prajñācakṣus. (P. paññācakkhu; T. shes rab kyi spyan; C. zhihui yan; J. chiegen; K. chihye an 智慧眼). In Sanskrit, "wisdom eye," one of the five eyes or five sorts of vision (PAÑCACAKṢUS), which are similar to the five (or six) "clairvoyances" or superknowledges (ABHIJÑĀ). In Pāli texts, the wisdom eye is one of the five sorts of extraordinary vision of a buddha. In MAHĀYĀNA sources, the wisdom eye knows all conditioned (SAṂSKṚTA) and unconditioned (ASAṂSKṚTA) dharmas and is free from all projections.

prajñājñānābhiṣeka. (T. shes rab ye shes kyi dbang). In Sanskrit, lit., "knowledge of the wisdom empowerment," with wisdom (PRAJÑĀ) here referring to a tantric consort. It is the third of the four empowerments or initiations employed in the ANUTTARAYOGATANTRAS, the other three being the vase empowerment (KALAŚĀBHIṢEKA) and the secret empowerment (GUHYĀBHIṢEKA) that precede it, and the fourth empowerment (CATURTHĀBHIṢEKA), which follows it. Having received the vase empowerment, in the secret empowerment the disciple ingests a drop of fluid (called BODHICITTA) that results from the sexual intercourse of his master and a consort. In the knowledge of the consort empowerment, the disciple engages in sexual union with the same consort, resulting in increasing levels of bliss, which is said to result as a drop (BINDU) that ascends through the central channel (AVADHŪTĪ). Although later monastic exegetes would interpret these empowerments symbolically, it appears that they were originally practiced as the tantric systems developed in India, and they continued to be practiced among certain groups of adepts in Tibet.

Prajñākaragupta. (T. Shes rab 'byung gnas sbas pa) (c. 750–810?). Author of a long (16,200-verse) commentary, the *Pramāṇavārttikabhāṣya* (alt. title *Pramāṇavārttikālaṃkārabhāṣya*) on DHARMAKĪRTI's PRAMĀṆAVĀRTTIKA. The work was translated into Tibetan by Skal ldan rgyal po and BLO LDAN SHES RAB and was later revised by Kumāraśrī and 'Phags pa shes rab as *Tshad ma rnam 'grel gyi rgyan*. There are subcommentaries to the work by Jamāri and Jayanta, both of which are extant in Tibetan translation.

Prajñākaramati. (T. Shes rab 'byung gnas blo gros) (950–1030). Indian author of an important pañjikā (commentary) on ŚĀNTIDEVA's BODHICARYĀVATĀRA. He also wrote a short but influential summary of Haribhadra's ABHISAMAYĀLAṂKĀRAVIVṚTI. Tibetan sources list him among the so-called six gatekeepers of VIKRAMAŚĪLA, a monastery that flourished during the Pāla dynasty in northeast India. According to one account, the six gatekeepers were RATNĀKARAŚĀNTI at the eastern gate, Vāgīśvarakīrti at the southern gate, Prajñākaramati at the western gate, NĀROPA at the northern gate, and Ratnavajra and Jñānaśrī in the center.

prajñāpāramitā. (P. paññāpāramī; T. shes rab kyi pha rol tu phyin pa; C. bore boluomiduo/zhidu; J. hannya haramitta/chido; K. panya paramilta/chido 般若波羅蜜多/智度). In Sanskrit, "perfection of wisdom" or "perfect wisdom"; a polysemous term, which appears in Pāli accounts of the Buddha's prior training as a BODHISATTVA (P. bodhisatta), but is widely used in MAHĀYĀNA Buddhism. ¶ Prajñāpāramitā refers to a level of understanding beyond that of ordinary wisdom, especially referring to the the wisdom associated with, or required to achieve, buddhahood. The term receives a variety of interpretations, but it is often said to be the wisdom that does not conceive of an agent, an object, or an action as being ultimately real. The perfection of wisdom is also sometimes defined as the knowledge of emptiness (ŚŪNYATĀ). ¶ As the wisdom associated with buddhahood, prajñāpāramitā is the sixth of the six perfections (PĀRAMITĀ) that are practiced on the bodhisattva path. When the practice of the six perfections is aligned with the ten bodhisattva bhūmis, the perfection of wisdom is practiced on the sixth BHŪMI, called ABHIMUKHĪ. ¶ Prajñāpāramitā is also used to designate the genre of Mahāyāna sūtras that sets forth the perfection of wisdom. These texts are considered to be among the earliest of the Mahāyāna sūtras, with the first texts appearing sometime between the first century BCE and the first century CE. Here, the title "perfection of wisdom" may have a polemical meaning, claiming to possess a wisdom beyond that taught in the MAINSTREAM BUDDHIST SCHOOLS. In addition to numerous descriptions of, and paeans to, emptiness, the perfection of wisdom sūtras also extol the practice of the bodhisattva path as the superior form of Buddhist practice. Although emptiness is said to be the chief topic of the sūtras, their "hidden meaning" is said to be the detailed structure of the bodhisattva path. A number of later commentaries, most notably the ABHISAMAYĀLAṂKĀRA, extracted terminology from these sūtras in order to systematize the presentation of the bodhisattva path. There are numerous sūtras with prajñāpāramitā in their titles, the earliest of which are designated simply by their length as measured in ŚLOKAS, a unit of metrical verse in traditional Sanskrit literature that is typically rendered in English as "stanza," "verse," or "line." Scholars speculate that there was a core text, which was then expanded. Hence, for example, the prajñāpāramitā sūtra in eight thousand lines (AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ) is often thought to be one of the earliest of the genre, later followed by twenty-five thousand lines (PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA), and one hundred thousand lines (ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀ), as well as compilations many times longer, such as XUANZANG's translation of the MAHĀPRAJÑĀPĀRAMITĀSŪTRA. The texts known in English as the "Heart Sūtra" (PRAJÑĀPĀRAMITĀHṚDAYASŪTRA) and the "Diamond Sūtra" (VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀ) are both much shorter versions of these prajñāpāramitā sūtras. ¶ Perhaps because the Sanskrit term prajñāpāramitā is in the

feminine gender, Prajñāpāramitā also became the name of a goddess, referred to as the mother of all buddhas, who is the embodiment of the perfection of wisdom. ¶ In the traditional Tibetan monastic curriculum, prajñāpāramitā is one of the primary topics of study, based on the *Abhisamayālaṃkāra* of MAITREYANĀTHA and its commentaries.

Prajñāpāramitāhṛdayasūtra. (T. Shes rab kyi pha rol tu phyin pa'i snying po'i mdo; C. Bore boluomiduo xin jing; J. Hannya haramitta shingyō; K. Panya paramilta sim kyŏng 般若波羅蜜多心經). In English, the "Heart of the Perfection of Wisdom Sūtra" (or, in other interpretations, the "DHĀRAṆĪ-Sūtra of the Perfection of Wisdom"); a work known in English simply as the "Heart Sūtra"; one of only a handful of Buddhist SŪTRAS (including the "Lotus Sūtra" and the "Diamond Sūtra") to be widely known by an English title. The "Heart Sūtra" is perhaps the most famous, and certainly the most widely recited, of all Buddhist sūtras across all Mahāyāna traditions. It is also one of the most commented upon, eliciting more Indian commentaries than any Mahāyāna sūtra (eight), including works by such luminaries as KAMALAŚĪLA, VIMALAMITRA, and ATIŚA DĪPAṂKARAŚRĪJÑĀNA, as well as such important East Asian figures as FAZANG, KŪKAI, and HAKUIN EKAKU. As its title suggests, the scripture purports to be the quintessence or heart (hṛdaya) of the "perfection of wisdom" (PRAJÑĀPĀRAMITĀ), in its denotations as both supreme wisdom and the eponymous genre of scriptures. The sūtra exists in long and short versions—with the longer version better known in India and the short version better known in East Asia—but even the long version is remarkably brief, requiring only a single page in translation. The short version, which is probably the earlier of the two recensions, is best known through its Chinese translation by XUANZANG made c. 649 CE. There has been speculation that the Chinese version may be a redaction of sections of the Chinese recension of the MAHĀPRAJÑĀPĀRAMITĀSŪTRA (also translated by Xuanzang) as a mnemonic encoding (dhāraṇī) of the massive perfection of wisdom literature, which was then subsequently translated back into Sanskrit, perhaps by Xuanzang himself. Although there is as yet no scholarly consensus on the provenance of the text, if this argument is correct, this would make the "Heart Sūtra" by far the most influential of all indigenous Chinese scriptures (see APOCRYPHA). The long version of the text, set on Vulture Peak (GṚDHRAKŪṬAPARVATA) outside RĀJAGṚHA, begins with the Buddha entering SAMĀDHI. At that point, the BODHISATTVA AVALOKITEŚVARA (who rarely appears as an interlocutor in the prajñāpāramitā sūtras) contemplates the perfection of wisdom and sees that the five aggregates (SKANDHA) are empty of intrinsic nature (SVABHĀVA). The monk ŚĀRIPUTRA, considered the wisest of the Buddha's ŚRĀVAKA disciples, is inspired by the Buddha to ask Avalokiteśvara how one should train in the perfection of wisdom. Avalokiteśvara's answer constitutes the remainder of the sūtra (apart from a brief epilogue in the longer version of the text). That answer, which consists essentially of a litany of negations of the major categories of Buddhist thought—including such seminal lists as the five aggregates (skandha), twelve sense-fields (ĀYATANA), twelve links of dependent origination (PRATĪTYASAMUTPĀDA), and FOUR NOBLE TRUTHS—contains two celebrated statements. The first, made in reference to the first of the five aggregates, is "form (RŪPA) is emptiness (ŚŪNYATĀ); emptiness is form" (RŪPAṂ ŚŪNYATĀ ŚUNYATAIVA RŪPAM). This is one of the most widely quoted and commented upon statements in the entire corpus of Mahāyāna sūtras and thus is not easily amenable to succinct explication. In brief, however, the line suggests that emptiness, as the nature of ultimate reality, is not located in some rarified realm, but rather is found in the ordinary objects of everyday experience. The other celebrated statement is the spell (MANTRA) that concludes Avalokiteśvara's discourse—GATE GATE PĀRAGATE PĀRASAṂGATE BODHI SVĀHĀ—which, unlike many mantras, is amenable to translation: "gone, gone, gone beyond, gone completely beyond, enlightenment, svāha." This mantra has also been widely commented upon. The presence of the mantra in the sūtra has led to its classification as a TANTRA rather than a sūtra in some Tibetan catalogues; it also forms the basis of Indian tantric SĀDHANAS. The brevity of the text has given it a talismanic quality, being recited on all manner of occasions (it is commonly used as an exorcistic text in Tibet) and inscribed on all manner of objects, including fans, teacups, and neckties in modern Japan.

Prajñāpāramitānayaśatapañcaśatikā. (T. Shes rab kyi pha rol tu phyin pa'i tshul brgya lnga bcu pa; C. Bore liqu fen; J. Hannya rishubun; K. Panya ich'wi pun 般若理趣分). In Sanskrit, "Way of the Perfection of Wisdom in One Hundred Fifty Lines," a short PRAJÑĀPĀRAMITĀ SŪTRA in fifteen chapters of ten lines each, spoken by different buddhas, including VAIROCANA. The presence of such terms as VAJRA, guhya, and SIDDHI have caused some to classify it as "tantric." The scripture is cited by both CANDRAKĪRTI and HARIBHADRA and was translated into Chinese five different times, by XUANZANG, BODHIRUCI, VAJRABODHI, AMOGHAVAJRA, and DĀNAPĀLA.

Prajñāpāramitāpiṇḍārtha. (T. Shes rab kyi pha rol tu phyin pa don bsdus pa). In Sanskrit, "Summary of the Perfection of Wisdom," a commentary on the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ attributed to DIGNĀGA; also known as the *Prajñāpāramitāpiṇḍārthasaṃgraha* and the *Prajñāpāramitāsaṃgrahakārikā*. It is a short work in fifty-eight lines, which summarize the perfection of wisdom under thirty-two headings, including the ten misconceptions (VIKALPA) and their antidotes, as well as the sixteen types of emptiness (ŚŪNYATĀ). The opening stanza of the text is widely quoted: "The perfection of wisdom is nondual wisdom; it is the TATHĀGATA. That term [is used] for texts and paths because they have that goal." The work provides a YOGĀCĀRA perspective on the PRAJÑĀPĀRAMITĀ, presenting a more systematic outline of doctrines than is typically found in the diffuse prajñāpāramitā literature. Doctrinally, the work is closely related to the MADHYĀNTAVIBHĀGA. It appears to have

been widely known; HARIBHADRA quotes from it five times in his ABHISAMAYĀLAṂKĀRĀLOKĀ. The text was translated into Chinese in 980 and into Tibetan in the eleventh century. There is a commentary on the text, entitled *Prajñāpāramitāpiṇḍārthasaṃgrahavivaraṇa*, by Triratnadāsa, a student of VASUBANDHU.

Prajñāpāramitāratnaguṇasaṃcayagāthā. (S). See RATNAGUṆASAṂCAYAGĀTHĀ.

Prajñāpāramitāsarvatathāgatamātā-Ekākṣarā. (T. Shes rab kyi pha rol tu phyin pa de bzhin gshegs pa thams cad kyi yum yi ge gcig ma). In Sanskrit, "Perfection of Wisdom in One Letter, the Mother of All Tathāgatas." The shortest of all the PRAJÑĀPĀRAMITĀ sūtras, it reads in its entirety: "Thus have I heard. At one time, the Lord (BHAGAVAT) was dwelling on Vulture Peak (GṚDHRAKŪṬAPARVATA) with a great assembly of 1,250 monks and many millions of bodhisattvas. At that time, the Lord said this to the venerable ĀNANDA: 'Ānanda, keep this perfection of wisdom in one letter for the benefit and happiness of sentient beings. It is thus: A.' So spoke the Lord and everyone—Ānanda, the monks, the BODHISATTVA-MAHĀSATTVAS—having understood and admired the perfection of wisdom, praised what the Lord had said." "The Perfection of Wisdom in One Letter" thus refers to the letter "a," the first letter of the Indic alphabet. See also A; AJIKAN.

Prajñāpradīpa. (T. Shes rab sgron me; C. Boredeng lun shi; J. Hannyatōron shaku; K. Panyadŭng non sŏk 般若燈論釋). In Sanskrit, "Lamp of Wisdom," the commentary on NĀGĀRJUNA's MŪLAMADHYAMAKAKĀRIKĀ by the sixth-century master BHĀVAVIVEKA. The "Wisdom" in the title is a reference to Nāgārjuna's text, the full title of which is *Prajñānāmamūlamadhyamakakārikā*. In his commentary on the first chapter of Nāgārjuna's text, Bhāvaviveka criticized the earlier commentary by BUDDHAPĀLITA, saying that it is insufficient simply to employ consequences (PRASAṄGA) and that one must also use autonomous syllogisms (SVATANTRĀNUMĀNA). CANDRAKĪRTI, in his own commentary, the PRASANNAPADĀ, came to Buddhapālita's defense and attacked Bhāvaviveka. It is largely based on this exchange that later Tibetan scholars came to categorize Bhāvaviveka as a *SVĀTANTRIKA and Buddhapālita and Candrakīrti as *PRĀSAṄGIKA. In addition to its intrinsic interest as a major work of an important Mahāyāna philosopher, Bhāvaviveka's commentary is of historical interest because it makes specific reference to other commentators on Nāgārjuna, as well as the doctrines of various rival schools, both Buddhist and non-Buddhist. The text is lost in Sanskrit but is preserved in Chinese and Tibetan translations and has a lengthy commentary by AVALOKITAVRATA preserved in Tibetan translation.

prajñapti. (T. gdags pa/btags pa; C. jiaming; J. kemyō; K. kamyŏng 假名). In Sanskrit, "designation," "imputation," or "convention," a term used to describe those things that are not intrinsic, ultimate, or primary, with phenomena whose reality is merely imputed (prajñapti), often contrasted with substantial phenomena (see DRAVYASAT). The various philosophical schools differ in the definition, extent, and deployment of the category, with the MADHYAMAKA arguing that all factors (DHARMA) are merely designations that exist only through imputation (PRAJÑAPTISAT), and nothing in the universe, including the Buddha or emptiness (ŚŪNYATĀ) exists substantially (dravyasat). However, the fact that conditioned dharmas are mere imputations does not imply that they lack functionality as conventional truths (SAṂVṚTISATYA). According to a YOGĀCĀRA explanation in the CHENG WEISHI LUN (**Vijñaptimātratāsiddhi*), all dharmas are said to have only imputed existence because (1) "dharmas are insubstantial and are contingent on fallacious imagining" (wuti suiqing jia); and (2) "dharmas have real substance but are real only in a provisional sense" (youti shishe jia). The first reason is based on the Yogācāra argument that the diversity, duality, and reality of things are merely mental projections (see PARIKALPITA), and are therefore artificial and imagined, existing only as fallacious conceptions. The second reason is based on the Yogācāra tenet of PARATANTRA, the "dependent nature of things." Accordingly, although things are "real" or "substantial" in that they have viable efficacy and functions, they are ultimately transformations of "activated" karmic "seeds" (BĪJA) stored within the eighth storehouse consciousness (ĀLAYAVIJÑĀNA). They are therefore said to be "dependent" on the consciousness and thus have only a "conditional" nature.

Prajñaptibhāṣya[pādaśāstra]. [alt. Prajñaptiśāstra] (T. Gdags pa'i gtsug lag bstan bcos; C. Shishe lun; J. Sesetsuron; K. Sisŏl non 施設論). In Sanskrit, "Treatise on Designations," one of the earliest books of the SARVĀSTIVĀDA ABHIDHARMAPIṬAKA; it is traditionally listed as the fourth of the six ancillary texts, or "feet" (pāda), of the JÑĀNAPRASTHĀNA, which is the central treatise or body (śarīra) of the Sarvāstivāda abhidharma canon. The *Prajñaptibhāṣya* derives from the earliest stratum of Sarvāstivāda abhidharma literature, along with the DHARMASKANDHA and the SAṂGĪTIPARYĀYA. YAŚOMITRA and BU STON attribute authorship of the *Prajñaptibhāṣya* to MAHĀMAUDGALYĀYANA. Unlike the rest of the canonical abhidharma texts of the Sarvāstivāda school, there is not a complete translation of this text in Chinese; the entire text survives only in a Tibetan translation ascribed to Prajñāsena. Portions of the second section of the text are, however, extant in a late Chinese translation by Dharmarakṣa et al. made during the eleventh century. The Tibetan text is in three parts: (1) lokaprajñapti, which deals with the cosmogonic speculations similar to such mainstream Buddhist texts as the AGGAÑÑASUTTA; (2) kāraṇaprajñapti, which deals with the causes governing the various stereotypical episodes in a bodhisattva's career (see BAXIANG), from entering the womb for his final birth to entering PARINIRVĀṆA; and (3) karmaprajñapti, a general discourse on the theory of moral cause and effect (KARMAN).

prajñaptisat. (T. btags yod; C. jiaming you; J. kemyōyu; K. kamyŏngyu 假名有). In Sanskrit, "imputed existence," a term used by the Buddhist philosophical schools to describe the ontological status of those phenomena that exist as designations, imputations, or conventions. The term is often contrasted with DRAVYASAT, or "substantial existence," a quality of those phenomena that possess a more objective nature. The various school of Buddhist philosophy differ on the meaning and extension of the category of prajñaptisat. The VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA held that the world is composed of indivisible particles of matter and indivisible moment of time, which are dravyasat, and that everything composed of an aggregation of those particles or moments is prajñaptisat. In MADHYAMAKA, all dharmas are prajñaptisat and no dharmas are dravyasat. See PRAJÑAPTI; DRAVYASAT.

Prajñaptivāda. (P. Paññattivādā; T. Btags par smra ba; C. Shuojiabu; J. Setsukebu/Sekkebu; K. Sŏlga pu 說假部). In Sanskrit, "Teaching of Designations"; one of the two schools of the KAUKKUṬIKA branch of the MAHĀSĀṂGHIKA school of mainstream Buddhism, along with the BAHUŚRUTĪYA; it may have split off as a separate school around the middle of the third century CE. The Prajñaptivāda posits a distinction between reality and the way that reality is perceived by ordinary sentient beings. Beings use the "provisional designations" (PRAJÑAPTI) of concepts in order to describe what is real, but those concepts are merely imputations of reality and have only conventional validity (PRAJÑAPTISAT). The Prajñaptivāda also claims that the Buddha inevitably was compelled to use such provisional designations in order to convey his teachings to ordinary beings, a position distinct from the LOKOTTARAVĀDA, one of the other major branches of the Mahāsāṃghika, which claims that the Buddha articulated the entirety of his teachings in a single utterance that was altogether transcendent (LOKOTTARA). Little is known about the regional center or geographic extent of the school.

prajñāśikṣā. (P. paññāsikkhā; T. shes rab kyi bslab pa; C. huixue; J. egaku; K. hyehak 慧學). In Sanskrit, the "training in wisdom," one of the three trainings (TRIŚIKṢĀ), together with the training in ethics (ŚĪLAŚIKṢĀ) and the training in meditation (SAMĀDHIŚIKṢĀ). See ADHIPRAJÑĀŚIKṢĀ and TRIŚIKṢĀ.

prajñāvimukta. (P. paññāvimutta; T. shes rab kyis rnam par grol ba; C. hui jietuo; J. egedatsu; K. hyehaet'al 慧解脫). In Sanskrit, "one who is liberated through wisdom." The term refers specifically to a person who has attained liberation through insight (VIPAŚYANĀ) into the three marks of existence: impermanence (ANITYA), suffering (DUḤKHA), and nonself (ANĀTMAN). Anyone who has attained any of the four stages of sanctity (ĀRYA)—stream-entry, once-returning, nonreturning, or arhatship—is said to have attained liberation through wisdom. Such liberation is equivalent to enlightenment (BODHI), results in the permanent eradication of the contaminants (ĀSRAVAKṢAYA), and leads to the cessation of REBIRTH. In the Pāli abhidhamma and Sarvāstivāda ABHIDHARMA, the person "liberated through wisdom" is the sixth of seven types of enlightened disciples (ārya); the other six are: (1) the saddhānusāri (S. ŚRADDHĀNUSĀRIN), or faith-follower; (2) dhammānusāri (S. DHARMĀNUSĀRIN); (3) saddhāvimutta (S. ŚRADDHĀVIMUKTA), or one liberated through faith; (4) diṭṭhippatta (S. DṚṢṬIPRĀPTA), or vision-attainer; (5) kāyasakkhī (S. KĀYASĀKṢIN), or witnessing with this very body; (6) ubhatobhāgavimutta (S. UBHAYATOBHĀGAVIMUKTA), or liberated in both ways. The prajñāvimukta who has attained liberation through the contemplation of no-self is contrasted with cetovimukta (P. cetovimutta; cf. CETOVIMUKTI), or "one liberated through mind," who has mastery of meditative absorptions (P. JHĀNA; S. DHYĀNA). The prajñāvimukta is also one of the VIṂŚATIPRABHEDASAṂGHA ("twenty varieties of the āryasaṃgha") based on the list given in the MAHĀVYUTPATTI.

Prakaraṇapāda[śāstra]. (T. Rab tu byed pa'i rkang pa; C. Pinlei zu lun; J. Honruisokuron; K. P'umnyu chok non 品類足論). In Sanskrit, "Exposition"; a book from the later stratum of the SARVĀSTIVĀDA ABHIDHARMA, which is traditionally listed as the first of the six ancillary texts, or "feet" (pāda), of the JÑĀNAPRASTHĀNA, the central treatise, or body (śarīra), of the Sarvāstivāda ABHIDHARMAPIṬAKA. The *Prakaraṇapāda* is attributed by tradition to Vasumitra and dates from c. 160 to 320 CE, probably following the compilation of the ABHIDHARMAMAHĀVIBHĀṢĀ. The treatise is extant only in a complete Chinese translation made by GUṆABHADRA and Bodhiyaśas between 435 and 443. The *Prakaraṇapāda* establishes the definitive Sarvāstivāda categorization of dharmas into a fivefold grouping: materiality (RŪPA), mentality (CITTA), mental concomitants (CAITTA or CAITASIKA), conditioned factors dissociated from thought (CITTAVIPRAYUKTASAṂSKĀRA), and uncompounded elements (ASAṂSKṚTADHARMA). This fivefold grouping is first employed in the ABHIDHARMAMAHĀVIBHĀṢĀ, whence it enters the mainstream of the Sarvāstivāda-VAIBHĀṢIKA analysis of dharmas and is subsequently adopted by several other Buddhist schools, including the SAUTRĀNTIKA, MADHYAMAKA, and YOGĀCĀRA (see BAIFA). The *Prakaraṇapāda* also adds a new listing of KUŚALAMAHĀBHŪMIKA, or factors always associated with wholesome states of mind. The *Prakaraṇapāda* was the first of the pādaśāstras to represent the mature synthesis of Sarvāstivāda doctrine, which was followed in later abhidharma manuals and primers. The text therefore represents a transitional point in Sarvāstivāda abhidharma writing between the pādaśāstras of the middle period and the commentarial writings of the later tradition.

Prakrit. (S. Prākṛta). A term that literally means "natural" in Sanskrit, used to designate a group of Indo-Āryan vernacular languages in ancient India. The term "Sanskrit" (saṃskṛta) has the sense both of "constructed," "perfected," or "refined," and thus describes a classical language that may not ever have been used for everyday verbal communication. The earliest extant

written forms of Prakrit are found in the inscriptions of AŚOKA. The Buddha is said to have spoken the Prakritic dialect of Māgadhī, the vernacular language of the Indian state of MAGADHA. Also important for Buddhism is the GĀNDHĀRĪ form of Prakrit, from the GANDHĀRA region of northwest India. These Prakrit dialects eventually evolved into many of the modern Indian vernacular languages, such as Bengali, Gujarati, Oriya, and Hindi. Although some scholars do not consider PĀLI and BUDDHIST HYBRID SANSKRIT to be Prakrits in the technical sense, they are clearly influenced by various Prakrits current at the time of their formation.

prakṛtiparinirvṛta. (T. rang bzhin gyis yongs su mya ngan las 'das pa; C. zixing niepan; J. jishō nehan; K. chasŏng yŏlban自性涅槃). In Sanskrit, "intrinsically extinguished"; a term used in a phrase common to the PRAJÑĀPĀRAMITĀ literature, in which all phenomena in the universe are described as being "unproduced (anutpanna, see ANUTPĀDA), unceasing (aniruddha), primordially at peace (ādiśānta), and intrinsically fully extinguished (prakṛtiparinirvṛta)." It refers to the state of quiescence in which all phenomena in the universe naturally abide. In the MADHYAMAKA school, the term is sometimes used as a synonym for emptiness (ŚŪNYATĀ). See also NIRVĀṆA.

prakṛtisthagotra. (T. rang bzhin gnas rigs; C. benxing zhu zhongxing; J. honshōjūshushō; K. ponsŏng chu chongsŏng 本性住種性). In Sanskrit, "naturally endowed lineage" or "intrinsic lineage." In certain strands of YOGĀCĀRA thought, it is believed that there are two kinds of "seeds" (BĪJA) that lead to future KARMAN. The first is newly acquired karmic seeds (xinxun zhongzi), which are activated as suitable conditions arise and will expire once their karmic efficacy is spent. Second, there are also certain primordial seeds (benyou zhongzi), which remain indestructible and, in a sense, forever determine one's spiritual tendency and potential. One such example is the "naturally endowed lineage" (prakṛtisthagotra) that determines if a person will ultimately become an ARHAT (via either the ŚRĀVAKA or PRATYEKABUDDHA paths), a buddha, or forever remain as an unenlightened "incorrigible" (ICCHANTIKA). That is, whether one will attain enlightenment or not, and what spiritual status one will ultimately reach, is "predetermined" by such a predisposition. In this controversial tenet, a person lacking the "primordial seed" necessary to qualify one as belonging to a MAHĀYĀNA "lineage" (GOTRA), for example, is forever deprived of the potential to cultivate the path to buddhahood. Together, and in contrast to, the "lineage that is conditioned by habits" (see SAMUDĀNĪTAGOTRA), they are known as "the two lineages: intrinsic and acquired" (xingxi er[zhong]xing). For the two kinds of karmic seeds, see ERZHONG ZHONGZI.

prakṛtiviśuddhi. (T. rang bzhin gyis rnam par dag pa; C. benxing jing; J. honshōjō; K. ponsŏng chŏng 本性淨). In Sanskrit, "intrinsic purity," a term used to describe the inherent purity and luminosity of the mind, with the implication that all afflictions (KLEŚA) are therefore adventitious and extrinsic to the mind's true nature.

pralambapādāsana. (T. rkang pa brkyangs pa'i 'dug stangs; C. chuizuzuo; J. suisokuza; K. sujokchwa 垂足坐). In Sanskrit, lit. "pendant leg posture"; a posture (ĀSANA) sometimes called the "seated" or "European" pose, where both legs of a figure hang pendant, feet on the ground, usually from a throne or seat. Tibetan images of MAITREYA are commonly found in this posture (and thus it is also known as the MAITREYĀSANA); he is said to sit in this pose so that he can easily stand in preparation for his descent to the world as the next buddha. This position is sometimes known as the BHADRĀSANA.

pramāda. (P. pamāda; T. bag med pa; C. fangyi; J. hōitsu; K. pangil 放逸). In Sanskrit, "heedlessness"; one of the forty-six mental concomitants (CAITTA) according to the SARVĀSTIVĀDA-VAIBHĀṢIKA school of ABHIDHARMA and one of the fifty-one according to the YOGĀCĀRA school, where it is listed among the twenty secondary afflictions (UPAKLEŚA). Heedlessness refers to a lack of vigilance in one's interaction with the external world so that one neglects salutary (KUŚALA) actions that will be conducive to the benefit of both oneself and others (see SVĀRTHA; PARĀRTHA) and instead engages in morally questionable behavior. Heedlessness is the opposite of "heedfulness" (APRAMĀDA), which is considered foundational to any kind of ethical or virtuous behavior—so much so, in fact, that the Buddha is said to have recommended it in his last words delivered on his deathbed: "Indeed, monks, I declare to you: decay is inherent in all compounded things; strive on with heedfulness." (P. handadāni bhikkhave amantayāmi vo: vayadhammā saṅkhārā; appamādena sampādetha.)

pramāṇa. (T. tshad ma; C. liang; J. ryō; K. yang 量). In Sanskrit, "means of knowledge," or "valid knowledge," defined technically as a consciousness that is not deceived with regard to its object. Many schools of Buddhism posit two forms of valid knowledge: direct perception (PRATYAKṢA) and inference (ANUMĀNA), with the former deriving from correct sense perception and the latter deriving from correct reasoning. Dharmakīrti states in his PRAMĀṆAVĀRTTIKA that there are two forms of valid knowledge (pramāṇa) because there are two objects of comprehension (prameya). The two types of objects are the manifest (ABHIMUKHĪ) and the hidden (PAROKṢA), with the former referring to objects that can be known through direct sense perception, the latter referring to those things that can be known only through inference. His limitation of forms of valid knowledge to only two is meant to distinguish Buddhist epistemology from that of the Hindu schools, where sound (śabda), especially in the sense of the sound of the Vedas, is counted as a valid form of knowledge. Discussions of these two forms of valid knowledge, especially as set forth in the works of DIGNĀGA and DHARMAKĪRTI, encompassed a range of topics in

epistemology and logic that became very influential in medieval India (among both Buddhists and non-Buddhists), and then in Tibet; its influence was less strong in East Asia. Thus, although the term pramāṇa technically refers to one of these two valid forms of knowledge, it comes by extension to refer to medieval and late Indian Buddhist epistemology and logic, in the latter case, especially as it pertains to the formal statement of syllogisms (PRAYOGA) to an opponent.

pramāṇabhūta. (T. tshad ma'i skyes bu). In Sanskrit, "authoritative one"; an epithet of the Buddha, which has also been variously translated as "he who is [like] valid knowledge," and "he who has come into existence as [a form of] valid knowledge." The epithet is most famously ascribed to the Buddha by DIGNĀGA in his PRAMĀṆASAMUCCAYA, and is variously commented upon by later Buddhist logicians. According to some commentators, the Buddha, unlike various Hindu deities, is like a form of valid knowledge (PRAMĀṆA) because he is reliable, in the sense that he is not deceptive and because he makes known things that were not known before, such as the FOUR NOBLE TRUTHS.

Pramāṇasamuccaya. (T. Tshad ma kun btus; C. Jiliang lun; J. Jūryōron; K. Chimnyang non 集量論). In Sanskrit, "Compendium on Valid Knowledge"; the most famous work of DIGNĀGA, the great Buddhist logician of the late fifth and early sixth centuries, and considered the foundational text of Buddhist logic and epistemology. In it, Dignāga describes direct perception (PRATYAKṢA) as being free from thought (KALPANĀ), and distinguishes between the objects of direct perception and thought, with direct perception able to discern specific characteristics (SVALAKṢAṆA), while thought deals only with general characteristics (SĀMĀNYALAKṢAṆA). In discussing the five sense consciousnesses and the mental consciousness (MANOVIJÑĀNA), he asserted that the sense consciousnesses operate exclusively through direct perception, whereas the mental consciousness knows objects through both direct perception and inference (ANUMĀNA). In explaining the function of thought, Dignāga described thought as operating through the negative route of APOHA, whereby thought does not perceive its object directly, but instead through the conceptual elimination of everything that is not the object. In this work, Dignāga also examines the elements of a logical syllogism (PRAYOGA) and the relations that must pertain among its various constituents in order for that statement to result in a correct inference.

pramāṇavāda. (T. tshad ma smra ba). In Sanskrit, "proponent of valid knowledge," a term used to describe the tradition of Buddhist logic deriving especially from the work of DIGNĀGA and DHARMAKĪRTI. This tradition did not represent a self-conscious school of Buddhist philosophy, but rather an approach to issues in logic and epistemology that were central to SAUTRĀNTIKA, YOGĀCĀRA, and MADHYAMAKA. See PRAMĀṆA.

Pramāṇavārttika. (T. Tshad ma rnam 'grel). In Sanskrit, "Commentary on Valid Knowledge," the most famous work of the great Buddhist logician DHARMAKĪRTI. The "Pramāṇa" in the title of text is a reference to DIGNĀGA's PRAMĀṆASAMUCCAYA; Dharmakīrti's work is ostensibly a commentary on Dignāga's text, although in fact Dharmakīrti's work makes significant refinements in, and occasional departures from, Dignāga's views. The *Pramāṇavārttika* is written in verse, with a prose commentary by the author, in four chapters, dealing with inference for oneself (SVĀRTHĀNUMĀNA), the proof of valid knowledge (pramāṇasiddhi), direct perception (PRATYAKṢA), and inference for others (PARĀRTHĀNUMĀNA). The work was the subject of numerous commentaries in India, and later in Tibet, where it was studied by all sects and became one of the "five books" (zhung lnga) that provided the foundation for the DGE LUGS monastic curriculum.

Pramāṇaviniścaya. (T. Tshad ma rnam par nges pa). In Sanskrit, "Determination of Valid Knowledge," one of the seven treatises of the Indian master DHARMAKĪRTI, perhaps second in fame to his PRAMĀṆAVĀRTTIKA, for which it serves as something of a summary. Following its translation into Tibetan by RNGOG BLO LDAN SHES RAB, it was the main text for the study of PRAMĀṆA (T. tshad ma) in Tibet, until Sa skya Paṇḍita's TSHAD MA RIGS GTER that explained the *Pramāṇavārttika* in detail.

pramuditā. (T. rab tu dga' ba; C. huanxi di; J. kangiji; K. hwanhŭi chi 歡喜地). In Sanskrit, "joyous," the first of the ten bodhisattva BHŪMI, a list of ten stages (DAŚABHŪMI) deriving from the DAŚABHŪMIKASŪTRA ("Sūtra on the Ten Bhūmis"), a sūtra that is later subsumed into the massive scriptural compilation, the AVATAṂSAKASŪTRA. This first bhūmi coincides with the attainment of the path of vision (DARŚANAMĀRGA) and the remaining nine to the path of cultivation (BHĀVANĀMĀRGA). The first stage is called "joyous" because the bodhisattva rejoices at having seen reality for the first time, or because he feels joy at seeing that he is close to buddhahood, at which point he can achieve the aims of sentient beings. When the six perfections are aligned with the ten bhūmis, the pramuditā stage is an occasion for the bodhisattva to practice the perfection of giving (DĀNAPĀRAMITĀ) in particular and attracts disciples through the four means of gathering (SAṂGRAHAVASTU). The bodhisattva remains at this stage as long as he remains unaware of subtle ethical transgressions; morality (ŚĪLA) is fully perfected on the second stage. On the first bhūmi, it is said that a bodhisattva can (1) see one hundred buddhas, (2) be blessed by one hundred buddhas, (3) live for one hundred eons, (4) see the past and future in those one hundred eons with wisdom, (5) enter into and withdraw from one hundred SAMĀDHIS, (6) vibrate one hundred worlds, (7) illuminate one hundred worlds, (8) bring one hundred sentient beings to spiritual maturity using emanations, (9) go to one hundred pure buddha-fields (PARIŚUDDHABUDDHAKṢETRA), (10) open one hundred doors of doctrine,

(11) display one hundred versions of his own body, and (12) surround each of those bodies with one hundred bodhisattvas. These numbers multiply as the bodhisattva proceeds to subsequent stages.

prāṇa. (T. srog; C. bona; J. hana; K. pana 波那). In Sanskrit, "wind," "breath," or "vital force"; the winds that course through the network of channels (NĀḌĪ) in the body, according to tantric physiognomy. There are various types of winds that perform functions such as movement, digestion, respiration, sexual activity, and sustenance of the life force. Much tantric practice is devoted, first, to causing these winds to flow freely through the system of channels and, subsequently, to gathering the various winds into the central channel in order to induce deep states of bliss.

prāṇāyāma. (T. srog rtsol; C. tiaoxi; J. chōsoku; K. chosik 調息). In Sanskrit, lit., "restraint of breath," "restraint of wind"; a term used to encompass various practices of breath control. During his six years of practice of asceticism prior to his achievement of enlightenment, some traditions say that the Buddha became adept at the practice of holding his breath for extended periods of time but eventually abandoned it as a form of self-mortification. Nonetheless, elaborate practices of breath control are found throughout Buddhism, especially in Buddhist TANTRA. For example, at the beginning of a tantric meditative session, one is instructed to purify the breath by inhaling through one nostril and exhaling through the other by closing each nostril successively with the index finger. In the practice of ANUTTARAYOGATANTRA, the term is used broadly to refer to all forms of meditation, including the visualization of seed syllables (BĪJA) that are intended to cause the various winds to enter into the central channel (AVADHŪTĪ). Such practices are to be distinguished from "mindfulness of breathing" (ĀNĀPĀNASMṚTI), which involves mindful awareness of the natural process of inhalations and exhalations, rather than any attempt to control or restrain the breath.

praṇidhāna. (P. panidhāna; T. smon lam; C. yuan; J. gan; K. wŏn 願). In Sanskrit, "vow" or "aspiration"; a statement expressing the solemn wish that a specific aim be achieved. The most famous type of praṇidhāna is the vow the BODHISATTVA takes to become a buddha in order to liberate all sentient beings from suffering (see PŪRVAPRAṆIDHĀNA). Praṇidhāna is also listed as one of the ten perfections (PĀRAMITĀ) and as one of the ten powers (BALA) of a bodhisattva. A vow may take the form of an oath, in which one promises to achieve an aim, or the form of a prayer, in which one asks that an aim be fulfilled, often through dedicating merit toward that aim. The term occurs also in pūrvapraṇidhāna, or "prior vow," a vow made in the past that has either been fulfilled in the present or will be fulfilled in the future, typically in conjunction with the aspiration to attain buddhahood. The term pūrvapraṇidhāna is used specifically in the MAHĀYĀNA to denote the vow made in the past by a bodhisattva to become a buddha himself, often specifying the place, the time, and the retinue that will be associated with that event. Since the buddhas succeeded in achieving their goal of buddhahood, their prior vows are therefore all considered to have been fulfilled. The most famous of all pūrvapraṇidhāna are the forty-eight vows that the monk DHARMĀKARA made before the buddha LOKEŚVARARĀJA, which ultimately led to his becoming the buddha AMITĀBHA and creating the pure land of SUKHĀVATĪ; these vows are described in the SUKHĀVATĪVYŪHASŪTRA and are foundational to the PURE LAND traditions of East Asia.

praṇidhānapāramitā. (T. smon lam gyi pha rol tu phyin pa; C. yuan boluomi; J. ganharamitsu; K. wŏn paramil 願波羅蜜). In Sanskrit, "perfection of aspiration," "prayer," or "resolve"; the eighth of the traditional list of ten perfections (PĀRAMITĀ). According to the system of the ten bodhisattva BHŪMI, this perfection, which is a subset of the "perfection of wisdom" (PRAJÑĀPĀRAMITĀ), is practiced on the eighth bhūmi, called the ACALĀ (immovable). Here, all of the aspirations (PRAṆIDHĀNA; PŪRVAPRAṆIDHĀNA) made by the bodhisattva over the long path he has traversed leading up to buddhahood are considered to have been achieved.

praṇidhicittotpāda. (T. smon pa'i sems bskyed; C. yuan puti xin; J. ganbodaishin; K. wŏn pori sim 願菩提心). In Sanskrit, lit., "aspirational creation of the intention," where "intention" or "thought" (CITTA) refers to BODHICITTA, the intention to achieve buddhahood in order to liberate all sentient beings from suffering. This is the first of two types of bodhicitta, the second being the PRASTHĀNACITTOTPĀDA, lit., the "creation of the intention to set out." In his BODHICARYĀVATĀRA, ŚĀNTIDEVA compares the first type of bodhicitta to the decision to undertake a journey and the second type to actually setting out on the journey. In the case of the BODHISATTVA path, the first refers to the process of developing the aspiration to buddhahood for the sake of others, while the second refers to undertaking the various practices of the bodhisattva path, such as the six perfections (PĀRAMITĀ). These two forms of bodhicitta are meant to be developed in sequence.

prapañca. (P. papañca; T. spros pa; C. xilun; J. keron; K. hŭiron 戲論). In Sanskrit, lit. "diffusion," "expansion"; viz. "conceptualization" or "conceptual proliferation"; the tendency of the process of cognition to proliferate the perspective of the self (ĀTMAN) throughout all of one's sensory experience via the medium of concepts. The locus classicus for describing how sensory perception culminates in conceptual proliferation appears in the Pāli MADHUPIṆḌIKASUTTA. As that scripture explains, any living being will be subject to an impersonal causal process of perception in which consciousness (P. viññāṇa; S. VIJÑĀNA) occurs conditioned by an internal sense base (INDRIYA) and an external sense object (ĀYATANA); the contact among these three brings about sensory impingement or contact (P. phassa; S. SPARŚA), which in turn leads to the sensation (VEDANĀ)

of that contact as pleasant, unpleasant, or neutral. At that point, however, the sense of ego intrudes and this process then becomes an intentional one, whereby what one feels, one perceives (P. saññā; S. SAṂJÑĀ); what one perceives, one thinks about (P. vitakka; S. VITARKA); and what one thinks about, one conceptualizes (P. papañca; S. prapañca). By allowing oneself to experience sensory objects not as things-in-themselves but as concepts invariably tied to one's own perspective, the perceiving subject then becomes the hapless object of an inexorable process of conceptual subjugation: viz., what one conceptualizes becomes proliferated conceptually (P. papañcasaññāsaṅkhā; a term apparently unattested in Sanskrit) throughout all of one's sensory experience. Everything that can be experienced in this world in the past, present, and future is now bound together into a labyrinthine network of concepts, all tied to oneself and projected into the external world as craving (TṚṢṆĀ), conceit (MĀNA), and wrong views (DṚṢṬI), thus creating bondage to SAṂSĀRA. By systematic attention (YONIŚOMANASKĀRA) to the impersonal character of sensory experience and through sensory restraint (INDRIYASAṂVARA), this tendency to project ego throughout the entirety of the perceptual process is brought to an end. In this state of "conceptual nonproliferation" (P. nippapañca; S. NIṢPRAPAÑCA), perception is freed from concepts tinged by this proliferating tendency, allowing one to see the things of this world as impersonal causal products that are inevitably impermanent (ANITYA), suffering (DUḤKHA), and nonself (ANĀTMAN). ¶ The preceding interpretation reflects the specific denotation of the term as explicated in Pāli scriptural materials. In a Mahāyāna context, prapañca may also connote "elaboration" or "superimposition," especially in the sense of a fanciful, imagined, or superfluous quality that is mistakenly projected on to an object, resulting in its being misperceived. Such projections are described as manifestations of ignorance (AVIDYĀ); reality and the mind that perceives reality are described as being free from prapañca (NIṢPRAPAÑCA), and the purpose of Buddhist practice in one sense can be described as the recognition and elimination of prapañca in order to see reality clearly and directly. In the MADHYAMAKA school, the most dangerous type of prapañca is the presumption of intrinsic existence (SVABHĀVA). In YOGĀCĀRA, prapañca is synonymous with the "seeds" (BĪJA) that provide the basis for perception and the potentiality for future action. In this school, prapañca is closely associated with false discrimination (VIKALPA), specifically the bifurcation of perceiving subject and perceived object (GRĀHYAGRĀHAKAVIKALPA). The goal of practice is said to be a state of mind that is beyond all thought constructions and verbal elaboration. ¶ The precise denotation of prapañca has been the subject of much perplexity and debate within the Buddhist tradition, which is reflected in the varying translations for the term in Buddhist canonical languages. The standard Chinese rendering xilun means "frivolous debate," which reflects the tendency of prapañca to complicate meaningful discussion about the true character of sensory cognition. The Tibetan spros ba means something like "extension, elaboration" and reflects the tendency of prapañca to proliferate a fanciful conception of reality onto the objects of perception.

prāpti. (T. 'thob pa; C. de; J. toku; K. tŭk 得). In Sanskrit, "possession," "acquisition"; the first of the fourteen "conditioned forces dissociated from thought" (CITTAVIPRAYUKTA-SAṂSKĀRA) listed in the SARVĀSTIVĀDA-VAIBHĀṢIKA ABHIDHARMA and in the YOGĀCĀRA system. The function of prāpti is to serve as a kind of glue that causes the various independent constituents of existence (DHARMA) to adhere in seemingly permanent constructs. The leap the Sarvāstivāda school made was to assert that this factor of "possession" was a real dharma (DRAVYADHARMA), in distinction to other schools, which asserted that the notion of possession was simply an imputed designation (PRAJÑAPTI). Prāpti is the conditioned force that attaches a specific affliction, action, or dharma to the mental continuum (SAṂTĀNA) of the individual, thus helping to maintain the semblance of the continuity of the person. Prāpti also receives and retains the effects of positive and negative volitional actions (KARMAN) and thus ensures karmic continuity. This same notion of prāpti is also deployed to clarify how the afflictions (KLEŚA) can be eradicated in a cognition of the FOUR NOBLE TRUTHS (catvāry āryasatyāni): viz., that cognition brings to an end the "possession" of the afflictions, thus ensuring that they may never arise again. This factor is the opposite of the related dissociated force of "dispossession" (APRĀPTI). The PRAJÑĀPĀRAMITĀ sūtras vehemently rejected any such notion of "possession," even of NIRVĀṆA itself, which they claimed could neither be attained nor possessed.

prasāda. (P. pasāda; T. dad pa/dang ba; C. chengjing; J. chōjō; K. chingjŏng 澄淨). In Sanskrit, "clarity," or "trust." As "clarity," the term is used to describe both the serene sense consciousnesses of someone whose mind is at peace as well as such a state of mind itself. As "trust," the term is central to Buddhism, where it is employed in explanations of the psychology of faith or belief (see ŚRADDHĀ); it leads to zest or "desire-to-act" (CHANDA) that in turn leads to the cultivation of ŚAMATHA (serenity or calmness). These meanings of prasāda overlap when the term denotes the serenity or joy that results from trust. In the theology of the JŌDO SHINSHŪ school of Japanese PURE LAND Buddhism, it refers to a serene acceptance of the grace of AMITĀBHA.

prasajyapratiṣedha. (T. med dgag). In Sanskrit, "non-affirming negative," or "nonimplied negation," a negative declaration (PRATIṢEDHA) that is expressed in such a way that nothing positive is implied. The most famous such nonimplied negation is emptiness (ŚŪNYATĀ), which is the mere absence of intrinsic existence (SVABHĀVA). See also PARYUDĀSAPRATIṢEDHA.

prasaṅga. (T. thal 'gyur). In Sanskrit, "consequence"; in Buddhist logic, a statement made to an opponent that uses the opponent's assertions to demonstrate contradictions in the

opponent's position. It is not necessary that the person who states the consequence accept the subject, predicate, and reason of the consequence. There is a difference of opinion as to whether the statement of the consequence is sufficient to bring about correct understanding in the opponent or whether an autonomous syllogism (SVATANTRAPRAYOGA) stating the correct position (that is, the position of the person who states the consequence) is also required. This was one of the points of disagreement that led to the designation of the *PRĀSAṄGIKA and *SVĀTANTRIKA branches of the MADHYAMAKA school.

***Prāsaṅgika**. (T. Thal 'gyur ba). In Sanskrit, "Consequentialist," one of the two main branches of the MADHYAMAKA school, so called because of its use of consequences (PRASAṄGA) rather than autonomous syllogisms (SVATANTRAPRAYOGA) in debates about the nature of reality. Its leading proponents include BUDDHAPĀLITA and CANDRAKĪRTI. The other branch of Madhyamaka is *SVĀTANTRIKA, represented by such figures as BHĀVAVIVEKA, JÑĀNAGARBHA, ŚĀNTARAKṢITA, and KAMALAŚĪLA. The designation "Prāsaṅgika" as a subschool of Madhyamaka does not occur in Indian literature; it was coined retrospectively in Tibet to describe the later developments of the Indian Madhyamaka school. In the doxographical literature of the DGE LUGS sect in Tibet, where *Prāsaṅgika is ranked as the preeminent school of Indian Buddhist philosophy, Prāsaṅgika differs from Svātantrika primarily on questions of the nature of emptiness (ŚŪNYATĀ) and the correct role of reasoning in understanding it, although other points of difference are also enumerated, including the question of whether the arhat must understand the selflessness of phenomena (DHARMANAIRĀTMYA) in order to achieve liberation.

Prasannapadā. (T. Tshig gsal). In Sanskrit, "Clear Words," the commentary on NĀGĀRJUNA's MŪLAMADHYAMAKAKĀRIKĀ by the seventh-century Indian master CANDRAKĪRTI; its full title is *Mūlamadhyamakavṛtti-Prasannapadā*. Among Candrakīrti's major works, it is regarded as second in importance only to his independent treatise, the MADHYAMAKĀVATĀRA, which was composed earlier. Apart from its importance as a commentary on Nāgārjuna's text, Candrakīrti's work is also important as the locus classicus for the division of Madhyamaka into the *SVĀTANTRIKA and *PRĀSAṄGIKA. Candrakīrti's was the third in an influential series of commentaries. The first was that of BUDDHAPĀLITA. The second was the PRAJÑĀPRADĪPA of BHĀVAVIVEKA, who criticized Buddhapālita's commentary on the first chapter of Nāgārjuna's text, specifically the section in which Buddhapālita refutes the Sāṃkhya position that an effect is produced from a cause that is the same nature as itself. In the *Prasannapadā*, Candrakīrti defended Buddhapālita and attacked Bhāvaviveka. It is based largely on these exchanges that later Tibetan scholars came to designate Buddhapālita and Candrakīrti as *Prāsaṅgikas and Bhāvaviveka as a *Svātantrika. Candrakīrti's commentary is also valued by scholars for its many citations from Mahāyāna sūtras. The *Prasannapadā* has attracted the attention of modern scholars, in part because, unlike the commentaries of Buddhapālita and Bhāvaviveka, for example, it has been preserved in Sanskrit.

Prasenajit. (P. Pasenadi; T. Gsal rgyal; C. Bosini wang; J. Hashinoku ō; K. Pasanik wang 波斯匿王). In Sanskrit, the proper name of the king of the region of KOŚALA during the time of GAUTAMA or ŚĀKYAMUNI Buddha. Prasenajit's capital was the city of ŚRĀVASTĪ, where the Buddha delivered many of his sermons. During his reign, Kośala was one of the two most powerful kingdoms in the Indian subcontinent, along with MAGADHA, and seems to have exerted political control over the neighboring ŚĀKYA kingdom, where the Buddha was born. According to the tradition, Prasenajit was born in the same year as the Buddha. Because of his dedication to the propagation, protection, and preservation of the Buddhist order (SAṂGHA), Prasenajit is often used as an example of Buddhist notions of proper kingship. In fact, several of the Buddha's sermons are given in response to a question asked by Prasenajit. Such devotion can also be seen in one particular distinction held by Prasenajit: legend has it that he was first person to have an image made of the Buddha. (Elsewhere, this distinction is given to King Udāyana or Rudrāyana; see UDĀYANA BUDDHA.) According to the thirteenth-century Sinhalese source, the *Kosalabimbavaṇṇanā* ("Laudatory Account of the Kosala Image"), Prasenajit was disappointed when he went to visit the Buddha but found that the Buddha was away from his residence. He therefore requested that an image of the Buddha be made that would function as his double; the Buddha answered that whoever might create such an image would accumulate immeasurable merit. This first image was said to have been made of sandalwood and to have displayed the thirty-two marks of a great man (MAHĀPURUṢALAKṢAṆA); when the Buddha first came to see the image that Prasenajit had commissioned, it rose to greet him. Many members of Prasenajit's family also played important roles in Buddhist literature. His wife, MALLIKĀ, was the person who initially encouraged him to become a follower of the Buddha. One of Prasenajit's sons was prince JETA, from whom the banker ANĀTHAPIṆḌADA (P. ANĀTHAPIṆḌIKA) purchased the JETAVANA (Jeta's grove) to donate to the Buddha; this was one of the Buddha's favorite residences and the place where many of his sermons were delivered. Prasenajit was the father of the princess Śrīmālādevī, the protagonist of the ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA. He was also the father of VIRŪḌHAKA, who, when he learned that his mother was not of noble birth, made war on the ŚĀKYA clan. Prasenajit's sister was VAIDEHĪ, the wife of king BIMBISĀRA.

Prasphuṭapadā. (T. Tshig rab tu gsal ba). In Sanskrit, "The Clearly Worded," a work by the Indian scholiast Dharmamitra (c. ninth century); the full title of this text is *Abhisamayālaṃkārakārikāprajñāpāramitopadeśaśāstraṭīkā-prasphuṭapadā* or "The

Clearly Worded, Commentary on Treatise Setting Forth the Perfection of Wisdom, the Verses of the Ornament of Realization." The *Prasphuṭapadā* is a subcommentary on HARIBHADRA's ABHISAMAYĀLAṂKĀRAVIVṚTI, which is intended to clarify points on the ABHISAMAYĀLAṂKĀRA, one of five texts that were purportedly revealed to ASAṄGA by the BODHISATTVA MAITREYA in the fourth or fifth centuries CE. The *Prasphuṭapadā* was written shortly after the composition of the *Abhisamayālaṃkāravivṛti* in the early ninth century. In the *Prasphuṭapadā*, Dharmamitra seeks to clarify Haribhadra's views as they appear in the *Vivṛti*, rather than put forth his own ideas regarding the *Abhisamayālaṃkāra*. In his work, Dharmamitra explains a number of doctrinal elements that would have a great impact on later forms of Tibetan Buddhism, including the TATHĀGATAGARBHA doctrine and the theory of multiple buddha bodies (BUDDHAKĀYA). For instance, in the *Prasphuṭapadā*, Dharmamitra asserts that the enjoyment body (SAṂBHOGAKĀYA) is accessible only to a bodhisattva who has reached the tenth stage (BHŪMI) of the bodhisattva path (see BODHISATTVABHŪMI). Dharmamitra's text, together with the *Durbodhāloka*, the subcommentary on the *Abhisamayālaṃkāravivṛti* by DHARMAKĪRTIŚRĪ (the teacher of ATIŚA DĪPAṂKARAŚRĪJÑĀNA), is often cited in Tibetan PRAJÑĀPĀRAMITĀ commentaries.

praśrabdhi. (P. passaddhi; T. shin tu sbyang ba; C. qing'an; J. kyōan; K. kyŏngan 輕安). In Sanskrit, "serenity," "calm"; one of the forty-six mental concomitants (CAITTA) according to the SARVĀSTIVĀDA-VAIBHĀṢIKA school of ABHIDHARMA, one of the fifty-one according to the YOGĀCĀRA school, where it is listed among the salutary (KUŚALA) mental states and one of the fifty-two in the Pāli ABHIDHAMMA. Praśrabdhi refers to the state of mind associated with concentration (SAMĀDHI), referring especially to the serenity that brings pliancy to the mind and body that enables the adept to direct the mind and body toward wholesome actions.

prasthānacittotpāda. (T. 'jug pa'i sems bskyed; C. xing putixin; J. gyōbodaishin; K. haeng porisim 行菩提心). In Sanskrit, lit., "creation of the intention to set out," where "intention" or "thought" (CITTA) refers to BODHICITTA, the wish to achieve buddhahood in order to save all sentient beings from suffering. This is the second of two types of bodhicitta, the other being PRAṆIDHICITTOTPĀDA, lit., "the aspirational creation of the intention." In his BODHICARYĀVATĀRA, ŚĀNTIDEVA compares the first type to the decision to undertake a journey and the second type to actually setting out on the journey. In the case of the BODHISATTVA path, the first refers to the process of developing the aspiration to buddhahood for the sake of others, while the second refers to the undertaking the various practices of the bodhisattva path, such as the six perfections (PĀRAMITĀ). These two forms of bodhicitta are meant to be developed in sequence.

pratāpana. (P. mahātapa; T. rab tu tsha ba; C. dajiaore; J. daishōnetsu; K. taech'oyŏl 大焦熱). In Sanskrit, "very hot," one of the hot hells in Buddhist cosmology; its prefix distinguishes it from another hell, which is merely "hot" (TĀPANA). Pratāpana is the seventh of the eight hot hells in increasing order of horror, and is thus exceeded in this regard only by the worst hell of all, the "interminable" (AVĪCI). The sufferings of the pratāpana hell include being cast into a vast cauldron of molten metal and having one's body wrapped with rods of burning iron.

pratibhāna. (P. paṭibhāna; T. spobs pa; C. biancai; J. benzai; K. pyŏnjae 辯才). In Sanskrit, "eloquence," or "ready speech," referring typically to the ability to inspire others through one's words. Pratibhāna is included among the four types of analytical knowledge (PRATISAṂVID) that are mastered by BODHISATTVAS at the ninth BHŪMI. In the East Asian tradition, a bodhisattva is said to have, or is exhorted to attain, eight qualities of true eloquence when delivering Buddhist teachings. He should display eloquence that is (1) free of hectoring and bellowing (since an accomplished bodhisattva inherently possesses such majestic charisma that he does not need to inveigle his audience to pay attention); (2) unconfused and organized in his delivery; (3) confident and unfazed; (4) unconceited; (5) meaningful, wholesome, and conducive to skillfulness; (6) profound, interesting, and informed; (7) free from harshness; (8) seasonable, adaptive, and responsive to the conditions at hand.

pratibhāsa. (T. snang ba; C. xianxian; J. kengen; K. hyŏnhyŏn 顯現). A polysemous term in Sanskrit, whose denotations include "appearance" and "perception." The term is often used to describe what is perceived by consciousness (VIJÑĀNA), as opposed to the true nature of the object perceived. The term therefore often carries a negative connotation of something ephemeral and deceptive. Tantric literature describes a practice of "pure appearance" in which the ordinary world is visualized as a MAṆḌALA and one's own body is visualized as the body of a buddha.

pratideśanā. (P. paṭidesanā; T. so sor bshags pa; C. huiguo; J. keka; K. hoegwa 悔過). Often translated from Sanskrit as "confession," but meaning something closer to "disclosure" or "acknowledgment"; the practice of acknowledging one's misdeeds. It is the central practice of the fortnightly UPOṢADHA rites, where monks and nuns "disclose" or "confess" their transgressions of the PRĀTIMOKṢA precepts and is also an important part of MAHĀYĀNA liturgy, in which misdeeds are revealed during an additional recitation during the upoṣadha rites, or, in the absence of a community (SAṂGHA), to an image of the buddha or to visualized buddhas. In the prātimokṣa, the related term PRATIDEŚANĪYA refers specifically to four infractions that need only be acknowledged.

pratideśanīya. (P. pāṭidesanīya; T. so sor bshags par bya ba; C. duishou/boluotitisheni; J. taishu/haradaidaishani; K. taesu/parajejesani 對首/波羅提提舍尼). In Sanskrit, lit., "entailing acknowledgment" or "disclosure"; a group of four ecclesiastical

offenses related to the receiving and eating of food, which are to be disclosed to, or confessed before, another monk. These offenses include (1) receiving food from an unrelated nun in an uninhabited area, (2) not dismissing a nun who is giving orders while monks are eating, (3) consuming food received from a "family in training," that is, a family too poor to provide alms, and (4) consuming unsolicited food received in one's own residence in the wilderness while one is not ill. In certain recensions of the PRĀTIMOKṢA, such as the Pāli and MŪLASARVĀSTIVĀDA, the offenses entailing acknowledgment form a separate category of transgressions from other misdeeds that require confession, in that the words used in acknowledging the violation are specifically prescribed for these four rules.

pratigha. (P. paṭigha; T. khong khro; C. chen; J. shin; K. chin 瞋). In Sanskrit, "aversion," "hostility," or "repulsion," one of the primary mental afflictions (KLEŚA) and closely synonymous with "ill will" (DVEṢA). In the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA, pratigha is listed as the second of the six fundamental afflictions (MŪLAKLEŚA), along with greed (RĀGA), ignorance (AVIDYĀ), conceit (MĀNA), doubt (VICIKITSĀ), and wrong views (DṚṢṬI). These six kleśas, along with bhavarāga (the desire for continued existence) constitute the latent afflictions (anusayakilesa) in the Pāli ABHIDHAMMA. The YOGĀCĀRA school also uses the same list of six fundamental kleśas, including pratigha but replacing māna with stupidity (mūḍhi). In Buddhist psychology, when contact with sensory objects is made "without introspection" (ASAṂPRAJANYA), aversion can arise. Since aversion is a psychological reaction that is associated with repulsion, resistance, and active dislike of a displeasing stimulus, it can also generate secondary mental afflictions (UPAKLEŚA) that have pratigha as their common foundation, including "anger" (KRODHA), "enmity" (UPANĀHA), "agitation" (PRADĀSA), "envy" (ĪRṢYĀ), and "harmfulness" (VIHIṂSĀ). Because pratigha includes both cognitive and affective dimensions, it is not removed through insight upon entry into the path of vision (DARŚANAMĀRGA), but is abandoned only after repeated training on the path of cultivation (BHĀVANĀMĀRGA).

prātihārya. (P. pāṭihāriya; T. cho 'phrul; C. shixian; J. jigen; K. sihyŏn 示現). In Sanskrit, "wonder" or "miracle," miraculous powers generally said to be exclusive to a buddha. In this sense, the term is sometimes distinguished from ṚDDHI, or "magical powers," which results from the attainment of states of DHYĀNA. Among the many miracles ascribed to the Buddha, two are particularly famous and are widely depicted in Buddhist iconography. Both took place at ŚRĀVASTĪ, where the Buddha defeated a group of TĪRTHIKAS. The first is the so-called "dual miracle" (YAMAKAPRĀTIHĀRYA) in which the Buddha caused both fire and water to emanate from his body. The second is the "great miracle" (MAHĀPRĀTIHĀRYA) in which the Buddha, seated on a great lotus, multiplied himself until the sky was filled with buddhas, some seated, some standing, some walking, some lying down, each teaching the dharma. Three categories of miracles (triprātihārya) are also enumerated. The first, the "miracle of magical power" (ṛddhiprātihārya) includes the myriad supranormal powers of the Buddha, including the power to fly and to appear and disappear. The second, the "miracle of foretelling" (ādeśanāprātihārya), refers to the Buddha's ability to know the thoughts of others. The third, the "miracle of instruction," is the Buddha's unique ability to teach the dharma. Eight deeds of the Buddha, sometimes referred to as miracles, are commonly depicted during the Pāla period. Taking place at the eight "great sites" (MAHĀSTHĀNA), the eight are (1) the miracle of his birth at LUMBINĪ, (2) the defeat of MĀRA and achievement of buddhahood at BODHGAYĀ, (3) the turning of the wheel of the dharma (DHARMACAKRA) at ṚṢIPATANA (SĀRNĀTH), (4) miracles performed at ŚRĀVASTĪ, (5) the descent from the TRĀYASTRIṂŚA heaven at SĀṂKĀŚYA, (6) the taming of the elephant NĀLĀGIRI at RĀJAGṚHA, (7) the receipt of the monkey's gift of honey at VAIŚĀLĪ, and (8) the passage into PARINIRVĀṆA at KUŚINAGARĪ. (See also BAXIANG).

pratijñā. (T. dam bca'; C. lizong; J. risshū; K. ipchong 立宗). In Sanskrit, lit., "promise," but used in Buddhist logic (HETUVIDYĀ) to mean "thesis" or "proposition," that is, the position that one is seeking to prove to an opponent. In this sense, it used synonymously with PAKṢA and SĀDHYA ("what is to be established"). A thesis is composed of a subject and a predicate; for example, "the mountain is on fire," or "sound is impermanent," with mountain and sound being the subject. There is considerable discussion in Buddhist logic on what constitutes a valid thesis. According to DIGNĀGA, a thesis is a proposition intended by its proponent as something to be stated alone (i.e., without reasons or examples) and whose subject is not contradicted by direct perception (PRATYAKṢA), inference (ANUMĀNA), valid authorities (PRAMĀṆA), or what is commonly accepted as true. In the works of Dignāga and DHARMAKĪRTI (and their commentators), there is also considerable discussion of whether, in debating with an opponent, one's own thesis needs to be explicitly stated, or whether it can be implied. The term pratijñā is also important in the MADHYAMAKA school, deriving from NĀGĀRJUNA's famous declaration in his VIGRAHAVYĀVARTANĪ that he has no thesis, which became in Tibet one of the most commented upon statements in Madhyamaka literature.

prātimokṣa. (P. pāṭimokkha; T. so sor thar pa; C. boluotimucha; J. haradaimokusha; K. parajemokch'a 波羅提木叉). In Sanskrit, "code" or "rules," referring to a disciplinary code of conduct (of which there are several versions) for fully ordained monks (BHIKṢU) and nuns (BHIKṢUṆĪ), or a text that sets forth that code, which probably constitutes the oldest part of the various Buddhist VINAYAS. The pre-Buddhist denotation of prātimokṣa is uncertain, and may perhaps mean a promise that is to be redeemed; the Buddhist etymologies seem to indicate a "binding obligation" and, by extension, a monastic regulation.

Indian Buddhist schools tended to define themselves in terms of the particular monastic code to which they adhered, and differences in the interpretation of the rules of conduct resulted in the convening of councils (SAṂGĪTI) to adjudicate such differences and, ultimately, in the schisms that produced the various mainstream Buddhist schools. Several different recensions of the prātimokṣa are extant, but there are three main lineages followed within the Buddhist tradition today: the THERAVĀDA pāṭimokkha followed in Sri Lankan and Southeast Asian Buddhism; the DHARMAGUPTAKA prātimokṣa followed in Chinese and Korean Buddhism; and the MŪLASARVĀSTIVĀDA prātimokṣa followed in Tibetan Buddhism. Despite divergences in the numbers of rules listed in these codes (the Theravāda, for example, has 227 rules for bhikṣus, the Dharmaguptaka 250, and the Mūlasarvāstivāda 253, and all have considerably more rules for bhikṣuṇī), there is substantial agreement among the prātimokṣa of the various mainstream Buddhist schools. They are all similarly structured, with separate codes for monks and nuns, enumerating a set of categories of transgressions: (1) PĀRĀJIKA transgressions of ethical expectations that were so serious as to bring "defeat" and in some vinaya traditions to require expulsion from the order, e.g., engaging in sexual intercourse and murder; (2) SAṂGHĀVAŚEṢA, transgressions entailing temporary suspension from the order, such as masturbation, acting as a go-between for sexual liaisons, or attempting to cause schism in the order (SAṂGHABHEDA); (3) ANIYATA, undetermined cases exclusive to monks who are found with women, which require investigation by the saṃgha; (4) NAIḤSARGIKAPĀYATTIKA, transgressions requiring confession and forfeiture of a prohibited object, such as hoarding excessive numbers of robes (CĪVARA), begging bowls (PĀTRA), and medicine, or keeping gold and silver; (5) PĀYATTIKA, transgressions that can be expiated through confession alone, such as lying; (6) PRATIDEŚANĪYA, minor transgressions to be acknowledged, related to receiving and eating food, which were to be confessed; (7) ŚAIKṢA, minor training rules governing monastic etiquette and deportment, such as not wearing robes sloppily or eating noisily, violations of which were called DUṢKṚTA, lit. "bad actions." Both the bhikṣu and bhikṣuṇī prātimokṣa also include (8) ADHIKARAṆAŚAMATHA, seven methods of resolving ecclesiastical disputes. Regardless of the school, the prātimokṣa was recited separately during the fortnightly UPOṢADHA ceremony by chapters of monks and nuns who gather inside a purified SĪMĀ boundary. All monks and nuns were expected to have confessed (see PĀPADEŚANĀ) to any transgressions of the rules during the last fortnight prior to the recitation of the code, thus expiating them of that transgression. At the conclusion of the recitation of each category of transgression, the reciter questions the congregation as to whether the congregation is pure; silence indicates assent.

prātimokṣasaṃvara. (T. so sor thar pa'i sdom pa; C. boluotimuchahu/biejietuo lüyi; J. haradaimokushago/betsugedatsu ritsugi; K. parajemokch'aho/pyŏrhaet'al yurŭi 波羅提木叉護/別解脫律儀). In Sanskrit, "restraint proffered by the disciplinary code" (PRĀTIMOKṢA); one of the three types of restraint (SAṂVARA) mentioned in the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA, which are associated with "unmanifest material force" or "hidden imprints" (AVIJÑAPTIRŪPA). In Sarvāstivāda literature, three types of restraint (saṃvara) against unwholesome (AKUŚALA) actions are mentioned: (1) the restraint proffered to a monk or nun when he or she accepts the disciplinary rules of the order (prātimokṣasaṃvara); (2) the restraint that is produced through mental absorption (dhyānasaṃvara); and (3) the restraint that derives from being free from the contaminants (anāsravasaṃvara). The restraint inherent in the disciplinary code creates a special kind of "force field" that automatically protects and dissuades monks and nuns from unwholesome activity, even when they are not consciously aware that they are following the precepts or when they are asleep. This specific type of restraint is what makes a person a monk or a nun, since just wearing robes and following an ascetic way of life would not in themselves be enough to instill in him or her the protective power offered by the prātimokṣa. This particular type of avijñaptirūpa thus creates an invisible and impalpable barrier that helps to protect the monk or the nun from unwholesome action. The prātimokṣasaṃvara is incorporated into later MAHĀYĀNA Buddhist and tantric Buddhist codes (see SDOM GSUM; TRISAṂVARA).

Prātimokṣasūtra. (T. So sor thar pa'i mdo; C. Jie ben; J. Kaihon; K. Kye pon 戒本). In Sanskrit, "Sūtra on the Code," a scripture that provides a separate listing of the code of conduct and monastic rules (PRĀTIMOKṢA) for monks (BHIKṢU) and for nuns (BHIKṢUṆĪ). Several of the mainstream Buddhist schools, including the MAHĀSĀṂGHIKA and MŪLASARVĀSTIVĀDA schools, had a separate text, called the *Prātimokṣasūtra*, that listed the prātimokṣa rules for monks and for nuns. There is no such separate text in the THERAVĀDA school, where the pāṭimokkha is included in the SUTTAVIBHAṄGA, the first major section of the Pāli VINAYAPIṬAKA, which includes the *mahāvibhaṅga* with the rules for monks and the *bhikkunīvibhaṅga* with the rules for nuns.

pratinivāsana. See NIVĀSANA.

pratipakṣa. (P. paṭipakkha; T. gnyen po; C. duizhi; J. taiji; K. taech'i 對治). In Sanskrit, lit., "opposite"; a "counteragent" or "antidote," a factor which, when present, precludes the presence of its opposite. In Buddhist meditation theory, an antidote may be a virtuous (KUŚALA) mental state (CAITTA) that is applied as a counteragent against a nonvirtuous (AKUŚALA) mental state. The Buddhist premise that two contrary mental states cannot exist simultaneously leads to the development of specific meditations to be used as such counteragents, sometimes called the five "inhibitory" contemplations (C. zhiguan, tingguan): (1) lust (RĀGA) is countered by the contemplations on impurity (AŚUBHABHĀVANĀ), e.g., the cemetery contemplations on the stages in the decomposition of a corpse; (2) hatred (DVEṢA)

is countered by the divine abiding (BRAHMAVIHĀRA) of loving-kindness (MAITRĪ); (3) delusion (MOHA) is countered by contemplating the twelvefold chain of dependent origination (PRATĪTYA-SAMUTPĀDA); (4) ego-conceit (asmimāna) is countered by the contemplation on the eighteen sense-fields (DHĀTU); and (5) discursive thought (VITARKA) is countered by mindfulness of breathing (ĀNĀPĀNASMṚTI). Progress on the path to liberation is also described technically in terms of the abandonment of a specific afflictive state (KLEŚA) through the application of its specific antidote. Thus, afflictions and their antidotes are enumerated for the nine levels of SAṂSĀRA (the sensuous realm, or KĀMADHĀTU, the four levels of the subtle-materiality realm, or RŪPADHĀTU, and the four levels of the immaterial realm, or ARŪPYADHĀTU). In each case, the antidote is an increasingly powerful level of wisdom (PRAJÑĀ) that displaces increasingly subtle levels of the afflictions. Both the four types of noble persons (ĀRYAPUDGALA) and the ten stages (BHŪMI) of the bodhisattva are defined by which antidotes have been successfully applied to eradicate specific afflictions. Thus, the accumulation and application of various antidotes is one of the practices that a bodhisattva must learn to perfect. The Buddha is said to have taught 84,000 antidotes for the 84,000 afflictions.

pratipatti. (P. paṭipatti; T. sgrub pa; C. xiuxing; J. shugyō; K. suhaeng 修行). In Sanskrit, "practice," "progress"; one of four aspects of the truth of the path (MĀRGASATYA), the fourth of the so-called FOUR NOBLE TRUTHS (catvāry āryasatyāni). The other aspects are mārga (path), nyāya (correct method), and nairyāṇika (providing a definite escape). As a word descriptive of the path, pratipatti is a word for all the practices, from the beginning practices of neophytes up to the final practices of noble beings (ĀRYA). In all cases the practice avoids the extremes (see MADHYAMAPRATIPAD) of self-indulgence and self-mortification, or the extreme views of eternalism (ŚĀŚVATADṚṢṬI) and annihilationism (UCCHEDADṚṢṬI). See also PAṬIPATTI.

pratirūpaka. (S). See SADDHARMAPRATIRŪPAKA.

pratisaṃkakṣikā. (S). See SAṂKAKṢIKĀ.

pratisaṃkhyānirodha. (T. so sor brtags 'gog; C. zemie; J. chakumetsu; K. t'aengmyŏl 擇滅). In Sanskrit, "analytical cessation," the permanent elimination of an affliction (KLEŚA) that occurs as a result of meditative analysis of the true nature of phenomena; one of the uncompounded factors (ASAṂSKṚTA–DHARMA) recognized in both the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA and the YOGĀCĀRA schools. The "true cessations" or "truth of cessation" (NIRODHASATYA) that constitute the third of the four noble truths (see NIRODHASATYA) involve analytical cessations. Analytical cessations are permanent phenomena because they are the permanent absence of a specific kleśa, essentially serving as a kind of "place marker" that ensures that a kleśa, once eliminated, can never recur. Analytical cessations are distinguished from nonanalytical suppressions (APRATISAṂKHYĀNIRODHA), which are neither an object of knowledge nor the result of insight; they suppress the production of any kind of dharma, ensuring (in the Sarvāstivāda interpretation) that they remain positioned in future mode and are never again able to arise in the present. The state of the analytical cessation of all the kleśas is synonymous with NIRVĀṆA.

pratisaṃlayana. (P. paṭisallāna; T. nang du yang dag 'jog pa; C. yanmo/jimo; J. enmoku/jakumoku; K. yŏnmuk/chŏngmuk 宴默/寂默). In Sanskrit, "seclusion" or "retirement"; withdrawing to a secluded place, such as the proverbial "root of a tree," so that one may rest or, in its technical usage, so that one may train in meditation free of distractions. By extension, pratisaṃlayana refers also to the mental "isolation" or "seclusion" that accompanies meditative practice. Pratisaṃlayana is listed as one of the constituents of practice (yogāṅga) and is sometimes described as a specific type of meditative absorption (DHYĀNA) in its own right.

pratisaṃvid. (P. paṭisaṃbhidā; T. so sor yang dag par rig pa; C. wu'ai jie; J. mugege; K. muae hae 無礙解). In Sanskrit, "analytical knowledge," of which there are four kinds: knowledge of (1) factors or phenomena (DHARMA), viz., one makes no mistakes in understanding causes, conditions, or the relationships pertaining between objects; (2) meaning (ARTHA), viz., to have no limitations with regard to the content, meaning, and analysis of one's teachings; (3) etymology or language (NIRUKTI), viz., the ability to comprehend all languages, including those of the divinities (DEVA) and other nonhuman beings (YAKṢA, GANDHARVA, ASURA, GARUḌA, KIṂNARA, MAHORĀGA), and to penetrate the full range of etymological or linguistic expressions; and (4) eloquence (PRATIBHĀNA), viz., ease in offering explanations and/or the ability to inspire others with one's words. These four types of knowledge are associated with both the attainment of arhatship and the achievement of the ninth of the ten stages (DAŚABHŪMI) of the BODHISATTVA path. In Chinese, these were known as the "unconstrained knowledges" (wu'ai jie).

pratisaraṇa. [alt. pratiśaraṇa] (P. paṭisaraṇa; T. rton pa; C. yi; J. e; K. ŭi 依). In Sanskrit, "reliance," "support," or "point of reference"; four things to be relied upon in the interpretation of a given teaching. The four are (1) to rely on the meaning (ARTHA), not the mere "letter" (vyañjana) or words; (2) to rely on the teachings (DHARMA), not the person (PUDGALA) who delivers those teachings; (3) to rely on true gnosis or knowledge (JÑĀNA), not the unreliable testimony of the ordinary consciousnesses (VIJÑĀNA); (4) to rely on the definitive meaning (NĪTĀRTHA), not the provisional meaning (NEYĀRTHA).

pratiṣedha. (T. dgag pa; C. zhe; J. sha; K. ch'a 遮). In Sanskrit, "negative" or "negation," the refutation of an opponent's position. The term is also used to mean "negative phenomenon,"

that is, a phenomenon that is understood through the elimination of another factor. Examples would include ĀKĀŚA ("space," when defined as the lack of obstruction) and ANĀTMAN (nonself), the absence of a self. In Buddhist logic, there are two types of negation, the "affirming negation" (PARYUDĀSAPRATIṢEDHA), which negates something while implying the existence of something else, and the "nonaffirming negation" (PRASAJYAPRATIṢEDHA), which negates without such implication.

pratiṣedhya. (T. dgag bya). In Sanskrit, "object of negation," that factor which is eliminated through the process of understanding a particular negative phenomenon (PRATIṢEDHA). The term is used especially in the context of discussions of nonself (ANĀTMAN) and emptiness (ŚŪNYATĀ), where the precise nature of what is being negated (that is, the meaning of self) is of great importance. If self is defined too narrowly, the conception of self that is the root cause of suffering may not be eliminated; if self is defined too broadly, there is a danger of falling into nihilism by denying even the conventional existence of such things are rebirth, KARMAN, and the efficacy of the path (MĀRGA).

pratiṣṭhā. (P. patiṭṭhā; T. rab tu gnas pa; C. jianli; J. konryū; K. kŏllip 建立). In Sanskrit, lit. "establishment," or "installation," but often having the sense of "consecration," especially of a monastery, temple, or buddha-image. There are numerous forms of consecration ceremonies across the Buddhist world. In the case of the consecration of buddha images, these ceremonies seek to cause the buddha to "enter" into his physical representation. In some cases, this consecration is done by reciting the life story of the Buddha in the presence of the image; in other cases, the DHARMAKĀYA of the buddha is invoked and requested to enter into the image. See also DIANYAN; KAIYAN; BUDDHĀBHIṢEKA.

pratiṣṭhitanirvāṇa. (T. gnas pa'i mya ngan las 'das pa; C. zhu niepan; J. jūnehan; K. chu yŏlban 住涅槃). In Sanskrit, "static NIRVĀṆA" or "localized nirvāṇa," a term used in the MAHĀYĀNA, often pejoratively, to describe the nirvāṇa of the ARHAT, which is "static" or "located" in a state of isolated serenity that transcends SAṂSĀRA. This type of nirvāṇa is contrasted with the "unlocalized nirvāṇa" (APRATIṢṬHITANIRVĀṆA) of a buddha which is not localized in either saṃsāra or the isolation of the arhat, but is instead a dynamic state that allows him to participate in the world while remaining forever untainted by it.

pratītyasamutpāda. (P. paṭiccasamuppāda; T. rten cing 'brel bar 'byung ba; C. yuanqi; J. engi; K. yŏn'gi 緣起). In Sanskrit, "dependent origination," "conditioned origination," lit., "origination by dependence" (of one thing on another); one of the core teachings in the Buddhist doctrinal system, having both ontological, epistemological, and soteriological implications. The notion of the conditionality of all existence is foundational in Buddhism. According to some accounts of the Buddha's life, it constituted the fundamental insight on the night of his enlightenment. In other accounts, in the first seven days and nights following his enlightenment, he sat contemplating the significance of his experience; finally on the seventh night he is said to have contemplated the fully realized chain of dependent origination in both forward and reverse order. In one of the earliest summaries of the Buddha's teachings (which is said to have been enough to bring ŚĀRIPUTRA to enlightenment), the Buddha is said to have taught: "When this is present, that comes to be. / From the arising of this, that arises. / When this is absent, that does not come to be. / From the cessation of this, that ceases." (P. imasmiṃ sati idaṃ hoti/imasuppādā idaṃ uppajjati/imasmiṃ asati idaṃ na hoti/imassa nirodhā idaṃ nirujjhati). This notion of causality (idaṃpratyayatā) is normatively described in a sequence of causation involving twelve interconnected links (NIDĀNA), which are often called the "twelvefold chain" in English sources: (1) ignorance (AVIDYĀ, P. avijjā), (2) predispositions, or volitional actions (S. SAṂSKĀRA, P. saṅkhāra), (3) consciousness (S. VIJÑĀNA, P. viññāṇa), (4) name and form, or mentality and materiality (NĀMARŪPA), (5) the six internal sense-bases (ĀYATANA), (6) sensory contact (S. SPARŚA, P. phassa), (7) sensation, or feeling (VEDANĀ), (8) thirst, or attachment (S. TṚṢṆĀ, P. taṇhā), (9) grasping, or clinging (UPĀDĀNA), (10) existence or a process of becoming (BHAVA), (11) birth or rebirth (JĀTI), and (12) old age and death (JARĀMARAṆA), this last link accompanied in its full recital by sorrow (śoka), lamentation (parideva), pain (DUḤKHA) grief (daurmanasya), and despair (upāyāsa). Some formulations of the chain, as in the MAHĀPADĀNASUTTANTA, include only ten links (skipping the first two), suggesting that the standard list of twelve links developed over time. (The commentary to the *Mahāpadānasuttanta* explains away this inconsistency by noting that the ten-linked chain does not take past lives into account but applies only to the current life.) Each link in this chain of causality is said to be the condition for the following link, thus: "dependent on ignorance, predispositions (S. avidyāpratyayāḥ saṃskārāḥ; P. avijjāpaccayā saṅkhārā), … dependent on birth, old age and death (S. jātipratyayāṃ jarāmaraṇaṃ; P. jātipaccayā jarāmaraṇaṃ)." This chain of dependent origination stands as the middle way (MADHYAMAPRATIPAD) between the two "extreme views" (ANTAGRĀHADṚṢṬI) of eternalism (ŚĀŚVATADṚṢṬI)—viz., the view that there is a perduring soul that continues to be reborn unchanged from one lifetime to the next—and annihilationism (UCCHEDADṚṢṬI)—the view that the person ceases to exist at death and is not reborn—because it validates the imputed continuity (SAṂTĀNA) of the personality, without injecting any sense of a permanent substratum of existence into the process. Thus, when the Buddha is asked, "Who is it who senses?," he rejects the question as wrongly framed and rephrases it as, "With what as condition does sensation (vedanā) occur? By contact (sparśa)." Or when asked, "Who is it who is reborn?," he would rephrase the question as "With what as condition does birth (jāti) occur? By becoming (bhava)."

Accurate understanding of dependent origination thus serves as an antidote (PRATIPAKṢA) to the affliction of delusion (MOHA) and contemplating the links in this chain helps to overcome ignorance (AVIDYĀ). ¶ The twelvefold chain of dependent origination is generally conceived to unfold in what are referred to as the "forward" and "reverse" orders, although in fact both versions proceed through the chain in the same sequence. First, as a progressive process of ontological becoming (bhavānulomaparīkṣā), the forward version of the chain describes the process by which ignorance ultimately leads to birth and death and thus the full panoply of existence in the turning wheel of SAṂSĀRA; in forward order, the chain is therefore an elaboration of the second noble truth, the truth of the origin of suffering (SAMUDAYASATYA). Second, the reverse order of the chain describes a negative process of soteriological eradication (kṣayavyayānulomaparīkṣā), where the cessation of ignorance serves as the condition for the cessation of predispositions, and so on through the entire chain until even old age and death are eradicated and the adept is released from continued rebirth in saṃsāra; in reverse order, the chain is therefore an elaboration of the third noble truth, the truth of the cessation of suffering (NIRODHASATYA). As a chain of ontological becoming, some traditional commentators organize the twelve links as occurring during the course of a single lifetime. Other commentators instead divide the twelve links over three lifetimes to illustrate explicitly the process of rebirth: ignorance and predispositions are assigned to a previous lifetime; consciousness, name and form, sense-fields, contact, sensation, thirst, grasping, and becoming are assigned to the current lifetime; and this leads to future birth, and eventual old age and death, in the immediately following lifetime. According to this interpretation, ignorance does not refer to a primordial ignorance, but rather to a specific moment of unsystematic reflection on things (AYONIŚOMANASKĀRA) that prompts a volitional action (saṃskāra). The predispositions created by that action imprint themselves on consciousness, which refers here to the "linking consciousness" (pratisaṃdhivijñāna) that links the past and present lives, a consciousness that is reborn, developing into a body with internal sense organs and a mind with sensory consciousnesses, which come into contact with external sensory objects, giving rise to sensations that are pleasant, unpleasant, or neutral. Sensations of pleasure, for example, can give rise to attachment to those sensations and then clinging, an intensification of that attachment. Such clinging at the end of life sustains the process of becoming, which leads to rebirth in the next existence, where one once again undergoes aging and death. This sequence of dependent conditions has repeated itself since time immemorial and will continue on indefinitely until liberation from rebirth is achieved. To illustrate the role of pratītyasamutpāda in the cycle of rebirth, its twelve links are sometimes depicted around the perimeter of the "wheel of life" (BHAVACAKRA). ¶ In the *Upanisāsutta* of the SAṂYUTTANIKĀYA, the standard twelvefold chain of dependent origination is connected to an alternate chain that is designated the "supramundane dependent origination" (P. lokuttara-paṭiccasamuppāda; S. lokottara-pratītyasamutpāda), which explicitly outlines the process leading to liberation. Here, the last factor in the standard chain, that of old age and death (jarāmaraṇa), is substituted with suffering, which in turn becomes the first factor in this alternate series. According to the *Nettipakaraṇa*, a Pāli exegetical treatise, this chain of supramundane dependent origination consists of (1) suffering (P. dukkha; S. duḥkha), (2) faith (P. saddhā; S. ŚRADDHĀ), (3) delight or satisfaction (P. pāmojja; S. prāmodya), (4) rapture or joy (P. pīti; S. PRĪTI), (5) tranquillity or repose (P. passaddhi; S. PRAŚRABDHI), (6) mental ease or bliss (SUKHA), (7) concentration (SAMĀDHI), (8) knowledge and vision that accords with reality (P. yathābhūtañāṇadassana; S. YATHĀBHŪTAJÑĀNADARŚANA), (9) disillusionment (P. nibbidā; S. NIRVEDA), (10) dispassion (P. virāga; S. VAIRĀGYA), (11) liberation (P. vimutti; S. VIMUKTI), and (12) knowledge of the destruction of the contaminants (P. āsavakkhayañāṇa; S. āsravakṣayajñāna; see ĀSRAVAKṢAYA). The *Kimatthiyasutta* of the AṄGUTTARANIKĀYA gives a slightly different version of the first links, replacing suffering and faith with (1) observance of precepts (P. kusalasīla; S. kuśalaśīla) and (2) freedom from remorse (P. avippaṭisāra; S. avipratisāra). ¶ Another denotation of pratītyasamutpāda is a more general one, the notion that everything comes into existence in dependence on something else, with such dependence including the dependence of an effect upon its cause, the dependence of a whole upon its parts, and the dependence of an object on the consciousness that designates it. This second meaning is especially associated with the MADHYAMAKA school of NĀGĀRJUNA, which sees a necessary relation between dependent origination and emptiness (ŚŪNYATĀ), arguing that because everything is dependently arisen, everything is empty of independence and intrinsic existence (SVABHĀVA). Dependent origination is thus central to Nāgārjuna's conception of the middle way: because everything is dependent, nothing is independent, thus avoiding the extreme of existence, but because everything is originated, nothing is utterly nonexistent, thus avoiding the extreme of nonexistence. In East Asia, and specifically the HUAYAN ZONG, this second interpretation of dependent origination is also recast as the unimpeded (wu'ai) "dependent origination of the DHARMADHĀTU" (FAJIE YUANQI), in which all things throughout the entire universe are conceived as being enmeshed in a multivalent web of interconnection and interdependency.

Pratītyasamutpādahṛdayakārikā. (T. Rten cing 'brel bar 'byung ba'i snying po'i tshig le'ur byas pa; C. Shi'er yinyuan lun; J. Jūniinnenron; K. Sibi inyŏn non 十二因緣論). In Sanskrit, "Verses on the Essence of Dependent Origination," a work attributed to NĀGĀRJUNA by BHĀVAVIVEKA. The work seeks to reconcile the two major meanings of PRATĪTYASAMUTPĀDA: that of a twelvefold sequence of cause and effect and a more general sense of phenomena arising in dependence on causes, which he sets forth in his MŪLAMADHYAMAKAKĀRIKĀ. Nāgārjuna qualifies the twelve links in the chain of causation under three headings, with ignorance (AVIDYĀ), attachment (TṚṢṆĀ), and grasping (UPĀDĀNA) classified as afflictions (KLEŚA);

predispositions (SAṂSKĀRA) and existence (BHAVA) as action (KARMAN); and the remaining seven as forms of suffering (DUḤKHA). Those five that are classified as kleśa and karman are also causes; the remaining seven are effects. The "essence" of pratītyasamutpāda in the title is the lack of self in both the person (PUDGALA) and the aggregates (SKANDHA).

***Pratītyasamutpādaśāstra**. (C. Yuansheng lun; J. Enshōron; K. Yŏnsaeng non 緣生論). In Sanskrit, "Treatise on Dependent Origination," a work by Ullaṅgha in thirty verses, with a prose explanation. The work is lost in Sanskrit and was translated into Chinese by Dharmagupta in 607 during the Daye era (605–616) of the Sui dynasty.

Pratītyasamutpādavibhaṅganirdeśasūtra. (T. Rten cing 'brel bar 'byung ba dang po dang rnam par dbye ba bstan pa zhes bya ba'i mdo). In Sanskrit, "Sūtra Setting Forth the Divisions of Dependent Origination," also known as the *Pratītyasamutpādādivibhaṅganirdeśasūtra*, a work discovered inscribed on two bricks at NĀLANDĀ monastery. The sūtra was commented upon by VASUBANDHU in his *Pratītyasamutpādavyākhyā*, with a subcommentary by Guṇamati.

prativedha. (P. paṭivedha; T. khong du chud pa; C. tongda; J. tsūdatsu; K. t'ongdal 通達). In Sanskrit, "penetration," or "direct realization," signifying the direct realization of the truth. Commonly, this realization, or actualization, of the truth is contrasted with the textual study of descriptions of the truth (PARIYATTI), or the soteriological practice of it (PAṬIPATTI). Prativedha is the culmination and fulfillment of these two prior disciplines. Thus the dharma is to be first studied, then practiced, and ultimately realized. In Pāli sources, paṭivedha (S. prativedha) is stratified into four degrees of liberation, beginning with the attainment of a "stream-enterer" (P. sotāpanna, S. SROTAĀPANNA), then "once-returner" (P. sakadāgāmi, S. SAKṚDĀGĀMIN), "nonreturner" (P. anāgāmi, S. ANĀGĀMIN), and finally arahant (S. ARHAT). It is understood that the last of these four degrees of penetration into the truth frees one from suffering and the prospect of further rebirth.

pratyakṣa. (T. mngon sum; C. xianliang; J. genryō; K. hyŏllyang 現量). In Sanskrit, "direct perception," cognition that is unmistaken in the sense that it correctly apprehends qualities such as shape and color, and is nonconceptual, in the sense that it does not perceive its object through the medium of an image, as does thought (KALPANĀ). In Buddhist epistemology, direct perception is one of only two forms of valid knowledge (PRAMĀṆA), along with inference (ANUMĀNA). Four types of direct perception are enumerated. The first is sensory direct perception, in which the five external sense objects are perceived directly by the sense consciousnesses (VIJÑĀNA), in reliance on the five sense organs (INDRIYA). This form of direct perception is to be differentiated from SAMJÑĀ, also sometimes translated as "perception." The latter term refers to the specific function of consciousness to apprehend the various characteristics of a given object or to differentiate between two objects. The second kind of direct perception is mental direct perception (MANONUBHAVA-PRATYAKṢA), which, according to one interpretation, includes a brief and unnoticed moment of direct perception by the mind at the end of sensory direct perception, with that moment of mental direct perception inducing the conceptual cognition of the object. Mental direct perception also includes the five ABHIJÑĀ, which result from states of deep concentration. The third type is self-knowing direct perception (svasaṃvedana), a function of self-consciousness, which observes a consciousness apprehending its object. It is this form of direct perception that makes possible memory of former moments of consciousness. The fourth type is yogic direct perception (YOGIPRATYAKṢA), which occurs only on one of the noble paths (ĀRYAMĀRGA), where the truth is directly perceived through a union of ŚAMATHA and VIPAŚYANĀ.

pratyālīḍha. (T. g.yon brkyang ba; C. zhanzuo; J. tensa; K. chŏnjwa 展左). In Sanskrit, lit., "extended to the left"; a term used to describe the Buddhist iconographical posture (ĀSANA), in which the figure holds the left leg bent forward at the knee with the right leg extended back in a lunging posture. While the term generally refers to standing postures, it may also apply to seated poses, and is distinguished from ĀLĪḌHA, where the leg positions are reversed. In Tibetan tantric art, the pratyālīḍha posture is often found in deities of the PITṚTANTRA class. See also ĀSANA.

pratyāstaraṇa. (P. paccattharaṇa; T. gding ba; C. woju; J. gagu; K. wagu 臥具). A sheet or mat permitted as one of the possessions of a Buddhist monk. The Buddha initially had allowed monks to place their few belongings on a piece of cloth. When monks pointed out to the Buddha that their sitting mat (NIṢĪDANA) was too small for lying down, he allowed them to have a larger piece of cloth that they could spread on the ground or the floor of their cell where they could rest or sleep.

pratyātmādhigama. (T. so sor rang gis rig pa; C. neizheng; J. naishō; K. naejŭng 內證). In Sanskrit, "specific understanding" or "individual understanding," a term used to describe the personal realization of a buddha, which is entirely nonconceptual and inexpressible. It is this realization that a buddha then compassionately translates into concepts and words in order to teach the dharma to sentient beings.

pratyavekṣaṇājñāna. (T. so sor rtogs pa'i ye shes; C. miao guancha zhi; J. myōkanzatchi; K. myo kwanch'al chi 妙觀察智). In Sanskrit, "wisdom of specific knowledge" (the Chinese means "wisdom of sublime investigation"); one of the five wisdoms (PAÑCAJÑĀNA) of a buddha in the MAHĀYĀNA, and specifically in the YOGĀCĀRA school, which are said to be achieved when consciousness is purified of afflictions (KLEŚA); each of

these wisdoms thus entails a transformation of the one or more of the eight consciousnesses. According to the CHENG WEISHI LUN, pratyavekṣaṇājñāna is a transformation of the sixth MANOVIJÑĀNA and is a buddha's direct understanding of the general and specific characteristics of all the phenomena in the universe.

pratyaya. (P. paccaya; T. rkyen; C. yuan; J. en; K. yŏn 緣). In Sanskrit, "condition"; referring generally to the subsidiary factors whose concomitance results in the production of an effect from a cause, especially in the compound HETUPRATYAYA ("causes and conditions"). For example, in the production of a sprout from a seed, the seed would be the cause (HETU), while such factors as heat and moisture would be conditions (pratyaya). Given the centrality of the doctrine of causality of Buddhist thought, detailed lists and descriptions of conditions appear in all strata of Buddhist literature. In the context of epistemology, in the case of the perception of a tree by a moment of visual consciousness (CAKṢURVIJÑĀNA), the prior moment of consciousness that leads to this specific visual consciousness is called the immediately antecedent condition (SAMANANTARAPRATYAYA), the tree is called the object condition (ĀLAMBANAPRATYAYA), and the visual sense organ is called the predominant condition (ADHIPATIPRATYAYA); the "cooperative condition" (SAHAKĀRIPRATYAYA) is the subsidiary conditions that must be present in order for an effect to be produced, such as for light to be present in order to generate visual consciousness, or the presence of heat and moisture for a seed to grow into a sprout. ¶ A much more detailed roster of these conditions occurs in a detailed list of twenty-four conditions enumerated in the PAṬṬHĀNA, the seventh book of the Pāli ABHIDHAMMAPIṬAKA, a work that applies twenty-four specific conditions to the mental and physical phenomena of existence and presents a detailed account of the Pāli interpretation of the doctrine of dependent origination (P. paṭiccasamuppāda; S. PRATĪTYASAMUTPĀDA). The twenty-four conditions are (1) the root condition (hetupaccaya), the condition upon which mental states entirely depend, such as a tree depending on its root. These root conditions are greed (LOBHA), hate (P. dosa, S. DVEṢA), and delusion (MOHA) in the case of unwholesome mental states, or greedlessness (alobha), hatelessness (adosa; DVEṢA), and undeludedness (amoha) in the case of wholesome mental states. Without these roots being present, the respective mental states cannot exist. (2) The object condition (ārammaṇapaccaya) is an object of perception and as such forms the condition for mental phenomena. External sense objects, such a sound, comprise the object conditions for the five physical sense consciousnesses, while mental objects such as thoughts, emotions, and memories comprise the object condition for the single internal sense consciousness of mind. (3) The dominant condition (adhipatipaccaya) gives rise to mental phenomena by way of predominance and can be one of four types: intention (chanda), energy (viriya), consciousness (citta), and investigation (vīmaṃsā). At any given time only one of the four conditions can predominate in a state of consciousness. (4) The proximate condition (anantarapaccaya) and (5) the immediately antecedent condition (samanantarapaccaya) refer to any stage in the process of consciousness that serves as the condition for the immediately following stage. For example, an eye consciousness that sees a visual object functions as the immediately antecedent condition for the arising in the next moment of the mental consciousness that receives the visual image. The mental consciousness, in turn, serves as the immediately antecedent condition for the mental consciousness that performs the function of investigating the object. (6) The cooperative condition (sahajātapaccaya) is any phenomenon or condition the arising of which necessitates the simultaneous arising of another thing; for example, any one of the four mental aggregates (P. khandha; S. SKANDHA) of feeling (vedanā), conception (P. saññā; S. SAṂJÑĀ), conditioning factors (P. saṅkhāra; S. SAṂSKĀRA), and consciousness (P. viññāṇa; S. VIJÑĀNA) functions as the cooperative condition for all the rest, since all four invariably arise together in the same moment. (7) The condition by way of mutuality (aññāmaññapaccaya) refers to the fact that all simultaneous phenomena, such as the mental aggregates mentioned above, are mutually supportive and so are also conditioned by way of mutuality; they arise and fall in dependence on one another. (8) The support condition (nissayapaccaya) is a preceding or simultaneous condition that functions as a foundation for another phenomenon in the manner of earth for a tree. An example is the five external sense organs (eye, ear, nose, tongue and body) and the one internal mental sense organ (mind), which are the preceding and simultaneous conditions for the six kinds of consciousness that arise when sense organs come into contact with their respective objects. (9) The decisive support condition (upanissayapaccaya) is anything that functions as a strong inducement to moral, immoral, or neutral mental or physical action. It is of three kinds: (a) by way of object (ārammaṇa), which can be any real or imaginary object of thought; (b) by way of proximity; and (c) by way of natural support (pakati), which includes such things as mental attitudes and associations with friends that can act as natural inducements to either wholesome or unwholesome behavior, or climate and food that induce health or illness of the body. (10) The prenascent condition (purejātapaccaya) is something previously arisen that forms a base for something arising later. An example is the five physical sense organs and the physical base of mind that, having already arisen, form the condition for the arising of consciousness through their operation. (11) The postnascent condition (pacchājātapaccaya) refers to consciousness arisen through the operation of the senses, because it serves as the necessary condition for the continued preservation of this already arisen body with its functioning senses. (12) The repetition condition (āsevanapaccaya) refers to impulsion moments of consciousness (javana) that arise in a series, each time serving as a condition for succeeding moments by way of repetition and frequency. (13) The action condition (kammapaccaya) refers to the KARMAN or karmic volitions (kammacetanā) of a previous

birth that functioned to generate the physical and mental characteristics of an individual's present existence. (14) The karma-result condition (vipākapaccaya) refers to the five karmically resultant external sense consciousnesses that function as simultaneous conditions for other mental and physical phenomena. (15) The nutriment condition (āhārapaccaya) is of four kinds and refers to material food (kabalinkārāhāra), which is food for the body; sensory and mental contact (phassa), which is food for sensation (vedanā); mental volition (CETANĀ = karman), which is food for rebirth; and consciousness (viññāna), which is food for the mind-body complex (NĀMARŪPA) at the moment of conception. (16) The faculty condition (indriyapaccaya) refers to twenty of twenty-two faculties (INDRIYA) enumerated in the Pāli abhidhamma out of which, for example, the five external sense faculties form the condition for their respective sense consciousnesses. (17) The meditative-absorption condition (jhānapaccaya) refers to a list of seven jhāna factors as conditions for simultaneous mental and corporeal phenomena. They are thought (vitakka), imagination (vicāra), rapture (pīti), joy (sukha), sadness (domanassa), indifference (upekkhā), and concentration (samādhi). (18) The path condition (maggapaccaya) refers to twelve path factors that condition progress along the path. These are: wisdom (paññā), thought-conception (vitakka), right speech (sammavācā), right bodily action (sammakammanta), right livelihood (sammajīva), energy (viriya), mindfulness (sati), concentration (samādhi), wrong views (micchāditthi), wrong speech (micchāvācā), wrong bodily action (micchākammanta), and wrong livelihood (micchājīva). (19) The association condition (sampayuttapaccaya) refers to the four mental aggregates of feeling (vedanā), perception (saññā), mental formations (saṅkhāra), and consciousness (viññāṇa), which assist one another by association through sharing a common physical base, a common object, and arising and passing away simultaneously. (20) The dissociation condition (vippayuttapaccaya) refers to phenomena that assist other phenomena by virtue of not having the same physical base and objects. (21 and 24) The presence condition (atthipaccaya) and the nondisappearance condition (avigatapaccaya) refer to any phenomenon that through its presence is a condition for other phenomena. (22 and 23) The absence condition (natthipaccaya) and the disappearance condition (vigatapaccaya) refer to any phenomenon, such as a moment of consciousness, which having just passed away constitutes the necessary condition for the immediately following moment of the same phenomenon by providing an opportunity for it to arise. ¶ The SARVĀSTIVĀDA school also recognizes a list of four conditions, all of which appear in the preceding Pāli list and thus appear to have evolved before the separation of the SARVĀSTIVĀDA and STHAVIRANIKĀYA schools: (1) HETUPRATYAYA, or condition qua cause, corresponding to no. 1 in the Pāli list; (2) SAMANANTARAPRATYAYA, or immediately antecedent condition, corresponding to no. 5 in the Pāli list; (3) ĀLAMBANAPRATYAYA, or object condition, corresponding to no. 2 in the Pāli list; (4) ADHIPATIPRATYAYA, or predominant condition, corresponding to no. 3 in the Pāli list. These four pratyaya first appear in the first-century CE VIJÑĀNAKĀYA and antedate the related Sarvāstivāda list of six "causes" (HETU).

pratyekabuddha. (P. paccekabuddha; T. rang sangs rgyas; C. yuanjue/dujue; J. engaku/dokukaku; K. yŏn'gak/tokkak 緣覺/獨覺). In Sanskrit, "individually enlightened one" or "solitary buddha"; an ARHAT who becomes enlightened through his own efforts without receiving instruction from a buddha in his final lifetime. Unlike the "perfectly enlightened buddhas" (SAMYAKSAṂBUDDHA), the pratyekabuddha refrains from teaching others about his experience because he has neglected to develop the same degree of great compassion (MAHĀKARUṆĀ) that motivates the samyaksaṃbuddhas. Even though he does not teach others, he may still guide by example, or through the use of gestures. Pratyekabuddhas are also distinguished from those who achieve the goal of arhat via the ŚRĀVAKA ("disciple") path, because śrāvakas are unable to achieve enlightenment on their own and must be instructed in the principles of Buddhism in order to succeed in their practice. A pratyekabuddha is also distinguished from the śrāvaka by the duration of his path: the pratyekabuddha path is longer because he must accumulate the necessary amount of merit (PUṆYA) to allow him to achieve liberation without relying on a teacher in his final lifetime. A pratyekabuddha is said to achieve liberation through contemplation of the principle of dependent origination (PRATĪTYASAMUTPĀDA), which accounts for the Chinese translation of yuanjue ("awakening via conditionality"). Two types of pratyekabuddhas are commonly enumerated in the literature: those who wander alone "like a rhinoceros" (KHAḌGAVIṢĀṆAKALPA) and the "congregators" (VARGACĀRIN). According to the MAHĀYĀNA, the path of the pratyekabuddha, together with the path of the śrāvaka, constitutes the HĪNAYĀNA, or "lesser vehicle"; these two categories are also often referred to as the "two vehicles" (C. ER SHENG) and their followers as "two-vehicle adherents." These lesser "two vehicles" contrast with the third and highest vehicle, the BODHISATTVAYĀNA.

pratyekabuddhayāna. (T. rang rgyal gyi theg pa; C. yuanjue sheng; J. engakujō; K. yŏn'gak sŭng 緣覺乘). In Sanskrit, "pratyekabuddha vehicle"; one of the three vehicles (TRIYĀNA), along with the ŚRĀVAKAYĀNA and the BODHISATTAYĀNA. MAHĀYĀNA sūtras and treatises classify the pratyekabuddhayāna as a form of the HĪNAYĀNA. Like the śrāvakayāna, the path of the PRATYEKABUDDHA culminates in achieving the enlightenment of an ARHAT, although according to some sources the path of the pratyekabuddha takes longer because he must master that path on his own, without instruction from a buddha in his final lifetime. In the ABHISAMAYĀLAṂKĀRA, pratyekabuddhas are said to eliminate the misconception of objects (grāhyavikalpa), but to be unable to eliminate the misconception of a subject (grāhakavikalpa); see GRĀHYAGRĀHAKAVIKALPA.

pratyekanaraka. (P. paccekaniraya; T. nye 'khor ba'i dmyal ba; C. gu diyu; J. kojigoku; K. ko chiok 孤地獄). In Sanskrit,

"neighboring hell" or "surrounding hell," a group of hells (S. naraka; cf. NĀRAKA). In traditional Buddhist cosmology the main hells are a system of eight hot hells and eight cold hells, located beneath the surface of the continent of JAMBUDVĪPA. According to the ABHIDHARMAKOŚABHĀṢYA, four neighboring hells are located on each of the four sides of the eight hot hells. It is said that, as the hell denizens exit one of the hot hells, they must pass through these four. The four are named: (1) KUKŪLA or "heated by burning chaff," a pit of hot ashes where the hell denizens are burned; seeing what appears to be water ahead, they plunge into (2) KUṆAPA, "mud of corpses," a swamp of rotting corpses; emerging from this, they set out on (3) KṢURAMĀRGA, "razor road," a road made of sword blades, which the hell denizens must walk before entering a grove of swords (ASIPATTRAVANA) where blades fall from the trees and where they are forced to climb trees embedded with iron spikes (AYAḤŚĀLMALĪVANA); finally they enter (4) NADĪ VAITARAṆĪ, "river difficult to ford," a river of boiling water in which the hell denizens are forced to swim.

Pratyutpannabuddhasaṃmukhāvasthitasamādhisūtra. (T. Da ltar gyi sangs rgyas mngon sum du bzhugs pa'i ting nge 'dzin gyi mdo; C. Banzhou sanmei jing; J. Hanju zanmaikyō; K. Panju sammae kyŏng 般舟三昧經). In Sanskrit, "Sūtra on the SAMĀDHI for Encountering Face-to-Face the Buddhas of the Present," often known by its abbreviated title *Pratyutpannasamādhisūtra*; one of the earliest MAHĀYĀNA SŪTRAS, and one of the very first Mahāyāna sūtras to be translated into Chinese, by the Indo-Scythian monk LOKAKṢEMA in 179 CE. (There are also three other Chinese translations, as well as Tibetan and Mongolian recensions.) The sūtra sets forth a meditation and visualization practice (which seems related to the traditional "recollection of the Buddha," or BUDDHĀNUSMṚTI), whereby one is able to come directly into the presence of the buddhas of the present in various world systems. An adept was to sit in meditation for up to seven days, facing the direction of his or her preferred buddha and visualizing that buddha's thirty-two major marks (MAHĀPURUṢALAKṢAṆA) and his eighty minor characteristics (ANUVYAÑJANA) until he had a vision of that buddha in his world system. Through this visualization, one could receive the teachings of one's preferred buddha, transmit those teachings to others, and then be reborn in that buddha's realm (BUDDHAKṢETRA). Because AMITĀBHA is used as an example of how to apply this technique, this sūtra is retrospectively associated in East Asia with PURE LAND traditions. The sūtra also contains expositions of the doctrine of emptiness (ŚŪNYATĀ), in which the insubstantiality of meditative experiences can be extended to all phenomena, a perspective that seems to adumbrate later YOGĀCĀRA views on the projection of external phenomena by the mind. Like many other early Mahāyāna sūtras, the text also extols both lay and monastic practice, the worship of STŪPAS, the making of buddha images, and the veneration of texts. Because the sūtra describes a technique for hearing (viz. learning) new Buddhist teachings even after ŚĀKYAMUNI Buddha has passed into PARINIRVĀṆA, this technique might have been employed to authenticate the production of new Mahāyāna sūtras.

pravāraṇā. (P. pavāraṇā; T. dgag phye; C. zizi; J. jishi; K. chaja 自恣). In Sanskrit, "invitation" or "presentation," the monastic ceremony that marks the end of the annual rains retreat (VARṢĀ). (The Tibetan translation denotes the "separation from prohibition" that accompanies the end of the rains retreat; the Chinese translation zizi has the connotation of "self-indulgence," suggesting that monks are then free to "follow their own bent.") The purity of the SAṂGHA is reaffirmed by each monk by asking the community whether he committed any infraction of the code of discipline (PRĀTIMOKṢA) during the period of the retreat. In the Southeast Asian traditions, the ceremony is held at the end of the rains retreat (varṣā) on the full-moon day of the seventh or eighth lunar month (usually between September and November), at which time each monk resident at a monastery invites the monastic community to point out any wrongs he may have committed that were either seen, heard, or suspected. The pravāraṇā must be performed at a single site by all eligible members of a given saṃgha, although if a monk is ill, he may dispatch his invitation through an intermediary. A monk guilty of an offense that has not been expiated may not participate. According to VINAYA strictures, the pravāraṇā ceremony may not be performed in the presence of the following kinds of persons: nuns, women in training to become nuns, male and female novices, persons who have seceded from the order, monastics guilty of a PĀRĀJIKA offense, monks who refuse to acknowledge their own wrongdoing (of three kinds), eunuchs, false monks who wear monastic attire without having been ordained, monks who have joined other religions, nonhumans, patricides, matricides, murderers of an ARHAT, seducers of nuns, schismatics, those who have shed the blood of a buddha, hermaphrodites, and laypersons. Traditionally on the pravāraṇā day, laypeople would come to the monastery and make offerings of necessary requisites to the monks throughout the day on behalf of their parents and deceased ancestors. The Chinese pilgrim YIJING (635–713) in his NANHAI JIGUI NEIFA ZHUAN describes pravāraṇā as an elaborate communal festival, with senior monks delivering protracted dharma lectures throughout the day and night; lamps were lit and flowers and incense offered as laypeople distributed gifts to the entire saṃgha.

pravrājanīyakarman. (P. pabbājanīyakamma; T. bskrad pa'i las; C. quchu jiemo; J. kushutsukonma; K. kuch'ul kalma 驅出羯磨). In Sanskrit, "eccclesiastial act of banishment," a temporary expulsion from full participation in the SAṂGHA, as a result of certain misdeeds. A monk may be subject to such banishment if he is guilty of corrupting good families (kuladūṣaka) or indulges in frivolous worldly behavior such as wearing garlands, playing, singing, or dancing; if he is quarrelsome or indiscreet in his behavior, or adheres to perverse doctrinal views; and if he criticizes any of the three jewels (RATNATRAYA) of the Buddha,

the DHARMA, or the saṃgha, harms others through unwholesome speech and action, or engages in wrong livelihood. A monk against whom a pravrājanīyakarman has been passed must leave his monastery and take up residence elsewhere while observing a number of restrictions. He may not confer UPASAṂPADĀ ordination or offer guidance (NIŚRAYA) to, or accept the services of, a novice; he may not accept an invitation to preach to nuns or actually preach to nuns; he should not repeat the offense for which he was banished or any similar or more serious offense; he should not criticize the decision passed against him or criticize the person(s) responsible for the decision. He may not object to the presence of any other monk at the UPOṢADHA or PRAVĀRAṆĀ ceremonies or interrogate another monk about alleged offenses; he may not reprimand other monks or cause a quarrel among other monks. When the saṃgha is satisfied that he has been rehabilitated, it is enjoined to revoke the act of banishment and restore the monk to full membership in the saṃgha.

pravrajita. (P. pabbajjā; T. rab tu byung ba; C. chujia; J. shukke; K. ch'ulga 出家). In Sanskrit, lit. "going forth," to leave behind the household life of a layperson in order to enter the monastic community as a religious mendicant; also pravrajyā and other variations. The term is often seen translated into English as "gone forth into homelessness" (the Chinese translation literally means "leaving home"). Pravrajita/pravrajyā is a technical term that refers to the lower ordination of a person as a ŚRĀMAṆERA or ŚRĀMAṆERIKĀ, that is, as a male or female novice. Admission of a novice into the SAṂGHA is performed with a simple ceremony. According to the Pāli tradition, the candidate shaves his hair and beard and, attiring himself in a monk's robe (CĪVARA) received from a donor, he presents himself before an assembly of monks, or a single monk of ten years' standing or more. Squatting on his haunches and folding his hands, the candidate recites the refuge formula three times (TRIŚARAṆA), whereupon he is made a novice. In most VINAYA traditions, a novice must observe ten precepts (ŚIKṢĀPADA, ŚRĀMAṆERASAṂVARA): abstaining from (1) killing, (2) stealing, (3) sexual intercourse, (4) lying, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8) using garlands, perfumes, and unguents to adorn the body, (9) using high and luxurious beds and couches, and (10) accepting gold and silver. The MŪLASARVĀSTIVĀDA VINAYA (which is followed in Tibet) expands these ten precepts to thirty-six. After receiving the lower ordination, the novice is required to live under the guidance (NIŚRAYA) of a teacher until he or she receives higher ordination (UPASAṂPADĀ) as a fully ordained monk (BHIKṢU) or nun (BHIKṢUṆĪ). The novice may not attend the reading of the PRĀTIMOKṢA during the bimonthly UPOṢADHA (P. uposatha) ceremony, or participate in any formal acts of the order (SAṂGHAKARMAN), such as giving ordination, and so on. At the beginning of his dispensation, the Buddha did not confer the lower ordination of a novice separately from the higher ordination, or upasaṃpadā, of a fully ordained monk. In all cases, candidates simply took the going forth as a fully ordained monk by taking the refuge formula. Later, "going forth" and higher ordination (upasaṃpadā) were made into separate ceremonies to initiate candidates into two hierarchically ranked institutions: the novitiate and full monkhood. The following types of persons may not be ordained as novices: branded thieves, fugitives from the law, registered thieves, those punished by flogging or branding, patricides, matricides, murderers of ARHATS, those who have shed the blood of a buddha, eunuchs, false monks, seducers of nuns, hermaphrodites, persons who are maimed, disabled, or deformed in various ways, and those afflicted with various communicable diseases.

prayoga. (T. sbyor ba; C. jiaxing; J. kegyō; K. kahaeng 加行). In Sanskrit, "application," "preparation," "joining together," "exertion." The term is widely used in soteriological, tantric, and astrological literature. It also functions as a technical term in logic, where it is often translated as "syllogism" and refers to a statement that contains a subject, a predicate, and a reason. A correct syllogism is composed of three parts, the subject (dharmin), the property being proved (SĀDHYADHARMA), and the reason (HETU or LIṄGA). For example, in the syllogism "Sound is impermanent because of being produced," the subject is sound, the property being proved is impermanence, and the reason is being produced. In order for the syllogism to be correct, three relations must exist among the three components of the syllogism: (1) the reason must be a property (DHARMA) of the subject, also called the "position" (PAKṢA), (2) there must be a relationship of pervasion (VYĀPTI) between the reason and the property being proved (SĀDHYADHARMA), such that whatever is the reason is necessarily the property being proved, and (3) there must be a relationship of "exclusion" or reverse pervasion (vyatirekavyāpti) between the property being proved and the reason, such that whatever is not the property being proved is necessarily not the reason. ¶ In the PRAJÑĀPĀRAMITĀ exegetical tradition based on the ABHISAMAYĀLAṂKĀRA, prayoga is the word used for the fourth to seventh of the eight ABHISAMAYAS ("clear realizations"). According to Ārya VIMUKTISENA's commentary (*Vṛtti*), the first three chapters set forth the three knowledges (JÑĀNA) as topics to be studied and reflected upon (see ŚRUTAMAYĪPRAJÑĀ, CINTĀMAYĪPRAJÑĀ); the next four chapters set forth the practice of those knowledges, viz. the practice of the knowledge of a buddha. This practice is called prayoga. It is primarily at the level of meditation (BHĀVANĀMAYĪPRAJÑĀ), and it leads to the SARVĀKĀRAJÑATĀ, a buddha's omniscient knowledge of

all aspects. The first prayoga is habituation to the perfect realization of all aspects (sarvākārābhisambodha); the second is learning to remain at the summit of the realization (mūrdhābhisamaya; cf. MŪRDHAN); the third is a further habituation to each aspect, one by one (anupūrvābhisamaya); and the fourth is the realization of all aspects in one single instant (ekakṣaṇābhisamaya). This is the moment prior to omniscience. This prayoga is first detailed in twenty subtopics beginning with the cryptic statement that the practice is no practice at all; the 173 aspects (ĀKĀRA) that together cover the entire range of a bodhisattva's practice are set forth at all the stages of development, through the paths of vision (DARŚANAMĀRGA) and cultivation (BHĀVANĀMĀRGA) up through the bodhisattva stages (BHŪMI) to the purification of the buddha-field (BUDDHAKṢETRA) and final instants of the path. Through the first of the four prayogas, the bodhisattva gains mastery over all the aspects; through the second, he abides in the mastery of them; with the third, he goes through each and makes the practice special; and with the fourth, he enters into the state of a buddha. See also PRAYOGAMĀRGA.

prayogamārga. (T. sbyor lam; C. jiaxing dao; J. kegyōdō; K. kahaeng to 加行道). In Sanskrit, "path of preparation," the second stage of the five-path (PAÑCAMĀRGA) soteriological schema, which follows the path of accumulation (SAṂBHĀRAMĀRGA) and precedes the path of vision (DARŚANAMĀRGA). It is said to provide the "preparation" for the direct perception of reality that will occur on the path of vision. The path of preparation begins with the attainment of an understanding of reality at a level of concentration that is equal to or exceeding the state of serenity (ŚAMATHA). This understanding corresponds to the "wisdom generated by meditation" (BHĀVANĀMAYĪPRAJÑĀ). The path of preparation has four levels (see NIRVEDHABHĀGĪYA): heat (ŪṢMAN), peak (MŪRDHA), forbearance (KṢĀNTI), and supreme worldly dharmas (LAUKIKĀGRADHARMA). Like the preceding path of accumulation, it is not a "noble path" (ĀRYAMĀRGA) because the direct perception of reality has not yet not occurred here. With the completion of the path of preparation and the attainment of the path of vision, one passes from the state of being an ordinary being (PṚTHAGJANA) to that of a noble person (ĀRYA).

preta. (P. peta; T. yi dwags; C. egui; J. gaki; K. agwi 餓鬼). In Sanskrit, lit. "departed one" or "ghost"; typically translated into English as "hungry ghost" (reflecting the Chinese rendering egui). The realm of hungry ghosts is one of the three or four unfortunate realms of rebirth (APĀYA; DURGATI), along with hell denizens (NĀRAKA), animals (TIRYAK), and sometimes demigods or titans (ASURA). Ghosts are most commonly depicted as having distended abdomens and emaciated limbs, like a human suffering from extreme malnutrition. Some traditions also say that they have gullets the size of the eye of a needle, so they are never able to consume enough to satiate their appetite. (This depiction of pretas as big-bellied and small-mouthed does not appear in Pāli and Southeast Asian sources until some late cosmological texts that date to the second millennium CE, suggesting that this is a north Indian or Sanskritic tradition, not a Pāli development.) Pretas are said to have been reborn in their unfortunate condition as a consequence of greed and avarice in a previous life. They spend their existence wandering in a futile search for food and drink; when they approach a river to drink, the water turns into blood and pus, and when they find food, they are unable to digest it due to various impediments, such as knots in their throats, or suffer when it is swallowed, when food turns into spears and molten iron. Traditions vary as to the location of the realm of ghosts, but there are many stories of the Buddha and his monks encountering ghosts. Feeding these departed spirits is an important ritual for Buddhist monks in many societies (see FANG YANKOU). Stories of encounters with such ghosts, who typically recount the unwholesome past deeds that led them to rebirth in such an unfortunate state, are common in Buddhist literature, as in the Pāli PETAVATTHU. The realm of the pretas also includes other ogres and goblins, such as PIŚĀCA.

Pretapurī. (S). One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA.

pride. See MADA.

prīti. (P. pīti; T. dga' ba; C. xi; J. ki; K. hŭi 喜). In Sanskrit, "rapture," "joy," "zest"; the third of the five factors of meditative absorption (DHYĀNĀṄGA) and the fourth of the seven factors of enlightenment (BODHYAṄGA); rapture helps to control the mental hindrances (NĪVARAṆA) of both malice (VYĀPĀDA) and sloth and torpor (STYĀNA–MIDDHA). A sustained sense of prīti is obstructed by malice (vyāpāda), the second of the five hindrances to DHYĀNA. Prīti refreshes both body and mind and manifests itself as physical and mental tranquillity (PRAŚRABDHI). The most elemental types of prīti involve such physical reactions as horripilation (viz., hair standing on end). As the experience becomes ever more intense, it becomes "transporting rapture," which is so uplifting that it makes the body seem so light as almost to levitate. Ultimately, rapture becomes "all-

pervading happiness" that suffuses the body and mind, cleansing it of ill will and tiredness. As both a physical and mental experience, prīti is present during both the first and second of the meditative absorptions associated with the subtle-materiality realm (RŪPĀVACARADHYĀNA), but fades into equanimity (UPEKṢĀ). In the even subtler third dhyāna, only mental ease (SUKHA) and one-pointedness (EKĀGRATĀ) remain. Divinities in the ŚUDDHĀVĀSA realm (viz., the five "pure abodes," the upper five of the eight heavens associated with the fourth dhyāna) and the ĀBHĀSVARĀLOKA (heaven of universal radiance) divinities are said literally to "feed on joy" (S. prītibhakṣa; P. pītibhakkha), i.e., to survive solely on the sustenance of physical and mental rapture.

prītijanana. (P. pītijanana; T. dga' ba bskyed; C. faxi J. hōki; K. pŏphŭi 法喜). In Sanskrit, lit. "joy inducing," viz. "joy of dharma," referring to the uplifting feelings of rapture that derive from properly observing precepts (ŚĪLA, e.g., to be morally "blameless" and harboring no regrets or shame) and from hearing, understanding, or practicing the dharma. Depending on its intensity, this joy may manifest in different ways, ranging from a radiant complexion, horripilation, and goose bumps, to ecstatic physical levitation. In the context of meditative absorption (DHYĀNA), such rapture is said to be conducive to the development of concentration and tranquillity.

priyavādita. (S). See SAṂGRAHAVASTU.

progressive instruction. See ANUPUBBIKATHĀ.

pṛṣṭhalabdhajñāna. [alt. tatpṛṣṭhalabdhajñāna] (T. rjes thob ye shes; C. houde zhi; J. gotokuchi; K. hudŭk chi 後得智). In Sanskrit, "subsequent wisdom" or "subsequently obtained wisdom"; a term used to describe one of the states of the noble path (ĀRYAMĀRGA). The attainment of the path of vision (DARŚANAMĀRGA) marks the first achievement of meditative equipoise (SAMĀHITA) in which the meditator has a direct and nonconceptual vision of reality. When the meditator withdraws from that state of direct realization to again perceive various phenomena, this state is called "subsequent wisdom." Reality is no longer being directly and exclusively perceived, but the power of that vision is said to infuse one's subsequent experience of the world, so that while objects may once again appear to be real, the meditator does not assent to that false appearance. Following the attainment of the path of vision, the meditator continues to proceed along the path through periods of meditative equipoise and subsequent wisdom.

pṛthagjana. (P. puthujjana; T. so so skye bo; C. fanfu; J. bonbu; K. pŏmbu 凡夫). In Sanskrit, "ordinary being," or "common person"; sentient beings who are still bound by the ten fetters (SAṂYOJANA) and thus have not attained the path of a noble person (ĀRYAMĀRGA)—that is, they have not yet become a stream-enterer (SROTAĀPANNA) or achieved the path of vision (DARŚANAMĀRGA). The ordinary being is often compared (unfavorably) to the noble person (ĀRYA) in Buddhist texts. It is said, for example, that the FOUR NOBLE TRUTHS (catvāry āryasatyāni) are called "noble" because they are true for noble persons, not for ordinary beings. Elsewhere, it is said that the suffering (DUḤKHA) associated with conditionality itself (SAṂSKĀRADUḤKATĀ) is like a wisp of wool in the palm of the hand for an ordinary person, in the sense that it is easily unnoticed; for the noble person, however, it is like a wisp of wool in the eye: It is utterly impossible not to notice it, and immediate effort is made to remove it.

pṛthivī. [alt. pṛthivīdhātu] (P. paṭhavī; T. sa; C. dida; J. jidai; K. chidae 地大). In Sanskrit, lit. "earth" or "ground," viz., the property of "solidity"; one of the four "great elements" (MAHĀBHŪTA) or "major elementary qualities" of which the physical world comprised of materiality (RŪPA) is composed, along with wind (viz. motion, movement, VĀYU, P. vāyu/vāyo), water (viz. cohesion, ĀPAS, P. āpo), and fire (viz. temperature, warmth, TEJAS, P. tejo). "Earth" is characterized by hardness and firmness, and can refer to anything that exhibits solidity. Because earth has temperature (viz. fire) and tangibility (viz. water), and is capable of motion (viz. wind), the existence of the other three elements may also be inferred even in that single element. In the physical body, this element is associated with hair, bones, teeth, organs, and so on. ¶ Pṛthivī, "Earth," is also the proper name of the goddess of the earth, also known as STHĀVARĀ, or "Immovable," who played a crucial role in the story of GAUTAMA Buddha's enlightenment. When the BODHISATTVA's right to occupy the sacred spot beneath the BODHI TREE was challenged by MĀRA, Gautama touched the earth (BHŪMISPARŚAMUDRĀ) with his right hand, calling on the goddess of the earth to testify to his boundless meritorious deeds over his past lives. She responded by causing a mild earthquake or, in other versions of the story, emerging from the earth to bear witness. See also THORANI.

Pucheng. (C) (普成). Son of the early Chinese lay figure FU DASHI (497–569). See FU DASHI.

puch'ŏ[nim]. (K) (부처님). Standard term for "buddha" in Korean. The compound is composed of the transcription puch'ŏ (buddha), typically followed by the honorific suffix nim. See BUDDHA.

pudgala. (P. puggala; T. gang zag; C. ren/buteqieluo; J. nin/futogara; K. in/pot'ŭkkara 人/補特伽羅). In Sanskrit, "person." Although all Buddhist schools deny the existence of a perduring, autonomous self (ĀTMAN), some schools accepted the provisional existence of a person that is associated with one or more of the aggregates (SKANDHA). There is a wide range of opinion as to the precise status of the person. Most Buddhist

schools hold that the person is a provisional designation (PRAJÑAPTI), but differ as to which among the constituents of mind and body could be designated by the term "person," with some schools asserting that all five aggregates are designated as the person, while others that only the mental consciousness (MANOVIJÑĀNA) is the person. The philosophical challenge faced by the Buddhist schools is to be able to uphold the continuity (SAṂTĀNA) of the accumulation and experience of KARMAN over the course of a single lifetime as well as potentially infinite lifetimes in both past and future, while simultaneously upholding the fundamental impermanence of mind and matter and the absence of a permanent self (ANĀTMAN). The VĀTSĪPUTRĪYA and the SAṂMITĪYA responded to the problem of accounting for personal continuity and rebirth when there is no perduring self by positing the existence of an "inexpressible" (S. avācya) "person" that is neither permanent nor impermanent and which is neither the same as nor different from the aggregates (skandha), but which is the agent of cognition and the bearer of action (KARMAN) from moment to moment and lifetime to lifetime. This position was criticized by other Buddhist schools, including in the ninth chapter of the ABHIDHARMAKOŚABHĀṢYA, where VASUBANDHU condemns this view as the heretical assertion of a permanent self or soul (ĀTMAN). Pudgala is more generically also used in a salutary sense in connection with noble persons (ĀRYAPUDGALA) who have achieved one of the four stages of sanctity. See also ŚREṆIKA HERESY.

pudgalanairātmya. (T. gang zag gi bdag med; C. renwuwo; J. ninmuga; K. inmua 人無我). In Sanskrit, "selflessness of the person," one of two types of nonself or selflessness, along with DHARMANAIRĀTMYA, the nonself or selflessness of phenomena. The absence of self (ANĀTMAN) is often divided into these two categories by MAHĀYĀNA philosophical schools, with the selflessness of persons referring to the absence of self among the five aggregates (SKANDHA) that constitute the person, and the selflessness of phenomena referring to the absence of self (variously defined) in all other phenomena in the universe, specifically the factors (DHARMA) that were posited to be real by several of the abhidharma traditions of mainstream Buddhism, and especially the SARVĀSTIVĀDA. Numerous meditation practices are set forth that are designed to lead the realization of the selflessness of the person, many of which involve the close mental examination of the constituents of mind and body to determine which might constitute, individually or collectively, an independent and autonomous agent of actions and the experiencer of their effects, that is, the referent of the "I" and for whom possessions are "mine." The central claim of Buddhism is that there is no such self to be found among the constituents of the person; thus, the realization of this fact constitutes a liberating knowledge that brings an end to suffering and the prospect of further rebirth. The relation between the selflessness of persons and the selflessness of phenomena is discussed at length in Buddhist philosophical literature. In some Mahāyāna systems, the selflessness of persons is considered to be less profound than the selflessness of phenomena, since an adept is able to achieve liberation as an ARHAT through cognition of the selflessness of persons alone, while cognition of the selflessness of phenomena is required of the BODHISATTVA in order to achieve buddhahood.

pudgalātmagraha. (T. gang zag gi bdag 'dzin; C. renwozhi; J. ningashū; K. inajip 人我執). In Sanskrit, lit.,"conception of a self of a person" or the "grasping at the personal self," a term that is used in combination with DHARMĀTMAGRAHA, the "conception of the self of phenomena." In the MAHĀYĀNA philosophical schools, the notion of self (ĀTMAN) is expanded beyond that of a permanent soul in each person, to a broader sense of independent existence or intrinsic existence (SVABHĀVA) that is falsely imagined to exist in all objects of experience. Sentient beings are thus said to falsely imagine the presence of such a self in two broad categories: persons (PUDGALA) and all other phenomena (DHARMA). Wisdom (PRAJÑĀ) entails understanding the lack of self in these two categories, referred to as the selflessness of persons (PUDGALANAIRĀTMYA) and the selflessness of phenomena (DHARMANAIRĀTMYA). Among the path theories of YOGĀCĀRA and MADHYAMAKA, there are differences of opinion as to whether the conception of the self of persons is more easily uprooted than the conception of the self of phenomena. In addition, although all agree that both forms of the conception of self must be eradicated by the BODHISATTVA in order to become a buddha, there are differences of opinion as to whether both must be eradicated by the ŚRĀVAKA and PRATYEKABUDDHA in order to become an ARHAT.

pudgalavāda. (P. puggalavāda; T. gang zag smra ba; C. buteqieluo lun; J. futogararon; K. pot'ŭkkara non 補特伽羅論). In Sanskrit, "proponents of a person" or "personalists," a term (not apparently employed by its adherents) used to refer to several mainstream (that is, non-MAHĀYĀNA) schools of Indian Buddhism (including the VĀTSĪPUTRĪYA and the SAṂMITĪYA) that responded to the problem of how to account for personal continuity and rebirth when there is no perduring self (ANĀTMAN) by positing the existence of an "inexpressible" (S. avācya) "person" that is neither permanent nor impermanent and which is neither the same as nor different from the aggregates (SKANDHA), but which is the agent of cognition and the bearer of action (KARMAN) from moment to moment and lifetime to lifetime. Although its adherents presumed that this position conformed to the Buddha's dictum that there was no self to be discovered among the aggregates, it was criticized by other Buddhist schools, including in the ninth chapter of the ABHIDHARMAKOŚABHĀṢYA, where it was seen as the heretical assertion of a permanent self or soul (ĀTMAN). Despite vehement opposition from rival mainstream Buddhist schools, Chinese pilgrims reported the prominence in India of schools that held pudgalavāda positions, although whether all the monks of a particular ordination lineage held all the philosophical positions associated with this tradition remains a question.

The problem of personal and karmic continuity from lifetime to lifetime without positing a perduring a self or soul is a persistent issue throughout the history of Buddhist thought, and it is addressed in the Mahāyāna, for example, through the YOGĀCĀRA school's doctrine of the foundational consciousness (ĀLAYAVIJÑĀNA). See also ŚREṆIKA HERESY.

Puggalapaññatti. In Pāli, lit., "Concept of the Person," "Analysis of Character Types"; the fourth of the seven books of the Pāli ABHIDHAMMAPIṬAKA. It is a classification of human personalities following the method of the AṄGUTTARANIKĀYA, grouping types of persons in categories of from one to ten elements, in ascending order. In the STHAVIRANIKĀYA, the person was seen not as a real phenomenon (P. dhamma, S. DHARMA), but was instead a mere designation or concept (P. paññati, S. PRAJÑAPTI), hence the title of the work. Some sections of the *Puggalapaññatti* are drawn nearly verbatim from the *Aṅguttaranikāya*, while others are taken from the SAṄGĪTISUTTA, a scripture in the DĪGHANIKĀYA that likewise uses the *Aṅguttara* method. Indeed, because the work draws much of its form and its content from discussions of the nature of the person in the SUTTAPIṬAKA, some scholars speculate that the *Puggalapaññatti* may be belong to the earliest stratum of Pāli ABHIDHAMMA materials.

Puhyu Sŏnsu. (浮休善修) (1543–1615). Korean Sŏn master of the Chosŏn dynasty. Sŏnsu was a native of Osu in present-day North Chŏlla province. In 1562, he went to CHIRISAN, where he became the student of a certain Sinmyŏng (d.u.) and later continued his studies under the Sŏn master Puyong Yŏnggwan (1485–1571). He was especially renowned for his calligraphy. Sŏnsu survived the Japanese Hideyoshi invasions from 1592 to 1598 and resided after the war at the monastery of HAEINSA. Sŏnsu and his disciple PYŎGAM KAKSŎNG were once falsely accused by another monk and were subsequently imprisoned; they were released later when the king learned of their innocence. In 1614, Sŏnsu went to the hermitage of Ch'ilburam at the monastery of SONGGWANGSA and passed away the next year after entrusting his disciples to Kaksŏng. He was given the posthumous title Honggak Tŭnggye (Expansive Enlightenment, Mastery of All). He left over seven hundred disciples, seven of whom became renowned Sŏn masters in their own right and formed separate branches of Sŏnsu's lineage. His writings can be found in the *Puhyudang chip*.

pūjā. (T. mchod pa; C. gongyang; J. kuyō; K. kongyang 供養). In Sanskrit, lit. "worship" and "offering"; any "ritual" at which offerings are made, or the offerings themselves. These offering rituals involve a number of standard liturgies, including those in three parts (TRISKANDHAKA) and seven parts (SAPTĀṄGAVIDHI). In the MAHĀYĀNA, many pūjās seem to derive from a simple three-part liturgy, which appeared in two forms. One form consisted of (1) the confession of transgressions (PĀPADEŚANĀ), (2) the admiration of others' virtues (ANUMODANA), and (3) the dedication of merit (PARIṆĀMANĀ). The other consisted of (1) the confession of transgressions, (2) the admiration of others' virtue, and (3) the request to the buddhas to turn the wheel of the dharma (DHARMACAKRAPRAVARTANA). This tripartite ritual was eventually expanded to include seven sections: obeisance, offering, confession, admiration, supplication to the buddhas and bodhisattvas to teach the dharma, entreaty not to pass into PARINIRVĀṆA, and dedication of any merit accrued by performing the preceding ritual to the enlightenment of all sentient beings. This sevenfold liturgy, presented most famously in the opening twelve stanzas of the BHADRACARĪPRAṆIDHĀNA ("Vow of SAMANTABHADRA's Deeds"), the last section of the GAṆḌAVYŪHA in the AVATAṂSAKASŪTRA, became a standard part of many MAHĀYĀNA practices, often serving as a prolegomenon to a meditation session. This sevenfold liturgy became a common element of tantric pūjās as well.

Puji. (J. Fujaku; K. Pojŏk 普寂) (651–739). In Chinese, "Universal Quiescence"; CHAN monk and disciple of SHENXIU (606?–706) in the so-called "Northern School" (BEI ZONG) of the early Chan tradition. In his youth, Puji is said to have studied a wide range of Buddhist scriptures before ordaining at the age of thirty-eight. Soon afterwards, he left to study with Shenxiu at Yuquansi (Jade Spring Monastery) on Mt. Dangyang in Jingzhou. As the best-known disciple of Shenxiu, Puji was one of the subjects of a series of polemical attacks by the HEZE SHENHUI (684–758) beginning in 732. Shenhui denounced Puji and other disciples of Shenxiu as representing a mere collateral branch of BODHIDHARMA's lineage and for promoting what Shenhui called a "gradual" (jian) approach to enlightenment. Shenhui instead promoted a "sudden teaching" (DUNJIAO), which he claimed derived from a so-called "Southern school" (NAN ZONG) founded by HUINENG (638–713), whom Shenhui claimed was the true successor of the fifth patriarch HONGREN (601–74). Later Chan historians such as GUIFENG ZONGMI (780–841) came to refer to a "Northern school" (Bei zong) of Chan to describe this lineage of Shenxiu's, to which Puji, Yifu (661–736), and XIANGMO ZANG (d.u.) were said to have belonged.

Pujian. (C) (普建). Son of the early Chinese lay figure FU DASHI (497–569). See FU DASHI.

Pulcho chikchi simch'e yojŏl. (佛組直指心體要節). In Korean, "Essential Excerpts of the Buddhas and Patriarchs Pointing Directly to the Essence of Mind," also known by the abbreviated titles *Chikchi simch'e yojŏl*, or simply *Chikchi*; the earliest surviving example from anywhere in the world of a text printed using movable metal type, predating Gutenberg's 1455 printing of the Bible by seventy-eight years. The two-roll lineage anthology of the CHAN school was compiled in 1372 by PAEGUN KYŎNGHAN (1299–1374), one of the three great Sŏn

masters of the late-Koryŏ dynasty. This anthology was first printed in 1377 at Hŭngdŏksa (the ruins of which were located in 1985 in Unch'ŏndong, near the city of Ch'ŏngju in South Korea) using movable cast-metal type. This printing technology was known to have been in use in Koryŏ–period Korea prior to the Mongol invasions of 1231–1232, but no examples survive. The metal-type printing of the *Chikchi* is held in the collection of the Bibliothèque nationale in Paris, and its existence was first noted by Maurice Courant in 1901. The first roll of the anthology includes the enlightenment poems of the seven buddhas of antiquity (SAPTATATHĀGATA), the twenty-eight Indian patriarchs of the Sŏn school (starting with MAHĀKĀŚYAPA and ending with BODHIDHARMA), the six Chinese patriarchs (ZUSHI) of Chan, and several later Sŏn masters. The second roll is a collection of the poetry, epitaphs, discourse records, and seminal teachings of eminent masters of the Sŏn school, such as the fourteen "nondualities" (ADVAYA) of Kyŏnghan's Indian teacher ZHIKONG CHANXIAN (K. Chigong Sŏnhyŏn; S. *Dhyānabhadra). Like many of these lineage anthologies, the text is derivative, drawing on such earlier genealogical collections as the JINGDE CHUANDENG LU and the SŎNMUN YŎMSONG CHIP of CHIN'GAK HYESIM (1178–1234). Although the entire first roll and the first page of the second roll of the metal-type recension are lost, a complete xylographic edition of the anthology survives, which dates to 1378, one year later than the metal-type recension.

Pulguksa. (佛國寺). In Korean, "Buddha Land Monastery," located outside KYŎNGJU, the ancient capital of the Silla dynasty, on the slopes of T'oham Mountain; this Silla royal monastery is the eleventh district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism and administers over sixty subsidiary monasteries and hermitages. According to the SAMGUK YUSA ("Memorabilia of the Three Kingdoms"), Pulguksa was constructed in 751 by Kim Taesŏng (700–774), chief minister of King Kyŏngdŏk (r. 742–765), and completed in 774; it may have been constructed on the site of a smaller temple that dated from c. 528, during the reign of the Silla King Pŏphŭng (r. 514–539). Although it was a large complex, Pulguksa was not as influential within the Silla Buddhist tradition as other Kyŏngju monasteries, such as HWANGNYONGSA and PUNHWANGSA. The monastery has since been renovated numerous times, one of the largest projects occurring at the beginning of the seventeenth century, after the monastery was burned during the Japanese Hideyoshi invasions of 1592–1598. Pulguksa's temple complex is built on a series of artificial terraces that were constructed out of giant stone blocks and is entered via two pairs of stone "bridges" cum staircases, which are Korean national treasures in their own right and frequently photographed. The main level of the monastery centers on two courtyards: one anchored by the TAEUNG CHŎN, or the main shrine hall, which houses a statue of ŚĀKYAMUNI Buddha, the other by the kŭngnak chŏn, or hall of ultimate bliss (SUKHĀVATĪ), which houses an eighth-century bronze statue of the buddha AMITĀBHA. The taeung chŏn courtyard is graced with two stone pagodas, the Sŏkka t'ap (Śākyamuni STŪPA) and the Tabo t'ap (Prabhūtaratna stūpa), which are so famous that the second of them is depicted on the Korean ten-wŏn coin. The juxtaposition of the two stūpas derives from the climax of the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), where the buddha PRABHŪTARATNA (Many Treasures) invites Śākyamuni to sit beside him inside his bejeweled stūpa, thus validating the teachings Śākyamuni delivered in the scripture. The Sŏkka t'ap represents Śākyamuni's solitary quest for enlightenment; it is three stories tall and is notable for its bare simplicity. This stūpa is in marked contrast to its ornate twin, the Tabo t'ap, or Pagoda of the buddha Prabhūtaratna, which is modeled after a reliquary and has elaborate staircases, parapets, and stone lions (one of which was removed to the British Museum). During a 1966 renovation of the Sŏkka t'ap, the world's oldest printed document was discovered sealed inside the stūpa: the MUGUJŌNGGWANG TAEDARANI KYŎNG (S. *Raśmivimalaviśuddhaprabhādhāraṇī*; "Great DHĀRAṆĪ of Immaculate Radiance"). The terminus ad quem for the printing of the *Dhāraṇī* is 751 CE, when the text was sealed inside the Sŏkka t'ap, but it may have been printed even earlier. Other important buildings include the Piro chŏn (VAIROCANA Hall) that enshrines an eighth-century bronze statue of its eponymous buddha, which is presumed to be the oldest bronze image in Korea; the Musŏl chŏn (The Wordless Hall), a lecture hall located directly behind the taeung chŏn, which was built around 670; and the Kwanŭm chŏn (AVALOKITEŚVARA hall), built at the highest point of the complex. Two and a half miles (4 kms) up T'oham Mountain to the east of Pulguksa is its affiliated SŎKKURAM grotto temple. Pulguksa and Sŏkkuram were jointly listed in 1995 as a UNESCO World Heritage Site.

Pullīramalaya. (S). One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA.

punarbhava. (P. punabbhava; T. yang srid pa; C. houyou; J. gou; K. huyu 後有). In Sanskrit, lit. "re-becoming," one of the Sanskrit terms used for what in English is translated as "rebirth" or "reincarnation," along with PUNARJANMAN (and PUNARMṚTYU, or "redeath"). See REBIRTH.

punarjanman. (T. yang skye; C. zaisheng; J. saishō; K. chaesaeng 再生). In Sanskrit, lit. "birth again." See REBIRTH.

punarmṛtyu. (T. yang shi; C. zaisi; J. saishi; K. chaesa 再死). In Sanskrit, lit. "re-death." See REBIRTH.

puṇḍarīka. (T. padma dkar po; C. bailianhua/fentuoli hua; J. byakurenge/fundarike; K. paengnyŏnhwa/pundari hwa 白蓮華/芬陀利華). In Sanskrit, "white lotus" (Nelumbo nucifera), a specific species of lotus flower (PADMA), the ubiquitous flower appearing in Buddhist literature. The lotus is one of

the most important symbols used in Buddhist literature and iconography. Because its spectacular flowers bloom above the muddy waters of stagnant ponds, the lotus is used as a symbol for the purity of mind that develops out of the pollution that is SAṂSĀRA. The puṇḍarīka lotus is especially famous in Buddhism as the "lotus" in the title of what is known in English as the "Lotus Sūtra"; the Sanskrit title is SADDHARMAPUṆḌARĪKASŪTRA, "White Lotus of the True Dharma." See also PADMA.

Punhwangsa. (芬皇寺). In Korean, "Fragrant [viz. Virtuous] Sovereign Monastery"; one of the four major monasteries located in the Silla-dynasty capital of Kyŏngju. The monastery was built in 634 at the command of Queen Sŏndŏk (r. 632–647) and, at its peak, its campus covered several acres. Like its neighbor HWANGNYONGSA, Punhwangsa was established with the support of the Silla royal family and was a center of rituals performed for the protection of the state (K. hoguk Pulgyo; C. HUGUO FOJIAO). Punhwangsa is perhaps best known for its massive stone pagoda, the oldest extant example from the Silla kingdom. The pagoda was erected following Chinese Tang-dynasty models, but was constructed with black andesite stone, rather than the fired bricks used in China. About 9,700 stone bricks remain from the pagoda, twenty-five percent of which are damaged or significantly weathered. The pagoda was once seven to nine stories tall with a hollow center, but only three stories remain, and the collapse of its upper stories has filled the center with debris. A partial restoration of the pagoda in 1915 revealed a reliquary box (K. sarigu; C. SHELIJU) hidden between the second and third stories. Gold ornaments, coins, scissors, and a needle were also found in the pagoda; these are thought to have once been owned by Queen Sŏndŏk herself. The pagoda is presumed to have had doorways on each of its four sides; two guardian figures flanked each doorway. Lion statues are placed at the four corners of the pagoda's foundation platform, and lotus blossoms are carved into the granite. The famous Silla artist Sol Kŏ (d.u.), who lived during the reign of King Chinhŭng (r. 540–575), painted a famous fresco of the bodhisattva AVALOKITEŚVARA at the monastery. In 755, King Kyŏngdŏk (r. 742–764) had a colossal standing image of BHAIṢAJYAGURU, the medicine buddha, cast for Punhwangsa, which was said to have weighed some 36,000 catties (kŭn). Punhwangsa was the residence of many of the most famous Korean monks of the Silla dynasty. When the VINAYA teacher CHAJANG (d.u.; fl. c. 590–658) returned in 643 from a sojourn in Tang China with a set of the Buddhist canon, as well as Buddhist banners, streamers, and other ritual items, he resided at Punhwangsa at the queen's request. The renowned monk-scholiast WŎNHYO (617–686) wrote many of his treatises and commentaries at Punhwangsa and was closely associated with the monastery. After he died, according to the SAMGUK YUSA ("Memorabilia of the Three Kingdoms"), his famous literatus son, Sŏl Ch'ong (c. 660–730), took Wŏnhyo's ashes and cast them into a lifelike image, which he enshrined at the monastery. When Sŏl Ch'ong prostrated beside it, the image is said to have turned its head to look at the son, a posture it retained from that point on. Little of Punhwangsa remains today, but it is still a functioning monastery.

puṇya. (P. puñña; T. bsod nams; C. fu; J. fuku; K. pok 福). In Sanskrit, "merit," the store of wholesome KARMAN created by the performance of virtuous deeds, which fructify in the form of happiness in the future. This merit may be accumulated (see PUṆYASAṂBHĀRA) over many lifetimes and dedicated toward a specific outcome (see PARIṆĀMANĀ), such as a favorable rebirth for oneself or another, or the achievement of buddhahood. The accumulation of merit, especially through charity (DĀNA) to the SAṂGHA, is one of the central practices of Buddhism across cultures and traditions, and numerous techniques for accumulating merit, increasing the store of merit, and protecting the store of merit from depletion or destruction are set forth in Buddhist texts. Pāli sources, for example, delineate three specific "grounds for producing merit" (puññakiriyavatthūni): giving (dāna), morality (P. sīla, S. ŚĪLA), and meditative practice (BHĀVANĀ). Merit can be dedicated toward a specific end, whether it is rebirth in the next lifetime, rebirth in the retinue of the future buddha MAITREYA, or the achievement of buddhahood for the welfare of all sentient beings.

puṇyajñānasaṃbhāra. (T. bsod nams dang ye shes kyi tshogs; C. fuzhi ziliang; J. fukuchi shiryō; K. pokchi charyang 福智資糧). In Sanskrit, "equipment" or "collection of merit and knowledge," a term that encompasses all the practices and deeds that a BODHISATTVA perfects along the path to buddhahood. It is said that a bodhisattva must amass both a collection of merit (PUṆYA) and a collection of knowledge (JÑĀNA) in order to achieve buddhahood; this is because merit will help to overcome the afflictions (KLEŚA), while knowledge will help to counter ignorance (AVIDYĀ). MAHĀYĀNA exegetes explain that the collection of merit fructifies as the material body (RŪPAKĀYA) of a buddha (which includes both the SAṂBHOGAKĀYA and the NIRMĀṆAKĀYA) and the collection of knowledge fructifies as the DHARMAKĀYA. As such, the collection of merit is associated with UPĀYA, or method, and the collection of knowledge is associated with PRAJÑĀ, or wisdom. Mahāyāna scholiasts have also explored the question of the relationship between the accumulation of these two collections and the practice of the six perfections (PĀRAMITĀ). Among various opinions set forth, a common one states that practice of the first three perfections—of giving (DĀNA), morality (ŚĪLA), patience (KṢĀNTI)—contributes to the collection of merit; the practice of the last two perfections—concentration (DHYĀNA) and wisdom (prajñā)—contributes to the collection of knowledge; and the perfection of effort (VĪRYA) contributes to both.

puṇyakriyāvastu. (P. puññakiriyāvatthu; T. bsod nams bya ba'i dngos po; C. fuye shi; J. fukugōji; K. pogŏpsa 福業事). In Sanskrit, "things that create merit," a term that appears in

ABHIDHARMA materials to describe three practices: giving (DĀNA), moral behavior (ŚĪLA), and meditation (BHĀVANĀ). Among forms of moral behavior, the five precepts (PAÑCAŚĪLA) of abstaining from killing, stealing, sexual misconduct, lying, and using intoxicants are considered to be especially productive of merit. Among forms of meditation, meditation on the four BRAHMAVIHĀRA of loving-kindness, compassion, joy, and equanimity are considered to be especially productive of merit.

puṇyakṣetra. (P. puññakkhetta; T. bsod nams kyi zhing; C. futian; J. fukuden; K. pokch'ŏn 福田). In Sanskrit, "field of merit," referring specifically to a recipient (a "field") that has a substantial potential to provide karmic compensation to a benefactor who "plants the seeds of merit" there by performing wholesome actions (KUŚALA-KARMAN), especially through acts of charity (DĀNA). Traditionally, the Buddha, the SAṂGHA as an institution, or individual monks and nuns were described as the primary fields of merit for the laity, and in this context these provide an "unsurpassed" (anuttara) "field of merit." By providing material support (dāna) such as food and robes' cloth (see KAṬHINA) to the monastic order and its members, the laity in return would reap spiritual rewards (i.e., receiving religious instructions from the renunciants) as well as karmic rewards (viz. good fortune in this life and better rebirth in the next). The use of the term eventually expanded, as in the Chinese SANJIE JIAO (School of the Third Stage), to include one's parents, the poor, the sick, the community of monks and nuns, and ultimately all sentient beings, since serving any of them involves acts of charity that would lead to the accumulation of merit. Several pairs of fields of merit are variously described in the literature. (1) The merit field of the trainee, or ŚAIKṢA (xueren tian), and the merit field of the accomplished adept, or AŚAIKṢA (wuxue ren tian). By making offerings to and supporting the spiritually accomplished (in this case, he who is "beyond training"—viz. an ARHAT), it is said that the merit accrued therefrom is greater than if the offering and support are given to someone less spiritually worthy. (2) The merit field associated with compassion (beitian) and the merit field associated with reverence (jingtian). In the Sanjie jiao school, for example, the former is exemplified by the act of giving (dāna) when it is undertaken with compassion (KARUṆĀ), such as in the case of helping the indigent; the latter is exemplified by the act of giving when it is undertaken with reverence, such as in the case of providing for the spiritually accomplished. (3) The merit field associated with anticipation (youzuo futian) and the merit field that is free from anticipation (wuzuo futian). The former refers to undertaking the act of giving with an active wish or anticipation of specific rewards; the latter is undertaken with no such wish or anticipation—and, since it is considered to stem from an unadulterated motive, will generate greater rewards. (4) The merit field associated with reverence (jingtian) and the merit field associated with (requiting) benefaction (en tian). The former is the act of giving directed toward the three jewels (RATNATRAYA); the latter, toward one's parents, teachers, and other benefactors.

puṇyānumodana. (T. bsod nams rjes su yi rang; C. suixifu; J. zuikifuku; K. suhŭibok 隨喜福). In Sanskrit, "taking delight in merit," "admiration of merit," or in some contexts, "accumulation of merit"; one of the ways of developing merit, according to which one admires and finds joy in (ANUMODANA) the meritorious deeds (PUṆYA) of others, often those of the SAṂGHA or of BODHISATTVAS. It is sometimes said that, by admiring the meritorious deed of another person, one accumulates as much merit as if one had performed the deed oneself. Taking delight in others' merit is therefore considered an especially efficient way of accumulating merit and functions as a standard component of many Buddhist rituals and prayers.

puṇyaprasava. (T. bsod nams skyes; C. fusheng tian; J. fukushōten; K. poksaeng ch'ŏn 福生天). In Sanskrit, "merit born," the second (lowest) of the eight heavens of the fourth concentration (DHYĀNA) of the subtle-materiality realm (RŪPADHĀTU). The divinities of this heaven are so called because of the great merit that resulted in their birth in the heaven. As with all the heavens of the subtle-materiality realm, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the divinities of that heaven during one's practice of meditation in a previous lifetime. This heaven has no analogue in Pāli.

puṇyasaṃbhāra. (T. bsod nams kyi tshogs; C. fude ziliang; J. fukutoku shiryō; K. poktŏk charyang 福德資糧). In Sanskrit, "equipment" or "collection" "of merit," one of the two accumulations (along with the JÑĀNASAṂBHĀRA) amassed over the course of the BODHISATTVA path and required for the attainment of buddhahood. This type of collection refers to the myriad meritorious deeds performed by a bodhisattva over millions of lifetimes, deeds that are dedicated to the achievement of buddhahood for the welfare of all sentient beings. Between the two poles of skill in means (UPĀYA) and wisdom (PRAJÑĀ), the collection of merit is associated with upāya. Among the six perfections (PĀRAMITĀ), the first three perfections, of giving (DĀNA), morality (ŚĪLA), and patience (KṢĀNTI), are traditionally associated with the collection of merit. The collection of merit, resulting from the performance of limitless meritorious deeds, is said to fructify as the RŪPAKĀYA of a buddha. See also PUṆYAJÑĀNASAṂBHĀRA.

Pūraṇa-Kāśyapa. (P. Pūraṇa-Kassapa; T. 'Od srung rdzogs byed; C. Fulanna Jiashe; J. Furannakashō; K. Puranna Kasŏp 富蘭那迦葉). One of the so-called "six heterodox teachers" (TĪRTHIKA) often mentioned in Buddhist sūtras and criticized by the Buddha. (The other five are MASKARIN GOŚĀLĪPUTRA, AJITA KEŚAKAMBHALA, KAKUDA KĀTYĀYANA, SAÑJAYA VAIRĀṬĪPUTRA, and NIRGRANTHA JÑĀTĪPUTRA.) Pūraṇa-Kāśyapa is said to have propounded the view of akiriyavāda, literally "nonaction," a kind of antinomianism that denied the law of moral cause and effect (KARMAN). Pūraṇa claimed that, since there was no ultimate distinction between good and evil

because actions did not have any effects, there was hence no harm in killing and stealing and no benefit in giving gifts and speaking truthfully. He also appears in accounts of the miracles the Buddha's performed at Śrāvastī (i.e., the YAMAKAPRĀTIHĀRYA, or "dual miracle," and the MAHĀPRĀTIHĀRYA or "great miracle") as one of the heterodox teachers who challenges the Buddha to a miracle contest. After the Buddha defeats the tīrthikas, Pūraṇa-Kāśyapa withdraws in despair and is said to have drowned himself in Lake Anavatapta.

pure land. (C. jingtu; J. jōdo; K. chŏngt'o 淨土). An English term with no direct equivalent in Sanskrit that is used to translate the Chinese JINGTU (more literally, "purified ground"); the Chinese term may be related to the term PARIŚUDDHABUDDHAKṢETRA (although this latter term does not appear in the SUKHĀVATĪVYŪHASŪTRA, the text most closely aligned with pure land thought). The term "pure land" has several denotations in English, which have led to some confusion in its use. These include (1) a buddha-field (BUDDHAKṢETRA) purified of transgressions and suffering by a buddha and thus deemed an auspicious place in which to take rebirth; (2) the specific (and most famous) of these purified fields, that of the buddha AMITĀBHA, named SUKHĀVATĪ; (3) the tradition of texts and practices in MAHĀYĀNA Buddhism dedicated to the description of a number of buddha-fields, including that of Amitābha, and the practices to ensure rebirth there; (4) a tradition of texts and practice in East Asian and Tibetan Buddhism, associated specifically with the goal of rebirth in the purified buddha-field of Amitābha; (5) the JŌDOSHŪ and JŌDO SHINSHŪ schools of Japanese Buddhism, deriving from the teachings of HŌNEN and SHINRAN, which set forth a "single practice" for rebirth in sukhāvatī. It is important to note that, although the *Sukhāvatīvyūhasūtra* (and other sūtras describing other buddha-fields) originated in India, there was no "pure land school" in Indian Buddhism; rebirth in a buddha-field, and especially that of sukhāvatī, was one of the many generalized goals of Mahāyāna practice. Although there was an extensive tradition in China of scriptural exegesis of the major pure land sūtras, this was not enough in itself to constitute a self-consciously "pure land school"; indeed, techniques for rebirth in sukhāvatī became popular in many strands of Chinese Buddhism (see NIANFO), especially in light of theories of the disappearance of the dharma (see MOFA). Finally, it is important to note that the goal of rebirth in sukhāvatī was an important practice in Japan prior to the advent of Hōnen, and remained so in schools other than Jōdoshū and Jōdo Shinshū.

pure land school. See JINGTU ZONG; JISHŪ; JŌDOSHŪ; JŌDO SHINSHŪ; YŪZŪNENBUTSUSHŪ.

Pūrṇa. (P. Puṇṇa; T. Gang po; C. Fulouna; J. Furuna; K. Puruna 富樓那). In Sanskrit, "Fulfilled," a famous ARHAT and disciple of the Buddha, often known as Pūrṇa the Great (MAHĀPŪRṆA). There are various stories of his origins and encounter with Buddha, leading some scholars to believe that there were two important monks with this name. In some cases, he is referred to as Pūrṇa Maitrāyaṇīputra (P. Puṇṇa Mantāṇīputta) and appears in lists of the Buddha's ten chief disciples, renowned for his skill in preaching the DHARMA. In the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), Pūrṇa is listed among the SRĀVAKAS who understand the parable in the seventh chapter on the conjured city; in the eighth chapter of that sūtra, the Buddha predicts Pūrṇa's eventual attainment of buddhahood. According to Pāli accounts, where he is known as Puṇṇa, he was a brāhmaṇa from Kapilavatthu (S. KAPILAVASTU), the son of Mantāṇī, who was herself the sister of Aññā Koṇḍañña (ĀJÑĀTAKAUṆḌINYA), the first of five ascetics (P. pañcavaggiyā; S. PAÑCAVARGIKA) converted and ordained by the Buddha at the Isipatana (S. ṚṢIPATANA) deer park (MṚGADĀVA) after his enlightenment. After preaching to the five ascetics, the Buddha traveled to Rājagaha (S. Rājagṛha); Aññā Koṇḍañña instead went to Kapilavatthu, where he proceeded to ordain his nephew Puṇṇa. Aññā Koṇḍañña retired to the forest while Puṇṇa remained in Kapilavatthu, devoting himself to the study of scripture and the practice of meditation, soon becoming an arahant (S. ARHAT). He gathered around him five hundred disciples, all of whom became monks, and taught them the ten bases of discourse he had learned. All of them became arahants. At Sāvatthi (Śrāvastī), the Buddha taught the dhamma to Puṇṇa in his private chambers, a special honor. While Puṇṇa was dwelling at the Andhavana grove, Sāriputta (S. Śāriputra) visited him to question him on points of doctrine. Puṇṇa was able to answer all of Sāriputta's queries. It was while listening to Puṇṇa's explication of causality that Ānanda became a stream-enterer (P. sotāpanna; S. SROTAĀPANNA). ¶ Other stories, most famously the *Pūrṇāvadāna* of the DIVYĀVADĀNA, tell of a different Pūrṇa, known as Puṇṇa Suppāraka in Pāli sources. His father was a wealthy merchant in the seaport of Sūrpāraka in western India. The merchant became ill and was cured by a slave girl, who eventually bore him a son, named Pūrṇa, who became in turn a skilled merchant. During a sea voyage with some merchants from Śrāvastī, he heard his colleagues reciting prayers to the Buddha. Overcome with feelings of faith, he went to see the Buddha and was ordained. After receiving brief instructions from the Buddha, he asked permission to spread the dharma among the uncivilized people of Śroṇāparāntaka, where he converted many and became an arhat in his own right. He later returned to his home city of Sūrpāraka, where he built a palace of sandalwood and invited the Buddha and his monks for a meal. Events from the story of Pūrṇa are depicted in cave paintings at AJAṆṬĀ in India and KIZIL in Central Asia along the SILK ROAD. A similar story of Pūrṇa's life as a merchant from a border region is recounted in still other Pāli accounts. After the Buddha preached the *Puṇṇovādasutta* to him, he is said to have joined the saṃgha and became an arahant. Puṇṇa won many disciples in his native land, who then wished to build a sandalwood monastery for the Buddha. The Buddha flew in celestial palanquins to Sunāparanta in the company of Puṇṇa and five hundred arahants in order to

accept the gift. Along the way, the Buddha converted a hermit dwelling atop Mount Saccabandha and left a footprint (BUDDHAPĀDA) in the nearby Narmada River so that the NĀGA spirits might worship it. Sunāparanta of the Pāli legend is located in India, but the Burmese identify it with their homeland, which stretches from Middle to Upper Burma. They locate Mount Saccabandha near the ancient Pyu capital of Sirīkhettarā (Prome). The adoption of Puṇṇa as an ancient native son allowed Burmese chroniclers to claim that their Buddhism was established in Burma during the lifetime of the Buddha himself and therefore was older than that of their fellow Buddhists in Sri Lanka, who did not convert to Buddhism until the time of Asoka (S. AŚOKA) two and half centuries later.

Pūrṇagiri. In Sanskrit, "Mountain of Abundance" (sometimes also seen written as Paurṇagiri); one of the four major geographical centers in India in the development of both the Hindu and the Buddhist tantric traditions, located near the city of Pittoragarh in the modern state of Uttar Pradesh. Many tantric texts, such as the eighth-century HEVAJRATANTRA, identify Kāmākhyā, Śrīhaṭṭa, UḌḌIYĀNA, and Pūrṇagiri as being the places where the secrets of tantra were first revealed. These four areas thus came to be known as śaktipīṭhas, or "seats of Śakti." Mythologically, this claim means that Pūrṇagiri is one of the places where the body of the goddess Śakti landed when it fell from heaven after being carved up by the gods. Different tantric schools offer various explanations as to which part of Śakti fell to Pūrṇagiri: some say it was her navel, others her neck and shoulders, still others her nose. Pūrṇagiri remains a popular pilgrimage site.

Pūrṇa-Maitrāyaṇīputra. (S). See PŪRṆA.

puruṣa. (P. purisa; T. skyes bu; C. ren/shifu/shenwo; J. nin/jifu/jinga; K. in/sabu/sina 人/士夫/神我). In Sanskrit, "person" or "being," a common term for an individual being or self in Indian literature. In the non-Buddhist Indian philosophical schools, especially Sāṃkhya, the term often refers to the imperishable self that persists from lifetime to lifetime. However, in Buddhist scholastic literature, the term tends to function as a synonym for PUDGALA, that is, the person or being created in each lifetime, which is the product of past action (KARMAN) and devoid of any perduring self (ĀTMAN). In less philosophical contexts, the term commonly means simply "man" or "(human) male." Thus, the Buddha is called a MAHĀPURUṢA, "great man." One of the famous uses of the term in Buddhist literature is found in the BODHIPATHAPRADĪPA of ATIŚA DĪPAṂKARAŚRĪJÑĀNA. In this work, Atiśa divides all persons into three capacities (TRĪNDRIYA), based on their level of aspiration. Those who seek only happiness within SAṂSĀRA, whether in this life or a future life, are classified as beings of lesser capacity (MṚDVINDRIYA). Those who seek liberation from rebirth for themselves alone are classified as beings of intermediate capacity (MADYENDRIYA). Those who seek to liberate all beings in the universe from suffering are beings of great capacity (TĪKṢṆENDRIYA). This threefold division provided the structure for TSONG KHA PA's LAM RIM CHEN MO.

puruṣakāraphala. (T. skyes bu'i byed pa'i 'bras bu; C. shiyong guo; J. jiyūka; K. sayong kwa 士用果). In Sanskrit, "effect produced by a person," or "virile fruition"; this is one of the five effects (PHALA) enumerated in the SARVĀSTIVĀDA ABHIDHARMA and the YOGĀCĀRA system. The puruṣakāraphala is the fruition of the coexistent cause (SAHABHŪHETU) and conjoined cause (SAṂPRAYUKTAHETU) and refers to effects that are the result of human effort (rather than the result of the ripening of past KARMAN), whether that effort be virtuous (KUŚALA), unvirtuous (AKUŚALA), or neutral. In this sense, the action performed by the person himself or herself leads to a result that is conjoined with that person: thus, a pot made by a potter would fall into this category of phala, as would a meditator's attainment of one of the noble paths (ĀRYAMĀRGA).

pūrvanivāsānusmṛti. (P. pubbenivāsānussati; T. sngon gyi gnas rjes su dran pa; C. suzhu suinian; J. shukujūzuinen; K. sukchu sunyŏm 宿住隨念). In Sanskrit, lit. "recollection of former abodes," viz., "memory of past lives."; a cardinal teaching of all schools of Buddhism and an element of meditative attainment in many Buddhist traditions. The term occurs most commonly as a component of one or another list, such as the superknowledges (ABHIJÑĀ), knowledges (VIDYĀ), or powers (BALA). Although lists of five, six, and seven abhijñā appear in Buddhist literature, the most common listing is of six, with the memory of past lives being fourth. The same memory of former abodes is sometimes called the first of the three knowledges (TRIVIDYĀ) that are realized at the point of enlightenment, the other two being the divine eye (DIVYACAKṢUS) and the knowledge of the destruction of the contaminants (ĀSRAVAKṢAYA). In addition, the memory of former abodes occurs as the eighth of the ten powers (bala) of the TATHĀGATA. ¶ In situating the memory of former abodes within broader descriptions of the practice of the path (MĀRGA), one general account describes the path of an average monk, while in another the Buddha relates his own experience. In the SĀMAÑÑAPHALASUTTA of the Pāli DĪGHANIKĀYA, for example, the Buddha describes the benefits of the life of mendicancy, providing a chronological catalogue of the attainments of one who follows the path, starting from the occasion of first hearing the dharma and proceeding to the attainment of NIRVĀṆA. Among those attainments are the six abhiññā/abhijñā, including memory of past lives and culminating with the knowledge of the destruction of the contaminants. Yet another variety of the arhat path is described in great detail in the CŪḶAHATTHIPADOPAMASUTTA of the MAJJHIMANIKĀYA. This account differs from that in the *Dīgha* with respect to the superknowledges, in that here, having attained the fourth meditative absorption (P. jhāna, S. DHYĀNA), the monk achieves only the last three of the abhiññā: the knowledge of former abodes, the divine eye, and the knowledge of the destruction of the contaminants. Elsewhere, these three experiences are referred

to as the three types of knowledge. In the VISUDDHIMAGGA, BUDDHAGHOSA describes a regimen in which the meditator recalls his or her life in reverse order, beginning with the most recent act of sitting down to meditate, tracing the events of this life back to the moment of conception and back to the moment of death in the previous existence and so on through the eons. Non-Buddhists are said to be able to recollect as far back as forty eons, ordinary ŚRĀVAKAS one thousand eons, the eighty great śrāvakas one hundred thousand eons, ŚĀRIPUTRA and MAHĀMAUDGALYĀYANA an incalculable age plus one hundred thousand eons, PRATYEKABUDDHAS two incalculable eons plus one hundred thousand eons, and buddhas limitless past lives. In the more detailed "autobiographical" narratives of the Buddha's enlightenment in mainstream sources, the bodhisattva becomes the Buddha by gaining the three types of knowledge: in the first watch of the night, the knowledge of former abodes; in the second watch, the divine eye; and in the third watch of the night, the knowledge of the destruction of the contaminants. In the second watch, he remembers his name, his clan, his caste, his food, his pleasure and pain, and his life span for individual lives over the incalculable past. In general, the achievement of the knowledge of former lives is described as the product of deep states of concentration and, as such, is accessible also to non-Buddhist YOGINS; for this reason it is considered a worldly or mundane (laukika) knowledge. In the MAHĀYĀNA sūtras, similar descriptions of the six abhijñā and three vidyā are found. However, the memory of former lives also occurs simply as the product of a certain meritorious deeds. The memory of past lives typically causes the person to practice virtue in order to avoid an unfortunate rebirth. In the SUKHĀVATĪVYŪHASŪTRA, it is said that all beings reborn in AMITĀBHA's PURE LAND will be endowed with memory of their former abodes going back trillions of eons.

pūrvapraṇidhāna. (T. sngon gyi smon lam; C. benyuan; J. hongan; K. ponwŏn 本願). In Sanskrit, "prior vow," a vow made in the past that has either been fulfilled in the present or will be fulfilled in the future, typically in conjunction with the attainment of buddhahood. The term pūrvapraṇidhāna is used specifically in the MAHĀYĀNA to denote the vow made in the past by a BODHISATTVA to become a buddha himself, often specifying the place, the time, and the retinue that will be associated with that achievement. Since the buddhas have perforce succeeded in achieving their goal of buddhahood, their prior vows are therefore all considered to have been fulfilled. The most famous of all prior vows are the forty-eight vows described in the SUKHĀVATĪVYŪHASŪTRA, in which the bodhisattva DHARMĀKARA makes a series of forty-eight vows to create the PURE LAND of SUKHĀVATĪ. These vows are narrated by the Buddha, who explains that the bodhisattva fulfilled all the vows and became the buddha AMITĀBHA. The exegesis of the vows of Dharmākara was an important element of JŌDOSHŪ and JŌDO SHINSHŪ buddhology in Japan. (The Chinese translation of this term literally means "original vow," and this English rendering is commonly seen in Western translations of PURE LAND works.) The compound *pubbepaṇidhāna is unattested in Pāli sources, but the term paṇidhāna is used to refer to this aspiration made in a previous life.

Pūrvaśaila. (P. Pubbaseliya; T. Shar gyi ri bo; C. Dongshan; J. Tōzan; K. Tongsan 東山). In Sanskrit, "Eastern Hill," the name of one of the offshoots of the MAHĀSĀṂGHIKA, associated particularly with the CAITYA school centered in the Andhra region of southern India. The name of the school seems to derive from the location of its chief VIHĀRA on a hill to the east of the city of Dhānyakaṭaka; one finds reference to both schools called Uttaraśaila ("Northern Hill") and Aparaśaila ("Western Hill"). Like other branches of the Caitya, the school seems to have held the building and veneration of reliquaries (CAITYA) to be particularly efficacious forms of creating merit (PUṆYA). Like other branches of the Mahāsāṃghika, they also held that the enlightenment of a buddha was superior to that of an ARHAT. Much of what is known about their doctrinal positions derives from the reports of authors from other schools, such as BUDDHAGHOSA in his commentary to the KATHĀVATTHU, where it is claimed that they asserted the existence of forces dissociated from thought (CITTAVIPRAYUKTA-SAṂSKĀRA) and of an intermediate state (ANTARĀBHAVA) between death and rebirth.

pūrvavideha. (S). See VIDEHA.

Pusa benye jing. (J. Bosatsu hongōkyō; K. Posal ponŏp kyŏng 菩薩本業經). In Chinese, "Original Acts [alt. Basic Endeavors] of the Bodhisattvas"; translated by ZHI QIAN (fl. c. 220–252). This scripture offers one of the earliest accounts of the ten BODHISATTVA stages (S. daśavihāra, DAŚABHŪMI) translated into Chinese. This text combines the variant versions of the ten bodhisattva stages found in the GAṆḌAVYŪHA (viz. AVATAṂSAKASŪTRA) and the MAHĀVASTU. This translated scripture should be distinguished from the PUSA YINGLUO PENYE JING, an indigenous Chinese sūtra attributed to the translator ZHU FONIAN (fl. c. 390), which may have been inspired by this similarly named text. In the tradition, the *Pusa benye jing* is usually abbreviated as the *Benye jing*, while that indigenous text is typically known by its abbreviated title *Yingluo jing*. (To confuse things even more, Zhu Fonian is also said to have translated a *Pusa yingluo jing*, which may be how his name became associated with the apocryphal *Pusa yingluo benye jing*.)

pusa jie. (J. bosatsukai; K. posal kye 菩薩戒). In Chinese, "BODHISATTVA precepts"; a set of precepts unique to the MAHĀYĀNA tradition, which bodhisattvas follow on the path to buddhahood. These precepts are regarded as independent from monastic precepts and can be taken and kept by monks and nuns, as well as laypeople. There are various enumerations of the vows, the most famous of which in East Asia is a list of ten major and forty-eight minor Mahāyāna precepts that derives

from the apocryphal FANWANG JING ("Book of Brahmā's Net"). See the extensive discussion in BODHISATTVAŚĪLA entry; see also BODHISATTVASAṂVARA.

Pusajie jing. (S. *Bodhisattvaśīlasūtra; J. Bosatsukaikyō; K. Posalgye kyŏng 菩薩戒經). In Chinese, "Book of the Bodhisattva Precepts"; independent title given to the second roll of the FANWANG JING ("Book of Brahmā's Net"), which provides a list of ten major and forty-eight minor MAHĀYĀNA precepts. This text is often cited by its reconstructed, but unattested, Sanskrit title, the **Bodhisattvaśīlasūtra*. See FANWANG JING; BODHISATTVAŚĪLA.

Pusa yingluo benye jing. (J. Bosatsu yōraku hongōkyō; K. Posal yŏngnak ponŏp kyŏng 菩薩瓔珞本業經). In Chinese, "Book of the Original Acts that Adorn the Bodhisattva," in two rolls, translation attributed to ZHU FONIAN (fl. c. 390); a Chinese indigenous sūtra (see APOCRYPHA) often known by its abbreviated title of *Yingluo jing*. The *Yingluo jing* was particularly influential in the writings of CHAN and TIANTAI exegetes, including such seminal scholastic figures as TIANTAI ZHIYI, who cited the sūtra especially in conjunction with discussions of the BODHISATTVA MĀRGA and Mahāyāna VINAYA. The *Yingluo jing* is perhaps best known for its attempt to synthesize the variant schemata of the Buddhist path (mārga) into a comprehensive regimen of fifty-two BODHISATTVA stages: the ten faiths, the ten abidings, the ten practices, the ten transferences, and the ten grounds (see C. DAŚABHŪMI; BHŪMI); these then culminate in the two stages of buddhahood, virtual or equal enlightenment (dengjue) and sublime enlightenment (miaojue), which the *Yingluo jing* calls respectively the immaculate stage (wugou di, S. *amalabhūmi) and the sublime-training stage (miaoxue di). The *Yingluo jing* is one of the first texts formally to include the ten faiths in its prescribed mārga schema, as a preliminary level prior to the initiation onto the bodhisattva path proper, which is said to occur at the time of the first arousal of the thought of enlightenment (BODHICITTOTPĀDA) on the first level of the ten abidings. The text therefore adds an additional ten steps to the forty-two named stages of the path outlined in the AVATAṂSAKASŪTRA (C. *Huayan jing*), providing a complete fifty-two-stage path, one of the most comprehensive accounts of the mārga to be found in East Asian Buddhist literature. The *Yingluo jing* also offers one of the most widely cited descriptions of the threefold classification of Buddhist morality (C. sanju jingji; S. ŚĪLATRAYA), a categorization of precepts found typically in YOGĀCĀRA-oriented materials. The *Yingluo jing* describes these as (1) the moral code that maintains both the discipline and the deportments (= S. SAṂVARAŚĪLA) through the ten perfections (PĀRAMITĀ); (2) the moral code that accumulates wholesome dharmas (= S. kuśaladharmasaṃgrāhaka) through the eighty-four thousand teachings; and (3) the moral code that aids all sentient beings (= S. SATTVĀRTHAKRIYĀ), through exercising loving-kindness, compassion, sympathetic joy, and equanimity (viz. the four BRAHMAVIHĀRA). The *Yingluo jing* specifies that these three categories of precepts are the foundation of morality for all bodhisattvas. The provenance and authorship of the *Pusa yingluo benye jing* have long been matters of controversy. In the fifth-century Buddhist catalogue CHU SANZANG JI JI, the compiler Sengyou lists the *Pusa yingluo benye jing* among miscellaneous works by anonymous translators. In the 594 scriptural catalogue *Zhongjing mulu*, the scripture is ascribed to Zhu Fonian, while the LIDAI SANBAO JI instead claims that the text was translated by the dhyāna master Zhiyan in 427. Later cataloguers generally accept the attribution to Zhu Fonian, though some note that the translation style differs markedly from that found in other of his renderings. The attribution to Zhu Fonian is also suspect because it includes passages and doctrines that seem to derive from other indigenous Chinese sūtras, such as the RENWANG JING, FANWANG JING, etc., as well as passages that appear in earlier Chinese translations of the AVATAṂSAKASŪTRA, PUSA BENYE JING, SHENGMAN JING, *Pusa dichi jing*, and DA ZHIDU LUN. Both internal and external evidence therefore suggests that the *Yingluo jing* is a Chinese apocryphon from the fifth century. ¶ The *Pusa yingluo benye jing* should be distinguished from the *Pusa benye jing* ("Basic Endeavors of the Bodhisattvas"), translated by ZHI QIAN (fl. c. 220–252), an authentic translation that offers one of the earliest accounts of the ten stages (S. daśavihāra, DAŚABHŪMI) translated into Chinese. (It is usually known by its abbreviated title of *Benye jing*.) This text seems to combine the accounts of the ten bodhisattva stages found in the GAṆḌAVYŪHA (viz., *Avataṃsakasūtra*) and the MAHĀVASTU and may have been the inspiration for the composition of this indigenous Chinese sūtra. (Zhu Fonian also translated a *Pusa yingluo jing*, which may be how his name became associated with this apocryphal *Pusa yingluo benye jing*.)

Pusŏksa. (浮石寺). In Korean, "Floating Rock Monastery," located on Mt. Ponghwang, in North Kyŏngsang province; one of the major Silla HWAŎM (C. HUAYAN ZONG) monasteries established by ŬISANG (625–702), the founder of the Hwaŏm school in Korea. According to the monastery's foundation story in the SAMGUK YUSA ("Memorabilia of the Three Kingdoms"), while Ŭisang was studying in China, he stayed over at the home of a layman, whose daughter Sŏnmyo (C. Shenmiao) became enamored of the master. When the time came for Ŭisang to return to Silla, he went to see Sŏnmyo to let her know that he was leaving, but she was not at home, so he just left a note for her. After receiving the message, Sŏnmyo ran down to the waterfront, only to see that his ship had already disappeared over the horizon. In despair, she jumped into the sea and died, but was reborn as a dragon who protected Ŭisang on the voyage back to Silla. After returning home, Ŭisang tried to build a monastery on Mt. Ponghwang in order to establish the Hwaŏm teachings in Silla. There were, however, five hundred bandits living on the mountain at the time, who stopped Ŭisang from proceeding. The dragon woman Sŏnmyo frightened them away by transforming herself into a huge rock floating in the air. The

monastery takes its name "Pusŏk" (Floating Rock) from this rock, which is believed to be the massive boulder that sits next to the main shrine hall. Sŏnmyo Pavilion is named after this female dharma protector. Many Silla and Koryŏ monks studied Hwaŏm doctrine at Pusŏksa, including the Silla SŎN masters Hyech'ŏl (785–861) and Muyŏm (801–888), and the Koryŏ state preceptors Kyŏrŭng (964–1053) and Hagil (1052–1144). Despite its close sectarian associations with the Hwaŏm school, the monastery's shrine halls are more directly linked to the PURE LAND teachings, reflecting Ŭisang's eclectic approach to Buddhist thought and practice. These pure land linkages include (1) the Anyang nu (Pavilion of Peaceful Nurturing) is an alternative name for the pure land of SUKHĀVATĪ; (2) Muryangsu chŏn (Hall of Immeasurable Life), the main shrine hall of the monastery, is dedicated to AMITĀBHA, rather than to the MAHĀVAIROCANA image that might be expected in a Hwaŏm monastery; (3) the statue of AMITĀBHA in the main hall faces east so that worshippers will face west, in the direction of the Amitābha's pure land, when worshipping in the hall; (4) after entering the Ilchu mun (One-Pillar Gate), the front entrance gate to the monastery grounds, the monastery is laid out over nine stone terraces, which is often interpreted as corresponding to the pure land theory of nine grades of the pure land (kup'um chŏngt'o; see C. JIUPIN), a sort of a soteriological outline of rebirth in the pure land, which ranges from the worst of the worst to the best of the best. Pusŏksa is currently a branch monastery (MALSA) of the sixteenth district monastery (PONSA) KOUNSA (Secluded Cloud Monastery), which was also founded by Ŭisang.

Putuoshan. (J. Fudasen; K. Pot'asan 普陀山/補陀山). In Chinese, "Mount POTALAKA"; a mountainous island in the Zhoushan Archipelago, about sixty-two miles off the eastern coast of Zhejiang province; also known as Butuoshan, Butuoluojiashan, Xiaobaihuashan, etc. Putuoshan is considered one of the four Buddhist sacred mountains in China, along with WUTAISHAN in Shanxi, EMEISHAN in Sichuan, and JIUHUASHAN in Anhui. Each of the mountains is said to be the residence of a specific BODHISATTVA, and Putuoshan is regarded as the sacred mountain of AVALOKITEŚVARA, known in Chinese as GUANYIN pusa, the revered "bodhisattva of compassion." There are many legends told about Putuoshan. During the Tang dynasty, an Indian monk is said to have come to Putuoshan and immolated his ten fingers, after which Avalokiteśvara appeared and preached the dharma to him. As this legend spread, Putuoshan gained fame as the sacred site of Avalokiteśvara. In 916 CE, a Japanese monk was bringing a statue of Avalokiteśvara back to Japan from Wutaishan, but was delayed on Putuoshan by fierce storms. He built a monastery for Avalokiteśvara on the island and named it Baotuo monastery, an abbreviated Chinese transcription for the Sanskrit word Potalaka, an Indian holy mountain that, according to the GAṆḌAVYŪHA of the AVATAṂSAKASŪTRA, is thought to be the abode of Avalokiteśvara. Since that sūtra said that Mt. Potalaka was an isolated mountainous island rising out of the ocean, the sacred geography seemed to match Putuoshan's physical geography. After the Southern Song dynasty, the scale of monasteries, nunneries, monks and nuns in Putuoshan increased significantly through donations from the imperial court and lay Buddhists. Many people came to Putuoshan, especially to pray for safe voyages. It was also popular for the emperor to perform religious rites on Putuoshan. In 1131, during the Southern Song dynasty, all Buddhist schools on Putuoshan were designated as CHAN monasteries. In 1214, Putuoshan was ordered to emphasize the worship of Avalokiteśvara. At the height of its prestige, there were as many as 218 monasteries on the island, housing more than two thousand monks and nuns. There are now three major monasteries on Putuoshan—Pujisi, Fayusi, and Huijisi—all affiliated with either the LINJI ZONG or the CAODONG ZONG of CHAN Buddhism, and seventy-two smaller temples. Pious pilgrims come to Putuoshan from all over China to worship Avalokiteśvara, and Putuoshan continues to be one of the most popular pilgrimage sites in China. See also POTALAKA; PO TA LA.

Puyan. (C) (普巖). See YUN'AN PUYAN.

Pyŏgam Kaksŏng. (碧巖覺性) (1575–1660). Korean SŎN master of the Chosŏn dynasty; also known as Chingwŏn. Kaksŏng was a native of Poŭn (in present-day North Ch'ungch'ŏng province). After losing his father at an early age, Kaksŏng became a monk under Sŏlmuk (d.u.) at the hermitage of Hwasanam. Kaksŏng received the full monastic precepts in 1588 from a certain Pojŏng (d.u.) and subsequently became the disciple of the eminent Sŏn master PUHYU SŎNSU, whom he accompanied from one mountain monastery to another. When Japanese troops stormed the Korean peninsula in 1592 during the Hideyoshi invasions, Kaksŏng served in the war in place of his teacher, who had been recommended earlier to the king by the eminent monk SAMYŎNG YUJŎNG. Kaksŏng launched a successful sea campaign against Japanese naval forces. Kaksŏng was once falsely accused of a crime and imprisoned, but was later released and appointed prelate (p'ansa) of both the Sŏn and KYO traditions and abbot of the monastery Pongŭnsa in the capital of Seoul. In 1624, he was appointed the supreme director of the eight provinces (p'alto toch'ongsŏp) and oversaw the construction of Namhansansŏng. Kaksŏng then spent the next few years in Chŏlla province, restoring the monasteries of HWAŎMSA, SONGGWANGSA, and SSANGGYESA, which had been burned during the Hideyoshi invasions. He also taught at HAEINSA, PAEGUNSA, and Sangsŏnam, but eventually returned to Hwaŏmsa, where he passed away in 1660. He produced many famous disciples, such as Ch'wimi Such'o (1590–1668), Paekkok Ch'ŏnŭng (1617–1680), Moun Chinŏn (1622–1703), and Hoeŭn Ŭngjun (1587–1672). Kaksŏng's lineage expanded into eight branches, and his influence on the subsequent development of Korean Sŏn rivalled that of CH'ŎNGHŎ HYUJŎNG, the preeminent Korean monk during the Chosŏn dynasty. Kaksŏng also composed many

treatises, including the *Sŏnwŏnjipto chung kyŏrŭi*, *Kanhwa kyŏrŭi*, *Sŏngmun sangŭi ch'o*, and others.

P'yohunsa. (表訓寺). In Korean, "P'yohun's monastery"; one of the four major monasteries on the Buddhist sacred mountain of KŬMGANGSAN (Diamond Mountains), now in North Korea. The monastery is said to have been built in 598 during the Silla dynasty by Kwallŭk (d.u.) and Yungun (d.u.), and rebuilt in 675 by P'yohun (d.u.), one of the ten disciples of ŬISANG (625–702), the vaunt-courier of the Korean HWAŎM (C. HUAYAN) school. The present monastery was rebuilt after the Korean War (1950–1953) on the model of an earlier reconstruction project finished in 1778 during the late-Chosŏn dynasty. The main shrine hall of the monastery is named Panya Pojŏn (Prajñā Jeweled Basilica), rather than the typical TAEUNG CHŎN (basilica of the great hero [the Buddha]), and the image of the bodhisattva DHARMODGATA (Pŏpki Posal) that used to be enshrined therein was installed facing Dharmodgata Peak (Pŏpkibong) to the northeast of the hall, rather than toward the front. The relics (ŚARĪRA) of NAONG HYEGŬN (1320–1376), a late-Koryŏ period Sŏn monk who introduced the orthodox LINJI ZONG (K. IMJE CHONG) lineage to Korea from China, were enshrined at P'yohunsa. The monastery also was famous for its iron pagoda (STŪPA) with fifty-three enshrined buddha images, but these were lost sometime during the Japanese occupation of Korea (1910–1945), along with Naong's relics. Chŏngyangsa, one of the branch monasteries of P'yohunsa, is said to have been built at the spot where Dharmodgata and his attendant bodhisattvas appeared before the first king of the Koryŏ dynasty, Wang Kŏn, T'aejo (877–943; r. 918–943), on his visit to Kŭmgangsan. The peak where Dharmodgata made his appearance is named Panggwangdae (Radiant Terrace), and the spot where T'aejo prostrated himself before Dharmodgata is called Paejŏm (Prostration Hill). Podŏgam, a hermitage affiliated with P'yohunsa, is notable for its peculiar construction: for four hundred years it has been suspended off a cliff, supported by a single copper foundation pillar.

P'yŏnyang Ŏn'gi. (鞭羊彦機) (1581–1644). Korean SŎN master and renowned painter during the Chosŏn period. Ŏn'gi entered the SAṂGHA at the age of eleven and subsequently became a student of the Sŏn master CH'ŎNGHŎ HYUJŎNG. He taught at various monasteries and hermitages, including Ch'ŏndŏksa, Taesŏngsa on Mt. Kuryong, and Ch'ŏnsuam on Mt. Myohyang. He died at sixty-three, leaving behind some thirty disciples, the largest group among Hyujŏng's four direct lineages. His writings can be found in the *P'yŏnyangdang chip*.

Q

Qianfo dong. (C) (千佛洞). In Chinese, "Caves of the Thousand Buddhas." See DUNHUANG.

Qianshou jing. (S. Nīlakaṇṭhakasūtra; T. Mgrin pa sngon po can [gyi mdo]; J. Senjūkyō; K. Ch'ŏnsu kyŏng 千手經). In Chinese, "Thousand Hands Sūtra"; in Sanskrit, "Blue-Throated [Avalokiteśvara] Sūtra"; an abbreviated title commonly used for the text that provides the scriptural foundation for the popular cult of Thousand-Armed and Thousand-Eyed AVALOKITEŚVARA (SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA). There are several Chinese translations of the scripture, including Bhagavaddharma's (fl. c. seventh century) *Qianshou Qianyan Guanshiyin pusa guangda yuanman wu'ai dabeixin tuoluoni jing* ("Dhāraṇī-Sūtra of Thousand-Eyed and Thousand-Armed Bodhisattva Who Regards the World's Sounds and Feels Vast, Complete, Unimpeded Great Compassion"), translated between 650 and 661, and Zhitong's (fl. c. seventh century) *Qianyan Qianbi Guanshiyin pusa tuoluoni shenzhou jing* ("Dhāraṇī-Sūtra of Thousand-Eyed and Thousand-Armed Bodhisattva Who Regards the World's Sounds"), translated between 627 and 649. (There are additional translations by BODHIRUCI, made in 709; VAJRABODHI, made between 731 and 736; and AMOGHAVAJRA, made during the eighth century.) Each version differs in its content and structure, but most include a spell dedicated to Thousand-Armed Avalokiteśvara (C. GUANYIN), which is commonly called the Qianshou (Thousand-Handed/Armed) or Dabei (Great Compassion) DHĀRAṆĪ. There are at least eight different Chinese transcriptions of this dhāraṇī and two Tibetan transcriptions, suggesting that different Sanskrit recensions of the spell were in circulation. Bhagavaddharma's translation of the sūtra has been the most popular in the East Asia and the title *Qianshou jing* typically refers to his recension. According to Bhagavaddharma's translation of the text, innumerable eons ago, Avalokiteśvara received this dhāraṇī from a buddha named Qianguang Wangjing Zhu Rulai (Tathāgata Tranquil Abode who is King of the Thousandfold Radiance), and, after making ten vows to benefit all sentient beings, the bodhisattva came to be endowed with a thousand arms and a thousand eyes. The sūtra then explains the various benefits of keeping and reciting the dhāraṇī. Keeping the dhāraṇī ensures, for example, fifteen kinds of salutary rebirths, such as being born in a good country, living during a peaceful time, meeting good friends, having sufficient money and food, and being protected by the divinities; it also ensures that the adept will avoid fifteen kinds of painful deaths, such as from hunger, madness, drowning, conflagration, poison, and suicide. These various sets of benefits are only included in Bhagavadharma's version, which may partly account for the greater popularity of his translation. His version also forgoes the complex instructions on ritual matters found in Zhitong's version, such as the detailed rules of creating an image of Guanyin, which were probably intended for ritual specialists. Bhagavaddharma's text introduced the dhāraṇī and the names of forty gestures (MUDRĀ) and their particular benefits; Amoghavajra's (705–774) later recension includes illustrations of these mudrā. Due to the great popularity of Bhagavaddharma's early translation, Thousand-Armed and Thousand-Eyed Avalokiteśvara became identified specifically with Avalokiteśvara's manifestation as Great Compassion (C. Dabei; S. MAHĀKARUṆIKA). Based on the same version, the Song TIANTAI master SIMING ZHILI (960–1028) composed a manual for a repentance ritual using this scripture: the *Qianshou Qianyan Dabeixinzhou xingfa* ("Rules for Performing the Great Compassion Heart Dhāraṇī of the Thousand-Handed and Thousand-Eyed One"). A late-ninth-century abridgment of Bhagavaddharma's translation, the *Dabei qiqing* ("Great Compassion Invocation"), was also created, probably for use as a ritual manual. Bhagavaddharma's translation of the sūtra also became popular in Japan and Korea as well. In Korea, where the text is known as the *Ch'ŏnsu kyŏng*, another abridgment was made that included only the Thousand-Hands dhāraṇī and Avalokiteśvara's vows; it was probably intended as a type of ritual procedure. This version also cites materials that derive from a variety of different traditions, including HWAŎM (C. HUAYAN), SŎN (C. CHAN), CH'ŎNT'AE (C. TIANTAI), and PURE LAND. Starting in the eighteenth century, several manuals were written with procedures for the ritual dedicated to Thousand-Armed Kwanŭm (Guanyin), all based on the dhāraṇī and vows. The current form of the rite is recited in the daily ritual of many Chinese and Korean monasteries. See also OM MAṆI PADME HŪṂ.

qiao. (S. śarīre khāni; J. kyō; K. kyu 竅). In Chinese, the "bodily orifices," of which nine are listed: the two eyes, the two ears, the two nostrils, the mouth, the reproductive organ, and the anus. In one form of "foulness contemplation" (S. AŚUBHABHĀVANĀ), in which the impure aspects of the human body are concentrated upon in order to counter lust and

excessive attachment to the body, practitioners focus on the way impurities (pus, blood, secretions, etc.) and odors are constantly being secreted through these nine orifices.

qi miezheng fa. (七滅諍法). In Chinese, "seven means of settling disputes" (SAPTĀDHIKARAṆAŚAMATHA). See also ADHIKARAṆAŚAMATHA.

Qimingsi. (齊明寺). In Chinese, "Brightness of Qi" convent, located in Yanguan county in Zhejiang province; the residence for several Qi-dynasty nuns listed in the BIQIUNI ZHUAN ("Lives of the Nuns") collection, including Dele (421–501 CE), SENGMENG (418–489 CE), Chaoming (438–498 CE), and Shi Faxuan (434–516 CE). Differing explanations of its foundation appear in the *Biqiuni zhuan*. The first story credits Sengmeng for founding the convent. It is said that when her mother became ill, Sengmeng returned to her home in Yanguan county to tend to her. While there, Sengmeng decided to turn her residence into a convent. It is said that she participated actively in the construction of the convent's various halls. The second account credits a devout layman named Yüan Jian for donating his residence to build the convent in 487 CE, during the Qi dynasty (479–502 CE). According to this version, the nun Dele was chosen as abbess of the convent because of her renowned lecturing skills and intellectual talent, her meditative expertise, and her ability to attract a wide following of both monks and nuns, including the aforementioned Shi Faxuan.

qinggou. (輕垢). In Chinese, "minor fault." See DUṢKṚTA.

qinggui. (J. shingi; K. ch'ŏnggyu 淸規). In Chinese, lit. "rules of purity" or "rules for the pure (assembly)," a genre of monastic codes compiled by adherents within the CHAN tradition. According to such Song-period genealogical records as the JINGDE CHUANDENG LU, the Tang Chan master BAIZHANG HUAIHAI (720–814) composed the first such Chan code, entitled the BAIZHANG QINGGUI ("Baizhang's Rules of Purity"), in order to establish an independent Chan discipline distinct from the normative VINAYA tradition; his qinggui is not extant, however, and modern scholars doubt that it ever existed. There might have been some Chan monastic codes as early as the Tang dynasty, influenced by such Chinese codes as DAO'AN's (312–384) *Sengni guifan* ("Standards for Monks and Nuns") or DAOXUAN's (596–667) *Jiaojie xinxue biqiu xinghu lüyi* ("Exhortation on Manners and Etiquette for Novices in Training"). However, the oldest surviving Chan code is the CHANYUAN QINGGUI compiled by the YUNMEN ZONG master CHANGLU ZONGZE (d. c. 1107). These types of texts were typically composed by the founding abbots of monasteries and thus include their vision of how monks in their monasteries should conduct themselves. These codes deal with daily routines in the monastery, monthly schedules, annual festivals, titles and duties of the administrative monks in the monastery, and outlines of various religious services. They may also include monastic rules and regulations related to state policies regarding SAṂGHA administration, such as rules on travel permits and the election of abbots. The codes differed in content, since each monastery compiled its own in accord with its own needs, e.g., as to whether it was a public or private monastery. For this reason, the Yuan Emperor Shun (r. 1333–1368) eventually compiled a unified code based on the rules attributed to Baizhang, entitled the *Chixiu Baizhang qinggui*. Although the term qinggui originally referred to the monastic codes associated with the Chan school, it later came to be used as a general term for the monastic codes used by other schools, such as in the TIANTAI monk Ziqing's (fl. fourteenth century) *Jiaoyuan qinggui* ("Pure Rules for the Garden of Doctrine") compiled in 1347. See also BCA' YIG.

Qingliang guoshi. (淸凉國師). See CHENGGUAN.

Qingyuan Xingsi. (J. Seigen Gyōshi; K. Ch'ŏngwŏn Haengsa 靑原行思) (d. 740). A Chinese CHAN master of the Tang dynasty, Qingyuan is said to have been a native of Jizhou in present-day Jiangxi province. Little is known of his career besides the fact that he was ostensibly the student of the sixth patriarch (LIUZU) HUINENG. He later resided at the monastery of Jingjusi on Mt. Qingyuan (present-day Jiangxi province) and acquired many students, of whom SHITOU XIQIAN (700–790) is the most famous. Like many of the reputed disciples of Huineng (e.g., YONGJIA XUANJUE and NANYUE HUAIRANG), Qingyuan's relation with Huineng is dubious. Later, three major "houses" (jia) of the Chan tradition, YUNMEN, CAODONG, and FAYAN, traced their lineages back to Huineng via Shitou and his teacher Qingyuan (see WU JIA QI ZONG). Qingyuan was given the posthumous title Chan master Hongji (Universal Salvation).

qini[zui]. (J. shichigyaku[zai]; K. ch'iryŏk[choe] 七逆[罪]). In Chinese, "seven transgressions," a listing of major moral transgressions in the Mahāyāna school as outlined in the Chinese *Book of Brahmā's Net* (FANWANG JING). The seven are the following: inflicting injuries on the Buddha ("shedding the Buddha's blood"), patricide, matricide, killing a renunciant, killing a preceptor, killing an ARHAT, and causing schism within the monastic community (SAṂGHABHEDA). If any of the seven are committed, one will not be eligible to receive precepts of any kind nor attain any considerable spiritual fruition within this lifetime. See also ICCHANTIKA; SAMUCCHINNAKUŚALAMŪLA.

qinli jue. (J. shinrikaku; K. ch'illi kak 親里覺). In Chinese, lit. "affection for one's relatives and hometown" or "partiality and nostalgia for one's loved ones, relatives, or fellow townsmen," one of the so-called eight kinds of misplaced attention (see BA JUE). This emotion refers to one's identification with favoritism and nostalgia for loved ones, whether that be in the form of one's land and country (guotu), family and clan (zuxing), or the endearing circle of familiar individuals (as in the case of this qinli jue). Especially for a monk who has become a homeless renunciant (see PRAVRAJITA), such attachment could

be a subtle spiritual obstacle. It is said that only ARHATs or advanced bodhisattvas have perfected their equanimity and are therefore completely impartial to both strangers and acquaintances (wu qingyuan xiang) and devoid of any dualistic concept of friends versus enemies.

qiqi. (J. shichishichi; K. ch'ilch'il 七七). In Chinese, "seven periods of seven days," viz., the forty-nine-day transitional period between rebirths. According to some Buddhist accounts, the forty-nine days following a person's death is of crucial importance in his or her karmic destiny. A deceased with strong and unambiguous karmic propensities is said to be reborn immediately into the appropriate realm. However, for those whose karmic composition is of mixed evil and good deeds and whose temperaments do not draw them so decidedly toward any one particular kind of existence, there would not be such clear-cut and swift propulsion into any particular realm of rebirth. They are said to reside in an "intermediate state" (ANTARĀBHAVA; see also BAR DO) for upward of forty-nine days, during which time the precarious equilibrium of their karmic indeterminacy is highly susceptible to conditions that would potentially tip the balance. These conditions might include a whimsical thought or emotion on the part of the intermediate-state being (GANDHARVA) or the intervening power of proper rituals and "transference of merits" (PARIṆĀMANĀ) performed on its behalf. For this reason, religious services of the latter sorts are widely performed in many Buddhist traditions during this "window of opportunity." Thus, "qiqi" refers either to the forty-nine-day period in which such services are held or to the services themselves.

qiqi ji. [alt. qiqi [ri] zhai] (J. shichishichi no ki/shichishichi [nichi]sai; K. ch'ilch'il ki/ch'ilch'il [il] chae 七七忌/七七[日]齋). In Chinese, lit. "seven-sevens service," the memorial services performed on the seven "seventh days" following a person's death, culminating in the forty-ninth-day ceremony (SISHIJIU [RI] ZHAI) that marks the official point of rebirth. (For a discussion of the transitional period between rebirths, see ANTARĀBHAVA; BAR DO; QIQI.) During this transitional period, intermediate-state beings (GANDHARVA) are presumed to be especially susceptible to the power of religious rituals, which transfers merit to them (PARIṆĀMANĀ) and thus potentially improves the quality of their next rebirth. For this reason, in many Buddhist traditions, but especially those in East Asia, the qiqi ji is performed weekly during this "window of opportunity," which culminates in the final "forty-ninth-day ceremony."

qiqing. (七情). In Chinese, "seven emotions." See QIQING LIUYU.

qiqing liuyu. (J. shichijō rokuyoku; K. ch'ilchŏng yugyok 七情六欲). In Chinese, "seven emotions and six desires." According to the DAZHIDU LUN, the seven emotions of joy, anger, sadness, horror, love, hate, and desire are directed to other people's (1) physical body (se), (2) appearance (xingmao), (3) comportment (weiyi), (4) voice (yanyu yinsheng), (5) delicateness or smoothness [of skin] (xihua), and (6) physical features (renxiang).

qiqi [ri] zhai. (七七[日]齋). In Chinese, "seven-sevens ceremony." See QIQI; SISHIJIU [RI] ZHAI.

qishan. (J. shichizen; K. ch'ilsŏn 七善). In Chinese, "seven excellences [of the Buddha's teaching]." They are the following: the excellence of its timing (shishan), meaning (yishan), language (i.e., its adaptiveness to regional dialects; yushan), singular goal [of attaining "NIRVĀṆA"] (dufa), completeness (juzu), melodiousness and edificatory properties (qingjing tiaorou), and conduciveness to living out the holy life (fanxing; see BRAHMACARYA).

qisheng. (C) (七生). See QIYOU.

qishengshi. (J. shichishōji; K. ch'ilsŭngsa 七勝事). In Chinese, "seven surpassing qualities [of the Buddha]": his physical marks (shensheng; see MAHĀPURUṢALAKṢAṆA), his abiding in or perfect conformity to the dharma (rufa zhu sheng), wisdom (zhisheng), perfections (juzu sheng; see PĀRAMITĀ), practices (xingchu sheng), ineffability (buke siyi sheng), and liberation (jietuo sheng).

Qisong. (C) (契嵩). See FORI QISONG.

qixian. (J. shichiken; K. ch'irhyŏn 七賢). In Chinese, lit. "seven sagacities," seven stages on the path of preparation (PRAYOGAMĀRGA) derived from the Chinese translation of the ABHIDHARMAKOŚABHĀṢYA. The first stage involves the cultivation of meditative "antidotes" (PRATIPAKṢA) such as the contemplation of foulness, the contemplation of loving-kindness, and the contemplation of the breath to counter, respectively, the excessive tendencies toward lust, ill will, and discursiveness. The second involves the practice of the so-called four foundations of mindfulness, which involves insight (VIPAŚYANĀ) into real-time experiences as they unfold in the body and mind. The third focuses on the contemplation of the three marks of existence (TRILAKṢAṆA), noticing the characteristics of impermanence, unsatisfactoriness, and selflessness in those psychophysical experiences. The fourth through seventh stages correspond to the "wholesome roots associated with the knowledge that penetrates reality" (NIRVEDHABHĀGĪYA-KUŚALAMŪLA): heat (ŪṢMAN), summit (MŪRDHAN), receptivity or acquiescence (KṢĀNTI), and highest worldly dharmas (LAUKIKĀGRADHARMA). These nirvedhabhāgīya open access to the path of vision (DARŚANAMĀRGA) where the first stage of sanctity, stream-entry (SROTAĀPANNA), is won.

qixing. (C) (七星). See BEIDOU QIXING.

Qixin lun. (C) (起信論). See DASHENG QIXIN LUN.

qiyou. (J. shichiu; K. ch'iryu 七有). In Chinese, "seven modes of existence": the six destinies (see GATI) and the "intermediate state" of the ANTARĀBHAVA.

qizhi. (J. shichichi; K. ch'ilchi 七知). In Chinese, "seven knowledges" or "seven discernments," the specific types of understanding that are indispensable in order to be an effective BODHISATTVA according to the MAHĀPARINIRVĀṆASŪTRA. These are (1) knowing the DHARMA (zhifa); (2) understanding the implicit meanings of the dharma (zhiyi); (3) knowing the timing of different kinds of practices (zhishi); (4) knowing contentment (zhizu); (5) knowing one's current level of spiritual capacity (zhizi); (6) a sense of the audience, viz., knowing how to adapt and cater to its specific backgrounds and abilities (zhizhong); and (7) realizing that reaching out to believers and nonbelievers requires different approaches and that there is a priority (zunbei) in saving oneself before one can save others (zhiren zunbei).

qizhongshe. (J. shichishu no sha; K. ch'ilchongsa 七種捨). In Chinese, "seven kinds of relinquishment." They are as follows: (1) an expansive, imperturbable equanimity (see UPEKṢĀ) that is devoid of attachments; (2) being impartial to all sentient beings, harboring no distinction between those who are endearing and those who are not; (3) not giving in to the effects of passion and enmity, craving, and ill will; (4) not harboring thoughts of anxiety, regret, or parsimony while one is overseeing the deliverance of sentient beings; (5) staying firmly anchored in the realization of emptiness (ŚŪNYATĀ) and relinquishing all clinging to the superficial and contingent characteristics of things; (6) willingly sharing with and giving to others, even if that means parting with what one loves and takes delight in; and (7) harboring no expectation for reciprocity, gratitude, or any other reward in one's acts of giving.

qizhongyu. (J. shichishugo; K. ch'ilchongŏ 七種語). In Chinese, the Buddha's "seven modes of speech." They are (1) yinyu, explanations of how a present cause will induce a specific future effect; (2) guoyu, explanations of how a present effect was a result of a specific past cause; (3) yinguo yu, explanations of the comprehensive principles and mechanisms of the operation of cause and effect; (4) yuyu, explanations through the use of parables, analogies, and illustrations; (5) buying [shuo] yu, a mode of speech that has been variously interpreted as either "enigmatic speech" ("buying" in this case is understood as "not connected with [logic or common sense or traditional tenets]") or "spontaneous speech" ("buying" in this case is understood as "[to speak] without responding [to specific questions]" and therefore is a "self-induced, spontaneous speech"); (6) shi liubu yu, explanations aimed at conforming and catering to worldly concerns, customs, or world views; in other words, these are mundane, provisional explanations not necessarily aimed at transmitting the highest truths; (7) ruyi yu, a mode of speech interpreted as either explanations made according to the likings and predilections of the audience ("ruyi" in this case means "conforming to the wishes" [of the audience]) or explanations that come from the Buddha's ultimate intent—i.e., these are the ultimate, "definitive" explanations ("ruyi" in this case means "conforming to [the Buddha's original] wish").

Qizil. See KIZIL.

qizuisheng. (J. shichisaishō; K. ch'ilch'oesŭng 七最勝). In Chinese, "the seven unsurpassed [qualities of the perfections]." According to the CHENG WEISHI LUN (S. **Vijñaptimātratāsiddhi*), the "perfections" (PĀRAMITĀ) of a BODHISATTVA are distinguished from other forms of virtuous and wholesome practices because of their seven unsurpassed qualities. They are the following: (1) being firmly anchored in the BODHISATTVA lineage (see GOTRA) (anzhu zuisheng); (2) being firmly founded on BODHICITTA, the bodhisattva's aspiration to lead all beings to deliverance (yizhi zuisheng); (3) being permeated with the intention to take pity in all sentient beings (yiguo zuisheng); (4) implementing all good deeds, not just a limited number (shiye zuisheng); (5) being compatible with all skillful means (see UPĀYA) and not constrained by just a limited number of them (qiaobian zuisheng); (6) ultimately leading to perfect BODHI (huixiang zuisheng); and (7) being undefiled by the two obstructions of KLEŚĀVARAṆA (afflictive obstructions) and JÑEYĀVARAṆA (cognitive obstructions) (qingjing zuisheng).

quanshen sheli. (J. zenshinshari; K. chŏnsin sari 全身舍利). In Chinese, "whole-body relics," the mummified remains of eminent masters. See ŚARĪRA.

quan shi. (J. gonjitsu; K. kwŏn sil 權實). In Chinese, "provisional versus definitive" or "conventional versus absolute," a bifurcation used in the TIANTAI school to refer to either the different grades of the Buddhist teachings or the different levels of truth to which the teaching points. In the former context, quan is equivalent to "provisional" as in "provisional teaching" (NEYĀRTHA), and shi is synonymous with "definitive" as in "definitive teaching" (NĪTĀRTHA). In the latter context, quan is equivalent to "conventional" as in the "conventional truth" (SAṂVṚTISATYA, e.g., the relative existence of a "self"), and shi is equivalent to "absolute" as in the "absolute truth" (PARAMĀRTHASATYA, e.g., all dharma lack a "self"). Used adjectivally, these two Sinographs modify a variety of other Chinese characters to form new compounds. See also FAXING ZONG.

Questions of King Milinda. See MILINDAPAÑHA.

R

Rabten, Geshe. (1920–1986). A Tibetan monk-scholar of the DGE LUGS sect who played an important role in the transmission of Tibetan Buddhism in the West. He was born into a farming family approximately fifty miles south of Dar rgyas (Dargye) monastery in the Tre hor region of Khams. At the age of seventeen Geshe Rabten began his studies at SE RA monastery in LHA SA; he later became the teacher of the five-year-old incarnate lama Dgon gsar rin po che (Gonsar Rinpoche), who would remain his close disciple throughout Geshe Rabten's life. Geshe Rabten and Dgon gsar followed the DALAI LAMA into exile where he received his DGE BSHES lha ram pa degree in 1963 at the age of forty-three. He attracted many students, was appointed religious assistant (mtshan zhabs) to the DALAI LAMA, and began to teach Western students in 1969. He started Tharpa Chöling Center of Higher Tibetan Studies near Lausanne, Switzerland, later in 1977. His full name is Dge bshes Rta mgrin rab brtan (Geshe Tamdin Rabten).

Rādha. (C. Luotuo; J. Rada; K. Rada 羅陀). Sanskrit and Pāli proper name of an eminent ARHAT deemed by the Buddha to be foremost among his monk disciples who were able to inspire speech in others. According to the Pāli account, Rādha was an aging brāhmaṇa who was neglected by his children in his old age and sought to enter the order of monks (SAṂGHA) for refuge. He initially went to a monastery in RĀJAGṚHA, where he performed chores, but was refused ordination by the monks because of his advanced age. Out of disappointment, Rādha began to grow thin. The Buddha, realizing that Rādha had the potential to achieve arhatship, summoned the monks and asked if any of them remembered any act of kindness performed for them by Rādha. ŚĀRIPUTRA recalled once receiving a ladle of food from Rādha's meager meal while on alms rounds in Rājagṛha, so the Buddha ordered Śāriputra to ordain him and soon afterward, he became an arhat. Śāriputra was pleased with Rādha's gentle behavior and kept him as an attendant; he also served for a time as an attendant to the Buddha. It was during that time that he was recognized for preeminence in inspiring others. His power even influenced the Buddha, who said that whenever he saw Rādha, he felt inclined to speak on subtle aspects of doctrine because of Rādha's wealth of views and his constant faith.

rāga. (T. 'dod chags; C. tan; J. ton; K. t'am 貪). In Sanskrit and Pāli, "passion," or "desire," one of the six root afflictions (MŪLAKLEŚA) and typically listed along with aversion (DVEṢA) and ignorance (MOHA) as one of the three poisons (TRIVIṢA) that cause suffering. Rāga is defined as a mental factor that perceives an internal or external contaminated phenomenon to be pleasant and then seeks it. It is closely synonymous with "greed" (LOBHA). In this denotation, rāga is also sometimes called KĀMARĀGA. In Buddhist psychology, when contact with objects is made "without proper comprehension" or "without introspection" (ASAṂPRAJANYA), passion, aversion, and delusion arise. Passion—which is a psychological reaction that is associated with the pursuing, possessing, or yearning for a pleasing stimulus and with being discontent with unpleasant stimuli—may target a host of possible objects. Scriptural accounts list these objects of passion as sensual pleasures, material belongings, loved ones, fame, the five aggregates (SKANDHA), ideologies and views (DṚṢTI), the meditative absorptions (DHYĀNA) of the "subtle materiality" and "immaterial" realms, the future "rebecoming" of the "self" (S. bhavarāga), and "nonexistence," viz., the future "annihilation" of the "self" (S. abhavarāga). It is noteworthy that the object of desire must be contaminated (SĀSRAVA), which in this context means that the object must be one whose observation results in an increase in such afflictions as hatred, ignorance, pride, and jealousy. This fact is relevant in light of the common question about whether the desire for enlightenment is a form of desire: it is not, because the object of that desire—NIRVĀṆA or buddhahood—is not a contaminated object. See also RŪPARĀGA.

Rāhula. (T. Sgra gcan 'dzin; C. Luohouluo; J. Ragora; K. Rahura 羅睺羅). In Sanskrit and Pāli, "Fetter"; proper name of the ARHAT who was the Buddha's only child, born on the day his father renounced the world. According to the Pāli account, as soon as Prince SIDDHARTHA learned of the birth of his son, he immediately chose to become a mendicant, for he saw his son as a "fetter" binding him ever more tightly to the household life. In a famous scene, the prince looks at his sleeping wife and infant son before departing from the palace to seek enlightenment. He wishes to hold his son one last time but fears that he will awaken his wife and lose his resolve. In the MŪLASARVĀSTIVĀDA VINAYA version of the story, Rāhula was conceived on the night of his father's departure from the palace and remained in gestation for a full six years, being born on the night that his father achieved buddhahood. After his

enlightenment, when the Buddha accepted an invitation to visit his father's palace, Rāhula's mother (RĀHULAMĀTĀ) YAŚODHARĀ sent her son to her former husband to ask for his inheritance, whereupon the Buddha ordered ŚĀRIPUTRA to ordain the boy. Rāhula thus became the first novice (ŚRĀMAṆERA) to enter the order. Knowing Yaśodharā's grief at the loss of her son, the Buddha's father, King ŚUDDHODANA, requested that in the future no child should be ordained without the consent of his parents; the Buddha accepted his request and a question about parental consent was incorporated into the ordination procedure. Rāhula is described as dutiful and always in search of instruction. In one sermon to the young boy, the Buddha warns him never to lie, even in jest. Rāhula often accompanied the Buddha or Śāriputra on their alms rounds (PIṆḌAPĀTA). The meditation topic the Buddha assigned to Rāhula was intended to counter the novice's strong carnal nature. When his mind was ready, the Buddha taught him the *Cūḷa-Rāhulovādasutta*, at the end of which Rāhula attained arhatship. Rāhula was meticulous in his observation of the monastic regulations, and the Buddha declared him foremost among his disciples in his eagerness for training. According to Chinese sources, Rāhula was also renowned for his patience. One day in Śrāvastī, he was harshly beaten and was bleeding badly from a head wound, but he bore his injury with composure and equanimity, which led the Buddha to praise him. Rāhula was also foremost in "practicing with discretion" (C. mixing diyi), meaning that he applied himself at all times in religious practice but without making a display of it. Rāhula passed away before both Śāriputra and the Buddha during a sojourn in TRĀYASTRIṂŚA heaven. In previous lives, Rāhula had many times been the son of the bodhisattva. He was called "lucky Rāhula" by his friends and Rāhula himself acknowledged his good fortune both for being the Buddha's son and for attaining arhatship. In the MAHĀYĀNA, Rāhula appears in a number of sūtras, such as the SADDHARMAPUṆḌARĪKASŪTRA, where his father predicts that he will become a buddha. Rāhula is also traditionally listed as eleventh of the sixteen ARHAT elders (ṢOḌAŚASTHAVIRA), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, MAITREYA. He is said to reside in Biliyangqu zhou (a Sanskrit transcription that supposedly means "land of chestnuts and grains") with 1,100 disciples. In CHANYUE GUANXIU's standard Chinese depiction, Rāhula is portrayed sitting on a rock in wide-eyed meditation, with his right finger held above his chest, pointing outward, and his left hand resting on his left knee.

Rāhulamātā. In Pāli, "Mother of RĀHULA," in the Pāli scriptures, a common term for Prince SIDDHĀRTHA's wife YAŚODHARĀ. See YAŚODHARĀ.

rainbow body. See 'JA' LUS.

rains retreat. See VARṢĀ.

Rājagṛha. (P. Rājagaha; T. Rgyal po'i khab; C. Wangshe cheng; J. Ōshajō; K. Wangsa sŏng 王舍城). Sanskrit name for the capital of the kingdom of MAGADHA during the time of the Buddha. Rājagṛha was known by several other names, including Girivraja, Vasumati, Bṛhadrathapura, Kuśāgarapura, Magadhapura, and Bimbisārapura. During the Buddha's lifetime, Rājagṛha was the capital city of King BIMBISĀRA, the ruler of Magadha and the first royal patron of the Buddha and his SAṂGHA. The Buddha's first visit occurred prior to his enlightenment, when he passed through the city shortly after his renunciation. He was watched on his alms round by Bimbisāra, who offered him half of his kingdom. The prince refused but promised to visit the city after he achieved his goal. When the Buddha returned to the city in the first year after his enlightenment, Bimbisāra donated a grove for the use of the Buddha and his monks during the rains retreat (VARṢĀ). It was called VEṆUVANAVIHĀRA, or "Bamboo Grove Monastery," and the Buddha spent several rains retreats after his enlightenment there (according to several sources, he spent his second, third, fourth, seventeenth, and twentieth rains retreat there). The Buddha received ŚĀRIPUTRA and MAHĀMAUDGALYĀYANA into the order in Rājagṛha. GṚDHRAKŪṬAPARVATA, or "Vulture Peak," the site where the PRAJÑĀPĀRAMITĀ sūtras, among many others, were delivered, was located outside the city. Together with Śrāvastī, Rājagṛha was one of the two most important centers of the Buddha's activities. The Buddha made a final visit to the city shortly before his death. After his cremation, the city received a share of the Buddha's relics (ŚARĪRA) and AJĀTAŚATRU, Bimbisāra's son and successor, erected a STŪPA to house them. It is said that Ajātaśatru later gathered seven of the shares of the Buddha's relics and enshrined them in a single stūpa, from which AŚOKA later obtained the relics for the eighty-four thousand stūpas he is said to have erected. The first Buddhist council (see COUNCIL, FIRST) took place at Rājagṛha, during the first rains retreat immediately following the death of the Buddha. The great monastic university of NĀLANDĀ was located on the outskirts of Rājagṛha. Rājagṛha was in a dilapidated condition by the time the Chinese pilgrim XUANZANG visited the area in the seventh century CE.

rājalīlāsana. (T. rgyal po rol pa'i stabs). In Sanskrit, "posture of royal ease," a seated pose (ĀSANA) similar to LALITĀSANA, formed with the right knee bent vertically and left knee horizontally, with the heels lightly touching on the seat. The leg positions may be reversed and one arm often rests atop the lifted knee with the other pushing up from the ground. This pose is characteristically found in certain bodhisattva images of AVALOKITEŚVARA or MAÑJUŚRĪ, and in representations of the Tibetan religious kings. See also ĀSANA.

rakṣā. [alt. rākṣā] (P. rakkhā; T. srung ba; C. yonghu; J. ōgo; K. ongho 擁護). In Sanskirt, "protection," "safeguard," referring to ritual actions or practices that are intended to ward off baleful and impure influences. These protective acts are often

performed as a preliminary step in constructing a MAṆḌALA, performing an initiation ritual (ABHIṢEKA), or cultivating meditative practices. The ritual is performed by inviting or imagining deities who purify the body, speech, and mind of the practitioner, and remove all inner and outer obstacles and evils; a common form of the Tibetan ritual utilizes a distinctive form of propitiatory offering (S. bali) called a GTOR MA (torma), small conical cakes. The officiating tantric master (VAJRĀCĀRYA) attracts the negative forces (T. gegs) to the offering, where they are propitiated or bound and led away from the assembly. Setting up a "wheel of protection" is an integral part of many ANUTTARAYOGATANTRA ritual practices (SĀDHANA) (see RAKṢĀCAKRA). A "protection cord" (rakṣāsūtra; T. srung skud) is ritually embued with protective power by a tantric master and given to each supplicant at the start of an initiation ritual; this is a piece of string or a narrow strip of cloth, usually red, that is tied around the neck, arm, or the wrist to protect the wearer. Tibetan religious figures often give visitors a "protection cord" as a gift. Small amulets (T. ga'u) housing protective buddhas, relics, or tightly rolled copies of ritual invocations or mantras believed to be particularly efficacious against harm are also carried on a belt or around the neck. See also PARITTA; RATANASUTTA.

rakṣācakra. (T. srung gi 'khor lo). In Sanskrit, "wheel of protection," a figurative wheel used to destroy internal and external evils during tantric rituals and meditative practices. The wheel is created through ritual actions or visualization as a preliminary step in constructing a MAṆḌALA, performing an initiation ritual (ABHIṢEKA), or cultivating meditative practices. The wheel has various intents, including maintaining the faithfulness of the disciple toward one's master, destroying the power of an enemy, preventing the intrusion of baleful influences, preventing infectious diseases, or averting a curse. For example, in the GUHYASAMĀJATANTRA, a practitioner visualizes a wheel with ten spokes, representing the ten directions (DAŚADIŚ). Each spoke is occupied by the ten wrathful deities (daśakrodha), who conquer enemies or inner hindrances, the names and the locations of which are as follows: YAMĀNTAKA (east), Prajñāntaka (south), Padmāntaka (west), Vighnāntaka (north), ACALA (northeast), Ṭakkirāja (southeast), Nīladaṇḍa (southwest), Mahābala (northwest), Uṣṇīṣacakravartin (zenith), and Sumbha (nadir). The practitioner then imagines demonic beings filling the areas between the spokes, so that, as the wheel turns, the spokes destroy the demons. In a more detailed explanation, the demons are also bound by ropes and put in well-like cells in the ground. This wheel is also called "wheel of the ten spokes" (daśacakra).

rākṣasa. [alt. rakṣas] (P. rakkhasa; T. srin po; C. luocha; J. rasetsu; K. rach'al/nach'al 羅刹). In Sanskrit, "ogre"; a species of demigod in Buddhist mythology (the female form is an "ogress," or rākṣasī) usually described as a flesh-eating demon that is able to fly, run like the wind, and possess superhuman strength during the night. According to numerous Buddhist texts, including the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") and the ABHINIṢKRAMAṆASŪTRA, the island of Sri Lanka is inhabited by ogres, who are able to shape-shift and seduce human beings in order to eat them. In the MAHĀPARINIRVĀṆASŪTRA, the king of the gods, INDRA, is said to have assumed the form of a rākṣasa in order to test the spiritual resolve of a young ascetic—ŚĀKYAMUNI Buddha in one of his previous lifetimes. Rākṣasas are also described as horse- or ox-headed wardens of a hell, who torture the hell denizens (NĀRAKA); in this case, they are often identified with YAKṢA. In the Buddhist pantheon, there is a rākṣasadeva (C. luocha tian), or lord of the rākṣasa, who presides over the southwest as one of the twelve directional guardians; this deva is also called NIRṚTI. The deva appears on the outer perimeter of the two MAṆḌALAS, the VAJRADHĀTU and GARBHADHĀTU maṇḍalas, at the bottom right side, representing the southwesterly direction. In Tibetan Buddhist accounts of the early spread of Buddhism (SNGA DAR), the land of Tibet is described as the supine body of a female ogress (rākṣasī; T. srin mo) who has to be pinned down with a series of temples (MTHA' 'DUL GTSUG LAG KHANG) built over strategic places on her body.

Ral pa can. (Ralpachen) (r. 815–838). The name by which Khri gtsug lde btsan (Titsuk Detsen), the forty-first ruler of the Tibetan dynastic period, is best known. He is considered to be the third of three great religious kings (chos rgyal) of Tibet, together with his predecessors SRONG BTSAN SGAM PO and KHRI SRONG LDE BTSAN. All three are regarded as human incarnations of the bodhisattva AVALOKITEŚVARA. Ral pa can is remembered as an enthusiastic patron of Buddhism, especially for raising the position and prestige of monks by establishing a tax to sustain their needs. He was so devoted to the SAṂGHA that he is said to have allowed monks to sit on his long locks of hair; his sobriquet "ral pa can" means "having long locks." He patronized the translation of Buddhist texts from a wide range of materials, including TANTRAS and ŚĀSTRAS that were not transmitted to other countries in East or Southeast Asia. The first standard Sanskrit–Tibetan lexicon, the MAHĀVYUTPATTI, was also completed during his reign. In addition to his support for Buddhism, Ral pa can is known for his military conquests, which expanded the territory of the Tibetan empire to its largest extent, conquering regions of China, India, Nepal, Khotan, Turkestan, and Gansu. After Tibetan armies attacked Yanzhou in modern Shandong Province, the Chinese sued for peace. A peace treaty in 821 set the boundaries between the two countries, marking a period of peaceful relations along the border. Three great bilingual steles bearing the inscription of this treaty were fashioned. One, erected in 823, still stands in front of the JO KHANG temple. Ral pa can's Buddhist sympathies eventually garnered the resentment of the aristocracy. In 838, he was assassinated by his elder brother, GLANG DAR MA, thus ending the period of the religious kings and the early propagation (SNGA DAR) of Buddhism in Tibet. According to Buddhist accounts, his death initiated a period of persecution of Buddhism.

Rāma IV. (Mongkut) (1804–1868). Thai monarch who spent twenty-seven years as a monk before becoming king of Siam. As a monk between 1824 and 1851 (his ordination name was Vajirañāna), Mongkut's studies led him to conclude that the VINAYA was not being strictly observed by the Thai SAṂGHA and that many rituals performed by monks did not derive from the Buddha's teachings. In 1830, he organized a small group of reformist monks called the THAMMAYUT nikai (P. Dhammayuttikanikāya), "the group that adheres strictly to the dharma," in contrast to what came to be known as the MAHANIKAI (P. Mahānikāya), the "great congregation" of monks who continued to follow the then-normative practices of Thai Buddhism. To establish this new reform tradition of Thai Buddhism, Mongkut drew on what he considered to be a pure ordination lineage from the Mon people of Burma (Myanmar). Prince Mongkut also sought to produce an authentic recension of the Pāli canon after finding the extant editions deficient and incomplete. His new movement emphasized study of the tipiṭaka (S. TRIPIṬIKA) as the basis for understanding Buddhist doctrine and rejected as unorthodox many Buddhist texts popular in Thai Buddhism (such as the *Traiphumikatha* as well as the JĀTAKA tales). The Thammayut movement also stressed proper monastic discipline, particularly details such as the correct way of wearing the robes (TRICĪVARA) and carrying the alms bowl (PĀTRA), as well as the proper demarcation of monastic space (SĪMĀ). Mongkut's reforms began a trend that led to the SAṄGHA ADMINISTRATION ACT, passed in 1902, establishing uniform practices for all monks throughout the country. Mongkut had considerable interaction with Western missionaries and was sensitive to their bias regarding Christianity's supposed superiority over Buddhism because of its affinities for science and technology. In possible response to this European influence, Mongkut and the Thammayut movement also emphasized the rational aspects of Buddhism that sought to make their religion compatible with science and modernity. Mongkut eventually became abbot of WAT BOWONNIWET (Wat Bovoranives) in the Thai capital of Bangkok, which continues to be the headquarters of the Thammayut sect. After Mongkut ascended to the throne, the Thammayut continued to be closely associated with the royal court; the majority of Thai monks, however, have remained in the Mahanikai order. Rāma IV, to the chagrin of many Thais, is the historical (if fanciful) figure behind Anna Leonowens's memoir about her experience in the Thai court as tutor to Mongkut's children, which became the inspiration for Margaret Landon's book *Anna and the King of Siam* and the Rodgers and Hammerstein musical *The King and I*.

Rāma V. (Chulalongkorn) (1853–1910). Thai monarch revered for his efforts to modernize the country; credited with moving Thailand into the modern age and maintaining close relations with the European colonial powers, while protecting the independence of his kingdom. He was known in Thai as the Royal Buddha ("Phra Phutta Jao Luang"). Like his father, RĀMA IV, he was a strong patron of Buddhism. In 1893, he had the Pāli tipiṭaka (S. TRIPIṬAKA) published in thirty-nine volumes and distributed to five hundred monasteries of the kingdom. This was the first time that a Buddhist canon had been printed in codex form. In 1895, he sent sets to 260 academic institutions and libraries around the world. Rāma V founded both of Thailand's public Buddhist universities, Mahachulalongkornrajavidyalaya (affiliated with the MAHANIKAI fraternity) and Mahamakut Buddhist University (affiliated with the THAMMAYUT fraternity), in 1887 and 1893, respectively. Since the late 1980s, Rāma V has been the object of popular devotion. Books, portraits, amulets, and chanting of khatha (magic formulae) are among the manifestations of this reverence, which culminates on Chulalongkorn Day (October 23), a national holiday commemorating the monarch's death.

Rāmañña Nikāya. Pāli name of one of the three predominant monastic fraternities (P. NIKĀYA) within the Sinhalese THERAVĀDA SAṂGHA, the others being the majority SIYAM NIKĀYA and the AMARAPURA NIKĀYA. The Rāmañña Nikāya is the smallest of these three, their monastic population being a third that of the Siyam Nikāya and half that of the Amarapura Nikāya. The Rāmañña Nikāya was one of several reform schools that appeared in Sri Lanka in the mid-nineteenth century. At that time, the dominant Siyam Nikāya only ordained members of the elite Goyigama caste. The Goyigama caste was concentrated in the interior highlands of Sri Lanka, which was governed by the Kandyan king. The lower castes—comprised of toddy tappers and cinnamon peelers (salāgama), who formed the majority population in the British-controlled coastal lowlands—were at most given lower ordination (P. pabbajjā; see S. PRAVRAJITA) as novices (P. sāmaṇera; S. ŚRĀMAṆERA). This discrimination led to the formation of as many as thirty religious orders whose members came from lower or rising castes. Members of the cinnamon-peeler caste sponsored delegations of religious aspirants who traveled to Burma (Myanmar) in order to receive ordination in an established lineage, ordination they could not receive in Sri Lanka. One such aspirant from the salāgama caste was Ambagahawatte Saranankara, who was ordained on June 12, 1861, by Venerable Gneiyadharma Sangharāja of the Ratnapunna Vihāra in Burma. In 1864, Ambagahawatte Saranankara returned to Sri Lanka and established the Rāmañña Nikāya order. (Rāmañña is the Pāli name for the region of south-coastal Burma.) The Rāmañña Nikāya was established not only in response to caste discrimination but also as an attempt to reform the practices of the Sri Lankan saṃgha. Indeed, the Rāmañña Nikāya's official status as an institution that makes no distinction between castes is portrayed as a return to the Buddha's acceptance of all strata of the Indian caste system. The Rāmañña Nikāya is particularly strong in the southwestern coastal regions of Sri Lanka, where it was founded.

Rāmeśvara. (S). One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA.

Ra mo che. One of the two oldest and most important religious institutions of LHA SA, together with the JO KHANG temple. Constructed during the same period as the Jo khang, the Ra mo che temple was originally intended as the repository of the famed JO BO SHĀKYAMUNI statue brought to Tibet by King SRONG BTSAN SGAM PO's Chinese bride, WENCHENG. According to legend, when the statue was being transported into the city, the cart became stuck and the princess stated that the temple should be built at that spot. That statue was later moved to the Jo khang and replaced in Ra mo che by the statue that had originally been in the Jo khang, a statue of the Buddha called JO BO MI BSKYOD RDO RJE, which had been brought to Tibet by BHṚKUṬĪ, the Nepalese wife of Srong btsan sgam po. Prior to 1959, Ra mo che was the site of RGYUD STOD, a tantric college of the DGE LUGS sect.

Rang 'byung rdo rje. (Rangjung Dorje) (1284–1339). A Tibetan Buddhist master recognized as the third KARMA PA, renowned for his erudition and his knowledge of practice traditions based on both new translation (GSAR MA) and old translation (RNYING MA) tantras. He was born either in the Skyid rong Valley or in the western Tibetan region of Ding ri and, according to traditional sources, as a child, was known for his exceptional perspicacity. The DEB THER SNGON PO ("Blue Annals") records that as a five-year-old boy, he met O RGYAN PA RIN CHEN DPAL, his principal guru, who recognized the young boy as the reincarnation of his teacher KARMA PAKSHI when the child climbed up on a high seat that had been prepared for O rgyan pa Rin chen dpal and declared himself to have been Karma Pakshi in his previous life (this was before the institution of incarnate lamas was established in Tibet). Rang 'byung rdo rje trained first at MTSHUR PHU monastery. He also studied with teachers from GSANG PHU and JO NANG. His collected works include explanations of the major YOGĀCĀRA and MADHYAMAKA treatises and commentaries and rituals based on the CAKRASAṂVARA, HEVAJRA, GUHYASAMĀJA, and KĀLACAKRA tantras. According to his traditional biographies, while in retreat, he had a vision of VIMALAMITRA and PADMASAMBHAVA in which he received the complete transmission of the Rnying ma tantras. He received instructions on the RDZOGS CHEN doctrine from Rig 'dzin Gzhon nu rgyal po, and wrote short works on rdzogs chen. He also discovered a treasure text (GTER MA), known as the *Karma snying thig*. He was a renowned poet and wrote important works on GCOD practice. The third Karma pa was also a skilled physician and astrologer. He developed a new system of astrology known as Mtshur rtsi, or "Mtshur phu astrology," on the basis of which a new Tibetan calendar was formulated and promulgated at Mtshur phu monastery. In 1331, he was summoned to the court of the Yuan emperor Tugh Temür, but stopped enroute when he correctly interpreted portents that the emperor had died. He later traveled to the Mongol capital of Daidu (modern Beijing) during the reign of Togon Temür, for whom he procured an elixir of long life. After returning to Tibet, he was summoned once again to the Mongol capital, where he passed away while meditating in a three-dimensional Cakrasaṃvara MAṆḌALA. Rang 'byung rdo rje's writings include the influential tantric work *Zab mo nang don* ("Profound Inner Meaning"). It is said that his image appeared in the full moon on the evening of his death, and illustrations of the third Karma pa often portray him seated amid a lunar disk.

Rang 'byung rig pa'i rdo rje. (Rangjung Rikpe Dorje) (1924–1981). A renowned and influential Tibetan Buddhist master, recognized as the sixteenth Karma pa, principal leader of the KARMA BKA' BRGYUD sect of Tibetan Buddhism. He was born in 1924 in the SDE DGE area of Khams, eastern Tibet, to an aristocratic family, and was recognized as the incarnation of the fifteenth Karma pa by the eleventh TAI SI TU. At the age of eight, the Karma pa was enthroned by the Tai Si tu at DPAL SPUNGS monastery in Khams. Soon after, he went to MTSHUR PHU monastery in central Tibet, where he undertook his studies. In his early years, he received many important Bka' brgyud, SA SKYA, and RNYING MA teachings from eminent masters of the time. In his teenage years, the Karma pa divided his time between Mtshur phu and Dpal spungs monasteries, settling at Mtshur phu at the age of eighteen for several years of retreat. In 1947, the Karma pa took his first long pilgrimage and visited the holy sites of India, Nepal, and Sikkim. In 1954, he accompanied the fourteenth DALAI LAMA to Beijing in attempts to find a peaceful agreement between the nations of China and Tibet. The next year, the Karma pa returned to Khams, where he sought to mediate conflicts between Tibetan militias and the Chinese military, which was beginning to establish a presence in Tibet. By the spring of 1959, the Karma pa decided that it would be better for the preservation of his tradition's religious heritage to leave his homeland and move into exile. After informing the Dalai Lama of his decision, the Karma pa left for Bhutan with an entourage of one hundred fifty laypeople, incarnate lamas (SPRUL SKU), and monks. He soon moved to Rumtek (Rum theg) monastery in Sikkim, which had been founded previously by the ninth Karma pa DBANG PHYUG RDO RJE. By 1966, the sixteenth Karma pa and his followers had restored Rumtek and formed a new seat in exile for the Karma Bka' brgyud sect. Rang 'byung rig pa'i rdo rje was renowned for his erudition in Buddhist philosophy as well as his mastery of meditation and his ability to work miracles. Beginning in 1974, the sixteenth Karma pa undertook numerous journeys to Europe and North America, where he founded several important Karma bka' brgyud study and meditation centers. During this time, he traveled widely, attracting a great number of Western disciples. In 1981, the sixteenth Karma pa passed away in a hospital near Chicago. His attending physician attested to the fact that the Karma pa's body remained warm for three days after being pronounced dead. Rang 'byung rig pa'i rdo rje was succeeded by the seventeenth Karma pa, O rgyan 'phrin las rdo rje (Orgyan Tinle Dorje).

rang rgyud shar gsum. (rang gyu shar sum). In Tibetan, "the three [texts] of the eastern Svātantrikas," a term used to refer

to three important works of the SVĀTANTRIKA MADHYAMAKA school of Indian Buddhism (although the appellation "*Svātantrika" was not used in India and was applied retrospectively by Tibetan doxographers) composed by authors from eastern India. The three works are the MADHYAMAKĀLAṂKĀRA by ŚĀNTARAKṢITA, the MADHYAMAKĀLOKA by KAMALAŚĪLA, and the SATYADVAYAVIBHAṄGA by JÑĀNAGARBHA.

rang stong gzhan stong. (rang dong shen dong). In Tibetan, lit. "self-emptiness, other-emptiness," an important and persistent philosophical debate in Tibetan Buddhism, dating to the fifteenth century. The opposing factions are the DGE LUGS sect on one side and the JO NANG sect on the other, with support from certain BKA' BRGYUD and RNYING MA authors. The debate concerns issues fundamental to their understanding of what constituted enlightenment and the path to its achievement. For the Dge lugs, the most profound of all Buddhist doctrines is that all phenomena in the universe are empty of an intrinsic nature (SVABHĀVA), that the constituents of experience are not naturally endowed with a defining characteristic. Emptiness (ŚŪNYATĀ) for the Dge lugs is the fact that phenomena do not exist in and of themselves; emptiness is instead the lack of intrinsic existence. The Dge lugs then, are proponents of "self-emptiness," and argue that the hypostatized factor that an object in reality lacks (i.e., is empty of) is wrongly believed by the unenlightened to be intrinsic to the object itself. Everything, from physical forms to the omniscient mind of the Buddha, is thus equally empty. This emptiness is described by the Dge lugs as a non-affirming or simple negation (PRASAJYA-PRATIṢEDHA), an absence with nothing else implied in its place. From this perspective, the Dge lugs judge the sūtras of the second of the three turnings of the wheel of the dharma as described in the SAṂDHINIRMOCANASŪTRA, "the dharma wheel of signlessness" (ALAKṢAṆADHARMACAKRA), to contain the definitive expression of the Buddha's most profound intention. By contrast, the Jo nang look for inspiration to the third turning of the wheel, "the dharma wheel for ascertaining the ultimate" (PARAMĀRTHAVINIŚCAYADHARMACAKRA; see also *SUVIBHAKTADHARMACAKRA), especially to those statements that describe the nonduality of subject and object to be the consummate nature (PARINIṢPANNA) and the understanding of that nonduality to be the highest wisdom. They describe this wisdom in substantialist terms, calling it eternal, self-arisen, and truly established. This wisdom consciousness exists autonomously and is thus not empty in the way that emptiness is understood by the Dge lugs. Instead, this wisdom consciousness is empty in the sense that it is devoid of all afflictions and conventional factors, which are extraneous to its true nature. Hence, the Jo nang speak of the "emptiness of the other," the absence of extrinsic and extraneous qualities. The Dge lugs cannot deny the presence of statements in the MAHĀYĀNA canon that speak of the TATHĀGATAGARBHA as permanent, pure, blissful, and endowed with self. But they argue that such statements are provisional, another example of the Buddha's expedient means of attracting to the faith those who find such a description appealing. The true tathāgatagarbha, they claim, is the emptiness of the mind; it is this factor, present in all sentient beings, that offers the possibility of transformation into an enlightened buddha. This is the view of CANDRAKĪRTI, they say, whom they regard as the supreme interpreter of the doctrine of emptiness. The Jo nang do not deny that this is Candrakīrti's view, but they deny Candrakīrti the rank of premier expositor of NĀGĀRJUNA's thought. For them, Candrakīrti teaches an emptiness which is a mere negation of true existence, which they equate with nihilism, or else a preliminary stage of negation that precedes an understanding of the highest wisdom. Nor do they deny that such an exposition is also to be found in Nāgārjuna's philosophical corpus (YUKTIKĀYA). But those texts, they claim, do not represent Nāgārjuna's final view, which is expressed instead in his devotional corpus (STAVAKĀYA), notably the DHARMADHĀTUSTAVA ("Praise of the Sphere of Reality"), with its more positive exposition of the nature of reality. Those who would deny its ultimate existence, such as Candrakīrti, they classify as "one-sided Madhyamakas" (phyogs gcig pa'i dbu ma pa) as opposed to the "great Madhyamakas" (DBU MA PA CHEN PO), among whom they would include the Nāgārjuna of the four hymns and ĀRYADEVA, as well as thinkers whom the Dge lugs classify as YOGĀCĀRA or SVĀTANTRIKA-MADHYAMAKA: e.g., ASAṄGA, VASUBANDHU, MAITREYANĀTHA, and ŚĀNTARAKṢITA. The Dge lugs attempt to demonstrate that the nature of reality praised by Nāgārjuna in his hymns is the same emptiness that he describes in his philosophical writings.

rasa. (T. ro; C. wei; J. mi; K. mi 味). In Sanskrit and Pāli, "taste," sensory objects of the tongue; the contact (SPARŚA) between the gustatory sense organ (JIHVENDRIYA) and the gustatory sensory object leads to gustatory consciousness (JIHVĀVIJÑĀNA). Six types of taste are enumerated in the ABHIDHARMA: sweet, sour, salty, pungent, bitter, and astringent.

rasanā. (T. ro ma). In tantric physiology, the channel (NĀḌĪ) that runs from the left nostril to the base of the spine in males and from the right nostril to the base of the spine in females. It is one of three main channels, together with the central channel (AVADHŪTĪ) and the LALANĀ, the left channel in females and the right channel in males. According to some systems, seventy-two thousand channels are found in the body, serving as the conduits for subtle energies or winds (PRĀṆA). The most important of these channels are the avadhūti, the lalanā, and the rasanā. The central channel runs from the place between the eyebrows to the crown of the head and down in front of the spinal column, ending at the genitals. The right and left channels run parallel to the central channel on either side. These two channels wrap around the central channel at various points, of which as many as seven are enumerated. These points, called wheels (CAKRA), are located between the eyes, at the crown of the

head, at the throat, at the heart, at the solar plexus, at the base of the spine, and at the tip of sexual organ. In ANUTTARAYOGATANTRA, especially in practices associated with the "stage of completion" (NIṢPANNAKRAMA), much emphasis is placed on loosening these knots in order to cause the winds to flow freely through the central channel.

rasāyatana. (T. ro'i skye mched; C. weichu; J. misho; K. mich'ŏ 味處). In Sanskrit, "taste sense field" or "gustatory sense field," i.e., tastes or flavors (RASA) as they occur in the list of twelve sense faculties or "bases of cognition" (ĀYATANA), which serve as the bases for the production of consciousness, viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind), and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of taste, the contact (SPARŚA) between the gustatory sense organ (JIHVENDRIYA) and its gustatory sensory object leads to gustatory consciousness (JIHVĀVIJÑĀNA).

Ras chung pa Rdo rje grags. (Rechungpa Dorje Drak) (1083/4–1161). A close disciple of the Tibetan sage MI LA RAS PA and an early master of the BKA' BRGYUD sect of Tibetan Buddhism. He was born in the southwest Tibetan region of Gung thang and, while herding cattle at the age of eleven, met Mi la ras pa, who was meditating in a nearby cave. Much to the consternation of his family, Ras chung pa left his home to follow the YOGIN, subsequently spending many years serving and training under his GURU. As one of Milarepa's youngest disciples, he earned the name Ras chung pa, lit. "little cotton-clad one." He was later dispatched to India in order to retrieve several transmissions of the LUS MED MKHA' 'GRO SNYAN RGYUD CHOS SKOR DGU ("nine aural lineage cycles of the formless ḌĀKINĪs"); Mi la ras pa's teacher MAR PA CHOS KYI BLO GROS had only received five of these nine cycles during his own studies in India. Ras chung pa acquired these teachings from the brāhmaṇa-adept TI PHU PA in India and, returning to Tibet, spent many years in solitary meditation. He eventually taught numerous disciples of his own. Although Ras chung pa was not a central part of the Bka' brgyud sect's institutional development, a role played by Mi la ras pa's other well-known disciple SGAM PO PA BSOD NAMS RIN CHEN, he figures prominently in the MI LA'I MGUR 'BUM ("Hundred Thousand Songs of Milarepa"), the collected verse instructions of Mi la ras pa. He also transmitted an important tradition of tantric instructions that were redacted as the RAS CHUNG SNYAN BRGYUD (Aural Lineage of Ras chung). These teachings gained some importance over the next several centuries and were later revived during the fifteenth century by GTSANG SMYON HERUKA at a religious center founded at one of Ras chung pa's principal meditation caves, RAS CHUNG PHUG.

Ras chung phug. (Rechung puk). A Tibetan hermitage and monastic center founded around a principal retreat cave of RAS CHUNG PA RDO RJE GRAGS, after whom the cave and complex are named. Located near the Yar klungs and Chong gye valleys of central Tibet, Ras chung phug housed over one thousand monks at the height of its florescence, although it was completely destroyed during the Chinese Cultural Revolution. During the fifteenth century, GTSANG SMYON HERUKA, the so-called madman of Gtsang, spent time there and helped to revive the religious tradition of Ras chung pa known as the RAS CHUNG SNYAN BRGYUD (aural lineage of Ras chung).

Ras chung snyan brgyud. (Rechung nyengyu). In Tibetan, lit. "the aural lineage of Ras chung," referring to RAS CHUNG PA RDO RJE GRAGS, a principal disciple of the BKA' BRGYUD founder MI LA RAS PA. Although called an aural lineage (snyan brgyud), it comprises a system of liturgies, ritual manuals, and tantric commentaries, together with their oral instructions, based primarily on the CAKRASAṂVARATANTRA. The lineage began with the LUS MED MKHA' 'GRO SNYAN RGYUD CHOS SKOR DGU ("nine aural lineage cycles of the formless ḌĀKINĪs") promulgated by the Indian adepts TILOPA and NĀROPA. Five of these were subsequently transmitted in Tibet by the Bka' brgyud founders MAR PA CHOS KYI BLO GROS and Mi la ras pa. Ras chung pa received them from Mi la ras pa and then journeyed to India, where he obtained the remaining instructions from the tantric master TI PHU PA. The system of teachings that Ras chung pa subsequently passed on became known as the "aural lineage of Ras chung pa." The fifteenth-century YOGIN GTSANG SMYON HERUKA later codified these teachings, together with those of Mi la ras pa's other prominent disciples, SGAM PO PA BSOD NAM RIN CHEN and Ngan rdzongs ras pa (Ngendzong Repa), into the SNYAN BRGYUD SKOR GSUM ("three cycles of aural lineage instructions").

Rāṣṭrapāla. (P. Raṭṭhapāla; T. Yul 'khor skyong; C. Laizhaheluo; J. Raitawara; K. Noet'ahwara 賴吒惒羅). In Sanskrit, an eminent ARHAT declared by the Buddha to be foremost among his monk disciples who renounced the world through faith. According to the Pāli account, he was born in Kuru as the son of a wealthy counselor who had inherited the treasure of a destroyed kingdom. He lived with his wives amid great luxury in his father's house in the township of Thullakoṭṭhita. He went to listen to the Buddha preach when the latter was visiting his city and decided at once to renounce the world and become a monk in the Buddha's dispensation. His parents refused to give their permission until he threatened to starve himself to death. They agreed on the condition that he return to visit their house as a monk. After his ordination, Rāṣṭrapāla accompanied the Buddha to ŚRĀVASTĪ (P. Sāvatthi) and there, through assiduous practice, attained arhatship. Having received the Buddha's permission, Rāṣṭrapāla resolved to fulfill his promise to his parents and returned to Thullakoṭṭhita, where he lived in the park of the Kuru king. On his alms round the next morning, he stopped at entrance of his parents' house. His father did not recognize him and mistook him for one of the monks who had

enticed his son to abandon his home. He cursed Rāṣṭrapāla and ordered him away. But a servant girl recognized him and offered him the stale rice she was about to throw away and then announced his true identity to his father. His father, filled with joy and hope at seeing his son, invited him to receive his morning meal at his home the next day. When he returned at the appointed time, Rāṣṭrapāla's father tried to tempt him to return to the lay life with a vulgar display of the family's wealth and the beauty of his former wives. They taunted him about the celestial maidens for whose sake he had renounced the world. They fainted in disappointment when he addressed them as "sisters" in reply. At the end of his meal, he preached to his family about the impermanence of conditioned things, the uselessness of wealth, and the enticing trap of physical beauty. But even then they were not convinced, and it is said that Rāṣṭrapāla flew through the air to return to his abode after his father bolted the doors to keep him at home and had servants try to remove his robes and dress him in the garb of a layman.

Rāṣṭrapālaparipṛcchā. (T. Yul 'khor skyong gis zhus pa; C. Huguo pusahui [jing]; J. Gokoku bosatsue[kyō]; K. Hoguk posal hoe [kyŏng] 護國菩薩會[經]). In Sanskrit, "The Questions of RĀṢṬRAPĀLA," one of the earliest MAHĀYĀNA sūtras; the terminus ad quem for its composition is the third century CE, when DHARMARAKṢA (c. 233–310) translated the sūtra into Chinese (c. 270 CE), probably following a manuscript from the GANDHĀRA region in the KHAROṢṬHĪ script. (The extant Sanskrit recension is much later.) There are also two later Chinese translations, one made c. 585–600 by JÑĀNAGUPTA and other c. 980 by DĀNAPĀLA. The *Raṣṭrapāla* represents a strand of early MAHĀYĀNA (found also in such sūtras as the KĀŚYAPAPARIVARTA and the UGRAPARIPṚCCHĀ) that viewed the large urban monasteries as being ill-suited to serious spiritual cultivation because of their need for constant fund-raising from the laity and their excessive entanglements in local politics. The *Rāṣṭrapāla* strand of early Mahāyāna instead dedicated itself to forest dwelling (see ARAÑÑAVĀSI) away from the cities, like the "rhinoceros" (KHAḌGAVIṢĀṆA), and advocated a return to the rigorous asceticism (S. DHŪTAGUṆA; see P. DHUTAṄGA) that was thought to characterize the early SAṂGHA. To the *Rāṣṭrapāla* author(s), the Buddha's own infinitely long career as a bodhisattva was an exercise in self-sacrifice and physical endurance, which they in turn sought to emulate through their own asceticism. The physical perfection the Buddha achieved through this long training, as evidenced in his acquisition of the thirty-two major marks of the superman (MAHĀPURUṢALAKṢAṆA), receives special attention in the sūtra. This approach is in marked contrast to other early Mahāyāna sūtras, such as the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ, which were suspicious of the motives of forest dwellers and supportive of cenobitic monasticism in the towns and cities, where monks and nuns would be in a better position to serve the laity by preaching the dharma to them.

Ratanasutta. In Pāli, "Discourse on the Precious," one of the best loved and most widely-recited Buddhist texts in the THERAVĀDA Buddhist world (there is no analogous recension in the Chinese translations of the ĀGAMAS). The *Ratanasutta* appears in an early scriptural anthology, the SUTTANIPĀTA, a later collection, the KHUDDAKAPĀṬHA, and in a postcanonical anthology of PARITTA ("protection texts"). The Pāli commentaries say that the discourse was first delivered to the Buddha's attendant ĀNANDA, who then went around the city of the Licchavis reciting the text and sprinkling holy water from the Buddha's own begging bowl (PĀTRA). Through this performance, the baleful spirits harassing the city were vanquished and all the people's illnesses were cured. The text itself consists of a mere seventeen verses, twelve of which recount the virtues of the three jewels (RATNATRAYA) of the Buddha, DHARMA, and SAṂGHA. The *Ratanasutta*'s great renown derives from its inclusion in the *Paritta* anthology, texts that are chanted as part of the protective rituals performed by Buddhist monks to ward off misfortunes; indeed, it is this apotropaic quality of the text that accounts for its enduring popularity. Paritta suttas refer to specific discourses delivered by the Buddha that are believed to offer protection to those who either recite the sutta or listen to its recitation. Other such auspicious apotropaic suttas are the MAṄGALASUTTA and the METTĀSUTTA. In Southeast Asia, these paritta texts are commonly believed to bring happiness and good fortune when chanted by the saṃgha. See also RAKṢĀ.

Rathavinītasutta. (C. Qiche jing; J. Shichishakyō; K. Ch'ilch'a kyŏng 七車經). In Pāli, the "Discourse on the Relay Chariots," the twenty-fourth scripture of the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA version appears as the ninth sūtra in the Chinese translation of the MADHYAMĀGAMA, as well as a recension of uncertain affiliation in the EKOTTARĀGAMA). This discourse recounts a dialogue between Sāriputta (S. ŚĀRIPUTRA) and Puṇṇa Mantāṇiputta (see PŪRṆA) concerning the seven stages of purification (see VISUDDHI) that must be traversed in order to attain final liberation in nibbāna (NIRVĀṆA), viz., the purification of (1) morality (SĪLAVISUDDHI); (2) mind (CITTAVISUDDHI); (3) views (DIṬṬHIVISUDDHI); (4) overcoming doubt (KAṄKHĀVITARAṆAVISUDDHI); (5) the purity of knowledge and vision of what is and is not the path (MAGGĀMAGGAÑĀṆADASSANAVISUDDHI); (6) knowledge and vision of progress along the path (PAṬIPADĀÑĀṆADASSANAVISUDDHI); (7) knowledge and vision itself (ÑĀṆADASSANAVISUDDHI). The seventh purification leads directly to final nibbāna. The seven stages are compared to a relay of seven chariots needed to transport the king of Kosala (KOŚALA) from his palace in Sāvatthi (ŚRĀVASTĪ) to his palace in Sāketa.

ratna. (P. ratana; T. rin chen/dkon mchog; C. zhenbao; J. chinbō; K. chinbo 珍寶). In Sanskrit, "jewel," "valuable," or "treasure," the most common term for a precious object in Buddhist texts and regularly used in Buddhist literature as a metaphor for enlightenment, since jewels represent purity,

permanence, preciousness, rarity, etc. TATHĀGATAGARBHA texts often call the tathāgatagarbha or buddha-nature the jewel-nature, since the preciousness of a jewel is unaffected even when it is sullied by mud (defilements); the TATHĀGATAGARBHASŪTRA, for example, specifically compares the tathāgatagarbha to a jewel buried in the dirt (see also RATNAGOTRAVIBHĀGA). In the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), the buddha-nature is described in a simile as a jewel that a rich man (the Buddha) has surreptitiously sown into the robes of his destitute friend (sentient beings). Such CHAN masters as GUIFENG ZONGMI (780–840) and POJO CHINUL (1158–1210) use jewels as metaphors to explain their theories of the buddha-nature. A jewel is also used to represent the pristine nature of the realm of enlightenment: in the AVATAṂSAKASŪTRA, the bejeweled canopy of the king of the gods, INDRA (see INDRAJĀLA), is deployed to illustrate the mutual interdependence that pertains between all phenomena in the universe. Several different lists of jewels are found in Buddhist literature. The most important is the "three jewels" (RATNATRAYA; TRIRATNA) of the Buddha, DHARMA, and SAṂGHA; commentaries explain that these three are called jewels because they are difficult to find and, once found, are of great value. The Tibetan translation of "three jewels," dkon mchog gsum (könchok sum) (lit. "three rare excellences") reflects this meaning. There are also several different lists of "seven jewels" (saptaratna). One list describes the seven "valuables" that are essential to the successful reign of a wheel-turning monarch (CAKRAVARTIN): a wheel, elephant, horse, gems, a queen, an able minister or treasurer, and a loyal adviser. Another list of seven is of the jewels decorating SUKHĀVATĪ, the PURE LAND of AMITĀBHA; these are listed in the AMITĀBHASŪTRA (see also SUKHĀVATĪVYŪHASŪTRA) as gold, silver, lapis lazuli, crystal, agate, ruby, and carnelian. Finally, there are seven "moral" jewels listed in mainstream Buddhist literature, as in the Pāli list of morality (P. sīla; S. ŚĪLA), concentration (SAMĀDHI), wisdom (P. paññā; S. PRAJÑĀ), liberation (P. vimutti; S. VIMUKTI), the knowledge and vision of liberation (P. vimuttiñāṇadassana; S. vimuktijñānadarśana), analytical knowledge (P. paṭisambhidā; S. PRATISAṂVID), and the factors of enlightenment (P. bojjhaṅga; S. BODHYAṄGA).

Ratnagiri. (T. Rin chen ri bo). In Sanskrit, "Bejeweled Mountain," also known as Ratnagiri Mahāvihāra, or "the great monastery Ratnagiri"; the name of an ancient monastery located in the Jajapur district of the contemporary Indian state of Orissa. The site was discovered and excavated in the mid-twentieth century. Ratnagiri was established sometime around the fifth or sixth centuries CE and flourished until the twelfth century. Both textual and archaeological evidence indicates that Ratnagiri, like NĀLANDĀ, was a prosperous and influential center of MAHĀYĀNA philosophy. Furthermore, the monastery appears to have played a significant role in the rise of VAJRAYĀNA and tantric Buddhism in India. The excavation of this site revealed two main monastic complexes, one of which was two stories high. The main reliquary mound (STŪPA) is nearly twenty feet high and fifty feet across at the base. Hundreds of smaller STŪPAS surround it on the main campus. The remains are decorated by carved depictions of buddhas, BODHISATTVAS, and a variety of deities from the Mahāyāna pantheon.

Ratna gling pa. (Ratna Lingpa) (1403–1478). An important treasure revealer (GTER STON) of the RNYING MA sect of Tibetan Buddhism, credited with discovering twenty-five collections of treasure texts (GTER MA). As a youth, he was identified as the reincarnation of Lang gro Dkon mchog 'byung gnas, one of the twenty-five disciples of PADMASAMBHAVA. According to traditional sources, he is said to have uncovered in a single lifetime the treasures ordinarily discovered in three lifetimes, and therefore is known under three names: Zhig po gling pa (Shikpo Lingpa), 'Gro 'dul gling pa (Drodul Lingpa), and Ratna gling pa. The treasures included RDZOGS CHEN teachings, peaceful and wrathful guru SĀDHANAS, AVALOKITEŚVARA practices, and MAHĀMUDRĀ texts. He also searched extensively for ancient tantras and oral traditions and compiled an extensive RNYING MA'I RGYUD 'BUM, a compendium of the tantras and tantric exegetical literature of the Rnying ma sect; that compendium is no longer extant, but it served as the basis of the rnying ma'i rgyud 'bum of 'JIGS MED GLING PA.

Ratnagotravibhāga. [alt. Ratnagotravibhaṅga] (T. Dkon mchog gi rigs rnam par dbye ba; C. Jiujing yisheng baoxing lun; J. Kukyō ichijō hōshōron; K. Kugyŏng ilsŭng posŏng non 究竟一乘寶性論). In Sanskrit, "Analysis of the Lineage of the [Three] Jewels," a seminal Indian MAHĀYĀNA ŚĀSTRA on the doctrine of the "embryo of the tathāgatas" (TATHĀGATAGARBHA), probably dating from the fourth century CE. Its full title is *Ratnagotravibhāga-Mahāyāna-Uttaratantra* and the treatise is often referred to simply as the *Uttaratantra*, or "Sublime Continuation." The Sanskrit recension is extant, along with Chinese and Tibetan translations. (RATNAMATI's Chinese translation was finished in 508.) The Chinese tradition attributes the work to Sāramati (C. Jianyi), while the Tibetan tradition attributes the core verses of the text to MAITREYA/MAITREYANĀTHA and its prose commentary entitled the *Uttaratantravyākhyā* to ASAṄGA. It is one of the "five books of Maitreya," which, according to legend, were presented by the future buddha Maitreya to Asaṅga during the latter's visit to the TUṢITA heaven. The primary subject of the *Ratnagotravibhāga* is the tathāgatagarbha or buddha-nature; this is the element (DHĀTU) or lineage (GOTRA) of the buddhas, which is present in all beings. The text offers an extensive overview of the tathāgatagarbha doctrine as set forth in such sūtras as the TATHĀGATAGARBHASŪTRA and the ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA. Like the *Śrīmālā Sūtra*, the treatise describes the tathāgatagarbha as being both empty (śūnya) of the afflictions (KLEŚA) but nonempty (aśunya) of the buddhas' infinite virtues. In ordinary beings, the tathāgatagarbha may be obscured by adventitious defilements, but when those defilements are removed, the state of enlightenment is restored. In proving this claim, the treatise examines in detail the "body

of the tathāgata," an alternate name for the buddha-nature, which is said to have four perfect virtues (GUṆAPĀRAMITĀ): permanence, bliss, selfhood, and purity. Those who have not realized the buddha-nature make two fundamental mistakes about emptiness (ŚŪNYATĀ): either viewing emptiness as annihilation (see UCCHEDADṚṢṬI), assuming that the experience of NIRVĀṆA requires the extinction of the phenomenal world; or substantiating emptiness by presuming that it is something distinct from materiality (RŪPA). Instead, the *Ratnagotravibhāga* asserts that the tathāgatagarbha is free from all the various types of afflictions, but fully contains the myriad inconceivable attributes of a buddha. The treatise also examines the specific deeds the buddhas perform for the welfare of all sentient beings. See also FOXING.

Ratnaguṇasaṃcayagāthā. (T. Yon tan rin po che sdud pa tshigs su bcad pa; C. Fomu baodezang bore boluomi jing; J. Butsumo hōtokuzō hannya haramitsukyō; K. Pulmo podŏk-chang panya paramil kyŏng 佛母寶德藏般若波羅蜜經). In Sanskrit, "Verses on the Collection of Precious Qualities," the longer title is *Prajñāpāramitāratnaguṇasaṃcayagāthā*, or "Verses on the Collection of the Precious Qualities of the Perfection of Wisdom." The *Ratnaguṇasaṃcayagāthā* epitomizes the early MAHĀYĀNA in its emphasis on the emptiness (ŚŪNYATĀ) of the aggregates (SKANDHA) and its praise of the path of the BODHISATTVA over that of the ARHAT. The text is considered to be of particular importance in the history of the Mahāyāna because many of its verses, particularly those that appear early in the text, may represent some of the earliest expressions of Mahāyāna philosophy and may date as far back as 100 BCE. Another indication of the text's antiquity is that it was translated into Chinese as early as the second century CE. The only extant Sanskrit version is that edited in the eighth century by HARIBHADRA to conform to the structure of the ABHISAMAYĀLAṂKĀRA, making the precise order of the original verses difficult to determine. Many Mahāyāna sūtras are composed of alternating verse and prose. The verses of the *Ratnaguṇasaṃcayagāthā* are written in an ancient meter, suggesting to some that they constitute part of an original sūtra, with the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ ("Perfection of Wisdom in Eight Thousand Lines") supplying the prose section. However, because the verses that appear in the *Ratnaguṇasaṃcayagāthā* are not in all cases identical to those in the *Aṣṭasāhasrikā*, the *Ratnaguṇasaṃcayagāthā* may have originally been a separate work. It appears as the verse recapitulations in the Chinese translation of the *Aṣṭasāhasrikā* and as the eighty-fourth chapter of the *Aṣṭadaśasāhasrikāprajñāpāramitā* ("Perfection of Wisdom in Eighteen Thousand Lines") in its Tibetan translation.

Ratnākaraśānti. (T. Shān ti pa/Rin chen 'byung gnas zhi ba) (c. late-tenth to early-eleventh century). Sanskrit proper name of an Indian scholar philosophically affiliated with the YOGĀCĀRA school, who resided and later taught at the monastic university of VIKRAMAŚĪLA in the northern region of ancient MAGADHA (modern Bengal). At Vikramaśīla, he studied under RATNAKĪRTI and JITĀRI and eventually become a prolific scholar of enormous breadth, who wrote significant works on logic, MADHYAMAKA and PRAJÑĀPĀRAMITĀ, Yogācāra, and TANTRA. Ratnākaraśānti composed at least thirteen works in Sanskrit. His writings on tantra are particularly noteworthy for their attempt to present a systematic view of tantric philosophy and practice from the perspective of Buddhist scholasticism. His works on logic include the *Antarvyāptisamarthana*, on "pervasion" or "concomitance" (VYĀPTI). He wrote commentaries on the eight-thousand- and twenty-five-thousand-line PRAJÑĀPĀRAMITĀ SŪTRAS (entitled *Sārottamā* and *Śuddhamati*, respectively). His tantric works included commentaries on both the HEVAJRATANTRA and GUHYASAMĀJATANTRA, as well as a work on the three vehicles, the *Triyānavyavasthāna*. During his tenure as a teacher at Vikramaśīla, he held the position of eastern gatekeeper. He was a teacher of ATIŚA DĪPAṂKARAŚRĪJÑĀNA, and he offered instruction to Tibetan students, including the translator 'BROG MI SHĀKYA YE SHES, who transmitted the LAM 'BRAS (path and result) teachings to the 'Khon family, who founded the SA SKYA sect. Ratnākaraśānti's fame was so widespread that he was even invited by the Sinhalese king to travel to Sri Lanka and preach. In Tibetan sources, a Shānti pa (a common Tibetan abbreviation of the name Ratnākaraśānti) is reported to have been a student of the renowned tantric adept and scholar NĀROPA (1016–1100), and is listed as one of the eighty-four masters (SIDDHAS) in the CATURAŚĪTISIDDHAPRAVṚTTI ("History of the Eighty-Four Siddhas").

Ratnakīrti. (T. Dkon mchog grags pa). Eleventh-century YOGĀCĀRA logician and student of Jñānaśrīmitra at VIKRAMAŚĪLA monastery. He is the author of ten extant treatises on logic, including the *Apohasiddhi*, or "Proof of Exclusion." The work deals with the topic of APOHA, the theory that words refer to concepts rather than to objects in the world and that these concepts are the exclusion of their opposite, i.e., that one's idea of a table, for example, is not that of a specific table but rather a generic image of everything that is "non-nontable," i.e., not not a table. Buddhist logicians considered the question of the negative and positive aspects of the meaning of words as well as their sequence; Ratnakīrti argued that they are simultaneous. The *Ratnakīrtikalā*, a commentary to the ABHISAMAYĀLAṂKĀRA, is attributed to Ratnakīrti, but its author may be a different scholar of the same name.

ratnakula. (T. rin chen rigs; C. baobu; J. hōbu; K. pobu 寶部). In Sanskrit, "jewel family," one of the "five lineages" or "five families" (PAÑCAKULA; PAÑCATATHĀGATA) of tantric Buddhism. The five are usually given as the TATHĀGATAKULA, VAJRAKULA, PADMAKULA, ratnakula, and the KARMAKULA (different tantras have different lists of these families). Those in the ratnakula become enlightened in the form of the buddha RATNASAMBHAVA. Each of the five families is associated with

one of the five aggregates (SKANDHA), five wisdoms (JÑĀNA), five afflictions (KLEŚA), five elements, and five colors. For the ratnakula, the skandha is sensation (VEDANĀ), the wisdom is the wisdom of equality (SAMATĀJÑĀNA); the affliction is pride, the color yellow, and the element earth.

Ratnakūṭasūtra. (T. Dkon mchog brtsegs pa'i mdo; C. Dabaoji jing; J. Daihōshakukyō; K. Taebojŏk kyŏng 大寶積經). In Sanskrit, "The Jewel-Heap Sūtra"; often known also as the *Mahāratnakūṭasūtra*, or "The Great Jewel-Heap Sūtra." Despite its title, this is actually not one SŪTRA but rather an early collection of forty-nine independent MAHĀYĀNA sūtras. The texts contained in this collection cover a broad range of important MAHĀYĀNA topics, including detailed discussions of emptiness (ŚŪNYATĀ), PURE LAND practices, skillful means (UPĀYA), the importance of cultivating both compassion (KARUṆĀ) and wisdom (PRAJÑĀ), and other significant subjects. Many of the texts embedded in the collection are seminal to the Mahāyāna tradition. In this collection, we find treated such influential figures as the buddhas AMITĀBHA and AKṢOBHYA, the BODHISATTVA MAÑJUŚRĪ, and the ARHAT MAHĀKĀŚYAPA. Its KĀŚYAPAPARIVARTA chapter was widely cited in MADHYAMAKA treatises. The collections also contain pure land texts, including the longer SUKHĀVATĪVYŪHASŪTRA as well as the AKṢOBHYATATHĀGATASYAVYŪHA on the pure land of Akṣobhya. The *Trisaṃvaranirdeśaparivarta* explains the bodhisattva VINAYA and how it differs from the vinaya of the ŚRĀVAKAS. Excerpts from the *Ratnakūṭasūtra* were translated into Chinese as early as the second century CE. While the entire collection is available in Chinese and Tibetan, only portions of it survive in Sanskrit. The *Ratnakūṭasūtra* occupies six volumes of the Tibetan canon (BKA' 'GYUR) (with fifty-two separate works in the SDE DGE edition, some with the same title but different content). In Chinese, the best-known recension of the *Ratnakūṭasūtra* is a massive 120-roll translation made by BODHIRUCI between 703 and 716 during the Tang dynasty; it incorporates in the collection some earlier translations of individual texts by DHARMARAKṢA, KUMĀRAJĪVA, ŚIKṢĀNANDA, etc. There are also two shorter renderings of portions of the text, one attributed to AN SHIGAO in the latter half of the second century CE, the second to Jñānagupta (523–600) in 595 CE, both in only one roll.

Ratnamati. (Rin chen blo gros; C. Lenamoti; J. Rokunamadai; K. Nŭngnamaje 勒那摩提) (fl. c. 508 CE). In Sanskrit, "Bejeweled Intelligence," name of an Indian scholar and Chinese translator who lived during the fifth and sixth centuries CE. He was especially renowned for his prodigious memory of a great many SŪTRA verses. In 508 CE, Ratnamati traveled from India to the Northern Wei capital of Luoyang, where he began to work on a translation of VASUBHANDU's "Treatise on the Ten Stages" (S. DAŚABHŪMIVYĀKHYĀNA; C. SHIDIJING LUN) with BODHIRUCI and Buddhaśānta (d.u.). However, disagreements between the collaborators over the nature of the ĀLAYAVIJÑĀNA (viz., whether it was pure, impure, or both) led them to produce different translations. Those who studied Bodhiruci's rendering came to be known as the Northern DI LUN ZONG, while the followers of Ratnamati's version were known as the Southern Di lun zong. The Southern Di lun school was represented by Ratnamati's foremost pupil, Huiguang (468–537), who advocated that the ālayavijñāna was an ultimate truth (PARAMĀRTHASATYA) and coextensive with the buddha-nature (FOXING), which thus was in fact innate. Ratnamati subsequently went on to collaborate with other scholars on the translation of other works, including the RATNAGOTRAVIBHĀGA, and the *Saddharmapuṇḍarīkopadeśa* attributed to VASUBANDHU. ¶ Ratnamati is also the name of a bodhisattva who appears in various MAHĀYĀNA sūtras.

Ratnameghasūtra. (T. Dkon mchog sprin gyi mdo; C. Baoyun jing; J. Hōungyō; K. Poun kyŏng 寶雲經). The "Cloud of Jewels," an important Mahāyāna sūtra, perhaps dating from the third or fourth century CE. It opens with the Buddha residing on the peak of Mt. Gayāśīrṣa when the BODHISATTVA SARVANĪVARAṆAVIṢKAMBHĪ approaches the Buddha and asks him more than one hundred questions ranging from the practice of giving (DĀNA) and the six perfections (PĀRAMITĀ) to the means of swiftly attaining ANUTTARASAMYAKSAṂBODHI. The Buddha's answers to these questions are widely quoted in later ŚĀSTRAS. In China, during the Ming dynasty, there were charges that interpolations were made in the sūtra during the reign of the Empress WU ZETIAN in order to legitimize her usurpation of the throne. These interpolations included the story of Prince Moonlight (Yueguang tongzi), who received a prediction from the Buddha that he would later become a great queen in China.

Ratnapāṇi. (T. Lag na rin chen; C. Baoshou pusa; J. Hōshu bosatsu; K. Posu posal 寶手菩薩). In Sanskrit, lit. "Bejeweled Hand" i.e., "one whose hand holds a jewel"; the name of a BODHISATTVA who is most often associated with the buddha RATNASAṂBHAVA, one of the five TATHĀGATAS (PAÑCATATHĀGATA) who are associated with the SARVATATHĀGATATATTVASAṂGRAHA's VAJRADHĀTU and GARBHADHĀTU MAṆḌALAS. Ratnapāṇi is usually depicted as seated with his right hand in the "gesture of generosity" or "boon-granting gesture" (VARADAMUDRĀ); his left hand sits in his lap and holds a wish-fulfilling gem (CINTĀMAṆI).

Ratnasambhava. (T. Rin chen 'byung gnas; C. Baosheng rulai; J. Hōshō nyorai; K. Posaeng yŏrae 寶生如來). In Sanskrit, "Born of a Jewel," one of the PAÑCATATHĀGATAS. He is the buddha of the ratna family (RATNAKULA) and his pure land is located in the south. He is often accompanied by the bodhisattva RATNAPĀṆI and his NIRMĀṆAKĀYA is KĀŚYAPA. He is depicted as golden in hue, displaying the VARADAMUDRĀ with his right hand (often with jewels pouring forth), and a CINTĀMAṆI in his left hand; these jewels suggest his ability to both provide material wealth and to enrich one's knowledge of the dharma. He is sometime depicted riding a horse or a

pair of lions. When depicted with a consort, it is either Locanā or Māmakī. The least developed of the five tathāgatas, Ratnasambhava is rarely depicted alone and does not seem to have become the object of cultic worship.

ratnatraya. [alt. triratna] (P. ratanattaya/tiratana; T. dkon mchog gsum; C. sanbao; J. sanbō; K. sambo 三寶). In Sanskrit, the "three jewels," also translated into English as the "triple gem" or the "three treasures"; the term is also often given as triratna. In the Buddhist tradition, RATNATRAYA refers to the three principal objects of veneration: the Buddha, the DHARMA, and the SAṂGHA. One of the most common practices that define a Buddhist is "taking refuge" (see ŚARAṆA) in the three jewels. This formula, which accompanies many lay and monastic rituals, involves a formal declaration that the practitioner "goes to" each of the three jewels for refuge (śaraṇa) or protection. The Sanskrit formula is as follows: "Buddhaṃ śaraṇaṃ gacchāmi. Dharmaṃ śaraṇaṃ gacchāmi. Saṃghaṃ śaraṇaṃ gacchāmi." meaning "I go to the Buddha for refuge. I go to the dharma for refuge. I go to the saṃgha for refuge." By repeating this formula three times, one identifies oneself as a Buddhist. (See also TRIŚARAṆA.) The precise meanings of these three terms, how they relate to one another, and exactly how each one is to be venerated are all subjects of extensive commentary within the tradition. The term buddha refers first, and most obviously, to the historical Buddha, GAUTAMA or ŚĀKYAMUNI, the sage of ancient India who realized and then taught the way to end all suffering. But the Buddha may also refer to any number of buddhas found in the extensive MAHĀYĀNA pantheon. In some varieties of the Mahāyāna, buddha may even refer to the inherent state of buddhahood that is the fundamental characteristic of all sentient beings. The term dharma refers to the teachings of a buddha, which can take a variety of possible forms including specific beliefs, texts, or practices; the dharma is sometimes divided into the scriptural dharma (ĀGAMADHARMA) and the realized dharma (ADHIGAMADHARMA). In the context of the three jewels, one is said to go for refuge in the latter. However, dharma may also refer to the pervasive, universal truth that is realized by a buddha, particularly as enshrined in the teaching of the FOUR NOBLE TRUTHS (catvāry āryasatyāni). Some commentators specify that in the context of the three jewels, the dharma refers to the third and fourth of the four truths, the truth of cessation (NIRODHASATYA) and the truth of the path (MĀRGASATYA), and most specifically to the truth of cessation. The term saṃgha refers to the community that seeks to realize and enact the teachings of a buddha for the sake of its own liberation and the liberation of others. Saṃgha is usually understood to include only those followers who have renounced the life of a householder (PRAVRAJITA) and taken up the life of a monk (BHIKṢU) or nun (BHIKṢUNĪ). However, the saṃgha is also sometimes interpreted to include both laymen (UPĀSAKA) and laywomen (UPĀSIKĀ) as well. In the context of refuge, the saṃgha is generally said to refer to those members of the community who are ĀRYAPUDGALA. See ĀRYASAṂGHA.

Ratnāvalī. (T. Rin chen phreng ba; C. Baoxingwang zheng lun; J. Hōgyō ō shōron; K. Pohaengwang chŏng non 寶行王正論). In Sanskrit, "Garland of Jewels," a Sanskrit work by the MADHYAMAKA philosopher NĀGĀRJUNA. The work consists of five hundred verses arranged in five chapters. While the *Ratnāvalī* contains many of Nāgārjuna's fundamental philosophical ideas, grounded primarily in the notion of emptiness (ŚŪNYATĀ), the work is more focused on issues of ethics. The *Ratnāvalī* is addressed to King Gautamīputra of ĀNDHRA, a friend and patron of Nāgārjuna, and much of the text discusses the proper conduct of the laity, particularly those in administrative positions such as ministers and kings. In particular, the fourth chapter is devoted to an exploration of kingship and the proper management of a kingdom. The work also contains a defense of the Mahāyāna as the word of the Buddha (BUDDHAVACANA), an exposition of the collection of merit (PUṆYASAṂBHĀRA) and the collection of wisdom (JÑĀNASAṂBHĀRA), a description of the ten bodhisattva stages (BHŪMI) based on the DAŚABHŪMIKASŪTRA, and a correlation of the practice of specific virtues with the achievement of the thirty-two marks of a superman (MAHĀPURUṢALAKṢAṆA). There are complete versions of the work extant in Tibetan and Chinese translations, but only parts survive in the original Sanskrit.

Raṭṭhapāla. (P). See RĀṢṬRAPĀLA.

raudracāra. (T. drag po'i las). In Sanskrit, "wrathful action," a synonym for ABHICARA. See ABHICARA.

raurava. (P. roruva; T. ngu 'bod; C. jiaohuan [diyu]; J. kyōkan[jigoku]; K. kyuhwan [chiok] 叫喚[地獄]). In Sanskrit, "crying" or "weeping," the name of the fourth of the eight hot hells, described as a land of red-hot iron where the denizens constantly weep because of their horrendous suffering.

ṛddhi. (P. iddhi; T. rdzu 'phrul; C. shenli; J. jinriki; K. sillyŏk 神力). In Sanskrit, "psychic powers," any number of supernatural powers regarded as a by-product of deep states of meditation (DHYĀNA). When listed as one of the six supranormal powers (ABHIJÑĀ; see also ṚDDHIVIDHĀBHIJÑĀ), these psychic powers include: (1) the ability to replicate one's body and, having done so, to make it one again; (2) the ability to pass through solid objects, such as walls and mountains, as if they were air; (3) the ability to walk on water as if it were solid earth; (4) the ability to fly through the air like a bird, even with one's legs crossed; and (5) the ability to touch the sun and the moon with one's hand. Such powers may be attained by any YOGIN, whether Buddhist or non-Buddhist, and are not in themselves an indicator of enlightenment. The Buddha is said to have generally dissuaded his monks from the display of such powers, although Buddhist texts are replete with accounts of such displays, including by the Buddha himself.

ṛddhipāda. (P. iddhipāda; T. rdzu 'phrul gyi rkang pa; C. si shenzu; J. shijinsoku; K. sasinjok 四神足). In Sanskrit, "bases of psychic powers," the four qualities that are regarded as prerequisites for the attainment of magical power. They are aspiration (CHANDA), thought (CITTA), effort (VĪRYA), and analysis (mīmāṃsā).

ṛddhividhābhijñā. (P. iddhividhābhiññā; T. rdzu 'phrul mngon shes; C. shenjing zhizhengtong; J. jinkyōchishōtsū; K. sin'gyŏng chijŭngt'ong 神境智證通). In Sanskrit, "psychic supranormal powers," referring to a set of five mundane (LAUKIKA; P. lokiya) supranormal powers (ABHIJÑĀ; P. abhiññā) produced through the perfection of meditative absorption (DHYĀNA). These psychic powers (ṚDDHI) include (1) the ability to replicate one's body and, having done so, to make it one again; (2) the ability to pass through solid objects, such as walls and mountains, as if they were air; (3) the ability to walk on water as if it were solid earth; (4) the ability to fly through the air like a bird, even with one's legs crossed; and (5) the ability to touch the sun and the moon with one's hand. See also ṚDDHI.

Rdo grub chen. (Do Drupchen). An important monastic seat of the RNYING MA sect of Tibetan Buddhism. The first Rdo grub chen lama, 'Jigs med phrin las 'od zer (Jigme Tinle Öser, 1742–1821) founded the monastery of Yar klungs Padma bkod in the Mgo log region of A mdo in 1810. His successor, 'Jigs med phun tshogs (Jikme Puntsok), founded another monastery in the same region at Rdo stod. The third Rdo drub chen lama, 'Jigs med bstan pa'i nyi ma (Jikme Tenpe Nyima, 1865–1926), a student of the RIS MED masters 'JAM DBYANGS MKHYEN BRTSE'I DBANG PO and 'JAM MGON KONG SPRUL BLO GROS MTHA' YAS, constructed a seminary there, attracting a large number of students.

Rdo grub chen incarnations. (Do Drupchen). An important Tibetan Buddhist incarnation lineage associated with the transmission of the KLONG CHEN SNYING THIG tradition revealed by 'JIGS MED GLING PA. The incarnation lineage includes:

1. 'Jigs med phrin las 'od zer (1745–1821)
2. 'Jigs med phun tshogs 'byung gnas (1824–1863)
3. 'Jigs med bstan pa'i nyi ma (1865–1926)

4a. Rig 'dzin bstan pa'i rgyal mtshan (1927–1961)

4b. Thub bstan phrin las dpal bzang (b. 1927)

The first incarnation, 'Jigs med phrin las 'od zer (Jikme Tinle Öser), was born in the Rdo valley of Mgo log, in eastern Tibet, and for this reason was later known as Rdo grub chen, the "great adept (grub chen) of Rdo." Despite the fact that he was not recognized as an incarnate lama (SPRUL SKU) at a young age, his youth is described as having been filled with visionary experiences of his past lives. He spent his early life studying under numerous masters throughout eastern, central, and southern Tibet, although it was only at the age of forty-one that he met his principal GURU, 'Jigs med gling pa, from whom he received the entire RNYING MA transmissions of BKA' MA and GTER MA and by whom he was certified as the principal lineage holder of the klong chen snying thig tradition. His fame as a spiritual luminary spread and traveled widely among the great monastic communities of eastern Tibet, teaching many of the great Rnying ma masters of his day and establishing the monastic center of Yar klungs Padma bkod in eastern Tibet. The second incarnation, 'Jigs med phun tshogs 'byung gnas (Jikme Puntsok Jungne), was known for his ability to perform miraculous feats, and he continued many of the traditions of his predecessor. He also laid the foundations for what would later become the famed Rdo grub chen monastery. The third incarnation, 'Jigs med bstan pa'i nyi ma (Jikme Tenpe Nyima), was born into a prominent family in the Mgo log region of eastern Tibet: his father was Bdud 'joms gling pa (1835–1903), a famed treasure revealer (GTER STON), and his seven younger brothers were all recognized as incarnate lamas. He studied under many great Rnying ma masters, including DPAL SPRUL RIN PO CHE and 'JAM DBYANGS MKHYEN BRTSE DBANG PO. Two individuals were recognized as the fourth incarnation and were enthroned simultaneously at Rdo grub chen monastery in about 1930. They continued their education together until the age of twenty. The first, Rig 'dzin bstan pa'i rgyal mtshan, was imprisoned during the Chinese invasion of Tibet and died in a prison labor camp. In 1957, the second incarnation, Thub bstan phrin las dpal bzang, escaped into exile in Sikkim where he established a permanent residence. He later became a representative at the Sikkim Research Institute of Tibetology in Gangtok and traveled widely throughout Europe and the United States.

Rdo rje brag. (Dorje Drak). The monastic seat for the BYANG GTER or "Northern Treasure" tradition of the RNYING MA sect of Tibetan Buddhism, located on the Gtsang po (Tsangpo) River in central Tibet. The Byang gter tradition originated with the treasure revealer Dngos grub rgyal mtshan (Ngödrup Gyaltsen), better known as RGOD LDEM CAN. His subsequent reincarnations, called the Rdo rje brag rig 'dzin ("the VIDYĀDHARAs of Dorje Drak"), became the institution's principal teacher. Rdo rje brag monastery was established in its present location in the sixteenth century by the third Rdo rje brag rig 'dzin Ngag gi dbang po (Ngaki Wangpo, 1580–1639), together with his master Bkra shis stobs rgyal (Tashi Topgyal, 1550?–1603). It was greatly expanded by the fourth Rdo rje brag rig 'dzin Padma 'phrin las (Pema Trinle, 1641–1717), but was subsequently destroyed (and Padma 'phrin las himself killed) during the Dzungar Mongol invasion. It was again demolished during the Chinese Cultural Revolution and has since been rebuilt. The monastery takes its name, lit. "vajra cliffs," from the shape of the surrounding rock face, said to resemble the shape of a VAJRA. Rdo rje brag is one of the six major Rnying ma monasteries; besides SMIN GROL GLING in central Tibet, they are KAḤ THOG, ZHE CHEN, RDZOGS CHEN, and DPAL YUL in Khams.

Rdo rje gling pa. (Dorje Lingpa) (1346–1405). A Tibetan Buddhist master, identified as the third of the five kingly treasure revealers (GTER STON RGYAL PO LNGA), and considered to be an emanation of the Tibetan king KHRI SRONG LDE BTSAN. As a youth, he took monastic ordination and studied both the ancient (RNYING MA) and new (GSAR MA) traditions of the sūtras and tantras. At age thirteen he discovered his first treasure text (GTER MA) behind a miracle-performing image of TĀRĀ in the KHRA 'BRUG temple. He considered himself to be the incarnation of the translator VAIROCANA and was guided by visions of him. When doubts were raised about the authenticity of his treasures, he began discovering texts and sacred objects in public settings. In addition to his discoveries, he was famous for his eccentric behavior and spontaneous songs. Rdo rje gling pa is said to have unearthed forty-three sets of treasure, foremost of which was the *Bla rdzogs thugs gsum* ("Trio of the Guru, Great Perfection, and Great Compassionate One").

Rdo rje grags ldan. (Dorje Drakden). A Tibetan DHARMAPĀLA associated with PE HAR RGYAL PO as his "minister" (T. blon po) who also takes possession of Pe har's medium, the GNAS CHUNG chos rje (Nechung Chöje), the "state oracle" of Tibet. One version of the origin of the oracle is that Rdo rje grags ldan, wishing to rise above his present status, began to appear to the monks of Tshal gung thang. Rather than inviting the god to take up residence at the monastery, they trapped him in a box, which they threw into the river. This box made its way to Gnas chung, where he escaped. The monks there thought it appropriate to invite the chief deity of the emanation, and thus Pe har was brought to the monastery to serve as the oracle. Elsewhere, it is explained that because Pe har will soon attain enlightened status as a supramundane protector ('jig rten las 'das pa'i srung ma), he is increasingly reluctant to answer questions pertaining to mundane matters. For this reason, he occasionally sends Rdo rje grags ldan to speak for him through the Gnas chung cho rje.

Rdo rje gro lod. (Dorje Drolö). One of the eight forms of PADMASAMBHAVA, that in which he subdued harmful spirits at Spa ro stag tshang (Paro Taktsang) and established Buddhism in Bhutan. He is wrathful with one face with three eyes, holds a VAJRA and a dagger (PHUR PA), and rides a tiger.

rdo rje gsum gyi bsnyen sgrub. (dorje sumgyi nyendrup). A rare Tibetan Buddhist tradition, lit. "propitiation and achievement of the three adamantine states," closely related to the KĀLACAKRATANTRA. It was originally promulgated by the great Tibetan adept O RGYAN PA RIN CHEN DPAL, who is said to have received the instructions directly from VAJRAYOGINĪ while traveling through northwest India. O rgyan pa's disciples composed several commentaries on the teaching, but it seems to have since fallen into obscurity.

Rdo rje legs pa. (Dorje Lekpa). A Tibetan deity who was subdued by PADMASAMBHAVA at 'O yug bge'u tshang and became a DHARMAPĀLA. He is a member of the gter gyi srung ma sde bzhi, "the four guardians of treasure," who guard the treasures of the four quarters of the world; he occupies the southern quarter and guards gold. He is depicted riding a goat and wearing a broad-brimmed hat. His origin legends include being born from the union of two demons (BDUD) as well as being the spirit of a learned but sinful Indian monk from NĀLANDĀ. He is said to take possession of numerous mediums.

Rdo rje shugs ldan. (Dorje Shukden). A protector of the DGE LUGS sect of Tibetan Buddhism. According to his legend, he is the spirit of Grags pa rgyal mtshan (Drakpa Gyaltsen), an alternate candidate for the position of fifth DALAI LAMA and a distinguished scholar who later was either assassinated or committed suicide. Grags pa rgyal mtshan was himself said to be the reincarnation of Paṇ chen Bsod nams grags pa (Sönam Drakpa), an important abbot of 'BRAS SPUNGS monastery after the death of the third Dalai Lama. Following the death of Grags pa rgyal mtshan, numerous calamities struck the Tibetan capital and the person of the fifth Dalai Lama. The Tibetan government enlisted the aid of the abbot of SMIN SGROL GLING monastery, who successfully convinced the spirit to adopt the role of protector of the Dge lugs pa, in which role he is said to guard against the corrupting influences of other sects' teachings, specifically those of the RNYING MA sect. He resides outside GNAS CHUNG monastery below 'Bras spungs monastery, outside of LHA SA, where the east gate is always locked to keep him from entering and displacing the state oracle, PE HAR RGYAL PO. He is depicted riding a snow lion. He has one face and three eyes and is holding a khaḍga and skull cup (S. KAPĀLA), with a mongoose and a golden goad (aṅkuśa) held in his left arm. Since the early twentieth century, Rdo rje shugs ldan became a widely worshipped protector of the Dge lugs pa due largely to the prominent Dge lugs cleric Pha bong kha pa (1878–1943). Both the thirteenth and fourteenth Dalai Lamas outlawed his worship on the grounds that he is in fact a harmful spirit, with the proclamations of the fourteenth Dalai Lama generating opposition from within the Dalai Lama's own Dge lugs sect, especially from monks who had been close disciples of the Dalai Lama's junior tutor Khri byang rin po che. In 1997, the principal of the School of Buddhist Dialectics in DHARMAŚĀLĀ, India, DGE BSHES Blo bzang rgya mtsho (Geshe Losang Gyatso), a supporter of the Dalai Lama's position, was brutally murdered. The Indian authorities issued arrest warrants for six men, mainly from the Cha phreng region of eastern Tibet associated with a group supporting worship of Rdo rje shugs ldan.

Rdo rje tshig rkang. (Dorje Tsikang). In Tibetan, "VAJRA Verses," a text whose content is said to have originated with the Indian adept VIRŪPA. The work forms a scriptural basis for the SA SKYA tradition of tantric theory and practice known as LAM 'BRAS ("path and result"). The work presents a summary of the entire tantric path to enlightment, from the most basic points of

doctrine to the consummate tantric meditative practices. The text is said to have been transmitted in purely oral form for at least eight generations. According to traditional accounts, Virūpa received the content of these teachings as a direct visionary transmission from the deity NAIRĀTMYĀ, on the basis of which he formulated the condensed instructions known as the *Rdo rje tshig khang*. Virūpa first taught the verses to his disciple Kāṇha, who taught them to Ḍāmarupa. They were passed to Avadhūti and then to the master Gayadhara (d. 1103), who traveled to Tibet in 1041 and transmitted the teachings to the great Sa skya founder and translator 'BROG MI SHĀKYA YE SHES. The latter taught the work orally in Tibetan (translated from the Indian dialect) and it was memorized and transmitted in this fashion until the prominent Sa skya master SA CHEN KUN DGA' SNYING PO promulgated them in written form.

rdzogs chen. (dzokchen). A Tibetan philosophical and meditative tradition, usually rendered in English as "great perfection" or "great completion." Developed and maintained chiefly within the RNYING MA sect, rdzogs chen has also been embraced to varying degrees by other Tibetan Buddhist sects. The non-Buddhist Tibetan BON religion also upholds a rdzogs chen tradition. According to legend, the primordial buddha SAMANTABHADRA (T. Kun tu bzang po) taught rdzogs chen to the buddha VAJRASATTVA, who transmitted it to the first human lineage holder, DGA' RAB RDO RJE. From him, rdzogs chen was passed to MAÑJUŚRĪMITRA and thence to ŚRĪSIṂHA, and the Tibetan translator Ba gor VAIROCANA, who had been sent to India by the eighth-century Tibetan King KHRI SRONG LDE BTSAN. In addition to Vairocana, the semimythical figures of VIMALAMITRA and PADMASAMBHAVA are considered to be foundational teachers of rdzogs chen in Tibet. Historically, rdzogs chen appears to have been a Tibetan innovation, drawing on multiple influences, including both non-Buddhist native Tibetan beliefs and Chinese and Indian Buddhist teachings. The term was likely taken from the GUHYAGARBHATANTRA. In the creation and completion stages of tantric practice, one first generates a visualization of a deity and its MAṆḌALA and next dissolves these into oneself, merging oneself with the deity. In the *Guhyagarbha* and certain other tantras, this is followed with a stage known as rdzogs chen, in which one rests in the unelaborated natural state of one's own innately luminous and pure mind. In the Rnying ma sect's nine-vehicle (T. THEG PA DGU) doxography of the Buddhist teachings, these three stages constitute the final three vehicles: the MAHĀYOGA, ANUYOGA, and ATIYOGA, or rdzogs chen. The rdzogs chen literature is traditionally divided into three categories, which roughly trace the historical development of the doctrine and practices: the mind class (SEMS SDE), space class (KLONG SDE), and instruction class (MAN NGAG SDE). These are collected in a group of texts called the RNYING MA'I RGYUD 'BUM ("treasury of Rnying ma tantras"). The mind class is comprised largely of texts attributed to Vairocana, including the so-called eighteen tantras and the KUN BYED RGYAL PO. They set forth a doctrine of primordial purity (ka dag) of mind (sems nyid), which is the basis of all things (kun gzhi). In the natural state, the mind, often referred to as BODHICITTA, is spontaneously aware of itself (rang rig), but through mental discursiveness (rtog pa) it creates delusion ('khrul ba) and thus gives rise to SAṂSĀRA. Early rdzogs chen ostensibly rejected all forms of practice, asserting that striving for liberation would simply create more delusion. One is admonished to simply recognize the nature of one's own mind, which is naturally empty (stong pa), luminous ('od gsal ba), and pure. As tantra continued to grow in popularity in Tibet, and new techniques and doctrines were imported from India, a competing strand within rdzogs chen increasingly emphasized meditative practice. The texts of the space class (klong sde) reflect some of this, but it is in the instruction class (man ngag sde), dating from the eleventh to fourteenth centuries, that rdzogs chen fully assimilated tantra. The main texts of this class are the so-called seventeen tantras and the two "seminal heart" collections, the BI MA SNYING THIG ("Seminal Heart of Vimalamitra") and the MKHA' 'GRO SNYING THIG ("Seminal Heart of the ḌĀKINĪ"). The seventeen tantras and the "Seminal Heart of Vimalamitra" are said to have been taught by Vimalamitra and concealed as "treasure" (GTER MA), to be discovered at a later time. The "Seminal Heart of the Ḍākinī" is said to have been taught by Padmasambhava and concealed as treasure by his consort, YE SHES MTSHO RGYAL. In the fourteenth century, the great scholar KLONG CHEN RAB 'BYAMS PA DRI MED 'OD ZER systematized the multitude of received rdzogs chen literature in his famous MDZOD BDUN ("seven treasuries") and the NGAL GSO SKOR GSUM ("Trilogy on Rest"), largely creating the rdzogs chen teachings as they are known today. With the man ngag sde, the rdzogs chen proponents made full use of the Tibetan innovation of treasure, a means by which later tantric developments were assimilated to the tradition without sacrificing its claim to eighth-century origins. The semilegendary figure of Padmasambhava was increasingly relied upon for this purpose, gradually eclipsing Vairocana and Vimalamitra as the main rdzogs chen founder. In subsequent centuries there have been extensive additions to the rdzogs chen literature, largely by means of the treasure genre, including the KLONG CHEN SNYING THIG of 'JIGS MED GLING PA and the *Bar chad kun gsal* of MCHOG GYUR GLING PA to name only two. Outside of the Rnying ma sect, the authenticity of these texts is frequently disputed, although there continue to be many adherents to rdzogs chen from other Tibetan Buddhist lineages. Rdzogs chen practitioners are commonly initiated into the teachings with "pointing-out instructions" (sems khrid/ngos sprod) in which a lama introduces the student to the nature of his or her mind. Two main practices known as KHREGS CHOD (breakthrough), in which one cultivates the experience of innate awareness (RIG PA), and THOD RGAL (leap over), elaborate visualizations of external light imagery, preserve the tension between the early admonition against practice and the appropriation of complex tantric techniques and doctrines. Extensive practices engaging the subtle body of psychic channels, winds, and drops (rtsa rlung thig le) further reflect the later tantric developments in rdzogs chen.

¶ RDZOGS CHEN is also used as the short name for one of the largest and most active Tibetan monasteries, belonging to the Rnying ma sect of Tibetan Buddhism, located in the eastern Tibetan region of Khams; the monastery's full name is Rus dam bsam gtan o rgyan chos gling (Rudam Samten Orgyan Chöling). It is a major center for both academic study and meditation retreat according to Rnying ma doctrine. At its peak, the monastery housed over one thousand monks and sustained more than two hundred branches throughout central and eastern Tibet. The institution was founded in 1684–1685 by the first RDZOGS CHEN INCARNATION Padma rig 'dzin (Pema Rikdzin) with the support of the fifth DALAI LAMA NGAG DBANG BLO BZANG RGYA MTSHO. Important meditation hermitages in the area include those of MDO MKHYEN RTSE YE SHE RDO RJE and MI PHAM 'JAM DBYANGS RNAM RGYAL RGYA MTSHO. DPAL SPRUL RIN PO CHE passed many years in retreat there, during which time he composed his great exposition of the preliminary practices of Tibetan Buddhism entitled the KUN BZANG BLA MA'I ZHAL LUNG ("Words of My Perfect Teacher").

Rdzogs chen incarnations. A lineage of incarnate lamas (SPRUL SKU) associated with RDZOG CHEN monastery. The first Rdzog chen incarnation, Rdzogs chen Padma rig 'dzin (Dzokchen Pema Rikdzin), founded the monastery at the behest of the fifth DALAI LAMA. The lineage comprises:

1. Rdzogs chen Padma rig 'dzin (1625–1697);
2. Rdzogs chen 'Gyur med theg mchog bstan 'dzin (Dzokchen Gyurme Tekchok Tendzin, 1699–1758);
3. Rdzogs chen Nges don bstan 'dzin bzang po (Dzokchen Ngedön Tendzin Sangpo, 1759–1792);
4. Rdzogs chen Mi 'gyur nam mkha'i rdo rje (Dzokchen Mingyur Namkhe Dorje, b. 1793);
5. Rdzogs chen Thub bstan chos kyi rdo rje (Dzokchen Tupten Chökyi Dorje, 1872–1935);
6. Rdzogs chen 'Jigs bral byang chub rdo rje (Dzokchen Jikdrel Jangchup Dorje, 1935–1959);
7. Rdzogs chen 'Jig med blo gsal dbang po (Jikme Losel Wangpo) (b. 1964).

rdzogs chen sde gsum. (dzokchen desum). Three major divisions of RDZOGS CHEN teachings in the Tibetan Buddhist tradition: the SEMS SDE (mental class), the KLONG SDE (space class), and the MAN NGAG SDE (instruction class). Of them, only the man ngag sde is now widely disseminated based on the tradition going back to KLONG CHEN PA.

Rdzogs pa chen po klong chen snying thig. See KLONG CHEN SNYING THIG.

Rdzong gsar. (Dzongsar). A Tibetan Buddhist monastery establised in 1253 by the illustrious SA SKYA hierarch 'PHAGS PA BLO GROS RGYAL MTSHAN in the SDE DGE region of eastern Tibet. It was greatly expanded during the nineteenth century by the great master 'JAM DBYANG MKHYEN BRTSE DBANG PO and his incarnation Rdzong gsar mkhyen brtse Chos kyi blo gros, who added a teaching institute (BSHAD GRWA). For the past several centuries, Rdzong gsar has been renowned as one of Tibet's premier centers for intellectual study. Its full name is Rdzong gsar bkra shis lha rtse (Dzongsar Tashi Lhatse).

rebirth. An English term that does not have an exact correlate in Buddhist languages, rendered instead by a range of technical terms, such as the Sanskrit PUNARJANMAN (lit. "birth again") and PUNARBHAVA (lit. "re-becoming"), and, less commonly, the related PUNARMṚTYU (lit. "redeath"). The Sanskrit term JĀTI ("birth") also encompasses the notion of rebirth. The doctrine of rebirth is central to Buddhism. It was not an innovation of the Buddha, being already common to a number of philosophical schools of ancient India by the time of his appearance, especially those connected with the ŚRAMAṆA movement of religious mendicants. Rebirth (sometimes called metempsychosis) is described as a beginningless process in which a mental continuum (see SAṂTĀNA) takes different (usually) physical forms lifetime after lifetime within the six realms (GATI) of SAṂSĀRA: divinities (DEVA), demigods (ASURA), humans (MANUṢYA), animals (TIRYAK), ghosts (PRETA), and hell denizens (NĀRAKA). The cycle of rebirth operates through the process of activity (KARMAN), with virtuous (KUŚALA) actions serving as the cause for salutary rebirths among the divinities and human beings, and unvirtuous (AKUŚALA) actions serving as the cause of unsalutary rebirths (DURGATI; APĀYA) among demigods, animals, ghosts, and hell denizens. The goal of the Buddhist path has been traditionally described as the cessation of the cycle of rebirth through the eradication of its causes, which are identified as the afflictions (KLEŚA) of greed, hatred, and ignorance and the actions motivated by those defilements. Despite this ultimate goal, however, much traditional Buddhist practice has been directed toward securing rebirth as a human or divinity for oneself and one's family members, while avoiding rebirth in the evil realms. The issue of how Buddhism reconciles the doctrine of rebirth with its position that there is no perduring self (ANĀTMAN) has long been discussed within the tradition. Some schools of mainstream Buddhism, such as the VĀTSĪPUTRĪYA or PUDGALAVĀDA, have gone so far as to posit that, while there may be no perduring "self," there is an "inexpressible" (avācya) "person" (PUDGALA) that is neither the same as nor different from the five aggregates (SKANDHA), which transmigrates from lifetime to lifetime. A more widely accepted view among the traditions sees the person as simply a sequence of mental and physical processes, among which is the process called consciousness (VIJÑĀNA). Consciousness, although changing every moment, persists as a continuum over time. Death is simply the transfer of this conscious continuum (SAṂTĀNA) from one impermanent mental and physical foundation to the next, just as the light from one candle may be transferred to

the next in a series of candles. The exact process by which rebirth occurs is variously described in the different Buddhist traditions, with some schools asserting that rebirth occurs in the moments immediately following death, with other schools positing the existence of an "intermediate state" (ANTARĀBHAVA) between death in one lifetime and rebirth in another, with that period lasting as long as forty-nine days (see SISHIJIU [RI] ZHAI). This state, translated as BAR DO in Tibetan, became particularly important in Tibet in both funerary rituals and in tantric practice, especially that of the RNYING MA sect. The reality of rebirth is one of the cardinal doctrines of Buddhism, which the religion claims can be empirically validated through direct spiritual insight (see YOGIPRATYAKṢA). Indeed, understanding the validity of this cycle of rebirth is associated with two of the three types of knowledge (TRIVIDYĀ) that are experienced through the enlightenment of an ARHAT or a buddha: the ability to remember one's own former lives (PŪRVANIVĀSĀNUSMṚTI) in all their detail and insight into the future rebirth destinies of all other beings based on their own actions (S. CYUTYUPAPĀDĀNUSMṚTI). See also SAṂSĀRA.

Record of Buddhist Kingdoms. See FAXIAN ZHUAN.

Record of the Western Regions. See DA TANG XIYU JI.

Red Hats. (C. hongmao 紅帽). A popular designation in both European languages and Chinese for the BKA' BRGYUD and sometimes the RNYING MA sects of Tibetan Buddhism, whose lamas do indeed wear red hats. Although the term ZHWA DMAR, or "Red Hat," is used to designate an important lineage of incarnate lamas within the KARMA BKA' RGYUD sect, the Western and Chinese division of major Tibetan Buddhist sects into the YELLOW HATS, Red Hats, and BLACK HATS has no corollary within the Tibetan tradition and should be avoided.

reigen. (靈驗). In Japanese, lit. "numinous verification," a term used to refer to the miraculous efficacy of a prayer, vow, or religious praxis. The benefits are often understood as the result of the "sympathetic resonance" (C. GANYING) between buddhas and/or deities who are the objects of the prayer and the subject who engages in prayer. The term can also refer to the miraculous power and virtue of the buddhas and deities to respond to the prayers of people.

reincarnation. See REBIRTH, PUNARBHAVA, PUNARJANMAN, SPRUL SKU.

Reiyūkai. (霊友会/靈友會). In Japanese, lit. "Numinous Friends Society," or "Society of Friends of the Spirits"; a Japanese Buddhist lay organization, deriving from the teachings of the NICHIRENSHŪ. It was founded in 1925 by KUBO KAKUTARŌ (1892–1944) and KOTANI KIMI (1901–1971), the wife of Kubo's elder brother, who took over leadership of the organization and became president in 1944 upon Kubo's death. Kubo insisted that everyone keep a family death register and give posthumous names to venerated ancestors; these activities were formerly the domain of monks, who would be paid for their services. His other ideas included the classical directive to convert the world into a PURE LAND for Buddhism and the need to teach others the truth. He particularly emphasized the ability of each individual to improve him or herself. Kubo's ideas appealed to the poor and he began to attract converts quickly, including his brother Kotani Yasukichi and Kotani's wife, Kotani Kimi. In 1971 after Kotani Kimi died, Kubo's son Kubo Tsugunari took over as the leader of the group. For years he had prepared for this future, including studying Indian philosophy and Buddhism at Risshō University. Despite this preparation, Reiyūkai was rocked by what some viewed as his personal failings and political maneuverings and Kubo Tsugunari eventually lost his leadership post. More recent leaders have been elected democratically. Some noted activities in recent years include opening the Lumbinī International Research Institute in Nepal and the International College for Advanced Buddhist Studies in Tōkyō. The organization reached its peak during the years surrounding the Second World War, when it claimed some three million members, and was the source of numerous Nichiren-related new religious movements, of which the RISSHŌ KŌSEIKAI, founded in 1938, became the most prominent. Reiyūkai continues to be an active lay organization in both Japan and abroad. The Reiyūkai organization has no clergy and no formal affiliation with any other Buddhist school, but instead relies on volunteer lay teachers who lead informal group meetings and discussions. Reiyūkai focuses on the human capacity for lifelong self-cultivation in order to become ever more wise and compassionate. All its adherents must have a personal sponsor in order to join the order. The school stresses ancestor worship, believing that personal and social ills are the result of inadequate veneration of ancestor spirits who have been unable to attain buddhahood and instead became guardian spirits until the proper rites are performed so they may be liberated. Its followers believe that reciting the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") in abridged form during daily morning and evening services or a group meeting transfers merit to their ancestors.

relics. See DHĀTU, ŚARĪRA, STŪPA, SUISHEN SHELI.

reliquary. See STŪPA, SHELIJU.

Rennyo. (蓮如) (1415–1499). In Japanese, "Lotus Suchness"; proper name of the Japanese monk who played a crucial role in the consolidation of JŌDO SHINSHŪ tradition. Rennyo was born at the monastery of HONGANJI in the Higashiyama district of Kyōto. He was the son of Zonnyo (1396–1457), himself a descendent of SHINRAN and the seventh abbot of Honganji. Despite some opposition from his stepmother and her son Nyojō (1412–1460), Rennyo succeeded his father as abbot of Honganji after his father's death in 1457. Rennyo began

expanding his sphere of influence by proselytizing in the outskirts of Kyōto. In 1465, the monks of HIEIZAN (see ENRYAKUJI) destroyed Honganji in order to restrict the spread of Rennyo's influence in regions under TENDAI control. Rennyo was able to save the portrait of Shinran (goei) from destruction and installed it temporarily at the temple of MIIDERA. After the attack, Rennyo wandered from region to region until he settled down far away from Mt. Hiei in Hokuriku (present-day Echizen), where he acquired a large following (of mostly peasants) through active proselytizing and the writing of pastoral letters (ofumi). In 1475, Rennyo returned to Kyōto, where he began the construction of a new Honganji in the district of Yamashina the following year. Rennyo also restored the hōonko memorial service for Shinran and established the nenbutsu (C. NIANFO; see NAMU AMIDABUTSU) inscriptions as an important object of worship. In his writings, Rennyo also systematized the teachings of Shinran and criticized priestly corruption and "heretical" teachings that did not emphasize exclusive faith in the buddha AMITĀBHA and his name. Under Rennyo's tenure as abbot, the Honganji complex grew into one of the most powerful monasteries of its era, controlling a vast network of subtemples. This period is traditionally considered to represent the institutional formation of Jōdo Shinshū.

rentian jiao. (C) (人天教). See HUAYAN WUJIAO.

Renwang baigaozuo hui. (J. Ninnō hyakukōzae; K. Inwang paekkojwa hoe 仁王百高座會). In Chinese, lit., "Humane Kings assembly of one hundred high seats." See RENWANG JING; HUGUO FOJIAO.

Renwang bore boluomi jing. (C) (仁王般若波羅蜜經). See RENWANG JING.

Renwang huguo bore boluomiduo jing. (C) (仁王護國般若波羅蜜多經). See RENWANG JING.

Renwang jing. (J. Ninnōgyō; K. Inwang kyŏng 仁王經). In Chinese, "Scripture for Humane Kings"; an influential indigenous Chinese scripture (see APOCRYPHA), known especially for its role in "state protection Buddhism" (HUGUO FOJIAO) and for its comprehensive outline of the Buddhist path of practice (MĀRGA). Its full title (infra) suggests that the scripture belongs to the "perfection of wisdom" (PRAJÑĀPĀRAMITĀ) genre of literature, but it includes also elements drawn from both the YOGĀCĀRA and TATHĀGATAGARBHA traditions. The text's audience and interlocutors are not the typical ŚRĀVAKAS and BODHISATTVAS but instead kings hailing from the sixteen ancient regions of India, who beseech the Buddha to speak this sūtra in order to protect both their states and their subjects from the chaos attending the extinction of the dharma (MOFA; SADDHARMAVIPRALOPA). By having kings rather than spiritual mentors serve as the interlocutors, the scripture thus focuses on those qualities thought to be essential to governing a state founded on Buddhist principles. The text's concepts of authority, the path, and the world draw analogies with the "humane kings" of this world who serve and venerate the transcendent monks and bodhisattvas. The service and worship rendered by the kings turns them into bodhisattvas, while the soteriological vocation of the monks and bodhisattvas conversely renders them kings. Thus, the relationship between the state and the religion is symbiotic. The sūtra is now generally presumed to be an indigenous Chinese scripture that was composed to buttress imperial authority by exalting the benevolent ruler as a defender of the dharma. The *Renwang jing* is also known for including the ten levels of faith (ŚRADDHĀ) as a preliminary stage of the Buddhist path prior to the arousal of the thought of enlightenment (BODHICITTOTPĀDA). It is one of a number of Chinese Buddhist apocrypha that seek to provide a comprehensive elaboration of all fifty-two stages of the path, including the PUSA YINGLUO BENYE JING and the YUANJUE JING. The *Renwang jing* is not known in Sanskrit sources, but there are two recensions of the Chinese text. The first, *Renwang bore boluomi jing*, is purported to have been translated by KUMĀRAJĪVA and is dated to c. 402, and the latter, titled *Renwang huguo bore boluomiduo jing*, is attributed to AMOGHAVAJRA and dated to 765. The Amoghavajra recension is based substantially on the Kumārajīva text, but includes additional teachings on MAṆḌALA, MANTRA, and DHĀRAṆĪ, additions that reflect Amoghavajra's place in the Chinese esoteric Buddhist tradition. Furthermore, because Amoghavajra was an advisor to three Tang-dynasty rulers, his involvement in contemporary politics may also have helped to shape the later version. Chinese scriptural catalogues (JINGLU) were already suspicious about the authenticity of the *Renwang jing* as least as early as Fajing's 594 *Zhongjing mulu*; Fajing lists the text together with twenty-one other scriptures of doubtful authenticity (YIJING), because its content and diction do not resemble those of the ascribed translator. Modern scholars have also recognized these content issues. One of the more egregious examples is the RENWANG JING's reference to four different perfection of wisdom (prajñāpāramitā) sūtras that the Buddha is said to have proclaimed; two of the sūtras listed are, however, simply different Chinese translations of the same text, the PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA, a blunder that an Indian author could obviously not have committed. Another example is the scripture's discussion of a three-truth SAMĀDHI (sandi sanmei), in which these three types of concentrations are named worldly truth (shidi), authentic truth (zhendi), and supreme-meaning truth (diyiyidi). This schema is peculiar, and betrays its Chinese origins, because "authentic truth" and "supreme-meaning truth" are actually just different Chinese renderings of the same Sanskrit term, PARAMĀTHASATYA. Based on other internal evidence, scholars have dated the composition of the sūtra to sometime around the middle of the fifth century. Whatever its provenance, the text is ultimately reclassified as an authentic translation in the 602 catalogue *Zongjing mulu* by Yancong and continues to be so listed in all subsequent East Asian catalogues. See also APOCRYPHA; SANDI.

requisites. [alt. four, eight, or eighteen]. See PARIṢKĀRA; NIŚRAYA.

Revata. (T. Nam gru; C. Lipoduo; J. Ribata; K. Ibada 離婆多). Sanskrit and Pāli proper name of an important ARHAT who was foremost among the Buddha's monk disciples in mastery of meditative absorption (DHYĀNA; P. JHĀNA). He is typically known as "doubting Revata" (KĀṄKṢĀ-REVATA; P. Kankhā-Revata), to distinguish him from several other Revatas who appear in the literature, because prior to his enlightenment he is said to have been troubled by doubt concerning what was permissible and what was not. According to the Pāli account, Revata was born into a wealthy family in the city of Sāvitthi (S. ŚRĀVASTĪ). One day he heard the Buddha preach in Kapilavatthu (S. KAPILAVASTU) and resolved to renounce the world and enter the order. He attained arhatship by relying on dhyāna, and his exceptional skill in these meditative states won him distinction. Revata had resolved to attain this distinction in a previous life as a brāhmaṇa when, during the time of the buddha Padmottara, he heard the Buddha describe one of his disciples as preeminent in his attainment of dhyāna. In another famous story, the mother of Uttara had been reborn as a hungry ghost (S. PRETA, P. peta) and after fifty-five years of wandering, encountered Revata and begged him for relief. He relieved her suffering by making various offerings to the SAṂGHA in her name. ¶ There was a later monk named Revata who played a major role at the second Buddhist council (SAṂGĪTI; see COUNCIL, SECOND) held at VAIŚĀLĪ. Some one hundred years after the death of the Buddha, the monk YAŚAS was traveling in Vaiśālī when he observed the monks there receiving alms in the form of gold and silver directly from the laity, in violation of the prohibition against monks' touching gold and silver. He also found that the monks had identified ten points in the VINAYA that were classified as violations but that they had determined were sufficiently minor to be ignored. Yaśas challenged the monks on these practices, but when he refused to accept their bribes to keep quiet, they expelled him from the order. Yaśas sought support of several respected monks in the west, including ŚĀṆAKAVĀSĪN and Revata, and together they traveled to Vaiśālī. Once there, Revata went to Sarvagāmin, the eldest monk of his era, who is said to have been a disciple of ĀNANDA, to question him about these ten points. At Revata's suggestion, a jury of eight monks was appointed to adjudicate, with four representatives selected from each party. Revata was selected as one of four from the party declaring the ten practices to be violations, and it was Revata who publically put the questions to Sarvagāmin. In each case, the senior monk said that the practice in question was a violation of the vinaya. Seven hundred monks then gathered to recite the vinaya. Those who did not accept the decision of the council held their own convocation, which they called the MAHĀSĀṂGHIKA, or "Great Assembly." This event is sometimes said to have led to the first "great schism" within the mainstream Buddhist tradition, between the STHAVIRANIKĀYA, or Fraternity of the Elders, and the Mahāsāṃghika.

Revatī. (T. Nam gru ma). In Sanskrit and Pāli, a laywoman whose story illustrates the unsalutary consequences of niggardliness toward monks and the salutary power of taking delight (MUDITĀ) in the virtue of others. According to the Pāli account, Revatī was the daughter of a householder of Vārāṇasī, who had no faith in the Buddha and was extremely uncharitable. Her husband was the wealthy lay patron of the Buddha, Nandiya, who had her partake in his meritorious deeds. When he went abroad, he asked his wife to continue his meritorious deeds toward the SAṂGHA. Revatī did so for seven days but then stopped and began to abuse the monks who came to her house for alms (PIṆḌAPĀTA). As a consequence of their respective actions, upon her death, Revatī was reborn in hell, while Nandiya was reborn as a divinity in the TRĀYASTRIṂŚA heaven. When he saw with his divine eye (DIVYACAKṢUS) that his wife had become a denizen of hell, he went to her and asked her to take delight in his meritorious deeds. As soon as she did so, Revatī became a divinity herself and resided with Nandiya in that same heaven. In Buddhist TANTRA, particularly in the SA SKYA and DGE LUGS sects of Tibet, Śrīmatī Revatī (T. Dmag zor ma) (rendered "magical weapon army") is a form of the protectress (T. srung ma) Śrīdevī (T. DPAL LDAN LHA MO).

Rgod ldem can Dngos grub rgyal mtshan. (Gödemchen Ngödrup Gyaltsen) (1337–1408). An important master and treasure revealer (GTER STON) of the RNYING MA sect of Tibetan Buddhism, often venerated with the title rig 'dzin (S. VIDYĀDHARA). According to traditional accounts, three vulture feathers miraculously grew from the crown of his head at the age of twelve; five more appeared when he turned twenty-four. For this reason he is known as Rgod ldem can, the "vulture quilled." He began his career as treasure revealer at twenty-nine, forming an important lineage known as the Northern Treasure (BYANG GTER) tradition. The Northern Treasures were eventually seated at RDO RJE BRAG monastery south of LHA SA, with Rgod ldem can's subsequent incarnations, known as the Rdo rje brag rig 'dzin lineage, serving as the institution's abbot.

Rgod tshang pa Mgon po rdo rje. (Götshangpa Gönpo Dorje) (1189–1258). A Tibetan Buddhist master revered as the founder of the upper (stod) branch of the 'BRUG PA BKA' BRGYUD sect of Tibetan Buddhism. He was born in the LHO BRAG region of southern Tibet, and as a child was known for his pleasing appearance and his beautiful singing voice. In his youth, he studied under a number of tutors and finally reached RWA LUNG monastery, where he met his principal guru, the 'Brug pa Bka' brgyud founder GTSANG PA RGYA RAS YE SHES RDO RJE, from whom he received monastic ordination and extensive instruction. In accordance with his master's advice, he spent much of his life as a wandering YOGIN, traveling across central, southern, and western Tibet and visiting numerous pilgrimage places including KAILĀSA, TSA RI, and Jālandhara (the modern Kangra Valley of Himachal Pradesh in northwest India).

He also established several important retreat centers where he passed many years in meditation, including Rgod tshang near modern-day Rtsib ri in Gtsang, Steng gro, Bde chen stengs, and Bar 'brogs Rdo rje gling.

Rgya gar chos 'byung. (Gyakar Chöjung). In Tibetan, "History of the Dharma in India," a detailed history of the development of Buddhism on the subcontinent written in 1608 by the Tibetan savant Kun dga' snying po (1575–1634), better known as TĀRANĀTHA. The work's complete title is *Dam pa'i chos rin po che 'phags pa'i yul du ji ltar dar ba'i tshul gsal bar ston pa dgos 'dod kun 'byung*. It is often consulted by Tibetan and Western scholars of Buddhism because of its judicious use of earlier traditional sources and its sense of the larger history of the subcontinent, perhaps fostered by the author's access to Indian informants, unusual for such a late period in Indian Buddhist history. The work restricts itself largely to the history of Buddhism in India and follows a chronology that can be loosely characterized as historical: it is based on five time periods between the time of AJĀTAŚATRU and AŚOKA, five time periods from there to the time of the third Buddhist council (see COUNCIL, THIRD), and remaining time periods covering the great MAHĀYĀNA masters, through the history of the Pāla dynasty. It ends with a history of Buddhism in different regions, a history of TANTRA, and of image making. Tāranātha's *Rgya gar chos 'byung* is supplemented by his histories of PADMASAMBHAVA, the KĀLACAKRATANTRA, the TĀRĀ and YAMĀNTAKA lineages, and by his BKA' 'BABS BDUN LDAN GYI RNAM THAR, "Biographies of the Seven Instruction Lineages."

Rgyal rabs gsal ba'i me long. (Gyalrab Salwe Melong). In Tibetan, "The Mirror Illuminating the Royal Genealogies," an important chronicle of the early Tibetan dynastic period, written in the fourteenth century by the SA SKYA hierarch BSOD NAMS RGYAL MTSHAN. Although its precise dating has long been in question, current scholarship suggests it was compiled in 1368. The work was regarded highly in Tibet and is often cited in later Tibetan literature.

Rgyal tshab Dar ma rin chen. (Gyaltsap Darma Rinchen) (1364–1432). One of the two principal disciples (together with MKHAS GRUB DGE LEGS DPAL BZANG) of the Tibetan Buddhist master TSONG KHA PA. Ordained and educated in the SA SKYA sect, Rgyal tshab (a name he would only receive later in life) studied with some of the great teachers of the day, including Red mda' ba gzhon nu blo gros. Rgyal tshab was already an established scholar, known especially for his expertise in PRAMĀṆA, when he first met Tsong kha pa at Rab drong around 1400. According to a well-known story, Rgyal tshab sought to debate Tsong kha pa and asked a nun, "Where is Big Nose?" (impertinently referring to Tsong kha pa's prominent proboscis). The nun rinsed out her mouth and lit a stick of incense before saying that the omniscient master Tsong kha pa was teaching in the temple. Rgyal tshab entered the temple and announced his presence, at which point Tsong kha pa interrupted his teaching and invited the great scholar to join him on the teaching throne. Rgyal tshab arrogantly accepted but as he listened to Tsong kha pa's teaching, he became convinced of his great learning and edged away from the master, eventually descending from the throne and prostrating before Tsong kha pa and taking his place in the assembly. From that point, he would become Tsong kha pa's closest disciple, credited with hearing and remembering everything that Tsong kha pa taught. He assisted Tsong kha pa in the founding of DGA' LDAN monastery and upon Tsong kha pa's death in 1419, Rgyal tshab assumed the golden throne of Dga' ldan, becoming the first DGA' LDAN KHRI PA or "Holder of the Throne of Dga' ldan," a position that would evolve into the head of the DGE LUGS sect. He was also called the "regent" (rgyal tshab) of Tsong kha pa, which became the name by which he is best known. He was a prolific author, known especially for his detailed commentaries on the works of DHARMAKĪRTI, as well as such important Indian texts as the ABHISAMAYĀLAṂKĀRA, BODHICARYĀVATĀRA, RATNĀVALĪ, CATUḤŚATAKA, and RATNAGOTRAVIBHĀGA. Rgyal tshab figures in the most common image in Dge lugs iconography, the rje yab sras gsum, or "the triumvirate, the lord father, and the sons," showing Tsong kha pa flanked by Rgyal tshab and Mkhas grub (with Rgyal tshab often shown with white hair). The collected works of these three scholars form something of a canon for the Dge lugs sect and are often printed together as the rje yab sras gsung 'bum or the "collected works of the lord father and the [two] sons."

Rgyud smad. (Gyume). In Tibetan, the "Lower Tantric College," one of two major DGE LUGS centers for tantric studies in LHA SA, together with RGYUD STOD. Prior to his death in 1419, TSONG KHA PA is said to have enjoined his disciple Rgyud Shes rab seng ge (1383–1445) to spread his tantric teachings. In 1432, he founded a tantric college in the Sras district of Gtsang called the Sras rgyud grwa tshang (the "tantric college of Se") or as the Gtsang stod rgyud (the "tantric [college] of Tsang, the upper [region]"). The term stod, lit. "upper" in Tibetan, also means "western" and is sometimes used as a synonym for Gtsang, the province to the west of the central province of Dbus. In 1433, he returned to Lha sa and founded Rgyud smad grwa tshang, or the "tantric college of lower [Tibet])." The term smad, literally "lower," also means "eastern." In 1474, Shes rab seng ge's disciple, Rgyud chen Kun dga' don grub, left Rgyud smad when he was not selected as the abbot. He later founded another tantric college in Lha sa, which he called Dbus stod 'Jam dpal gling grwa tshang or the "Garden of MAÑJUŚRĪ College of Upper Ü." It eventually became known as Rgyud stod. Shortly after its founding, it moved to the RA MO CHE temple in Lha sa. Hence, the the standard translations "lower tantric college" for Rgyud smad and "upper tantric college" for Rgyud stod have no implications of hierarchy or curricular gradation, but refer simply to the geographical locations of the institutions from which they evolved. Monks from the three great Dge lugs

monasteries of Lha sa ('Bras spungs, Se ra, and Dga' ldan) who had achieved one of the two higher dge bshes (geshe) degrees—the lha ram pa or the tshogs ram pa—could enter as a dge bshes bka' ram pa. Which of the two tantric colleges a geshe attended was determined by his birthplace. The curriculum of both of the tantric colleges involved study of the Guhyasamāja-tantra, Cakrasaṃvaratantra, and Vajrabhairavatantra systems. These were studied through memorization and debate, as in the sūtra colleges. Monks also received instruction in the performance of ritual, the use of mudrā, the making of images, and the construction of maṇḍalas. Monks were also instructed in chanting; the deep chanting that has become famous in the West was taught at both Rgyud smad and Rgyud stod. Those who successfully completed the curriculum received the title of dge bshes sngags ram pa. Monks who were not already geshes of one of three monasteries could enter one of the tantric colleges to receive ritual instruction but received a lower degree, called bskyed rim pa. Becoming a dge bshes sngags ram pa and especially an officer of one of the tantric colleges (dge bskos or disciplinarian; bla ma dbu mdzad, lit. "chant leader" but the vice abbot; and mkhan po or abbot) was essential for holding positions of authority in the Dge lugs hierarchy. For example, the Dga' ldan khri pa was required to be a former abbot of Rgyud smad or Rgyud stod. After the Chinese takeover of Tibet, Rgyud smad and Rgyud stod were reestablished in exile in India.

Rgyud stod. (Gyutö). In Tibetan, "Upper Tantric College." See Rgyud smad.

rhinoceros [horn] simile. See khaḍgaviṣāṇa; khaḍgaviṣāṇakalpa.

Rhys Davids, Caroline Augusta Foley. (1857–1942). A prominent scholar of Pāli Buddhism and wife of Thomas William Rhys Davids. Caroline Augusta Foley attended University College in London, where she studied Pāli language and literature. She later became a fellow at University College and worked as a Pāli reader at the School of Oriental and African Studies at the University of London. Known to be a brilliant Pāli scholar and teacher, Rhys Davids had many dedicated students when she lectured in Indian philosophy at Manchester University. In 1894, at the age of thirty-six, she married T. W. Rhys Davids. They had three children together. In 1922, Rhys Davids became the president of the Pāli Text Society, which had been founded by her husband, and served as president for twenty years. Rhys Davids published more than twenty-five monographs and translations. Two of her most famous books are *Gotama the Man* and *Sakya or Buddhist Origins*.

Rhys Davids, Thomas William. (1843–1922). Preeminent British scholar of Pāli Buddhism, Thomas William Rhys Davids was born in Colchester, the son of a Congregationalist minister. He attended secondary school in Brighton and then went on to the University of Breslau in Germany, where he studied Sanskrit. He received a PhD from the University of Breslau before taking a position as a judge in the Ceylon Civil Service in 1864. He resigned from this position in 1872 and became a lawyer in 1877. Instead of practicing law, Rhys Davids turned to researching and writing about Pāli literature. His first book, *The Ancient Coins and Measures of Ceylon*, was published in 1877, after which he began to publish regularly in the *Journal of the Royal Asiatic Society*. In 1880, he translated the Nidānakathā. His 1881 Hibbert Lectures became quite famous, and at the second lecture, Rhys Davids announced the creation of the Pali Text Society, the first learned society in the West to focus on Pāli language and literature. In 1882, Rhys Davids became a professor of Pāli at University College, London. From 1885 to 1904, he also worked for the Royal Asiatic Society. In 1904, he became professor of comparative religion at Victoria University, Manchester. In 1894, Rhys Davids married Caroline August Foley (see Rhys Davids, Caroline August Foley); the two worked and published together for the rest of their lives. Rhys Davids published many works, including a *Manual of Buddhism*, the first two volumes of the "Sacred Books of the Buddhists" series, and the first volume of a *Pāli-English Dictionary*. The Rhys Davidses together translated the Dīghanikāya between 1910 and 1921.

Ri bo che. (Riwoche). A branch monastic seat of the Stag lung subsect of the Bka' brgyud sect of Tibetan Buddhism, located near Chab mdo in eastern Tibet. Ri bo che's founder, Sangs rgyas dbon (Sangye Ön, 1250/1–1296) better known as Dbon po bla ma (Önpo Lama), previously served a brief period as abbot of Stag lung monastery, the subsect's main seat in central Tibet. According to traditional sources, Sangs rgyas dbon left central Tibet in order to fulfill the prophecy that he would construct an even greater monastic institution in the east. His departure, however, may have been hastened by political pressure exerted by Stag lung monastery's political patrons, who favored a rival abbot. Sangs rgyas dbon established Ri bo che in 1276, and while it originally served as a branch of Stag lung monastery, it later developed a strong, nearly independent tradition. With its grand, imposing structure, Ri bo che was renowned as one of the great centers of Buddhist learning in eastern Tibet, possessing an impressive library of religious works. Its monks were highly esteemed for their expertise in meditation.

Ri bo dpal 'bar. (Riwo Palbar). A mountain in Skyid grong (Kyirong) county of southwestern Tibet on the Nepalese border believed to have been a retreat location of both the Indian sage Padmasambhava and the Tibetan yogin Mi la ras pa. According to the latter's biography, the village of Ragma at the mountain's base was home to many of the yogin's patrons and the site of his meditation cave called Byang chub rdzong (Jangchup Dzong), "The Fortress of Enlightenment." Near the

summit lies a small chapel, now in partial ruins, housing the relics of the great RNYING MA scholar and historian KAḤ THOG RIG 'DZIN TSHE DBANG NOR BU.

rig pa. The standard Tibetan translation of the Sanskrit term VIDYĀ, or "knowledge." The Tibetan term, however, has a special meaning in the ATIYOGA and RDZOGS CHEN traditions of the RNYING MA sect of Tibetan Buddhism, where it refers to the most profound form of consciousness. Some modern translators of Tibetan texts into European languages consider the term too profound to be rendered into a foreign language, while others translate it as "awareness," "pure awareness," or "mind." Unlike the "mind of clear light" (PRABHĀSVARACITTA; 'od gsal gyi sems) as described in other tantric systems, rig pa is not said to be accessible only in extraordinary states, such as death and sexual union; instead, it is fully present, although generally unrecognized, in each moment of sensory experience. Rig pa is described as the primordial basis, characterized with qualities such as presence, spontaneity, luminosity, original purity, unobstructed freedom, expanse, clarity, self-liberation, openness, effortlessness, and intrinsic awareness. It is not accessible through conceptual elaboration or logical analysis. Rather, rig pa is an eternally pure state free from the dualism of subject and object (cf. GRĀHYAGRĀHAKAVIKALPA), infinite and complete from the beginning. It is regarded as the ground or the basis of both SAṂSĀRA and NIRVĀṆA, with the phenomena of the world being its reflection; all thoughts and all objects of knowledge are said to arise from rig pa and dissolve into rig pa. The ordinary mind believes that its own creations are real, forgetting its true nature of original purity. For the mind willfully to seek to liberate itself is both inappropriate and futile because rig pa is already self-liberated. Rig pa therefore is also the path, and its exponents teach practices that instruct the student how to distinguish rig pa from ordinary mental states. These practices include a variety of techniques designed to eliminate karmic obstacles (KARMĀVARAṆA), at which point the presence of rig pa in ordinary experience is introduced, allowing the mind to eliminate all thoughts and experiences itself, thereby recognizing its true nature. Rig pa is thus also the goal of the path, the fundamental state that is free from obscuration. Cf. LINGZHI.

Rin chen bzang po. [alt. Lo tsā ba chen po, Lo chen] (Rinchen Sangpo) (958–1055). A Tibetan translator of Sanskrit Buddhist texts who helped to initiate the revival of Buddhism in Tibet known as the later dissemination (PHYI DAR) of the dharma. He was born in the western Tibetan region of GU GE. According to traditional histories, at the age of seventeen, he was sent to India together with a group of twenty other youths by King YE SHES 'OD to study Sanskrit and Indian vernacular languages. Rin chen bzang po made several trips to India, spending a total of seventeen years in Kashmir and the monastic university of VIKRAMAŚĪLA before returning the Tibet. During the last years of his life, he collaborated with the Bengali master ATIŚA DĪPAṂKARAŚRĪJÑĀNA at THO LING monastery. Rin chen bzang po's literary career concentrated on new and revised translations of important Indian Buddhist works; he is credited with 178 translations spanning the SŪTRAS, TANTRAS, and commentarial literature. Apart from his literary activities, he also brought with him numerous artisans and craftsmen from Kashmir and, with their aid, was highly active in the construction of new monasteries, temples, and shrines across western Tibet. These institutions, and the artwork they house, were strongly influenced by the artistic styles and religious practices of northwest India and now serve as important records of a tradition otherwise nearly lost. Most important among these temples are Tho ling, KHA CHAR, and NYAR MA, although tradition ascribes him with founding 108 buildings in all. Rin chen bzang po is still considered a local hero in the regions of western Tibet, Ladakh, Lahul, Spiti, and Kinnaur, and the current reincarnation, LO CHEN SPRUL SKU, maintains his monastic seat at Kyi monastery in Spiti.

rin chen gter mdzod. (rinchen terdzö). In Tibetan, "treasury of precious treasure teachings"; a collection of root texts, liturgical and ritual works, meditation manuals (SĀDHANA), commentarial, and supplemental literature pertaining to the genre of discovered treasure teachings (GTER MA) of the RNYING MA sect of Tibetan Buddhism. The collection was compiled and edited by the nineteenth-century savant 'JAM MGON KONG SPRUL BLO GROS MTHA' YAS and forms one of his five treasuries (KONG SPRUL MDZOD LNGA). Kong sprul's motivation for this massive project, resulting in sixty-three volumes of literature (over one hundred in modern redactions), was complex. The compilation preserves many systems of instruction that were in danger of being lost or forgotten, but it also forms a canonical collection of authoritative treasure texts—one of the first projects of its kind.

rin po che. In Tibetan, lit. "of great value," hence "precious one"; most commonly an honorific added to the name of a Tibetan BLA MA (lama), which is also used as a term of respect for addressing and referring to one's own or another's lama or teacher. The term may be used for any lama, but the term is

most commonly used for incarnate lamas (SPRUL SKU), in which case it is often affixed to the name of the lineage, for example, Rgyal ba rin po che (a common appellation of the DALAI LAMA), Paṇ chen rin po che (the PAN CHEN BLA MA), mkhan rin po che ("precious abbot"), and so on. In ordinary Tibetan parlance, to refer to someone as a rin po che means that he (rarely she) is a sprul sku (incarnate lama).

Rinzaishū. (臨濟宗). In Japanese, "Rinzai School"; one of the major Japanese ZEN schools established in the early Kamakura period. The various branches of the Japanese Rinzai Zen tradition trace their lineages back to the Chinese CHAN master LINJI YIXUAN (J. Rinzai Gigen) and his eponymous LINJI ZONG; the name Rinzai, like its Chinese counterpart, is derived from Linji's toponym. The tradition was first transmitted to Japan by the TENDAISHŪ monk MYŌAN EISAI (1141–1215), who visited China twice and received training and certification in the HUANGLONG PAI collateral line of the Linji lineage on his second trip. Eisai's Zen teachings, however, reflected his training in the esoteric (MIKKYŌ) teachings of the Tendai school; he did not really intend to establish an entirely new school. After Eisai, the Rinzai tradition was transferred through Japanese monks who trained in China and Chinese monks who immigrated to Japan. Virtually all of the Japanese Rinzai tradition was associated with the YANGQI PAI collateral line of the Linji lineage (see YANGQI FANGHUI), which was first imported by the Japanese vinaya specialist Shunjō (1166–1227). According to the early-Edo-period *Nijūshiryū shūgen zuki* ("Diagrammatic Record of the Sources of the Twenty-Four Transmissions of the Teaching"), twenty-four Zen lineages had been transmitted to Japan since the Kamakura period, twenty-one of which belonged to the Rinzai tradition; with the exception of Eisai's own lineage, the remaining twenty lineages were all associated with the Yangqi collateral line. Soon after its introduction into Japan, the Rinzai Zen tradition rose to prominence in Kamakura and Kyōto, where it received the patronage of shōguns, emperors, and the warrior class. The Rinzai teachers of this period included monks from Tendai and SHINGONSHŪ backgrounds, such as ENNI BEN'EN (1202–1280) and SHINCHI KAKUSHIN (1207–1298), who promoted Zen with an admixture of esoteric elements. Chinese immigrant monks like LANXI DAOLONG (J. Rankei Dōryu, 1213–1278) and WUXUE ZUYUAN (J. Mugaku Sogen, 1226–1286) also contributed to the rapid growth in the popularity of the Rinzai tradition among the Japanese ruling classes, by transporting the Song-style Linji Chan tradition as well as Song-dynasty Chinese culture more broadly. With the establishment of the Ashikaga shogunate in 1338, the major Zen temples were organized following the Song Chinese model into the GOZAN (five mountains) system, a tripartite state control system consisting of "five mountains" (gozan), "ten temples" (jissetsu), and several associated "miscellaneous mountains" (shozan). The powerful gozan monasteries located in Kamakura and Kyōto functioned as centers of classical Chinese learning and culture, and continued to influence the ruling classes in Japan until the decline of the Ashikaga shogunate in the sixteenth century. The disciples of Enni Ben'en and MUSŌ SOSEKI (1275–1351) dominated the gozan monasteries. In particular, Musō Soseki was deeply engaged in both literary endeavors and political activities; his lineage produced several famous gozan poets, such as Gidō Shūshin (1325–1388) and Zekkai Chūshin (1336–1405). Outside the official gozan ecclesiastical system were the RINKA, or forest, monasteries. DAITOKUJI and MYŌSHINJI, the two principal rinka Rinzai monasteries, belonged to the Ōtōkan lineage, which is named after its first three masters NANPO JŌMYŌ (1235–1309), SŌHŌ MYŌCHŌ (1282–1337), and KANZAN EGEN (1277–1360). This lineage emphasized rigorous Zen training rather than the broader cultural endeavors pursued in the gozan monasteries. After the decline of the gozan monasteries, the Ōtōkan lineage came to dominate the Rinzai Zen tradition during the Edo period and was the only Rinzai line to survive to the present. Despite the presence of such influential monks as TAKUAN SŌHŌ (1573–1645) and BANKEI YŌTAKU (1622–1693), the Rinzai tradition began to decline by the sixteenth and the seventeenth centuries. The monk credited with revitalizing the Rinzai tradition during the Edo period is the Myōshinji monk HAKUIN EKAKU (1685–1768). Hakuin systematized the KŌAN (see GONG'AN; KANHUA CHAN) method of meditation, which is the basis of modern Rinzai Zen practice; it is also through Hakuin and his disciples that most Rinzai masters of today trace their lineages. The Rinzai tradition is currently divided into the fifteen branches named after each of their head monasteries, which represents the influence of the head and branch temple system designed in the Edo period. Of the fifteen branches, the Myōshinji branch has largely eclipsed its rivals and today is the largest and most influential of all the Rinzai lines.

ris med. (ri me). In Tibetan, lit. "unbounded," "unlimited," or "impartial"; often translated as "nonsectarian" or "eclectic" in conjunction with a religious ideal that appears to have gained widespread currency in the early nineteenth century, most famously in the Khams SDE DGE kingdom in eastern Tibet. The origins of the movement are traced to the founding of DPAL SPUNGS monastery, established in 1727 by the eighth TAI SI TU CHOS KYI 'BYUNG GNAS, a great BKA' BRGYUD scholar, historian, and linguist, with support from Sde dge's ruler Bstan pa tshe ring (Tenpa Tsering, 1678–1738), who sponsored the carving and printing of the Sde dge edition of the Tibetan BKA' 'GYUR and BSTAN 'GYUR. Si tu revitalized the study of Sanskrit and stressed the importance of older traditions that had fallen into decline after the rise to power of the DGE LUGS sect. The revitalization of religious learning in Sde dge spread to the Bka' 'brgyud and RNYING MA institutions in the region and reached its peak in the middle of the nineteenth century. When the Dpal spungs-based revitalization began to disturb the traditional SA SKYA affiliation of the Sde dge royal family (from the time of 'PHAGS PA,' 1235–1280), such leading figures as 'JAM MGON KONG SPRUL BLO 'GRO MTHA' YAS, 'JAM DBYANG MKHYEN BRTSE

DBANG PO, and MCHOG GYUR GLING PA responded to the danger of conflict among powerful Sde dge clans by using impartial liturgies that did not stress one tradition over another. There is some evidence that another great ris med lama, DPAL SPRUL RIN PO CHE, extended the spirit to include even Dge lugs traditions. The frequency of the occurrence of the term ris med in Tibetan literature from that era has given rise in the West to the notion that something akin to a "nonsectarian movement" occurred in eastern Tibet in the nineteenth century, one in which scholars of the Rnying ma, Bka' brgyud, and Sa skya sects not only read and benefited from each other's traditions (as had long been the case), but also studied the works of the politically more powerful Dge lugs sect, which had been at odds with both Rnying ma and Bka' brgyud at various points since the seventeenth century. This idea that such a "movement" occurred has been largely drawn from preliminary studies of 'Jam mgon kong sprul. This Bka' brgyud lama (who was born into a BON family and initially ordained into a Rnying ma monastery) achieved a remarkable breadth and depth in his scholarship. In several collections of liturgical texts and lengthy treatises, he set forth a vision of a nonsectarian ideal in which intersectarian exchanges were valued, yet strict separations between the multiple lineages and orders were carefully upheld. Still, the notion that 'Jam mgon kong sprul, 'Jam dbyang mkhyen brtse, and Dpal sprul Rin po che were at the center of a "nonsectarian movement," in the sense that there was a widespread institutional reformation in their lifetimes, is not historically accurate. It is perhaps better to speak of the nonsectarian ideal and their own lives as models of its expression. That model was indeed much imitated in the early twentieth century, and the ris med ideal appears to have become a standard motif for the social and political unification of the Tibetan exile community since 1959. The current DALAI LAMA, for example, is known to use the metaphor of the five-fingered hand (the four main Buddhist orders and the Bon religion) to describe a Tibetan society as fundamentally united yet respectful of its differences.

Risshō Kōseikai. (立正佼成会). In Japanese, "Society for Establishing Righteousness and Peaceful Relations," one of Japan's largest lay Buddhist organizations. Risshō Kōseikai was founded in 1938 by NIWANO NIKKYŌ (1906–1999), the son of a farming family in Niigata prefecture, and NAGANUMA MYŌKŌ (1889–1957), a homemaker from Saitama prefecture. In 2007, it claimed 1.67 million member households, with 239 churches in Japan and fifty-six churches in eighteen countries outside of Japan. Originally formed as an offshoot of REIYŪKAI, Risshō Kōseikai is strongly influenced by NICHIRENSHŪ doctrine, although it bears no organizational ties with the latter school. In terms of its ethos and organizational structure, it embodies many of the characteristics of Japan's so-called new religions. Risshō Kōseikai emphasizes worship of the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") as a means for self-cultivation and salvation as well as for the greater good of humanity at large. Religious practice includes recitation of chapters from the *Saddharmapuṇḍarīkasūtra* every morning and evening and chanting of the Japanese title of the sūtra, or DAIMOKU, viz., NAMU MYŌHŌRENGEKYŌ. As is common among schools associated with worship of the *Saddharmapuṇḍarīkasūtra*, Risshō Kōseikai believes that people share karmic links with their ancestors. Through recitation of *Saddharmapuṇḍarīkasūtra* passages and its title, along with repentance for one's past transgressions, one can transfer merit to one's ancestors. This transference aims to subdue the troubled spirits of ancestors who did not attain buddhahood, as well as to eliminate any negative karmic bonds with them. Risshō Kōseikai is headquartered in Tōkyō. However, its organization is largely decentralized and it has no priesthood. This structure places more value and responsibility on its laity, who are presumed to be capable of transferring merit and conducting funerals and ancestral rites on their own. Group gatherings generally address counseling issues for individuals and families alongside the study of Buddhist doctrine. In contrast to Reiyūkai, which emphasizes devotional faith to the *Saddharmapuṇḍarīkasūtra* without the need for detailed doctrinal understanding of Buddhism, adherents of Risshō Kōseikai, in line with the school's founders, include the analytic study of doctrine as complementary to their faith.

Risshū. [alt. Ritsushū] (律宗). In Japanese, "School of Discipline," one of the so-called six schools of the Nara tradition of early Japanese Buddhism (see NARA BUDDHISM, SIX SCHOOLS OF); the term is also sometimes seen transcribed as RITSUSHŪ. Although its origins are uncertain, a decree by the Grand Council of State (J. Daijōkan) in 718 acknowledged Risshū as one of major schools of Buddhism in the Japanese capital of Nara. The school is dedicated to the exegesis and dissemination of the rules of Buddhist VINAYA, especially those associated with the SIFEN LÜ ("Four-Part Vinaya") of the DHARMAGUPTAKA school. Rather than an established religious institution, the Risshū, like the other contemporaneous schools of the Nara period (710–974), should instead be considered more of an intellectual tradition or school of thought. Risshū arose as an attempt to systematize monastic rules and practices on the basis of Chinese translations of Indian vinaya texts. Throughout the first half of the eighth century, Japanese monks relied on the Taihō Law Code (701), a set of government-mandated monastic regulations, to guide both their ordination ceremonies (J. jukai) and their conduct. Realizing that Japan lacked proper observance of the vinaya, Nara scholars who had studied monastic discipline in China sought the aid of GANJIN (C. Jianzhen; 687–763), a well-known Chinese master of the NANSHAN LÜ ZONG (South Mountain School of Discipline), the largest of the three vinaya traditions of China. Their attempts to use Ganjin to establish an orthodox ordination ceremony in Japan met with considerable resistance, first from the Chinese court, which did not want to part with Ganjin, and second with entrenched interests in Nara, which had grown accustomed to the Taihō regulations. After five failed

attempts to travel to Japan at these monks' invitation, Ganjin finally arrived in Japan in 754. Then sixty-six and blind, Ganjin finally established an ordination platform that summer at the great Nara monastery of TŌDAIJI. Soon thereafter, two more ordination platforms were erected under the jurisdiction of Risshū: one at Yakushiji in Shimotsuke province (in present-day Tochigi prefecture), and one at Kanzeonji in Chikuzen province (in present-day Fukuoka prefecture). In his later years, Ganjin also founded the monastery of TŌSHŌDAIJI in Nara, where he trained monks according to his own codification of the rules. Risshū and the other Nara schools fell into a period of decline over the course of the Heian period (794–1185), which ultimately set the stage for a restoration of Risshū in the early Kamakura period (1185–1333). Under the leadership of the Tendai priest Shunjō (1166–1227), who had studied in China, a group of monks with interests in vinaya assembled at Sennyūji in Kyōto. They would later become identified as the Hokkyō, or "northern capital," branch of the Risshū school, in contrast to the Nankyō (southern capital) branch in Nara. Monks in Nara also attempted to restore Risshū, as exemplified by Kakujō's (1194–1249) move to Tōshōdaiji and the efforts of Eizon (1201–1290), who incorporated esoteric practice (see MIKKYŌ) in his restoration of Risshū at Saidaiji in Nara. Today, Risshū survives in the two monasteries of Tōshōdaiji and Saidaiji, although the latter was officially joined with the SHINGONSHŪ during the Meiji Restoration (1868–1912).

Ritsu School. (J). See RISSHŪ.

Ritsushū. (J) (律宗). See RISSHŪ; NANSHAN LÜ ZONG.

rje. (je). A Tibetan title or honorific, lit. "one to be followed," hence "leader." It is affixed at the beginning or the end of a name, to indicate the person's importance. The three founders of the DGE LUGS sect, for example, commonly have the title affixed to their names: Rje RIN PO CHE is TSONG KHA PA; Rgyal tshab rje is RGYAL TSHAB DAR MA RIN CHEN, and Mkhas grub rje is MKHAS GRUB DGE LEGS DPAL BZANG; this triumvirate is commonly referred to be the abbreviation rje yab sras gsum (je yabse sum) ("triumvirate of the lord father and the [two] sons"). See also RJE BSTUN; RJE BTSUN DAM PA.

rje 'bangs nyer lnga. (jebang nyernga). In Tibetan, lit. "the twenty-five, king and subjects," referring to the twenty-five chief disciples of the eighth-century Indian adept PADMASAMBHAVA during his activity in Tibet. The king refers to the Tibetan ruler KHRI SRONG LDE BTSAN, who was responsible for inviting Padmasambhava to Tibet to aid in the founding of BSAM YAS monastery. According to some lists, the remaining twenty-four disciples are:

1. Nam mkha'i snying po (Namke Nyingpo)
2. Sangs rgyas ye shes (Sangye Yeshe)
3. Rgyal ba mchog dbyangs (Gyalwa Chokyang)
4. Mkhar chen bza' (Karchensa)
5. Dpal gyi ye shes (Palgyi Yeshe)
6. Dpal gyi seng ge (Palgyi Senge)
7. Bai ro tsa na (VAIROCANA)
8. Gnyags Jñānakumāra (Nyak Jñānakumāra)
9. G.yu sgra snying po (Yudra Nyingpo)
10. Rdo rje bdud 'joms (Dorje Dudjom)
11. Ye shes dbyangs (Yeshe Yang)
12. Sog po Lha dpal (Sokpo Lhapal)
13. Zhang YE SHES SDE (Shang Yeshe De)
14. Dpal gyi dbang phyug (Palgyi Wangchuk)
15. Ldan ma rtse mang (Denma Tsemang)
16. Ska ba DPAL BRTSEGS (Kawa Paltsek)
17. Shud bu dpal gyi seng ge (Shubu Palgyi Senge)
18. Rgyal ba'i blo gros (Gyalwe Lodrö)
19. Khye'u chung lo (Khye'u Chunglo)
20. 'O bran Dpal gyi dbang phyug (Odran Palgyi Wangchuk)
21. Rma Rin chen mchog (Ma Rinchen Chok)
22. Lha lung Dpal gyi rdo rje (Lhalung Palgyi Dorje)
23. Lang gro Dkon mchog 'byung gnas (Langdro Könchok Jungne)
24. La gsum rgyal ba byang chub (Lasum Gyalwa Jangchub)

Other lists include Padmasambhava's female disciples MANDĀRAVĀ and YE SHES MTSHO RGYAL.

rje btsun. (jetsün). In Tibetan, "lord" or "reverend," a Tibetan honorific used especially for revered religious figures. The term is perhaps most commonly used to as a term of respect for MI LA RAS PA, so much so that the term rje btsun alone in Tibetan often refers to him. The word btsun (tsun) (S. and P. bhadanta) is usually reserved for monks, but by extension applies also to saintly persons; RJE means one to be followed. The feminine form of the term is rje btsun ma (jetsünma), often used to refer to TĀRĀ, or to saintly women; it is used as a prefix to show respect to nuns or prominent female teachers.

Rje btsun dam pa. (Jetsün Dampa). In Tibetan, "excellent lord," the Tibetan name of the Khalkha Jebtsundamba Khutuktu, the lineage of incarnate lamas who serve as head of the DGE LUGS sect in Mongolia, also known as Bogd Gegen. The lineage was established by the fifth DALAI LAMA, who, after his suppression of the JO NANG sect, declared that the renowned Jo nang scholar TĀRANĀTHA had been reborn in Mongolia, thus taking an important line of incarnations from a rival sect and transferring it to his own Dge lugs sect. The first Rje btsun dam pa was Blo bzang bstan pa'i rgyal mtshan (1635–1723), known in Mongolian as Bogdo Zanabazar or simply Zanabazar. He was the son of the Mongol prince Gombodorj, the Tosiyetu Khan, ruler of the Khan Uula district of Mongolia, and himself became the head of the Khalkha Mongols. He and the second Rje btsun dam pa lama were direct descendants of Genghis

Khan. Zanabazar was ordained at the age of five and recognized as the incarnation of Tāranātha, this recognition confirmed by the fifth Dalai Lama and first PAṆ CHEN LAMA. He spent 1649–1651 in Tibet where he received initiations and teachings from the two Dge lugs hierarchs. Zanabazar is remembered especially as a great sculptor who produced many important bronze images. He was also a respected scholar and a favorite of the Manchu Chinese Kangxi emperor. During the Qing dynasty, the Rje btsun dam pa was selected from Tibet, perhaps in fear that a Mongol lama would become too powerful. During the Qing, it was said that the Qing emperor, the Dalai Lama, and the Rje btsun dam pa were incarnations of MAÑJUŚRĪ, AVALOKITEŚVARA, and VAJRAPĀṆI, respectively. When northern Mongolia sought independence, the eighth Rje btsun dam pa (1869–1924) assumed the title of emperor of Mongolia, calling himself Boghda Khan (also "Bogd Khan"). He was the head of state until his death in 1924, after which the Communist government declared the end of the incarnation line. However, 'Jam dpal rnam grol chos kyi rgyal mtshan was recognized in LHA SA as the ninth Rje btsun dam pa; he fled into exile in India in 1959.

rlung rta. (lung ta). In Tibetan, the word for "luck," lit. "wind horse"; in its secondary meaning, it is commonly referred to in English as a "prayer flag." It is a colored square of cloth, usually about one foot square, and often imprinted with a prayer. These flags are then attached to poles, the rooftops of monasteries and dwellings, or are strung from the cairns found at the summits of mountain passes. The wind is said to carry the benefits requested by the prayer imprinted on the fluttering flag, both to the person who flies the flag as well as to all beings in the region. The prayer flag has in its center an image of a deity or auspicious symbol usually two or three inches square, set within a single-line frame; the female bodhisattva TĀRĀ is commonly depicted, as is the "wind horse" itself, a horse carrying a jewel on its back. The prayer itself (often a series of mantras) appears on the flag as if on a sheet of paper, with lines breaking in the middle of the flag to accommodate the central image. Prayer flags are made from a wooden block print. The block is inked and the piece of cloth then laid across it and pressed with a roller to transfer the words and picture onto the cloth. With many prayer flags, there is a brief statement after the prayer of the benefits that will accrue from its flying.

Rma chen spom ra. (Machen Pomra). A Tibetan mountain god whose seat is A MYES RMA CHEN in A mdo (today the Qinghai region of China) where he is the chief SA BDAG, or "earth lord," of the region. As with other pre-Buddhist Tibetan mountain deities, Rma chen spom ra was converted to Buddhism, in his case by PADMASAMBHAVA. The mountain was inserted into a Tibetan list of the twenty-four PĪṬHA from the CAKRASAṂVARATANTRA, and is further understood to be a three-dimensional Cakrasaṃvara MAṆḌALA. The cult of Rma chen spom ra was introduced to central Tibet by TSONG KHA PA, a native of the region; he made Rma chen spom ra the chief DHARMAPĀLA of DGA' LDAN monastery. That monastery used to remove his image from the monastery each night to a small shrine outside the walls: since the god is a layman and has a female consort, by the rules of the monastery he cannot sleep inside the walls. Later the practice was replaced with a formal daily request to the god to leave the monastery for the night. He is golden, wears a golden cuirass and a helmet, carries a lance with a flag, a sack made from the skin of a mongoose and rides a white horse. His consort is the sman mo (menmo) Gung sman ma (Gungmenma). The DGE LUGS sect considers the god Phying dkar ba (Chingkarwa) to be an emanation of Rma chen spom ra.

Rme ru snying pa. (Meru Nyingpa). A Tibetan monastery on the northeast side of the JO KHANG in the Tibetan capital of LHA SA; one of six institutions constructed by the Tibetan king RAL PA CAN, purportedly on the site where Thon mi Sambhoṭa (c. seventh century) developed the Tibetan script. The Indian master ATIŚA DĪPAṂKARAŚRĪJÑĀNA refurbished the monastery and it was later converted to the DGE LUGS sect in the sixteenth century under the third DALAI LAMA, BSOD NAMS RGYA MTSHO. Me ru rnying pa is dedicated primarily to RDO RJE GRAGS LDAN, one of Tibet's central protector deities and the spirit that possesses the medium of GNAS CHUNG, the state oracle of Tibet.

rnam thar. (namtar). In Tibetan, "complete liberation," translating the Sanskrit VIMOKṢA. In the Tibetan context, rnam thar refers to a widespread literary genre of sacred biography or autobiography. As its translation suggests, the term usually indicates an emphasis on the stereotypically Buddhist aspects of the subject's life, including his or her religious training, practice of meditation, and eventual liberation. Such works often incorporate elements of the fabulous and the fantastic and have parallels with the genre of hagiography. Three types of rnam thar are often enumerated: the "outer autobiography" (phyi'i rnam thar), which narrates the important events of daily life, including travels and meetings with prominent persons; the "inner autobiography" (nang gi rnam thar), which describes religious teachings received and relationships with teachers and disciples; and the "secret autobiography" (GSANG BA'I RNAM THAR), which describes religious experiences, with the author often writing from the perspective of a transcendental subject.

Rngog Blo ldan shes rab. (Ngok Loden Sherap) (1059–1110). A Tibetan scholar and translator, nephew of RNGOG LEGS PA'I SHES RAB. After studying under his uncle and participating in the "Council of THO LING" in GU GE, he left for India at the age of eighteen with a group of companions, including RWA LO TSĀ BA. He spent seventeen years pursuing the study of Buddhist texts, including the SŪTRAS, TANTRAS, and Buddhist sciences; his main teacher of PRAMĀṆA was the Kashmiri logician

Bhavyarāja. At the age of thirty-five, he returned to Tibet to become the second abbot of GSANG PHU NE'U THOG monastery near LHA SA. He translated numerous works still found in the BKA' 'GYUR and BSTAN 'GYUR sections of the Tibetan Buddhist canon. These include the PRAMĀṆAVINIŚCAYA of DHARMAKĪRTI, the five works of MAITREYA, and the major works of what would be dubbed the YOGĀCĀRA SVĀTANTRIKA school. He also composed a number of works himself, which do not seem to have survived. Along with RIN CHEN BZANG PO, he is often referred to as a "great translator" (lo chen); in later works sometimes simply as bdag nyid chen po (S. mahātma). Because of the influence of his translations and his own substantial writings, he is considered along with SA SKYA PAṆḌITA to be a founding figure of Tibetan Buddhist scholasticism.

Rngog Legs pa'i shes rab. (Ngog Lekpe Sherap) (fl. eleventh century). Tibetan scholar and translator venerated as an important founder of the BKA' GDAMS sect of Tibetan Buddhism. The exact year of his year of birth is unclear, although it is known that he was born in the western Tibetan region of GU GE. According to Tibetan histories, he was one of twenty-one young scholars sent to India by the region's king, YE SHES 'OD, to study Sanskrit, Buddhist philosophy, and TANTRA. He returned to Tibet and became an important disciple of the Bengali master ATIŚA DĪPAṂKARAŚRĪJÑĀNA. He also studied under and collaborated with the famed translator RIN CHEN BZANG PO. Together with Atiśa and 'BROM STON RGYAL BA'I 'BYUNG GNAS, Ngog Legs pa'i shes rab is considered an important Bka' gdams forefather. In 1073, he laid the foundations for an early monastic center for Buddhist learning, GSANG PHU NE'U THOG, south of LHA SA. He is also known as Rngog lo tsā ba (Ngog, the translator) and Rngog lo chung (Ngog, the junior translator) in distinction to Rin chen Bzang po, the great translator (lo chen).

Rnying ma. (Nyingma). In Tibetan, "Ancient," the name of one of the four major sects of Tibetan Buddhism. The name derives from the sect's origins during the "early dissemination" (SNGA DAR) of Buddhism in Tibet and its reliance on translations of TANTRAS made during that period; this is in distinction to the new (GSAR MA) sects of BKA' BRGYUD, SA SKYA, and DGE LUGS, all of which arose during the later dissemination (PHYI DAR) and make use of newer translations. The Rnying ma is thus "ancient" in relation to the new sects and only began to be designated as such after their appearance. The sect traces its origins back to the teachings of the mysterious figure of PADMASAMBHAVA, who visited Tibet during the eighth century and is said to have hidden many texts, called "treasures" (GTER MA), to be discovered in the future. In addition to the Buddhist canon accepted by all sects of Tibetan Buddhism, the Rnying ma adds another collection of tantras (the RNYING MA'I RGYUD 'BUM) as well as the discovered "treasure" (GTER MA) texts to their canonical corpus, works that in many cases the other sects regard as APOCRYPHA, i.e., not of Indian origin. Rnying ma identifies nine vehicles among the corpus of Buddhist teachings, the highest of which is known as ATIYOGA or, more commonly, the "great perfection" (RDZOGS CHEN). These teachings describe the mind as the primordial basis, characterized by qualities such as presence, spontaneity, luminosity, original purity, unobstructed freedom, expanse, clarity, self-liberation, openness, effortlessness, and intrinsic awareness. It is not accessible through conceptual elaboration or logical analysis. Rather, the primordial basis is an eternally pure state free from the dualism of subject and object, infinite and perfect from the beginning, and ever complete. The technique for the discovery of the ubiquitous original purity and self-liberation is to engage in a variety of practices designed to eliminate karmic obstructions, at which point the mind eliminates all thoughts and experiences itself, thereby recognizing its true nature. The rdzogs chen doctrine does not seem to derive directly from any of the Indian philosophical schools; its precise connections to the Indian Buddhist tradition have yet to be established. Some scholars have claimed an historical link and doctrinal affinity between rdzogs chen and the CHAN tradition of Chinese Buddhism, but the precise relationship between the two remains to be fully investigated. It is noteworthy that certain of the earliest extant rdzogs chen texts specifically contrast their own tradition with that of Chan. In comparison to the Dge lugs, Bka' brgyud, and Sa skya, the Rnying ma (with some important exceptions, notably at the time of the fifth DALAI LAMA) remained largely uninvolved in state politics, both within Tibet and in foreign relations. Although they developed great monasteries, such as SMIN GROL GLING, RDZOGS CHEN, and RDO RJE BRAG, the Rnying ma also maintained a strong local presence as lay tantric practitioners (sngags pa) who performed a range of ritual functions for the community. The Rnying ma produced many famous scholars and visionaries, such as KLONG CHEN RAB 'BYAMS, 'JIGS MED GLING PA, and MI PHAM. In the nineteenth century, Rnying ma scholars played a key role in the so-called nonsectarian movement (RIS MED) in eastern Tibet, which produced many important new texts.

Rnying ma'i rgyud 'bum. (Nyingme Gyübum). A compendium of the tantras and tantric exegetical literature of the RNYING MA sect of Tibetan Buddhism; considered apocryphal by the redactors of the Tibetan Buddhist canon (BKA' 'GYUR), the collection thus represents an alternative or supplementary Rnying ma canon of tantric scriptures. Numerous editions are extant, including the SDE DGE edition (twenty-six volumes), the Gting kye (twenty-six volumes), the Skyi rong (thirty-seven volumes), the Tsham brag (forty-six volumes), and the Vairo rgyud 'bum (eight volumes). All but the last divide the tantras into the standard Rnying ma doxographical categories of MAHĀYOGA, ANUYOGA, and ATIYOGA, although within those categories differences emerge (the Vairo rgyud 'bum, for example, includes only atiyoga). Further editions include those recently discovered in Kathmandu and the so-called Waddell edition, a close relative to the Gting kye. All but the Sde dge are

manuscripts. Catalogues of Buddhist texts were made as far back as the eighth century, but the roots of the Rnying ma'i rgyud 'bum go back to the second propagation of Buddhism in Tibet (roughly the eleventh to thirteenth centuries). In opposition to the new translation sects (GSAR MA) that developed around newly imported tantras, adherents of the earlier translations coalesced into the Rnying ma, or "ancients," sect. There is evidence that 'Gro mgon Nam mkha' 'phel, the son of one of the earliest proponents of the Rnying ma sect, NYANG RAL NYI MA 'OD ZER, arranged a collection of early tantras in eighty-two volumes, which is no longer extant. The Vairo rgyud 'bum also may date as far back as the twelfth century, although its origins are unclear. When BU STON RIN CHEN GRUB edited the Tibetan Buddhist canon in the fourteenth century, he excluded the tantras found in the Rnying ma'i rgyud 'bum on the basis that he could find no Indic originals with which to authenticate them. Bu ston's position has been shown by Tibetan and Western scholars to have been partisan and inconsistent, and several tantras he excluded, such as the VAJRAKĪLAYA tantras, are accepted by other sects. Some excluded tantras do in fact appear to be early combinations of Indic and Tibetan material, while others, especially later revelatory scriptures (GTER MA) are entirely of Tibetan composition. An early version of the Rnying ma'i rgyud 'bum that may have influenced later editions was that of RATNA GLING PA, no longer extant. The Tshams brag appears to have been commissioned by Tsham brag bla ma Ngag dbang 'brug pa (1682–1748) and was based on a still earlier Bhutanese version. GTER BDAG GLING PA's edition later became the basis for that of 'JIGS MED GLING PA, in twenty-five volumes, which was produced in 1772, and is known as the Padma 'od gling edition. This in turn was the basis for the Sde dge block-print edition, carved between 1794 and 1798 and overseen by Dge rtse paṇ chen 'Gyur med mchog grub (1761–1829) of KAḤ THOG monastery.

Rnying ma pa. (Nyingmapa). A person affiliated with the RNYING MA sect of Tibetan Buddhism.

Rōben. (J) (良辨). See RYŌBEN.

Roerich, George (Yuri). (1902–1960). George (Yuri) Nikolaevich Roerich was the son of Russian painter and mystic Nikolai Roerich and Helena Ivanova, a Theosophist who translated Madame Blavatsky's *The Secret Doctrine* into Russian. Roerich spent much of his childhood traveling the world. The family traveled to Urga, in the far western region of Siberia, and their journeys took them to Ladakh as well as later to Europe and America. He studied Asian languages at the University of London, at Harvard University, and at Paris, where he studied with SYLVAIN LÉVI. Nikolai Roerich believed that ŚAMBHALA was located in Central Asia, perhaps in the Gobi Desert, and from 1925 to 1928 he led an expedition through Chinese Turkestan, Mongolia, and Tibet, in search of evidence of the hidden kingdom of śambhala, the supposed abode of the mahātmas, the spiritual masters of all religions. In 1928, George and his father established the Urusvati Himalayan Research Institute in Darjeeling, India, moving later to the Kullu Valley in the western Himalayas. George Roerich was a scholar in Tibetology and Mongolian studies, later serving as the first director of the Buddhist Branch of the Institute of Oriental Studies in Moscow. Roerich played a significant role in reviving Russian Orientalism after returning from exile in 1957. Under Khrushchev's government, Roerich was able to revive the Biblioteca Buddhica Series, which had ceased publication in 1937. He worked with Bidiya Dandaron and GUNAPALA PIYASENA MALALASEKERA (1899–1973) and succeeded in printing the first Russian version of the DHAMMAPADA in 1960. He died suddenly from a heart attack that same year. Among his publications, his most important for Buddhist studies was his translation (with the assistance of DGE 'DUN CHOS 'PHEL) of the DEB THER SNGON PO ("Blue Annals") by 'Gos lo tsā ba Gzhon nu dpal.

rōhatsu sesshin. (臘八攝心). In Japanese, lit. "retreat on the eighth [day] of the last [month]," typically refering to an intensive week-long session of meditation (SESSHIN) that ends on the eighth day of the twelfth lunar month (rōhatsu), the reputed day of the Buddha's enlightenment according to the East Asian calendar. The retreat begins with a ceremony on the first of the twelfth lunar month and ends on the morning of the eighth with another ceremony, which usually consists of a lecture by the abbot known as the rōhatu jōdo, and offerings made to an image of ŚĀKYAMUNI emerging from the mountains (shussan Shaka). (Cf. PRĀGBODHI[GIRI].) The rōhatsu sesshin performed in the SAṂGHA hall (SENGTANG) at ZEN monasteries often entails nonstop meditative practice with little or no sleep. See also YONGMAENG CHŎNGJIN.

Rong ston Smra ba'i seng ge. (Rongtön Mawe Senge) (1367–1449). A Tibetan Buddhist master, especially revered within the SA SKYA sect, also known as Rong ston Shes bya kun rig Shākya rgyal mtshan (Rongton Sheja Kunrik Shākya Gyaltsen). Born into a BON family in Rgyal rong (Gyarong) in eastern Tibet, Rong ston traveled to the famed BKA' GDAMS institution of SANG PHU NE'U THOG, where he received ordination and studied all the major branches of Buddhist learning. He furthered his education under numerous masters across central Tibet and became renowned for his writings on PRAMĀṆA and PRAJÑĀPĀRAMITĀ. His two most famous students were SHĀKYA MCHOG LDAN and GO BO RAB 'BYAMS PA BSOD NAMS SENG GE, both prolific scholars known for polemical exchanges with early defenders of TSONG KHA PA. Rong ston founded NA LAN DRA monastery in 'Phan yul (Penyul), north of LHA SA, which later became an important Sa skya institution.

Rong zom Chos kyi bzang po. (Rongzom Chökyi Sangpo) (1012–1088). An important figure in the renaissance of the

RNYING MA tradition in Tibet. His collected works in two volumes include the *Rdzogs pa chen po'i lta sgom* ("Instructions on Cultivating the View of the Great Perfection") (see RDZOGS CHEN) and a seminal work on SDOM GSUM ("three codes") *Dam tshig mdo rgyas*. He was learned in the older traditions based on earlier translations and in the new traditions that spread after the return of the translators RIN CHEN BZANG PO and RNGOG LEGS PA'I SHES RAB. Traditionally, he is said to be the recipient of teachings deriving from Heshang MOHEYAN, VAIROCANA, and VIMALAMITRA—important figures of the early dissemination (SNGA DAR)—and it is said that upon meeting ATIŚA DĪPAṂKARAŚRĪJÑĀNA after his arrival in Tibet, Atiśa considered him a manifestation of his teacher Nag po pa (Kṛṣṇapāda). Rong zom instructed many important figures of the day, including the translator MAR PA, prior to his departure for India.

rosary. See JAPAMĀLĀ; MĀLĀ.

rōshi. (老師). In Japanese, lit. "old master," an honorific typically used with reference to a senior Buddhist teacher or monk, sometimes interpreted to be a contraction of the compound rōdaishūshi ("elder teacher of the tradition"). In the Japanese ZEN schools, rōshi is a technical term used to designate a senior teacher who is authorized to offer spiritual guidance and to hold higher ecclesiastical positions. Within the RINZAISHŪ, rōshi specifically refers to a Zen master who has received certification to teach (J. inka; C. YINKE) from another rōshi and who is thereafter authorized to sanction the awakening of others during private interviews known as sanzen. In the SŌTŌSHŪ, one becomes a rōshi through a shihō or series of ordination ceremonies with one's teacher, which acknowledge mastery of the precepts and receipt of dharma transmission, so that the recipient is then authorized to teach and receive appointment as abbot of a Sōtō monastery. Despite its literal denotation, the term rōshi may also be used as an honorary appellation for older monks who are not yet teachers, or even to refer to monks in general. Thus the term rōshi is not necessarily used to imply old age but rather respect or veneration.

Ṛṣipatana. (P. Isipatana; T. Drang srong lhung ba; C. Xianren duochu; J. Sennin dasho; K. Sŏnin t'ach'ŏ 仙人墮處). In Sanskrit, lit. "Place where Holy Men Descend"; referring specifically to the Ṛṣipatana (P. Isipatana) MṚGADĀVA (Deer Park), located just northeast of the city of Vārāṇasī, where the Buddha spoke his first sermon, the "Turning of the Wheel of the Dharma" (DHARMACAKRAPRAVARTANASŪTRA; P. DHAMMACAKKAPPAVATTANASUTTA); this site is also commonly known as the Deer Park (Mṛgadāva) in SĀRNĀTH. Explanations for the name Ṛṣipatana generally involve slight variations of a story set in the time of the previous buddha KĀŚYAPA. Just before the advent of Kāśyapa, five hundred PRATYEKABUDDHAs were said to be living in the hills of the park. When they heard of the coming of this Buddha, they flew into to the air, attained NIRVĀṆA, and manifested the fire element; the fire burned their material bodies, which fell as ashes to the park below. Thus, the site came to be called "the place where holy men descend." Others argue that Ṛṣipatana is instead a variation of Ṛṣipattana, meaning "gathering place of holy men."

rtsod grwa. (tsödra). In Tibetan, lit. "debating institution," particularly a large DGE LUGS monastery where a central part of the monastic complex is the chos ra (chöra), literally "fenced enclosure for dharma," hence "debate courtyard," often an enclosed open space close to the main assembly hall where monks who study scriptures assemble to debate points of doctrine. The term mtshan nyid grwa tsang (tsenyi dratsang) is often used in place of rtsod grwa. The origins of the rtsod grwa may go back to the model of study followed in BKA' GDAMS monasteries like GSANG PHU NE'U THOG, although such debate was also a part of the curriculum in the large monastic universities of northeast India, such as VIKRAMAŚĪLA, NĀLANDĀ, and ODANTAPURĪ. The rtsod grwa is sometimes contrasted with teaching institutes (BSHAD GRWA) and places given over to meditation (sgrub khang), although most monasteries have parts dedicated to those activities as well. The best-known rtsod grwa are the six great Dge lugs monasteries of pre-1959 Tibet where the calendar year had strict debating periods; debate was raised to a high level there, forming a central part of the curriculum. For a month during the winter, 'Jang phu monastery to the southwest of LHA SA was the site of an intensive debate called the 'Jang dgun chos (Janggünchö) attended by students from the major Dge lugs monasteries in the greater Lha sa area, where debate focused particularly on the PRAMĀṆAVĀRTTIKA of DHARMAKĪRTI.

Ru fajie pin. (S. *Dharmadhātupraveśanaparivarta; J. Nyūhokkaibon; K. Ip pŏpkye p'um 入法界品). In Chinese, "Chapter on 'Entering the DHARMADHĀTU.'" See GAṆḌAVYŪHA; AVATAṂSAKASŪTRA.

rūpa. (T. gzugs; C. se; J. shiki; K. saek 色). In Sankrit and Pāli, "body," "form," or "materiality," viz., that which has shape and is composed of matter. The term has two primary doctrinal denotations. More generally, rūpa refers to materiality, which serves as objects of the five sensory consciousnesses (VIJÑĀNA): visual, auditory, olfactory, gustatory, and tactile. This is the meaning of rūpa as the first of the five aggregates (SKANDHA), where it includes all the physical constituents of the person. The second sense is more limited; the colors and shapes that serve as objects of the visual consciousness (CAKṢURVIJÑĀNA) are designated as rūpa (and this accounts for the Chinese translation of the term as "color"); this second denotation is a subset of the first, and much more limited, referring only to the objects of the visual consciousness (CAKṢURVIJÑĀNA). It is in this second sense that rūpa is counted among the twelve ĀYATANA and eighteen DHĀTU. In formulations of the person as "name and form" (NĀMARŪPA), viz., an individual's mental and physical constituents, "name" (NĀMA) subsumes the four mental aggregrates

(SKANDHA) of sensation (VEDANĀ), perception (SAṂJÑĀ), conditioning factors (SAṂSKĀRA), and consciousness (VIJÑĀNA), while "form" (rūpa) refers to the materiality aggregate (RŪPASKANDHA), viz., the physical body. In some MAHĀYĀNA sūtras, rūpādi ("form, and so on") means all dharmas because form is the first in the all-inclusive list of SAṂKLIṢṬA and VYAVADĀNA dharmas that are declared to be empty of an essential identity (SVABHĀVA).

rūpadhātu. (T. gzugs khams; C. sejie; J. shikikai; K. saekkye 色界). In Sanskrit and Pāli, the "realm of subtle materiality" or "form realm," which together with the sensuous, or desire, realm (KĀMADHĀTU) and the immaterial, or formless, realm (ĀRŪPYADHĀTU) constitute the three realms (TRAIDHĀTUKA) of SAṂSĀRA; the term is synonymous with rūpāvacara. The subtle-materiality realm is located above the heavens of the sensuous realm, which are situated on and above Mount SUMERU. This realm is divided into four meditative heavens associated with the four meditative concentrations of the subtle-materiality realm (RŪPĀVACARADHYĀNA). These meditative heavens are places of rebirth in saṃsāra and are accessible only through mastery of a specific rūpāvacaradhyāna; the beings reborn there are classified as BRAHMĀ gods. Rebirth in these meditative heavens is the result of a specific kind of virtuous action, called an "immovable action" (S. ANIÑJYAKARMAN), in which the action has the definite and specific effect of bringing about rebirth in either the subtle-materiality or immaterial heavens. The immovable action that would result in rebirth in, for example, the second concentration of the subtle-materiality realm, is the achievement of that specific state of dhyāna as a human in the immediately preceding lifetime. This realm is called the "subtle-materiality realm" because the beings there are free of the desires of the sensuous realm yet retain at least some semblance of physicality, albeit extremely subtle, and have a vestigial attachment to form (RŪPA). Only three of the five sensory objects remain in the subtle-materiality realm: visual objects, auditory objects, and objects of touch; hence, the deities there have only three physical sense organs, of sight, hearing, and touch. Each of the four concentrations of the subtle-materiality realm has its own sublevels, with three levels in the the first heaven, three in the second, three in the third, and eight in the fourth, totaling seventeen. In each ascending level, the heaven is situated farther above Mount Sumeru, the height of its beings grows taller, and their life spans increase. Although the characteristics of the various heavens within the subtle-materiality realm are described in some detail, the greater emphasis in Buddhist literature is on the states of meditative absorption that characterize each, how they are achieved, and how they differ from each other, with particular attention paid to the highest of the four, the fourth dhyāna of the subtle-materiality realm. The first three absorptions are characterized by a feeling of physical rapture (PRĪTI) and mental ease or bliss (SUKHA), whereas the fourth and subtlest of these dhyānas is characterized by one-pointedness of mind (CITTAIKĀGRATĀ) and equanimity (UPEKṢĀ). It is therefore considered an ideal state from which to achieve NIRVĀṆA: for example, when the Buddha entered PARINIRVĀṆA, his mind passed through each of the four subtle-materiality and immaterial absorptions before passing into nirvāṇa directly from the fourth absorption. The fourth absorption also received particular attention as a place of rebirth. While the first three concentrations each have only three divisions, the fourth concentration has eight, with the additional five reserved for those beings who become ĀRYA, or noble beings, through direct insight into the nature of reality. In the fourfold division of noble persons (ĀRYAPUDGALA; viz., stream-enterer, once-returner, nonreturner, and ARHAT), the nonreturner (ANĀGĀMIN) is defined as that noble person who is never again reborn in the sensuous realm. Such a person may be reborn in the subtle-materiality realm, however, and the upper five heavens of the fourth absorption are a special place of rebirth called the pure abodes (ŚUDDHĀVĀSA) that are reserved just for such beings. See also DEVA.

rūpakāya. (T. gzugs sku; C. seshen; J. shikishin; K. saeksin 色身). In Sanskrit and Pāli, "physical body," a term that seems to have been used originally to refer to the physical body of the Buddha, as opposed to the body or corpus of the Buddha's marvelous qualities, which were referred to as the DHARMAKĀYA. In the MAHĀYĀNA tradition, the rūpakāya refers to two specific visible forms of a Buddha: the NIRMĀṆAKĀYA, or "emanation body," which is visible to ordinary beings, and the SAṂBHOGAKĀYA, or "enjoyment body," which appears only to advanced bodhisattvas. When texts refer to the two bodies of a buddha, these refer to the rūpakāya and the dharmakāya. When texts refer to the three bodies (TRIKĀYA) of a buddha, these refer to the two types of the rūpakāya—the nirmāṇakāya and the saṃbhogakāya—along with the dharmakāya.

rūpaloka. (S). See RŪPADHĀTU.

rūpaṃ śūnyatā śunyataiva rūpam. (T. gzugs stong pa'o stong pa nyid gzugs so; C. se jishi kong kong jishi se; J. shikisokuzekū kūsokuzeshiki; K. saek chŭksi kong kong chŭksi saek 色即是空空即是色). In Sanskrit, "form is emptiness, emptiness is form"; a famous line from PRAJÑĀPĀRAMITĀ sūtras, known particularly from the PRAJÑĀPĀRAMITĀHṚDAYASŪTRA ("Heart Sūtra"). The line is widely commented upon in India, Tibet, and East Asia, but is generally presumed to describe the relationship between the objects of ordinary experience (represented by "form," or RŪPA, the first of the five aggregates, or SKANDHA; see RŪPASKANDHA) and ultimate reality (here "emptiness," or ŚŪNYATĀ). Some Sanskrit editions of the sūtra read the first phrase as "form is empty," a reading reflected also in the Tibetan translation. In brief, the line might be interpreted to mean that the nature of the objects of ordinary experience is emptiness and that the ultimate truth *cum* emptiness is to be found in the objects of ordinary experience.

rūparāga. (T. gzugs la chags ba; C. se tan; J. shikiton; K. saek t'am 色貪). In Sanskrit and Pāli, "craving for existence in the

subtle-materiality realm," the sixth of ten "fetters" (SAṂYOJANA) that keep beings bound to SAṂSĀRA. Rūparāga is the desire to be reborn as a divinity (DEVA) in the subtle-materiality realm (RŪPADHĀTU) where beings are possessed of refined material bodies, are free from physical passions, and have minds that are perpetually absorbed in the rapture, ease, and equanimity of meditative absorption (DHYĀNA). According to this interpretation, craving for subtle-material existence is permanently eliminated upon attaining the stage of an ARHAT, the fourth and highest degree of Buddhist sanctity (ĀRYAPUDGALA). Other schools of ABHIDHARMA use the name "free from attachment to form" (rūpavītarāga) to refer to a subset of nonreturners (ANĀGĀMIN) who eliminate all attachment to the subtle-materiality absorptions (RŪPĀVACARADHYĀNA) while in a sensuous-realm body, take rebirth in an immaterial state (ĀRŪPYADHĀTU), and go on to the BHAVĀGRA where they finally reach NIRVĀṆA.

rūpaskandha. (P. rūpakkhandha; T. gzugs kyi phung po; C. se yun; J. shikiun; K. saek on 色蘊). In Sanskrit, "materiality aggregate," the first of the five aggregates (SKANDHA). It includes all material elements of the body, including the five sense objects of visual forms, sounds, tastes, odors, and tangible objects, and the five sense organs (INDRIYA).

rūpāvacaradhyāna. (P. rūpāvacarajhāna; T. gzugs na spyod pa'i bsam gtan; C. sejie ding; J. shikikaijō; K. saekkye chŏng 色界定). In Sanskrit, "meditative absorption associated with the subtle-materiality realm"; in some Buddhist schools, one of the two main classifications of meditative absorption (DHYĀNA), along with ĀRŪPYĀVACARADHYĀNA, meditative absorption associated with the immaterial realm. In both cases, dhyāna refers to the attainment of single-pointed concentration of the mind on an object of meditation. The four absorptions of the subtle-materiality realm are characterized by an increasing attentuation of consciousness as one progresses from one stage to the next. By entering into any one of the dhyānas, the meditator temporarily allays the five hindrances (NĪVARAṆA) through the force of concentration, which puts in place the five constituents of absorption (DHYĀNĀṄGA). The five hindrances are (1) sensuous desire (KĀMACCHANDA), which hinders the constituent of one-pointedness of mind (CITTAIKĀGRATĀ); (2) malice (VYĀPĀDA), hindering physical rapture (PRĪTI); (3) sloth and torpor (STYĀNA-MIDDHA), hindering applied thought (VITARKA); (4) restlessness and worry (AUDDHATYA-KAUKṚTYA), hindering mental ease and bliss (SUKHA); and (5) skeptical doubt (VICIKITSĀ), which hinders sustained thought (VICĀRA). These hindrances thus specifically obstruct one of the factors of absorption (dhyānāṅga), and once they are allayed the first subtle-materiality dhyāna will be achieved. In the first subtle-materiality dhyāna, all five constituents of dhyāna are present; as concentration deepens, these gradually fall away, so that in the second dhyāna, both types of thought vanish and only prīti, sukha, and ekāgratā remain; in the third dhyāna, only sukha and ekāgratā remain; and in the fourth dhyāna, concentration is now so rarified that only ekāgratā is left. Mastery of the fourth rūpāvacaradhyāna is required for the cultivation of the supranormal powers (ABHIJÑĀ) and also provides the foundation for the cultivation of the four dhyānas of the immaterial realm (ĀRŪPYĀVACARADHYĀNA). Mastery of any of the subtle-materiality absorptions can result in rebirth as a BRAHMĀ god within the corresponding plane of the subtle-materiality realm (RŪPADHĀTU).

rūpāyatana. (T. gzugs kyi skye mched; C. sechu; J. shikisho; K. saekch'ŏ 色處). In Sanskrit and Pāli, "visual sense field," i.e., visible form (RŪPA) as it occurs in the list of twelve sense faculties or "bases of cognition" (ĀYATANA), which serve as the bases for the production of consciousness, viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of form, the contact (SPARŚA) between the visual sense base (CAKṢURINDRIYA) and its corresponding visual sensory object (rūpa) leads to visual consciousness (CAKṢURVIJÑĀNA).

Rwa lo tsā ba Rdo rje grags. (Ra Lotsawa Dorje Drakpa) (1016–1128?). A prominent translator and YOGIN of the "later dissemination" (PHYI DAR) of Buddhism to Tibet. While still in his teens, he went to Nepal, where he received instructions and transmissions of a number of tantric cycles; he received the VAJRABHAIRAVA and VAJRAVĀRĀHĪ transmissions from the Nepalese master Bharo. Upon his return to Tibet, he attracted many students and received generous offerings from patrons, which he used for the support of the dharma; among his many projects was the rebuilding of BSAM YAS after it was destroyed by fire. He translated many tantric texts and is known especially for his translations of texts connected with YAMĀNTAKA. He also translated the KĀLACAKRATANTRA into Tibetan; the tradition deriving from his translation is known as the Rwa lugs. He was also a controversial figure, known to have little patience with those who opposed him; he is said to have used his tantric powers to "liberate" (i.e., kill) thirteen rivals, including according to some accounts, MAR PA's son DAR MA SDO SDE.

Rwa lung. (Ralung). A principal monastic seat of the 'BRUG PA BKA' BRGYUD sect of Tibetan Buddhism, located southwest of LHA SA. The monastery was established in 1180 by the 'Brug pa founder GTSANG PA RGYA RAS YE SHES RDO RJE on a site consecrated by his master GLING RAS PA. According to traditional accounts, the site takes its name from a sacred goat whose milk was accidentally splashed on a rock. When the milk dried, the mantra oṃ aḥ hūṃ was found miraculously inscribed on the rock face. Gling ras pa took this as an important omen and called the site Rwa lung, lit. "Goat's Omen." Rwa lung was first directed by Gtsang pa rgya ras and later, beginning in the fifteenth century, by his successive reincarnations (SPRUL SKU) known as the 'BRUG CHEN INCARNATIONS.

Rwa sgreng. (Reting). A principal monastery of the BKA' GDAMS sect in central Tibet, located in the region of 'Phan po north of LHA SA. The monastery was established in 1056 by 'BROM STON RGYAL BA'I 'BYUNG GNAS, foremost disciple of the Bengali master ATIŚA DĪPAṂKARAŚRĪJÑĀNA. The institution was greatly expanded under the direction of 'Brom ston pa's successors Rnal 'byor pa chen po and Po to ba (b. 1031), although it was sacked by Mongol invaders in 1240. In 1397, the eminent scholar TSONG KHA PA visited Rwa sgreng and experienced a vision of Atiśa, prompting him to compose his celebrated work LAM RIM CHEN MO there. The monastery subsequently became an important DGE LUGS institution. The monastery was severely damaged during the Chinese Cultural Revolution, but has since been partially rebuilt. From the time of the seventh DALAI LAMA, the abbots of Rwa sgreng became eligible to serve as regents during the interegnum between the Dalai Lama's death and his reincarnation's majority. The Rwa sgreng lamas served as regent two times: between the reigns of the eleventh and twelfth Dalai Lamas and between that of the thirteenth and fourteenth.

Ryōanji. [alt. Ryūanji] (龍安寺). In Japanese, "Dragon Peace Monastery," located in northwest Kyōto and famous for its dry landscape garden (J. karesansui). Originally an estate of the Fujiwara clan, the site was converted into a ZEN temple in 1450 by order of the military leader Hosokawa Katsumoto (1430–1473), a vassal of the Ashikaga shōgun. He installed Giten Genshō, the fifth abbot of MYŌSHINJI, as its founding religious leader (see KAISAN); since that time the monastery has been affiliated with the Myōshinji branch of the RINZAISHŪ of Zen Buddhism. The site of bloody fighting during the Ōnin civil war (1467–1477), Ryōanji had to be rebuilt by Hosokawa Katsumoto's son Hosokawa Masamoto between 1488 and 1499. Much of the monastery burned down in 1789 and was subsequently reconstructed. The monastery was a relatively obscure temple in the first half of the twentieth century, but the garden gained great fame in 1949 when it was used in a scene of Ozu Yasujirō's film *Banshun* (*Late Spring*). Beginning in the 1950s, the garden began to be described as a "Zen garden" and has since come to be considered one of Japan's cultural masterpieces. The garden has fifteen moss-covered boulders set in a sea of white pebbles. During the nineteenth century, the arrangement of the stones was called "tiger cubs crossing a river," referring to a Chinese folktale, although many other interpretations have been offered in more recent decades. The temple grounds are the burial site of seven Hosokawa lords. Ryōanji was listed as a UNESCO World Heritage Site in 1994.

Ryōben. [alt. Rōben] (良辨) (689–773). Founder of the Japanese Kegonshū (C. HUAYAN ZONG) during the Nara period (710–784) and the first abbot of TŌDAIJI, the major Kegon monastery and the headquarters of the KOKUBUNJI network of provincial temples. Ryōben originally studied the teachings of the Hossō (C. FAXIANG) school under Gien (d. 728) and resided at the monastery of Konshuji. Under the patronage of the emperor Shōmu (r. 724–749), Tōdaiji and its network of provincial temples was completed and the colossal NARA DAIBUTSU consecrated in 752; Ryōben was appointed the monastery's first abbot and he formally established the Kegon school at the site. The Kegon school, one of the six major scholastic traditions of Nara Buddhism (see NARA BUDDHISM, SIX SCHOOLS OF), is said to date from 740, when Ryōben invited the Korean monk SIMSANG (J. Shinjō, d. c. 744), a disciple of FAZANG (643–712), to Konshōji to lecture on the AVATAṂSAKASŪTRA to Emperor Shōmu. Simsang is therefore typically considered the first patriarch of the Kegon school and Ryōben the second.

ryōbu. (兩部). In Japanese, the "two groupings," also known as ryōkai ("two realms"); referring to the TAIZŌKAI and KONGŌKAI systems and their related MAṆḌALAS in the esoteric tradition (MIKKYŌ) of Japan. See TAIZŌKAI and KONGŌKAI.

Ryōgen. (良源) (912–985). In Japanese, "Virtuous Fount"; a tenth-century exponent of the TENDAISHŪ during the Heian Period, also known posthumously as Jie Daishi. Born in Ōmi province (present-day Shiga prefecture), Ryōgen became the eighteenth appointed head (zasu) of the Tendai school in 966 and spent the last nineteen years of his life at ENRYAKUJI reforming monastic discipline, promoting doctrinal studies, and writing works of his own. He used strategic political alliances to help what was then a marginalized Tendai school become the most powerful religious institution in Japan; in addition, he raised funds both to reconstruct burned monastic buildings on HIEIZAN and to construct new monasteries within its precincts. In response to escalating disputes among regional monastic communities, Ryōgen also established in 970 the first permanent fighting force to defend and serve the interests of the Mt. Hiei monks. While this move appears to contradict a set of reforms he had previously issued that forbade his monks from carrying weapons, it seems that his first troops may actually have been hired mercenaries rather than "monk soldiers" (J. SŌHEI). Among Ryōgen's disciples, perhaps the best known is GENSHIN (942–1017), the author of the influential ŌJŌ YŌSHŪ.

ryōkai. (J) (兩界). See RYŌBU.

Ryōkan. (良寬) (1758–1831). In Japanese, "Virtuous Liberality"; Edo-period ZEN monk in the SŌTŌSHŪ, often known as Ryōkan Taigu (lit. Ryōkan, the Great Fool). Ryōkan was associated with a reformist group within the contemporary Sōtō monastic community that sought to restore formal meditative practice and the study of the writings of DŌGEN KIGEN. Ryōkan grew up in Echigo province (present-day Niigata prefecture), the son of a SHINTŌ priest. He became a novice monk at age seventeen at the nearby Sōtō monastery of Kōshōji and was ordained when he turned twenty-one under a Sōtō monk named Kokusen (d. 1791). He left for Kokusen's monastery in the Bitchū province (present-day Okayama prefecture) and

subsequently inherited the temple after Kokusen died. Soon afterward, however, he departed from the monastery, choosing instead to follow an itinerant lifestyle for the next several years. In 1804, he settled down for twelve years in a hut on Mt. Kugami, situated near his hometown. In 1826 Ryōkan met Teishin (d. 1872), a young nun who had been previously widowed, and the two remained close companions until Ryōkan's death. Ryōkan eventually chose for himself a radically simple existence, living much of his life as a hermit, owning few possessions and begging for alms. He was well regarded for his love of children and his compassion for people from all social strata, including prostitutes. His expression of compassion was so extreme that he is even said to have placed lice inside his robes so they would not get cold and to have exposed his legs to mosquitoes while he slept. Ryōkan was a renowned calligrapher and poet (in both Chinese and vernacular Japanese). Most of his verses are written as thirty-one-syllable tanka, although he also wrote ninety chōka (long poems) and at least twenty other verses in nonstandard form. Ryōkan's poetry addressed his common everyday experiences in the world in direct, humble terms. Ryōkan did not publish during his lifetime; rather, his verses were collected and published posthumously by his companion Teishin.

Ryōnin. (良忍) (1072–1132). In Japanese, "Virtuous Forbearance"; founder of the YŪZŪNENBUTSUSHŪ, an early PURE LAND school in Japan. Ryōnin traveled to HIEIZAN at the age of twelve to study the TENDAISHŪ (C. TIANTAI ZONG) teachings and was ordained at the age of fifteen. He retreated to Ōhara, a rural area north of Kyōto, in 1095, where he spent the next thirty years. There, Ryōnin at first studied the SADDHARMAPUṆḌARĪKASŪTRA and the AVATAṂSAKASŪTRA, but later concentrated on reciting the SUKHĀVATĪVYŪHASŪTRA. Through a revelation from the buddha AMITĀBHA that he received in 1117, Ryōnin began teaching his principle of YŪZŪNENBUTSU (perfect-interpenetration recitation of the Buddha's name), in which every individual benefits from both his own and others' chanting of the Buddha's name (J. nenbutsu; C. NIANFO) through a mutual transfer of merit. In 1124, Ryōnin began traveling throughout Japan to spread the practice. His decision to begin teaching evokes Śākyamuni Buddha's own life story: after realizing this principle, Ryōnin was content dwelling in solitude, but VAIŚRAVAṆA (J. Tabun tennō) appeared before Ryōnin to ask him to teach his revelation and disseminate the chanting practice among the people. As Ryōnin traveled around Japan, he carried with him a booklet in which he recorded the names of all the people who agreed to practice the chanting of the Buddha's name everyday. Soon after beginning his campaign, Ryōnin received the imperial bell from the retired monarch Toba (r. 1107–1123), who also added his name to this register of adherents: both the bell and the register are now housed at Dainenbutsuji, the headquarters of the Yūzūnenbutsu school. Such a sign of imperial support for Ryōnin's campaign attracted many new followers to his school. Ryōnin continued his evangelical efforts until his death in 1132 at Raigōin, one of the two cloisters (along with Jōrengein) that he established in Ōhara. Ryōnin also studied Buddhist "BRAHMĀ chanting" (J. bonbai; see C. FANBAI; K. pŏmp'ae) and founded his own lineage of bonbai chanting during his thirty years in Ōhara.

S

Sabbāsavasutta. (C. Loujin jing; J. Rojingyō; K. Nujin kyŏng 漏盡經). In Pāli, "Discourse on All the Contaminants," the second sutta in the Pāli MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as the tenth SŪTRA in the Chinese translation of the MADHYAMĀGAMA; there is also a recension of unidentified affiliation in the EKOTTARĀGAMA); preached by the Buddha to a gathering of monks in the JETAVANA grove in the town of Sāvatthi (S. ŚRĀVASTĪ). The Buddha describes the contaminants or outflows (ĀSRAVA) that afflict the minds of ordinary worldlings and keep them bound to the cycle of birth and death. He then prescribes seven methods for controlling and eradicating the contaminants: by correct vision (of the nature of the self), restraint (of the senses), usage (i.e, correct usage of the monastic requisites), endurance (e.g., bearing hunger, climate, physical pain), avoidance (e.g., bad friends, unsuitable residences), removal (e.g., of sensuality and ill will), and development (of the seven limbs of awakening).

sa bdag. (sadak). In Tibetan, lit. "lord of the earth" or "owner of the earth"; a term that encompasses a number of deities who are the rightful owners of particular sites, such as lakes, hills, mountains, and valleys, and who must be properly propitiated before using, and especially digging at, a site. If not properly propitiated, they may cause a wide range of maladies, including epidemics among humans and livestock. These deities can be of either Tibetan or Indian origin, the latter including such beings as NĀGAS.

śabda. (P. sadda; T. sgra; C. sheng; J. shō; K. sŏng 聲). In Sanskrit, "sound," or "auditory object"; the object of the auditory consciousness and one of the five sense objects, the others being visible forms (RŪPA), smells (GANDHA), tastes (RASA), and tangible objects (SPARŚA). Sounds are the object of the auditory sense organ (ŚROTRENDRIYA) and lead to the production of auditory consciousness (ŚROTRAVIJÑĀNA). In the ABHIDHARMAKOŚABHĀṢYA, sounds are categorized according to their source, being divided into those sounds caused by elements conjoined with consciousness (upāttamahābhūtahetuka) and sounds caused by elements not conjoined with consciousness (anupāttamahābhūtahetuka). The former would include the sound made by the clapping of hands or the vocalization of a human or animal; the latter would include sounds in the natural world, such as the sound of wind or water. Each of these two types is further subdivided into the articulate (sattvākhya, lit. "sentient being's utterance") and the inarticulate (asattvākhya, lit. "not a sentient being's utterance") based on whether or not the sound communicates meaning to a sentient being. Each of these is further divided into two types, the pleasant (yaśa) and the unpleasant (ayaśa), yielding eight types of sound. The nature of sound is an important point of controversy between Buddhist and Hindu thinkers in India, with Buddhists arguing that sound is impermanent (ANITYA) against Mīmāṃsakas who claim that the Vedas are eternal sounds that are not created by persons (apauruṣeya) and hence permanent.

śabdasāmānya. (T. sgra spyi). In Sanskrit, lit. "sound generality" or "sound universal"; a term that appears in Buddhist logic and epistemology in discussions of the operations of thought and the relations between thought and language. The term refers to the sound or phonetic component that appears to the mind, regardless of whether the meaning of that sound is understood. The referent, or semantic content, of the sound that appears to the mind is called arthasāmānya, literally "meaning generality" or "meaning universal." It is possible to have a sound generality independent of meaning generality, as in the case of hearing a word in a language that one does not understand. It is also possible to have a meaning generality alone, as in the case of seeing an object or hearing a description of an object, but not knowing its name. A conceptual consciousness (see KALPANĀ) is defined as one in which a sound generality and a meaning generality are suitable to be mixed, that is, for the name of the object to be associated with its mental image. The term appears in DIGNĀGA and is important in Tibetan Buddhist epistemology.

śabdāyatana. (P. saddāyatana; T. sgra'i skye mched; C. shengchu; J. shōsho; K. sŏngch'ŏ 聲處). In Sanskrit, "auditory sense-field," that is, sound (ŚABDA) as it occurs in the list of twelve sense faculties or "bases of cognition" (ĀYATANA), which serve as the bases for the production of consciousness: viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of sound, the contact (SPARŚA) between the auditory sense base and its corresponding auditory sensory object leads to auditory consciousness (ŚROTRAVIJÑĀNA).

sabhāgahetu. (T. skal mnyam gyi rgyu; C. tonglei yin; J. dōruiin; K. tongnyuin 同類因). In Sanskrit, "homogeneous cause"; the fourth of the six types of causes (HETU) outlined in the JÑĀNAPRASTHĀNA, the central text of the SARVĀSTIVĀDA ABHIDHARMA, wherein a cause is always antecedent to its incumbent effect. This homogeneity can occur in a number of guises. In the case of physical causation, an apple seed would be a homogenous cause to the production of an apple. In the case of mental causation, a moment of wisdom that derives from what is heard (ŚRUTAMAYĪPRAJÑĀ) would be a homogenous cause to subsequent moments of the wisdom that derives from reflection (CINTĀMAYĪPRAJÑĀ). In the case of actions, a wholesome (KUŚALA) action (KARMAN) is a homogeneous cause to wholesome effects. This homogeneity extends throughout all of the three realms (TRAIDHĀTUKA) of SAṂSĀRA, viz., the sensuous realm (KĀMADHĀTU), the subtle-materiality realm (RŪPADHĀTU), and the immaterial realm (ĀRŪPYADHĀTU). In these cases, a cause may produce an effect that it superior to it, as long as the effect is produced in the same realm. For example, a moment of the wisdom that derives from what is heard (śrutamayīprajñā) in the sensuous realm might serve as a homogeneous cause for a moment of the wisdom that derives from reflection (cintāmayīprajñā) in the sensuous realm.

sābhisaṃskāraparinirvāyin. (T. mngon par 'du byed dang bcas pa yongs su mya ngan las 'das pa; C. youxing banniepan; J. ugyōhatsunehan; K. yuhaeng panyŏlban 有行般涅槃). In Sanskrit, "one who achieves NIRVĀṆA through effort"; a particular sort of nonreturner (ANĀGĀMIN), one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). According to the ABHIDHARMAKOŚABHĀṢYA, the sābhisaṃskāraparinirvāyin are nonreturners who, having achieved any of the sixteen birth states of the immaterial realm (ĀRŪPYADHĀTU), enter "nirvāṇa with remainder" (SOPADHIŚEṢANIRVĀṆA) at that support, but only after they have made a conscious effort and applied a little force. This differentiates them from the UPAPADYAPARINIRVĀYIN and the ANABHISAṂSKĀRAPARINIRVĀYIN.

Saccaka. (P). See MAHĀSACCAKASUTTA.

Sa chen Kun dga' snying po. (Sachen Kunga Nyingpo) (1092–1158). A great scholar and adept of the SA SKYA sect of Tibetan Buddhism, renowned especially for his writings on the tantric system of LAM 'BRAS, or "path and result." He is usually referred to simply as Sa chen, or "Great Master of Sa skya." Born the son of DKON MCHOG RGYAL PO, another important Sa skya master and first throne-holder of Sa skya monastery, he was a child prodigy. He first trained under the Sa skya hierarch Ba ri lo tsā ba Rin chen grags pa (Bari Lotsāwa Rinchen Drakpa, 1040–1111), from whom he received numerous transmissions of both SŪTRA and TANTRA. At the age of eleven he began a meditation retreat in which he had a visionary encounter with the bodhisattva MAÑJUŚRĪ. The bodhisattva spoke to him four lines that subsequently became a fundamental Sa skya teaching called the zhen pa bzhi bral ("parting from the four attachments"):

If you are attached to this life, you are not a religious person.
If you are attached to SAMSĀRA, you do not have renunciation.
If you are attached to your own welfare, you do not have BODHICITTA.
If grasping occurs, you do not have the view.

In 1111, at the age of twenty, he received the throne of Sa skya monastery from Ba ri lo tsā ba and became the institution's third abbot, a position he held for the remainder of his life. Beginning in 1120, Sa chen received the seminal Sa skya instructions on lam 'bras from Zhang ston chos 'bar (Shangtön Chöbar, 1053?–1135?), a YOGIN who initially claimed not to know anything about the topic. However, he eventually provided instruction to Sa chen for eight years, after which he instructed him not to teach lam 'bras for the next eighteen years. Sa chen then spent those eighteen years in retreat, practicing these instructions. During this time, he had a vision of the Indian adept VIRŪPA, founder of the lam 'bras lineage, who bestowed on him the lam 'bras teachings in their entirety. After completing his retreat, Sa chen put Virūpa's instructions on lam 'bras, known as the RDO RJE TSHIG RKANG ("Vajra Verses"), into writing for the first time, eventually composing eleven commentaries on them. Later, Sa chen was poisoned and went into a coma. When he regained consciousness, he had suffered complete memory loss. He thus went to his former teachers to receive instructions again. However, there was no one to provide the lam 'bras teachings and Zhang ston chos 'bar had passed away. Sa chen went into retreat, during which Zhang ston chos 'bar appeared to him and repeated his previous teachings. Among Sa chen's four sons, two became prominent Sa skya leaders: BSOD NAMS RTSE MO and Grags pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216). Another of his sons, Dpal che 'od po (Palche Öpo, 1150–1204), was the father of SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN, who would become one of Tibet's most influential religious figures. Kun dga' snying po and the most illustrious of his offspring over the next two generations (Grags pa rgyal mtshan, Bsod nams rtse mo, Kun dga' snying po, and 'PHAGS PA) are known as SA SKYA GONG MA LNGA (the five Sakya hierarchs) and as such have iconic status in Sa skya ritual.

Sacred Books of the Buddhists. A pioneering series of translations of Buddhist texts, initially edited by F. MAX MÜLLER and later by CAROLINE A. F. RHYS DAVIDS. After Müller had completed the Sacred Books of the East series (ten of whose forty-nine volumes were devoted to Buddhist works), he continued to receive requests to publish translations of more texts, especially Asian texts. He decided to start a new series for Buddhism, with financial support provided by the Thai king Chulalongkorn (RĀMA V). The first volume was published in 1895 by Oxford University Press. Publication was eventually

taken over by the PALI TEXT SOCIETY. To date, some fifty volumes have been published in the series.

ṣaḍakṣarī. [alt. ṣaḍakṣarīvidyā] (T. yi ge drug pa'i rig sngags; C. liuzi daming/liuzi zhangju; J. rokujidaimyō/rokujishōku; K. yukcha taemyŏng/yukcha changgu 六字大明/六字章句). In Sanskrit, "six-syllable spell"; the renowned MANTRA associated with the BODHISATTVA of compassion, AVALOKITEŚVARA: viz., "OṂ MAṆI PADME HŪṂ." The mantra has six syllables and is used to call upon the bodhisattva, using his epithet Maṇipadma or "Jewel Lotus," a four-armed form who holds both a rosary of jewels (RATNA) and a lotus flower (PADMA). Hence, the mantra means "Oṃ, O Jewel-Lotus," not "jewel in the lotus," contrary to popular belief. The earliest textual source for this mantra is the KĀRAṆḌAVYŪHA [alt. Avalokiteśvaraguṇa-Kāraṇḍavyūha]. See OṂ MAṆI PADME HŪṂ.

Sadāparibhūta. (T. Rtag tu mi brnyas pa; C. Changbuqing pusa; J. Jōfukyō bosatsu; K. Sangbulgyŏng posal 常不輕菩薩). In Sanskrit, "Never Disparaging," the name of a BODHISATTVA described in the eponymous nineteenth or twentieth chapter (depending on the version) of the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"). The Buddha explains that long ago there was a bodhisattva named Sadāparibhūta who did not study or recite the sūtras. Whenever he saw a monk (BHIKṢU), nun (BHIKṢUṆĪ), male lay disciple (UPĀSAKA), or female lay disciple (UPĀSIKĀ), he would say, "I dare not belittle you because you will all become buddhas." Arrogant monks, nuns, and male and female lay disciples began to sarcastically refer to him as "Never Disparaging." When the bodhisattva was about to die, he heard millions of verses of the *Saddharmapuṇḍarīkasūtra* in the sky and as a result his life span was increased by many eons, during which he taught the sūtra. Those who had mocked him were reborn in AVĪCI hell, but were eventually reborn as his disciples and later became the five hundred bodhisattvas in the assembly of the *Saddharmapuṇḍarīkasūtra*. The Buddha reveals that he had been the bodhisattva Sadāparibhūta in a previous life. The bodhisattva's famous statement, "I dare not belittle you because you will all become buddhas," came to be known as the "twenty-four character 'Lotus Sūtra'" because in KUMĀRAJĪVA's translation, the line is twenty-four Sinographs long. The chapter was especially important to the Japanese reformer NICHIREN, who noted the importance of developing even a negative relationship with the true teaching, as evidenced by the fact that those who slandered Sadāparibhūta eventually became bodhisattvas themselves.

Sadāprarudita. (T. Rtag tu ngu; C. Changti [pusa]; J. Jōtai [bosatsu]; K. Sangje [posal] 常啼[菩薩]). In Sanskrit, "Ever Weeping," the name of a BODHISATTVA whose story appears in the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ. He sets out in search of a teacher who will teach him the perfection of wisdom (PRAJÑĀPĀRAMITĀ) but, unable to find one, is constantly crying. He eventually learns that the bodhisattva DHARMODGATA is teaching in a faraway city. He has nothing to offer his teacher and thus announces that he is willing to sell his body. ŚAKRA, the king of the gods, decides to test his commitment and takes the form of an old man who agrees to buy some of Sadāprarudita's flesh. He cuts off a piece of his thigh and gives it to the man. The man then asks for some bone marrow. Sadāprarudita is about to break his leg to extract the marrow when a wealthy merchant's daughter, impressed by his dedication, offers to provide the necessary gifts for Dharmodgata. Śakra then reveals his true form and heals Sadāprarudita's body. Sadāprarudita, the merchant's daughter, and her five hundred attendants then proceed to the city where Dharmodgata is residing and receive his teachings. The story is a famous example of DEHADĀNA, the "gift of the body" that bodhisattvas make out of their dedication to the welfare of others. It is also an important example of devotion to the teacher.

ṣaḍāyatana. (P. saḷāyatana; T. skye mched drug; C. liuchu; J. rokusho; K. yukch'ŏ 六處). In Sanskrit, "six bases of cognition"; the fifth link in the twelvefold chain of dependent origination (PRATĪTYASAMUTPĀDA), preceded by "name and form" (NĀMARŪPA) and followed by "contact" (SPARŚA). Here, the six bases of cognition refer to the six sense organs (INDRIYA): the eye, ear, nose, tongue, body, and mentality. In some interpretations of the twelvefold chain, the term refers specifically to the formation of the sense organs in the womb, on the basis of the prior link, "name and form" (nāmarūpa), which refers to the five aggregates (SKANDHA) directly after conception. The term "bases" or "sources" (ĀYATANA) more commonly refers to the twelve bases of cognition—the six sense organs and their six objects—but in the context of dependent origination, it refers specifically to the sense organs.

Saddanīti. In Pāli, the "Practice of Grammar," an important work on Pāli grammar and philology by the twelfth century Burmese monk Aggavaṃsa. Composed in 1154, it is considered the most important of the extant Pāli grammars. It draws both on the first known Pāli grammar, written by Kaccāyana, as well as Pāṇini's Sanskrit grammar. Its twenty-eight chapters contain a detailed morphology of Pāli and discussions of prefixes and particles.

Ṣaḍdarśanasamuccaya. In Sanskrit, "Compendium of the Six Views," a work by the eighth-century Indian scholar Haribhadra (or Haribhadra Sūri) of the Śvetāmbara school of Jainism. The six views refer to six schools of Indian philosophy: Buddhism, Jainism (see JAINA), and the four Hindu schools of Nyāya, Sāṃkhya, Vaiśeṣika, and Mīmāṃsā. The work also contains an appendix on the so-called "materialist" school, Cārvāka. The work remains useful to scholars of Buddhism for articulating how Buddhist doctrines were interpreted by non-Buddhist schools.

Saddhammapajjotikā. [alt. Saddhammaṭṭhitikā]. In Pāli, "Illumination of the True Dharma," a commentary on the

NIDDESA of the KHUDDAKANIKĀYA, written by UPASENA of Sri Lanka, probably in either 817 or 877 CE. The text borrows heavily from the VISUDDHIMAGGA of BUDDHAGHOSA.

Saddhammappakāsinī. In Pāli, "Explanation of the True Dharma," a commentary on the PAṬISAMBHIDĀMAGGA of the KHUDDAKANIKĀYA, attributed to Mahānāma of Sri Lanka. According to its colophon, the commentary was composed in the first half of the sixth century CE. The text contains numerous quotations from the VISUDDHIMAGGA of BUDDHAGHOSA.

Saddhammasaṅgaha. In Pāli, "Chronicle of the True Dharma," an ecclesiastical and literary history of THERAVĀDA Buddhism, written by Dhammakitti Mahāsāmī at the Thai capital AYUTHAYA during the reign of PARAMARĀJĀ I (1370–1388 CE); it is the earliest Buddhist chronicle composed in Southeast Asia. The author was inspired to write the history after his return from Sri Lanka, where he had participated in an ongoing purification and revival of Buddhism on the island. The work relies heavily on the DĪPAVAṂSA, MAHĀVAṂSA, and VINAYA commentary, SAMANTAPĀSĀDIKĀ, as well as on the historical introduction to the twelfth-century MAHĀPARĀKRAMABĀHU-KATIKĀVATA of PARĀKRAMABĀHU I. The work is divided into eleven chapters and concludes with an account of the benefits of listening to the preaching of the dharma. The *Saddhammasaṅgaha* was translated into English in 1941 by B. C. Law under the title, *A Manual of Buddhist Historical Traditions*.

saddharma. (P. saddhamma; T. dam pa'i chos; C. zhengfa; J. shōbō; K. chŏngpŏp 正法). In Sanskrit, "true dharma" or "right dharma" (and often translated as "true law" in the nineteenth century), a term for the teaching of the Buddha. The term appears widely in Buddhist literature, including the Pāli canon. The term DHARMA has many meanings in Indian literature in general and in Indian Buddhism in particular. Scholars speculate that SADDHARMA was coined to indicate specifically that the saddharma was "the teaching of the Buddha," in order to distinguish his doctrine from those of non-Buddhist teachers (whose doctrines were also termed dharma). It may have also been intended to imply a truer, in the sense of a more definitive, teaching within the teachings of the Buddha, as in the title of the "Lotus Sūtra," SADDHARMAPUṆḌARĪKASŪTRA, lit., "White Lotus of the True Dharma," where the Buddha explains that his teaching on the one vehicle (EKAYĀNA) supersedes his previous teaching of three vehicles (TRIYĀNA). Saddharma was also used to refer to that period after the PARINIRVĀṆA of a particular buddha, when his teaching remained complete and intact and its practice was faithful and virtuous; this period preceded their inevitable decline (see SADDHARMAPRATIRŪPAKA and SADDHARMAVIPRALOPA).

saddharmapratirūpaka. (T. dam pa'i chos kyi gzugs brnyan; C. xiangfa/xiangsi zhengfa; J. zōhō/zōjishōbō; K. sangpŏp/sangsajŏngpŏp 像法/像似正法). In Sanskrit, "semblance dharma," or "counterfeit dharma" (although this latter translation has a pejorative connotation in English that is not present in the Sanskrit); the term more literally means "a [mere] reflection of the true dharma." The term occurs most commonly in MAHĀYĀNA literature and is largely absent in the texts of the MAINSTREAM BUDDHIST SCHOOLS, suggesting that it came into use around the beginning of the Common Era. In its most general sense, it refers to the entire period during which the true dharma (SADDHARMA) of a given buddha exists in the world, i.e., from the time that the buddha passes into PARINIRVĀṆA to the time that his dharma finally vanishes completely. In some texts, this term refers specifically to the second of two periods in the duration of the dharma: the first is the saddharma, or true dharma, the second is the saddharmapratirūpaka, or reflection of the true dharma. In East Asian eschatological traditions, saddharmapratirūpaka came to refer to the second of three periods in the disappearance of the dharma from the world: there was a period of the true dharma (zhengfa), a period of "semblance dharma" (called XIANGFA in Chinese), and a period of final dharma (see MOFA, SADDHARMAVIPRALOPA). See also ANTARADHĀNA.

Saddharmapuṇḍarīkasūtra. (T. Dam pa'i chos padma dkar po'i mdo; C. Miaofa lianhua jing/Fahua jing; J. Myōhōrengekyō/Hokekyō; K. Myobŏp yŏnhwa kyŏng/Pŏphwa kyŏng 妙法蓮華經/法華經). In Sanskrit, "Sūtra of the White Lotus of the True Dharma," and known in English simply as the "Lotus Sūtra"; perhaps the most influential of all MAHĀYĀNA sūtras. The earliest portions of the text were probably composed as early as the first or second centuries of the Common Era; the text gained sufficient renown in India that a number of chapters were later interpolated into it. The sūtra was translated into Chinese six times and three of those translations are extant. The earliest of those is that made by DHARMARAKṢA, completed in 286. The most popular is that of KUMĀRAJĪVA in twenty-eight chapters, completed in 406. The sūtra was translated into Tibetan in the early ninth century. Its first translation into a European language was that of EUGÈNE BURNOUF into French in 1852. The *Saddharmapuṇḍarīkasūtra* is perhaps most famous for its parables, which present, in various versions, two of the sūtra's most significant doctrines: skill-in-means (UPĀYA) and the immortality of the Buddha. In the parable of the burning house, a father lures his children from a conflagration by promising them three different carts, but when they emerge they find instead a single, magnificent cart. The three carts symbolize the ŚRĀVAKA vehicle, the PRATYEKABUDDHA vehicle, and the BODHISATTVA vehicle, while the one cart is the "one vehicle" (EKAYĀNA), the buddha vehicle (BUDDHAYĀNA). This parable indicates that the Buddha's previous teaching of three vehicles (TRIYĀNA) was a case of upāya, an "expedient device" or "skillful method" designed to attract persons of differing capacities to the dharma. In fact, there is only one vehicle, the vehicle whereby all beings proceed to buddhahood. In the parable of the conjured city, a group of weary travelers take rest in a magnificent city, only to be told later that it is a magical creation. This conjured city

symbolizes the NIRVĀṆA of the ARHAT; there is in fact no such nirvāṇa as a final goal in Buddhism, since all will eventually follow the bodhisattva's path to buddhahood. The apparently universalistic doctrine articulated by the sūtra must be understood within the context of the sectarian polemics in which the sūtra seems to have been written. The doctrine of upāya is intended in part to explain the apparent contradiction between the teachings that appear in earlier sūtras and those of the *Saddharmapuṇḍarīkasūtra*. The former are relegated to the category of mere expedients, with those who fail to accept the consummate teaching of the *Saddharmapuṇḍarīkasūtra* as the authentic word of the Buddha (BUDDHAVACANA) repeatedly excoriated by the text itself. In a device common in Mahāyāna sūtras, the sūtra itself describes both the myriad benefits that accrue to those who recite, copy, and revere the sūtra, as well as the misfortune that will befall those who fail to do so. The immortality of the Buddha is portrayed in the parable of the physician, in which a father feigns death in order to induce his sons to commit to memory an antidote to poison. The apparent death of the father is compared to the Buddha's entry into nirvāṇa, something which he only pretended to do in order to inspire his followers. Elsewhere in the sūtra, the Buddha reveals that he did not achieve enlightenment as the prince Siddhārtha who left his palace, but in fact had achieved enlightenment eons before; the well-known version of his departure from the palace and successful quest for enlightenment were merely a display meant to inspire the world. The immortality of the Buddha (and other buddhas) is also demonstrated when a great STŪPA emerges from the earth. When the door to the funerary reliquary is opened, ashes and bones are not found, as would be expected, but instead the living buddha PRABHŪTARATNA, who appears in his stūpa whenever the *Saddharmapuṇḍarīkasūtra* is taught. ŚĀKYAMUNI joins him on his seat, demonstrating another central Mahāyāna doctrine, the simultaneous existence of multiple buddhas. Other famous events described in the sūtra include the miraculous transformation of a NĀGA princess into a buddha after she presents a gem to Śākyamuni and the tale of a bodhisattva who immolates himself in tribute to a previous buddha. The sūtra contains several chapters that function as self-contained texts; the most popular of these is the chapter devoted to the bodhisattva AVALOKITEŚVARA, which details his ability to rescue the faithful from various dangers. The *Saddharmapuṇḍarīkasūtra* was highly influential in East Asia, inspiring both a range of devotional practices as well as the creation of new Buddhist schools that had no Indian analogues. The devotional practices include those extolled by the sūtra itself: receiving and keeping the sūtra, reading it, memorizing and reciting it, copying it, and explicating it. In East Asia, there are numerous tales of the miraculous benefits of each of these practices. The practice of copying the sūtra (or having it copied) was a particularly popular form of merit-making either for oneself or for departed family members. Also important, especially in China, was the practice of burning either a finger or one's entire body as an offering to the Buddha, emulating the self-immolation of the bodhisattva BHAIṢAJYARĀJA in the twenty-third chapter (see SHESHEN). In the domain of doctrinal developments, the *Saddharmapuṇḍarīkasūtra* was highly influential across East Asia, its doctrine of upāya providing the rationale for the systems of doctrinal taxonomies (see JIAOXIANG PANSHI) that are pervasive in East Asian Buddhist schools. In China, the sūtra was the central text of the TIANTAI ZONG, where it received detailed exegesis by a number of important figures. The school's founder, TIANTAI ZHIYI, divided the sūtra into two equal parts. In the first fourteen chapters, which he called the "trace teaching" (C. jimen, J. SHAKUMON), Śākyamuni appears as the historical buddha. In the remaining fourteen chapters, which Zhiyi called the "origin teaching" (C. benmen, J. HONMON), Śākyamuni reveals his true nature as the primordial buddha who achieved enlightenment many eons ago. Zhiyi also drew on the *Saddharmapuṇḍarīkasūtra* in elucidating two of his most famous doctrines: the three truths (SANDI, viz., emptiness, the provisional, and the mean) and the notion of YINIAN SANQIAN, or "the trichiliocosm in an instant of thought." In the TENDAISHŪ, the Japanese form of Tiantai, the sūtra remained supremely important, providing the scriptural basis for the central doctrine of original enlightenment (HONGAKU) and the doctrine of "achieving buddhahood in this very body" (SOKUSHIN JŌBUTSU); in TAIMITSU, the tantric form of Tendai, Śākyamuni Buddha was identified with MAHĀVAIROCANA. For the NICHIREN schools (and their offshoots, including SŌKA GAKKAI), the *Saddharmapuṇḍarīkasūtra* is not only its central text but is also considered to be the only valid Buddhist sūtra for the degenerate age (J. mappo; see C. MOFA); the recitation of the sūtra's title is the central practice in Nichiren (see NAMU MYŌHŌRENGEKYŌ). See also SADĀPARIBHŪTA.

saddharmavipralopa. (T. dam pa'i chos rab tu rnam par 'jig pa; C. mofa; J. mappō; K. malpŏp 末法). In Sanskrit, "disappearance of the true dharma," the predicted demise of the Buddha's dispensation (ŚĀSANA) from the world. Mainstream Buddhist doctrine holds that all evidence of the teaching of the previous buddha must vanish before the next buddha can appear in the world. The precise length of the duration of ŚĀKYAMUNI Buddha's dispensation is a persistent issue in Buddhist literature. The most common, and probably the oldest, of these predictions occurs in the accounts of the Buddha's decision to permit the ordination of women, where he says that if he had not ordained women, the true dharma (SADDHARMA) would have endured for one thousand years; however, because of his decision to ordain women, it will only last five hundred years (see MAHĀPRAJĀPATĪ). A variety of other predictions for the decline and disappearance of the dharma appear in various sūtras, with the period of the duration of the dharma ranging from as short as five hundred years to as long as twelve thousand years (in some Chinese sources); other figures include seven hundred, one thousand, one thousand five hundred, two thousand, two thousand five hundred, and five thousand years. The majority of periods involving one thousand years or more

occur in MAHĀYĀNA sūtras. However, in BUDDHAGHOSA's MANORATHAPŪRAṆĪ, a chronology of five thousand years is provided, in which the dharma gradually disappears over five periods of one thousand years each. During the first millennium after the Buddha's demise, there will be a disappearance of the attainments (P. ADHIGAMA), at the end of which no disciple will have the capacity to attain the rank of stream-enterer (P. sotāpanna; S. SROTAĀPANNA). During the second millennium, there will be a disappearance of practice (P. PAṬIPATTI) at the end of which no disciple will be able to attain meditative states or maintain the precepts. During the third millennium, there will be a disappearance of learning (P. PARIYATTI), at the end of which all books of the tipiṭaka (S. TRIPIṬAKA) will be lost. During the fourth millennium, the indicators or signs (NIMITTA) of monastic life will begin to vanish, at the end of which all monks will stop wearing saffron robes and will return to lay life. During the fifth and final millennium, there will be a disappearance of the relics (DHĀTU, see ŚARĪRA), at the end of which the relics of the Buddha will reassemble and, after being worshipped by the divinities, will burst into flame and vanish. Buddhaghosa's five thousand-year timetable has become standard in the Pāli tradition. The doctrine of the disappearance of the dharma is central to the various East Asian theories of decline. See also MOFA; ANTARADHĀNA.

Saddhatissa, Hammalawa. (1914–1990). A prolific Pāli scholar, translator, social activist, and senior Buddhist monk. Born at Hammalawa in Satkorale province, Sri Lanka, he was ordained a BHIKṢU in 1926 and pursued his undergraduate studies in Sri Lanka at Vidyodaya Pirivena and Prachina Bhasopakara Samagama. He continued his studies in Benares in India, the School of Oriental and African Studies (SOAS) in London, and ultimately received his Ph.D. at Edinburgh in 1965. He was proficient in Pāli, Sanskrit, Prakrit, Sinhala, and Hindi and held numerous academic posts in Asia, Europe, and North America, including Professor of Pāli at Banaras Hindu University from 1956 to 1957, Lecturer in Sinhala at SOAS from 1958 to 1960, Professor of Buddhism and Pāli at the University of Toronto from 1966 to 1969, and Visiting Lecturer at Oxford in 1973. While holding these posts, he also conducted numerous lecture tours in Europe, the United States, and Japan. In 1956, he served as an advisor to Dr. BHIMRAO RAMJI AMBEDKAR (1891–1956) at Nagpur, India, during the organization of mass conversions of members of the Dalit caste (the so-called untouchables) to Buddhism. Between 1957 and 1985 he served as head of London Buddhist Vihara, and in 1966 revived the British MAHĀBODHI SOCIETY, which had been defunct since World War II, serving as its president. He also helped found the New London Buddhist Vihara in 1964; the Buddhist Center, Oakenholt, in Oxford in 1971; the Buddhist Research Library, in Nugegoda, Sri Lanka in 1984; and the Buddha Vihara, Handsworth, in Birmingham in 1986. He was appointed president of the Saṅgha Council of Great Britain in 1966, and the Sanghanayaka Thera of the United Kingdom in 1980. In 1984 he served as vice-president of the Pali Text Society. His English publications and critical editions and translations include *The Buddha's Way, Buddhist Ethics*, *The Birth-Stories of the Ten Bodhisattas and the Dasabodhisattuppattikathā*, *Sutta Nipāta, Upāsakajanālankāra*, *Handbook for Buddhists*, *Introduction to Buddhism*, and *The Life of the Buddha*.

ṣaḍgati. (P. *chagati; T. 'gro ba rigs drug; C. liuqu; J. rokushu; K. yukch'wi 六趣). In Sanskrit, "six destinies"; an expansion of the more common list of five rebirth destinies (PAÑCAGATI), adding demigods or titans (ASURA) to the usual five: divinities (DEVA; including those of the sensuous, subtle-materiality, and immaterial realms); asuras, humans (MANUṢYA), animals (TIRYAK), ghosts (PRETA), and hell beings (NĀRAKA). See GATI; PAÑCAGATI.

sādhana. (T. sgrub thabs; C. chengjiu fa; J. jōjuhō; K. sŏngch'wi pŏp 成就法). In Sanskrit, "method" or "technique," used especially in reference to a tantric ritual designed to receive attainments (SIDDHI) from a deity. Tantric sādhanas generally take one of two forms. In the first, the deity (which may be a buddha, BODHISATTVA, or another deity) is requested to appear before the meditator and is then worshipped in the expectation of receiving blessings. In the other type of tantric sādhana, the meditator imagines himself or herself to be the deity at this very moment, that is, to have the exalted body, speech, and mind of an enlightened being. Tantric sādhanas tend to follow a fairly set sequence, whether they are simple or detailed. More elaborate sādhanas may include the recitation of a lineage of GURUS; the creation of a protection wheel guarded by wrathful deities to subjugate enemies; the creation of a body MAṆḌALA, in which a pantheon of deities take residence at various parts of the meditator's body, etc. Although there are a great many variations of content and sequence, in many sādhanas, the meditator is instructed to imagine light radiating from the body, thus beckoning buddhas and bodhisattvas from throughout the universe. Visualizing these deities arrayed in the space, the meditator then performs a series of standard preliminary practices called the sevenfold service (SAPTĀṄGAVIDHI), a standard component of sādhanas. The seven elements are (1) obeisance, (2) offering (often concluding with a gift of the entire physical universe with all its marvels), (3) confession of misdeeds, (4) admiration of the virtuous deeds of others, (5) entreaty to the buddhas not to pass into NIRVĀṆA, (6) supplication of the buddhas and bodhisattvas to teach the dharma, and (7) dedication of the merit of performing the preceding toward the enlightenment of all beings. The meditator then goes for refuge to the three jewels (RATNATRAYA), creates the aspiration for enlightenment (BODHICITTA; BODHICITTOTPĀDA), the promise to achieve buddhahood in order to liberate all beings in the universe from suffering, and dedicates the merit from the foregoing and subsequent practices toward that end. The meditator next cultivates the four "boundless" attitudes (APRAMĀṆA) of loving-kindness (MAITRĪ), compassion (KARUṆĀ), empathetic joy (MUDITĀ), and equanimity or

impartiality (UPEKṢĀ), before meditating on emptiness (ŚŪNYATĀ) and reciting the purificatory mantra, oṃ svabhāvaśuddhāḥ sarvadharmāḥ svabhāvaśuddho 'haṃ ("Oṃ, naturally pure are all phenomena, naturally pure am I"), understanding that emptiness is the primordial nature of everything, the unmoving world and the beings who move upon it. Out of this emptiness, the meditator next creates the maṇḍala. The next step in the sādhana is for the meditator to animate the residents of the maṇḍala by causing the actual buddhas and bodhisattvas, referred to as "wisdom beings" (JÑĀNASATTVA), to descend and merge with their imagined doubles, the "pledge beings" (SAMAYASATTVA). Light radiates from the meditator's heart, drawing the wisdom beings to the maṇḍala where, through offerings and the recitation of mantra, they are prompted to enter the residents of the maṇḍala. With the preliminary visualization now complete, the stage is set for the central meditation of the sādhana, which varies depending upon the purpose of the sādhana. Generally, offerings and prayers are made to a sequence of deities and boons are requested from them, each time accompanied with the recitation of appropriate MANTRA. At the end of the session, the meditator makes mental offerings to the assembly before inviting them to leave, at which point the entire visualization, the palace and its residents, dissolve into emptiness. The sādhana ends with a dedication of the merit accrued to the welfare of all beings.

sādhana. (T. sgrub pa; C. nengli; J. nōryū; K. nŭngnip 能立). In Sanskrit, "proof"; a term used in Indian logic in the sense of a proof statement or syllogism. The Indian Nyāya (Logic) school advocated that there were five necessary stages in syllogistic reasoning: (1) probandum or proposition (PRATIJÑĀ), viz., "The mountain is on fire"; (2) reason (HETU), "because there is smoke," (3) analogy (udāharaṇa), "Whatever is smoky is on fire, like a stove, but unlike a lake"; (4) application (upanaya), "Since this mountain is smoky, it is on fire"; (5) conclusion (nigamana), "The mountain is on fire." Using the same example, the Buddhist logician DIGNĀGA reduced the syllogism down to just three essential steps: (1) thesis or proposition (PAKṢA), "the mountain is on fire"; (2) reason (HETU), "because there is smoke"; (3) exemplification (dṛṣṭānta), "whatever is smoky is on fire, like a stove," and "whatever is not on fire is not smoky, like a lake," or, more simply, "like a stove, unlike a lake." See also LIṄGA; PRAYOGA.

Sādhanamālā. (T. Sgrub thabs rgya mtsho). In Sanskrit, "Garland of Methods," sometimes attributed to ABHAYĀKARAGUPTA; an important compendium of some three hundred individual tantric SĀDHANAs, the latest of which were composed around the twelfth century. In addition to the details its provides about tantric practice during this period, the detailed descriptions of the deities to be visualized are an important source of tantric Buddhist iconography. The version preserved in Tibetan is entitled *Sādhanasāgara*, "Ocean of Methods."

sādhāraṇasiddhi. (T. thun mong gi dngos grub). In Sanskrit, "common attainment," a term used, especially in the tantric context, to refer to various supranormal powers, such as the ability to fly, walk through walls, and find buried treasure, which can be attained through the recitation of MANTRAs and the propitiation of deities by both Buddhist and non-Buddhist YOGINs. It is contrasted with the "uncommon attainment" (asādhāraṇasiddhi), which is synonymous with "supreme attainment" (UTTAMASIDDHI), viz., the attainment of buddhahood.

sādhumatī. (T. legs pa'i blo gros; C. shanhui di; J. zen'eji; K. sŏnhye chi 善慧地). In Sanskrit, "auspicious intellect," the ninth of the ten bodhisattva BHŪMIs. A list of ten stages (DAŚABHŪMI) is most commonly enumerated, deriving from the DAŚABHŪMIKASŪTRA ("Sūtra on the Ten Bhūmis"), a sūtra that is later subsumed into the massive scriptural compilation, the AVATAṂSAKASŪTRA. The first bhūmi coincides with the attainment of the path of vision (DARŚANAMĀRGA) and the remaining nine to the path of cultivation (BHĀVANĀMĀRGA). Together with the eighth and tenth bhūmis, this is one of the three "pure bhūmis," because at the end of the seventh bhūmi, the bodhisattva has abandoned all afflictions (KLEŚA), and is devoted to destroying the remaining obstructions (ĀVARAṆA). On this bhūmi, the bodhisattva practices the ninth of the ten perfections, the perfection of power (BALAPĀRAMITĀ). This stage is called "auspicious intellect" because at this stage the bodhisattva gains a special understanding of the dharma, which allows him to teach others without error. This special understanding comes from his attainment of the four analytical knowledges (PRATISAṂVID). By means of the analytical knowledge of phenomena or factors (dharmapratisaṃvid; see DHARMA), he gains a thorough knowledge of the specific characteristics of all phenomena. By means of the analytical knowledge of meanings (arthapratisaṃvid; see ARTHA), he gains a thorough knowledge of the categories of all phenomena. Through the analytical knowledge of etymology (niruktipratisaṃvid; see NIRUKTI) he gains perfect facility in language so that he can teach without confusing doctrines. With the analytical knowledge of eloquence (pratibhānapratisaṃvid; see PRATIBHĀNA), he is able to inspire others with his words. Another explanation says that through dharmapratisaṃvid, the bodhisattva knows the words in the twelve branches of the Buddha's teaching (dharma); through arthapratisaṃvid, he knows the content or meaning of the twelve branches of the Buddha's teaching (DVĀDAŚĀṄGA [PRAVACANA]); through niruktipratisaṃvid, he knows the languages of each region (nirukti); and through pratibhānapratisaṃvid, he possesses the above three knowledges and thus has confidence to teach others. The bodhisattva remains on this stage as long as he is unable to display the land, retinue, and emanations of a buddha, make full use of the qualities of a buddha, and bring sentient beings to spiritual maturity.

sādhyadharma. (T. sgrub bya'i chos; C. suoli/suochengli; J. shoryū/shojōryū; K. sorip/sosŏngnip 所立/所成立). In

Sanskrit, the "property being proven," a term in Buddhist logic that designates one of the elements of a correct syllogism or proof (PRAYOGA) leading to inference (ANUMĀNA). A syllogism is composed of three parts, the subject (dharmin), the property being proved (sādhyadharma), and the reason (HETU or LIṄGA). It is called sādhyadharma because the sādhya ("what is being proved") must be a dharma ("property") of the logical subject. For example, in the syllogism, "Sound is impermanent because of being produced," the subject is sound, the property being proved is impermanence, and the reason is being produced. In order for the syllogism to be correct, three relations must exist among the three components of the syllogism: (1) the reason must be a property (DHARMA) of the subject, also called the "position" (PAKṢA), (2) there must be a relationship of pervasion (VYĀPTI) between the reason and the property being proved, such that whatever is the reason is necessarily the property being proved, and (3) there must be a relationship of "exclusion" or reverse pervasion (vyatirekavyāpti) between the property being proved and the reason such that whatever is not the property being proved is necessarily not the reason. In the example, the syllogism "Sound is impermanent because of being produced," is correct because the reason (being produced) is a quality of the subject (sound), there is pervasion because whatever is produced is necessarily impermanent, and there is reverse pervasion because whatever is not impermanent is necessarily not produced. See ANUMĀNA; LIṄGA.

sad mi bdun. (se mi dün). In Tibetan, lit. "seven men who were tested"; the first seven Tibetans to be ordained as Buddhist monks at BSAM YAS monastery under the preceptor ŚĀNTARAKṢITA during the late seventh century. The seven were: (1) Sba khri gzigs (Ba Tisik), ordained as Śrīghoṣa (T. Dpal byangs); (2) Sba gsal snang (Ba Selnang), ordained as Jñānendra (T. Ye shes dbang po); (3) Sba khri bzher/bzhir (Ba Tisher); (4) Ba gor VAIROCANA, or Vairocanarakṣita; (5) Rma rin chen mchog (Ma Rinchen Chok); (6) Rgyal ba mchog dbyangs (Gyelwa Chokyang); and (7) 'Khon klu'i dbang po srung ba (Könlu Wangpo Sungwa) (Nāgendrarakṣita). Alternate lists occasionally include: Rtsang legs grub (Tsang Lekdrup), or La sum rgyal ba'i byang chub (La sum Gyelwe Jangchup).

ṣaḍmūlakleśa. (T. rtsa ba'i nyon mongs drug; C. liu genben fannao; J. roku konpon bonnō; K. yuk kŭnbon pŏnnoe 六根本煩惱). In Sanskrit, "six root afflictions," as outlined in the SARVĀSTIVĀDA ABHIDHARMA and in the YOGĀCĀRA list of dharmas (see BAIFA); the six unsalutary mental states that serve as the sources for all the other KLEŚA. They are: desire (RĀGA), anger (PRATIGHA), pride (MĀNA), ignorance (AVIDYĀ), doubt (VICIKITSĀ), and wrong view (DṚṢṬI). See ANUŚAYA; KLEŚAMAHĀBHŪMIKA; MŪLAKLEŚA; SAṂYOJANA.

ṣaḍpāramitā. (T. phar phyin drug; C. liu boluomi; J. ropparamitsu; K. yuk paramil 六波羅蜜). In Sanskrit, the "six perfections," the six bodhisattva perfections (PĀRAMITĀ) of giving (DĀNA), morality (ŚĪLA), patience (KṢĀNTI), effort (VĪRYA), meditative absorption (DHYĀNA), and wisdom (PRAJÑĀ). In the DAŚABHŪMIKASŪTRA, four additional perfections are added, such that one perfection is associated with each of the ten bodhisattva stages (BHŪMI). These additional four perfections are understood as additional elements of the sixth perfection, prajñāpāramitā. They are the perfection of expedient means (UPĀYAPĀRAMITĀ), the perfection of the vow (to attain buddhahood) (PRAṆIDHĀNAPĀRAMITĀ), the perfection of powers (BALAPĀRAMITĀ) and the perfection of knowledge (JÑĀNAPĀRAMITĀ). In Pāli materials, there is a different set of ten perfections (PĀRAMĪ) that are practiced by the bodhisattva. See PĀRAMITĀ and the specific types of perfections.

ṣaḍvārgika. (P. chabbaggiya; T. drug sde; C. liuqun [biqiu]; J. rokugun [biku]; K. yukkun [pigu] 六群[比丘]). In Sanskrit, the "group of six," a notorious group of six mischievous monks (BHIKṢU), whose misbehavior led to the promulgation of many rules of conduct for the Buddhist order. According to the tradition, the rules of the VINAYA were not formulated hypothetically. Instead, when a monk acted in an inappropriate way, the Buddha would then make a rule prohibiting that action in the future. Thus, for each infraction, the vinaya provides an account of the circumstances that led to its formulation. The names of these six monks, individually and collectively, figure prominently in an inordinate number of those accounts. They are also often portrayed as actively resisting the enforcement of the rules of discipline. The names of the members of this infamous group of malefactors differ in Sanskrit and Pāli sources. In Sanskrit, they are usually listed as Nanda, Upananda, Udāyin (alt. Kālodāyin), Chanda, Aśvaka, and Punarvasu. The Pāli typically gives instead Assaji, Punabhasu, Paṇḍuka, Lohitaka, Mettiya, and Bhummajaka. According to Pāli sources, prior to their ordination, they were acquaintances of each other, living in ŚRĀVASTĪ. Unable to earn a living, they decided to enter the order. Deciding that it was unwise to remain together, they divided into three groups of two (Assaji and Punabhasu, Paṇḍuka and Lohitaka, and Mettiya and Bhummajaka). Each pair attracted a following of five hundred monks. The followers of Paṇḍuka and Lohitaka, living at JETAVANA, were the most virtuous, remaining near the Buddha and accompanying him in his travels. Some sources also offer a salutary motivation behind their frequent transgressions: to provide a wide range of test cases leading to specific monastic rules, so that the SAṂGHA would be protected against future unscrupulous behavior.

Sagaing. One of five Burmese capitals that flourished in Upper Burma (Myanmar) after the fall of PAGAN between the fourteenth and nineteenth centuries, the others being Pinya, AVA (Inwa), Amarapura and MANDALAY. The city of Sagaing lies adjacent to the Sagaing Hills along the Irrawaddy (Ayeyarwady) River to the west of Mandalay in central Burma. The Irrawaddy flows from north to south as it passes Mandalay and then turns west for several miles. Sagaing is named for this point on the river, "the beginning of the bend." Following the collapse of the Pagan empire, Sagaing served as the capital city of a much

reduced Burmese state between 1316 and 1364, after which the capital was moved across the river to Ava. Sagaing has been an important Buddhist center since Pagan times, and tradition claims the Buddha visited the site himself. The city and the surrounding hills contain hundreds of pagodas, monasteries, nunneries, and cave retreats, and many of Burma's most celebrated scholars hailed from Sagaing over the centuries. Sagaing retains its preeminence as one of the country's main centers of Buddhist scholarship and meditation practice.

Sāgara. (T. Rgya mtsho; C. Suojieluo/Suoqieluo; J. Shakara [alt. Shakatsura]/Shagara; K. Sagalla/Sagara 娑竭羅/娑伽羅). In Sanskrit, "Ocean"; one of the eight dragon kings (NĀGA) who served as guardians of the BUDDHADHARMA. His name appears alongside those of the other seven dragon kings who were in the audience when the Buddha taught the SADDHARMAPUṆḌARĪKASŪTRA. Sāgara is believed to be the dragon king of the ocean, who governs precipitation. He resides in a palace beneath the ocean that surrounds Mt. SUMERU. Sāgara occasionally appears as a flanking-attendant of the BODHISATTVA AVALOKITEŚVARA. In his palace, Sāgara is said to store a MAṆI jewel, which he sometimes offers to the bodhisattva. In the twelfth chapter of the *Saddharmapuṇḍarīkasūtra*, Sāgara also appears as the father of the eight-year-old nāga princess who, by offering a jewel to the Buddha, instantaneously turns into a male, traverses the ten bodhisattva stages (BHŪMI), and achieves buddhahood, evidence to some exegetes in the tradition that women have the capacity to achieve buddhahood.

sāgaramudrāsamādhi. (T. rgya mtsho'i phyag rgya ting nge 'dzin; C. haiyin sanmei; J. kaiin zanmai; K. haein sammae 海印三昧). In Sanskrit, "ocean-seal samādhi," or "oceanic reflection samādhi," a concentration (SAMĀDHI) often treated as emblematic of the HUAYAN ZONG's most profound vision of reality. "Ocean seal" is a metaphor for the pure and still mind that is able to reflect all phenomena while remaining perpetually unaffected by them, just as the calm surface of the ocean is said to be able to reflect all the phenomena in the universe. The AVATAṂSAKASŪTRA includes the sāgaramudrāsamādhi among several other types of samādhi that it mentions. In the "SAMANTABHADRA Bodhisattva Chapter" (Puxian pusa pin), the first of the ten samādhis taught by this bodhisattva is the sāgaramudrāsamādhi; through its power, a buddha is enabled to perform all types of works to rescue sentient beings, such as manifesting himself as a buddha and using numerous skillful means (UPĀYA) in order to guide them. The "Ten Bhūmis Chapter" (Shidi pin) mentions sāgaramudrāsamādhi as one of a list of eleven samādhis that occur to bodhisattvas who reach the tenth stage (BHŪMI) on the path. The "Manifestation of the Tathāgata Chapter" (Rulai chuxian pin) says that sāgaramudrāsamādhi is so named because it is like the ocean that reflects the images of all sentient beings. In the Huayan scholastic tradition, sāgaramudrāsamādhi is raised to pride of place within its doctrinal system. Sāgaramudrāsamādhi is considered to be the generic samādhi (zongding) that the Buddha enters prior to beginning the elucidation of the various assemblies recounted in the *Avataṃsakasūtra* itself; the seven subsequent samādhis that the Buddha enters as he preaches the teaching of the *Avataṃsakasūtra* at each of the eight assemblies (hui) (there is no samādhi prior to the second assembly) are regarded instead as specific types of samādhis (bieding). ZHIYAN (602–668), the second Huayan patriarch, associated sāgaramudrāsamādhi with the teaching of one vehicle (EKAYĀNA) in his KONGMU ZHANG, where he says that the common and distinctive teachings of the one vehicle (yisheng tongbie) are revealed through the "ocean-seal" samādhi, while the teachings of the three vehicles (TRIYĀNA) are revealed through the subsequently obtained wisdom (C. houde zhi; S. PRṢṬHALABDHAJÑĀNA). FAZANG (643–712), the third Huayan patriarch, following his teacher Zhiyan's view, declares at the beginning of his HUAYAN WUJIAO ZHANG that his work was written to reveal the teaching of the one vehicle that the Buddha attained through the "ocean-seal" samādhi. It is Fazang who formalized the place of the sāgaramudrāsamādhi in the Huayan doctrinal system. In his XIU HUAYAN AOZHI WANGJIN HUANYUAN GUAN, Fazang noted that the "ocean-seal" samādhi and the Huayan samādhi (C. Huayan sanmei), both mentioned among the ten samādhis in the Xianshou pusa pin of the *Avataṃsakasūtra*, correspond to the "two functions" (er YONG): respectively, to the "function of the eternal abiding of all things reflected on the ocean" (haiyin senluo changzhu yong) and the "function of the autonomy of the perfect luminosity of the DHARMADHĀTU" (fajie yuanming zizai yong). Both of these types of functions were subordinated to the highest category of the "one essence" (yi TI), viz., the "essence of the pure and perfect luminosity of the self-nature" (*zixing qingjing yuanming ti*). The first type of function, which was associated with the sāgaramudrāsamādhi, was the perfect reflection of all things in the pure mind; like the unsullied ocean that reflected all phenomena, it also was freed from any type of delusion or falsity. For Fazang, "ocean seal" (haiyin) was interpreted to mean the "original enlightenment of true thusness" (ZHENRU BENJUE) by correlating this function with the "ocean of the thusness of the dharma nature" (faxing zhenru hai) as mentioned in the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna"). In Fazang's *Huayan youxin fajie ji*, the "ocean-seal" samādhi was classified as a cause and the Huayan samādhi as a fruition. Elsewhere, in his HUAYAN JING TANXUAN JI, Fazang additionally differentiates the ocean-seal samādhi itself into two phases of cause and fruition: the stage of the cause is attained by the bodhisattva SAMANTABHADRA at the tenth of the ten stages of faith, while the fruition stage corresponds to the samādhi of a tathāgata. In addition to its importance in the *Avataṃsakasūtra* and the Huayan school, there are several other sūtras that also mention the sāgaramudrāsamādhi. For example, the MAHĀPRAJÑĀPĀRAMITĀSŪTRA says that the sāgaramudrāsamādhi incorporates all other samādhis. The RATNAKŪṬASŪTRA states that one should abide in sāgaramudrāsamādhi in order to obtain complete, perfect enlightenment

(ANUTTARASAMYAKSAṂBODHI). Finally, the MAHĀSAṂNIPĀTASŪTRA says that one can see all sentient beings' mental functions and gain the knowledge of all teaching devices (DHARMAPARYĀYA) through the sāgaramudrāsamādhi.

sa ga zla ba. (saga dawa). The name of the fourth Tibetan month, the holiest month of the year, when it is believed the results of wholesome actions increase a hundred thousand times; the fifteenth day of this month is particularly auspicious, commemorating the day when ŚĀKYAMUNI was born, enlightened, and entered NIRVĀṆA. See WESAK.

sahabhūhetu. (T. lhan cig 'byung ba'i rgyu; C. juyouyin; J. kuuin; K. kuyuin 俱有因). In Sanskrit, the "coexistent cause"; the second of the six types of causes (HETU) outlined in the JÑĀNAPRASTHĀNA, the central text of the SARVĀSTIVĀDA ABHIDHARMA. This type of cause refers to the fact that coexistent dharmas simultaneously condition one another, as with a great element (MAHĀBHŪTA) and its derivatives, or a specific dharma and its four conditioned characteristics (SAṂSKṚTALAKṢAṆA). This process is comparable to the coexistence of the three legs of a tripod: if any one leg is missing, the other two legs are unable to function; thus, these coexistent dharmas must all exist simultaneously, so that if one is missing, all are missing. In the case of perception, for example, the Sarvāstivāda claimed that a moment of visual perception required that the visual sense-faculty (viz., the eye; INDRIYA), the visual object, and visual consciousness all had to exist simultaneously. This interpretation of the coexistent cause is subsequently adapted as a crucial component of the YOGĀCĀRA theory of representation-only (VIJÑAPTIMĀTRATĀ).

sahaja. (T. lhan skyes; C. jushengqi; J. kushōki; K. kusaenggi 俱生起). A polysemous Sanskrit term, variously translated as "coemergence," "connate," "simultaneously arisen," and "the innate." This term is used frequently in the tantric Buddhist verses composed by the SIDDHAS of medieval north India such as SARAHA, Kāṇha, and TILOPA; these include collections of DOHĀ recorded in APABHRAṂŚA and Bengali compilations of caryāgīti (see CARYĀGĪTIKOṢA). In these contexts, sahaja refers most generally to the ultimate and innermost true nature, as well as to its realization through the spontaneous and uninhibited lifestyle and practice associated with tantric adepts. The term may be used as a noun for the ultimate state itself, or as an adjective describing a state or condition as natural and uncontrived. In the context of the YOGINĪ tantras such as the HEVAJRATANTRA, the term sahaja is used to refer to the highest of four states of ecstasy—innate ecstasy (sahajānanda)—which can be gained through the visualized or actual practice of sexual yoga, and through which one comes to realize the mind's luminosity and natural purity. Early twentieth-century authors—beginning with the Bengali scholars and translators who first published studies on the collections of tantric verses—described what they called the sahajayāna ("path of sahaja") and the sahajiyās who followed it, although neither term is found in traditional Indian Buddhist literature. The Tibetan form, lhan skyes (short for lhan cig tu skyes pa) appears widely in the subsequent literature of MAHĀMUDRĀ.

sahajakleśāvaraṇa. (T. nyon sgrib lhan skyes; C. jusheng fannao zhang/jusheng huo; J. kushō no bonnōshō/kushō no waku; K. kusaeng pŏnnoe chang/kusaeng hok 俱生煩惱障/俱生惑). In Sanskrit, "innate afflictive obstructions," those obstructions (ĀVARAṆA) to liberation that derive from mistaken conceptions of self (ĀTMAN) that are generated and reinforced over many lifetimes. This type is in distinction to PARIKALPITAKLEŚĀVARAṆA (T. nyon sgrib kun btags) or "artificial afflictive obstructions," which are mistaken conceptions of self that are generated through the study of flawed philosophical systems or ideologies in the present lifetime. The latter are understood to be more easily abandoned than the sahajakleśāvaraṇa.

sahajātmagraha. (T. bdag 'dzin lhan skyes; C. jusheng wuming; J. kushō no mumyō; K. kusaeng mumyŏng 俱生無明). In Sanskrit, "innate conception of self," a term used to refer to the deep-seated conception of self that is maintained by all sentient beings from lifetime to lifetime. It is contrasted with the artificial conception of self (PARIKALPITĀTMAGRAHA), which is acquired during a human lifetime through the study of false tenet systems, such as those that assert the existence of a perduring self (ĀTMAN). Those on the path to enlightenment abandon the artificial conception of self more easily than they do the innate conception of self.

sahajāvidyā. (T. lhan cig skyes pa'i ma rig pa; C. jusheng wuming; J. kushō no mumyō; K. kusaeng mumyŏng 俱生無明). In Sanskrit, "innate ignorance," a term used to refer to the deep-seated ignorance that is maintained by sentient beings from lifetime to lifetime. It is contrasted with artificial ignorance (PARIKALPITĀVIDYĀ), the ignorance acquired during a human lifetime through the study of false tenet systems, such as those that assert the existence of a perduring self (ĀTMAN). Those on the path to enlightenment abandon the artificial ignorance more easily than the innate ignorance.

sahajayāna. (T. lhan skyes theg pa). In Sanskrit, "innate vehicle" or "spontaneous vehicle." See SAHAJA.

sahakāripratyaya. (T. lhan cig byed pa'i rkyen; C. zhuyuan; J. joen; K. choyŏn 助緣). In Sanskrit, the "cooperative condition," referring to those subsidiary conditions that must be present in order for an effect to be produced, such as the presence of heat and moisture for a seed to grow into a sprout. In the context of epistemology, sahakāripratyaya is the last of four types of conditions (PRATYAYA) that must be present in order for consciousness to occur: for example, in the case of the perception of a tree by a moment of visual consciousness (CAKṢURVIJÑĀNA), the prior moment of consciousness that leads to this visual consciousness is called the immediately antecedent condition (SAMANANTARAPRATYAYA), the tree is called the object

condition (ĀLAMBANAPRATYAYA), and the visual sense organ is called the predominant condition (ADHIPATIPRATYAYA); the cooperative condition would be the light that must be present in order to see.

sahāloka. (T. mi mjed kyi 'jig rten; C. suopo shijie; J. shaba sekai; K. saba segye 娑婆世界). In Sanskrit, lit. "world of endurance," in the MAHĀYĀNA, the name of the world system we inhabit where the buddha ŚĀKYAMUNI taught; the term may also be seen written as sahālokadhātu. The tradition offers at least two explanations for designating this realm as the sahāloka. First, it is called the "world of endurance" because of the suffering endured by the beings that populate it. Second, the Sanskrit term sahā can also mean "together with, conjointly," and in this sense the term is understood to indicate that in this realm karmic causes and their effects are inextricably bound together. There is a range of opinion concerning the extent of the sahā world. Some texts identify this land with the continent of JAMBUDVĪPA, some with all four continents of this world system, and some with the entire trichiliocosm (TRISĀHASRAMAHĀSĀHASRALOKADHĀTU). The sahāloka is the buddha-field (BUDDHAKṢETRA) of Śākyamuni, which is described as an impure field because it includes animals, ghosts, and hell denizens. In both the SADDHARMAPUṆḌARĪKASŪTRA and the VIMALAKĪRTINIRDEŚA, however, Śākyamuni indicates that while unenlightened beings may perceive it as a world of suffering and desire, the sahā world is in reality his pure buddha field, a fact that is fully perceived by those who have achieved enlightenment. The highest divinity (DEVA) in the sahāloka is BRAHMĀ, one of whose epithets is SAHĀṂPATI, "Lord of the Sahā World."

Sahāṃpati. (P. Sahampati; T. Mi mjed kyi bdag po; C. Suopo shijie zhu; J. Shabasekaishu; K. Saba segye chu 娑婆世界主). In Sanskrit, "Lord of the Sahā World," the epithet of a BRAHMĀ deity. The first concentration (DHYĀNA) of the realm of subtle materiality (RŪPADHĀTU; see RŪPĀVACARADHYĀNA) has three levels, called BRAHMAKĀYIKA, BRAHMAPUROHITA, and MAHĀBRAHMĀ. The most senior of the deities of this third and highest level within the first concentration is called Brahmā Sahāṃpati. He plays a crucial role in the inception of the Buddhist teaching (ŚĀSANA). After his enlightenment, the newly enlightened Buddha is said to have wondered whether there was anyone in this world who would be able to understand his teaching. Brahmā Sahāṃpati then appeared to him and implored him to teach, convincing him that there were persons "with little dust in their eyes" who would be able to understand his teachings. According to BUDDHAGHOSA, the Buddha had every intention to teach but feigned reluctance in order that Brahmā Sahāṃpati would make the request, knowing that if the most powerful divinity in the SAHĀLOKA implored the Buddha to teach, those who honored Brahmā would heed the Buddha's teachings. Brahmā Sahāṃpati also assured the Buddha that in their last lifetimes, none of the buddhas of the past had had a teacher other than the DHARMA they discovered themselves. According to some accounts, he is divinity not of the mahābrahmā realm but rather of the ŚUDDHĀVĀSA.

Sāhasrabhujasāhasranetrāvalokiteśvara. [alt. Sahasrabhujasahasranetrāvalokiteśvara] (T. Spyan ras gzigs phyag stong spyan stong; C. Qianshou Qianyan Guanyin; J. Senju Sengen Kannon; K. Ch'ŏnsu Ch'ŏnan Kwanŭm 千手千眼觀音). In Sanskrit, "Thousand-Armed and Thousand-Eyed AVALOKITEŚVARA"; one of the manifestations of the bodhisattva of compassion, Avalokiteśvara (C. GUANYIN). The iconographical representations of this manifestation are usually depicted in abbreviated form with forty arms, each of which has an eye on its palm, indicating its ability compassionately to see and offer assistance to suffering sentient beings. Every arm also holds a different instrument, such as an axe, a sword, a bow, an arrow, a staff, a bell, or blue, white, and purple lotuses, each symbolizing one of the bodhisattva's various skills in saving sentient beings. The forty arms and eyes work on behalf of the sentient beings in the twenty-five realms of existence, giving the bodhisattva a total of a thousand arms and eyes. The images also typically are depicted with eleven or twenty-seven heads, although images with five hundred heads are also found. The origin of this manifestation is uncertain; the prototype may be such Indian deities as Viṣṇu, INDRA, and Śiva, who are also sometimes depicted with multiple hands and eyes. Since no image of this form of the BODHISATTVA has been discovered in India proper, some scholars suggest that the form may have originated in Kashmir (See KASHMIR-GANDHĀRA) and thence spread north into Central and East Asia; this scenario is problematic, however, because the earliest such image found at DUNHUANG, the furthest Chinese outpost along the SILK ROAD, dates to 836, about two hundred years later than the first such image painted in China, which is said to have been made for the Tang emperor by an Indian monk sometime between 618 and 626. The Thousand-Armed and Thousand-Eyed Guanyin became popular in China through translations of the QIANSHOU JING ("Thousand Hands Sūtra"; *Nīlakaṇṭhakasūtra*) made between the mid-seventh and early-eighth centuries. Due to the great popularity of Bhagavaddharma's (fl. c. seventh century) early translation, which was rendered between 650 and 658, the Thousand-Armed and Thousand-Eyed Avalokiteśvara became identified specifically with Avalokiteśvara's manifestation as Great Compassion (C. Dabei; S. MAHĀKARUṆIKA), although the epithet is used also to refer to Avalokiteśvara more generally. The Guanyin cult was popular in Chang'an and Sichuan during the Tang period and became widespread throughout China by the Song period; this bodhisattva was subsequently worshipped widely in Korea, Japan, and Tibet, as well. The ritual of repentance offered to the bodhisattva was created by the TIANTAI monk ZHILI (960–1028); the ritual is still widely performed in Taiwan and China. By the twelfth century, the Thousand-Armed and Thousand-Eyed Guanyin also came to be identified with the legendary princess MIAOSHAN, who was so filial that she offered her own eyes to save her father's life. In Tibet, this

form of Avalokiteśvara is called Sāhasrabhuja-ekādaśamukha Avalokiteśvara (Spyan ras gzigs phyag stong zhal bcu gcig), with one thousand arms (often depicted in a fan formation) and eleven heads. According to a well-known story, the bodhisattva of compassion had vowed that if he ever gave up his commitment to suffering sentient beings and sought instead his own welfare, his head would break into ten pieces and his body into a thousand. In a moment of despair at the myriad sufferings of the world, his head and body exploded. The buddha AMITĀBHA put his body back together, crafting one thousand arms and ten heads, placing a duplicate of his own head at the top. This form of Avalokiteśvara is therefore known as, "one thousand arms and eleven heads" (phyag stong zhal bcu gcig).

Sahasrākṣa. (P. Sahassākkha; T. Mig stong can; C. Qianyan; J. Sengen; K. Ch'ŏnan 千眼). In Sanskrit, "One-Thousand Eyes," an epithet of INDRA. In Sanskrit and Pāli sources, Indra is known by several names, the most frequent being ŚAKRO DEVĀNĀM INDRAḤ (P. Sakko devānām indo), meaning "ŚAKRA, king of the gods." A number of Indra's various epithets are explained in one section of the Pāli SAṂYUTTANIKĀYA; there, the name "One-Thousand Eyes" (P. Sahassākkha) is explained by saying that in one instant Indra can consider one thousand different matters. The broader Indian religious tradition, from which Buddhism appropriated the divinity Indra, also has a number of stories explaining why Indra is called "One-Thousand Eyes." In the most popular of these stories, Indra seduces the wife of a famous seer (ṛṣi). The ṛṣi punishes Indra with a curse—causing one thousand vulvas (S. bhaga) to appear on his body. The ṛṣi is later persuaded to remove the curse and he turns each one of the vulvas into an eye.

sahā world. (S). See SAHĀLOKA.

Saichō. (最澄) (767–822). In Japanese, "Most Pure"; the monk traditionally recognized as the founder of the TENDAISHŪ in Japan; also known as Dengyō Daishi (Great Master Transmission of the Teachings). Although the exact dates and place of Saichō's birth remain a matter of debate, he is said to have been born to an immigrant Chinese family in Ōmi province east of HIEIZAN in 767. At age eleven, Saichō entered the local Kokubunji and studied under the monk Gyōhyō (722–797), a disciple of the émigré Chinese monk Daoxuan (702–766). In 785, Saichō received the full monastic precepts at the monastery of TŌDAIJI in Nara, after which he began a solitary retreat in a hermitage on Mt. Hiei. In 788, he built a permanent temple on the summit of Mt. Hiei. After Emperor Kanmu (r. 781–806) moved the capital to Kyōto in 794, the political significance of the Mt. Hiei community and thus Saichō seem to have attracted the attention of the emperor. In 797, Saichō was appointed a court priest (naigubu), and in 802 he was invited to the monastery of Takaosanji to participate in a lecture retreat, where he discussed the writings of the eminent Chinese monk TIANTAI ZHIYI on the SADDHARMAPUṆḌARĪKASŪTRA. Saichō and his disciple GISHIN received permission to travel to China in order to acquire Tiantai texts. In 804, they went to the monastery or Guoqingsi on Mt. Tiantai and studied under Daosui (d.u.) and Xingman (d.u.), disciples of the eminent Chinese Tiantai monk JINGQI ZHANRAN. Later, they are also known to have received BODHISATTVA precepts (bosatsukai) from Daosui at Longxingsi. He is also said to have received tantric initiation into the KONGŌKAI and TAIZŌKAI (RYŌBU) MAṆḌALAS from Shunxiao (d.u.). After nine and a half months in China, Saichō returned to Japan the next year with numerous texts, which he catalogued in his *Esshūroku*. Emperor Kanmu, who had been ill, asked Saichō to perform the esoteric rituals that he had brought back from China as a therapeutic measure. Saichō received permission to establish the Tendai sect and successfully petitioned for two Tendai monks to be ordained each year, one for doctrinal study and one to perform esoteric rituals. After the death of Kanmu in 806, little is known of Saichō's activities. In 810, he delivered a series of lectures at Mt. Hiei on the *Saddharmapuṇḍarīkasūtra*, the SUVARṆAPRABHĀSOTTAMASŪTRA, and the RENWANG JING ("Scripture for Humane Kings"). In 812, Saichō also constructed a meditation hall known as the Hokkezanmaidō. Later, Saichō is also said to have received kongōkai initiation from KŪKAI at the latter's temple Takaosanji, but their relations soured after a close disciple of Saichō's left Saichō for Kūkai. Their already tenuous relationship was sundered completely when Saichō requested a tantric initiation from Kūkai, who replied that Saichō would need to study for three years with Kūkai first. Saichō then engaged the eminent Hossōshū (FAXIANG ZONG) monk Tokuitsu (d.u.) in a prolonged debate concerning the buddha-nature (see BUDDHADHĀTU, FOXING) and Tendai doctrines, such as original enlightenment (see HONGAKU). In response to Tokuitsu's treatises *Busshōshō* and *Chūhengikyō*, Saichō composed his *Shōgonjikkyō*, *Hokke kowaku*, and *Shugo kokkaishō*. Also at this time, Saichō began a prolonged campaign to have an independent MAHĀYĀNA ordination platform established at Mt. Hiei. He argued that the bodhisattva precepts as set forth in the FANWANG JING, traditionally seen as complementary to monastic ordination, should instead replace them. He argued that the Japanese were spiritually mature and therefore could dispense entirely with the HĪNAYĀNA monastic precepts and only take the Mahāyāna bodhisattva precepts. His petitions were repeatedly denied, but permission to establish the Mahāyāna ordination platform at Mt. Hiei was granted a week after his death. Before his death Saichō also composed the *Hokke shūku* and appointed Gishin as his successor.

Saidaiji. (西大寺). In Japanese, "Great Monastery to the West"; one of the seven major monasteries in the ancient Japanese capital of Nara (J. NANTO SHICHIDAIJI); the headquarters of the True Word Precepts (SHINGON-Ritsu) school in Japan. As its name implies, Saidaiji is located in the western part of Nara and was first constructed in 765 in accordance with a decree from SHŌTOKU TAISHI (572–622). The monastery originally had

two main halls, one dedicated to the buddha BHAIṢAJYAGURU and the other to the bodhisattva MAITREYA. After conflagrations in 846 and 860, the monastery began to decline, but revived when Eison (Kōshō bosatsu; 1201–1290) moved there in 1235 and made it the center of his movement to restore the VINAYA. After another major fire in 1502, the Tokugawa Shogunate supported a rebuilding project. The monastery enshrines four bronze statues of the four heavenly kings (CATURMAHĀRĀJA), dating to the Nara (710–794) period. The main hall is dominated by a statue of ŚĀKYAMUNI said to have been carved cooperatively by eleven sculptors in 1249. To its right is a statue of MAÑJUŚRĪ riding a lion, to its left, a statue of Maitreya dating from 1322.

Saigyō. (西行) (1118–1190). A Japanese Buddhist poet of the late Heian and early Kamakura periods, especially famous for his many waka poems, a traditional style of Japanese poetry; his dharma name literally means "Traveling West," presumably referring to the direction of the PURE LAND of AMITĀBHA. Born as Satō Norikiyo into a family of the warrior class, he served during his youth as a guard for the retired emperor Toba (r. 1107–1123) before becoming a monk at the age of twenty-two. Although relatively little is known about his life, Saigyō seems to have traveled around the country on pilgrimage before eventually settling in relative seclusion on KŌYASAN, the headquarters of the SHINGONSHŪ. Virtually all of his poems are written in the thirty-one-syllable waka form favored at court and cover most of the traditional topics addressed in such poems, including travel, reclusion, cherry blossoms, and the beauty of the moon in the night sky. His poetry also reflects the desolation and despondency that Japanese of his time may have felt was inevitable during the degenerate age of the dharma (J. mappō; C. MOFA). Saigyō's *Sankashū* ("Mountain Home Collection") includes some fifteen hundred poems written in the course of his career; ninety-four of these poems were included in the imperially sponsored waka collection, the *Shinkokinshū* ("New Collection of Ancient and Modern Times"), compiled in 1205, making him one of Japan's most renowned and influential poets.

śaikṣa. (P. sekha; T. slob pa; C. xueren; J. gakunin; K. hagin 學人). In Sanskrit, "neophyte," "acolyte," one who is undergoing religious training. The path to enlightenment is often divided into the path of training and the path of no further training (AŚAIKṢA), with the former including (1) the seven paths of enterer and abider in the stages of the stream-enterer, once-returner, and nonreturner, and the enterer in the stage of the arhat; and (2) the paths of accumulation, preparation, vision, and meditation. The adept path where no further training is necessary (AŚAIKṢAMĀRGA) is the state of an ARHAT or a buddha.

śaikṣadharma. (P. sekhiyadhamma; T. bslabs pa'i chos; C. zhongxue; J. shugaku; K. chunghak 衆學). In Sanskrit, lit., "qualities in which to be trained"; in the PRĀTIMOKṢA, a large set of rules to be followed in the course of daily monastic life, the violation of which entails no sanction beyond the need for confession. They are for the most part items of etiquette with regard to dress, accepting and eating food, teaching the dharma, and using the toilet. The number of these precepts varies by VINAYA recension, with the Chinese MAHĀSĀṂGHIKA having sixty-six and the Chinese SARVĀSTIVĀDA having 113. In the Pāli vinaya, the term refers to a group of seventy-five precepts found in the *Pāṭimokkha* divided into seven sections. The first two rules concern proper dress. The next twenty-four rules concern the proper way to enter villages and inhabited areas and interact with the laypeople there. A set of thirty rules concerns the proper way to take meals. The next fifteen rules concern the preaching of dharma, and the last three rules concern the use of the toilet. Śaikṣa rules are the same for monks and nuns. One who knowingly transgresses these rules is guilty of an "offense of wrongdoing" (S. DUṢKṚTA; P. dukkata).

Sajip. (四集). In Korean, "Fourfold Collection," a compilation of three Chinese CHAN and one Korean SŎN texts that has been used in Korean Buddhist seminaries (kangwŏn) since at least the eighteenth century as the core of the monastic curriculum. The four books in the collection provide monks and nuns with, first, a systematic overview of mature Korean Buddhist thought and soteriology, focusing on the accommodation between Buddhist doctrinal study (KYO)—specifically HUAYAN (K. Hwaŏm) thought—and CHAN (Sŏn) meditation practice and different schemata of awakening (C. WU; K. o) and cultivation (C. xiu; K. su); and second, extensive grounding in the theory and mode of practice of "questioning meditation" (K. kanhwa Sŏn; C. KANHUA CHAN), the predominant form of meditative practice in Korea since the middle of the Koryŏ dynasty. The books of the "Fourfold Collection" are, in their traditional order: (1) The "Letters of Dahui" (C. DAHUI PUJUE CHANSHI SHU, better known in Korea by its abbreviated title *Sŏjang*, C. SHUZHUANG), a collection of the correspondence between the Chinese LINJI master DAHUI ZONGGAO (1089–1163) and various of his lay and ordained students, which describe the specifics of kanhua Chan meditation; (2) The "Chan Prolegomenon" (CHANYUAN ZHUQUANJI DUXU, known in Korea by its abbreviated title of TOSŎ), by GUIFENG ZONGMI (780–841), which provides an overarching hermeneutical framework—drawing on a series of polarities such as sudden and gradual, emptiness and self-nature, true and provisional—through which to understand the relationships among the teachings of representative traditions of Chan and the various doctrinal traditions, leading to a vision of Buddhism that reconciles the scholastic schools and the Chan schools; (3) The "Essentials of Chan" (GAOFENG HESHANG CHANYAO, typically known in Korea as the SŎNYO), by GAOFENG YUANMIAO (1238–1295), which Koreans have considered one of the clearest expositions of kanhwa Sŏn in all of Sŏn literature and use as a primer on the technique; (4) The "Excerpts from the 'Dharma Collection and Special Practice Record' with Personal Notes" (PŎPCHIP PYŎRHAENGNOK CHŎRYO PYŎNGIP SAGI, usually known by its abbreviated title

CHŎRYO) by POJO CHINUL (1158–1210), which offers an exhaustive examination of the question of whether enlightenment is achieved via a sudden or gradual process of soteriological development, advocating as the optimal stratagem the approach of sudden awakening followed by gradual cultivation (K. tono chŏmsu; C. DUNWU JIANXIU), and first introducing to Korea the kanhwa Sŏn technique; through this examination, Chinul specifically correlates the path as described in the doctrinal teachings of Buddhism (Kyo) with the practice of Sŏn, an approach that subsequently becomes emblematic of Korean Buddhism. The four books of the *Sajip* are thus intended to provide monks and nuns with substantial grounding in the theory and practice of kanhwa Sŏn prior to their beginning intensive training in the meditation hall (Sŏnbang).

sākāra. (T. rnam bcas; C. youxiang; J. usō; K. yusang 有相). In Sanskrit, lit. "having aspects," a term used in Buddhist epistemological accounts of perception, which asserts that what is perceived in sensory perception is not the object itself, but the "aspect" (ĀKĀRA) of the object. Buddhist philosophical schools differ as to whether or not such an "aspect" is required in order for sense perception to occur. VAIBHĀṢIKAS are "non-aspectarians" (NIRĀKĀRAVĀDA), who hold that mind knows objects directly; SAUTRĀNTIKAS are "aspectarians" (SĀKĀRAVĀDA), who say mind knows its object through an image of the object that is taken into the mind. YOGĀCĀRA also holds that the mind knows its object through an image. However, there is an internal debate within the school as to whether the appearance is a true aspect (satyākāra) or a false aspect (alīkākāra). In the late eighth century in north India, in the MADHYAMAKĀLAṂKĀRA of ŚĀNTARAKṢITA, and the commentaries on his work by his students KAMALAŚĪLA and HARIBHADRA, this terminology was central in a discussion of how the TATHĀGATA can be all-knowing (literally, "knowing all aspects," SARVĀKĀRAJÑATĀ) while possessing ADVAYAJÑĀNA (nondual knowledge). See ĀKĀRA.

sākāravāda. (T. rnam pa dang bcas par smra ba). In Sanskrit, "proponent of having aspects," or "aspectarians"; a position in Buddhist epistemology, according to which sensory perception is not of the object itself but of an "aspect" (ĀKĀRA) of the object. See ĀKĀRA; SĀKĀRA.

Sāketa. (T. Gnas bcas; C. Suozhiduo cheng; J. Shagita jō; K. Sagida sŏng 娑枳多城). In Sanskrit and Pāli, a town in KOŚALA regarded during the Buddha's time as one of the six great cities of India, said to be located six or seven leagues (YOJANA) from ŚRĀVASTĪ. The other cities are Kauśāmbī, Campā, Vārāṇasī, Śrāvastī, and RĀJAGṚHA. The city has been identified by some with Ayodhyā. The Buddha and his disciples visited the city often; it is the setting for the *Sāketa Jātaka* and the *Sāketasutta*.

Sakkapañhasutta. (C. Di-Shi suowen jing; J. Taishaku shomongyō; K. Che-Sŏk somun kyŏng 帝釋所問經). In Pāli, "Discourse on Sakka's Question"; the twenty-first sutta of the DĪGHANIKĀYA (there are three separate recensions in Chinese: an independent sūtra translated by FAXIAN; a SARVĀSTIVĀDA recension that appears as the fourteenth sūtra in the Chinese translation of the DĪRGHĀGAMA; and a SARVĀSTIVĀDA recension that appears as the 134th sūtra in the Chinese translation of the MADHYAMĀGAMA). The sūtra is preached to ŚAKRA (P. Sakka), king of the gods, by the Buddha while he dwelt in the Indraśāla [alt. Indraśaila] (P. Indasāla) cave near RĀJAGṚHA. Śakra inquired as to why there was so much hostility between beings. The Buddha explained that hostility is caused by selfishness; that selfishness is caused by likes and dislikes, and that likes and dislikes, in turn, are caused by desire. Desire is produced by mental preoccupations (S. VITARKA, P. vitakka) born from the proliferation of concepts (S. PRAPAÑCA, P. papañca) that gives rise to SAṂSĀRA. The Buddha then delineates a practice to be pursued and a practice to be abandoned for subduing this conceptual proliferation.

Śakra. (P. Sakka; T. Brgya byin; C. Di-Shi; J. Taishaku; K. Che-Sŏk 帝釋). Sanskrit name of a divinity who is often identified with the Vedic god INDRA (with whom he shares many epithets), although it is perhaps more accurate to describe him as a Buddhist (and less bellicose) version of Indra. Typically described in Buddhist texts by his full name and title as "Śakra, the king of the gods" (ŚAKRO DEVĀNĀM INDRAḤ), he is the divinity (DEVA) who appears most regularly in Buddhist texts. Śakra is chief of the gods of the heaven of the thirty-three (TRĀYASTRIṂŚA), located on the summit of Mount SUMERU. As such, he is a god of great power and long life, but is also subject to death and rebirth; the Buddha details in various discourses the specific virtues that result in rebirth as Śakra. In both the Pāli canon and the MAHĀYĀNA sūtras, Śakra is depicted as the most devoted of the divine followers of the Buddha, descending from his heaven to listen to the Buddha's teachings and to ask him questions (and according to some accounts, eventually achieving the state of stream-enterer), and rendering all manner of assistance to the Buddha and his followers. In the case of the Buddha, this assistance was extended prior to his achievement of buddhahood, both in his previous lives (as in the story of Vessantara in the VESSANTARA JĀTAKA) and in his last lifetime as Prince SIDDHĀRTHA; when the prince cuts off his royal locks and throws them into the sky, proclaiming that he will achieve buddhahood if his locks remain there, it is Śakra who catches them and installs them in a shrine in the heaven of the thirty-three. When the Buddha later visited the heaven of the thirty-three to teach the ABHIDHARMA to his mother MĀYĀ (who had been reborn there), Śakra provided the magnificent ladder for his celebrated descent to JAMBUDVĪPA that took place at SĀṂKĀŚYA. When the Buddha was sick with dysentery near the end of his life, Śakra carried his chamber pot. Śakra often descends to earth disguised as a brāhmaṇa in order to test the virtue of the Buddha's disciples, both monastic and lay, offering all manner of miraculous boons to those who pass

the test. In the Pāli canon, a section of the SAṂYUTTANIKĀYA consists of twenty-five short suttas devoted to him.

sakṛdāgāmin. (P. sakadāgāmi; T. lan gcig phyir 'ong ba; C. yilai/situohan; J. ichirai/shidagon; K. illae/sadaham 一來/斯陀含). In Sanskrit, lit. "once-returner"; the second (in ascending order) of the four grades of noble person (ĀRYAPUDGALA), the others being the SROTAĀPANNA or "stream-enterer" (the first grade), the ANĀGĀMIN or "nonreturner" (the next grade above sakṛdāgāmin), and the ARHAT or "worthy one" (the highest grade). The sakṛdāgāmin is one who has completely put aside the first three of ten fetters (SAṂYOJANA) that bind one to the cycle of rebirth; namely, (1) belief in the existence of a self in relation to the body (SATKĀYADṚṢṬI), (2) doubt about the efficacy of the path (VICIKITSĀ), (3) belief in the efficacy of rites and rituals (ŚĪLAVRATAPARĀMARŚA); and in addition, he has made progress in substantially overcoming the fourth and fifth fetters, namely, (4) sensual craving (KĀMARĀGA), and (5) malice (VYĀPĀDA). Having put aside the first three fetters completely and mitigated the fourth and fifth fetters, the sakṛdāgāmin is destined to be reborn in the sensuous realm (KĀMADHĀTU) at most one more time, although he may be reborn in the realm of subtle materiality (RŪPADHĀTU) or the immaterial realm (ĀRŪPYADHĀTU) before attaining NIRVĀṆA. Both SAKṚDĀGĀMIPHALAPRATIPANNAKA and SAKṚDĀGĀMIPHALASTHA are once-returners. The sakṛdāgāmin is also one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). In this context sakṛdāgāmin is the name for candidates (pratipannaka) for the fruition of sakṛdāgāmin SAKṚDĀGĀMIPHALAPRATIPANNAKA). They may be either a follower through faith (ŚRADDHĀNUSĀRIN) or a follower through doctrine (DHARMĀNUSĀRIN) with either dull (MṚDVINDRIYA) or keen faculties (TĪKṢṆENDRIYA). In all cases they are those who, before reaching the path of vision (DARŚANAMĀRGA), have eliminated six or seven of the levels of afflictions (KLEŚA) that cause rebirth in the sensuous realm (KĀMADHĀTU) that the ordinary (LAUKIKA) path of meditation (BHĀVANĀMĀRGA) removes, but they will not have eliminated the eighth or ninth level. Were they to have done so, they would be called candidates for the third fruit of nonreturner (ANĀGĀMIPHALAPRATIPANNAKA).

sakṛdāgāmiphalapratipannaka. (P. sakadāgāmimagga; T. phyir 'ong zhugs pa; C. yilai xiang; J. ichiraikō; K. illae hyang 一來向). In Sanskrit, candidate for the fruit of once-returner. If they are VĪTARĀGAPŪRVIN (those who have already eliminated afflictions (KLEŚA) associated with the sensuous realm prior to reaching the path of vision) and ānupūrvin (those who reach the four fruits of the noble path in a series), they are SROTAĀPANNAPHALASTHA. See SAKṚDĀGĀMIPHALASTHA.

sakṛdāgāmiphalastha. (P. sakadāgāmiphala; T. phyir 'ong 'bras gnas; C. zheng yilai guo; J. shōichiraika; K. chŭng illae kwa 證一來果). In Sanskrit, "one who has reached, or is the recipient of, the fruit of once-returner"; this term is paired with the SAKṚDĀGĀMIPHALAPRATIPANNAKA, one who is a candidate for the fruit of once-returner. Both refer to the "once-returner" (SAKṚDĀGĀMIN), one of the four types of noble persons (ĀRYA); the sakṛdāgāmiphalapratipannaka has, however, only reached the ĀNANTARYAMĀRGA (unimpeded path), while the sakṛdāgāmiphalastha has reached the VIMUKTIMĀRGA (path of freedom). In general, according to the ABHIDHARMAKOŚABHĀṢYA, a noble person reaches the goal of ARHAT by becoming free of all the afflictions (KLEŚA) of the three realms, from the sensuous realm to the BHAVĀGRA, the highest level of the immaterial realm. There are nine levels to the three realms: the level of the sensous realm is counted as one, and each of the four meditative absorptions (DHYĀNA) of the realms of both subtle materiality and and immateriality are counted as one each. The path of vision (DARŚANAMĀRGA) has sixteen instants, eight ānantaryamārga and eight vimuktimārga. The first four instants (consisting of two pairs of ānantaryamārga and vimuktimārga) are focused on the truth of suffering as it pertains to the sensuous realm, and then to the remaining eight levels of the two upper realms. The second four instants are focused on the truth of origination as it pertains to the sensuous realm, and then to the remaining eight levels of the two upper realms (see DHARMAKṢĀNTI). In this way, during sixteen instants that systematize the path of vision, all the afflictions to be eliminated by the path of vision are removed. The sharpest people (TĪKṢṆENDRIYA), with the finest store of previous actions, like the Buddha, know all three realms are equally conditioned by suffering (SAṂSKĀRADUḤKHATĀ) and feel disgust for all of it equally as SAṂSĀRA; they enter into the path of vision, eliminate the fetters, and awaken as arhats. Others have gradations of good fortune, ranging from those who will reach the final goal after death, to those who spend many lives taking rebirth in different heavens in the upper two realms before finally reaching the goal of arhatship. Those whose prior store of actions is such that, prior to reaching the path of vision, they have eliminated all, some, or none of the nine sets of afflictions that specifically cause rebirth in the sensuous realm reach the intermediate fruits of nonreturner, once-returner, and stream-enterer, respectively, when they reach the path of vision. The number of births they will take, and the places they take them, give rise to an āryasaṃgha made up of twenty different persons (VIṂŚATIPRABHEDASAṂGHA). In the Mahāyāna didactic reformulations of ABHIDHARMA, sakṛdāgāmin is a name for celestial bodhisattvas who are in their last life before taking birth in the TUṢITA heaven prior to becoming complete and perfect buddhas (samyaksaṃbuddha).

Śakro devānām indraḥ. (P. Sakko devānām indo). In Sanskrit, "ŚAKRA, king of the gods." See ŚAKRA, INDRA.

Śakulā. (P. Sakulā; C. Shejuli; J. Shakuri; K. Saguri 奢拘梨). An eminent ARHAT nun declared by the Buddha as foremost among his nun disciples in mastery of the divine eye (S. DIVYACAKṢUS, P. dibbacakkhu). She was the daughter of a brāhmaṇa family in the city of ŚRĀVASTĪ (P. Sāvatthi),

who became a lay follower of the Buddha when she witnessed him accept the gift of the JETAVANA grove offered by ANĀTHAPIṆḌADA. Once, while listening to an arhat monk preach, she became overwhelmed with a sense of the transience of worldly things and joined the order as a nun. Through cultivating insight, she eventually attained arhatship. One of the extraordinary powers (ABHIJÑĀ) she developed as a consequence of her practice was the divine eye, or the ability to perceive the past lives of other beings and to understand the karmic consequences of the actions that led them from one existence to the next. It was because of her exceptional ability that she was deemed foremost in this regard. During the time of Padmottara (P. Padumuttara) Buddha, she was the half-sister of the Buddha and overheard one of his nun disciples being called foremost in mastery of the divine eye. It was at that time that she resolved to attain that distinction during the dispensation of a future buddha.

Śākya. (P. Sākiya; T. Shākya; C. Shijia; J. Shaka; K. Sŏkka; V. Thích ca 釋迦). Name of an ancient north Indian tribe that flourished in the southern foothills of the Himālayas near what is now the border between Nepal and India. This tribe produced the historical buddha, called either GAUTAMA or ŚĀKYAMUNI, whose name means "Sage of the Śākya Clan." Unfortunately virtually no sources referring to the Śākyas can be found outside the Buddhist tradition. The origin of the name is uncertain, being variously described as synonymous with the Sanskrit term śākya, meaning "able," or as a derivative of the noun śāka, a kind of tree used by this clan in construction. Texts describe this clan as ruled by KṢATRIYAS, the military or administrative caste of the Indian social system. At the time of the Buddha, the Śākyas were ruled by his father, King ŚUDDHODANA. The Śākyas made KAPILAVASTU the capital of their region. Both the MAHĀVASTU and the BUDDHACARITA name the Śākyas as descendants of the legendary solar king Ikṣvāku; the ultimate progenitor of the Śākyas was MAHĀSAṂMATA, the first king of the present world system. In the time of the Buddha, the Śākyas, although they were self-governing, were subjects of the neighboring kingdom of KOŚALA. According to various accounts, VIRŪḌHAKA (P. Viḍūḍabha), the king of KOŚALA, annexed the territory of the Śākyas and killed most of its inhabitants after they insulted him by revealing that his mother, whom they had provided as a bride to his father PRASENAJIT, was a servant. Prior to their demise, the Buddha himself is said to have dissuaded Virūḍhaka from invading the territory of the Śākyas. In East Asian Buddhism after the fourth century CE, monks and nuns traditionally abandoned their family surnames and adopted instead the Buddha's clan name Śākya (C. Shi); see SHI.

śākyabhikṣu. (P. sākiyabhikkhu or sakkabhikkhu; T. shākya dge slong; C. shijia seng; J. shakasō; K. sŏkka sŭng 釋迦僧). Literally "ŚĀKYA monk," a term for a Buddhist monk that appears most frequently in Buddhist donor inscriptions, but also occasionally in non-Buddhist Indian sources. Śākya refers to the northern Indian clan into which was born the historical buddha, who is thus known as ŚĀKYAMUNI, or "Sage of the Śākya Clan." In its most general use, the term refers to any Buddhist monk, in distinction to mendicants of other Indian religious traditions, such as the JAINA. This figurative use of the term Śākya—i.e., all monks as members of the Śākya clan—is common in Buddhist texts. Often monks are described as kinsmen or sons of the Buddha or the Śākyas. In its more specific use, śākyabhikṣu refers to those monks who, like the Buddha, actually belonged to the Śākya clan. Some scholars have argued that, in the Indian context, the term śākyabhikṣu was used specifically and exclusively by MAHĀYĀNA monks. Many East Asian monastic traditions use their pronunciations of the Sinographic transcription of the name Śākya as the "clan name" for all their ordained members (see SHI).

Śākyamuni. (P. Sakkamuni; T. Shākya thub pa; C. Shijiamouni; J. Shakamuni; K. Sŏkkamoni 釋迦牟尼). In Sanskrit, "Sage of the ŚĀKYA Clan," one of the most common epithets of GAUTAMA Buddha, especially in the MAHĀYĀNA traditions, where the name ŚĀKYAMUNI is used to distinguish the historical buddha from the myriad other buddhas who appear in the SŪTRAS. The Śākyas were a tribe in northern India into which was born SIDDHĀRTHA GAUTAMA, the man who would become the historical buddha. According to the texts, the Śākya clan was made up of KṢATRIYAS, warriors or political administrators in the Indian caste system. The Śākya clan flourished in the foothills of the Himālayas, near the border between present-day Nepal and India. Following the tradition's own model, which did not seek to provide a single and seamless biography of Gautama or Śākyamuni until centuries after his death, this dictionary narrates the events of the life of the Buddha in separate entries about his previous lives, his teachings, his disciples, and the places he visited over the course of his forty-five years of preaching the dharma. In India, accounts of events in the life of the Buddha first appeared in VINAYA materials, such as the Pāli MAHĀVAGGA or the LOKOTTARAVĀDA school's MAHĀVASTU. Among the Pāli SUTTAS, one of the most detailed accounts of the Buddha's quest for enlightenment occurs in the ARIYAPARIYESANĀSUTTA. It is noteworthy that many of the most familiar events in the Buddha's life are absent in some of the early accounts: the miraculous conception and birth; the death of his mother, Queen MĀYĀ; his sheltered youth; the four chariot rides outside the palace where he beholds the four portents (CATURNIMITTA); his departure from the palace; and his abandonment of his wife, YAŚODHARĀ, and his newborn son, RĀHULA. Those stories appear much later, in works like AŚVAGHOṢA's beloved verse narrative, the BUDDHACARITA, from the second century CE; the SARVĀSTIVĀDA school's third- or fourth-century CE LALITAVISTARA; and the NIDĀNAKATHĀ, the first biography of the Buddha in Pāli, attributed to BUDDHAGHOSA in the fifth century CE, some eight centuries after the Buddha's passing. Even in that later biography, however,

the "life of the Buddha" ends with ANĀTHAPIṆḌADA's gift of JETAVANA grove to the Buddha, twenty years after the Buddha's enlightenment and twenty-five years before his death. Other biographical accounts end even earlier, with the conversion of ŚĀRIPUTRA and MAHĀMAUDGALYĀYANA. Indeed, Indian Buddhist literature devotes more attention to the lives of previous buddhas and to the former lives (JĀTAKA) of Gautama or Śākyamuni than they do to biographies of his final lifetime (when biography is taken to refer to a chronological account from birth to death). And even there, the tradition takes pains to demonstrate the consistency of the events of his life with those of previous buddhas; in fact, all buddhas are said to perform the same eight or twelve deeds (see BAXIANG; TWELVE DEEDS OF A BUDDHA). The momentous events of his birth, renunciation, enlightenment under the BODHI TREE, and first turning of the wheel of the dharma (DHARMACAKRAPRAVARTANA) are described in detail in a range of works, and particular attention is given to his death, in both the Pāli MAHĀPARINIBBANASUTTA and the Sanskrit MAHĀPARINIRVĀṆASŪTRA. And all traditions, whether MAINSTREAM BUDDHIST SCHOOLS or the Mahāyāna, are deeply concerned with the question of the location of the Buddha after his passage into PARINIRVĀṆA.

Śākyaprabha. (T. Shākya 'od). (d.u.) Medieval Indian master of the VINAYA, renowned in Tibet, together with GUṆAPRABHA, as one of the "two supreme ones" (mchog gnyis). Apparently from KASHMIR, he was an expert in the MŪLASARVĀSTIVĀDA VINAYA. He is best known for his work *Śrāmaṇeratriśatakakārikā* ("Three Hundred Verses on the Novice"), to which he wrote an autocommentary entitled *Prabhāvatī*.

Śākyaśrībhadra. (T. Shākya shrī) (1127–1225). Also known as Śākyaśrī, a monk and scholar from KASHMIR who played an important role in the later dissemination (PHYI DAR) of Buddhism in Tibet, especially for the SA SKYA sect of Tibetan Buddhism. He served as abbot at both NĀLANDĀ and VIKRAMAŚĪLA monasteries. As the last abbot of Vikramaśīla monastery, he witnessed its destruction by Muslim troops. Declaring that Buddhism had been destroyed in India, he traveled to Tibet in 1204 (at the age of seventy-seven, if his birth year of 1127 is accurate) at the invitation of the Tibetan translator Khro phu lo tsā ba, in the company of nine Indian and Nepalese paṇḍitas. There, he gave teachings on PRAMĀṆA, ABHIDHARMA, VINAYA, the ABHISAMAYĀLAṂKĀRA, MADHYAMAKA, TANTRA, and Sanskrit grammar and poetics. His most famous Tibetan disciple was SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN, whom he ordained as a BHIKṢU in 1208. It is said that Śākyaśrībhadra gave him the name Sa skya Paṇḍita ("Scholar from Sa skya") because of his ability to spontaneously translate Tibetan into Sanskrit. The two worked together on a new translation of DHARMAKĪRTI's PRAMĀṆAVĀRTTIKA, marking the beginning of Sa skya Paṇḍita's influence in the field of pramāṇa. Śākyaśrībhadra's ordination lineage, known as the Kha che lugs, or "Kashmiri system," would be adopted by the GSAR MA sects. Śākyaśrībhadra gave teachings at many monasteries in central and western Tibet, ordained many monks, translated Sanskrit texts, and established several monasteries. While at BSAM YAS, he discovered a manuscript of the GUHYAGARBHATANTRA and vouched for its authenticity. He is also credited with providing the Tibetans with a more accurate chronology of the life of the Buddha. In 1212, he consecrated a great statue of MAITREYA at Khro pu. After ten years in Tibet, he returned to his native Kashmir where he spent the last decade of his life. He is often referred to in Tibetan simply as Kha che paṇ chen, the "great paṇḍita from Kashmir."

śāla. (P. sāla; T. sā la; C. shaluoshu; J. saraju/sharaju; K. sarasu 沙羅樹). In Sanskrit, the "sal" tree (Shorea robusta, [alt. Vatica robusta]); a species of tree native to South Asia, which figures prominently in the Buddhist tradition. In India, the tree grows upwards of one hundred feet in height and provides both timber and fragrant resin, which is burned for incense. In several of his discourses, the Buddha uses the growth of the śāla tree as an analogy for the development of wholesome qualities (KUŚALA). This tree also is particularly significant in Buddhist hagiography because it was under this type of tree that the Buddha was born and died. Queen MĀYĀ, the Buddha's mother, is said to have given birth to the prince while clinging for support to the branches of a śāla tree that had bent itself down to help her. The Buddha chose a grove of śāla trees near the town of KUŚINAGARĪ as the site of his PARINIRVĀṆA. Different versions of the Buddha's demise represent these trees in various ways. One version says that the Buddha laid down between twin śāla trees and passed away. Another version says that the Buddha's deathbed was surrounded by pairs of śāla trees—two in each of the four cardinal directions—and at the moment of his death these trees blossomed out of season, rained petals upon him, and their trunks turned white. See also SIKU.

Sāleyyakasutta. In Pāli, the "Discourse to the Sāleyyakas"; the forty-first sutta contained in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears, but without title, in the Chinese translation of the SAṂYUKTĀGAMA); preached by the Buddha to a group of brāhmaṇa householders at the town of Sālā in the Kosala (S. KOŚALA) country. The Buddha describes for them the ten nonvirtuous actions that lead to unhappiness and unfortunate rebirths and the ten virtuous actions that lead to happiness and fortunate rebirths (see KARMAPATHA). The ten nonvirtuous actions are divided into three kinds of bodily misdeed: (1) killing, (2) stealing, (3) and sexual misconduct; four kinds of verbal misdeed: (4) lying, (5) divisive speech, (6) harsh speech, and (7) senseless prattle; and three kinds of mental misdeed: (8) covetousness, (9) harmful intent, and (10) wrong views. The ten virtuous actions are explained as the abstaining from the ten virtuous actions. The Buddha then describes the fortunate rebirths among humans and divinities that may be expected by those who perform virtuous deeds.

Śālistambasūtra. (T. Sā lu ljang pa'i mdo; C. Daogan jing; J. Tōkangyō; K. Togan kyŏng 稻稈經). In Sanskrit, the "Rice Seedling Sūtra," a MAHĀYĀNA SŪTRA noted for its detailed presentation of the doctrine of dependent origination (PRATĪTYASAMUTPĀDA). The sūtra begins with the Buddha gazing at a rice seedling and then declaring, "Monks, he who sees dependent origination sees the dharma. He who sees the dharma sees the Buddha." ŚĀRIPUTRA asks MAITREYA what this statement means, and the majority of the sūtra is devoted to his answer. This sūtra provides one of the most detailed treatments of the doctrine of dependent origination found anywhere in the scriptural literature. The doctrine had been set forth in various ways in previous sūtras, and the Śālistambasūtra appears to be something of a digest of these various presentations. The sūtra is widely quoted by Indian commentators in their own expositions of dependent origination, including MADHYAMAKA authors, although the sūtra does not connect dependent origination with emptiness (ŚŪNYATĀ). Indeed, the text is so widely quoted that, although the sūtra is lost in the original Sanskrit, approximately ninety percent of the Sanskrit text can be recovered from citations of it in various Indian treatises.

Sallekhasutta. (C. Zhouna wenjian jing; J. Shūna monkengyō; K. Chuna mun'gyŏn kyŏng 周那問見經). In Pāli, "Discourse on Effacement," the eighth sutta in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as the ninety-first sūtra in the Chinese translation of the MADHYAMĀGAMA, as well as a recension of unidentified affiliation in the EKOTTARĀGAMA); preached by the Buddha to Mahācunda, a master of meditative absorption (P. JHĀNA, S. DHYĀNA) in the JETAVANA grove in the town of Sāvatthi (S. ŚRĀVASTĪ). The Buddha explains that pride and speculative views regarding self and the nature of the world cannot be overcome by mere meditative absorption, but only through insight into the Buddhist truths (insight that implicitly will lead to stream-entry). Furthermore, true austerity is nothing other than refraining from forty-four types of unwholesome qualities; one mired in sensuality cannot help bring another to purity.

samādhi. (T. ting nge 'dzin; C. sanmei; J. sanmai; K. sammae 三昧). In Sanskrit, "concentration"; a foundational term in Buddhist meditation theory and practice, which is related to the ability to establish and maintain one-pointedness of mind (CITTAIKĀGRATĀ) on a specific object of concentration. The SARVĀSTIVĀDA school of ABHIDHARMA and the YOGĀCĀRA school list samādhi as one of a group of five determinative (VINIYATA) mental concomitants (CAITTA), whose function is to aid the mind in ascertaining or determining its object. The five are: aspiration or desire-to-act (CHANDA), determination or resolve (ADHIMOKṢA), mindfulness or memory (SMṚTI), concentration (SAMĀDHI), and wisdom or cognition (PRAJÑĀ). According to ASAṄGA, these five determinative factors accompany wholesome (KUŚALA) states of mind, so that if one is present, all are present. In Pāli ABHIDHAMMA materials, concentration is one of the seven mental factors (P. cetasika) that are invariably associated with all moments of consciousness (CITTA, MANAS, or VIJÑĀNA). Concentration occurs in many other important lists, including as the second of the three trainings (TRIŚIKṢĀ), and the last stage of the eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). Concentration is distinguished according to the quality of consciousness with which it is associated. "Right concentration" (SAMYAKSAMĀDHI, P. sammāsamādhi) is concentration associated with wholesome (KUŚALA) states of mind; it is listed not only as one element of the eightfold noble path, but as one of seven factors of enlightenment (BODHYAṄGA, P. bojjhaṅga), and, in an incipient state, as one of five powers (BALA) and the other categories that together make up the BODHIPĀKṢIKADHARMA (thirty-seven factors associated with awakening). High degrees of concentration can be developed through the practice of meditation (BHĀVANĀ). Concentration of such intensity receives the designation "one-pointedness of mind" (cittaikāgratā). When developed to its greatest degree, mental concentration leads to the attainment of DHYĀNA (P. JHĀNA), "meditative absorption." It is also the main mental factor defining the four magical powers (ṚDDHIPĀDA, P. iddhipāda). The cultivation of concentration for the purposes of attaining meditative absorption is called tranquillity meditation (ŚAMATHA). In the Pāli abhidhamma, three levels of concentration are distinguished in the practice of tranquility meditation: (1) preparatory concentration (PARIKAMMASAMĀDHI) is the degree of concentration established at the beginning of a meditation session. (2) Access or neighborhood concentration (UPACĀRASAMĀDHI) arises just as the practitioner approaches but does not enter the first level of meditative absorption; it is marked by the appearance in the mind of a representational image (PAṬIBHĀGANIMITTA) of the object of meditation. (3) "Attainment" or "full" concentration (APPANĀSAMĀDHI) is the level of concentration that arises upon entering and abiding in any of the meditative absorptions. In the MAHĀYĀNA sūtras, a wide variety of profound meditative experiences are described as samādhis and are mentioned as attainments of the bodhisattva as he ascends through the ten BHŪMIS. The MAHĀVYUTPATTI lists 118 different samādhis that are specified by name in the PRAJÑĀPĀRAMITĀ sūtras, such as candravimala (stainless moon), sarvadharmodgata (surpassing all dharmas), siṃhavikrīḍita (lion's play), anantaprabha (limitless light), and acala (immovable). See also YATHĀBHŪTAJÑĀNADARŚANA.

Samādhirājasūtra. (T. Ting nge 'dzin rgyal po'i mdo; C. Yuedeng sanmei jing; J. Gatttōsanmaikyō; K. Wŏltŭng sammae kyŏng 月燈三昧經). The "King of Concentrations Sūtra"; an important MAHĀYĀNA sūtra (also known as the *Candrapradīpa*) composed in India, probably in the fourth century CE, with the text undergoing expansion in subsequent centuries. The text is a mixture of poetry and prose, with the verse sections considered to be the older stratum. The sūtra is cited often in Mahāyāna śāstras, especially in the PRASANNAPADĀ of CANDRAKĪRTI and the ŚIKṢĀSAMUCCAYA of ŚĀNTIDEVA, and is also one of the

foundational texts, or "nine dharmas" (see NAVAGRANTHA), of Newar Buddhism. A Chinese translation of the complete sūtra was made by Narendrayaśas in 557. The *Samādhirājasūtra* is composed of a dialogue between the Buddha and the bodhisattva Candragupta, and sets forth various forms of meditation for bodhisattvas, including the "king of concentrations" of the sūtra's title, which is defined as "the proclamation that all phenomena are of the same nature." The sūtra does not offer instructions for developing these samādhis, but instead provides their names and recounts their wondrous effects. The sūtra describes at some length the two (rather than three) bodies of a buddha, the DHARMAKĀYA and the RŪPAKĀYA, with the former identified with the "mind of clear light" (PRABHĀSVARACITTA).

samādhiśikṣā. (T. ting nge 'dzin gyi bslab pa). In Sanskrit, "training in meditation." See ADHISAMĀDHIŚIKṢĀ.

samādhisūtra. In Sanskrit, "meditation sūtra." See SANMEI JING.

samāhita. (T. mnyam bzhag; C. dengyin; J. tōin; K. tŭngin 等引). In Sanskrit and Pāli, "equipoise" (lit. "composed" or "collected"); a past passive participle formed from the Sanskrit root √dhā ("to place") with the prefixes sam ("fully") and ā ("from all sides") (and etymologically related to SAMĀDHI), in which the mind of the practitioner is linked to its object, in such a way that discursive thought no longer intrudes. A paranomastic gloss interprets it as linking (āhita) the mind to equanimity (sama). The term is sometimes contrasted with subsequent attainment (pṛṣṭhalabha), when discursiveness returns. The decision to include samāhita in the Buddhist narrative on meditation, but to emphasize instead samādhi, could be a reaction to brahmanical discourses on meditative states, which tend to emphasize samāhita over samādhi. In the Buddhist tradition, the notion of samāhita as an attainment is incorporated in different ways from one meditation model to another. In the YOGĀCĀRABHŪMIŚĀSTRA of the YOGĀCĀRA school, for example, samāhita is listed as the sixth of seventeen stages (BHŪMI) by which progress is made toward the state of a buddha. See also SAMĀPATTI.

samāhitajñāna. (T. mnyam bzhag ye shes; C. dengyin zhi; J. tōinchi; K. tŭngin chi 等引智). In Sanskrit, "wisdom of equipoise," the state of direct realization of reality in which the ultimate truth is perceived without mediation by thought in a state of yogic direct perception (YOGIPRATYAKṢA). In descriptions of the five paths (PAÑCAMĀRGA) to enlightenment, the attainment of such wisdom occurs on the path of vision (DARŚANAMĀRGA) and is repeated over the course of the path of cultivation (BHĀVANĀMĀRGA). It has two parts, the VIMUKTIMĀRGA and the ĀNANTARYAMĀRGA.

samanantarapratyaya. (P. samanantarapaccaya; T. de ma thag pa'i rkyen; C. dengwujian yuan; J. tōmuken'en; K. tŭngmugan yŏn 等無間緣). In Sanskrit, "immediate-antecedent condition"; the second of the four types of conditions (PRATYAYA) recognized in the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA and the YOGĀCĀRA school. Samanantarapratyaya is also listed as one of the twenty-four conditions (P. paccaya) in the massive Pāli ABHIDHAMMA text, the PAṬṬHĀNA. This type of condition refers to the immediately antecedent moment, which through its cessation enables a subsequent moment to arise; in the case of consciousness (VIJÑĀNA), it therefore refers to the prior moment of consciousness that is a necessary antecedent to the next moment of consciousness. All types of thought in the conditioned (SAṂSKṚTA) realm serve as immediate-antecedent conditions. The only exception is the final thought-moment in the mental continuum of an ARHAT: because the next thought-moment involves the experience of the unconditioned (ASAṂSKṚTA), no further thoughts from the conditioned realm can ever again recur. This type of condition is also called the "antecedent condition" (ANANTARAPRATYAYA); the VISUDDHIMAGGA explains that samanantarapratyaya and anantarapratyaya are essentially the same, except that the former emphasizes the immediacy of the connection between the two moments.

samānapratibhāsadharmin. (T. chos can mthun snang). In Sanskrit, lit. "subject that appears the same" or "commonly appearing subject," a term in Buddhist logic, particularly important in Tibetan Buddhism. This term refers to the common basis (T. gzhi mthun) that must be present in order for a reasonable and constructive debate to occur. In other words, if adherents of two different doctrinal systems try to debate, but employ only terms and ideas that are unique to their own systems, then no position can be effectively proven or refuted. Furthermore, the participants in a debate must have a common understanding of the subject that is being debated and a shared understanding of what constitutes a logical example. This term is also understood to mean that the participants in a debate must understand the scripture on which the debate is based. Some Buddhist philosophers, such as Jayānanda, refuted the notion that debate or inference (ANUMĀNA) was in any way constructive on the following general grounds: to the enlightened mind, all phenomena are devoid of substance or definition and therefore no phenomenon can serve as a samānapratibhāsadharmin. This is a central issue in MADHYAMAKA, where the proponent of emptiness (ŚŪNYATĀ) rejects the notion of anything that possesses its own nature (SVABHĀVA). This raises the question of whether there is a commonly appearing subject in a debate between a Madhyamaka and non-Madhyamaka; if there is, to what degree is the appearance "common"; and how does the Madhyamaka present his position under such circumstances.

samānārthatā. (P. samānattatā; T. don mthun pa; C. tongshi; J. dōji; K. tongsa 同事). In Sanskrit, "consistency"; viz., acting in accordance with one's own teachings, or demonstrating consistency between one's words and deeds. See SAṂGRAHAVASTU.

Sāmaññaphalasutta. (S. Śrāmaṇyaphalasūtra; C. Shamenguo jing; J. Shamongakyō; K. Samun'gwa kyŏng 沙門果經). In

Pāli, the "Discourse on the Fruits of Mendicancy," the second sutta of the DĪGHANIKĀYA (a separate DHARMAGUPTAKA recension appears as the twenty-seventh sūtra in the Chinese translation of the DĪRGHĀGAMA; another unidentified recension also is included in the Chinese translation of the EKOTTARĀGAMA). The patricide king AJĀTAŚATRU (P. Ajātasattu) and the physician JĪVAKA visit the Buddha dwelling at Jīvaka's mango grove, Ambavana. Impressed by the silence and discipline of the Buddha's disciples gathered there, Ajātaśatru thinks that it would be good if his own son, Udayabhadra (P. Udāyibaddha), were to join such an assembly of mendicants. He asks the Buddha about the benefits of mendicancy here and now, such that men would put aside worldly pursuits and join the Buddhist order. According to the Pāli recension, he states that he had already put this question to six other famous recluses of the day—namely, PŪRAṆA-KĀŚYAPA, MASKARIN GOŚĀLĪPUTRA, AJITA KEŚAKAMBALA, KAKUDA KĀTYĀYANA, NIRGRANTHA-JÑĀTĪPUTRA, and SAÑJAYA VAIRĀṬĪPUTRA (P. Pūraṇa Kassapa, Makkhali Gosāla, Ajita Kesakambala, Pakudha Kaccāyana, Nigaṇṭha Nātaputta and Sañjaya Belaṭṭiputta)—but received no satisfactory answer. In response to the king's query, the Buddha describes the immediate benefits of mendicancy from the most mundane to the most exalted. He notes that even a servant or householder who becomes a mendicant receives the honor of kings. Moreover, the mendicant is free of taxation and the burden of supporting a family and learns control of the senses, mindfulness (SMṚTI, P. sati) and contentment. Being content, the mendicant becomes glad and calm, which provide the foundation for attaining the four meditative absorptions (DHYĀNA, P. JHĀNA). Higher than any of these and on the basis of having mastered the four meditative absorptions, the mendicant can develop the six higher knowledges or supranormal powers (ABHIJÑĀ, P. abhiññā), which culminate in enlightenment and liberation from the cycle of rebirth. Upon hearing this discourse, Ajātaśatru expressed regret at having murdered his father and took refuge in the Buddha. After the king's departure, the Buddha noted to his disciples that were it not for the fact that the king had murdered his father, he would have attained the stage of stream-enterer (SROTAĀPANNA) then and there.

Samantabhadra. (T. Kun tu bzang po; C. Puxian; J. Fugen; K. Pohyŏn 普賢). The Sanskrit name of both an important bodhisattva in Indian and East Asian Buddhism and of an important buddha in Tibetan Buddhism. As a bodhisattva, Samantabhadra is a principal bodhisattva of the MAHĀYĀNA pantheon, who is often portrayed as the personification of the perfection of myriad good works and spiritual practices. He is one of the AṢṬAMAHOPAPUTRA, and an attendant of ŚĀKYAMUNI Buddha, standing opposite MAÑJUŚRĪ at the Buddha's side. In the PAÑCATATHĀGATA configuration, he is associated with the buddha VAIROCANA. Samantabhadra figures prominently in the AVATAṂSAKASŪTRA. In a chapter named after him, he sets forth ten SAMĀDHIS. In the GAṆḌAVYŪHA (the final chapter of the *Avataṃsakasūtra*), the bodhisattva SUDHANA sets out in search of a teacher, encountering fifty-two beings (twenty of whom are female), including the Buddha's mother Mahāmāyā (MĀYĀ), the future buddha MAITREYA, as well as AVALOKITEŚVARA and MAÑJUŚRĪ. His final teacher is the bodhisattva Samantabhadra, who sets forth the ten vows in his famous BHADRACARĪPRAṆIDHĀNA. In China, the center of Samantabhadra's worship is EMEISHAN in Sichuan province, which began to develop in the early Tang. According to legend, Samantabhadra arrived at the mountain by flying there on his white elephant, his usual mount. As a buddha, Samantabhadra is the primordial buddha (ĀDIBUDDHA) according to the RNYING MA sect of Tibetan Buddhism. He is depicted naked, blue, and in sexual union with his consort Samantabhadrī. He is embodiment of the original purity of all phenomena of SAṂSĀRA and NIRVĀṆA. Called the "primordial basis" (ye gzhi), he is regarded as the eternal union of awareness (RIG PA) and emptiness (ŚŪNYATĀ), of emptiness and appearance, and of the nature of the mind and compassion. As such he is the wellspring of the ATIYOGA teachings.

Samantabhadracarī-praṇidhāna-rāja. (S). See BHADRACARĪPRAṆIDHĀNA.

Samantagandha. (T. Kun tu dri bsung; C. Puxiang; J. Fukō; K. Pohyang 普香). In Sanskrit and Pāli, "Universal Fragrance." In the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), Samantagandha is listed as one of the many divinities (DEVA) who accompany ŚAKRA, the king of the gods, and are present from the outset of the Buddha's sermons. In other texts, such as the MAHĀVASTU, Samantagandha is listed as one of the divinities who appears on more than one occasion to honor the Buddha by scattering in the sky such articles as flowers (see KHAPUṢPA) and sandalwood powder. In the APADĀNA, a Pāli collection of hagiographical narratives found in the KHUDDAKANIKĀYA, Samantagandha is listed as a name for one of the hundreds of ARHATS whose prior births are recounted in the text. In the distant past, the ARHAT Pādapūjaka Thera was born thirteen times as a king under the name Samantagandha.

sāmantaka. (T. nyer bsdogs; C. jinfen; J. gonbun; K. kŭnbun 近分). In Sanskrit, "preparation," "neighboring state"; according to the YOGĀCĀRABHŪMI and the ABHIDHARMASAMUCCAYA, each of the four concentrations (DHYĀNA) and attainments (SAMĀPATTI) has two parts: maula (fundamental state) and sāmantaka (a neighboring part that is preparatory to that fundamental state). The fundamental state is ŚAMATHA (serenity, calmness) and the sāmantaka (preparation) is included under the heading of VIPAŚYANĀ (insight). Six or seven types of attentions (MANASKĀRA) are listed as preparations for the attainment of the first dhyāna. These include attention that contemplates marks (lakṣaṇapratisaṃvedīmanaskāra), arises from belief (ādhimokṣikamanaskāra), arises from separation (prāvivekyamanaskāra), contemplates joy and withdrawal (ratisaṃgrāhakamanaskāra), investigates (mīmāṃsakamanaskāra), is a final practice (prayoganiṣṭamanaskāra), and leads to the result of the final practice (prayoganiṣṭaphalamanaskāra). There are nine

impediments (heya) between the fundamental stages of the first and second concentrations (dhyāna), for example. Attention is then paid to the marks of the lower as coarse (audārika) and the higher as delightful (śānta). The first attention identifies the impediments and focuses the mind on removing them; the second brings vigor or energy (VĪRYA); the third, fourth, and six actually counteract the three sets of three impediments; the fifth investigates to see whether the impediments have actually been eliminated. The seventh is the fundamental state. See also UPACĀRASAMĀDHI.

Samantapāsādikā. (C. Shanjianlü piposha; J. Zenkenritsubibasha; K. Sŏn'gyŏnyul pibasa 善見律毘婆沙). In Pāli, lit. "Entirely Pleasing"; the title of a fifth-century commentary on the VINAYAPIṬAKA, written in Sri Lanka by the renowned exegete BUDDHAGHOSA. The *Samantapāsādikā* contains a lengthy introduction called *Bāhiranidāna*, which recounts the early history of the dispensation from the death of the Buddha through the convocation of the first three Buddhist councils (see SAṂGĪTĪ) and to the recitation of the VINAYA in Sri Lanka by MAHĀRIṬṬHA during the reign of the Sinhalese king DEVĀNAṂPIYATISSA. A translation of the *Bahīranidāna* appears in the Pali Text Society's English translation series as *The Inception of Discipline.* The remainder of the *Samantapāsādikā* covers a broad array of topics, touching on many points of historical and geographical interest. The commentary makes reference to the specific locations of a host of Indian VIHĀRAS and CAITYAS (P. cetiya). It also offers details on the life and works of AŚOKA, BIMBISĀRA, AJĀTAŚATRU, and other Indian kings as well as information on the missionaries that Aśoka sent throughout South and Southeast Asia. The *Samantapāsādikā* includes an account of the life of the elder MOGGALIPUTTATISSA, compiler of the KATHĀVATTHU in the Pāli ABHIDHAMMAPIṬAKA. The three classifications of vinaya, SUTTA, and abhidhamma piṭakas are also explained by Buddhaghosa in this commentary.

sāmānyalakṣaṇa. (T. spyi mtshan; C. gongxiang; J. gūsō; K. kongsang 共相). In Sanskrit, "general characteristic," "generic quality," "shared mark"; a term used in contrast to SVALAKṢAṆA ("specific characteristic," "own mark") to describe qualities that are generic to a class of phenomena, as opposed to those qualities that are unique to a given object. In the SAUTRĀNTIKA school, sāmānyalakṣaṇa refers to the objects of thought (KALPANĀ) that must be apprehended through a mental image and thus lack the specificity of the impermanent objects of direct perception (PRATYAKṢA).

samāpatti. (T. snyom 'jug; C. dengzhi/zhengshou; J. tōji/shōju; K. tŭngji/chŏngsu 等至/正受). In Sanskrit and Pāli, "attainment" or "trance," a state of deep concentration produced through the practice of meditation; the term literally means "correct entrance." Specifically, samāpatti refers to eight levels of attainment, which correlate with the eight meditative absorptions (DHYĀNA), the four absorptions of the realm of subtle materiality (RŪPĀVACARADHYĀNA) and the four of the immaterial realm (ĀRŪPYĀVACARADHYĀNA). However, unlike the dhyāna model, samāpatti may also add a ninth attainment, called either the attainment of the cessation of perception and sensation (SAṂJÑĀVEDAYITANIRODHA) or the trance of cessation (NIRODHASAMĀPATTI). The four attainments of the realm of subtle materiality are named for the order in which they occur. Thus, in ascending order, they are the first concentration (prathamadhyāna, P. paṭhamajjhāna), the second concentration (dvitīyadhyāna, P. dutiyajjhāna), the third concentration (tṛtīyadhyāna, P. tatiyajjhāna), and the fourth concentration (caturthadhyāna, P. catutthajjhāna). The four levels of the immaterial realm are the attainment of the sphere of boundless space (ākāśānantyāyatanasamāpatti, P. ākāsānañcāyatanasamāpatti), attainment of the sphere of boundless consciousness (vijñānānantyāyatanasamāpatti, P. viññāṇañcāyatanasamāpatti), attainment of the sphere of nothingness (ākiñcanyāyatanasamāpatti, P. ākiñcaññāyatanasamāpatti), and attainment of the sphere of neither perception nor nonperception (naivasaṃjñānāsaṃjñāyatanasamāpatti, P. nevasaññānāsaññāyatanasamāpatti). As indicated earlier, a ninth stage, the attainment of the cessation of perception and sensation (saṃjñāvedayitanirodha) or the attainment of cessation (nirodhasamāpatti), is often added to these latter four. These eight or nine states are also known as the "successive dwellings" (anupūrvavihāra). By achieving one of these states of absorption through the practice of meditation while still a human being, one will be reborn in the respective level of these realms of existence in the next lifetime. Similar samāpatti schemes, which present stratified levels of meditative attainment, also appear in non-Buddhist yogic systems. See also ASAṂJÑĀSAMĀPATTI.

samāpattidhyāna. (S). See DHYĀNASAMĀPATTI.

samāropa. (T. sgro 'dogs; C. zengyi; J. zōyaku; K. chŭngik 增益). In Sanskrit, "superimposition," "reification," or "erroneous affirmation"; the mistaken attribution to an object of a quality that the object does not in fact possess. The term samāropa is sometimes paired with APAVĀDA ("denigration" or "denial"), where samāropa would refer to the claim or belief that something that in fact does not exist, does exist, while apavāda would refer to the claim or belief that something that in fact does exist, does not exist (such as the FOUR NOBLE TRUTHS). In Buddhist philosophy, the most important of such erroneous superimpositions is the attribution of a perduring self (ĀTMAN) to the impermanent aggregates (SKANDHA). In MADHYAMAKA, samāropa refers to the false ascription of intrinsic nature (SVABHĀVA) to phenomena (DHARMA). The purpose of the Madhyamaka critique is to refute these false qualities that have been superimposed by ignorance onto the objects of experience; the conventionally existent objects that serve as the object of these false projections are not refuted. In YOGĀCĀRA, samāropa is often used to refer to the superimposition of objective existence to phenomena that are in fact of the nature of consciousness.

samatājñāna. (T. mnyam nyid ye shes; C. pingdengxing zhi; J. byōdōshōchi; K. p'yŏngdŭngsŏng chi 平等性智). In Sanskrit, "wisdom of equality" or "impartial wisdom"; one of the five wisdoms (PAÑCAJÑĀNA) of a buddha. Through the samatājñāna, a buddha sees beyond all superficial distinctions and differentiations and perceives the fundamental nature of all things as emptiness (ŚŪNYATĀ). Thus, a buddha makes no distinction between one sentient being and another, and no distinction between self and other; in addition, no ultimate difference is perceived between SAṂSĀRA and NIRVĀṆA. Such undifferentiated perception gives rise to equality, impartiality, and compassion for all beings. In YOGĀCĀRA theory, samatājñāna is understood to arise through the cessation of attachment to conceptions of self and pride. In TANTRA, among the five buddhas (PAÑCATATHĀGATA), this type of wisdom is associated with RATNASAMBHAVA.

śamatha. (P. samatha; T. zhi gnas; C. zhi; J. shi; K. chi 止). In Sanskrit, variously translated as "calmness," "serenity," "quiescence," or "tranquillity" (and sometimes as "stopping," following the Chinese rendering of the term); one of the two major branches of Buddhist meditative cultivation (BHĀVANĀ), along with insight (VIPAŚYANĀ). Calmness is the mental peace and stability that is generated through the cultivation of concentration (SAMĀDHI). Śamatha is defined technically as the specific degree of concentration necessary to generate insight (VIPAŚYANĀ) into reality and thus lead to the destruction of the afflictions (KLEŚA). Śamatha is a more advanced degree of concentration than what is ordinarily associated with the sensuous realm (KĀMADHĀTU) but not fully that of the first meditative absorption (DHYĀNA), viz., the first absorption associated with the subtle-materiality realm (RŪPĀVACARADHYĀNA). According to the YOGĀCĀRABHŪMI and the ABHIDHARMASAMUCCAYA, śamatha is the fundamental state (maula) of each of the four concentrations (dhyāna) and attainments (SAMĀPATTI), in distinction to a neighboring part that is preparatory to that fundamental state (see SĀMANTAKA), which is vipaśyanā. The process of meditative cultivation that culminates in calmness is described in one account as having nine stages. In the account found in the MADHYĀNTAVIBHĀGA, for example, there are eight forces that operate during these stages to eliminate five hindrances: viz., laziness, forgetting the object of concentration, restlessness and worry, insufficient application of antidotes (anabhisaṃskāra), and over-application of the antidotes (abhisaṃskāra). During the initial stage, when first placing the mind on its object, the first hindrance, laziness, is counteracted by a complex of four motivational mental factors: CHANDA (desire-to-do), vyāyāma (resolve), ŚRADDHĀ (faith), and PRAŚRABDHI (pliancy or readiness for the task). When the cultivation of calmness has reached a slightly more advanced stage, mindfulness (SMṚTI) counteracts the forgetfulness that occurs when concentration wanders away from the meditation object. When a stream of concentration is first achieved, a meta-awareness called introspection or clear comprehension (SAṂPRAJANYA) operates to counteract dullness and restlessness. Finally, in the last stages of the process, there is an application (abhisaṃskāra) in order to heighten the intensity of the concentration to the requisite level, and to avoid the subtle overexcitement that comes with feelings of great ease; and just prior to the attainment of śamatha, there is the setting aside of any application of conscious effort. At that point, calmness continues on its own as a natural stream of tranquillity, bringing great physical rapture (PRĪTI) and mental ease (SUKHA) that settles into the advanced state of serenity called śamatha. ¶ In the context of monastic discipline, śamatha, in its denotation as calming, is also used technically to refer to the formal settlement of monastic disputes. See ADHIKARAṆAŚAMATHA; SAPTĀDHIKARAṆAŚAMATHA.

śamathavipaśyanā. (P. samathavipassanā; T. zhi gnas lhag mthong; C. zhiguan; J. shikan; K. chigwan 止觀). In Sanskrit, "calmness and insight," a term used to describe a meditative state that combines the clarity and stability of ŚAMATHA with the understanding of the nature of reality associated with VIPAŚYANĀ. In Indian ŚĀSTRA literature, vipaśyanā is defined as insight into reality that is conjoined with śamatha and induced by analytical meditation. Thus, true vipaśyanā includes śamatha. The combination of śamatha and vipaśyanā marks the attainment of the wisdom arisen from reflection (CINTĀMAYĪPRAJÑĀ); and the combination of the two with emptiness (ŚŪNYATĀ) as their object marks the beginning of the path of preparation (PRAYOGAMĀRGA). In YOGĀCĀRA accounts, as in the YOGĀCĀRABHŪMI and the ABHIDHARMASAMUCCAYA, the four concentrations (DHYĀNA) and attainments (SAMĀPATTI) are said to have two parts: a fundamental state (maula), which is śamatha, and a neighboring part that is preparatory to that fundamental state (SĀMANTAKA), which is vipaśyanā; this explanation suggests the vital interconnection between these two terms. Samatha and vipassanā are known in Pāli, but chiefly in a later stratum of the suttas and in commentarial literature. The terms are also important in Chinese Buddhism, serving for example as the subject of the magnum opus of TIANTAI ZHIYI, the MOHE ZHIGUAN, or the "Great Calmness and Insight."

samaya. (T. dam tshig; C. sanmoye; J. sanmaya; K. sammaya 三摩耶). In Sanskrit and Pāli, "vow," "occasion," a polysemous term within the tradition. This term is especially important in tantric Buddhism, where it refers to a specific set of vows (see SAṂVARA) taken in conjunction with an initiation rite (ABHIṢEKA, dīkṣā). These vows are considered to represent a powerful bond between student and teacher and a commitment to maintain them is deemed essential to success in tantric practice. A breech of one's samaya vows is often said to have serious consequences, including rebirth in hell. Pledging to keep tantric practices secret and pledging never to bring harm to one's teacher are two examples of a samaya vow. A student of tantra will often take more and more of these vows as he or she progresses. In the Tibetan categorization of tantras into four sets, these vows are systematized into codes. In ANUTTARAYOGATANTRA,

there is a set list of nineteen samayas associated with the PAÑCATATHĀGATA. The term samaya may also refer to the symbolic representation of a buddha, BODHISATTVA, or deity, such as with a VAJRA, a sword, or a lotus flower. These symbols may represent the divinity itself or more often an attribute of that divinity, such as a vow taken by a buddha or bodhisattva. ¶ In Sanskrit, samaya also indicates a general unit of time that is understood as one specific occasion or as a season of the year. The term samaya is often seen in ABHIDHARMA analyses of distinct chronological moments. For example, in the AṬṬHASĀLINĪ, a Pāli commentary on the DHAMMASAṄGAṆI, BUDDHAGHOSA analyzes the term samaya into five specific meanings related to the passage of time.

Samayabhedoparacanacakra. (T. Gzhung tha dad pa rim par bklag pa'i 'khor lo; C. Yibuzonglun lun; J. Ibushūrinron; K. Ibujongnyun non 異部宗輪論). In Sanskrit, "The Wheel of the Formations of Divisions of the Doctrine"; the title of an important historiographical text written by VASUMITRA, a prominent scholar of the SARVĀSTIVĀDA school, who wrote in KASHMIR sometime around the second century CE. The text records the Sarvāstivāda account of the evolution of the various schools (NIKĀYA) that arose in the mainstream Buddhist community in the years after the Buddha's death. Thus, it is an important source of information on the schools and subschools of mainstream Nikāya Buddhism in ancient India. In VASUMITRA's version, the divisions in the Buddhist sects occur roughly one hundred years later than they do in the Sinhalese Pāli records of the same events. According to Vasumitra, the major disagreement that led to the first major schism in the SAṂGHA was the result of five propositions put forward by the monk MAHĀDEVA concerning the nature and achievements of an ARHAT. The MAHĀSĀṂGHIKA agreed with Mahādeva's five theses, while the STHAVIRANIKĀYA did not, thus leading to the split.

samayamudrā. (T. dam tshig gi phyag rgya; C. sanmoye yin; J. sanmayain; K. sammaya in 三摩耶印). In Sanskrit, "seal of the vow," "seal of time," or "seal of the symbol," all three denotations related to objects of meditation in tantric Buddhism. The samayamudrā is usually listed as the third of four "seals" (MUDRĀ), "seal" here being used in the sense of a doorway through which one must pass in order to attain full realization; the other three are the KARMAMUDRĀ, the JÑĀNAMUDRĀ, and the MAHĀMUDRĀ. In the context of sexual yoga, the term is also used to refer to a tantric consort who maintains the tantric pledges, as opposed to a karmamudrā (a consort who does not maintain such pledges) and a jñānamudrā (a consort who is not a physical person but is visualized in meditation). As "seal of the vow," the samayamudrā involves sustained focus on one's intention to keep a specific set of vows received as part of one's initiation (ABHIṢEKA, DĪKṢĀ) into tantric practice. As "seal of time," samaya carries its temporal denotation and the meditation involves an abandonment of past and future for the sake of a sustained experience of the present moment. As "seal of the symbol," the object of attention is a symbolic representation of various aspects of a buddha, BODHISATTVA, or deity.

samayasattva. (T. dam tshig sems dpa'; C. sanmeiye saduo; J. sanmayasatta; K. sammaeya salt'a 三昧耶薩埵). In Sanskrit, "pledge being," an important element in tantric visualization. Prior to inviting a deity to appear, the meditator visualizes the body of the deity. This visualized image is called the "pledge being." The actual deity, called the "wisdom deity" (JÑĀNASATTVA), is then invited to descend into and fuse with the visualized form. In this context, the term SAMAYA may be understood in two different ways. First, the term is synonymous with "conventional," indicating that the visualized body of the deity is not his or her actual body. The term samaya is also understood to indicate the practitioner's "vow" or "pledge" to undertake those practices that will evoke the actual presence of the deity. When the meditator visualizes himself or herself as the deity, the initial visualization is the "pledge being." In some tantric circles, the term samayasattva is also used to indicate one who has been newly initiated into esoteric practice.

samayavimukta. (T. dus kyis rnam par grol ba; C. shi jietuo; J. jigedatsu; K. si haet'al 時解脫). In Sanskrit, "one liberated dependent upon a specific occasion"; one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). The term refers to an ARHAT who is a ŚRADDHĀNUSĀRIN and who, because of weaker faculties, has limited periods of meditative concentration during which it is possible to achieve NIRVĀṆA.

śambhala. (T. bde 'byung). Often spelled Shambhala. In the texts associated with the KĀLACAKRATANTRA, the kingdom of śambhala is said to be located north of the Himālayan range. It is a land devoted to the practice of the *Kālacakratantra*, which the Buddha himself had entrusted to śambhala's king SUCANDRA, who had requested that the Buddha set forth the tantra. The kingdom of śambhala is shaped like a giant lotus and is filled with sandalwood forests and lotus lakes, all encircled by a massive range of snowy peaks. In the center of the kingdom is the capital, Kalapa, where the luster of the palaces, made from gold, silver, and jewels, outshines the moon; the walls of the palaces are plated with mirrors that reflect a light so bright that night is like day. In the very center of the city is the MAṆḌALA of the buddha Kālacakra. The inhabitants of the 960 million villages of śambhala are ruled by a beneficent king, called the Kalkin. The laypeople are all beautiful and wealthy, free of sickness and poverty; the monks maintain their precepts without the slightest infraction. They are naturally intelligent and virtuous, devoted to the practice of the VAJRAYĀNA, although all authentic forms of Indian Buddhism are preserved. The majority of those reborn there attain buddhahood during their lifetime in śambhala. The *Kālacakratantra* also predicts an apocalyptic war. In the year 2425 CE, the barbarians (generally identified as Muslims) and demons who have destroyed

Buddhism in India will set out to invade śambhala. The twenty-fifth Kalkin, Raudracakrin, will lead his armies out of his kingdom and into India, where they will meet the forces of evil in a great battle, from which the forces of Buddhism will emerge victorious. The victory will usher in a golden age in which human life span will increase, crops will grow without being cultivated, and the entire population of the earth will devote itself to the practice of Buddhism. Given the importance of the *Kālacakratantra* in Tibetan Buddhism, śambhala figures heavily in Tibetan Buddhist belief and practice; in the DGE LUGS sect, it is said that the PAṆ CHEN LAMAS are reborn as kings of śambhala. There is also a genre of guidebooks (lam yig) that provide the route to śambhala. The location of śambhala has long been a subject of fascination in the West. Śambhala plays an important role in the Theosophy of HELENA PETROVNA BLAVATSKY, and the Russian Theosophist Nicholas Roerich led two expeditions in search of śambhala. The name śambhala is considered the likely inspiration of "Shangri-La," described in James Hilton's 1933 novel *Lost Horizon*.

saṃbhāra. (T. tshogs; C. ziliang; J. shiryō; K. charyang 資糧). In Sanskrit, "equipment," requisite," "accumulation." This term is used to indicate those qualities that are necessary for the realization of some religious attainment, usually progress along the path to enlightenment. For example, in a common formulation of the stages of the path that successively lead one to enlightenment, the SAṂBHĀRAMĀRGA, or "path of accumulation," is the first of the five paths (PAÑCAMĀRGA). On this path, the practitioner attains a degree of three prerequisite qualities that must be developed before one can begin to undertake the religious life: morality (ŚĪLA), merit (PUṆYA), and concentration (SAMĀDHI). Similarly, MAHĀYĀNA literature cites merit (puṇya) and knowledge (JÑĀNA) as the saṃbhāra, or "equipment," of the BODHISATTVA. In this sense, the term saṃbhāra is also understood to indicate "accumulation" in that it is amassing these qualities that brings about progress on the path. See also BODHISAṂBHĀRA.

saṃbhāramārga. (T. tshogs lam; C. ziliang dao; J. shiryōdō; K. charyang to 資糧道). In Sanskrit, "path of accumulation" or "path of equipment"; the first of two parts of the preparatory adhimukticaryābhūmi, literally, "level of belief performance" (see ADHIMOKṢA); the first of the five paths (PAÑCAMĀRGA), which begins the accumulations of merit and wisdom necessary to achieve NIRVĀṆA or BODHI, respectively, on the ŚRĀVAKA, PRATYEKABUDDHA, or BODHISATTVA paths. The path of accumulation is said to begin with the authentic wish to achieve the goal of one's path, viz., with NIRVEDA (P. nibbidā) (i.e., disgust for SAṂSĀRA) in the case of those who wish for nirvāṇa, and with the development of BODHICITTA (the aspiration to enlightenment) in the case of those suited for the Mahāyāna. In the first pañcamārga model, the path of accumulation, like the path of preparation (PRAYOGAMĀRGA) that follows it, is not a noble path of a noble being (ĀRYA) because the direct perception of reality does not occur there. The saṃbhāramārga is subdivided into the three stages of small, middling, and large: at the first stage, the cultivation of the four applications of mindfulness (SMṚTYUPASTHĀNA) is primary, at the second the four resolves (PRAHĀṆA), and at the third the four legs of miraculous attainment (ṚDDHIPĀDA). In Mahāyāna ABHIDHARMA, the first level of the path of accumulation is exemplified by earth because it is the ground for all good qualities. The second level is exemplified by gold because from that time on the aspiration to reach enlightenment will not change to anything baser; a bodhisattva is no longer capable of retrogressing from the Mahāyāna and gains an initial capacity to hear the voice of an actual buddha through the achievement of the SROTO'NUGATO NĀMA SAMĀDHIḤ. On the third level of the path of accumulation, the bodhisattva is able to see the NIRMĀṆAKĀYA of buddhas directly and receive teachings from them.

saṃbhinnapralāpāt prativirati. (P. samphappalāpā paṭivirata; T. ngag 'khyal ba spong ba; C. bu qiyu; J. fukigo; K. pul kiŏ 不綺語). In Sanskrit, "[the monk] abstains from idle chatter," one of ten wholesome (KUŚALA) ways of action (see KARMAPATHA); it refers to the effort or vow to abstain from speech that is either nonsensical or unwholesome. As a moral offense, speaking idly or nonsensically is of greater or lesser severity depending upon how often one engages in it. According to the CŪḶAHATTHIPADOPAMASUTTA in the Pāli MAJJHIMANIKĀYA, one who abstains from idle chatter instead speaks at the right time (kālavādī), speaks only of facts (bhūtavādī), speaks of the goal (atthavādī), speaks of the teaching (dhammavādī), and speaks of religious discipline (vinayavādī).

saṃbhogakāya. (T. longs spyod rdzogs pa'i sku; C. baoshen; J. hōjin; K. posin 報身). In Sanskrit, "enjoyment body" or "reward body"; in the MAHĀYĀNA, the second of the three bodies of a buddha (TRIKĀYA), along with the body of reality (DHARMAKĀYA) and the transformation body (NIRMĀṆAKĀYA). The saṃbhogakāya is described as simultaneously a body for one's own enjoyment (C. zi shouyong shen), in which the buddha knows the joy that comes from experiencing the dharma for oneself; and a body for others' enjoyment (C. ta shouyong shen), in which advanced bodhisattvas experience the increasing magnificence of the buddha's grandeur as they continue to move up the bodhisattva path (MĀRGA). The saṃbhogakāya buddha is adorned with all the accoutrements that are received as rewards for his advanced spiritual experience, which are only visible to similarly advanced beings, specifically bodhisattvas at the first bodhisattva stage (BODHISATTVABHŪMI) and upwards who are dwelling in buddha-fields (BUDDHAKṢETRA). Lesser beings, such as humans, are only able to view the manifestation body (nirmāṇakāya) of a buddha, not his saṃbhogakāya. In bipartite divisions of the buddhas' bodies as a flesh body (RŪPAKĀYA) and a body of reality (dharmakāya), the saṃbhogakāya and nirmāṇakāya are subsumed within the rūpakāya. A saṃbhogakāya is defined by five

certainties: it will always be in an AKANIṢṬHA heaven, it will always teach Mahāyāna doctrine, it will always last until the end of SAṂSĀRA, it will always be surrounded exclusively by bodhisattvas who have reached the bodhisattva bhūmis, and it will always be endowed with the thirty-two major and eighty minor marks of a great person (see MAHĀPURUṢALAKṢAṆA).

saṃbodhi. (T. rdzogs pa'i byang chub; C. zhengjue; J. shōgaku; K. chŏnggak 正覺). In Sanskrit, "complete enlightenment" or "full awakening," a synonym for buddhahood. See ANUTTARASAMYAKSAṂBODHI; MAHĀBODHI.

sambo sach'al. (三寶寺刹). In Korean, "three-jewel monasteries"; three major Korean monasteries that by tradition represent one of the three jewels (RATNATRAYA) of Buddhism: T'ONGDOSA, the Buddha jewel monastery (Pulbo sach'al), because of its ordination platform and the relics (K. sari; S. ŚARĪRA) of the Buddha enshrined behind its main shrine hall (TAEUNG CHŎN); HAEINSA, the DHARMA-jewel monastery (Pŏppo sach'al), because it preserves the xylographs of the Korean Buddhist canon (KORYŎ TAEJANGGYŎNG); and SONGGWANGSA, the SAṂGHA-jewel monastery (Sŭngbo sach'al), because of the series of state preceptors (K. kuksa; C. GUOSHI) during the Koryŏ dynasty who practiced at the monastery.

Saṃcayagāthāprajñāpāramitā. (S). See RATNAGUṆASAṂCAYAGĀTHĀ.

Saṃdhinirmocanasūtra. (T. Mdo sde dgongs 'grel; C. Jieshenmi jing; J. Gejinmikkyō; K. Haesimmil kyŏng 解深密經). In Sanskrit, variously interpreted to mean the sūtra "Unfurling the Real Meaning," "Explaining the Thought," or "Unraveling the Bonds"; one of the most important Mahāyāna sūtras, especially for the YOGĀCĀRA school. The sūtra is perhaps most famous for its delineation of the three turnings of the wheel of the dharma (DHARMACAKRAPRAVARTANA), which would become an influential schema for classifying the teachings of the Buddha. The sūtra has ten chapters. The first four chapters deal with the nature of the ultimate (PARAMĀRTHA) and how it is to be understood. The fifth chapter discusses the nature of consciousness, including the storehouse consciousness (ĀLAYAVIJÑĀNA) where predispositions (VĀSANĀ) are deposited and ripen. The sixth chapter discusses the three natures (TRISVABHĀVA). In the seventh chapter, the division of the Buddha's teachings into the provisional (NEYĀRTHA) and the definitive (NĪTĀRTHA) is set forth. The eighth chapter explains how to develop ŚAMATHA and VIPAŚYANĀ. The ninth chapter describes the ten bodhisattva BHŪMIS and the final chapter describes the nature of buddhahood. Each of these chapters contains important passages that are cited in subsequent commentaries and treatises. ¶ Perhaps the most influential of all the sūtra's chapters is the seventh, which discusses the three turnings of the wheel of the dharma (dharmacakrapravartana). There, the bodhisattva Paramārthasamudgata explains that the first turning of the wheel had occurred at ṚṢIPATANA (the Deer Park at SĀRNĀTH), where the Buddha had taught the FOUR NOBLE TRUTHS to those of the ŚRĀVAKA ("listener, disciple") vehicle. This first turning of the wheel is called the CATUḤSATYADHARMACAKRA, the "dharma wheel of the four truths." The bodhisattva says, "This wheel of dharma turned by the Buddha is surpassable, an occasion [for refutation], provisional, and subject to dispute." Referring presumably to the perfection of wisdom (PRAJÑĀPĀRAMITĀ) sūtras, the bodhisattva then goes on to explain that the Buddha then turned the wheel of dharma a second time for those who had entered the Mahāyāna, teaching them the doctrine of emptiness (ŚŪNYATĀ), that phenomena are "unproduced, unextinguished, originally quiescent, and inherently beyond sorrow." Commentators would call this second turning of the wheel the ALAKṢAṆADHARMACAKRA, "the dharma wheel of signlessness." But this wheel also is provisional. The Buddha finally turned the wheel of doctrine a third time for those of all vehicles, clearly differentiating how things exist. "This wheel of doctrine turned by the BHAGAVAT is unsurpassed, not an occasion [for refutation], of definitive meaning; it is indisputable." Commentators would call this third turning of the wheel the PARAMĀRTHAVINIŚCAYADHARMACAKRA, "the dharma wheel for ascertaining the ultimate"; it is also called "the dharma wheel that makes a fine delineation" (*SUVIBHAKTADHARMACAKRA). The sūtra thus takes something of an historical perspective on the Buddha's teaching, declaring both that his first sermon on the four noble truths addressed to śrāvakas and his teaching of the perfection of wisdom addressed to bodhisattvas was not his final and most clearly delineated view. That consummate view, his true intention, is found in the third turning of the wheel of dharma, a wheel that includes, at very least, the *Saṃdhinirmocanasūtra* itself. The *Saṃdhinirmocanasūtra* was translated into Chinese four times: by GUṆABHADRA, BODHIRUCI, PARAMĀRTHA, and XUANZANG. Of these recensions, the translations by Bodhiruci and Xuanzang are complete renderings of the sūtra and circulated most widely within the East Asian tradition; the other two renderings were shorter digests of the sūtra.

saṃdhyābhāṣyā. (S). See SANDHYĀBHĀṢĀ.

saṃgha. (P. saṅgha; T. dge 'dun; C. sengqie; J. sōgya; K. sŭngga 僧伽). A BUDDHIST HYBRID SANSKRIT term, generally translated as "community" or "order," it is the term most commonly used to refer to the order of Buddhist monks and nuns. (The classical Sanskrit and Pāli of this term is saṅgha, a form often seen in Western writings on Buddhism; this dictionary uses saṃgha as the generic and nonsectarian Buddhist Hybrid Sanskrit form.) The term literally means "that which is struck together well," suggesting something that is solid and not easily broken apart. In ancient India, the term originally meant a "guild," and the different offices in the saṃgha were guild terms: e.g., ĀCĀRYA, which originally meant a "guild master," was adopted in Buddhism to refer to a teacher or preceptor of neophytes to the monastic community. The Buddhist saṃgha

began with the ordination of the first monks, the "group of five" (PAÑCAVARGIKA) to whom the Buddha delivered his first sermon, when he turned the wheel of the dharma (DHARMACAKRA-PRAVARTANA) at SĀRNĀTH. At that time, there was no formal ordination ceremony; the Buddha simply used the EHIBHIKṢUKĀ formula, lit. "Come, monk," to welcome someone who had joined the order. The order grew as rival teachers were converted, bringing their disciples with them. Eventually, a more formal ritual of ordination (UPASAṂPADĀ) was developed. In addition, as circumstances warranted, the Buddha slowly began making rules to organize the daily life of the community as a whole and its individual members (see VINAYA). Although it seems that in the early years, the Buddha and his followers wandered without fixed dwellings, donors eventually provided places for them to spend the rainy season (see VARṢĀ) and the shelters there evolved into monasteries (VIHĀRA). A saṃgha came to be defined as a group of monks who lived within a particular geographical boundary (SĪMĀ) and who gathered fortnightly (see UPOṢADHA) to recite the monastic code (PRĀTIMOKṢA). That group had to consist of at least ten monks in a central region and five monks in more remote regions. In the centuries after the passing of the Buddha, variations developed over what constituted this code, leading to the formation of "fraternities" or NIKĀYAS; the tradition typically recognizes eighteen such groups as belonging to the MAINSTEAM BUDDHIST SCHOOLS, but there were clearly more. ¶ There is much discussion in Buddhist literature on the question of what constitutes the saṃgha, especially the saṃgha that is the third of the three jewels (RATNATRAYA), to which Buddhists go for refuge (ŚARAṆA). One of the oldest categories is the eightfold saṃgha, composed only of those who have reached a certain level of spiritual attainment. The eight are four groups of two, in each case one who is approaching and one who has attained one of the four ranks of stream-enterer, or SROTAĀPANNA; once-returner, or SAKṚDĀGĀMIN; nonreturner, or ANĀGĀMIN; and worthy one, or ARHAT. This is the saṃgha of the saṃgha jewel, and is sometimes referred to as the ĀRYASAṂGHA, or "noble saṃgha." A later and more elaborate category expanded this group of eight to a group of twenty, called the VIṂŚATIPRABHEDASAṂGHA, or "twenty-member saṃgha," based on their different faculties (INDRIYA) and the ways in which they reach NIRVĀṆA; this subdivision appears especially in MAHĀYĀNA works, particularly in the PRAJÑĀPĀRAMITĀ literature. Whether eight or twenty, it is this group of noble persons (ĀRYAPUDGALA) who are described as worthy of gifts (dakṣiṇīyapudgala). Those noble persons who are also ordained are sometimes referred to as the "ultimate saṃgha" (PARAMĀRTHASAṂGHA) as distinguished from the "conventional saṃgha" (SAṂVṚTISAṂGHA), which is composed of the ordained monks and nuns who are still ordinary persons (PṚTHAGJANA). In a still broader sense, the term is sometimes used for a fourfold group, composed of monks (BHIKṢU), nuns (BHIKṢUṆĪ), lay male disciples (UPĀSAKA), and lay female disciples (UPĀSIKĀ). However, this fourfold group is more commonly called PARIṢAD ("followers" or "congregation"), suggesting that the term saṃgha is more properly used to refer to the ordained community. In common parlance, however, especially in the West, saṃgha has come to connote any community of Buddhists, whether monastic or lay, or a combination of the two. In the long history of Buddhism, however, the presence or absence of the Buddhist dispensation (ŚĀSANA) has traditionally been measured by the presence or absence of ordained monks who virtuously maintain their precepts. In the history of many Buddhist lands, the establishment of Buddhism is marked by the founding of the first monastery and the ordination of the first monks into the saṃgha. See also SAṂGHABHEDA; SAMMUTISAṄGHA; ĀRYAPUDGALA; SŬNGT'ONG; SAṄGHARĀJA.

Saṃgha Administration Act. See SAṄGHA ADMINISTRATION ACT.

Saṃghabhadra. (T. 'Dus bzang; C. Zhongxian; J. Shugen; K. Chunghyŏn 衆賢) (c. fifth century CE). In Sanskrit, "Auspicious to the Community"; the proper name of an influential Indian master of the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA. Historical sources suggest that Saṃghabhadra hailed from KASHMIR and was a younger contemporary of his principal rival VASUBANDHU. The historical records of XUANZANG and PARAMĀRTHA agree that Saṃghabhadra publicly challenged Vasubandhu to debate, but his challenge was never accepted. Saṃghabhadra's most famous works include the *NYĀYĀNUSĀRA, or "Conformity with Correct Principle," and the **Abhidharmasamayapradīpikā* (C. Xianzong lun), or "Exposition of Accepted Doctrine." The **Nyāyānusāra* is both a clarification of the ABHIDHARMA philosophy of the Vaibhāṣika school and a critical commentary on the presentation found in Vasubandhu's ABHIDHARMAKOŚABHĀṢYA. The later *Samayapradīpikā* is a shorter explanation of the doctrines of the Vaibhāṣikas, which in large measure summarizes the positions explored in the **Nyāyānusāra*. Neither of these works survives in their Sanskrit originals but only in their Chinese translations. Saṃghabhadra's defense of Kashmir Sarvāstivāda-Vaibhāṣika positions ushered in the neo-Vaibhāṣika period of Sarvāstivāda thought, which took the **Nyāyānusāra* and the *Samayapradīpikā* as its main texts.

saṃghabheda. (P. saṅghabheda; T. dge 'dun gyi dbyen byed pa; C. poseng; J. hasō; K. p'asŭng 破僧). In Sanskrit, "splitting the community"; the act of causing a schism in the community of Buddhist monks and nuns (SAṂGHA). Technically, a schism occurs when nine or more fully ordained monks separate themselves from the order; a faction of less than nine monks constitutes a "dissension" (saṃgharāji) rather than a schism. These schisms may occur over disagreements in the teachings (DHARMA) or details of monastic life (VINAYA). The ABHIDHARMAMAHĀVIBHĀṢĀ distinguishes two different types of saṃghabheda, one in which there are two separate saṃghas established within a single SĪMĀ boundary, the second in which a group attempts to establish a new dispensation with a different

teacher. The first and most infamous example of this latter type of schism is the one caused by Buddha's cousin DEVADATTA, who declared that he, and not GAUTAMA, was the real master and that his five practices were the correct dispensation. After failing in his attempts to take Gautama's life, Devadatta convinced a group of monks in the city of VAIŚĀLĪ that the asceticism advocated by Gautama and his followers was not rigorous enough; five hundred monks chose to enlist in Devadatta's new order. The act of causing or encouraging such a rift in the saṃgha is presented as the worst of the five "uninterrupted deeds" (ĀNANTARYAKARMAN) and is so heinous that it guarantees the perpetrator a KALPA-long lifetime in AVĪCI—the worst of the various Buddhist hells. According to the *Abhidharmamahāvibhāṣā*, the consequences of saṃghabheda are so odious that if the malefactor's sentence in hell has not been completed by the time of the annihilation accompanying the end of the kalpa, he will be reborn into another world-system's hell to complete his term. The seriousness of the saṃghabheda offense is also demonstrated by the fact that King AŚOKA himself warns against it in one of his rock edicts. Therein, he states that any monk who causes schism should be cast from the monastery and returned to the status of a layman. Despite this censure, the Buddhist tradition is full of instances of such divisions in the monastic community. As Buddhism spread through India, a host of different schools (NIKĀYA) emerged, some based on significant doctrinal distinctions, others on regional variations in monastic and ritual observances. Texts that document the proceedings of the third Buddhist council (SAṂGĪTI, see COUNCIL, THIRD), which occurred sometime around 250 BCE, list eighteen to twenty major schools.

saṃghakarman. (P. saṅghakamma; T. dge 'dun gyi las; C. seng jiemo; J. sōkonma; K. sŭng kalma 僧羯磨). In Sanskrit, an "ecclesiastical act," such as admission into the order as novices (PRAVRAJITĀ), full ordination of monks and nuns (UPASAṂPADĀ); the fortnightly confession ceremony recitation of the PRĀTIMOKṢA (UPOṢADHA), the ceremony closing the rains retreat (PRAVĀRAṆĀ), giving cloth for robes (KAṬHINA), the adjudication of rules, the administration of punishments to transgressors of the precepts, and the settlement of disputes among the clergy. See KARMAN.

saṃgharājan. (S). See SAṄGHARĀJA.

saṃghāta. (P. saṅghāta; T. bsdus 'joms; C. zhonghe [diyu]; J. shugō[jigoku]; K. chunghap [chiok] 衆合[地獄]). In Sanskrit, lit. "crushing"; the name of the third of eight stratified hot hells that are detailed in many Buddhist cosmological models. The Sanskrit term saṃghāta has a variety of meanings and the exact nature and method of the torment experienced in this hell varies from source to source. One of its meanings is "crushing" and thus saṃghāta is often rendered in English as the "crushing hell." Creatures unfortunate enough to be reborn in this destiny are commonly described as being continually crushed together between mountain ranges. Alternatively, they may be crushed by iron rollers, plates, and even iron elephants that come at them from the four directions while they are trapped waist-deep in a thick sheet of iron. This form of the saṃghāta hell is most often associated with sexual misconduct. However, the *Sadgatikārikā* describes saṃghāta in altogether different terms. It takes the Sanskrit term saṃghāta as meaning "heap" or "collection," and beings reborn in that hell are piled into heaps and slaughtered together as punishment for having killed living creatures.

saṃghāṭī. (P. saṅghāṭi; T. snam sbyar; C. sengqieli/dayi; J. sōgyari/daie; K. sŭnggari/taeŭi 僧伽梨/大衣). In Sanskrit, "outer robe"; the largest of the "three robes" (TRICĪVARA) worn by a monk or nun, along with the "lower robe" or waistcloth (S. ANTARVĀSAS, P. antaravāsaka), and the upper robe (S. UTTARĀSAṂGA, P. uttarāsaṅga). This particular robe was in two layers and was required to be tailored in patches, numbering from nine up to twenty-five, depending on the account in the various VINAYA recensions. This use of patches of cloth is said to have been modeled after plots of farmland in MAGADHA that the Buddha once surveyed. See also CĪVARA; KĀṢĀYA.

saṃghātiśeṣa. (S). See SAṂGHĀVAŚEṢA.

Saṃghavarman. (C. Sengqiebamo; J. Sōgyabatsuma; K. Sŭnggabalma 僧伽跋摩) (fl. c. fifth century). Sanskrit proper name of an Indian monk who in 433 presided over the first ordination of nuns (BHIKṢUṆĪ) in China performed according to the correct ecclesiastical act (SAṂGHAKARMAN) of the VINAYA. At this time, SENGGUO and over three hundred other nuns were ordained with both an assembly of monks and an assembly of nuns in attendance, thereby officially instituting the monastic order for women in China. Saṃghavarman also translated DHARMATRĀTA II's SAṂYUKTĀBHIDHARMAHṚDAYA into Chinese. See SENGGUO.

saṃghāvaśeṣa. [alt. saṃghātiśeṣa] (P. saṅghādisesa; T. dge 'dun lhag ma; C. sengcanzui/sengcanfa; J. sōzanzai/sōzanhō; K. sŭngjanjoe/sŭngjanpŏp 僧殘罪/僧殘法). In Sanskrit, "probationary offense"; a category of offenses in the roster of monastic rules (PRĀTIMOKṢA) that require penance and/or probation. The saṃghāvaśeṣa offenses are the second most serious category of offense in the VINAYA, second only to the "defeats" (PĀRĀJIKA), which render a monk or nun "not in communion" (ASAṂVĀSA) with the community. A saṃghāvaśeṣa infraction requires either an open confession of the offense before a gathering of monks or else expulsion from the order (SAṂGHA) if the offender refuses to confess. According to one paranomastic gloss, because the remedy for these offenses requires the intervention of the saṃgha at both the beginning (ādi) and the end (śeṣa) of the expiation process, these offenses are known collectively as saṃghādiśeṣa. The probationary offender receives two different kinds of punishments: penance (MĀNATVA) and temporary probation (PARIVĀSA). The mānatva penance is imposed on a

monk who commits a saṃghāvaśeṣa offense when that monk immediately confesses the infraction to another monk. In the Pāli vinaya, the penance imposed in this circumstance is called "penance for unconcealed offenses" (apaṭicchannamānatta), which entails the loss of the usual privileges of monkhood for a set period of six nights. If a monk instead conceals a saṃghāvaśeṣa offense for a period of time before confessing it, he must undergo a "probationary penance" called either parivāsa or, in Pāli, "penance for concealed offenses" (paṭicchannamānatta). This probationary penance likewise entails the loss of privileges, but in this case that probation must last for as long as the offense was concealed. After the parivāsa penance is completed, the monk must then undergo mānatta penance for six nights. These penances are similar in some vinaya traditions to those meted out to "pārājika penitents" (ŚIKṢĀDATTAKA). During his probationary period, the offender is stripped of his seniority and expected to observe certain social constraints. For example, the VINAYAPIṬAKA states that such offenders may not leave the monastery grounds without being accompanied by at least four monks (BHIKṢU) who are not themselves on probation. Also, every day of his probation, the offending monk must inform the other monks of the offense for which he is being punished. The exact number of precepts that fall under the category of saṃghāvaśeṣa varies somewhat among the different vinaya traditions; a typical list of thirteen rules for monks includes (1) willingly emitting semen, (2) engaging in lustful physical contact with a woman, (3) using sexually inappropriate language toward a woman, (4) praising sexual intercourse as a religious act, (5) acting as the liaison in the arrangement of a marriage, (6) building a personal hut that is larger than the prescribed dimensions, (7) building a monastery (VIHĀRA) for the community that does not meet the prescribed specifications, (8) falsely and maliciously accusing another monk of an infraction, (9) taking up an issue as a ploy to falsely accuse another monk of an infraction, (10) taking any action that may result in a schism within the community (SAṂGHABHEDA), (11) siding with or following a monk who has created a schism in the order, (12) refusing to acknowledge and to heed the admonishments of training given by other monks, and finally (13) corrupting families. Nuns are typically subject to seventeen rules, including a few additional restrictions enumerated in the *bhikṣuṇī-prātimokṣa*. After completing the parivāsa penance and his six nights of mānatva, the monk approaches the saṃgha, which in this case means a quorum of monks consisting of at least twenty members, and requests to be "called back into community" (S. ABHYĀYANA, P. abbhāna). If the saṃgha agrees, the monk is declared free of the saṃghāvaśeṣa offense and is restored to his former status.

saṃgīti. (P. saṅgīti; T. bka' bsdu; C. jieji; J. ketsujū; K. kyŏlchip 結集). In Sanskrit, "chant," "recitation," and, by extension, "council." The term is used to refer to both the recitation of scripture and a communal gathering of monks held for the purpose of such recitation; for this reason, the term is often translated as "council," or "synod," such as the first council, second council, etc., following the death of the Buddha. These councils were held to resolve questions of orthodoxy and typically involved the recitation and redaction of the Buddhist canon (TRIPIṬAKA). At such Buddhist councils, the Buddhist canon was communally rehearsed, agreed upon, and codified; in the Pāli account, the same procedure was followed for redacting the exegetical commentaries, called AṬṬHAKATHĀ. In this same Pāli narrative, a saṃgīti was convened at the conclusion of a successful purification of the dispensation (P. sāsanavisodhana) in which false monks and heretics are expelled, schism healed, and the SAṂGHA reunified. A saṃgīti is conducted by representatives of that newly purified saṃgha, who in a public forum unanimously affirm the authority of a common canon. For a detailed description of the major councils, see COUNCIL (s.v.). ¶ The term saṃgīti may also be used to refer to the "recitation" of a specific scripture itself. A famous such text is the MAÑJUŚRĪNĀMASAṂGĪTI or "Recitation of the Names of Mañjuśrī."

saṃgītikāra. [alt. saṃgītikāraka] (T. bka' sdud pa po; C. jiejizhe; J. ketsujūsha; K. kyŏlchipcha 結集者). In Sanskrit, "rapporteur," the person who recites a discourse that they have heard spoken by the Buddha, e.g., the "I" in "thus have I heard" (EVAṂ MAYĀ ŚRUTAM). This person is typically identified as ĀNANDA (for the SŪTRAPIṬAKA) or UPĀLI (for the VINAYAPIṬAKA), but the identity of the saṃgītikāra became a topic of discussion in the MAHĀYĀNA, which asserted that the Buddha also delivered discourses outside the physical presence or mental comprehension of Ānanda. In those cases, the saṃgītikāra was usually a BODHISATTVA, such as MAÑJUŚRĪ.

Saṃgītiparyāya[pādaśāstra]. (T. 'Gro ba'i rnam grangs; C. Jiyimen zulun; J. Shūimonsokuron; K. Chibimun chok non 集異門足論). In Sanskrit, "Treatise on Pronouncements," one of the earliest books of the SARVĀSTIVĀDA ABHIDHARMAPIṬAKA; it is traditionally listed as the last of the six ancillary texts, or "feet" (pāda), of the JÑĀNAPRASTHĀNA, the central treatise, or body (śarīra), of the Sarvāstivāda abhidharmapiṭaka. The text is a commentary on the *Saṃgītisūtra* ("Discourse on Communal Recitation"; see SAṄGĪTISUTTA) and is attributed either to Mahākauṣṭhila (according to YAŚOMITRA and BU STON) or to ŚĀRIPUTRA (according to Chinese tradition). Following closely the structure of the *Saṃgītisūtra*, the author sets out a series of dharma lists (MĀTṚKĀ), given sequentially from ones to tens, to organize the Buddha's teachings systematically. The sets of twos, for example, cover name and form (NĀMARŪPA); the threes, the three unwholesome faculties (AKUŚALAMŪLA) of greed (LOBHA), hatred (DVEṢA), and delusion (MOHA); the fives, the five aggregates (SKANDHA), etc. Its ten sections (nipāta) cover a total of 203 sets of factors (DHARMA). Sanskrit fragments of the *Saṃgītiparyāya* were discovered at BĀMIYĀN and TURFAN, but the complete text is only extant in a Chinese translation made by XUANZANG and his translation team between 660 and 664. The *Saṃgītiparyāya*

derives from the earliest stratum of Sarvāstivāda abhidharma literature, along with the DHARMASKANDHA and the PRAJÑAPTIBHĀṢYA. The *Saṃgītiparyāya*'s closest analogue in the Pāli ABHIDHAMMA literature is the DHAMMASAṄGAṆI.

saṃgrahavastu. (T. bsdu ba'i dngos po; C. si sheshi; J. shishōji; K. sa sŏpsa 四攝事). In Sanskrit, translated variously as "grounds for assembling," "means of conversion," or "articles of sympathy"; in the Mahāyāna sūtras, these are four methods by which bodhisattvas attract and retain students. The four are: (1) generosity (DĀNA), (2) kind words (priyavādita), (3) helpfulness, viz., teaching others to fulfill their aims (arthacaryā), and (4) acting in accordance with one's own teachings, viz., consistency between words and deeds, or perhaps even the "common good" (SAMĀNĀRTHATĀ). There is an extensive description of these four qualities in the sixteenth chapter of the MAHĀYĀNASŪTRĀLAṂKĀRA, an important Mahāyāna ŚĀSTRA said to have been presented to ASAṄGA by the bodhisattva MAITREYA in the TUṢITA heaven (see also MAITREYANĀTHA).

Samguk yusa. (三國遺事). In Korean, "Memorabilia of the Three Kingdoms"; a collection of historical records and legends from the Three Kingdoms period in Korea, attributed to the Korean monk IRYŎN (1206–1289), although the extant version may well have been expanded and emended by one of his disciples. The *Samguk yusa* was written c. 1282–1289, during the period of Mongol suzerainty over Korea, which began in 1259. In his miscellany, Iryŏn includes a variety of hagiographies of eminent monks in the early Korean Buddhist tradition, often drawing from local accounts of conduct (haengjang) rather than official biographies, and from stories of early Korean Buddhist miracles and anomalies drawn from regional lore. In its emphasis on local narrative, where Buddhism dominated, over official discourse, Iryŏn's *Samguk yusa* contrasts with Kim Pusik's (1075–1151) earlier *Samguk sagi* ("Historical Annals of the Three Kingdoms"), which included little information on Buddhism. The text is divided into nine sections, in five rolls: a dynastic chronology of early Korean kingdoms; "wonders" from the three kingdoms of Koguryŏ, Paekche, and Silla and their predecessor states; the rise of Buddhism; STŪPAS and images; exegetes; divine spells; miraculous responses of bodhisattvas; the lives of recluses; and expressions of filial piety. The dynastic chronology that appears at the beginning of the definitive 1512 edition of the text contains several discrepancies with information that appears later in the text and may be a later addition from the fourteenth century. The *Samguk yusa* also makes one of the earliest references to the Tan'gun foundation myth of the Korean state and contains many indigenous Korean songs known as hyangga.

saṃjīva. (P. sañjīva; T. yang gsos; C. denghuo [diyu]; J. tōkatsu [jigoku]; K. tŭnghwal [chiok] 等活[地獄]). In Sanskrit, "revival," or "repetition"; the name of one of the many hells in Buddhist cosmology, usually listed as the first of eight hot or burning hells. The exact punishment meted out on those unfortunate enough to be reborn in this hell varies depending on how the Sanskrit term saṃjīva is understood. First, saṃjīva may be interpreted as "reanimation" or "regeneration." Thus, beings born into this realm are injured—in some versions by each other—in a variety of cruel ways, e.g., mangled, stabbed, pounded, and crushed. After meeting their demise so cruelly, they are then brought back to life and their bodies revived by a cool wind that sweeps over the entire realm; the same tortures are then repeated. Second, the term saṃjīva may be understood as "repetition," and beings in this hell are understood to undergo the sufferings they inflicted upon others.

saṃjñā. (P. saññā; T. 'du shes; C. xiang; J. sō; K. sang 想). In Sanskrit, "perception," "discrimination," or "(conceptual) identification." The term has both positive and negative connotations. As one of the five omnipresent factors (SARVATRAGA) among the listings of mental concomitants (CAITTA, P. CETASIKA) in the VAIBĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA and in the YOGĀCĀRA school, saṃjñā might best be translated as "discrimination," referring to the mental function of differentiating and identifying objects through the apprehension of their specific qualities. Saṃjñā perceives objects in such a way that when the object is perceived again it can be readily recognized and categorized conceptually. In this perceptual context, there are six varieties of saṃjñā, each derived from one of the six sense faculties. Thus we have perception of visual objects (rūpasaṃjñā), perception of auditory objects (śabdasaṃjñā), perception of mental objects (dharmasaṃjñā), and so on. As the third of the five aggregates (SKANDHA), saṃjñā is used in this sense, particularly as the factor that perceives pleasant or unpleasant sensations as being such, giving rise to attraction, aversion and other afflictions (KLEŚA) that motivate action (KARMAN). In the compound "equipoise of nonperception" (ASAṂJÑĀSAMĀPATTI), saṃjñā refers to mental activities that, when temporarily suppressed, bring respite from tension. Some accounts interpret this state positively to mean that the perception aggregate itself is no longer functioning, implying a state of rest with the cessation of all conscious thought. In other accounts, however, asaṃjñāsamāpatti is characterized as a nihilistic state of mental dormancy, which some non-Buddhist teachers had mistakenly believed to be the ultimate, permanent quiescence of the mind and to have become attached to this state as if it were final liberation. In Pāli materials, saññā may also refer to "concepts" or "perceptions" that may be used as objects of meditation. The Pāli canon offers several of these meditative objects, such as the perception of impermanence (aniccasaññā, see S. ANITYA), the perception of danger (ĀDĪNAVA-saññā), the perception of repugnance (paṭighasaññā, see PRATIGHA), and so on.

saṃjñāvedayitanirodha. (P. saññāvedayitanirodha; T. 'du shes dang tshor ba 'gog pa; C. xiangshou mie; J. sōjumetsu; K. sangsu myŏl 想受滅). In Sanskrit, lit. "the suppression (NIRODHA) of perception (SAMJÑĀ) and sensation (vedayita)"; an

experience specific to states of deep meditative attainment (e.g., SAMĀPATTI). The term refers to the last in a series of nine stratified meditative attainments (samāpatti), which involve the progressive suppression (S. anupūrvanirodha, P. anupubbanirodha) of subtle elements that constitute conscious experience. The series begins with the first DHYĀNA, in which the awareness of all sense objects is temporarily allayed, and culminates in a state "beyond" the last of the four immaterial absorptions (ĀRŪPYĀVACARADHYĀNA), where there is the cessation of all sensations and perceptions. Saṃjñāvedayitanirodha is understood to be an experience of consciousness in its purest form, without any attributes or objects to distort it. Despite being free of content and/or objects, however, consciousness is still said to persist in some form. In VASUBANDHU's *Mahāyānaśatadharmavidyādvāraśāstra* ("Mahāyāna Treatise on Entry into Knowledge of the Hundred Dharmas"), Vasubandhu lists saṃjñāvedayitanirodha as one of six unconditioned factors (ASAṂSKṚTADHARMA). See also NIRODHASAMĀPATTI.

saṃkakṣikā. (P. saṅkacchika; T. rngul gzan; C. sengzhizhi; J. sōgishi; K. sŭnggiji 僧衹支). In Sanskrit, "undershirt," "vest," or "waistcloth"; an article of clothing worn by Buddhist monks, which is a standard part of a monk's accoutrements in some, but not all, Buddhist monastic traditions. Although the exact function and details of the garment vary slightly, the saṃkakṣikā is generally described as a kind of undershirt that leaves one shoulder (usually the right one) bare. Often this garment is completely covered by other robes (see CĪVARA) that are worn over it, especially when monks and nuns are outside the precincts of the monastery. The Tibetan translation of this term, rngul gzan, literally means "shawl for sweat," and refers to a garment intended for use during the day; a "night sweatshirt" (rngul gzan gyi gzan, which is a translation of the Sanskrit term pratisaṃkakṣikā) is intended for use in the evening. In some traditions, the saṃkakṣikā is also known as the aṃsavaṭṭaka; in others, it is known as the UTTARĀSAṂGA.

Śaṃkarasvāmin. (T. Bde byed bdag po; C. Shangjieluozhu; J. Shōkarashu; K. Sanggallaju 商羯羅主) (c. sixth century CE). Sanskrit proper name of an Indian philosopher and logician, who was a student of the Indian logician DIGNĀGA. Śaṃkarasvāmin is credited with the authorship of the *Nyāyapraveśa*, or "Primer on Logic," which became an important work in many Asian schools. Some have argued, based on the Tibetan tradition, that the *Nyāyapraveśa* was actually written by Śaṃkarasvāmin's teacher Dignāga, and that the recension translated into Chinese is a version that Śaṃkarasvāmin later edited. The *Nyāyapraveśa* provides an introduction to the logical system of Dignāga, covering such subjects as valid and invalid methods of proof, methods of refutation, perception, erroneous perception, inference, and erroneous inference. Although Śaṃkarasvāmin's work was not as extensive, detailed, or original as Dignāga's, it proved to be popular within the tradition, as attested by its extensive commentarial literature, including exegeses by non-Buddhists. Large parts of the work survive in the original Sanskrit. See NYĀYAPRAVEŚA.

Sāṃkāśya. (P. Saṅkassa; T. Sang kha sa; C. Sengqieshi; J. Sōgyase; K. Sŭnggasi 僧伽施). City in northern India, near ŚRĀVASTĪ, renowned as the site where the Buddha descended to earth from the heaven of the thirty-three (TRĀYASTRIṂŚA), after spending the rains retreat (VARṢĀ) there teaching ABHIDHARMA to his mother, MĀYĀ; also known as Kapitha. At the time for his descent, ŚAKRA and BRAHMĀ made three ladders or staircases—one of gold, one of silver, and one of jewels—with the Buddha descending from heaven on the staircase of jewels, Śakra on the staircase of gold, and Brahmā on the staircase of silver. This descent is often depicted in Buddhist iconography and the city of Sāṃkāśya, said to be the place where all buddhas descend to earth from the heaven of the thirty-three, was one of the eight "great sites" (MAHĀSTHĀNA) and an important place of pilgrimage. The event is often referred to as the DEVĀVATĀRA, or "descent of the divinities," which is another alternate name for Sāṃkāśya.

saṃkleśa. (P. saṃkilesa; T. kun nas nyon mongs pa; C. ran; J. zen; K. yŏm 染). In Sanskrit, "impurity," "defilement," or "pollution," sometimes used interchangeably with the more frequent term "affliction" (KLEŚA). There are two basic kinds of impurities (saṃkleśa): craving (TṚṢṆĀ) and ignorance (AVIDYĀ). These impurities lead to a whole host of more specific impurities, such as the desire for sensual pleasure, and erroneous views, such as the views of eternalism and annihilationism. The goal of the Buddhist path is to cleanse the mind of these impurities. Saṃkleśa is frequently seen used in contrast to the term purity (VYAVADĀNA) and indicates a mode of causation that inevitably leads one to suffering. Beings are constantly engaged in the process of either purification (vyavadāna) or defilement (saṃkleśa), depending upon their actions and thoughts at any given moment. In some MAHĀYĀNA texts, it is understood that the ultimate result of the process of purification is the realization that all phenomena (DHARMA) are ultimately devoid of any distinction between pure and impure.

saṃkliṣṭa. [alt. saṃkleśika] (T. kun nas nyon mongs pa; C. bujing; J. fujō; K. pujŏng 不淨). In Sanskrit, "afflicted," "defiled," "soiled," a polysemous term used to describe the predominate characteristic of SAṂSĀRA, applied in a variety of contexts related to the cause and fact of suffering. More specifically, saṃkliṣṭa is used to describe the truth of suffering (DUḤKHASATYA) and the truth of origination (SAMUDAYASATYA). In the PRAJÑĀPĀRAMITĀ literature, dharmas are divided into two classes, the afflicted and the pure (viśuddha), often referred to by the abbreviation rūpādi ("form and so on"), where form is the first term in the list of the afflicted class, viz., the first of the five skandhas that are associated with suffering. The list includes the SKANDHAS, ĀYATANAS, DHĀTUS, the twelvefold chain of dependent origination (PRATĪTYASAMUTPĀDA), and so on, all of which

are saṃkliṣṭa ("afflicted") dharmas. In the prajñāpāramitā, the list of dharmas goes on to the list of pure dharmas as well, ending with the fruits of the noble path, the unshared qualities of a buddha (ĀVENIKA[BUDDHA]DHARMA), and the knowledge of all aspects (SARVĀKĀRAJÑATĀ).

Saṃkusumitarājendra. (T. [Rgyal dbang] Me tog cher rgyas; C. Kaifuhua wang [rulai]; J. Kaifukeō [nyorai]; K. Kaebuhwa wang [yŏrae] 開敷華王[如來]). In Sanskrit, "Flowering [viz., Fully-Manifested] King," the name of a TATHĀGATA who is mentioned in the MAÑJUŚRĪMŪLAKALPA, an influential tantric text from India composed around the seventh century; also known as Saṃkusumitarājan. At one point in the *Mañjuśrīmūlakalpa*, the buddha ŚĀKYAMUNI enters into a deep state of concentration, and causes a ray of light to shoot from his head. The light travels to Kusumāvatī, where dwells the tathāgata Saṃkusumitarājendra with a host of BODHISATTVAS. MAÑJUŚRĪ sees the light and understands that it is a beacon from Śākyamuni. Saṃkusumitarājendra encourages Mañjuśrī to visit Śākyamuni, ostensibly to inquire about his well-being, which is a pretext for Mañjuśrī to learn a MANTRA from him. Saṃkusumitarājendra is one of the five buddhas who appears in the GARBHADHĀTUMAṆḌALA; he usually sits to the right of VAIROCANA, the cosmic buddha at the center of the MAṆḌALA. One interpretation of his name is that Saṃkusumitarājendra spreads virtue and compassion through the universe as if they were flowers.

Sammādiṭṭhisutta. In Pāli, "Discourse on Right View," the ninth sutta in the MAJJHIMANIKĀYA (a somewhat similar SARVĀSTIVĀDA recension appears as the twenty-ninth sūtra in the Chinese translation of the MADHYAMĀGAMA, although with a different title and interlocutor; there is also an untitled Sarvāstivāda recension in the Chinese translation of the SAṂYUKTĀGAMA); preached by ŚĀRIPUTRA (P. Sāriputta) to a group of monks in the JETAVANA grove in the town of ŚRĀVASTĪ (P. Sāvatthi). Śāriputra explains that when actions of body, speech, and mind are motivated by greed, hatred, and delusion they are deemed unwholesome (P. akusala; S. AKUŚALA). When they are motivated by nongreed, nonhatred and nondelusion they are deemed wholesome (P. kusala; S. KUŚALA). He further explains the significance of the FOUR NOBLE TRUTHS, the twelve links of dependent origination (P. paṭiccasamuppāda, S. PRATĪTYASAMUTPĀDA), and the afflictions.

Saṃmitīya. (T. Mang bkur ba; C. Zhengliang bu; J. Shōryōbu; K. Chŏngnyang pu 正量部). One of the "mainstream" (that is, non-Mahāyāna) schools of Indian Buddhism, a subsect of the VĀTSĪPUTRĪYA, and remembered primarily for its affirmation of the notion of a "person" (PUDGALA) that is neither the same as nor different from the aggregates (SKANDHA). Because of their assertion of such an "inexpressible" (avācya) person, the adherents of the school were dubbed PUDGALAVĀDA ("proponents of the person") and were criticized by other Buddhist schools for asserting the existence of a self, a position anathema to the mainstream Buddhist position of nonself (ANĀTMAN). Despite this apparent heresy, the school enjoyed considerable popularity in India; the seventh-century Chinese pilgrim XUANZANG describes it as the largest of the mainstream Buddhist schools in India, representing one quarter of all active monks. See VĀTSĪPUTRĪYA.

Sammohavinodanī. In Pāli, "The Dispeller of Delusion," a commentary by the influential Pāli scholar BUDDHAGHOSA on the VIBHAṄGA, the second book of the Pāli ABHIDHAMMAPIṬAKA. This work covers much of the same material found in Buddhaghosa's VISUDDHIMAGGA, which is thought to be the earlier of the two works. In his introduction to *Sammohavinodanī*, Buddhaghosa claims to have drawn his analysis from more ancient commentaries. The work is divided into eighteen sections, beginning with an exposition on the five aggregates (P. khandha, S. SKANDHA). Each subsequent section covers a different element of the *Vibhaṅga*'s content, including analyses of the sense spheres (ĀYATANA), elements (DHĀTU), stages of meditative absorption (P. JHĀNA, S. DHYĀNA), the path (P. magga, S. MĀRGA), rules of training (P. sikkhāpada, S. ŚIKṢĀPADA), and so on. This commentary is particularly well known for its analysis of conditioned origination (P. paṭiccasamuppāda, S. PRATĪTYASAMUTPĀDA), which offers perhaps the most detailed examination of this doctrine found in the Pāli abhidhamma; there, Buddhaghosa represents the entire chain of causes and effects as occurring in both an entire lifetime as well as in single moment of consciousness. The *Sammohavinodanī* itself became the subject of extensive exegesis in the Pāli tradition.

sammutisaṅgha. (S. saṃvṛtisaṃgha; T. kun rdzob pa'i dge 'dun; C. shisu seng; J. sezokusō; K. sesok sŭng 世俗僧). In Pāli, "conventional order"; the community of legally ordained monks and nuns. A technical term used in the Pali commentaries, the sammutisaṅgha is comprised of monks and nuns who are still puthujjana (S. PṚTHAGJANA), or ordinary unenlightened persons. This contrasts with the PARAMATTHASAṄGHA, or "ultimate order," comprised of noble (P. āriya, S. ĀRYA) monks and nuns.

saṃnāha. (T. go cha; C. beijia; J. hikō; K. p'igap 被甲). In Sanskrit, "armor"; a term that occurs especially in the tradition of the ABHISAMAYĀLAṂKĀRA, where the term "armor practice" (saṃnāhapratipatti) refers both to the bodhisattva path in general as well as to specific practices begun on the path of accumulation or equipment (SAṂBHĀRAMĀRGA). In the PRAJÑĀPĀRAMITĀ sūtras (which are termed the jinajananī, "mother of victors"), bodhisattvas are said to be armed with a great armor (saṃnaddhasaṃnāha), an equipment made out of the interwoven six perfections (PĀRAMITĀ); and to set out (prasthāna) for the difficult work (duṣkaracaryā) necessary to become "victors" (JINA). This "difficult work" involves activities done for the sake of others. Each of the perfections is said to

subsume all the other perfections, so that, for example, when bodhisattvas engage in exceptional acts of giving away their wealth or limbs (DĀNA), the act is informed by the bodhisattva's morality (ŚĪLA); done with forbearance (KṢĀNTI) that can withstand the difficulty involved; propelled by perseverance (VĪRYA), and informed by concentration (SAMĀDHI), which enables the bodhisattva to stay focused on the aim of enlightenment while remaining tranquil and at ease; and is grounded on the wisdom (PRAJÑĀ) that understands that the act of giving, the carrying out of the act, and the donor are all interdependent and without any inherent nature (SVABHĀVA). When bodhisattvas are armed with this great armor, they do not become discouraged by the long and difficult task of looking after the welfare of others (PARĀRTHA) who are "numberless like the sands of the Ganges" (GAṄGĀNADĪVĀLUKĀ). Buckling on the armor (saṃnāha) and setting out (prasthāna) on their quest, bodhisattvas ultimately accumulate all their necessary equipment (SAṂBHĀRA) and go forth (niryāṇa) to the final goal of buddhahood.

saṃpannakrama. (S) (T. rdzogs rim). See NIṢPANNAKRAMA.

Sampasādanīyasutta. (C. Zihuanxi jing; J. Jikangikyō; K. Chahwanhŭi kyŏng 自歡喜經). In Pāli, "Discourse on Serene Faith"; the twenty-eighth sutta of the DĪGHANIKĀYA (a separate DHARMAGUPTAKA recension appears as the eighteenth SŪTRA in the Chinese translation of the DĪRGHAGĀMA; there is also a separate but untitled SARVĀSTIVĀDA recension in the Chinese translation of the SAṂYUKTĀGAMA); addressed to ŚĀRIPUTRA at NĀLANDĀ in Pāvārika's mango grove. Śāriputra declares that there has never been nor will there ever be anyone equal to the Buddha in wisdom. When questioned by the Buddha whether he had ever met a buddha of the past or had been able to fathom the Buddha's own mind, Śāriputra admits he had done neither but nevertheless proceeds to justify his faith on the basis of the Buddha's unsurpassable qualities. The Buddha approves of Śāriputra's explanation and advises him to preach it often to others.

saṃprajanya. (P. sampajañña; T. shes bzhin; C. zhengzhi; J. shōchi; K. chŏngji 正知). In Sanskrit, "clear comprehension," "circumspection," "introspection"; a term that is closely related to, and often appears in compound with, mindfulness (S. SMṚTI, P. sati). In descriptions of the practice of developing meditative absorption (DHYĀNA), smṛti refers to the factor of mindfulness that ties the mind to the object, while saṃprajanya is the factor that observes the mind to determine whether it has strayed from its object. Specifically, Pāli sources refer to four aspects of clear comprehension, which involve the application of mindfulness in practice. The first is purpose (P. sātthaka), viz., whether the action will be in the best interests of oneself and others; its principal criterion is whether it leads to growth in dharma. Second is suitability (P. sappāya): whether an action is in accord with the appropriate time, place, and personal capacity; its principal criterion is skillfulness in applying right means (P. upāyakosalla; S. UPĀYAKAUŚALYA). Third is the domain of meditation (gocara): viz., all experiences should be made a topic of mindful awareness. Fourth is nondelusion (asammoha): viz., recognizing that what seem to be the actions of a person are in fact an impersonal series of mental and physical processes; this aspect of saṃprajanya helps to counteract the tendency to view all events from a personal point of view. Saṃprajanya thus expands upon the clarity of thought generated by mindfulness by incorporating the additional factors of correct knowledge (JÑĀNA) or wisdom (PRAJÑĀ).

saṃprayukta. (T. mtshungs ldan; C. xiangying; J. sōō; K. sangŭng 相應). In Sanskrit, literally "yoked," "harnessed," "joined together." This term is used in the ABHIDHARMA in the sense of "concomitant" or "associated"; its nominal counterpart saṃprayoga may be translated as "concomitance." The term saṃprayukta is used to describe the relationship between mind (CITTA) and mental concomitants (CAITTA). This relationship is described as "concomitant" in that the origination and specific features of one are closely related to the origination and specific features of the other. The SARVĀSTIVĀDA enumerated five ways in which the mind and mental functions are concomitant by listing five features that they share: sense base (ĀŚRAYA), object (ĀLAMBANA), aspect of the object (ĀKĀRA), moment of arising (KĀLA), and substance (DRAVYA).

saṃprayuktahetu. (T. mtshungs ldan gyi rgyu; C. xiangying yin; J. sōōin; K. sangŭngin 相應因). In Sanskrit, "conjoined" or "associative" "cause"; the third of the six kinds of causes (HETU) outlined in the JÑĀNAPRASTHĀNA, the central text of the SARVĀSTIVĀDA ABHIDHARMA, which accounts for the fact that mental events cannot exist in isolation but instead mutually condition, or are "associated" with, one another. This type of cause is effectively a subsection of the coexistent cause (SAHABHŪHETU). Mind (CITTA) or consciousness (VIJÑĀNA) cannot exist in isolation; they are always conjoined with various related mental concomitants (CAITTA). Thus the conjoined causes exist in a relationship of mutuality or reciprocation, e.g., mind causes mental concomitants, but mental functions also cause mind. Because of this reciprocity, the functioning of the visual organ (viz., the eye) leads to an associated visual consciousness (CAKṢURVIJÑĀNA) and associated mental concomitants, such as visual sensations (VEDANĀ), perceptions (SAṂJÑĀ), emotions that derive from those perceptions, and so forth.

saṃprayuktasaṃskāra. In Sanskrit, "forces conjoined [with thought]." See CITTASAṂPRAYUKTASAṂSKĀRA.

Saṃputa Tantra. (S). See HEVAJRATANTRA.

saṃsāra. (T. 'khor ba; C. lunhui/shengsi lunhui; J. rinne/shōjirinne; K. yunhoe/saengsa yunhoe 輪迴/生死輪迴). In Sanskrit and Pāli, "wandering," viz., the "cycle of REBIRTH."

The realms that are subject to rebirth are typically described as composed of six rebirth destinies (GATI): divinities (DEVA), demigods or titans (ASURA), humans (MANUṢYA), animals (TIRYAK), ghosts (PRETA), and hell denizens (NĀRAKA). These destinies are all located within the three realms of existence (TRAIDHĀTUKA), which comprises the entirety of our universe (see also AVACARA; LOKADHĀTU). At the bottom of the sensuous realm (KĀMADHĀTU; kāmāvacara) are located the denizens of the hells (NĀRAKA), the lowest of which is named the interminable (AVĪCI). This most ill-fated of existences is followed by ghosts, animals, humans, demigods, and the divinities of the six heavens of the sensuous realm. Higher levels of the divinities occupy the upper two realms of existence, the subtle-materiality realm (RŪPADHĀTU) and the immaterial realm (ĀRŪPYADHĀTU). The bottom three destinies, of hell denizens, hungry ghosts, and animals, are referred to as the three evil bournes (DURGATI); these are destinies where suffering predominates because of the past performance of unwholesome (AKUŚALA) actions (KARMAN). In the various levels of the divinities, happiness predominates, because of the past performance of wholesome (KUŚALA) actions. By contrast, the human destiny is thought to be ideally suited for religious training, because it is the only bourne where both suffering and happiness can be readily experienced, allowing the adept to recognize more easily the true character of life as impermanent (ANITYA), suffering (DUḤKHA), and nonself (ANĀTMAN). Saṃsāra is said to have no beginning and to come to end only for those individuals who achieve liberation from rebirth through the practice of the path (MĀRGA) to NIRVĀṆA. Saṃsāra is depicted iconographically as a "wheel of existence" (BHAVACAKRA), which shows the six rebirth destinies, surrounding a pig, a rooster, and a snake, which symbolize ignorance (AVIDYĀ), desire (LOBHA), and hatred (DVEṢA), respectively. Around the edge of the wheel are scenes representing the twelve links of dependent origination (PRATĪTYASAMUTPĀDA). The relation between saṃsāra and nirvāṇa is discussed at length in Buddhist texts, with NĀGĀRJUNA famously declaring that there is not the slightest difference between them, because the true nature of both is emptiness (ŚŪNYATĀ).

saṃskāra. (P. saṅkhāra; T. 'du byed; C. xing; J. gyō; K. haeng 行). In Sanskrit, a polysemous term that is variously translated as "formation," "volition," "volitional action," "conditioned," "conditioning factors." In its more passive usage (see SAṂSKṚTA, P. saṅkhata), saṃskāra refers to anything that has been formed, conditioned, or brought into being. In this early denotation, the term is a designation for all things and persons that have been brought into being dependent on causes and conditions. It is in this sense that the Buddha famously remarked that "all conditioned things (saṃskāra) are impermanent" (anityāḥ sarvasamskārāḥ), the first of the four criteria that "seal" a view as being authentically Buddhist (see CATURNIMITTA). In its more active sense, saṃskāra as latent "formations" left in the mind by actions (KARMAN) refers to that which forms or conditions other things. In this usage, the term is equivalent in meaning to action. It is in this sense that saṃskāra serves as the second link in the twelvefold chain of dependent origination (PRATĪTYASAMUTPĀDA). There, saṃskāra refers specifically to volition (CETANĀ) and as such assumes the karmically active role of perpetuating the rebirth process; alternatively, in the YOGĀCĀRA school, saṃskāra refers to the seeds (BĪJA) left in the foundation or storehouse consciousness (ĀLAYAVIJÑĀNA). Saṃskāra is also the name for the fourth of the five aggregates (SKANDHA), where it includes a miscellany of phenomena that are both formed and in the process of formation, i.e., the large collection of factors that cannot be conveniently classified with the other four aggregates of materiality (RŪPA), sensation (VEDANĀ), perception (SAṂJÑĀ), and consciousness (VIJÑĀNA). This fourth aggregate includes both those conditioning factors associated with mind (CITTASAṂPRAYUKTASAṂSKĀRA), such as the mental concomitants (CAITTA), as well as those conditioning forces dissociated from thought (CITTAVIPRAYUKTASAṂSKĀRA), such as time, duration, the life faculty, and the equipoise of cessation (NIRODHASAMĀPATTI).

saṃskāraduḥkhatā. (T. 'du byed kyi sdug bsngal; C. xingku; J. gyōku; K. haenggo 行苦). In Sanskrit, "suffering inherent in conditioning," the third of the three types of suffering, together with DUḤKHADUḤKHATĀ and VIPARIṆĀMADUḤKHATĀ. This is the most subtle and most pernicious of the three types of suffering, since it conditions all of SAṂSĀRA. Saṃskāraduḥkhatā is identified as neutral sensations and their objects, which, due to impermanence, can turn into sensations of pain in the next instant. It is said that this form of suffering generally goes unnoticed by ordinary beings (PṚTHAGJANA), where it is like a wisp of wool in the palm of the hand, but it cannot be ignored by noble beings (ĀRYAPUDGALA), where it is like a wisp of wool in the eye. An example for the three types of suffering is a burn: as a conditioned event, it is suffering just because of what it is (saṃskāraduḥkhatā); when soothed with a cooling ointment it feels better, but when the temporary relief ends it will inevitably become suffering again (viparināmaduḥkhatā); and when jabbed, it causes excruciating pain (duḥkhaduḥkhatā).

saṃskṛta. (T. 'dus byas; C. youwei; J. ui; K. yuwi 有爲). In Sanskrit, "conditioned," a term that describes all impermanent phenomena, that is, all conditioned factors (saṃskṛtadharma) that are produced through the concomitance of causes and conditions; these phenomena are subject to the four characteristics (CATURLAKṢAṆA) governing all conditioned objects (SAṂSKṚTALAKṢAṆA), viz., "origination," or birth (JĀTI), "continuance," or maturation (STHITI), "senescence," or decay (JARĀ), and "desinence," or death (ANITYA). Saṃskṛta is contrasted with ASAṂSKṚTA, "unconditioned," a common adjective of NIRVĀṆA, but also a category that in some traditions includes space (ĀKĀŚA) and other types of absence and cessation. The fact that the objects of ordinary experience are conditioned is commonly cited as a reason why they are unreliable and thus should be abandoned, and why the unconditioned state should be sought. See also SAṂSKĀRA.

saṃskṛtalakṣaṇa. (T. 'dus byas kyi mtshan nyid; C. youwei xiang; J. uisō; K. yuwi sang 有爲相). In Sanskrit, "compounded characteristics"; according to the SARVĀSTIVĀDA ABHIDHARMA analysis of causality, four "forces dissociated from thought" (CITTAVIPRAYUKTASAṂSKĀRA) that govern conditioned existence: viz., origination or birth (JĀTI), continuance or maturation (STHITI), "senescence" or decay (JARĀ), and "desinence" or extinction, viz., death (ANITYA). See CATURLAKṢAṆA.

saṃtāna. (P. santāna; T. rgyud / rgyun; C. xiangxu; J. sōzoku; K. sangsok 相續). In Sanskrit, "continuum," a term used to designate an uninterrupted sequence of cause and effect, especially a sequence of mental moments. Because there is nothing permanent in the mind and body, but there is continuity in the ways in which they are made manifest, they are described as a continuum. The term is used most commonly to refer to the mental continuum, both within a single lifetime and as it extends over many lifetimes. In the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA, the "immediate-antecedent condition" (SAMANANTARAPRATYAYA) accounts for the immediately preceding moment in the saṃtāna, which by coming to an end, enables a subsequent moment of thought to arise. All types of thought in the conditioned (SAṂSKṚTA) realm serve as immediate-antecedent conditions that enable the mental continuum to persist. The only exception is the final thought-moment in the mental continuum of an ARHAT: the immediate-antecedent condition does not function at the specific moment, because the arhat's next thought-moment involves the experience of the unconditioned (ASAṂSKṚTA); thus, no further thoughts from the conditioned realm can ever again recur and the arhat is liberated from SAṂSĀRA. This notion of a mental continuum also serves to counter annihilationist interpretations (see UCCHEDAVĀDA, UCCHEDĀNTA) of the quintessential Buddhist doctrine of nonself (ANĀTMAN): there may be no permanent, underlying substratum of being that can be designated as a self or soul (ĀTMAN), but this fact does not controvert the continuity that pertains in the flow of moral cause and effect (KARMAN) or the possibility of REBIRTH.

samucchinnakuśalamūla. (T. dge rtsa bcad pa; C. duanshangen; J. danzengon; K. tansŏn'gŭn 斷善根). In Sanskrit, "those whose wholesome roots are eradicated," referring to beings who have performed the most heinous of acts, or who are unable to engage in even the most basic of wholesome activities. Their wholesome roots (KUŚALAMŪLA) being thereby eradicated, they are thus condemned to subsequent rebirth in the hells (see NĀRAKA), where they may spend an "indefinite" period. The samucchinnakuśalamūla is related to the MAHĀYĀNA term for the spiritual bereft, or incorrigibles (ICCHANTIKA), who also may be condemned to a virtual eternity in the hells. A person can become samucchinnakuśalamūla through lack of faith (ĀŚRADDHYA), wrong views (MITHYĀDṚṢṬI), or by being swayed by the afflictions (kleśasaṃyoga). It is said that the inability to engage in charity (DĀNA), the foundation of Buddhist ethical practice, is the determining factor that leads to a person becoming samucchinnakuśalamūla.

samudācāra. (T. kun tu spyod pa; C. xianxing; J. gengyō; K. hyŏnhaeng 現行). In Sanskrit, the term has two important denotations: "proper conduct," or "intention, purpose, habitual idea"; and "manifest action." Samudācāra designates religious action that is undertaken for the sake of attaining liberation for oneself and either liberation or an improved state of rebirth for others. Thus, the term can refer to a buddha's unceasing effort and the influence he exerts to help beings attain liberation. In its description of the first BHŪMI, the MAHĀVASTU lists eight types of samudācāra for a BODHISATTVA. These are generosity (tyāga), compassion (KARUṆĀ), relentlessness (aparikheda), humility (amāna), study of all the treatises (sarvaśāstrādhyāyitā), courage (vikrama), social skills (lokānujñā), and resolve (dhṛti). Deriving from its denotation of volitional impulse, samudācāra also comes to be used in the YOGĀCĀRA school to indicate the emergence of conditioned factors (saṃskṛtadharma) from the ĀLAYAVIJÑĀNA, since, once they have arisen and are no longer dormant, they influence conscious action. In the context of Yogācāra thought, then, samudācāra is often translated as "manifest action." The term is also used in the sense of the special qualities of the practice of bodhisattvas, who are habituated to the ultimate nature of things (TATHATĀ, literally, "suchness"). The dependent origination of an action and the ultimate way in which that action occurs are inseparable; hence samudācāra, and in particular actions prompted by the aspiration for enlightenment, are "manifest actions." In tantric literature, the term is used for the four types of activities, also known as the CATURKARMAN.

samudānītagotra. (T. yang dag par bsgrub pa'i rigs; C. xizhongxing; J. shūshushō; K. sŭpchongsŏng 習種性). In Sanskrit, "the [karmic] lineage that is conditioned by habits." In the YOGĀCĀRA school, a distinction is made between the indestructible, inherent "naturally endowed lineage" (PRAKṚTISTHAGOTRA) and this changeable, continuously acquired "lineage conditioned by habits" (samudānītagotra). In contrast to the former, which predetermines a person's orientation toward the two vehicles of either MAHĀYĀNA or HĪNAYĀNA, the latter allows for some leeway for personal adaptations and change through doctrinal study, practice, and exposure (these are what are meant by "habits"). According to this controversial Yogācāra tenet, whereas a person cannot effect change in terms of his highest spiritual potential and vehicular predisposition because of his "naturally endowed lineage," he can nevertheless influence the speed with which he is able to attain enlightenment, and other extrinsic variations within his predetermined "lineage." This flexibility is the lineage that is conditioned, and can be altered, by "habits." Together and in contrast with the "naturally endowed lineage," they are known as "the two lineages: intrinsic and acquired" (xingxi er[zhong]xing). ¶ In another interpretation based on the BODHISATTVABHŪMI and MAHĀYĀNASAṂGRAHA, the naturally endowed (prakṛtistha) lineage is present since time

immemorial (anādikālika) and is called śrutavāsanā (the residual impression left by listening). In Yogācāra, where there are no external objects, and the ĀLAYAVIJÑĀNA is the storehouse of all seeds (BĪJA), the śrutavāsanā is a seed planted in the deepest recesses of the ālaya (see AMALAVIJÑĀNA) and helps explains how those who first hear the different branches of the Buddha's doctrine thereby learn and reach the goal of full enlightenment. In this interpretation, the difference between the prakṛtisthagotra and the samudānītagotra is only one of time: when the lineage (understood on the analogy of a seed or capacity) is dormant it is the naturally endowed lineage; when, nutured by the practices leading up to the path of vision (DARŚANAMĀRGA), it comes closer to the ĀŚRAYAPARĀVṚTTI (fundamental transformation of the basis) on the eighth bodhisattva bhūmi, it is samudānītagotra.

samudaya. (T. kun 'byung; C. ji; J. jū; K. chip 集). In Sanskrit and Pāli, "origination" or "arising." In the *Samudayasutta*, the 132nd sutta of the twenty-second section of the Pāli SAṂYUTTANIKĀYA, samudaya refers to the origination of the five aggregates (P. khandha; S. SKANDHA), which is followed by their subsistence and passing away. In this basic sense, samudaya conveys the sense that the aggregates that make up a person are not miraculously there, or there permanently, but arise as the result of specific causes and conditions. The term is most widely used in the compound SAMUDAYASATYA ("truth of the origin [of suffering]") the second of the FOUR NOBLE TRUTHS. In the more detailed explanation of the truth of origination, samudaya is the second of four aspects (ĀKĀRA), each of which counteract a mistaken view about the origin of suffering (see SAMUDAYASATYA). It counteracts the view that suffering is created only once, in a single act by a creator god, because the skandhas arise continually in a stream or continuum (SAṂTĀNA).

samudayasatya. (P. samudayasacca; T. kun 'byung gi bden pa; C. jidi; J. jittai; K. chipche 集諦). In Sanskrit, "truth of origination"; the second of the so-called FOUR NOBLE TRUTHS (catvāry āryasatyāni) promulgated by the Buddha in his first sermon (see DHAMMACAKKAPPAVATTANASUTTA) in the Deer Park at SĀRNĀTH. In this context, SAMUDAYA refers to the origination or cause of the first truth, suffering (DUḤKHA; DUḤKHASATYA). The origination of suffering is identified as KARMAN and KLEŚA. Karman or past actions, in this case unwholesome (AKUŚALA) actions, are identified as the immediate cause of suffering, with negative deeds fructifying as experiences of mental and physical pain. The afflictions (kleśa), often enumerated in this context as greed, hatred, and delusion, are the mediate causes of suffering, motivating the nonvirtuous deeds that result in future suffering. Among these three, delusion, understood as the mistaken conception of a perduring self (ĀTMAGRAHA), is the root cause of suffering, and produces greed and hatred. The implication of the second truth is that if one can eliminate the cause or origin of suffering, one can then put an end to suffering itself. This truth of the origin of suffering has four aspects (ĀKĀRA): it is the cause (HETU), origination (SAMUDAYA), producer (saṃbhava), and condition (PRATYAYA). These four aspects counteract respectively the mistaken views that (1) suffering is arbitrary and has no cause, (2) there is only a single cause for suffering even though it is diverse and ongoing, (3) suffering is just the imaginary transformations of reality, and (4) suffering is the result of a particular mental focus, not the inexorable result of a mind governed by kleśa and karman. These four aspects of the truth of origination are like a disease (in the sense that kleśa and karman are the root cause of suffering), like a boil that is the origin of ongoing pain, like a thorn that produces intense suffering immediately, and like misfortune, in that the unbroken continuum (SAṂTĀNA) of the aggregates (SKANDHA) is the condition for a life that is governed by suffering.

saṃvara. (P. saṃvara; T. sdom pa; C. lüyi/sanbaluo; J. ritsugi/sanbara; K. yurŭi/samballa 律儀/三跋羅). In Sanskrit, "restraint," referring generally to the restraint from unwholesome (AKUŚALA) actions (KARMAN) that is engendered by observance of the monastic disciplinary code (PRĀTIMOKṢA), the BODHISATTVA precepts, and tantric vows. In the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA, three specific types of restraint (SAṂVARA) against unwholesomeness (akuśala) are mentioned, which are all associated with "unmanifest material force" or "hidden imprints" (AVIJÑAPTIRŪPA): (1) the restraint proffered to a monk or nun when he or she accepts the disciplinary rules of the order (PRĀTIMOKṢASAṂVARA); (2) the restraint that is engendered by mental absorption (dhyānajasaṃvara); and (3) the restraint that derives from being free from the contaminants (anāsravasaṃvara). The restraint inherent in the disciplinary code (prātimokṣasaṃvara) creates a special kind of protective force field that helps to dissuade monks and nuns from unwholesome activity, even when they are not consciously aware they are following the precepts or even when they are asleep. This specific type of restraint is what makes a person a monk, since just wearing robes or following an ascetic way of life would not in themselves be sufficient to instill in him the protective power offered by the prātimokṣa. The restraint engendered by DHYĀNA (dhyānajasaṃvara) refers to the fact that absorption in meditation was thought to confer on the monk protective power against physical harm: the literature abounds with stories of monks who discover tiger tracks all around them after withdrawing from dhyāna, thus suggesting that dhyāna itself was a force that provided a protective shield against accident or injury. Finally, anāsravasaṃvara is the restraint that precludes someone who has achieved the extinction of the contaminants (ĀSRAVA)—that is, enlightenment—from committing any action (karman) that would produce a karmic result (VIPĀKA), thus ensuring that their remaining actions in this life do not lead to any additional rebirths. ¶ In MAHĀYĀNA materials, such as the BODHISATTVABHŪMI, the first of three types of morality that together codify the moral training of a bodhisattva is called saṃvaraśīla ("restraining morality"); under this heading is

included the different sets of rules for BHIKṢU, BHIKṢUṆĪ and so on in the prātimokṣa, taken as a whole; two further codifications of rules called the morality of collecting wholesome factors (kuśalasaṃgrāhakaśīla), and the morality that acts for the welfare of beings (sattvārthakriyāśīla; see ARTHAKRIYĀ); together, these three constitute the definitive and exhaustive explanation of bodhisattva morality, known as TRISAṂVARA, the "three restraints" or "triple code." The original meaning of saṃvara as "restraint" remains central in the *Bodhisattvabhūmi*'s account, but the text expands the scope of morality (ŚIKṢĀPADA) widely, incorporating all altruistic acts under the rubric of skillful means employed for the sake of others, in essence formulating a code for bodhisattvas who are committed to acting like buddhas. In Indian and Tibetan tantra, the meaning of trisaṃvara undergoes yet further expansion. Each of the five buddha KULA (in one list AKṢOBHYA, VAIROCANA, RATNASAMBHAVA, AMITĀBHA, and AMOGHASIDDHI) has a vowed morality, called SAMAYA. This tantric code is the third of the three codes, the other two being the prātimokṣa codes and the *Bodhisattvabhūmi*'s code for bodhisattvas. These three, then, are called the prātimokṣa-saṃvara, the bodhisattvasaṃvara, and the guhyamantrasaṃvara ("secret mantra vows") (see SDOM GSUM RAB DBYE). ¶ In tantric literature, saṃvara also has the sense of "union," a meaning that is conveyed in the proper name of (CAKRA)SAṂVARA (see also HERUKA), a principal deity of the VAJRAYĀNA ANUTTARAYOGATANTRA tradition. A god named Saṃvara appears in the *Ṛg Veda* as an enemy of the gods who hoarded the precious soma (the divine nectar) and kept it from INDRA, who eventually destroyed Saṃvara's mountain fortress. The myth suggests the possibility that Saṃvara or Cakrasaṃvara began his existence as a pre-Vedic Indian deity preserved in Buddhist tantra in a subordinated position. With his adoption into the Buddhist pantheon, Saṃvara (likely the Buddhist version of Śiva) himself vanquishes the Vedic god—he is commonly depicted trampling BHAIRAVA (Śiva) and/or his consort. Alternate Indian names for him include Śambara and Paramasukha Cakrasaṃvara. The Tibetan Bde mchog, or "supreme bliss," is a translation of paramasukha. Tantric cycles connected to Saṃvara were introduced to Tibet by the translator MAR PA in the eleventh century CE. He is said to reside at the mountain of TSHA RI in Rdza yul, southern Tibet, as well as in the Bde mchog pho brang on Mount KAILĀSA, where the nearby Lake Manasarovar is sacred to him. His consort is VAJRAVĀRĀHĪ.

saṃvartakalpa. (P. saṃvaṭṭakappa; T. 'jig pa'i bskal pa; C. huaijie; J. ekō; K. koegŏp 壞劫). In Sanskrit, "eon of dissolution," one of the four periods in the cycle of the creation and destruction of a world system, according to Buddhist cosmology. These are: the eon of creation (VIVARTAKALPA); the eon of abiding (VIVARTASTHĀYIKALPA); the eon of dissolution (saṃvartakalpa); and the eon of nothingness (SAṂVARTASTHĀYIKALPA). According to the ABHIDHARMAKOŚABHĀṢYA, each of the four eons lasts twenty intermediate eons. After the complete dissolution of the previous world system, an eon of nothingness occurs, during which the universe remains in a state of vacuity, with the sentient beings who had populated that world system reborn in other worlds or in the second absorption (DHYĀNA) of the subtle-materiality realm (RŪPADHĀTU). The eon of creation begins when a wind begins to blow in space, impelled by the previous actions (KARMAN) of sentient beings. A circle of wind forms, followed by a circle of water, followed by a circle of golden earth. The entire world-system of the sensuous realm (KĀMADHĀTU) then forms, including Mount SUMERU, the four continents and their subcontinents, the heavens, and the hells. These are then populated by beings, reborn in the various realms as a result of their previous actions. When all realms of the world system have been populated, the eon of creation ends and the eon of abiding begins. At the beginning of the eon, the human life span is said to be "infinite" and decreases until it eventually reaches ten years of age. It then increases to eighty thousand years, before decreasing again to ten years. It takes one intermediate eon for the life span to go from ten years to eighty thousand years to ten years again. The eon of abiding is composed of twenty eons, beginning with the intermediate eon of decrease (in which the life span decreases from "infinite" to ten years), followed by eighteen intermediate eons of increase and decrease, and ending with an intermediate eon of increase, when the life span increases from ten years to eighty thousand years, at which point the next eon, the eon of dissolution begins. Buddhas only appear during periods of decrease. ŚĀKYAMUNI Buddha appeared when the life span was one hundred years. It is said that MAITREYA will come when the human life span next reaches eighty thousand years. The eon of dissolution begins when sentient beings are no longer reborn in the hell realms of that world system. After that point, the hell realms of that world then disappear. (Beings who subsequently commit deeds warranting rebirth in hell are reborn into the hell realms of other universes.) The realms of ghosts and animals then disappear. Through the practice of meditation, humans are reborn in the first DHYĀNA and then into the second dhyāna. When the karman that has caused beings to be reborn in that world is exhausted, such that the physical world is depopulated, seven suns appear in the sky and incinerate the entire world system, including Mount Sumeru and all of the first dhyāna. This is followed by another eon of nothingness. See also SATTVALOKA.

saṃvartasthāyikalpa. (P. saṃvaṭṭaṭṭhāyīkappa; T. stong pa'i bskal pa; C. kongjie; J. kūkō; K. konggŏp 空劫). In Sanskrit, "eon of nothingness"; one of the four periods in the cycle of the creation and destruction of a world system, according to Buddhist cosmology. These are: the eon of creation (VIVARTAKALPA); the eon of abiding (VIVARTASTHĀYIKALPA); the eon of dissolution (SAṂVARTAKALPA); and the eon of nothingness (saṃvartasthāyikalpa). According to the ABHIDHARMAKOŚABHĀṢYA, each of the four eons lasts twenty intermediate eons. After the complete dissolution of the previous world system, an eon of nothingness occurs in which the universe remains in a state of vacuity, with the sentient beings who had populated that world

system reborn in other worlds or in the second concentration (DHYĀNA) of the realm of subtle materiality (RŪPADHĀTU). (For the remainder of this cosmology, see the preceding entry SAṂVARTAKALPA, s.v.) After successive eons of formation, abiding, and dissolution, the karma that had caused beings to be reborn into the world is exhausted, such that the physical world is depopulated; seven suns then appear in the sky and incinerate the entire world system, including Mount SUMERU and all of the first dhyāna. Thus begins a new eon of nothingness, a period of twenty intermediate eons of vacuity. See also BHĀJANALOKA.

saṃvṛti. (P. sammuti; T. kun rdzob; C. shisu/su; J. sezoku/zoku; K. sesok/sok 世俗/俗). In Sanskrit, "conventional" or "relative"; a term used to designate the phenomena, concepts, and understanding associated with unenlightened, ordinary beings (PṚTHAGJANA). Saṃvṛti is akin to the Sanskrit term LAUKIKA (mundane), in that both are used to indicate worldly things or unenlightened views, and is typically contrasted with PARAMĀRTHA, meaning "ultimate" or "absolute." In Sanskrit the term carries the connotation of "covering, concealing," implying that the independent reality apparently possessed by ordinary phenomena may seem vivid and convincing, but is in fact ultimately illusory and unreal. Much analysis and debate has occurred within the various philosophical schools regarding the questions of if, how, and in what way saṃvṛti or conventional phenomena exist. For example, in his PRASANNAPADĀ, the seventh-century scholar CANDRAKĪRTI lists the following three characteristics of saṃvṛti. First, they conceal reality (avacchādana). Second, they are mutually dependent (anyonyasamāśraya), meaning that saṃvṛti phenomena are dependent on causes and conditions. Finally, they are concerned with worldly activities or speech (lokavyavahāra). Buddhas and BODHISATTVAS use their understanding of conventional reality to help them convey the DHARMA to ordinary beings and lead them away from suffering. See also SAṂVṚTISATYA.

saṃvṛtibodhicitta. (T. kun rdzob byang chub kyi sems). In Sanskrit, "conventional (or relative) aspiration to enlightenment." In Indian MAHĀYĀNA scholastic literature, this term is contrasted with the "ultimate aspiration to enlightenment" (PARAMĀRTHABODHICITTA). The term saṃvṛtibodhicitta is used to refer to BODHICITTA in its more common usage, as the aspiration to achieve buddhahood for the sake of all sentient beings. It is the generation of this aspiration for enlightenment (BODHICITTOTPĀDA) that marks the beginning of the bodhisattva path and the Mahāyāna path of accumulation (SAṂBHĀRAMĀRGA). The ultimate aspiration or mind of enlightenment refers to the bodhisattva's direct realization of the ultimate truth (PARAMĀRTHASATYA). In the case of the MADHYAMAKA school's interpretation, this would be the direct realization of emptiness (ŚŪNYATĀ). Such realization, and hence the ultimate aspiration to enlightenment, occurs beginning on the Mahāyāna path of vision (DARŚANAMĀRGA) and is further developed on the path of cultivation (BHĀVANĀMĀRGA). These two types of bodhicitta explain how bodhicitta is present both during periods of concentration or equipoise (see SAMĀPATTI, SAMĀHITA) on the ultimate truth and during all the other stages of the path, called subsequent attainment (pṛṣṭhalabdha; cf. PṚṢṬHALABDHAJÑĀNA). These two terms inform the presentation of bodhicitta in the BODHICITTAVIVARAṆA, attributed to NĀGĀRJUNA, and are widely employed in Tibetan BLO SBYONG literature.

saṃvṛtisaṃgha. (S). See SAMMUTISAṄGHA.

saṃvṛtisatya. (P. sammutisacca; T. kun rdzob bden pa; C. shisu di/sudi; J. sezokutai/zokutai; K. sesok che/sokche 世俗諦/俗諦). In Buddhist Sanskrit, "conventional truth" or "relative truth"; the term carries the pejorative connotation of deception, concealment, and obscuration. Conventional truth (saṃvṛtisatya) and ultimate truth (PARAMĀRTHASATYA) constitute the "two truths" (SATYADVAYA), a philosophical bifurcation that is widely referenced and analyzed in Buddhism. All dharmas are said to be included in one of these two categories. Saṃvṛtisatya is variously defined by the Buddhist philosophical schools, but it is generally understood to refer to objects of ordinary experience that involve misperceptions tainted by ignorance, in distinction to the true or ultimate nature of those objects, which are ultimate truths (paramārthasatya). It is important to note that conventional truths, although misperceived, nonetheless exist conventionally or have conventional utility. The object of the most consequential misconception, a perduring self (ĀTMAN), is not a conventional truth because it is utterly nonexistent. Saṃvṛtisatya is also understood to mean the unavoidable domain through which sentient beings must navigate and communicate with one another in the mundane world. Thus buddhas and BODHISATTVAS use their knowledge of conventional truths to teach unenlightened beings and lead them away from suffering. Some Buddhist schools further subdivide saṃvṛtisatya into two categories: tathyasaṃvṛtisatya (correct conventional truth) and atathyasaṃvṛtisatya (or mithyāsaṃvṛtisatya, incorrect or false conventional truth), a distinction based upon whether or not the object can perform functions in accordance with their appearance. For example, a face would be a tathyasaṃvṛtisatya but a reflection of a face in a mirror would be a mithyāsaṃvṛtisatya.

samyagājīva. (P. sammājīva; T. yang dag pa'i 'tsho ba; C. zhengming; J. shōmyō; K. chŏngmyŏng 正命). In Sanskrit, "right livelihood" or "correct livelihood"; the fifth constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). "Right" (samyak) in this context is interpreted as "resulting in a decrease in the net suffering experienced by oneself and others." Of the three divisions of the eightfold path—morality (ŚĪLA), concentration (SAMĀDHI), and wisdom (PRAJÑĀ)—samyagājīva is the third of the three aspects of moral training. It involves abstention from engaging in occupations that are considered to be incompatible with morality because they bring harm to other beings, either

directly or indirectly. Such inappropriate occupations include selling weapons, or working as a butcher, fisherman, or soldier. Right livelihood also involves abstention from any occupation that may cause oneself, or encourage others, to break precepts associated with right speech (SAMYAGVĀC) and right action (SAMYAKKARMĀNTA). For this reason, selling intoxicants is considered to be a breach of right livelihood. The tradition provides examples of wrong livelihoods for both monastics and the laity. In Pāli literature, the BRAHMAJĀLASUTTA and SĀMAÑÑAPHALASUTTA of the DĪGHANIKĀYA list several "wrong livelihoods" for monks. These include performing divination and astrology as well as casting spells. MAHĀYĀNA interpretations stress the absence of absolutes, and the relative merits or demerits of any occupation based on the situation at hand and its value to the larger goal of promoting the welfare of others. In the inversion of categories that is characteristic of much of tantric literature, many of the MAHĀSIDDHAs are involved in professions that do not constitute right livelihood according to mainstream Buddhist definitions.

samyagdṛṣṭi. (P. sammādiṭṭhi; T. yang dag pa'i lta ba; C. zhengjian; J. shōken; K. chŏnggyŏn 正見). Often translated as "right view" or "correct view," the first constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). It is described as the correct understanding of the FOUR NOBLE TRUTHS (catvāry āryasatyāni); namely, the truth of suffering, the truth of the cause of suffering, the truth of cessation of suffering, and the truth of the path leading to the end of suffering. The last truth is itself the same as the eightfold path. Right view is also identified as the correct understanding of nonself (ANĀTMAN). In the MADHYĀNTAVIBHĀGA, right view refers to the understanding of the vision of truth that has just been witnessed, the unique formulation of the inexpressible in the mind of the awakened one who has just emerged from equipoise (SAMĀHITA).

samyagvāc. (P. sammāvācā; T. yang dag pa'i ngag; C. zhengyu; J. shōgo; K. chŏngŏ 正語). In Sanskrit, "right speech" or "correct speech," the third constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA), described as refraining from the four types of unwholesome verbal action: viz., lying, divisive speech, harsh speech, and frivolous prattle. See KARMAPATHA.

samyagvyāyāma. (P. sammāvāyāma; T. yang dag pa'i rtsol ba; C. zhengjingjin; J. shōshōjin; K. chŏngjŏngjin 正精進). In Sanskrit, "right effort" or "correct effort"; the sixth constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA), which is divided into four progressive endeavors: (1) preventing the arising of unwholesome (AKUŚALA) mental states that have not yet arisen, (2) continuing to abandon unwholesome mental states that have already arisen, (3) generating wholesome (KUŚALA) mental states that have not yet arisen, and (4) continuing to cultivate wholesome mental states that have already arisen. These wholesome mental states are characterized by mindfulness (SMṚTI), energy (VĪRYA), rapture (PRĪTI), concentration (SAMĀDHI), and equanimity (UPEKṢĀ), with the emphasis on energy or vigor (vīrya), here called effort (vyāyāma). In a more technical sense, as the sixth constituent of the eightfold noble path as set forth in the MADHYĀNTAVIBHĀGA, MAHĀYĀNASŪTRĀLAṂKĀRA, and parts of the ABHIDHARMAKOŚABHĀṢYA, samyagvyāyāma is the right effort required to eliminate the specific sets of afflictions (KLEŚA) that are to be abandoned on the path of cultivation (BHĀVANĀMĀRGA). The same force, required right from the start of the development of the path to enlightenment, is systematized as the four pradhāna (effort) or PRAHĀṆA (abandonments). Like smṛti and samādhi (see ṚDDHIPĀDA), effort is singled out for special treatment because of its importance at all stages of the path. The word SAMYAKPRADHĀNA (correct effort) is synonymous with samyakvyāyāma when it describes pradhāna that is fully developed. See also SAMYAKPRADHĀNA.

samyakkarmānta. (P. sammākammanta; T. yang dag pa'i las kyi mtha'; C. zhengye; J. shōgō; K. chŏngŏp 正業). In Sanskrit, lit. "correct ends of actions," commonly translated as "right action" or "correct action" and is the fourth constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). Of the three divisions of the eightfold path—morality (ŚĪLA), concentration (SAMĀDHI), and wisdom (PRAJÑĀ)—samyakkarmānta is the second of the three types of moral training. It is described as refraining from the three unwholesome physical actions of killing, stealing, and sexual misconduct. Thus three of the five most fundamental Buddhist precepts (PAÑCAŚĪLA) are encompassed by samyakkarmānta (the other two being abstinence from false speech and abstinence from intoxicants). Action is considered to be particularly significant in the Buddhist tradition because it is understood to be a product of mental volition (CETANĀ). Various schools variously interpret the nuances of right action. For example, East Asian Buddhism has generally concluded that meat-eating inevitably causes animals to suffer and is therefore inconsistent with samyakkarmānta, even though meat-eating is not specifically proscribed in the mainstream Buddhist VINAYAS.

samyakpradhāna. (P. sammāpadhāna; T. yang dag par spong ba; C. zhengqin; J. shōgon; K. chŏnggŭn 正勤). In Sanskrit, "right effort" or "correct effort"; in Tibetan (which reads the term as PRAHĀṆA), "right abandonment." There are four right efforts, which are set forth within the presentation of the second set of dharmas making up the thirty-seven constituents of enlightenment (BODHIPĀKṢIKADHARMA). The four pradhānas (efforts or, as prahāṇa, abandonments) describe effort at incipient stages of the path or religious training; by contrast, right effort (SAMYAKVYĀYĀMA), the sixth constituent of the eightfold path (ĀRYĀṢṬĀṄGAMĀRGA), denotes the effort or abandonment that occurs during the path of vision (DARŚANAMĀRGA) or the path of cultivation (BHĀVANĀMĀRGA), when the path is more fully developed. Pradhāna involves the effort to abandon unwholesome (AKUŚALA) mental states—and their resulting actions via body,

speech, and mind—that are conducive to suffering. Simultaneously, samyakpradhāna encompasses the effort to cultivate those wholesome (KUŚALA) mental states that are conducive to happiness for both oneself and others. These wholesome mental states are characterized by mindfulness (SMṚTI), energy (VĪRYA), rapture (PRĪTI), concentration (SAMĀDHI), and equanimity (UPEKṢĀ). At the first stage of practice, the focus is on SMṚTI, which, as the foundations of mindfulness (SMṚTYUPASTHĀNA), involves mindfulness of the FOUR NOBLE TRUTHS as applied to the body, sensations, states of mind, and wholesome and unwholesome dharmas. At the second stage of the practice, the focus is on the effort needed to develop samādhi. When fully developed in the mind of the awakened person, the practice of mindfulness is called right mindfulness; concentration, rapture, and equanimity are included under right concentration; and energy is called right effort (samyakvyāyāma).

samyaksamādhi. (P. sammāsamādhi; T. yang dag pa'i ting nge 'dzin; C. zhengding; J. shōjō; K. chŏngjŏng 正定). In Sanskrit, "right concentration" or "correct concentration," the eighth constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). It is defined generally as the concentration of the mind on wholesome objects. When fully developed, such concentration results in the attainment of the four levels of meditative absorption (DHYĀNA) associated with the realm of subtle materiality (RŪPADHĀTU). In this context, two types of samyaksamādhi are described. The first, called mundane, or LAUKIKA, is associated with all forms of ordinary concentration up to and including the four stages of dhyāna. The second type is associated with the attainment of the four supramundane (LOKOTTARA) paths of the stream-enterer, once-returner, nonreturner, and arhat.

samyaksaṃbodhi. (P. sammāsaṃbodhi; T. yang dag par rdzogs pa'i byang chub; C. zhengdengjue; J. shōtōgaku; K. chŏngdŭnggak 正等覺). In Sanskrit, "complete, perfect enlightenment." The term, along with its synonym, ANUTTARASAMYAKSAṂBODHI, is commonly used to refer to the enlightenment of a buddha, achieved under the BODHI TREE. Different schools of Buddhist thought distinguish this samyaksaṃbodhi from the simple enlightenment (BODHI) of an ARHAT in a variety of ways, with the MAHĀYĀNA schools asserting, for example, that a buddha has destroyed both the afflictive obstructions (KLEŚĀVARAṆA) and the obstacles to omniscience (JÑEYĀVARAṆA), while an arhat has only destroyed the former.

samyaksaṃbuddha. (P. sammāsaṃbuddha; T. yang dar par rdzogs pa'i sangs rgyas; C. zhengbianzhi; J. shōhenchi; K. chŏngp'yŏnji 正遍知). In Sanskrit, "complete and perfect buddha" or "complete and perfect enlightened one," a common epithet of a buddha, emphasizing that he has achieved the ultimate enlightenment, one that surpasses all others, including the enlightenment of the ARHAT.

samyaksaṃkalpa. (P. sammāsaṅkappa; T. yang dag pa'i rtog pa; C. zhengsiwei; J. shōshiyui; K. chŏngsayu 正思惟). In Sanskrit, "right attitude" or "right intention"; the second constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA), described as the intention to avoid thoughts of attachment, hatred, and harmful intent, and to promote loving-kindness and nonviolence. Alternatively, it is the mental articulation or conceptualization (SAṂKALPA) of the content of the inexpressible vision of the FOUR NOBLE TRUTHS that occurs on the path of vision (DARŚANAMĀRGA) and that motivates one to teach it to others; SAMYAGDṚṢṬI (right view) is, by contrast, the nonconceptual understanding of that content.

samyaksmṛti. (P. sammāsati; T. yang dag pa'i dran pa; C. zhengnian; J. shōnen; K. chŏngnyŏm 正念). In Sanskrit, "right mindfulness" or "correct mindfulness," the seventh constituent of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). It is defined as the full development of the cultivation of the four foundations of mindfulness (SMṚTYUPASTHĀNA) on the body (KĀYA; KĀYĀNUPAŚYANĀ), sensations (VEDANĀ), mind (CITTA), and various factors (DHARMA).

samyaktvaniyāmāvakrānti. (P. sammattaniyāma-okkanti; T. yang dag pa nyid skyon med pa la zhugs pa; C. zhengxing lisheng; J. shōshōrishō; K. chŏngsŏng isaeng 正性離生). In Sanskrit, "access to the certainty that one will eventually win liberation" or "entering the stage of certainty that one is destined for enlightenment." In the five-stage path structure (PAÑCAMĀRGA) of the SARVĀSTIVĀDA school of ABHIDHARMA, the third stage, the path of vision (DARŚANAMĀRGA), is marked by single thought-moments of realization regarding the FOUR NOBLE TRUTHS (catvāry āryasatyāni), divided into four insights for each of the four truths. The second of these sixteen moments involves the "knowledge of the fact of suffering" (duḥkhe dharmajñāna) with regard to the sensuous realm of existence (KĀMADHĀTU). This acceptance marks the access to the stage of certainty that one is destined for enlightenment (samyaktvaniyāmāvakrānti). This certainty is catalyzed by the highest worldly dharmas (LAUKIKĀGRADHARMA), the fourth and last of the four aids to penetration (NIRVEDHABHĀGĪYA). This process leads to stream-entry (SROTAĀPANNA), the first of the four stages of sanctity (ĀRYAMĀRGA).

saṃyojana. (T. kun tu sbyor ba; C. jie; J. ketsu; K. kyŏl 結). In Sanskrit and Pāli, "fetter." There are ten fetters that are commonly listed as binding one to the cycle of rebirth (SAṂSĀRA): (1) SATKĀYADṚṢṬI (P. sakkāyadiṭṭhi) is the mistaken belief in the existence of a self in relation to the five aggregates (SKANDHA). (2) VICIKITSĀ (P. vicikicchā) is doubt about the efficacy of the path (MĀRGA). Such skeptical doubt is also classified as one of five hindrances (NĪVARAṆA) that prevent the mind from attaining meditative absorption (DHYĀNA). (3) ŚĪLAVRATAPARĀMARŚA (P. sīlabbataparāmāsa), "attachment to rules and rituals," one of four kinds of clinging (UPĀDĀNA), is

the mistaken belief that, e.g., purificatory rites, such as bathing in the Ganges River or performing sacrifices, can free a person from the consequences of unwholesome (AKUŚALA) actions (KARMAN). (4) KĀMARĀGA ("craving for sensuality"), or KĀMACCHANDA ("desire for sense gratification"), and (5) VYĀPĀDA ("malice"), synonymous with DVEṢA (P. dosa; "hatred"), are both also classified as hindrances to meditative absorption; along with greed (LOBHA) and ignorance (AVIDYĀ, P. avijjā; see the tenth fetter below), dveṣa is also one of the three unwholesome faculties (AKUŚALAMŪLA). (6) RŪPARĀGA ("craving for existence in the realm of subtle-materiality") is the desire to be reborn as a divinity in the realm of subtle materiality (RŪPADHĀTU), where beings are possessed of refined material bodies and are perpetually absorbed in the bliss of meditative absorption (dhyāna). (7) ĀRŪPYARĀGA ("craving for immaterial existence") is the desire to be reborn as a divinity in the immaterial realm (ĀRŪPYADHĀTU), where beings are comprised entirely of mind and are perpetually absorbed in the meditative bliss of the immaterial attainments (SAMĀPATTI). (8) MĀNA ("pride") arises from comparing oneself to others and manifests itself in three ways, in the feeling that one is superior to, equal to, or inferior to others. (9) AUDDHATYA (P. uddhacca) is the mental restlessness or excitement that impedes concentration. (10) AVIDYĀ is ignorance regarding the FOUR NOBLE TRUTHS whereby one sees what is not self as self, what is not profitable as profitable, and what is painful as pleasurable. The first three fetters vanish when one reaches the level of stream-enterer; there is a reduction in the other fetters when one reaches the level of once-returner and nonreturner; and all the fetters vanish when one reaches the stage of arhatship. See also ANUŚAYA; ĀRYAMĀRGAPHALA; ANĀGĀMIN.

Samyŏng Yujŏng. (四溟惟政) (1544–1610). Influential Korean SŎN master during the Chosŏn dynasty and important resistance leader during the Japanese Hideyoshi invasions of the late sixteenth century. Yujŏng was a native of Miryang in present-day South Kyŏngsang province. He was ordained by a monk named Sinmuk (d.u.) at the monastery of CHIKCHISA on Mt. Hwanghak (in present-day North Kyŏngsang province). In 1561, he passed the clerical examinations (SŬNGKWA) for Sŏn monks and was appointed the abbot of Chikchisa in 1573. He later became the disciple of the eminent Sŏn master CH'ŎNGHŎ HYUJŎNG (a.k.a. SŎSAN TAESA). When the Japanese invaded the Korean peninsula in 1592, Yujŏng took over his teacher Hyujŏng's place as leader of the monks' militia (ŭisŭnggun) against the invading troops. Leading several thousand monk-soldiers, Yujŏng's army played a crucial role in several battles where the Japanese were defeated. After the war ended, Yujŏng is also said to have gone to Japan as an emissary of the Korean king to negotiate peace with the new shōgun Tokugawa Ieyasu (1543–1616); he also helped to negotiate the release of some three thousand Korean hostages and prisoners of war taken during the invasion. For his valor during the war, Yujŏng was appointed prelate (p'ansa) of the SŎN (Meditation) and KYO (Doctrine) schools of the Chosŏn-dynasty ecclesia. By the eighteenth century, Yujŏng had become the object of a popular cult in Korea, and shrines to Yujŏng and his teacher Hyujŏng were erected around the country.

Saṃyuktābhidharmahṛdaya. (C. Za apitan xin lun; J. Zōabidon shinron; K. Chap abidam sim non 雜阿毘曇心論). In Sanskrit, "Heart of Abhidharma with Miscellaneous Additions"; the last of a series of expository treatises that summarized the SARVĀSTIVĀDA ABHIDHARMA as it was prevailing in BACTRIA and GANDHĀRA. The treatise was based on Dharmaśresthin's ABHIDHARMAHṚDAYA and includes material adapted from the ABHIDHARMAMAHĀVIBHĀṢĀ. The text is available only in a Chinese translation made by SAṂGHAVARMAN in the Liu Song capital of Jiankang in 434 CE; it is divided into eleven rolls, which correspond to separate chapters, on such topics as the elements (DHĀTU), conditioned factors (SAṂSKĀRA), KARMAN, etc. This treatise was composed during the early fourth century CE by the Sarvāstivāda ĀBHIDHARMIKA DHARMATRĀTA II (d.u.). The text was probably composed during a third major stage in the development of Sarvāstivāda abhidharma literature, following the JÑĀNAPRASTHĀNA and its six traditional ancillary treatises, or "feet" (pādaśāstra), and then the major *Vibhāṣā* exegeses; this stage eventually culminated in the composition of VASUBANDHU's celebrated ABHIDHARMAKOŚABHĀṢYA. This Dharmatrāta is often designated in the scholarly literature as Dharmatrāta II, to distinguish him from the Dārṣṭāntika Dharmatrāta I, who was one of the four great ābhidharmikas whom XUANZANG says participated in the fourth Buddhist council (SAṂGĪTI; see COUNCIL, FOURTH) convened by the KUSHAN king KANIṢKA (r. c. 127–151 CE). Dharmatrāta II also composed the *Pañcavastuvibhāṣā* (C. *Wushi piposha lun*; "Exposition of the Fivefold Classification"), a commentary on the first chapter of Vasumitra's PRAKARAṆAPĀDA, one of the seven major texts of the Sarvāstivāda ABHIDHARMAPIṬAKA, which was translated by Xuanzang in 663; it involves a discussion of the mature Sarvāstivāda school's fivefold classification system for dharmas: materiality (RŪPA), mentality (CITTA), mental concomitants (CAITTA), forces dissociated from thought (CITTAVIPRAYUKTA-SAṂSKĀRA), and the unconditioned (ASAṂSKṚTA).

Saṃyuktāgama. (P. Saṃyuttanikāya; T. Yang dag par ldan pa'i lung; C. Za ahan jing; J. Zōagongyō; K. Chap aham kyŏng 雜阿含經). In Sanskrit, "Connected Discourses," a division of the ĀGAMAs corresponding roughly to the Pāli SAṂYUTTANIKĀYA. The collection was probably compiled sometime between 200 and 400 CE. Some Sanskrit fragments, especially of the nidānasaṃyukta section, were discovered in TURFAN, but the full collection is only preserved in a Chinese translation, in fifty rolls, made by GUNABHADRA between 435 and 443 CE, with a second partial Chinese translation (in sixteen rolls) made by an anonym and a brief one-roll version (with only twenty-seven sūtras) apparently translated by AN SHIGAO. The longer Chinese translation is presumed to belong to the SARVĀSTIVĀDA school,

with the shorter partial translation perhaps attributed to the KĀŚYAPĪYA school. The *Saṃyuktāgama* collects 1,362 sūtras (compared to 2,872 for the Pāli Saṃyuttanikāya), with some nascent attempts at a subject-matter arrangement, but nothing nearly as systematic as that found in the *Saṃyuttanikāya*. The Chinese translated title of *Za Ahan jing* (lit. "Miscellaneous Āgama") corresponds more closely to a Sanskrit **Kṣudrakāgama* (cf. P. KHUDDAKANIKĀYA), a "miscellaneous" collection of sūtras that is not known to have existed in the Sarvāstivāda school, although the content is more closely aligned with the *Saṃyuttanikāya*.

Saṃyuttanikāya. (S. Saṃyuktāgama; T. Yang dag par ldan pa'i lung; C. Za ahan jing; J. Zōagongyō; K. Chap aham kyŏng 雜阿含經). In Pāli, "Collection of Related Discourses" (or in its nineteenth-century translation *Book of Kindred Sayings*); the third of the five divisions of the Pāli SUTTAPIṬAKA and corresponds roughly to the SAṂYUKTĀGAMA of the SARVĀSTIVĀDA and KĀŚYAPĪYA schools, which is now extant only in its Chinese translations. The Pāli recension is comprised of some 2,872 individual suttas. Because of questions as to what constitutes a sutta in this case (some are only one sentence in length), enumerations of the number of suttas in the various saṃyutta/saṃyukta collections vary widely, from just under three thousand to over seven thousand (the longer of the two Chinese recensions contains 1,362 sūtras). The *Saṃyuttanikāya* is divided into five chapters, or vaggas, which are subdivided into fifty-six saṃyuttas, arranged largely by subject matter. The collection derives its title from this classificatory system. The five vaggas are devoted to: (1) verses (sagātha), suttas that in the majority of cases contain verses; (2) causation (NIDĀNA), suttas that deal primarily with epistemology and psychology; (3) the aggregates (P. khandha, S. SKANDHA) on the five aggregates; (4) the six sense-fields (P. saḷāyatana, S. ṢAḌĀYATANA), dealing with the six sources of consciousness; and (5) the great division (mahāvagga), which contains suttas on the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA), the states of concentration (DHYĀNA), the establishments of mindfulness (SMṚTYUPASTHĀNA), and other important doctrines.

Śāṇakavāsin. (T. Sha na'i gos can; C. Shangnahexiu/Shangnuojiafusuo; J. Shōnawashu/Shōnyakabasha; K. Sangnahwasu/Sangnakkabaksa 商那和修/商諾迦縛娑). In Sanskrit, "Linen Wearer" [alt. Śāṇakavāsa]; the third (or fourth according to SARVĀSTIVĀDA sources) successor to the Buddha in some of the traditional dharma lineages preserved in Nepal, Tibet, and East Asia. His name derives from a legend that, from the moment he was born following a six-year-long period of gestation in his mother's womb, he was always dressed in linen garments. Before becoming a monk, he was a rich merchant in RĀJAGṚHA, who frequently offered alms to the SAṂGHA. He entered the religious order on the recommendation of ĀNANDA, and eventually succeeded him. After mastering all the canons, Śāṇakavāsin traveled around India, propagating Buddhism. He converted many people to the religion, including UPAGUPTA, who became his successor. He also played a role in the second Buddhist council (see COUNCIL, SECOND). He is believed to have died in MATHURĀ.

Sanbōe. (三宝絵). In Japanese, "The Three Jewels," a work composed by Minamoto Tamenori (d. 1011); also known as *Sanbōekotoba*. In this preface, Tamenori laments the fact that the world has now entered into the age of the final dharma (J. mappō; see C. MOFA) and speaks of the need to honor the DHARMA. Tamenori's text largely consists of three sections corresponding to the three jewels (RATNATRAYA), namely the Buddha, dharma, and saṃgha. In the buddha-jewel section, Tamenori provides JĀTAKA stories from various sources. In the dharma-jewel section, he describes the history of Buddhism in Japan from the rise of SHŌTOKU TAISHI (574–622) to the end of the Nara period. In the saṃgha-jewel section, Tamenori relies on many temple records and texts to speak of the representative ceremonies and rituals of Japanese Buddhism, their provenance, and the biographies of some important monks who carried out these events. The *Sanbōe* serves as a valuable source for studying the history of Buddhism during the Nara period.

Sāñcī. A famous STŪPA or CAITYA about six miles southwest of Vidiśā in the Indian state of Madhya Pradesh; often seen transcribed as Sanchi. The Sāñcī stūpa and its surrounding compound is one of the best-preserved Buddhist archeological sites in the world and is well known for its many monasteries, reliquaries, pillars, and stone relief carvings. Sāñcī was an active site of worship and pilgrimage in India between the third century BCE and the twelfth century CE. However, unlike other pilgrimage sites such as SĀRNĀTH and BODHGAYĀ, Sāñcī is not known to be a place that was associated with the historical Buddha and there are no records or stories of the Buddha himself ever visiting the site. The emperor AŚOKA is credited with laying the foundation of the compound by erecting a stūpa and a pillar on the site. Other stories mention a Vidiśā woman whom Aśoka married, called Vidiśā Devī, who was a devout Buddhist; according to tradition, she was the one who initiated construction of a Buddhist monastery at the site. When Aśoka ascended the throne at PĀṬALIPUTRA, she did not accompany him to the capital, but remained behind in her hometown and later became a nun. Sāñcī and the nearby city of Vidiśā were located near the junction of two important trading routes, and the city's wealthy merchants munificently supported its monasteries and religious sites. Structures erected during the rule of the Śuṅgas and the Śātavāhanas still stand today, and the area flourished after 400 CE during the reign of the Guptas. Sāñcī subsequently fell into a lengthy decline and seems to have been completely deserted at least by the end of the thirteenth century. The site was rediscovered in 1818 by a certain British General Taylor, who excavated the western section of the stūpa; his archeological work was continued by F. C. Maisay and Alexander Cunningham, who discovered relics (ŚARĪRA) believed to be those of the Buddha's two major disciples ŚĀRIPUTRA and

MAHĀMAUDGALYĀYANA in the center of the dome of the main stūpa. There was ongoing controversy within different divisions of the British colonial government over whether or not Sāñcī artifacts should be shipped to British museums; finally, in 1861, the Archeological Survey of India was established and the area was preserved and protected. See also NĀSIK.

sandaihihō. (三大秘法). In Japanese, "three great esoteric laws," three secret teachings that are presumed to have been hidden between the lines of the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") until NICHIREN (1222–1282) discovered them and revealed them to the world. The three are: (1) the DAI-GOHONZON (J. honmon no honzon), the main object of worship in the NICHIREN SHŌSHŪ school, which is a cosmological chart (MAṆḌALA) of the universe surrounding an inscription of homage to the title of the "Lotus Sūtra" and Nichiren's own name; (2) the sanctuary (J. honmon no kaidan) where the daigohonzon is enshrined at KAISEKIJI, the head temple of Nichiren Shōshū; and (3) the teaching of NAM MYŌHŌRENGEKYŌ (J. honmon no DAIMOKU), "Homage to the 'Lotus Sūtra,'" the recitation that is central to Nichiren practice.

sandao. (J. sandō; K. samdo 三道). In Chinese, lit. "three destinies," in East Asian Buddhist iconography, the "triple fold" of skin at the base of the neck on images of the buddhas and bodhisattvas, which is intended to indicate the inevitability of rebirth and the operation of cause and effect. These three folds of skin are interpreted to represent the "three destinies" that inevitably accrue to life in the realm of SAṂSĀRA, viz., the afflictions (S. KLEŚA, C. fannao dao), actions (S. KARMAN, C. ye dao), and suffering (S. DUḤKHA, C. ku dao).

sandhyābhāṣā. [alt. saṃdhyābhāṣyā] (T. dgongs bshad/dgongs skad). In Sanskrit, "intentional language," often mistranslated as "twilight language"; a kind of secret or coded speech, used especially, but not exclusively, in TANTRA. The term is used in a broader hermeneutical sense to explain how a difficult or otherwise problematic text requires commentary in order to bring out its doctrinally consistent meaning. The term is also used in an exclusively tantric sense to refer to a secret linguistic code that is understood and used by initiates of a particular tantric circle: e.g., "frankincense" means "blood" and "camphor" means "semen." The *Pradīpoddyotana* commentary by the tāntrika Candrakīrti on the *Guhyasamājamūlatantra* explains sandhyābhāṣā with a scheme of six alternatives (ṣaṭkoṭi) in a series of four modes going from less to more profound. The six alternatives are provisional (NEYĀRTHA) and definitive (NĪTĀRTHA); requiring interpretation (ābhiprāyika) and not requiring interpretation (anābhiprāyika); and ayathāruta (when one cannot take words literally) and yathāruta (when one can take words literally). Complicated or obscure language (called VAJRA expression) that can be taken literally (yathāruta), or that can be taken at face value to convey meaning, provides a provisional meaning, i.e., a meaning that requires interpretation (neyārtha); this leads to what the statement does not say literally (ayathāruta), which is its definitive meaning (nītārtha). A passage about a topic not addressed in statements about lower stages of the tantric path, and therefore couched in words that are coded and apparently contradictory to other statements, in the sense that other passages about practices at lower stages of the tantric path contradict what it says, are ābhiprāyika, while straightforward statements about a topic that is not addressed at lower stages of the tantric path are anābhiprāyika; for example, direct statements about clear light (PRABHĀSVARA) and illusory bodies (māyākāya), the culminating attainments in the Guhyasamāja system. Finally, a statement couched in ordinary language about a topic that is relevant to both earlier and later stages of the tantric path is yathāruta (can be taken literally); statements using a specialized argot, using unusual words that are ordinarily meaningless, like some words in MANTRAS, are ayathāruta. See also ABHIPRĀYA; ABHISAṂDHI.

sandhyābhāṣita. (S). See SANDHYĀBHĀṢĀ.

sandi. (J. santai; K. samje 三諦). In Chinese, "three truths," "threefold truth," or "three judgments"; a tripartite exegetical description of reality as being empty, provisional, and their mean, used in both the SAN LUN ZONG and TIANTAI ZONG of Chinese Buddhist philosophy. The three truths are said to have been first taught by SŬNGNANG (c. 450–c. 520), whom tradition considers an important vaunt courier in the development of the Chinese San lun school, the Chinese counterpart of the MADHYAMAKA branch of Indian philosophical exegesis, and then developed by later thinkers in both the San lun and Tiantai traditions. This Chinese notion of three truths is said to derive from a verse appearing in the Chinese translation of NĀGĀRJUNA's MŪLAMADHYAMAKAKĀRIKĀ (C. *Zhong lun*): "All phenomena that are produced from causes and conditions,/ These in fact are empty. /They are also provisional names. /This as well is the meaning of the middle way." This account is then systematized by Chinese exegetes into: (1) the authentic truth of emptiness (kongdi), viz., all things are devoid of inherent existence and are empty in their essential nature: (2) the conventional truth of being provisionally real (jiadi), viz., all things are products of a causal process that gives them a derived reality; and (3) the ultimate truth of the mean (zhongdi), viz., all things, in their absolute reality, are neither real nor unreal, but simply thus. This three-truth schema may have been influenced by indigenous Chinese scriptures (see APOCRYPHA) such as the RENWANG JING and the PUSA YINGLUO BENYE JING. The *Renwang jing*, for example, discusses a three-truth SAMĀDHI (sandi sanmei), in which these three types of concentrations are named worldly truth (shidi), authentic truth (zhendi), and supreme-meaning truth (diyiyidi). In this treatment, worldly truth is the affirmation of the dualistic phenomena of ordinary existence, while authentic truth is presumed to be the denial of the reality of those phenomena; both are therefore aspects of what is typically called conventional truth (SAṂVṚTISATYA) in the two-truth

schema (see SATYADVAYA). The supreme-meaning truth transcends all dichotomies, including affirmation and negation, to provide an all-embracing perspective and corresponds to ultimate truth (PARAMĀRTHASATYA). This schema is peculiar, and betrays its Chinese origins, because "authentic truth" and "supreme-meaning truth" are actually just different Chinese renderings of the same Sanskrit term, paramāthasatya. Zhiyi also interprets the statement "neither the same nor different" in the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") as referring implicitly to the three-truth schema: "different" is the conventional truth of provisional reality, "same" is the authentic truth of emptiness, and the whole phrase is the ultimate truth of the mean. These presentations demonstrate that the Chinese were grappling with what they considered to be an unresolved internal tension in Indian presentations of conventional and ultimate truth and were exploring a three-truth schema as one means of resolving that tension.

sanfen kejing. (J. sanbunkakyō; K. sambun kwagyŏng 三分科經). In Chinese, "threefold division of a scripture," an exegetical technique developed by the pioneering scholiast and cataloguer DAO'AN (312–385) to analyze a specific SŪTRA's narrative structure. Dao'an's scriptural commentaries posited the following three major sections that were common to all sūtras: (1) the prefatory setting (C. xufen; S. nidāna), which specifies the time and place where the sūtra was delivered; (2) the "text proper" (zhengzongfen), viz., the main body of the sūtra, which relates the doctrines and practices that were the subject of the discourse; and (3) the "dissemination section" (liutongfen; S. parīndanā), which describes the confidence and insight the scripture inspired in its audience. This schema was frequently employed in subsequent scriptural exegesis of most of the major scholastic schools of East Asian Buddhism and is still widely used even today. See also NETTIPPAKARAṆA; PEṬAKOPADESA; VYĀKHYĀYUKTI; WUZHONG XUANYI.

saṅgha. Pāli and classical Sanskrit variant of "community." See also the BUDDHIST HYBRID SANSKRIT form SAṂGHA and its various compound forms.

Saṅgha Administration Act. A law enacted in Thailand in 1902 designed to bring the entire Buddhist order (P. saṅgha, S. SAṂGHA) of Thailand under a single administrative authority. It was primarily an initiative of Prince Wachirayān, brother of King Chulalongkorn (RĀMA V) and the son of King Mongkut (RĀMA IV). The law was initially applied only to royal monasteries and several other important monasteries, but in 1908 it was extended to encompass the entire northeast region. It established a single system for monastic education and standardized the ordination procedure. Under this act, all abbots in Thailand were appointed by government officials or the king. The act was revised in 1941 and in 1962. It has not met with universal acceptance or compliance, being challenged especially by the tradition of the forest monks (ARAÑÑAVĀSI).

Saṅghamittā. (S. Saṃghamitrā; C. Sengqiemiduo; J. Sōgyamitta; K. Sŭnggamilta 僧伽蜜多). In Pāli, "Friend of the Community," proper name of the nun (BHIKṢUṆĪ) who was the daughter of the Indian king Asoka (S. AŚOKA) and sister of MAHINDA (S. Mahendra). According to some accounts, Mahinda and Saṅghamittā were twins; others claim, instead, that Mahinda was one or two years her senior. According to Pāli sources, Saṅghamittā was born in Ujjeni (S. Ujjayinī) and married to Aggibrahmā (S. Agnibrahmā), with whom she had a son named Sumana. The most detailed account of her life comes to us in the MAHĀVAṂSA (c. fifth century CE). There, she is said to have been ordained when she was eighteen years old. When Mahinda went to Sri Lanka and converted King DEVĀNAṂPRIYATISSA, the king's daughter Anulā asked to be ordained. Mahinda replied that monks cannot ordain women, but that his sister was a nun and that she should be invited to come from India. Saṅghamittā traveled to the island kingdom, bringing along with her eleven other nuns in order to establish her ordination lineage in that new region, as well as a branch from the BODHI TREE. The *Mahāvaṃsa* tells us that during her voyage to Sri Lanka, nineteen NĀGAs threatened to use their magic to steal the bodhi tree, but Saṅghamittā defended it by taking the form of a GARUḌA (the natural enemy of the nāgas). Tradition holds that the bodhi tree she brought took root in ANURĀDHAPURA and it remains to this day an object of worship. Neither Mahinda nor Saṅghamittā returned to India. Upon her death, her body was cremated and her remains were enshrined in a STŪPA in Cittasālā, near the site of the bodhi tree.

saṅgharāja. In Pāli, lit. "ruler of the community," often rendered into English as "supreme patriarch"; a title used in the predominantly THERAVĀDA traditions of Sri Lanka, Thailand, and Cambodia. The title is given to one monk who serves as the head of a single monastic school (NIKĀYA), or the head of the entire national saṅgha (S. SAṂGHA). The procedure for appointing a saṅgharāja differs across traditions. At times, the title has been given to the most senior monk in the saṅgha, that is, the one who has been ordained the longest. At other times, designating a saṅgharāja has been the prerogative of the king, as was the case for the first saṅgharāja to be appointed in Southeast Asia: Mahākassapa, a forest-dwelling monk of Sri Lanka who, in the twelfth century, helped King PARĀKRAMABĀHU I reform the Ceylonese saṅgha. The duties of the saṅgharāja have varied widely. In some instances, the title is honorific and the office holder wields little or no administrative power; in such instances, the saṅgharāja serves as a figurehead and spokesman for the saṅgha. In other instances, such as with Mahākassapa, the saṅgharāja has the authority to enact dramatic changes in the order and structure of the Buddhist saṅgha. Another title related to the saṅgharāja is that of upasaṅgharāja, a deputy who is appointed to assist the saṅgharāja in carrying out his duties. The Burmese equivalent of saṅgharāja is thathanabaing. See also CHONGJŎNG.

Saṅgītisutta. (S. Saṃgītisūtra; C. Zhongji jing; J. Shushūkyō; K. Chungjip kyŏng 衆集經). In Pāli, "Discourse on

Communal Recitation," the thirty-third sutta of the DĪGHANIKĀYA (a separate DHARMAGUPTAKA recension appears as the ninth sūtra in the Chinese translation of the DĪRGHĀGAMA); preached by Sāriputta (S. ŚĀRIPUTRA) to a congregation of monks at Pāvā in Malla country. The followers of the JAINA leader Nigaṇṭha-Nātaputta (S. NIRGRANTHA-JÑĀTĪPUTRA) had begun to quarrel following the death of their master. Śāriputra related to the monks at Pāvā that this occurred because Jñātīputra was not enlightened and so his teachings were erroneous and not well taught, but the Buddha, by contrast, was enlightened and his teachings were well taught. Śāriputra suggested that the dharma be chanted by the congregation in unison as a means of preserving it. He then summarized the dharma under numerical classifications ranging from groups of ones to groups of tens as a device for memorization. This exegetical stratagem provides one of the first canonical recensions of the "matrices" (P. mātikā, S. MĀTṚKĀ) that are thought to mark the incipiency of the ABHIDHARMA, and its style of exposition is closely connected to that employed in the DASUTTARASUTTA (S. *Daśottarasūtra*); several of its exegetical categories are also reproduced in the SAṂGĪTIPARYĀYA of the SARVĀSTIVĀDA ABHIDHARMA.

Saṅgītivaṃsa. In Pāli, "Chronicle of the Councils"; a history of nine THERAVĀDA (i.e., STHAVIRANIKĀYA) Buddhist councils, or saṅgīti (S. SAṂGĪTI), according to the Thai reckoning. Written in Pāli in Bangkok in 1789 by the monk Somdet Phra Wannarat, the text describes the three Buddhist councils held in ancient India, followed by an account of councils four through eight in Sri Lanka, and concludes with the ninth Buddhist council (see COUNCIL, NINTH) held in Bangkok under King Rāma I in 1788–1789. The work contains much information on the religion and polity of Thailand through the establishment of the Cakri dynasty (1782-present).

sangong. (三公). In Chinese, lit. "three gentlemen"; the three great lay masters of Chinese Buddhism recognized by PENG SHAOSHENG (1740–1796) in his JUSHI ZHUAN ("The Biographies of [Eminent] Laymen"): LIU CHENGZHI (354–410), for his mastery of PURE LAND (JINGTU) practice; LI TONGXUAN (635–730), for his scholarship on HUAYAN; and PANG YUN (740–803), for his practice of CHAN. See individual entries for the three.

sang rgyas. (sang gye). The Tibetan translation of buddha. In coining neologisms to render Buddhist terminology, Tibetan translators sometimes sought to evoke multiple meanings of a single Sanskrit term. In the case of buddha, they knew that the Sanskrit root √budh has the meaning of both "awaken" and "open" or "spread." They therefore translated buddha as "awakened" and "spread," meaning that a buddha has awakened from the sleep of ignorance and spread his mind to all objects of knowledge.

Sangs rgyas gling pa. (Sangye Lingpa) (1340–1396). Tibetan treasure revealer (GTER STON) and master of the RNYING MA sect of Tibetan Buddhism. He was born in the southern Tibetan region of Rkong po (Kongpo) and experienced visions of AVALOKITEŚVARA as a child. He was ordained as a BHIKṢU at Byang chub gling monastery on TSA RI. From the age of thirty-four onward, he is credited with discovering numerous treasure cycles, especially from the region of Rkong po. Foremost among these are the "six root tantras of the gathering intentions" (dgongs 'dus rtsa ba'i rgyud drug), which he later divided into thirteen volumes. These teachings were acclaimed by masters of varied sectarian affiliation including the fourth and fifth KARMA PAS, the latter transmitting them to the Ming emperor Yongle.

sanguan. (J. sangan; K. samgwan 三觀). In Chinese, "threefold contemplation"; several versions of such a threefold contemplation are elaborated in Chinese exegetical traditions, of which the most influential was the TIANTAI version outlined by TIANTAI ZHIYI in his MOHE ZHIGUAN. Zhiyi's version entails a system of contemplative practice that leads to the attainment of insight into the nature of reality. Zhiyi's "threefold contemplation" consists of the contemplations of the "three truths: (SANDI): emptiness, conventional existence, and their mean (C. kong jia zhong sanguan; J. kū ge chū sangan; K. kong ka chung samgwan). The first, "contemplation on emptiness" (kongguan), is the step of practice that advances beyond naïve realism by penetrating into the conditionally constructed, and therefore insubstantial, nature of all phenomena (see ŚŪNYATĀ). The second, the "contemplation on conventionality" (jiaguan), involves the reaffirmation of the conventional existence of all phenomena, whereby a bodhisattva actively engages the world in spite of his awareness of the reality of emptiness. The third, the "contemplation of their mean" (zhongguan), is understood as a dialectical transcendence of the previous two modes of practice. This transcendence has two aspects: it is transcendent because it is neither ("the middle that negates both," C. shuangfei zhi zhong) and because it affirms both ("the middle that illuminates both," C. shuangzhao zhi zhong). It is "neither" because the middle way is not fixed exclusively on either abiding in emptiness or on wallowing in mundane existence. It is "both" because it elucidates that "emptiness" and "conventionality" are not opposing realities but are in fact mutually validating. "The threefold contemplation" is understood variously as a gradual or a simultaneous practice ("two kinds of 'threefold contemplation,'" C. erzhong sanguan; J. nishu no sangan; K. ijong samgwan). The gradual practice of the "threefold contemplation" begins with the contemplation of emptiness, advances to that of conventional existence, and culminates in the contemplation of their mean. Tiantai exegetes variously labeled this approach "the threefold contemplation" by either "graduated stages" (C. cidi sanguan; J. shidai sangan; K. ch'aje samgwan) or "differentiation" (C. biexiang sanguan; J. bessō no sangan; K. pyŏlsang samgwan). As a simultaneous practice, all three aspects of the reality are to be contemplated simultaneously

within any given instant of thought: a true understanding of "emptiness" is the same as the correct understanding of "conventional existence," for they are just different emphases of the same truth of conditionality; only an erroneous construction of "emptiness" and "conventional existence" would lead to the conclusion that they are separate, contradictory realities. This approach is variously referred to as "the threefold contemplation that does not involve graduated stages" (C. bucidi sanguan; J. fushidai sangan; K. pulch'aje samgwan), "the perfectly interfused threefold contemplation" (C. yuanrong sanguan; J. ennyū no sangan; K. wŏnyung samgwan), or "the threefold contemplation [that is to be conducted within] a single moment of thought" (C. yixin sanguan; J. isshin sangan; K. ilsim samgwan). See also SANZHI.

sanimitta. (T. mtshan bcas). In Sanskrit, literally "with marks" or "with signs," a term that has at least two principal denotations. In the context of MADHYAMAKA, sanimitta is a pejorative term, implying that one perceives the world via the chimeric signs or marks of intrinsic nature (SVABHĀVA). Because all phenomena are ultimately "signless" (ĀNIMITTA), to perceive them as having signs is a benighted form of ignorance. In the context of tantric meditation, however, the term has a more salutary meaning. Tantric texts and especially YOGATANTRAS, mention two forms of meditation, one called "yoga with signs" (SANIMITTAYOGA), the other "yoga without signs" (ANIMITTAYOGA). Yoga with signs refers to meditation in which one visualizes oneself as a deity, one's environment as a MAṆḌALA, etc. Yoga without signs refers to meditation in which one meditates on emptiness (ŚŪNYATĀ). In certain tantric SĀDHANAS, both forms of meditation are performed.

sanimittayoga. (T. mtshan bcas kyi rnal 'byor). Literally, "yoga with signs," a term that occurs in Buddhist tantric literature, and is especially associated with YOGATANTRA class of tantric texts. Yoga with signs refers to those meditation practices that entail dualistic appearances or "signs," in the sense that the meditator visualizes seed syllables (BĪJA) and deities. It is contrasted with ANIMITTAYOGA, or "yoga without signs," those meditation practices in which one meditates on emptiness (ŚŪNYATĀ) in such a way that there are no dualistic appearances or signs.

Sañjaya Vairāṭīputra. [alt. Saṃjayin Vairāṭīputra] (P. Sañjaya/Sañcaya Belaṭṭhiputta; T. Smra 'dod kyi bu mo'i bu yang dag rgyal ba can; C. Shansheye Piluozhizi; J. Sanjaya Birateishi; K. Sansaya Pirajija 刪闍耶毘羅胝子). One of the so-called "six heterodox teachers" often mentioned in Buddhist sūtras, whose views and/or practices were criticized by the Buddha, along with PŪRAṆA-KĀŚYAPA, MASKARIN GOŚĀLĪPUTRA, AJITA KEŚAKAMBALA, KAKUDA KĀTYĀYANA, and NIRGRANTHA-JÑĀTĪPUTRA. Sañjaya was a skeptic who doubted the possibility of knowledge and the validity of logic. On questions such as the presence of a world beyond the visible world, the nature of the postmortem condition, and whether actions done in this life had effects in the next, he found the four traditional answers—affirmation, negation, partial affirmation and partial negation, and neither affirmation or negative—to each be unacceptable, and therefore gave evasive answers when asked such speculative questions. The Buddha's two foremost disciples, ŚĀRIPUTRA and MAHĀMAUDGALYĀYANA, were originally disciples of Sañjaya before encountering the teachings of the Buddha. They are said to have each taken 250 of Sañjaya's followers with them when they abandoned him for the Buddha. Upon hearing the news of their departure, Sañjaya vomited blood and fainted.

Sanjie jiao. (J. Sangaikyō/Sankaikyō; K. Samgye kyo 三階教). In Chinese, often translated as the "Three Stages School," but more probably referring to the "School of the Third Stage." The Sanjie jiao was a Chinese religious movement that was inspired by the influential teachings of the Chinese monk XINXING (540–594). The community shared Xinxing's belief in the decline of the DHARMA (MOFA) and the concomitant decay of one's potential or capacity (genji) for attaining buddhahood. According to the Three Stages teachings, the capacities of sentient beings are roughly divided into the so-called three stages (sanjie). The first two stages, now past, are those of the one vehicle (YISHENG; cf. EKAYĀNA) or three vehicles (TRIYĀNA), during which correct views about Buddhism were still present in the world. The current "third stage" (i.e., the present) was characterized instead by the proliferation of false views and prejudices. Because people during this degenerate age of the dharma were inevitably mistaken in their perceptions of reality, it was impossible for them to make any correct distinctions, whether between right and wrong, good and evil, ordained and lay. To counter these inveterate tendencies toward discrimination, Sanjie jiao adherents were taught instead to treat all things as manifestations of the buddha-nature (FOXING), leading to a "universalist teaching" (pufa) of Buddhism that was presumed to have supplanted all the previous teachings of the religion. Xinxing advocated that almsgiving (DĀNA) was the epitome of Buddhist practice during the degenerate age of the dharma and that the true perfection of giving (DĀNAPĀRAMITĀ) meant that all people, monks and laypeople alike, should be making offerings to relieve the suffering to those most in need, including the poor, the orphaned, and the sick. In its radical reinterpretation of the practice of giving in Buddhism, even animals were considered to be a more appropriate object of charity than were buddhas, bodhisattvas, monks, or the three jewels (RATNATRAYA); members of the community were even said to bow down to dogs. As the only reliable practice during this degenerate third stage, the Sanjie jiao community institutionalized giving in the form of an "inexhaustible storehouse cloister" (WUJINZANG YUAN). Donations made to the inexhaustible storehouse established by the Three Stages community at the monastery Huadusi in Chang'an would be distributed again during times of famine. The offerings were also used to fund the restoration of monasteries and the performance of religious

services (i.e., the reverence field of merit, C. jingtian), and to provide alms to the poor (i.e., the compassion field of merit, C. beitian; see PUṆYAKṢETRA). The inexhaustible storehouse also came to serve as a powerful money-lending institution. The Three Stages community was labeled a heresy during the persecution of Buddhism during the Tang dynasty and, in 713, the Tang emperor Xuanzong (r. 712–756) issued an edict closing the inexhaustible storehouse due to charges of embezzlement; its scriptures were eventually labeled spurious (see APOCRYPHA) and dropped out of circulation, only to be rediscovered in the DUNHUANG manuscript cache. Despite these persecutions, the school continued to be influential for several more centuries.

sanju. (J. sanku; K. samgu 三句). In Chinese, "three propositions," a unique set of precepts taught by CHŎNGJUNG MUSANG (680–756, alt. 684–762) in the JINGZHONG ZONG lineage of the early CHAN school. Musang sought to summarize the method of practice taught by the founder of Chinese Chan school, BODHIDHARMA, in three propositions, which he described as "no-recollection" (wuyi), which he equated with morality (ŚĪLA); "no-thought" (WUNIAN), which corresponded to concentration (SAMĀDHI); and "not-forgetting" (mowang), which was the equivalent of wisdom (PRAJÑĀ). In other Jingzhong zong texts, Musang's successor BAOTANG WUZHU later claims that he was in fact the creator of these three propositions and makes the explicit connection between them and the three trainings (TRIŚIKṢĀ) of mainstream Buddhism. GUIFENG ZONGMI later explains the first proposition, "no-recollection," as not tracing back the past; the second "no-thought," as not yearning for the future; and the third "not-forgetting" as "always conforming to this knowledge without confusion or mistake."

Sanjūsangendō. (三十三間堂). In Japanese, "Hall of Thirty-Three Bays"; a Buddhist temple in Kyōto, Japan, also known as "Hall of the Lotus King" (J. Rengeōin); it is part of the Myōhōin (Sublime Dharma Hall), a temple affiliated with the Japanese TENDAISHŪ. The number thirty-three refers to the belief that the BODHISATTVA Kannon (S. AVALOKITEŚVARA) saves humanity by transforming himself into thirty-three different figures. Taira no Kiyomori (1118–1181) completed the temple at the command of former emperor Goshirakawa (1127–1192) in 1164. After a fire destroyed the temple hall in 1249, the reconstruction of the building was completed in 1266 by former emperor Gosaga (1220–1272). The principal image of the temple is the "Eleven-Headed and Thousand-Armed Kannon" (see S. EKĀDAŚAMUKHĀVALOKITEŚVARA and SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA). This deity was made of Japanese cypress in the yosegi zukuri style (viz., using several blocks of wood) by the artist Tankei (1173–1256) during the Kamakura period. It has eleven faces on its head and twenty-one pairs of arms that symbolize his one thousand arms. On both sides of the central seated statue are one thousand more standing images of the same type of Kannon, in five rows, each about five feet five inches in height, each said to be different from the other. Along with these statues, the school of Unkei (1151–1223) and Tankei also made twenty-eight statues of guardian deities. Additionally, flanking the right and left side of this arrangement are the statues of the Wind God (J. Fūjin) and the Thunder God (J. Raijin), respectively.

saṅkhārupekkhāñāṇa. In Pāli, "knowledge arising from equanimity regarding all formations"; according to the VISUDDHIMAGGA, the eighth of nine knowledges (P. ñāṇa, S. JÑĀNA) cultivated as part of "purity of knowledge and vision of progress along the path" (PAṬIPADĀÑĀṆADASSANAVISUDDHI). This latter category, in turn, constitutes the sixth and penultimate purity (P. visuddhi, S. VIŚUDDHI) to be developed along the path to liberation. Knowledge arising from equanimity regarding all formations arises as a consequence of understanding all conditioned formations (S. SAṂSKĀRA) that comprise the individual and the universe as being characterized by the three marks (S. TRILAKṢAṆA) of impermanence (S. ANITYA), suffering (S. DUḤKHA) and nonself (S. ANĀTMAN). This understanding is the product of the immediately preceding (seventh) knowledge called "knowledge arising from contemplation of reflection" (PAṬISAṄKHĀNUPASSANĀÑĀṆA). Understanding the formations to be void (see ŚŪNYATĀ) in this way, the practitioner abandons both terror and delight, and, regarding them as neither "I" nor "mine," he becomes indifferent and neutral towards them. The sixth, seventh, and eighth knowledges when taken together are called "insight leading to emergence" (vuṭṭhānagāmini vipassanā) because they stand at the threshold of liberation. The *Visuddhimagga* states that, at this stage in the practice, one can continue to contemplate the formations with equanimity, or, if the mind turns towards the nibbāṇa element (S. NIRVĀṆADHĀTU) as its object, one of three types of liberation (S. VIMUKTI) ensues. If liberation occurs while contemplating impermanence, it is called "signless liberation," if it occurs while contemplating suffering it is called "wishless liberation," and if it occurs while contemplating nonself it is called "empty liberation" (see VIMOKṢAMUKHA).

San lun xuanyi. (J. Sanron gengi; K. Sam non hyŏnŭi 三論玄義). In Chinese, "Profound Meaning of the Three Treatises," composed by the monk JIZANG sometime around 597. Although the title mentions the so-called "three treatises" (see SAN LUN ZONG), the *San lun xuanyi* is actually a commentary on four influential texts, namely the *Zhong lun* (cf. S. MŪLAMADHYAMAKAKĀRIKĀ), BAI LUN (S. *ŚATAŚĀSTRA), SHI'ERMEN LUN (S. **Dvādaśamukhaśāstra*), and DAZHIDU LUN (**Mahāprajñāpāramitāśastra*). The *San lun xuanyi* systematically presents the teachings of NĀGĀRJUNA and provides a succinct explanation of the notion of emptiness (ŚŪNYATĀ). Jizang's treatise consists of two main sections, which he terms the destruction of heresies and the elucidation of truth. His first section discusses the non-Buddhist teachings of India and the traditions of Zhuangzi, Laozi, and the *Zhouyi* in China. He also condemns ABHIDHARMA as HĪNAYĀNA teachings, the *TATTVASIDDHI as provisional MAHĀYĀNA,

and the teachings of the five periods (see WUSHI BAJIAO) as a misleading attachment to MAHĀYĀNA. In the second section, Jizang explains the appearance of Nāgārjuna and the teachings of the *Zhong lun*, *Bai lun*, *Shi'ermen lun*, and *Dazhidu lun*. Jizang's explanations rely heavily upon the notion of the two truths (SATYADVAYA).

San lun zong. (J. Sanronshū; K. Sam non chong 三論宗). In Chinese, the "Three Treatises school," a Chinese analogue of the MADHYAMAKA school of Indian Buddhism philosophy; a largely exegetical tradition that focused on three important texts translated by KUMĀRAJĪVA, namely the *Zhong lun* ("Middle Treatise"), BAI LUN ("Hundred [Verse] Treatise"), and SHI'ERMEN LUN ("Twelve [Chapter] Treatise"). The *Zhong lun* is ostensibly a translation of NĀGĀRJUNA's MŪLAMADHYAMAKAKĀRIKĀ. Kumārajīva's translation (dated 409), however, also contains his own notes as well as a commentary on Nāgārjuna's text by Piṅgala (fl. c. 4 CE). The *Bai lun* (*ŚATAŚĀSTRA) is attributed to ĀRYADEVA and was translated into Chinese by Kumārajīva in 404. In this text, the author employs the apophatic language of the Madhyamaka school and refutes the arguments of rival traditions. The *Shi'ermen lun* (**Dvādaśamukhaśāstra*) is also attributed to Nāgārjuna and is purportedly an introductory manual to the *Zhong lun*. In this text, the author provides an interpretation of emptiness (ŚŪNYATĀ) in twelve chapters. No Sanskrit or Tibetan recensions of the *Bai lun* or *Shi'ermen lun* are extant. The "three treatises," however, exerted much influence in East Asia, where they functioned as the central texts for students of emptiness and Madhyamaka doctrine. JIZANG (549–623) wrote influential commentaries on the three treatises and came to be regarded as the systematizer of the San lun school. He retrospectively traces the school to two important vaunt couriers: SENGZHAO (374–414), an influential early Chinese exegete and cotranslator of the perfection of wisdom (PRAJÑĀPĀRAMITĀ) literature, whose writings helped to popularize the works of the Madhyamaka school in China; and SŪNGNANG (c. 450–c. 520), who is claimed to have taught the notion of "three truths" or "three judgments" (SANDI)—the truths of emptiness, provisional reality, and their mean—an exegetical schema that was influential in the subsequent development of both the San lun and TIANTAI schools. The writings of San lun exegetes were also influential in Korea during the Three Kingdoms period (where the tradition was known as Sam non) and during the Nara and Heian periods in Japan (where it was called Sanron).

sanmei jing. (S. samādhisūtra; J. sanmaikyō; K. sammae kyŏng 三昧經). In Chinese, "SAMĀDHI scriptures"; a category of MAHĀYĀNA sūtras that are primarily or exclusively concerned with the practice or experience of meditation (SAMĀDHI), or whose title contains the term sanmei. The earliest reference to sanmei jing as a scriptural category appears in the oldest extant Chinese scriptural catalogue, CHU SANZANG JIJI ("Compilation of Notices on the Translation of the TRIPIṬAKA"), compiled by SENGYOU (445–518) around 515; there, Sengyou remarks that Zhu Fahu (DHARMARAKṢA) translated several sanmei jings. The Chinese Buddhist canon (DAZANGJING) contains more than fifty sūtras that use the term sanmei in their titles. These include sanmei jings whose Sanskrit titles do not use the term samādhi and to which the term sanmei was added when these scriptures were translated into Chinese. There are also other scriptures of uncertain provenance whose titles in earlier Chinese translations did not contain the term sanmei. An examination of successive Chinese Buddhist scriptural catalogues (JINGLU) in fact reveals that there were several sūtras that circulated first with one title, and later with a revised title that added sanmei to the original. Furthermore, there are a number of indigenous Chinese Buddhist scriptures (see APOCRYPHA), that were not entered into the canon, which call themselves sanmei jing. This phenomenon began early in the history of Chinese Buddhism. DAO'AN's 374 CE scriptural catalogue (ZONGLI ZHONGJING MULU), which is no longer extant but portions of which are excerpted in Sengyou's *Chu sanzang jiji*, lists twenty-six scriptures of dubious authenticity; of these, six are titled sanmei jing. Several sanmei jings, such as the *Banzhou sanmeijing* (S. PRATYUTPANNABUDDHASAṂMUKHĀVASTHITASAMĀDHISŪTRA), offer instruction regarding the full range of practices involved in cultivating a specific samādhi technique. The majority of sanmei jings, however, are instead concerned with the various states of mind that the Buddha or BODHISATTVAS attained through samādhi, praising that samādhi, and/or emphasizing the merit gained through keeping and transmitting the text of the sanmei jing. The popularity of the sanmei jing genre in Chinese Buddhism can be at least partially attributed to Chinese Buddhists' faith and interest in the religious practice of copying and reciting scriptures, which most sanmei jings encourage as a means of attaining enlightenment. Higher meditative states like samādhi sometime seem ancillary to the topic of certain sanmei jings: the JINGDU SANMEI JING, for example, offers a detailed account of thirty separate levels of the hells and the incumbent punishments meted out there; in order to avoid the torments of hell, the scripture exhorts laypeople not to meditate, but instead to observe the five precepts (PAÑCAŚĪLA) and perform the "eight-restrictions fast" (BAGUAN ZHAI) on specific Chinese seasonal days.

sanmi. (三密). In Chinese, "three mysteries." See SANMITSU.

sanmitsu. (C. sanmi, K. sammil 三密). In Japanese, "three secrets" or "three mysteries"; an esoteric Buddhist teaching that posits that the body, speech, and mind of sentient beings, which are understood to be the source of the three forms of KARMAN in standard Buddhist doctrine, abide in a nondual relationship with the body, speech, and mind of MAHĀVAIROCANA, the DHARMAKĀYA buddha. All speech is therefore in actuality the speech of this buddha, all forms are his body, and all mental formations are at their root the mind of Mahāvairocana. The doctrine of the three mysteries appears in various strata of

MAHĀYĀNA materials, but is featured most prominently in esoteric literature. In China, TIANTAI thinkers such as TIANTAI ZHIYI and ZHANRAN argued that the Buddha taught via his NIRMĀṆAKĀYA, SAMBHOGAKĀYA, or dharmakāya, depending on the capacities of his audience. On another level, however, these three bodies of the Buddha were said to be nondual. In Japan, KŪKAI argued that all beings had the capacity to experience the teaching of the dharmakāya directly, a position that later Japanese TENDAI thinkers argued was implicit in the earlier Chinese Tiantai teachings on the three mysteries. Kūkai's sanmitsu theory held that ordinary beings may rapidly realize their buddhanature through ABHIṢEKA, or ritual initiation, and ADHIṢṬHĀNA, or ritual empowerment, which allowed for the efficacious performance of MUDRĀ, the chanting of MANTRA and DHĀRAṆĪ, and the contemplation of the MAṆḌALA of a chosen object of devotion. These forms of initiation and empowerment, when followed by these three modes of ritual comportment, were said to reveal that the sublime reality of buddhahood is alive within the mundane reality that beings ordinarily inhabit. Once the body, speech, and mind of beings and buddhas are recognized as nondual, an ordinary being is then able to acquire SIDDHI, or supernatural powers, which may be used to effect change in the world, up to and including achieving buddhahood in this very body (J. SOKUSHIN JŌBUTSU; C. JISHEN CHENGFO).

Sansheng yuanrong guan. (三聖圓融觀). In Chinese, "contemplation on the consummate interfusion of the Three Sages," viz., VAIROCANA Buddha and the two bodhisattvas MAÑJUŚRĪ and SAMANTABHADRA. See treatment in YUANRONG.

Śāntarakṣita. (T. Zhi ba 'tsho) (725–788). Eighth-century Indian Mahāyāna master who played an important role in the introduction of Buddhism into Tibet. According to traditional accounts, he was born into a royal family in Zahor in Bengal and was ordained at NĀLANDĀ monastery, where he became a renowned scholar. He is best known for two works. The first is the TATTVASAṂGRAHA, or "Compendium of Principles," a critical survey and analysis of the various non-Buddhist and Buddhist schools of Indian philosophy, set forth in 3,646 verses in twenty-six chapters. This work, which is preserved in Sanskrit, along with its commentary by his disciple KAMALAŚĪLA, remains an important source on the philosophical systems of India during this period. His other famous work is the MADHYAMAKĀLAṂKĀRA, or "Ornament of the Middle Way," which sets forth his own philosophical position, identified by later Tibetan doxographers as YOGĀCĀRA-*SVĀTANTRIKA-MADHYAMAKA, so called because it asserts, as in YOGĀCĀRA, that external objects do not exist, i.e., that sense objects are of the nature of consciousness; however, it also asserts, unlike Yogācāra and like MADHYAMAKA, that consciousness lacks ultimate existence. It further asserts that conventional truths (SAṂVṚTISATYA) possess their own character (SVALAKṢAṆA) and in this regard differs from the other branch of Madhyamaka, the *PRĀSAṄGIKA. The Yogacāra-Madhyamaka synthesis, of which Śāntarakṣita is the major proponent, was the most important philosophical development of late Indian Buddhism, and the *Madhyamakālaṃkāra* is its locus classicus. This work, together with the MADHYAMAKĀLOKA of Śāntarakṣita's disciple Kamalaśīla and the SATYADVAYAVIBHAṄGA of JÑĀNAGARBHA, are known in Tibet as the "three works of the eastern *Svātantrikas" (rang rgyud shar gsum) because the three authors were from Bengal. Śāntarakṣita's renown as a scholar was such that he was invited to Tibet by King KHRI SRONG LDE BTSAN. When a series of natural disasters indicated that the local deities were not positively disposed to the introduction of Buddhism, he left Tibet for Nepal and advised the king to invite the Indian tantric master PADMASAMBHAVA, who subdued the local deities. With this accomplished, Śāntarakṣita returned, the first Buddhist monastery of BSAM YAS was founded, and Śāntarakṣita invited twelve MŪLASARVĀSTIVĀDA monks to Tibet to ordain the first seven Tibetan monks. Śāntarakṣita lived and taught at Bsam yas from its founding (c. 775) until his death (c. 788) in an equestrian accident. Tibetans refer to him as the "bodhisattva abbot." The founding of Bsam yas and the ordination of the first monks were pivotal moments in Tibetan Buddhist history, and the relationship of Śāntarakṣita, Padmasambhava, and Khri srong lde btsan figures in many Tibetan legends, most famously as brothers in a previous life. Prior to his death, Śāntarakṣita predicted that a doctrinal dispute would arise in Tibet, in which case his disciple Kamalaśīla should be invited from India. Such a conflict arose between the Indian and Chinese factions, and Kamalaśīla came to Tibet to debate with the Chan monk Moheyan in what is referred to as the BSAM YAS DEBATE, or the "Council of Lhasa."

Santi Asoke. A modern reform movement in Thailand that began under the leadership of Bodhirak (P. Bodhirakka), a monk who had a storied past as a television entertainer, spirit medium, and bhikkhu (S. BHIKṢU). In 1975 he set up an independent saṅgha, ordaining monks and nuns himself, thereby ignoring the traditional requirement that a monk must have a minimum of ten years of seniority before ordaining others. For this reason, along with his violation of several other rules in the monastic code, Bodhirak was officially defrocked by the Supreme Saṅgha Council of Thailand. Santi Asoke emphasizes a semi-ascetic lifestyle for the laity and austerity for the monks, as opposed to what he criticized as the luxurious living conditions enjoyed by many popular monks around the country, some of whom live in modern buildings, travel in private cars, and have meals brought to their residences. Santi Asoke monks wear brown robes rather than the traditional saffron color commonly worn by many monks in Thailand, do not shave their eyebrows, and adhere to a strict vegetarian diet. Laypeople also observe vegetarianism and many observe the eight precepts (see ŚĪLA, AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ) in their daily lives. The group criticizes lavish merit-making as lacking in moral virtue, which it feels can be attained by working hard, avoiding unnecessary consumption, and sharing one's surplus with the rest of society. In addition to avoiding traditional metaphysical beliefs

and practices, the group is also opposed to meditation. It views the concept of right concentration (SAMYAKSAMĀDHI), the eighth step of the eightfold path (ĀRYĀṢṬĀṄGAMĀRGA), as the culmination of the other steps, not as a separate stage of practice. Santi Asoke also differs from more mainstream forms of Buddhism in that its temples do not have any images of the Buddha, explaining that only the dharma can represent the Buddha. Its adherents view themselves as followers of "authentic Buddhism," as opposed to: (1) occult Buddhism, whose followers believe in superstition, fortune-telling, and the power of amulets; (2) capitalistic Buddhism, which Santi Asoke contends is composed of business people who practice meditation in order to become more competitive; and (3) hermetic Buddhism, which encourages asceticism and which the Asoke group criticizes as selfish. Santi Asoke affords a somewhat higher status to its female renunciants than does the mainstream Thai saṅgha, granting female monastics status and title equivalent to that of novice monks, rather than the mainstream's wholly lay MAE CHI designation. Bodhirak and scores of his followers were arrested in 1989 at the behest of Thailand's Supreme Saṅgha Council for committing the criminal act of impersonating monks. All were convicted, but given suspended sentences. While opposed by the federal government and the saṅgha, Santi Asoke maintains its existence and influence through the efforts of a small number of politically connected lay followers, most notably a former governor of Bangkok.

śāntikāra. (S). See ŚĀNTIKA.

Śāntideva. (T. Zhi ba lha). Eighth-century Indian monk of NĀLANDĀ monastery, renowned as the author of two influential MAHĀYĀNA texts: the BODHICARYĀVATĀRA (a long poem on the practice of the bodhisattva path) and the ŚIKṢĀSAMUCCAYA (a compendium of passages from Mahāyāna sūtras corroborating the explanations given in the *Bodhicaryāvatāra*). Nothing is known of his life apart from legends. According to these tales, he was of royal birth but renounced the world before his investiture as king. At Nālandā monastery, he was known as an indolent monk. In order to humiliate him, his fellow monks challenged him to recite sūtras before the assembly. He asked whether they wished to hear something old or something new. When they requested something new, he recited the *Bodhicaryāvatāra*. When he reached the ninth chapter, on wisdom (PRAJÑĀ), he began to rise into the air and disappeared, never to return. For this reason, there is some controversy as to how the ninth chapter ends, and indeed, there are different recensions of the text, one longer and one shorter. Based on the contents of the *Bodhicaryāvatāra*'s ninth chapter, Tibetan doxographers count Śāntideva as a proponent of the *PRĀSAṄGIKA-MADHYAMAKA. The *Bodhicaryāvatāra* was very influential in Tibet; particularly noteworthy is the BKA' GDAMS tradition of dge bshes Po to ba, who lists it and the *Śikṣāsamuccaya*, along with the BODHISATTVABHŪMI, MAHĀYĀNASŪTRĀLAṂKĀRA, Āryaśūra's JĀTAKAMĀLĀ, and the UDĀNAVARGA, as the six fundamental treatises of the Bka' gdams tradition.

śāntika. (T. zhi ba'i las; C. xizai; J. sokusai; K. sikchae 息災). In Sanskrit, "pacifying activities," (also seen written as śānticāra); one of the four types of activities (CATURKARMAN) set forth in the Buddhist TANTRAs. The other three are: activities of increase (PAUṢṬIKA) to increase prosperity, lengthen life, etc.; control or subjugation (VAŚĪKARAṆA) of the unruly or unwilling; and violent or drastic measures (ABHICĀRA), such as killing and warfare. Pacifying activities involve those rituals that purify baleful influences that appear in such forms as hindrances and illness.

sanyao. (J. san'yō; K. samyo 三要). In Chinese, the "three essentials," of meditation practice in the CHAN school: (1) the faculty of great faith (da xingen; cf. ŚRADDHĀ and INDRIYA), (2) great ferocity or tenacity of purpose (da fenzhi), and (3) the sensation of great doubt (da YIQING). These essentials are specifically relevant to cultivation of the "Chan of observing the meditative topic" (KANHUA CHAN), or "questioning meditation." This list was first compiled by the Yuan-dynasty Chan monk GAOFENG YUANMIAO (1238–1295) in his *Gaofeng heshang chanyao*, better known as simply the CHANYAO ("Essentials of Chan"; K. Sŏnyo); the list figures prominently in the presentation of SŎN in the SŎN'GA KWIGAM by the Korean Sŏn monk CH'ŎNGHŎ HYUJŎNG (1520–1604), whence it enters into the Japanese ZEN tradition. As Gaofeng explains them, the faculty of great faith (śraddhendriya) refers to the steadfastness of belief in the inherency of the buddha-nature (FOXING) as the ground of enlightenment. Great ferocity means intense passion toward practice, which he compares to the emotions you would feel if you came across your father's murderer. Gaofeng describes the sensation of doubt (YIQING) regarding the intent behind Chan meditative topics (HUATOU) as like the anxiety and anticipation you feel when you are about to be exposed for some heinous act you committed. All three of these factors are essential, Gaofeng says, if the adept is to have any hope of mastering the kanhua Chan technique.

sanzhi. (J. sanshi; K. samji 三止). In Chinese, "threefold calming" or "threefold concentration"; a complement to the "threefold contemplation" (SANGUAN) taught by TIANTAI ZHIYI of the TIANTAI ZONG. These three types of calming or concentration are: (1) the "concentration that [leads to the] experience of reality" (tizhen zhi); (2) the "concentration that [leads to] expedient responses to conditions" (fangbian suiyuan zhi); and (3) the "concentration that [leads to the] cessation of the two discriminatory extremes" (xi erbian fenbie zhi). The first concentration corresponds to the "contemplation of emptiness" in the "threefold contemplation" scheme; this is because, by bringing to cessation the various forms of conceptual proliferation (PRAPAÑCA) and bringing the practitioner to a direct experience of emptiness (ŚŪNYATĀ), it generates an insight into the fact that all things are dependent for their existence on conditions and therefore lack a "self" or any abiding substance. The second mode of concentration corresponds to the "contemplation of conventional existence"; this is because, by abiding in this

concentration, the bodhisattva understands emptiness without becoming stuck in inactivity or unresponsiveness to worldly phenomena, such as the suffering of other sentient beings. He is able to function dynamically in the world without becoming disquieted or contaminated by those conditions he is responding to or participating in. The third complements the "contemplation of the mean" in the "threefold contemplation" scheme, and brings an end to such dualistic concepts as SAṂSĀRA and NIRVĀṆA. The "discriminatory extremes" are sometimes read as referring to the excesses that are potentially involved in practicing exclusively the first two modes of concentration.

sanzhi sanguan. (C) (三止三觀). See SANZHI and SANGUAN.

sanzhong shijian. (J. sanshuseken; K. samjong segan 三種世間). In Chinese, "the three types of world systems": the world of sentient beings (SATTVALOKA), the receptacle world (BHĀJANALOKA), and the world of the five aggregates (C. WUYUN SHIJIAN). See SATTVALOKA.

sapakṣa. (T. mthun phyogs; C. tongpin; J. dōhon; K. tongp'um 同品). In Sanskrit, "similar instance"; one of three related Sanskrit terms used in Buddhist logic (HETUVIDYĀ): viz., PAKṢA (logical subject), sapakṣa (similar instance), and VIPAKṢA (dissimilar instance). For example, in the syllogism (PRAYOGA) "sound is impermanent because it is produced," sound is the pakṣa; a pot is sapakṣa (similar instance or in the similar class), and space is vipakṣa (dissimilar instance or in the dissimilar class). The VYĀPTI (positive concomitance) is established based on the similar instance, i.e., the opponent's knowledge that a pot breaks because it is produced is extended to sound; the VYATIREKA (negative concomitance) is established based on the dissimilar instance, i.e., the opponent's knowledge that space is permanent because it is not produced is extended to exclude a sound from the dissimilar class because it is produced. See also PAKṢADHARMA, PRAYOGA.

Sa pan. (T). See SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN.

sap'ansŭng. (事判僧). In Korean, "administrative monk," monks who are responsible for the administrative and financial affairs of a Korean monastery; one of the two major divisions of Korean monastic vocations, along with IP'ANSŬNG, practice monks who are engaged in scriptural study, meditative training, and ritual chanting. A large social organization like a monastery required a whole range of ecclesiastical positions to administer the monastic office, treasury, kitchen, etc.; the monks who occupied these offices are collectively referred to as sap'ansŭng. In the past, these monks would also have managed the various economic activities that took place in the monastery, including farming, book printing, paper making, and straw-sandal production. See also TOUSHOU; ZHISHI.

saptabuddha. (S). See SAPTATATHĀGATA.

saptadhana. (P. sattadhana; T. nor bdun; C. qi cai; J. shichizai; K. ch'il chae 七財). In Sanskrit, "seven kinds of riches [in the dharma]." They are: (1) faith or confidence (ŚRADDHĀ), (2) vigor or effort (VĪRYA), (3) virtue or moral restraint (ŚĪLA), (4) sense of shame (HRĪ) and fear of blame (APATRĀPYA), (5) listening to or learning the dharma (lit. "hearing," śruta), (6) relinquishment (PRAHĀṆA), and (7) the wisdom arising from meditative training (BHĀVANĀMAYĪPRAJÑĀ).

saptādhikaraṇaśamatha. (P. sattādhikaraṇasamatha; T. rtsod pa nye bar zhi ba bdun; C. qi miezheng fa; J. shichimetsujōhō; K. ch'il myŏlchaeng pŏp 七滅諍法). In Sanskrit, "seven methods of settling disputes." In confronting monastic members who have transgressed the rules and regulations of the order (see PRĀTIMOKṢA), or when there are disputes about meting out the appropriate sanctions for such infraction, the VINAYA outlines seven methods for dealing with the transgressors and resolving the differences, respectively. According to the CŪḶAVAGGA section of the Pāli pāṭimokkha (using the Sanskrit name for each section): (1) Saṃmukha-vinaya involves the appeal to scriptural and vinaya laws or to direct evidence of transgression. (2) Smṛti-vinaya relies on character witness, testimony of witness[es] of the infraction, and the memory of the transgressor himself if he or she has a clean record and is of trustworthy temperament. In the latter case, an otherwise trustworthy suspect who claims to have no memory of the infraction is presumed innocent. (3) Amūḍha-vinaya is resorting to insanity claims. "Temporary insanity" or the loss of judgment due to different causes at the time of the infraction is considered mitigating and even exculpatory. The transgressor is only brought to the monastic hearing when his sanity or consciousness is restored. (4) Tatsvabhāvaiṣīya-vinaya is the postponement of appropriate punishment after the transgressor has offered a voluntary confession. (5) Yadbhūyasikīya-vinaya is used when a suspect intransigently refuses to confess. It is the citing of contrary evidence to, and self-contradictions and variances in, the suspect's account. (6) Pratijñākāraka-vinaya is the verdict of the majority through voting. Typically elder monks of renowned virtue are assembled for the vote. (7) Tṛṇastāraka-vinaya is interpreted in two ways. One account explains this procedure as having the disputing parties each elect a senior representative to argue their respective cases. Another account has it that, in the case of ultimately irresolvable disputes, both parties should bow down to each other reverentially like "grass in the wind," offering apologies and divulging how oneself could have possibly been more culpable. The Tibetan translation (rtswa bkram pa lta bur 'os pa) suggests a procedure "that strews grass over it [as a covering]." See also ADHIKARAṆAŚAMATHA.

saptakṛdbhavaparama. (T. re ltar thogs na srid pa lan bdun pa; C. jiqi fanyou; J. gokushippon'u; K. kŭkch'il panyu 極七返有). In Sanskrit, "one who takes up to seven existences" before NIRVĀṆA; a specific type of stream-enterer (SROTAĀPANNA), one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA).

According to the ABHIDHARMAKOŚABHĀṢYA, they are those who, on reaching the path of vision (DARŚANAMĀRGA), have not yet eliminated even one of the set of nine levels of afflictions (KLEŚA) that cause rebirth in the sensuous realm (KĀMADHĀTU), these being the impediments to the first DHYĀNA that the mundane (LAUKIKA) path of cultivation (BHĀVANĀMĀRGA) removes; they will therefore take up to a maximum of seven rebirths in the sensuous realm before they reach the goal of ARHAT.

saptāṅgavidhi. (T. yan lag bdun pa'i cho ga; C. qizhi zuofa; J. shichishisahō; K. ch'ilchi chakpŏp 七支作法). In Sanskrit, "seven-branched worship," a common component of MAHĀYĀNA Buddhist liturgy, often performed as a means of accumulating merit at the beginning of a Mahāyāna or tantric ritual or meditation session. The list may include more than seven items, but its standard form includes: obeisance (vandanā), offering (pūjana), confession of wrongdoing (PĀPADEŚANĀ), admiration or rejoicing (ANUMODANA), requesting the buddhas to turn the wheel of dharma (dharmacakrapravartanacodana), requesting the buddhas not to pass into PARINIRVĀṆA (aparinirvṛtādhyeṣaṇa), and the dedication of merit (PARIṆĀMANĀ). Obeisance includes reciting the three refuges (TRIŚARAṆA) formula and praising the excellent qualities of the Buddha, DHARMA, and SAṂGHA; the offering branch is expanded to include elaborate offerings to each of the senses, and, in tantric rituals, so-called inner and secret offerings. In the BHADRACARĪPRAṆIDHĀNA, the final part of the GAṆḌAVYŪHA (and itself the final chapter of the AVATAṂSAKASŪTRA), the bodhisattva SAMANTABHADRA reveals the worship in its fullest Mahāyāna formulation: he prefaces his famous ten vows with a version in which he imagines, on each atom in the universe, as many buddhas and bodhisattvas as there are atoms in the universe, and before each atom he imagines beings, as many as there are atoms in the universe, making obeisance, offering, confessing, and so on.

Saptaśatikāprajñāpāramitā. (T. Shes rab kyi pha rol tu phyin pa bdun brgya pa; C. Qibai song bore; J. Shichihyakuju hannya; K. Ch'ilbaek song panya 七百頌般若). In Sanskrit, the "Perfection of Wisdom in Seven Hundred Lines," a PRAJÑĀPĀRAMITĀ sūtra in which the interlocutors include the Buddha, MAÑJUŚRĪ, MAITREYA, ŚĀRIPUTRA, ĀNANDA, and Nirālambā Bhaginī. It sets forth such topics as the true nature of the TATHĀGATA, the ultimate nonexistence of enlightenment and the stages leading to it, and the samādhi of the "single array" (ekavyūhasamādhi, see YIXING SANMEI). Like the VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA, it emphasizes the paradoxical nature of the teachings of the perfection of wisdom.

saptatathāgata. (P. sattatathāgata; T. de bzhin gshegs pa bdun; C. qifo/guoqu qifo; J. shichibutsu/kako shichibutsu; K. ch'ilbul/kwagŏ ch'ilbul 七佛/過去七佛). In Sanskrit, the "seven buddhas [of antiquity]"; a list of seven past buddhas bridging the last two cyclical periods of the universe, which include ŚĀKYAMUNI and the six buddhas who preceded him, i.e., VIPAŚYIN (P. Vipassin), Śikhin (P. Sikhī), Viśvabhū (P. Vessabhū), Krakucchanda (P. Kondañña), Kanakamuni (P. Konāgamana) and KĀŚYAPA (P. Kassapa). The first three buddhas are the last three of the one thousand buddhas who appeared in the preceding "glorious eon" (vyūhakalpa), the cyclic period of a universe just prior to the present "auspicious eon" (BHADRAKALPA), and the remaining four buddhas are the first four of the one thousand buddhas during the present bhadrakalpa. Śākyamuni will be succeeded by MAITREYA, the fifth buddha in the current cycle. The seven buddhas of antiquity are widely discussed in the ĀGAMA literature and in such texts as the BHADRAKALPIKASŪTRA, where their activities, lineages, parents, offspring, disciples, residences, and teachings are recorded in great detail. Initially depicted symbolically, such as at BHĀRHUT and SĀÑCĪ in the form of a row of seven BODHI TREEs, the seven tathāgatas were shown in human form by the time of the Kushan dynasty and are common in monastic art across Central and East Asia. The buddhas are often differentiated only by the MUDRĀs they display. MAITREYA is often added as an eighth figure, distinguished by his bodhisattva guise.

Śāradvatīputra. (S). See ŚĀRIPUTRA.

Saraha. (T. Sa ra ha; C. Shaluohe; J. Sharaka; K. Saraha 沙羅訶). An eighth-century Indian tantric adept, counted among the eighty-four MAHĀSIDDHAs and renowned for his songs of realization (DOHĀ); also known as Sarahapāda. There are few historical facts regarding Saraha, but according to traditional sources he was born into a Bengali brāhmaṇa family. He is often known by the appellation "Great Brāhmaṇa." In his youth he entered the Buddhist monastic order but later abandoned the clergy in favor of living as a wandering YOGIN. During a visionary experience, he was exhorted to train under a female arrowsmith, who, by means of symbolic instruction, taught Saraha the means for piercing through discursiveness and dualistic thought. Having realized the nature of MAHĀMUDRĀ, he earned the name Saraha, lit., "piercing arrow" or "he who has shot the arrow." Saraha is an important member in Tibetan lineages for the instructions on mahāmudrā. He also composed numerous spiritual songs (dohā) popular among Newari and Tibetan Buddhists. Originally recorded in an eastern Indian APABHRAṂŚA dialect, these songs were later collected and translated into Tibetan as the well-known DO HA SKOR GSUM ("Three Cycles of Songs").

śaraṇa. (P. saraṇa; T. skyabs; C. guiyi; J. kie; K. kwiŭi 歸依). In Sanskrit, "refuge," "shelter," or "haven"; referring specifically to the "three refuges" (TRIŚARAṆA) of the Buddha, DHARMA, and SAṂGHA, where Buddhists seek safe haven. The recitation of the three refuges is one of the foundational ritual practices in Buddhism: "I go for refuge to the Buddha (buddhaṃ śaraṇaṃ gacchāmi). I go for refuge to the dharma (dharmaṃ śaraṇaṃ gacchāmi). I go for refuge to the saṃgha (saṃghaṃ śaraṇaṃ

gacchāmi).” Reciting this formula three times was one of the first ways supplicants gained admittance to the Buddhist community, which initially began with wandering monks and later expanded into different levels of both clergy and lay. Separate rituals for each level of ordination developed, but the triśaraṇa recitation is found in them all. In general, after identifying the three objects of refuge through their special features and unique qualities, supplicants are instructed to keep a set of rules; the most basic rule is associated with the dharma (“the actual refuge”), i.e., not willfully hurting any living being (AHIṂSĀ). It is not clear how the triśaraṇa recitation became associated with conversion (see AMBEDKAR, BHIMRAO RAMJI), although in modern contexts it is often the formula associated with that religious event. See TRIŚARAṆA; RATNATRAYA.

Saraṇaṃkara. (1698–1778). Sinhalese monk instrumental in the founding of the SIYAM NIKĀYA. At the time of his youth, the tradition of full ordination (UPASAṂPADĀ) of monks had died out in Sri Lanka because there were not the requisite number of bhikkhus (S. BHIKṢU) on the island to ordain others. All monks were therefore novices (ŚRĀMAṆERA), many of whom do not wear saffron robes and had wives and children. Despite not having received a legitimate ordination, Saraṇaṃkara and a group of like-minded ascetics sought instead to live the life of the bhikkhu and maintain all 227 rules of the Pāli pāṭimokkha (S. PRĀTIMOKṢA). He eventually petitioned the king to allow monks from abroad to be invited so they could restore the tradition of full ordination (as had been done twice before in the previous five centuries) but his request was rejected and he was banished to a remote region of the island. Saraṇaṃkara eventually returned and became tutor to the next king. During the reign of the following king, Kīrti Śrī Rājasiṃha, a group of Thai monks, led by Upāli, was invited to Sri Lanka at the entreaty of Saraṇaṃkara, where they reestablished full ordination and began what became known as the Siyam Nikāya, since Upāli was from Siam (Thailand). Based at Kandy, it would become the largest of the Sinhalese monastic lineages. In 1760, Saraṇaṃkara was implicated in a plot to overthrow the Sinhalese king and install a Thai prince on the throne of Sri Lanka, but he was later cleared of any wrongdoing. Among his important writings is the *Sāratthadīpanī*.

Sarasvatī. (T. Dbyangs can ma; C. Biancaitian/Miaoyintian; J. Benzaiten/Myōonten; K. Pyŏnjaech’ŏn/Myoŭmch’ŏn 辯才天/妙音天). An Indian goddess revered in both Hinduism and Buddhism as the goddess of composition (including music and poetry) and of learning. She is often depicted playing a vīṇā lute and riding on a swan. She appears in a number of Buddhist sūtras, including the SUVARṆAPRABHĀSOTTAMASŪTRA. Because of that sūtra’s articulation of a role for Buddhism in “state protection” (see HUGUO FOJIAO), Sarasvatī came to be regarded as important goddess in Japan, where, as Benzaiten, she was included among the “seven gods of good fortune” (SHICHIFUKUJIN).

Sāratthappakāsinī. In Pāli, “Revealer of Essential Meaning,” a commentary on the SAṂYUTTANIKĀYA by BUDDHAGHOSA.

sārdhavihārin. (P. saddhivihārika [alt. saddhivihārī]; T. lhan cig gnas pa; C. gongxing dizi; J. gūgyō deshi; K. konghaeng cheja 共行弟子). In Sanskrit, lit. “one who lives with,” or “one who lives in accord with,” but often translated as “disciple” or “apprentice” (see ANTEVĀSIKA). Although the term can simply refer to one of the residents of a monastery, as “disciple” it refers to a novice or a monk who dwells with his UPĀDHYĀYA or preceptor for the purpose of receiving instruction in the dharma and training in the VINAYA. A disciple in residence with his preceptor is said to be under “guidance” (NIŚRAYA). The relationship of the sārdhavihārin and the upādhyāya is described as being like that of a son and a father. Accordingly, the disciple is required to serve the daily needs of his preceptor, by, for example, providing him with water, washing and preparing his robes and alms bowl, cleaning his residence, accompanying him on journeys, and attending him when he is sick. The sārdhavihārin requires the permission of the upādhyāya to attend others, to accompany others on alms rounds, to seek instruction from others, etc. The sārdhavihārin is required to seek pardon from his upādhyāya for any wrongdoing, and may be expelled for bad behavior. If he loses his upādhyāya while he is still in need of guidance, because the latter dies, goes away, secedes from the order, or changes religions, the disciple is to seek out a competent teacher (ĀCĀRYA) to serve in place of the upādhyāya. A fully ordained monk must remain under the guidance of either an upādhyāya or ācārya for a minimum of five years from the time of his ordination. A monk may be required to live under niśraya for a longer period, or for his whole life, if he is unable to become competent in dharma and vinaya.

Śāriputra. (P. Sāriputta; T. Shā ri bu; C. Shelifu; J. Sharihotsu; K. Saribul 舍利弗). In Sanskrit, “Son of Śārī”; the first of two chief disciples of the Buddha, along with MAHĀMAUDGALYĀYANA. Śāriputra’s father was a wealthy brāhmaṇa named Tiṣya (and Śāriputra is sometimes called Upatiṣya, after his father) and his mother was named Śārī or Śārikā, because she had eyes like a śārika bird. Śārī was the most intelligent woman in MAGADHA; she is also known as Śāradvatī, so Śāriputra is sometimes referred to as Śāradvatīputra. Śāripūtra was born in Nālaka near RĀJAGṚHA. He had three younger brothers and three sisters, all of whom would eventually join the SAṂGHA and become ARHATs. Śāriputra and Mahāmaudgalyāyana were friends from childhood. Once, while attending a performance, both became overwhelmed with a sense of the vanity of all impermanent things and resolved to renounce the world together. They first became disciples of the agnostic SAÑJAYA VAIRĀṬĪPUTRA, although they later took their leave of him and wandered through India in search of the truth. Finding no solution, they parted company, promising one another that whichever one should succeed in finding the truth would

inform the other. It was then that Śāriputra met the Buddha's disciple, AŚVAJIT, one of the Buddha's first five disciples (PAÑCAVARGIKA) and already an arhat. Śāriputra was impressed with Aśvajit's countenance and demeanor and asked whether he was a master or a disciple. When he replied that he was a disciple, Śāriputra asked him what his teacher taught. Aśvajit said that he was new to the teachings and could only provide a summary, but then uttered one of the most famous statements in the history of Buddhism, "Of those phenomena produced through causes, the TATHĀGATA has proclaimed their causes (HETU) and also their cessation (NIRODHA). Thus has spoken the great renunciant." (See YE DHARMĀ s.v.). Hearing these words, Śāriputra immediately became a stream-enterer (SROTAĀPANNA) and asked where he could find this teacher. In keeping with their earlier compact, he repeated the stanza to his friend Mahāmaudgalyāyana, who also immediately became a stream-enterer. The two friends resolved to take ordination as disciples of the Buddha and, together with five hundred disciples of their former teacher Sañjaya, proceeded to the VEṆUVANAVIHĀRA, where the Buddha was in residence. The Buddha ordained the entire group with the EHIBHIKṢUKĀ ("Come, monks") formula, whereupon all except Śāriputra and Mahāmaudgalyāyana became arhats. Mahāmaudgalyāyana was to attain arhatship seven days after his ordination, while Śāriputra reached the goal after a fortnight upon hearing the Buddha preach the *Vedanāpariggahasutta* (the Sanskrit recension is entitled the *Dīrghanakhaparivrājakaparipṛcchā*). The Buddha declared Śāriputra and Mahāmaudgalyāyana his chief disciples the day they were ordained, giving as his reason the fact that both had exerted themselves in religious practice for countless previous lives. Śāriputra was declared chief among the Buddha's disciples in wisdom, while Mahāmaudgalyāyana was chief in mastery of supranormal powers (ṚDDHI). Śāriputra was recognized as second only to the Buddha in his knowledge of the dharma. The Buddha praised Śāriputra as an able teacher, calling him his dharmasenāpati, "dharma general" and often assigned topics for him to preach. Two of his most famous discourses were the DASUTTARASUTTA and the SAṄGĪTISUTTA, which the Buddha asked him to preach on his behalf. Sāriputra was meticulous in his observance of the VINAYA, and was quick both to admonish monks in need of guidance and to praise them for their accomplishments. He was sought out by others to explicate points of doctrine and it was he who is said to have revealed the ABHIDHARMA to the human world after the Buddha taught it to his mother, who had been reborn in the TRĀYASTRIṂŚA heaven; when the Buddha returned to earth each day to collect alms, he would repeat to Śāriputra what he had taught to the divinities in heaven. Śāriputra died several months before the Buddha. Realizing that he had only seven days to live, he resolved to return to his native village and convert his mother; with this accomplished, he passed away. His body was cremated and his relics were eventually enshrined in a STŪPA at NĀLANDĀ. Śāriputra appears in many JĀTAKA stories as a companion of the Buddha, sometimes in human form, sometimes in animal form, and sometimes with one of them a human and the other an animal. Śāriputra also plays a major role in the MAHĀYĀNA sūtras, where he is a common interlocutor of the Buddha and of the chief BODHISATTVAS. Sometimes he is portrayed as a dignified arhat, elsewhere he is made the fool, as in the VIMALAKĪRTINIRDEŚA when a goddess turns him into a woman, much to his dismay. In either case, the point is that the wisest of the Buddha's arhat disciples, the master of the abhidharma, does not know the sublime teachings of the Mahāyāna and must have them explained to him. The implication is that the teachings of the Mahāyāna sūtras are therefore more profound than anything found in the canons of the MAINSTREAM BUDDHIST SCHOOLS. In the PRAJÑĀPĀRAMITĀHṚDAYA ("Heart Sūtra"), it is Śāriputra who asks AVALOKITEŚVARA how to practice the perfection of wisdom, and even then he must be empowered to ask the question by the Buddha. In the SADDHARMAPUṆḌARĪKASŪTRA, it is Śāriputra's question that prompts the Buddha to set forth the parable of the burning house. The Buddha predicts that in the future, Śāriputra will become the buddha Padmaprabha.

śarīra. (P. sarīra; T. lus/sku/ro/ring bsrel; C. sheli; J. shari; K. sari 舍利). In Sanskrit, a common term for "body" in both the literal and metaphoric sense (as in the "main body" of a text as opposed to a commentary). The term is also used to refer to a corpse, especially that of a monk or of the Buddha, both before and after cremation; in the latter case, the term is often translated as "relic" (śarīra). However, this is not always the meaning in the mortuary context, and the term śarīrapūjā, "worship of the śarīra," often seems to mean the funeral ceremony for the Buddha or a monk, rather than the worship of relics. Relics entombed in a STŪPA were indeed worshipped; in those contexts, the term generally appears in the plural. In general, relics include whole-body relics (C. QUANSHEN SHELI; J. zenshin shari; K. chŏnsin sari)—e.g., the mummified remains of eminent masters—and partial-body relics (C. SUISHEN SHELI; J. saishin shari; K. swaesin sari)—e.g., portions of the physical body, such as a finger bone, TOOTH RELIC, or crystalline substances that are presumed to be the condensation of the sanctified remains of an enlightened person that occurs during cremation. Such physical remains were believed to represent the Buddha's or the sages' ongoing presence and power and have been objects of worship since the time of the Buddha's own PARINIRVĀṆA. According to written sources, the śarīra left after the cremation of the Buddha were apportioned by the brāhmaṇa DROṆA, who divided the relics into eight shares and distributed them among the kingdoms of north India. Nevertheless, the "war of the relics" that was supposed to have broken out over the disposition of the relics—depicted on two friezes appearing on architraves on the southern and western gateways of the great STŪPA of SĀÑCĪ—probably never occurred. Emperor AŚOKA is said to have subsequently collected and redistributed these relics by erecting eighty-four thousand STŪPAS throughout his realm to enshrine them. Nineteen such stūpas were "discovered" in China before

the Tang dynasty, among them one at Changgansi on Ayuwangshan and another on WUTAISHAN. Major śarīra like the finger bone of the buddha at FAMENSI also became the objects of fervent cults in medieval China. Buddhist scriptures, which were the "relics of the DHARMAKĀYA" (C. fashen sheli; J. hosshin shari; K. pŏpsin sari), also came to be enshrined in stūpas and Buddhists worshipped them just as they worshipped physical remains. See also DHARMAŚARĪRA; DHĀTU.

Sārnāth. The modern place name for a site approximately four miles outside of Vārāṇasī and the location of the Deer Park (MṚGADĀVA) in ṚṢIPATANA where the Buddha is said to have first "turned the wheel of dharma" (DHARMACAKRAPRAVARTANA), viz., delivered his first sermon. Sārnāth is thus considered one of the holiest sites in the Buddhist world and has long been an important place of pilgrimage. Seven weeks after the Buddha became enlightened at BODHGAYĀ, he started out for the Deer Park at Ṛṣipatana, where he met and preached to his five former ascetic companions, the PAÑCAVARGIKA. To these five men, the Buddha preached the FOUR NOBLE TRUTHS (catvāry āryasatyāni). Of the five, the first to become enlightened was ĀJÑĀTAKAUṆḌINYA, followed shortly thereafter by the other four. Soon after the Buddha began teaching, a young man named YAŚAS arrived from Vārāṇasī with fifty-four other people, who all asked to be ordained. Later, Emperor AŚOKA had a large STŪPA and other monuments erected at the spot. When FAXIAN visited Sārnāth during his fifth-century pilgrimage, the site was an active religious center, with two monasteries and four stūpas. The monastic community was still thriving during the seventh century when XUANZANG visited. Today, the Dhamek stūpa is the major surviving architectural structure, likely the restoration of a stūpa dating back to the Aśokan period. Ruins of the monastery are also visible, along with an important edict on an Aśokan pillar forbidding activities that might cause a schism in the order (SAṂGHABHEDA).

Sarvadurgatipariśodhanatantra. (T. Ngan song thams cad yongs su sbyong ba'i rgyud; C. Zuisheng foding tuoluoni jingchu yezhang zhou jing; J. Saishōbutchōdarani jōjogōshōjukyō; K. Ch'oesŭng pulchŏng tarani chŏngje ŏpchang chu kyŏng 最勝佛頂陀羅尼淨除業障呪經). In Sanskrit, "Tantra on the Complete Purification of All Negative Places of Rebirth," an important Indian tantra classified sometimes as a CARYĀTANTRA, but most commonly as a YOGATANTRA, associated with the SARVATATHĀGATATATTVASAṂGRAHA. In the text, ŚAKRA asks the Buddha ŚĀKYAMUNI about the fate of a deity named Vimalamaṇiprabha, who is no longer living in the TRĀYASTRIṂŚA heaven. The Buddha explains that he has been reborn in the AVĪCI hell. The gods then ask the Buddha how to avoid rebirth in the three "evil destinies" (DURGATI) of animals, ghosts, and hell denizens. The Buddha sets forth a variety of rituals, including rituals for the four kinds of activities (ŚĀNTIKA, PAUṢṬIKA, VAŚĪKARAṆA, ABHICĀRA) as well as rituals for the dead. The text was widely commented upon in Tibet, where it was a major source of rituals for the fortunate rebirth of the dead.

sarvajñatā. (P. sabbaññu; T. kun shes/thams cad mkhyen pa; C. yiqie zhi; J. issaichi; K. ilch'e chi 一切智). In Sanskrit, "all-knower," "all-knowledge," or "omniscience"; in early versions of the perfection of wisdom (PRAJÑĀPĀRAMITĀ) sūtras, the name for a buddha's knowledge; later, the term was used for the knowledge of a ŚRĀVAKA or PRATYEKABUDDHA, in contrast to a buddha's knowledge of all aspects (SARVĀKĀRAJÑATĀ), which is reached by cultivating a bodhisattva's knowledge of the paths (MĀRGAJÑATĀ). The "all" (sarva) means all the grounds (vastu) of the knowledge of defiled (SAṂKLIṢṬA) and pure (viśuddha, see VIŚUDDHI) dharmas systematized in the FOUR NOBLE TRUTHS. In the ABHISAMAYĀLAṂKĀRA and VIMUKTISENA's commentary to that text, sarvajñatā has both a positive and a negative meaning. In the opening verses of the *Abhisamayālaṃkāra*, for example, sarvajñatā is called the mother of the perfection of wisdom. In such cases it is a positive term for the part of a buddha's knowledge that is shared in common with śrāvakas, and so on. In the third chapter of the same work, sarvajñatā is a negative term used to identify the absence of skillful means (UPĀYA) and the lack of the total absence of subject-object conceptualization (GRĀHYAGRĀHAKAVIKALPA) in śrāvakas, in order to point clearly to the superiority of the BODHISATTVA path.

sarvajñatājñāna. (P. sabbaññutāñāṇa; T. thams cad mkhyen pa'i ye shes; C. yiqiezhi zhi; J. issaichichi; K. ilch'eji chi 一切智智). In Sanskrit, "omniscient knowledge"; a buddha's knowledge of all the grounds (vastu) of the knowledge of defiled (SAṂKLIṢṬA) and purified (viśuddha, see VIŚUDDHI) dharmas systematized in the FOUR NOBLE TRUTHS. In the ABHISAMAYĀLAṂKĀRA and its commentarial tradition, sarvajñatājñāna also refers to the knowledge of the four noble truths in the mental continuum of a bodhisattva or buddha. See SARVAJÑATĀ.

sarvākārajñatā. (T. rnam pa thams cad mkhyen pa; C. yiqiezhong zhi; J. issaishuchi; K. ilch'ejong chi 一切種智). In Sanskrit, "knowledge of all aspects," the preferred term in the ABHISAMAYĀLAṂKĀRA and its commentaries for the omniscience of a buddha, which simultaneously perceives all phenomena in the universe and their final nature. When explained from the perspective of the goal that bodhisattvas will reach, the knowledge of all aspects is indicated by ten dharmas, among which are cittotpāda (cf. BODHICITTOTPĀDA), defining all the stages of all the Buddhist paths; AVAVĀDA, defining all the instructions relevant to those stages, the stages leading to the elimination of the subject-object conceptualization (GRĀHYAGRĀHAKAVIKALPA) along the entire range of accomplishments up to and including the state of enlightenment itself (see also NIRVEDHABHĀGĪYA); the substratum (GOTRA), objective supports (ĀLAMBANA) and aims (uddeśa) of the practice; and the practices (PRATIPATTI) incorporating the full range of skillful means (UPĀYAKAUŚALYA) necessary

to turn the wheel of the dharma (DHARMACAKRAPRAVARTANA) in all its variety. When described from the perspective of the bodhisattva's practice that leads to it, sarvākārajñatā has 173 aspects: twenty-seven aspects of a ŚRĀVAKA's knowledge of the four noble truths (SARVAJÑATĀ), thirty-six aspects of a BODHISATTVA's knowledge of paths (MĀRGAJÑATĀ) and one hundred ten aspects that are unique to a buddha. These are again set forth as the thirty-seven aspects of all-knowledge, thirty-four aspects of the knowledge of the paths, and the thirty-nine aspects of the knowledge of all aspects itself. See also ĀKĀRA.

Sarvamaṇḍalasāmānyavidhiguhyatantra. (T. Gsang ba spyi rgyud; C. Ruixiye jing; J. Suikiyakyō; K. Yuhŭiya kyŏng 蕊哷耶經). In Sanskrit, "Secret Tantra for the Common Ritual for all MAṆḌALAS"; a text that belongs, according to Tibetan categorization of tantras, to the KRIYĀTANTRA class.

Sarvanīvaraṇaviṣkambhin. (T. Sgrib pa thams cad rnam par sel ba; C. Chugaizhang pusa; J. Jogaishō bosatsu; K. Chegaejang posal 除蓋障菩薩). In Sanskrit, "Blocking all Hindrances"; a BODHISATTVA who is the interlocutor of the KĀRAṆḌAVYŪHA; in the GUHYASAMĀJATANTRA, he is listed as one of the eight great bodhisattvas (see AṢṬAMAHOPAPUTRA); he associated with the buddha AMOGHASIDDHI. See KĀRAṆḌAVYŪHA.

Sarvāstivāda. (T. Thams cad yod par smra ba; C. Shuo yiqieyou bu/Sapoduo bu; J. Setsuissaiubu/Satsubatabu; K. Sŏrilch'eyu pu/Salbada pu 說一切有部/薩婆多部). In Sanskrit, "Teaching that All Exists," one of the most influential of all the mainstream (that is, non-Mahāyāna) schools of Indian Buddhism, named after its doctrine that all conditioned factors (DHARMA) continue to exist (sarvam asti) throughout all three time periods (TRIKĀLA) of past, present, and future. The Sarvāstivāda had one of the most elaborate ABHIDHARMA canons (ABHIDHARMAPIṬAKA) in all of Buddhism and the school was especially known for its distinctive and influential dharma theory. The Sarvāstivāda identified seventy-five dharmas that the school held were substantially existent (dravyasat) and endowed with intrinsic nature (SVABHĀVA): viz., the five sense organs (INDRIYA), the five sense objects, nonmanifest materiality (AVIJÑAPTIRŪPA), mind (CITTA), forty-six mental concomitants (CAITTA), fourteen conditioned forces dissociated from thought (CITTAVIPRAYUKTASAṂSKĀRA), and three unconditioned (ASAṂSKṚTA) factors. Although the conditioned dharmas always existed, they still were impermanent and thus still moved between temporal periods because of specific "forces dissociated from thought" (CITTAVIPRAYUKTASAṂSKĀRA): the "compounded characteristics" (SAṂSKṚTALAKṢAṆA, CATURLAKṢAṆA) of origination (JĀTI), continuance (STHITI), "senescence" or decay (JARĀ), and "desinence," viz., extinction (ANITYATĀ). In the Sarvāstivāda treatment of causality, these four characteristics were forces that exerted real power over compounded objects, escorting those objects along the causal path until the force "desinence" finally extinguished them; this rather tortured explanation was necessary in order to explain how factors that the Sarvāstivāda school posited continued to exist in all three time periods yet still appeared to undergo change. Even after enlightenment, those dharmas still continued to exist, although they were then effectively "canceled out" through the force of the "nonanalytical suppressions" (APRATISAṂKHYĀNIRODHA), which kept in check the production of all types of dharmas, ensuring that they remained positioned in future mode forever and were never again able to arise in the present. This distinctive dharma theory of the Sarvāstivāda was probably what the MADHYAMAKA philosopher NĀGĀRJUNA was reacting against in his clarion call that all dharmas were devoid of intrinsic existence (NIḤSVABHĀVA) and thus characterized by emptiness (ŚŪNYATĀ). The Sarvāstivāda school's elaborate abhidharma was also the inspiration for the still more intricate "Mahāyāna abhidharma" of the YOGĀCĀRA school (see BAIFA), which drew much of its classification scheme and many of its specific dharmas directly from the Sarvāstivāda. In describing the path of the ARHAT, the Sarvāstivāda set forth a five-stage path system (PAÑCAMĀRGA, of accumulation/equipment, preparation, vision, cultivation, and no further learning) for the ARHAT and asserted that the BODHISATTVA practices six perfections (PĀRAMITĀ) in the course of his training. This five-stage path was also adopted by the Yogācāra in its own theory of the bodhisattva MĀRGA. The Sarvāstivāda developed an elaborate view of the Buddha and the events of his life, as represented in the famous LALITAVISTARA. In its view of death and rebirth, Sarvāstivāda accepted the reality of the "intermediate state" (ANTARĀBHAVA) between rebirths, which in the Sarvāstivāda analysis could range from instantaneous rebirth, to rebirth after a week, indeterminate duration, and as many as forty-nine days; the latter figure seems to have become dominant in later traditions, including Mahāyāna, after it was adopted by the ABHIDHARMAKOŚABHĀṢYA and the YOGĀCĀRABHŪMI. The Sarvāstivāda was one of the main subgroups of the STHAVIRANIKĀYA (School of the Elders), which split with the MAHĀSĀṂGHIKA in the first centuries following the Buddha's death. The Sarvāstivāda evolved as one of the three major subdivisions of the Sthaviranikāya, perhaps as early as a century or two following the first schism, but certainly no later than the first century CE. Sarvāstivāda was one of the most enduring and widespread of the mainstream Buddhist schools. It was especially important in northern India in such influential Buddhist regions as KASHMIR and GANDHĀRA and eventually along the SILK ROAD in some of the Indo-European petty kingdoms of the Tarim River basin, such as KUCHA. Its geographical location along the major overland trade routes also led to it becoming the major mainstream school known to East Asian Buddhism. The Sarvāstivāda school includes an important subgroup, the VAIBHĀṢIKA ("Followers of the Vibhāṣā"), who were the ĀBHIDHARMIKAS associated with the Sarvāstivāda school, especially in Kashmir in northwestern India but also in Gandhāra and even BACTRIA. Because these masters considered their teachings to be elaborations of doctrines found in the encyclopedic Sarvāstivāda abhidharma treatise, the

ABHIDHARMAMAHĀVIBHĀṢĀ, they typically referred to themselves as Sarvāstivāda-Vaibhāṣika or simply Vaibhāṣika. This group was later also distinguished from the MŪLASARVĀSTIVĀDA ("Root Sarvāstivāda"), a distinction that may have originated in a dispute over VINAYA recensions between the northwestern Sarvāstivāda-Vaibhāṣika school in Kashmir and Gandhāra and the Sarvāstivāda school of MATHURĀ in north-central India. The Mūlasarvāstivāda is best known for its massive MŪLASARVĀSTIVĀDA VINAYA, one of the oldest and by far the largest (by up to a factor of four) of the major monastic codes (see VINAYAPIṬAKA) of the mainstream Buddhist schools; because of its eclectic content, it functioned almost as a proto-canon. The Mūlasarvāstivāda vinaya is the monastic code still followed today in the Tibetan traditions of Buddhism. See also SAUTRĀNTIKA.

Sarvatathāgatatattvasaṃgraha. (T. De bzhin gshegs pa thams cad kyi de kho na nyid bsdus pa; C. Yiqie rulai zhenshishe dasheng xianzheng sanmei dajiaowang jing; J. Issainyorai shinjitsushō daijōgenshōzanmai daikyōōgyō; K. Ilch'e yŏrae chinsilsŏp taesŭng hyŏnjŭng sammae taegyowang kyŏng 一切如來眞實攝大乘現證三昧大教王經). In Sanskrit, "Compendium of Principles of All the Tathāgatas"; one of the most important Buddhist tantras, whose influence extended through India, China, Japan, and Tibet. Likely dating from the late seventh century, the text presented a range of doctrines, themes, and practices that would come to be regarded as emblematic of tantric practice. These include the the view that ŚĀKYAMUNI Buddha did not actually achieve enlightenment under the BODHI TREE but did so through ritual consecration. The commentaries to the *Sarvatathāgatatattvasaṃgraha* recount that Prince SIDDHĀRTHA was meditating on the banks of the NAIRAÑJANĀ River when he was roused by the buddha VAIROCANA and all the buddhas of the ten directions, who informed him that such meditation would not result in the achievement of buddhahood. He thus left his physical body behind and traveled in a mind-made body (MANOMAYAKĀYA) to the AKANIṢṬHA heaven, where he received various consecrations and achieved buddhahood. He next descended to the summit of Mount SUMERU, where he taught the YOGATANTRAS. Finally, he returned to the world, reinhabited his physical body, and then displayed to the world the well-known defeat of MĀRA and the achievement of buddhahood under the Bodhi tree. The tantra also include the violent subjugation of Maheśvara (Śiva) by the wrathful bodhisattva VAJRAPĀṆI, suggesting competition between Hindu and Buddhist tantric practitioners at the time of its composition and the increasing importance of violent imagery in Buddhist tantra. Such important elements as the five buddha families (PAÑCATATHĀGATA) and the practice of visualizing oneself as a deity also appear in the text. The tantra is also important for the prominment role given to the buddha Vairocana. In East Asia, the *Sarvatathāgatatattvasaṃgraha* was particularly influential in the form of the VAJRAŚEKHARA, the reconstructed Sanskrit title derived from the Chinese translations of the first chapter of the *Sarvatathāgatatattvasaṃgraha* made by VAJRABODHI and AMOGHAVAJRA during the Tang dynasty. This would become a central text for the esoteric traditions of China and Japan. The full text of the *Sarvatathāgatatattvasaṃgraha* was not translated into Chinese until Dānapāla completed his version in 1015. Ānandagarbha (fl. c. 750) wrote an important commentary on the *Sarvatathāgatatattvasaṃgraha* called *Tattvālokakarī* ("Illumination of the Compendium of Principles Tantra"), and Śākyamitra (fl. c. 750) wrote a commentary called *Kosalālaṃkāra* ("Ornament of Kosala"). Ānandagarbha's maṇḍala ritual called *Sarvavajrodayamaṇḍalavidhi* is a ritual text based on the first chapter of the *Sarvatathāgatatattvasaṃgraha*. The tantra was very influential in Tibet during both the earlier dissemination (SNGA DAR) and the later dissemination (PHYI DAR) periods. Classified as a yogatantra, it was an important source during the later period, for example, for such scholars as BU STON RIN CHEN GRUB and TSONG KHA PA in their systematizations of tantra.

sarvatraga. (T. kun 'gro; C. bianxing; J. hengyō; K. p'yŏnhaeng 遍行). In Sanskrit, "all-pervasive" or "omnipresent"; referring specifically to the five omnipresent (sarvatraga) mental concomitants (CAITTA) that are present to varying degrees in all conscious states according to the analysis of the YOGĀCĀRA ABHIDHARMA. These five factors are: sensory contact (SPARŚA), sensation (VEDANĀ), volition (CETANĀ), perception or discrimination (SAṂJÑĀ), and attention (MANASKĀRA). It is not possible to identify consciousness or mind (CITTA) except through these omnipresent factors; each has a specific mental function, and when these functions operate together they produce what is conventionally called a conscious state or mind. Thus manaskāra functions as a basic level of mental activity; cetanā functions to make consciousness nonarbitrary, giving consciousness intention relative to its object; sparśa functions to connect consciousness with its object; vedanā extends mere contact into the realm of sentient experience; and saṃjñā functions to differentiate and identify a particular object. These five factors are included among the ten MAHĀBHŪMIKA dharmas in the seventy-five dharmas of the SARVĀSTIVĀDA school. In the Pāli ABHIDHAMMA, there are seven mental factors (P. cetisika) that are associated with all states of consciousness, these five together with concentration (SAMĀDHI) and mental vitality (JĪVITA).

sarvatragahetu. (T. kun 'gro'i rgyu; C. bianxing yin; J. hengyōin; K. p'yŏnhaeng in 遍行因). In Sanskrit, "all-pervasive," or "universally active," "cause," the fifth of the six types of causes (HETU) outlined in the JÑĀNAPRASTHĀNA, the central text of the SARVĀSTIVĀDA ABHIDHARMA. This type of cause refers to the fact that the unwholesome proclivities (ANUŚAYA) of mind produce not only identical types of subsequent proclivities, but also serve as the root cause of all other types of afflictions, thus obstructing a person's capacity to understand the true nature of reality. The unwholesome cause and effect must occur in the same realm (such as the RŪPADHĀTU), but the cause

and effect can be different types of unwholesome states, e.g., ignorance can produce attachment.

Sarvodaya. Also known as Sarvodaya Shramadana, a reform movement founded in Sri Lanka in 1958 by A. T. Ariyaratne. This lay Buddhist movement sought to promote, as its name suggests, "the welfare of all" through "the donation of labor," especially at the local level, through various public works and relief projects, such as building roads, digging wells, and bringing better healthcare and farming techniques to the village. Sarvodaya also sought to reestablish what it considered to be the traditional relationship between the village and its monastery.

Sasaki, Ruth Fuller. (1892–1967). An influential Western scholar of the CHAN (ZEN) Buddhist tradition. Ruth Fuller Everett had been married to Charles Everett, who died in 1940. She was introduced to Asian religions while living in Nyack, New York, and more specifically to Buddhism while on a world cruise that took her and her husband to Japan in 1930. There, she met DAISETZ TEITARO SUZUKI. Two years later, she returned to Japan and spent more than three months at the monastery of NANZENJI, where she was allowed to practice with the monks. She met ALAN WATTS when she traveled to London with her daughter Eleanor, who married Watts in 1938, the same year that Fuller joined Sokei-an, Shigetsu Sasaki's Buddhist Society of America, and began to edit the Society's Journal (*The Cat's Yawn*). Fuller and Sasaki translated the YUANJUE JING ("Perfect Enlightenment Sūtra") together. Sasaki was imprisoned in 1942 during the American internment of Americans of Japanese heritage in World War II. In prison, his health deteriorated. Fuller and Sasaki were married in 1944, but he died in 1945, at which time Fuller became the leader of the Zen Institute in New York City. She moved to Japan in 1949 in order to find a teacher for the Institute and finish translating her husband's work. Fuller was ordained in 1958, and traveled between Japan and the United States until her death in 1967. She published *Zen Dust* with Miura Isshū, and *Zen: A Method for Religious Awakening*.

śāsana. (P. sāsana; T. bstan pa; C. shengjiao; J. shōgyō; K. sŏnggyo 聖教). In Sanskrit, "dispensation," "teachings"; the Buddha's teachings especially as conceived historically as an institutionalized religion; a common term for the teachings of the Buddha, or what is typically known in the West as "Buddhism." The Pāli commentaries analyze the teachings of the Buddha according to both a twofold and threefold system of classification. The twofold dispensation is comprised of the "teaching for monks" (P. bhikkhusāsana) and "teaching for nuns" (P. bhikkhunīsāsana). The threefold dispensation is comprised of the "teaching on scriptural study" (P. pariyattisāsana), "teaching on practice" (P. paṭipattisāsana), and the "teaching on realization" (P. paṭivedhasāsana). According to this system, scriptural study constitutes the foundation of the Buddha's teaching, without which there can be no successful practice of the path (MĀRGA) and hence no realization of the Buddhist truths or of enlightenment. The same Pāli commentaries state that the teachings of GAUTAMA Buddha will last for five thousand years and propose a variety of scenarios as to how it will suffer gradual decline until its complete disappearance (see ANTARADHĀNA). According to the THERAVĀDA calculation, the śāsana reached its halfway point in 1956.

Sāsanavaṃsa. In Pāli, "Chronicle of the Dispensation," an ecclesiastical history written by the Burmese (Myanmar) scholiast Paññāsāmi at Mandalay in 1861. Written from the perspective of the royally sponsored THUDHAMMA Council, the text purports to record the history of the THERAVĀDA saṅgha from the time of the Buddha, through its introduction into Burma in ancient times, up to the author's own period. Based on the earlier Burmese-language Buddhist chronicle, *Thathanalinkara Sadan* (1831), the *Sāsanavaṃsa* was the last of a series of such chronicles, all representing the Thudhamma point of view, to be produced during the Konbaung dynasty (1752–1885). The text was edited for the PALI TEXT SOCIETY by Mabel Bode in 1897, and was translated as *The History of the Buddha's Religion* by B. C. Law in 1952.

sāsanavisodhana. In Pāli, "purification of the Buddha's teaching"; referring specifically to the expulsion of malefactors and heretics from the congregation of Buddhist monks and nuns (P. saṅgha; S. SAṂGHA). It is typically, but not necessarily followed by a communal recitation (SAṂGĪTI) of the Buddhist canon (P. tipiṭaka; S. TRIPIṬAKA) by the newly purified and reunited saṅgha. The monastic code (VINAYA) severely limits the ability of the saṅgha as a body or its leaders to force the secession of false monks, monks guilty of PĀRĀJIKA offenses, schismatics, or heretics. For this reason this authority has been ceded by historical precedent and tradition (but not by vinaya law) to the state, embodied ideally in the person of the pious Buddhist king. In the Pāli tradition, the ultimate paradigm for royal interventionism in saṅgha affairs is King Dhammāsoka (see AŚOKA), who is portrayed in the Pāli chronicles of Sri Lanka and the Pāli commentaries as having purged the saṅgha of malefactors at the behest of the saṅgha and under the guidance of the elder MOGGALIPUTTATISSA. After the saṅgha was purified, Moggaliputtatissa convened the third Buddhist council (see COUNCIL, THIRD) to rehearse and reaffirm the Buddha's true teachings. Cf. SIKKHĀPACCAKKHĀNA; ŚIKṢĀDATTAKA.

Sa skya. (Sakya). In Tibetan, lit. "gray earth"; a principal sect and monastery of the Tibetan tradition. The Sa skya was politically powerful during the thirteenth and fourteenth centuries and renowned for its scholastic training and emphasis on the tantric system of LAM 'BRAS, or "path and result." Its name is derived from the sect's original institution of Sa skya monastery (see infra), which was named after a place by that name, meaning "gray earth"; the monastery is painted with a distinctive

gray-blue wash. Sa skya doctrinal history extends back to the Indian adept VIRŪPA, who is considered a primary source for the instructions on the HEVAJRATANTRA and lam 'bras, and the Tibetan translator 'BROG MI SHĀKYA YE SHES, who carried these teachings to Tibet. The founding of the Sa skya sect in Tibet is attributed to members of the ancient 'Khon family including DKON MCHOG RGYAL PO, a disciple of 'Brog mi. Dkon mchog rgyal po founded Sa skya monastery in 1073, with its tantric practice based on the new tantras that were then being brought from India; Sa skya is thus one of the "new translation" (GSAR MA) sects. His son SA CHEN KUN DGA' SNYING PO promulgated the seminal Sa skya instructions on the *Hevajratantra* and lam 'bras. In 1247 the acclaimed scholar SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN fashioned an agreement with the Mongol ruler Godan Khan, in which the Tibetan monk was granted supreme political authority in Tibet. Later, Sa skya Paṇḍita's nephew, 'PHAGS PA BLO BROS RGYAL MTSHAN formed a similar agreement with Qubilai Khan, establishing Sa skya rule into the fourteenth century. The principal leaders of the Sa skya were traditionally chosen from among members of the 'Khon family and the position of SA SKYA KHRI 'DZIN, or "Sakya Throne Holder," continues to be a hereditary, as opposed to an incarnation-based, position. Beginning in the fifteenth century several branches of the Sa skya sect developed. The NGOR subsect was established by KUN DGA' BZANG PO, known as Ngor chen ("great man of Ngor"), who founded a seat at NGOR E WAM CHOS LDAN in 1429. Blo gsal rgya mtsho (Losel Gyatso, 1502–1566), called Tshar chen ("great man of Tshar"), established the Tshar Sa skya lineage. Also counted among the greatest Sa skya masters are the SA SKYA GONG MA RNAM LNGA, the so-called "five Sa skya forefathers." ¶ Sa skya is also the name of the monastery that is the monastic seat of the Sa skya sect of Tibetan Buddhism, located in Gtsang (Tsang) in central Tibet, and founded in 1073 by the Sa skya hierarch Sa chen kun dga' snying po. It served as the site of Tibetan political power during the period of Sa skya dominance in the thirteenth and fourteenth centuries. The central monastic complex is a massive, imposing structure, renowned for its extensive library.

Sa skya gong ma rnam lnga. (Sakya Gongma Namnga). In Tibetan, "five Sa skya forefathers," or "five hierarchs of Sa skya." Five great masters, the most illustrious scholar-saints of the aristocratic 'Khon family, revered as early founders and teachers of the SA SKYA sect of Tibetan Buddhism. They are:

1. SA CHEN KUN DGA' SNYING PO (1092–1158)
2. BSOD NAMS RTSE MO (1142–1182)
3. Grags pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216)
4. SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN (1182–1251)
5. 'PHAGS PA BLO GROS RGYAL MTSHAN (1235–1280)

Kun dga' snying po (called Sa chen) was instrumental in making the LAM 'BRAS tradition a central pillar of the Sa skya sect, Kun dga' rgyal mtshan (called Sa paṇ) was one of the greatest scholars Tibet has produced, and 'Phags pa (called Dharmarāja, T. Chos rgyal) forged an alliance with the Mongolian rulers of China and instituted Sa skya rule over much of Tibet in the thirteenth century. The different subsects of Sa skya all give the five an iconic role in their practices and rituals.

Sa skya khri 'dzin. (Sakya Tridzin). In Tibetan, lit. "throne holder of SA SKYA," used as a title for the principal religious leader of the Sa skya sect of Tibetan Buddhism. It is a hereditary position assumed by male members (often a son or nephew) of the ancient 'Khon family that traces its lineage back to 'Khon DKON MCHOG RGYAL PO, who founded Sa skya monastery in 1073. The forty-first holder of the Sa skya throne, Ngag dbang kun dga' theg chen dpal 'bar (Ngawang Kunga Tekchen Pelbar) (b. 1945), was born in southern Tibet. Following his enthronement at Sa skya monastery in 1959, he escaped the Chinese communist invasion by fleeing to India where he established a new seat near the former British hill station of Dehradun. He continues to travel throughout Asia, Europe, and North America, where he teaches to a wide audience.

Sa skya pa. An adherent of the SA SKYA sect of Tibetan Buddhism.

Sa skya pa'i bka' 'bum. (Sakya Kabum). In Tibetan, "Collected Works of the Sa skya"; the collected writings of the SA SKYA GONG MA RNAM LNGA, the first five great hierarchs of the SA SKYA tradition: SA CHEN KUN DGA SNYING PO, BSOD NAMS RTSE MO, Grags pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216), SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN, and 'PHAGS PA BLO GROS RGYAL MTSHAN. The standard edition of the collected works is in fifteen volumes carved on wood blocks at the SDE DGE printery in Khams in eastern Tibet in 1736.

Sa skya Paṇḍita Kun dga' rgyal mtshan. (Sakya Paṇdita Kunga Gyaltsan) (1182–1251). Although associated primarily with the SA SKYA sect, Sa skya Paṇḍita is traditionally considered one of the greatest savants and religious luminaries in the history of Tibetan Buddhism. He authored a number of seminal philosophical treatises, and beyond his role as scholar and logician, played an instrumental role in forging a relationship with the Mongol court. The name Sa skya Paṇḍita is an honorific title, meaning "Scholar of Sa skya," often abbreviated as Sa paṇ. Born into a renowned family, he was the grandson of SA CHEN KUN DGA' SNYING PO and the nephew of the Sa skya BSOD NAMS RTSE MO and Grags pa rgyal mtshan (Drakpa Gyaltsen, 1147–1216), from whom he received teachings. Sa paṇ began his studies at a young age, and was quickly recognized as a prodigy. He studied extensively with the leading masters of his day, including scholars from the great centers of learning in India, such as ŚĀKYAŚRĪBHADRA, from whom he received BHIKṢU ordination in 1208. He excelled in all fields of Buddhist knowledge, especially Sanskrit grammar and poetics and the logical

treatises on epistemology (PRAMĀṆA). In 1216, Grags pa rgyal mtshan passed away, and Sa paṇ became the principal religious master of Sa skya. The next twenty-eight years of his career were highly productive. It was during this time that he composed his pramāṇa masterpiece, TSHAD MA RIGS GTER ("Treasury of Logical Reasoning") circa 1219, and his great synthetic doctrinal tract, SDOM GSUM RAB DBYE ("Clear Differentiation of the Three Vows"), in about 1232. He was renowned as both a debater (famously defeating a renowned Hindu scholar) and a polemicist, composing works critical of various doctrines of the rival BKA' BRGYUD, RNYING MA, and JO NANG sects. In 1244 Sa paṇ received a summons to the court of the Mongol prince Godan for the purpose of negotiating the submission of Tibet to Mongol authority. Traveling slowly across Tibet together with his nephew and eventual successor 'PHAGS PA BLO GROS RGYAL MTSHAN, he reached the Mongol court and met with Godan in 1247. The prince was greatly impressed by Sa paṇ's erudition, as well as his magical and medical powers; the prince is said to have converted to Buddhism after Sa paṇ cured him of a skin disease. Tibet was subsequently spared Mongol occupation, and the Sa skya sect, with Sa paṇ as its chief prelate, was granted political authority within Tibet, a position that was later passed on to 'Phags pa by Qubilai Khan. The relation of Sa paṇ, and later 'Phags pa, with the Mongol ruler would be cited as the paradigm of the so-called "priest-patron" (YON MCHOD) relationship. Sa paṇ did not live to return to Tibet, passing away at the capital of Godan's court. Sa paṇ authored more than a hundred works and translated many texts from Sanskrit into Tibetan. Among his compositions, the five most famous are, including the two listed above: *Legs bshad* ("Elegant Sayings"), *Mkhas pa rnams 'jug pa'i sgo* ("Entrance Gate for the Wise"), and *Thub pa'i dgongs gsal* ("Elucidating the Intention of the Sage").

sāsrava. (P. sāsava; T. zag bcas; C. youlou; J. uro; K. yuru 有漏). In Sanskrit, lit. "with outflows," hence, "contaminated," "tainted." Just as a leaky roof lets in rain that destroys a residence and all its contents, the edifice of the five aggregates (SKANDHA) is a ruin dampened by the afflictions (KLEŚA) of greed, hatred, and delusion and riddled with the rot of KARMAN (viz., the formative forces left by the actions motivated by the afflictions). Sāsrava is similar in meaning to SAṂKLIṢṬA (defilement, affliction), although wider in application because unwholesome (AKUŚALA) and wholesome (KUŚALA) states are sāsrava if they lead to a future state with outflows, even if that is a fortunate state of happiness in this lifetime or the next. In this sense, sāsrava is a common designation for the aggregates (skandha) and refers to those objects that may serve as an occasion for the increase of kleśa. Thus, even an inanimate object can be considered "contaminated" in the sense that it can serve as a cause for the increase of the afflictions, such as greed. According to the ABHIDHARMAKOŚABHĀṢYA, only four dharmas are uncontaminated. Three of these are permanent: space (ĀKĀŚA), nonanalytical cessation (APRATISAṂKHYĀNIRODHA), and analytical cessation (PRATISAṂKHYĀNIRODHA), which would include NIRVĀṆA. The only impermanent dharma that is uncontaminated is the truth of the path or true path (MĀRGASATYA); technically, this would refer to the equipoise of nonperception (ASAṂJÑĀSAMĀPATTI) when absorbed in a perfect vision of the FOUR NOBLE TRUTHS, or, in the MAHĀYĀNA, in the perfect vision of the emptiness (ŚŪNYATĀ) of all dharmas. The SĀSRAVASKANDHA (contaminated aggregates) is the entire heap of dharmas that make up a person (PUDGALA), with the sole exception of the NIRVĀṆA element, or in Mahāyāna the pure element (DHĀTU) that locates the lineage (GOTRA) of all beings destined for the final perfect enlightenment. The ABHIDHARMASAMUCCAYA gives six meanings for sāsrava, which it says can be (1) a contaminant (ĀSRAVA) itself, i.e., an actual kleśa, (2) the other parts of the mind that are necessarily present when obscuration (ĀVARAṆA) is present, (3) the aggregates when kleśa is operating, (4) the future contaminated aggregates that arise from the earlier cause, (5) the higher stages of the path because, although not governed by kleśa, they are tied up with thought construction, and (6) even the very final stage of the bodhisattva path, because it is affected by residual impressions left by earlier contaminated states.

sāsravaskandha. (P. sāsavakhandha; T. zag bcas kyi phung po; C. youlou yun; J. uroun; K. yuru on 有漏蘊). In Sanskrit, "aggregates associated with the contaminants," the entire heap of dharmas, systematized as the "five aggregates that are the objects of clinging" (pañcopādānaskandha) that comprise the person (PUDGALA). See SĀSRAVA; SKANDHA.

śāstṛ. (P. satthar; T. ston pa; C. shi; J. shi; K. sa 師). In Sanskrit, "teacher"; referring to any teacher and a common epithet for the Buddha, who is often referred to as the "teacher of gods and men [or princes and people]" (śāstā devamanuṣyāṇām; see discussion in the conclusion to DEVA, s.v.). Among the various terms for a teacher in Buddhist literature, including GURU, ĀCĀRYA, and UPĀDHYĀYA, śāstṛ was a term of particular respect. In early Buddhist literature, it seems to have been reserved exclusively for the Buddha and past buddhas and not for disciples (ŚRĀVAKA) of the Buddha; thus, whenever the term "teacher" appears, it typically refers to the Buddha himself. To recognize the Buddha as the true teacher and to declare him as such is regarded as a central determinant of Buddhist identity. Outside the Buddhist community, the term was also used to refer to the so-called "six heterodox teachers," such as PŪRAṆA KĀŚYAPA.

śāstra. (T. bstan bcos; C. lun; J. ron; K. non 論). In Sanskrit, "treatise," a term used to refer to works contained in the various Buddhist canons attributed to various Indian masters. In this sense, the term is distinguished from SŪTRA, a discourse regarded as the word of the Buddha or spoken with his sanction. In the basic division of Buddhist scripture in the Tibetan canon, for example, the translations of śāstra (BSTAN 'GYUR) are contrasted with the words of the Buddha (or a buddha) called BKA' 'GYUR. A Buddhist śāstra can be in verse or prose, and of any length, and

it includes the different Sanskrit compositional genres (vṛtti, vārttika, bhāṣya, ṭīkā, vyākhyā, pañjikā, and so on) often rendered by the single English word "commentary." In the Buddhist context, the genre is typically a form of composition that explains the words or intention of the Buddha. The word śāstra is found in the actual title of a number of works, for example, the *Prajñāpāramitopadeśaśāstrakārikā*, an alternate title of the ABHISAMAYĀLAṂKĀRA, and the *Mahāyānottaratantraśāstravyākhyā*, another name for the RATNAGOTRAVIBHĀGA.

śāstṛsaṃjñā. (T. ston par 'du shes; C. dashi xiang; J. daishisō; K. taesa sang 大師想). In Sanskrit, "recognition as the teacher," a term that appears especially in the MAHĀYĀNA sūtras in a variety of contexts. In addition to its denotation of recognizing the Buddha as the true teacher (ŚĀSTṚ), the Mahāyāna also claims that a bodhisattva should regard all other bodhisattvas as his teachers, as if they were the Buddha himself; one should regard as one's teacher the person from whom one hears the perfection of wisdom (PRAJÑĀPĀRAMITĀ); one should regard the text of the prajñāpāramitā itself as one's teacher; and one should regard all sentient beings as one's teacher.

***śāstrapiṭaka**. (C. lunzang; J. ronzō; K. nonjang 論藏). In Sanskrit reconstruction, "treatise basket," a more inclusive designation for the ABHIDHARMAPIṬAKA, the third "basket" of the Buddhist canon (TRIPIṬAKA), which expands this section of the canon to take in scholastic treatises (ŚĀSTRA) from the MAHĀYĀNA exegetical schools in addition to the ABHIDHARMA texts of the MAINSTREAM BUDDHIST SCHOOLS. The Sanskrit term appears in Western literature on the canon, but seems not to be attested in Indian sources (or in their Tibetan translation) and may be a back-translation from the Chinese locution lunzang. Since virtually the inception of Buddhism in China, the Mahāyāna tradition dominated. This allegiance is apparently why Chinese scriptural catalogues (JINGLU), since at least the time of the definitive KAIYUAN SHIJIAO LU (730), had listed Mahāyāna materials first in their respective rosters of SŪTRA and śāstra texts. This same order is subsequently followed in the traditional printed versions of the Chinese Buddhist canon (DAZANGJING; see also KORYŎ TAEJANGGYŎNG). To the Chinese, who proudly identified with the Mahāyāna, it must have seemed anathema to treat as canonical ABHIDHARMA works by the ARHAT-ĀBHIDHARMIKAS (such as KĀTYĀYANĪPUTRA or VASUMITRA) but not the scholastic treatises by the Indian BODHISATTVA-exegetes of Mahāyāna (such as NĀGĀRJUNA and VASUBANDHU) who were much more renowned to the Chinese. In order to give pride of place to the works of these influential Mahāyāna scholiasts, the Chinese listed them before abhidharma texts in the roster of śāstra materials collected in the Chinese Buddhist canon, and referred to this third basket more expansively as a "treatise basket" (lunzang) rather than merely an abhidharmapiṭaka.

śāśvatadṛṣṭi. (P. sassatadiṭṭhi; T. rtag lta; C. changjian; J. jōken; K. sanggyŏn 常見). In Sanskrit, "eternalism," one of the two "extreme views" (ANTAGRĀHADṚṢṬI), along with "annihilationism" (UCCHEDADṚṢṬI). Eternalism is the mistaken belief or view that a self (ĀTMAN) exists independently of the five aggregates (SKANDHA) and that it continues to exist eternally, transmigrating from one rebirth to the next. Annihilationism (ucchedadṛṣṭi) is, by contrast, the mistaken belief that the self is the same as the aggregates and that the continuum (SAṂTĀNA) of consciousness ceases to exist at death. See also ŚĀŚVATĀNTA.

śāśvatānta. (P. sassata; T. rtag pa'i mtha'; C. changbian; J. jōhen; K. sangbyŏn 常邊). In Sanskrit, "extreme of eternalism"; one of the two extremes (along with the extreme of annihilationism, or UCCHEDĀNTA) included in the ANTAGRĀHADṚṢṬI, or "extreme views." There are six root afflictions (MŪLAKLEŚA), according to the hundred-dharma list (BAIFA) of the YOGĀCĀRA ABHIDHARMA, the last of which is DṚṢṬI ([wrong] views); dṛṣṭi is further subdivided into five types of wrong views, which in turn include antagrāhadṛṣṭi. The "extreme view" refers specifically to the mistaken notion that (1) there is a perduring soul that continues to be reborn unchanged from one lifetime to the next, or (2) the continuum (SAṂTĀNA) of consciousness is annihilated at death and thus not subject to rebirth. The former view is called the extreme of eternalism (ŚĀŚVATADṚṢṬI; P. sassatadiṭṭhi); the latter, the extreme of annihilationism (UCCHEDADṚṢṬI; P. ucchedadiṭṭhi). The praise of the Buddha by NĀGĀRJUNA at the opening of his MŪLAMADHYAMAKAKĀRIKĀ says that the Buddha avoided these two and six other extremes (the extremes of cessation and production, coming and going, difference and sameness) by teaching that all dharmas are products of a process of dependent origination (PRATĪTYASAMUTPĀDA) and are thus free from any essential nature (SVABHĀVA). Although variously defined, the term śāśvānta is generally used in descriptions of the view that phenomena possess a greater degree of permanence and reality than they in fact do, a tenet that is often ascribed to non-Buddhist schools, such as Sāṃkhya. The various schools of Buddhist philosophy also deploy the term polemically to denigrate the tenets of a rival. The SAUTRĀNTIKA school, for example, could claim that the Sarvāstivāda position that dharmas exist throughout all three time periods represented a mistaken attachment to the extreme of permanence; the MADHYAMAKA school could claim that the YOGĀCĀRA assertion that all objects have the nature of consciousness represented a mistaken attachment to the extreme of permanence. The extremes (anta) are contrasted with the middle (madhyama) that defines freedom from SAṂSĀRA, or, in Mahāyāna works, freedom from the extremes of both SAṂSĀRA and NIRVĀṆA. The Buddhist middle way (MADHYAMAPRATIPAD) between these two extremes posits that there is no permanent, perduring soul (countering eternalism), and yet there is karmic continuity from one lifetime to the next (countering annihilationism). See also SATKĀYADṚṢṬI.

śatadharma. In Sanskrit, "hundred factors"; the normative roster of factors (DHARMA) recognized in the YOGĀCĀRA school's

system of MAHĀYĀNA ABHIDHARMA. See BAIFA; and, for the full roster, the List of Lists.

Śataka. (S). See *ŚATAŚĀSTRA.

Śatasāhasrikāprajñāpāramitāsūtra. (T. Shes rab kyi pha rol tu phyin pa stong phrag brgya pa; C. Shiwansong bore; J. Jūmanju hannya; K. Simmansong panya 十萬頌般若). In Sanskrit, the "Perfection of Wisdom in One Hundred Thousand Lines," the longest of the PRAJÑĀPĀRAMITĀ sūtras. Some scholars regard the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ (eight thousand lines) to be the earliest of the prajñāpāramitā sūtras, which was then expanded into the *Aṣṭadaśasāhasrikāprajñāpāramitāsūtra* (eighteen thousand lines) and the PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA (twenty-five thousand lines). According to this explanation, the most extensive of the expansions is the *Śatasāhasrikāprajñāpāramitā*, sometimes referred to as the "great mother [of the victors]." The composition sequence of these different sūtras is not as clear as once thought, however, and there appear to be parts of the *Śātasāhasrikā* not found in the *Aṣṭa*, which may go back to very early material. The text is in three major sections, with the first two expanding on the contents of the *Aṣṭasāhasrikāprajñāpāramitā*. The third section, which seems to be an independent text, contains discussions of topics such as the nature of enlightenment, the Buddha's omniscience, the body of the Buddha, and the six perfections. Unlike the other two briefer expansions, the version in one hundred thousand lines omits four chapters that occur in the *Aṣṭasāhasrikāprajñāpāramitā*. It is said that after the Buddha taught the *Śatasāhasrikāprajñāpāramitā*, he entrusted it to the NĀGAS, who kept it in a jeweled casket in the bottom of the ocean, where it was eventually retrieved and brought to the human world by NĀGĀRJUNA.

***Śataśāstra**. (C. Bai lun [alt. Bo lun]; J. Hyakuron; K. Paek non 百論). In Sanskrit, lit., "The Hundred Treatise," a work attributed to the MADHYAMAKA master ĀRYADEVA, and counted as one of the "three treatises" of the SAN LUN ZONG of Chinese Buddhism, together with the *Zhong lun* ("Middle Treatise") and SHI'ERMEN LUN ("Twelve Gate Treatise"), both attributed to NĀGĀRJUNA. The *Zhong lun* is ostensibly a translation of Nāgārjuna's MŪLAMADHYAMAKAKĀRIKĀ; however, KUMĀRAJĪVA's translation (dated 409) also contains his own annotation and a commentary to Nāgārjuna's text by Piṅgala (fl. fourth century CE). The *Shi'ermen lun* (**Dvādaśamukhaśāstra*) is also attributed to Nāgārjuna and is purportedly an introductory manual to the *Zhong lun*. The *Śataśāstra* was translated into Chinese by Kumārajīva in 404. No Sanskrit or Tibetan recensions of the work are known to exist; the Sanskrit title is a reconstruction. Some have speculated that the work is an abbreviated version of Āryadeva's most famous work, the CATUḤŚATAKA. The two works consider many of the same topics, including the nature of NIRVĀṆA and the meaning of emptiness (ŚŪNYATĀ) in a similar fashion and both refute Sāṃkhya and Vaiśeṣika positions, but the order of their treatment of these topics and their specific content differ; the *Śatakaśāstra* also contains material not found in the *Catuḥśataka*. The *Śataśāstra* is therefore probably not a mere summary of the *Catuḥśataka*, but may instead represent Kumārajīva's interpretation of Āryadeva's text.

śāṭhya. (P. sāṭheyya; T. g.yo; C. kuang; J. ō; K. kwang 誑). In Sanskrit, "dissimulation" or "deception"; the sixth of the twenty secondary afflictions (UPAKLEŚA) in the SARVĀSTIVĀDA list of seventy-five dharmas. Śāṭhya is the attempt to conceal one's faults out of a desire to receive goods or services from others. Dissimulation is said to prevent one from meeting spiritual mentors (KALYĀṆAMITRA) in this or subsequent lives. Dissimulation differs from deceit (MĀYĀ) in that deceit is the pretension to have good qualities that one in fact lacks, while dissimulation is the concealment of faults that one possesses.

sati. (P). See SMṚTI.

satipaṭṭhāna. (P). See SMṚTYUPASTHĀNA.

Satipaṭṭhānasutta. (S. *Smṛtyupasthānasūtra; T. Dran pa nye bar bzhag pa'i mdo; C. Nianchu jing; J. Nenjogyō; K. Yŏmch'ŏ kyŏng 念處經). In Pāli, "Discourse on the Foundations of Mindfulness"; the tenth sutta in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as the ninety-eighth SŪTRA in the Chinese translation of the MADHYAMĀGAMA; there is another unidentified recension in the Chinese translation of the EKOTTARĀGAMA). An expanded version of the same sutta, titled the "Great Discourse on the Foundations of Mindfulness" (MAHĀSATIPAṬṬHĀNASUTTANTA), which adds extensive discussion on mindfulness of breathing (P. ānāpānasati, S. ĀNĀPĀNASMṚTI), is the twenty-second sutta in the Pāli DĪGHANIKĀYA. This sutta is one of the most widely commented upon texts in the Pāli canon and continues to hold a central place in the modern VIPASSANĀ (S. VIPAŚYANĀ) movement. The sutta was preached by the Buddha to a gathering of disciples in the town of Kammāsadhamma in the country of the Kurus. The discourse enumerates twenty-one meditation practices for the cultivation of mindfulness (P. sati, S. SMṚTI), a term that refers to an undistracted watchfulness and attentiveness, or to recollection and thus memory. In the text, the Buddha explains the practice under a fourfold rubric called the four foundations of mindfulness (P. satipaṭṭhāna, S. SMṚTYUPASTHĀNA). The four foundations are comprised of "contemplation of the body" (P. kāyānupassanā, S. KĀYĀNUPAŚYANĀ); "contemplation of sensations" (P. vedanānupassanā, S. vedanānupaśyanā), that is, physical and mental sensations (VEDANĀ) that are pleasurable, painful, or neutral; "contemplation of mind" (P. cittānupassanā, S. cittānupaśyanā), in which one observes the broader state of mind (CITTA) as, e.g., shrunken or expanded, while under the influence of various positive and negative emotions; and "contemplation of phenomena" (P. dhammānupassanā, S. dharmānupaśyanā), which involves the contemplation of several key doctrinal categories, such as the

five aggregates (P. khandha, S. SKANDHA) and the FOUR NOBLE TRUTHS. The first of the four, the mindfulness of the body, involves fourteen exercises, beginning with the mindfulness of the inhalation and exhalation of the breath (P. ānāpānasati, S. ĀNĀPĀNASMṚTI). Mindfulness of the breath is followed by mindfulness of the four physical postures (P. iriyāpatha, S. ĪRYĀPATHA) of walking, standing, sitting, and lying down. This is then extended to a full general awareness of all physical activities. Thus, mindfulness is something that is also meant to accompany all of one's actions in the course of the day, and is not restricted to formal meditation sessions. This discussion is followed by mindfulness of the various components of the body, an intentionally revolting list that includes fingernails, bile, spittle, and urine. Next is the mindfulness of the body as composed of the four great elements (MAHĀBHŪTA) of earth, water, fire, and air. Next are the "contemplations on the impure" (P. asubhabhāvanā, S. AŚUBHABHĀVANĀ), viz., contemplation of a corpse in nine successive stages of decomposition. The practice of the mindfulness of the body is designed to induce the understanding that the body is a collection of impure elements that arise and cease in rapid succession, utterly lacking any kind of permanent self. This insight into the three marks of existence—impermanence, suffering, and no-self—leads in turn to enlightenment. Mindfulness of the body is presented as the core meditative practice, with the other three types of mindfulness applied as the meditator's attention is drawn to those factors. The sutta calls the foundations of mindfulness the ekayānamagga, which in this context might be rendered as "the only path" or "the one way forward," and states that correct practice of the four foundations of mindfulness will lead to the stage of the worthy one (P. arahant, S. ARHAT), or at least the stage of the nonreturner (P. anāgāmi, S. ANĀGĀMIN), in as little as seven days of practice, according to some interpretations. See also ANUPASSANĀ.

satkāyadṛṣṭi. (P. sakkāyadiṭṭhi; T. 'jig tshogs la lta ba; C. youshenjian; J. ushinken; K. yusin'gyŏn 有身見). In Sanskrit, "[wrong] view of a real person," "view of a existent body"; the wrong view that the impermanent components of the body (KĀYA) are in fact real (sat). This wrong view is related to the (mis)conceptions of I (AHAṂKĀRA) and mine (MAMAKĀRA). It is classed as a type of afflicted view (kliṣṭadṛṣṭi), that is, a mistaken belief about a self in relation to the five aggregates (SKANDHA). In mainstream Buddhist materials, satkāyadṛṣṭi is listed as the first of ten fetters (SAṂYOJANA) that keep beings bound to the cycle of rebirth (SAṂSĀRA) and as the sixth of ten fundamental afflictions (MŪLAKLEŚA). Pāli materials delineate four types of satkāyadṛṣṭi for each of the five aggregates (P. khandha, S. SKANDHA), for a total of twenty varieties in all. The four types are: (1) the belief that the self is the same as the aggregates; i.e., the same as materiality (RŪPA), sensations (VEDANĀ), perception (SAṂJÑĀ), conditioning factors (SAṂSKĀRA), and consciousness (VIJÑĀNA); (2) the belief that the self is contained in the aggregates, (3) the belief that the self is different from the aggregates, and (4) the belief that the self is the owner of the aggregates. Satkāyadṛṣṭi is permanently eradicated by attaining the state of a stream-enterer (SROTAĀPANNA), the first of four degrees of sanctity (see ĀRYAPUDGALA).

satori. (悟). In Japanese, "awakening," "enlightenment." See WU; DUNWU; BODHI.

sattva. (P. satta; T. sems can; C. youqing/zhongsheng; J. ujō/shujō; K. yujŏng/chungsaeng 有情/衆生). In Sanskrit, "living being," commonly translated into English as "sentient being"; a generic term for any being in the cycle of rebirth (SAṂSĀRA), including the five or six rebirth destines (GATI) of divinities (DEVA), demigods or titans (ASURA), humans (MANUṢYA), animals (TIRYAK), ghosts (PRETA), and hell denizens (NĀRAKA). Buddhism, unlike the JAINA tradition, does not generally accept that plants are endowed with consciousness and thus does not typically include plant life among sentient beings (although this claim later becomes a matter of debate within the tradition, especially in East Asia). The term sattva technically does not include buddhas and ARHATS, because they are no longer subject to rebirth. In the word BODHISATTVA and MAHĀSATTVA, sattva may retain a meaning closer to its mainstream Indian usage as "spiritual essence," as in the Sāṃkhya school, where sattva is conceived as the spiritual, enlightening "strand" (guṇa) that interacts with tamas (dullness) and rajas (energy) to explain the dispositions of people and the changes that occur in the environment.

sattvakaṣāya. (T. sems can snyigs ma; C. zhongsheng zhuo; J. shujōjoku; K. chungsaeng t'ak 衆生濁). In Sanskrit, "degeneracy of beings," one of the five signs of the degeneration of a world system that, according to Buddhist cosmology, occur between the time when the average human life span is one hundred years and when it is ten years. The term sattvakaṣāya refers to the fact that the intelligence and moral character of the beings who populate the world deteriorate during this period. See KĀṢĀYA; SAṂVARTAKALPA.

sattvaloka. (P. sattaloka; T. sems can 'jig rten; C. zhongsheng shijian/youqing shijian; J. shujō seken/ujōseken; K. chungsaeng segan/yujŏng segan 衆生世間/有情世間). In Sanskrit, "world of sentient beings"; a term used to refer to the sentient beings (SATTVA) who are the inhabitants of the realms of SAṂSĀRA. The sattvaloka is used in distinction to, and in conjunction with, its companion term BHĀJANALOKA, the "receptacle world" that is the physical environment or "container" for those sentient beings. The inanimate bhājanaloka and the animate sattvaloka together make up the three realms of existence (TRILOKA[DHĀTU]). The bhājanaloka is formed during the first of the twenty intermediate-length eons (KALPA) that make up the one great eon (MAHĀKALPA), called the "kalpa of creation" (VIVARTAKALPA); the sattvaloka comes into existence during the remaining nineteen intermediate-length kalpas as sentient beings begin to be reborn in the bhājanaloka, beginning in

the heavens and ending in the hells. The disappearance of the sattvaloka takes the form of a gradual depopulation of the bhājanaloka during the "kalpa of dissolution" (SAṂVARTAKALPA). This process begins with the cessation of those beings' rebirth in hell, which is followed by the dissolution of the hells themselves. (Those beings whose time in hell is not yet exhausted will be reborn in a hell in another universe.) The same twofold process then occurs for the realms of animals and ghosts. After that, seven suns appear in the sky, incinerating the remaining bhājanaloka, including Mount SUMERU, the four continents, and the subtle-materiality heavens of the first DHYĀNA. Beings in the first DHYĀNA who can achieve the second dhyāna escape destruction. When the kalpa of creation begins again, the bhājanaloka and the sattvaloka reappear due to the inertial force of the KARMAN of sentient beings. These two worlds and the world of the five aggregates (C. WUYUN SHIJIAN) together constitute the three types of world systems (C. SANZHONG SHIJIAN).

sattvaparyaṅka. (T. skyil krung). In Sanskrit, "heroic cross-legged posture," the sattvaparyaṅka is a seated pose formed with both legs bent horizontally with the shins lying flat on the seat and one foot lying slightly in front of the other. See also ĀSANA.

sattvārdhaparyaṅka. (T. skyil krung phyed pa). In Sanskrit, "heroic half cross-legged posture," the sattvārdhaparyaṅka is a seated pose similar to SATTVAPARYAṄKA, where one leg is bent horizontally with the shin lying flat on the seat and the other leg bent and hanging somewhat pendant. See also ĀSANA.

sattvārtha. (T. sems can gyi don; C. raoyi youqing; J. nyōyakuujō; K. yoik yujŏng 饒益有情). In Sanskrit, the "welfare of sentient beings," a term that occurs in Buddhist morality in the phrase sattvārthakriyāśīla, "the precept of acting for the welfare of sentient beings," the third of the bodhisattva's "three sets of pure precepts" (trividhāni śīlāni, see ŚĪLATRAYA) as systematized in the BODHISATTVABHŪMI. This set refers to practices that accrue to the welfare of others, in distinction to the saṃvaraśīla, or "restraining precepts," which refers to the HĪNAYĀNA rules of discipline (PRĀTIMOKṢA) that help adepts restrain themselves from all types of unwholesome conduct; and practicing all types of virtuous deeds (kuśaladharmasaṃgrāhakaśīla), which accumulates the various sorts of wholesome conduct. The welfare of sentient beings emphasizes a more active involvement in the lives of others through such deeds as nursing the sick, offering charity to the poor, protecting the helpless from harm, comforting the afflicted, and providing hospitality to travelers. It also includes more unusual forms of aid, such as using one's supranormal powers to reveal to potential transgressors the consequences of suffering in hell. The welfare of sentient beings is ultimately achieved by teaching them the dharma. In the case of the bodhisattva, sarvasattvārtha, the "welfare of all sentient beings," is one of the two goals that bodhisattvas have vowed to achieve, the other being buddhahood. It is said that by achieving buddhahood, the bodhisattva fulfills two aims or goals, his own welfare (SVĀRTHA) and the welfare of others (PARĀRTHA), the latter term being a synonym of sattvārtha. Of the three buddha bodies (BUDDHAKĀYA), the SAṂBHOGAKĀYA and NIRMĀṆAKĀYA are described as bodies that serve the welfare of others, and the DHARMAKĀYA is described as completing one's own aims or welfare.

satya. (P. sacca; T. bden pa; C. di; J. tai; K. che 諦). In Sanskrit, "truth," in the sense of that which is nondeceptive and exists as it appears. The term appears in two famous lists: the FOUR NOBLE TRUTHS (catvāry āryasatyāni) that were set forth in the Buddha's first sermon, the DHAMMACAKKAPPAVATTANASUTTA (S. DHARMACAKRAPRAVARTANASŪTRA); and the two truths (SATYADVAYA) discussed in the Buddhist philosophical schools and especially in MADHYAMAKA, viz., the conventional truth, or SAṂVṚTISATYA, and the ultimate truth, or PARAMĀRTHASATYA. In Madhyamaka, satya is also used in the compound satyasiddha, "truly existent" or "truly established," to refer to a false degree of truth or autonomy imagined by ignorance. It is also found in the compound SATYAVACANA ("statement of truth"), where magical powers derive from the truth inherent in one's words. In the MAHĀYĀNA, such solemn asseverations of truth reflect the power of a bodhisattva's aspiration to bring about the welfare of all sentient beings. See also SANDI.

satyadvaya. (P. saccadvaya; T. bden pa gnyis; C. erdi; J. nitai; K. ije 二諦). In Sanskrit, "the two truths," viz., "ultimate truth" (PARAMĀRTHASATYA) and "conventional truth" (SAṂVṚTISATYA). The two truths are central terms in Buddhist philosophy for categorizing the phenomena of the universe. Regardless of the school, the two truths are presumed to be exhaustive, with everything that exists, that is, all DHARMAS, falling into one of the two categories. This bifurcation is associated especially with the MADHYAMAKA school, but it occurs in other schools as well, with each providing its own view of what constitutes the two truths. In each case, however, conventional truths might be described as the objects of ordinary experience that tend to be misperceived by the unenlightened, by mistakenly ascribing to them a greater degree of reality than they in fact possess. Thus, despite being "truths," conventional truths are falsely perceived, as implied in the term saṃvṛti, with its connotation of deception. Ultimate truths, literally "supreme object truths," might be described as those realities that exist as they appear and whose direct perception can lead to liberation from rebirth. For the VAIBHĀṢIKA branch of SARVĀSTIVĀDA ABHIDHARMA, a conventional truth is any phenomenon that can be either physically or mentally broken down into parts; an ultimate truth is a partless particle of matter or an indivisible moment of consciousness. For the YOGĀCĀRA, conventional truths are dependent phenomena (PARATANTRA) as well as permanent phenomena such as space (ĀKĀŚA); ultimate truths are consummate natures (PARINIṢPANNA). In Madhyamaka, conventional truths are all phenomena other than emptiness (ŚŪNYATĀ), which is the ultimate truth. The Chinese SAN LUN ZONG

(Madhyamaka) master JIZANG (549–623) discusses the three stages of the two truths, in which each of these stages serves to correct any possible reification of Buddhist truth.

Satyadvayavibhaṅga. (T. Bden pa gnyis rnam par 'byed pa). In Sanskrit, "Distinction Between the Two Truths," a work by the eighth-century MADHYAMAKA master JÑĀNAGARBHA. According to Tibetan classification, the work belongs to the SVĀTANTRIKA-MADHYAMAKA, and within that, the SAUTRĀNTIKA-SVĀTANTRIKA-MADHYAMAKA. This work, together with the MADHYAMAKĀLAṂKĀRA by ŚĀNTARAKṢITA and the MADHYAMAKĀLOKA of KAMALAŚĪLA are known in Tibet as the "three works of the eastern *SVĀTANTRIKAS" (rang rgyud shar gsum) because the three authors were from Bengal. The *Satyadvayavibhaṅga* is composed in verses (kārikā) and includes a prose autocommentary (vṛtti) by the author. There is also a commentary (pañjikā) by Śāntarakṣita, who is said to have been a student of Jñānagarbha. The text presumably takes its title from Nāgārjuna's statement in his MŪLAMADHYAMAKAKĀRIKĀ: "Those who do not comprehend the distinction between these two truths do not know the nature of the profound doctrine of the Buddha." The ultimate truth (PARAMĀRTHASATYA) is nondeceptive; its nature accords not with appearance, but with valid knowledge gained through reasoning (nyāya). It is also free from discursive thought (NIRVIKALPA). The conventional truth (SAṂVṚTISATYA) includes ordinary appearances, or as the text says, "whatever appears even to cowherds and women." Within the category of the conventional, there are true and false conventions, which are distinguished based on their ability to perform a function (ARTHAKRIYĀ) in accordance with their appearance; thus water is a true convention and a mirage is a false convention. The work ends with a discussion of the three bodies (TRIKĀYA) of a buddha.

***Satyasiddhiśāstra**. (C. Chengshi lun; J. Jōjitsuron; K. Sŏngsil non 成實論). See CHENGSHI LUN; *TATTVASIDDHI.

satyavacana. (P. saccavacana, [alt. saccakiriyā]; T. bden pa'i ngag; C. shiyu; J. jitsugo; K. sirŏ 實語). In Sanskrit, "asseveration of truth," or "statement of truth"; a solemn declaration or oath in which the truth inherent in its words generates magical or protective powers (see PARITTA). For example, when Prince SIDDHĀRTHA first renounced the world and cut off his hair, he threw it into the air and said, "If I am to become a buddha, may it stay in the sky." Due to this asseveration of truth, his hair was caught by the chief of the gods ŚAKRA, who enshrined it in a CAITYA in the TRĀYASTRIṂŚA heaven. The Buddha's disciple AṄGULIMĀLA offered a well-known asseveration of truth to help ease a woman's labor pains: "Since I was born of āryan birth, O sister, I am not aware of having intentionally deprived any living being of its life. By this asseveration of truth, may you be well and may your unborn child be well." (There is intentional irony in this statement, since Aṅgulimāla was a murderer before he became a monk; his "āryan birth" here refers to his ordination into the SAṂGHA.) In Buddhist literature, miraculous events are said to be a result of an asseveration of truth. Often, when a bodhisattva has given away some body part as an act of DĀNA (see DEHADĀNA; SHESHEN) that body part is restored as a result of one's solemn declaration, as in the case of SADĀPRARUDITA. In the JĀTAKAMĀLĀ of Āryaśūra, Śakra appears in the form of a blind brāhmaṇa to test the generosity of King ŚIBI, one of the Buddha's previous lives. The king goes blind when he donates his eyes to the brāhmaṇa, but his sight is restored when he makes a solemn statement of truth that his charity is sincere, articulating, in effect, the bodhisattva's aspiration to seek the welfare of all beings (SATTVĀRTHA). According to another story, a young boy was bitten by a poisonous snake. The distraught parents stopped a passing monk and asked him to use his medical knowledge to save the child. The monk replied that the situation was so grave that the only possible cure was an asseveration of truth. The father said, "If I have never seen a monk that I did not think was a scoundrel, may the boy live." The poison left the boy's leg. The mother said, "If I have never loved my husband, may the boy live." The poison retreated to the boy's waist. The monk said, "If I have never believed a word of the dharma, but found it utter nonsense, may the boy live." The boy rose, completely cured. Such is the power of the truth.

Saundarananda. (T. Mdzes dga' bo). In Sanskrit, "Handsome Nanda," the Indian philosopher-poet AŚVAGHOṢA's verse recounting of NANDA's transformation from enamored husband, to ascetic, and finally to enlightened ARHAT, written c. second century CE. "Handsome Nanda" is the epithet of NANDA, the younger half brother of the Buddha. The first half of this ornate poem provides a elaborate retelling of Nanda's forced ordination into the Buddhist order, his humiliation due to his erotic attachments to both his wife Sundarī (a.k.a. JANAPADAKALYĀṆĪ NANDĀ) and various heavenly nymphs (APSARAS), and finally his decision to abandon carnality and seek enlightenment. In the second half of the poem, the Buddha offers Nanda instruction in moral and sensory restraint, leading up to the FOUR NOBLE TRUTHS, and finally the achievement of the "deathless," a synonym for NIRVĀṆA. The poem ends with the now-enlightened Nanda compassionately teaching to others the path to liberation. Aśvaghoṣa's elaborate kāvya version of this well-known tale of conversion is a classic of early Indian Buddhist literature. There is some controversy over its influence and popularity, however, since unlike most of Aśvaghoṣa's other works, there are no Indian commentaries, and the poem was never translated into either Chinese or Tibetan.

Saurāṣṭra. (S). One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA.

Sautrāntika. (T. Mdo sde pa; C. Jingliang bu; J. Kyōryōbu; K. Kyŏngnyang pu 經量部). In Sanskrit, "Followers of the Sūtras," one of the "mainstream" (that is, non-MAHĀYĀNA) schools of Indian Buddhism, which may have been a dissenting

offshoot of the SARVĀSTIVĀDA school. Its name was apparently meant to distinguish this school from those ĀBHIDHARMIKAS who based themselves on ABHIDHARMA treatises, such as the ABHIDHARMAMAHĀVIBHĀṢĀ. The Sautrāntika were "Followers of the Sūtras" because they were said to have rejected the validity of the abhidharma as being the word of the Buddha (BUDDHAVACANA) and advocated a doctrine of momentariness (KṢAṆIKAVĀDA), in which (again in distinction to the Sarvāstivāda) only present activity exists. No texts of the school are extant, but its positions are represented in the ABHIDHARMAKOŚABHĀṢYA, which presents the SARVĀSTIVĀDA-VAIBHĀṢIKA positions in detail, and as deficient relative to a putative Sautrāntika position. According to Tibetan accounts, VASUBANDHU, the author of the *Abhidharmakośabhāṣya*, wrote from the perspective of the Sautrāntika position even while he himself was a YOGĀCĀRA adherent. Similarly, some of the chapters of the Yogācāra DHARMAKĪRTI's explanation of Dignāga's logical system are written from the Sautrāntika perspective. According to ŚĀNTARAKṢITA and his student KAMALAŚĪLA, one major difference between the Vaibhāṣika and Sautrāntika schools is their respective rejection or acceptance of SVASAṂVEDANA ("self-cognizing awareness"). Although both schools accept that atoms (PARAMĀṆU) build up to form external objects that are perceived by consciousness, the Vaibhāṣika say that the mind knows these objects directly, while the Sautrāntika position is that it knows them through images (ākāra). In late Indian and Tibetan classifications, the Sautrāntika and Vaibhāṣika are called the two ŚRĀVAKA schools (T. nyan thos sde pa), to distinguish them from the two Mahāyāna schools of YOGĀCĀRA and MADHYAMAKA.

Sautrāntika-Svātantrika-Madhyamaka. (T. Mdo sde spyod pa'i dbu ma rang rgyud pa). One of the two subschools (along with the YOGĀCĀRA-SVĀTANTRIKA-MADHYAMAKA) of the *SVĀTANTRIKA branch of MADHYAMAKA, as identified by Tibetan exegetes. This is the school of BHĀVAVIVEKA, his commentator AVALOKITAVRATA, and JÑĀNAGARBHA. Like other Svātantrikas, these three exegetes assert that phenomena exist conventionally by way of their own qualities (SVALAKṢAṆA). They thus declare that external objects exist conventionally and deny the existence of a self-cognizing awareness (SVASAṂVEDANA). With regard to the path, they contend that ŚRĀVAKAS and PRATYEKABUDDHAS understand the selflessness of the person (PUDGALANAIRĀTMYA) but not the selflessness of phenomena (DHARMANAIRĀTMYA), whereas BODHISATTVAS understand both kinds of nonself.

sayadaw. In Burmese, an honorific used for a respected monk. The term was originally used specifically to designate the senior monk (mahathera) who was selected to serve as royal preceptor, but it eventually came to be used more generically as a term of respect for any eminent monk.

Sba bzhed. (Bashe). In Tibetan, the "Annals of Sba," a ninth-century history of the early Tibetan dynastic period and the activities of King KHRI SRONG LDE BTSAN, traditionally attributed to the author Sba Gsal snang (Ba Salnang, c. late-eighth century)—a leading member of the Sba (Ba) clan and abbot of BSAM YAS monastery during the years leading up to the BSAM YAS DEBATE. The text thus discusses the founding of Bsam yas, the debate, and other events surrounding the establishment of Buddhism during the period. It contains the earliest reference to PADMASAMBHAVA, describing him as a water diviner. Modern scholarship tends to date the complete version of the work to the twelfth or even fourteenth century, although there are extant fragments that are likely earlier. The complete title is *Sba bzhed ces bya ba las sba gsal snang gi bzhed pa bzhugs*.

sbas yul. (beyul). In Tibetan, "hidden land," often translated as "hidden valley," a paradisaical land whose existence is not often known until the land is "opened" by a lama (BLA MA). Such lands are typically located in southern Tibet, northern Nepal, and Sikkim and are associated especially with the RNYING MA sect as sites where PADMASAMBHAVA hid treasure texts (GTER MA). After converting the local gods to Buddhism, Padmasambhava "sealed" the lands so that they could be discovered at a time in the future and serve as a refuge from the vicissitudes of the world; the weather is clement, the harvests are good, and there is no disease or conflict. They are special places for the practice of TANTRA during the degenerate age of the dharma, where an adept can make rapid progress on the path; in this regard, they are akin to Buddhist PURE LANDS, even though they are located on earth. Hidden lands are considered safe havens, inaccessible to the enemies of the dharma and of Tibet, where one may live a long and peaceful life. According to some traditions, there are 108 hidden lands. In addition to concealing treasure texts in the hidden lands, Padmasambhava also left guidebooks for their discovery. One of the most famous of the hidden lands is PADMA BKOD.

scripture, nine/twelves divisions of. See NAVAṄGA [PĀVACANA]; DVĀDAŚĀṄGA[PRAVACANA].

Sde dge. (Derge). A region on the Tibet-China border, which until the 1950s was one of the most famous kingdoms in Khams; now incorporated into China's Sichuan province. The kingdom with its twenty-five districts enjoyed the autonomy of an independent state throughout much of its existence. Included among its famous monasteries are DPAL SPUNGS, KAḤ THOG, RDZOGS CHEN, ZHE CHEN, and DPAL YUL. From the eighteenth century onward, its royal family supported a famous printery that became the repository of hundreds of thousands of woodblock prints. The printing of the entire BKA' 'GYUR and BSTAN 'GYUR edited by TAI SI TU Gstug lag chos kyi 'byung gnas (1700–1774) and of the foundational texts of the SA SKYA and RNYING MA sects, among others, were started there in 1729 and completed in 1744. In the nineteenth century, the region became the center of the Khams RIS MED (nonsectarian) movement; many of the modern traditions of Tibetan

Buddhism can be traced back to its founders 'Jam mgon kong sprul, 'Jam dbyangs mkhyen brtse, and Dpal sprul rin po che.

Sde srid Sangs rgyas rgya mtsho. (Desi Sangye Gyatso) (1653–1705). The third and final regent of the fifth Dalai Lama Ngag dbang blo bzang rgya mtsho, serving as regent of Tibet from 1679 until his death. He successfully concealed the death of the fifth Dalai Lama in 1682 for some fifteen years, in part to allow for the completion of the Po ta la Palace. During this time, he served as ruler of Tibet, overseeing (and keeping secret) the discovery of the sixth Dalai Lama, Tshangs dbyangs rgya mtsho. In addition to being a skilled politician, Sangs rgyas rgya mtsho was one of the most learned and prolific authors in the history of Tibet, composing important treatises on all manner of subjects, including statecraft, ritual, astrology and calendrics, poetics, architecture, and court etiquette. He had a special interest in medicine, composing his famous treatise entitled Baiḍūrya sngon po and founding a medical college on Lcag po ri near the Po ta la. His largest literary project was his seven-thousand page work on the life of the fifth Dalai Lama and his previous incarnations. More than any other author, he was responsible for solidifying the mythic identity of the Dalai Lama as an incarnation of the bodhisattva Avalokiteśvara and establishing the line of incarnations over the centuries in India and Tibet, which culminated in the person of the fifth Dalai Lama. He was a staunch supporter and active promoter of the Dge lugs sect, greatly increasing the number of its monasteries and the size of its monastic population. After the Mongol chieftain Lha bzang Khan claimed rulership over Tibet in 1700, Sangs rgyas rgya mtsho agreed to share power with him, but was soon deposed. Armed conflict occurred between the factions despite a series of truces. Sde srid Sangs rgyas rgya mtsho was captured and beheaded by Mongol troops in 1705.

sdom gsum. (domsum). In Tibetan, "three vows" or "three codes"; variously the three sets of vows or restraints (trisaṃvara) set forth in the śīlaparivarta (morality chapter) of the Bodhisattvabhūmi; or (1) the seven sets of vinaya rules that make up the prātimokṣa code of the hīnayāna, (2) the three sets of vows or restraints defining bodhisattva morality in the Bodhisattvabhūmi, and (3) the nineteen samayas that codify tantric morality, particularly as found in the Tibetan version of the Vajraśekharatantra. See also trisaṃvara, saṃvara, śīlatraya.

Sdom gsum rab dbye. (Domsum Rapye). In Tibetan, "Clear Differentiation of the Three Vows," an important work by the Tibetan master Sa skya Paṇḍita Kun dga' rgyal mtshan. Composed in verse, around 1232, it deals with the three vows or codes: the prātimokṣa vows, the bodhisattva vows, and the tantric vows (samaya). In Tibet, it was considered possible, and in some cases ideal, for the Buddhist practitioner to receive and maintain all three sets of precepts: the monk's precepts (prātimokṣa), which from the Tibetan perspective derived from the hīnayāna; the bodhisattva precepts, which derived from the Mahāyāna, and the tantric precepts, which derived from the vajrayāna. However, there was a wide range of opinion on the relation among these three and how to resolve contradictions among them. The "Clear Differentiation of the Three Vows" is not an exposition of the three sets of precepts, but rather a polemical work in which Sa skya Paṇḍita criticizes interpretations of the three then current in the other sects of Tibetan Buddhism. Sa skya Paṇḍita's own view, in brief, was that the prātimokṣa and the bodhisattva precepts provided the foundation for the tantric precepts, such that someone receiving tantric initiation should already hold the other two sets. The work provoked hostile responses from those whose views were criticized in the text, leading Sa skya Paṇḍita to reply to his critics in a series of letters. His text sparked the development in subsequent centuries of a genre of texts on the three vows or codes (sdom gsum).

Sdom gsum rnam nges. (Domsum Namnge). A work in the sdom gsum (three codes) genre by Mnga' ris paṇ chen Padma dbang rgyal (Ngari Panchen Pema Wangyel, 1487–1542). It is a work of the Rnying ma sect, but is influenced both by the Sdom gsum rab dbye and by works on ethics by Tsong kha pa. It became widely known through Lo chen Dharma shri's detailed explanation, which is a central part of the curriculum of many Rnying ma bshad grwa (monastic schools).

secession from the order. See sikkhāpaccakkhāna.

seiban. (西班). In Japanese, "west rank"; the offices of the prefects (C. toushou) at a Chan or Zen monastery. These offices are often located on the west side of the monastery and are hence referred to as the west rank. On the east are the stewards (C. zhishi), who are thus referred to as the east section or rank. The Chanyuan qinggui, for instance, refers to the stewards as the east section (C. dongxu) and the prefects as the west section (C. xixu).

Sekhasutta. In Pāli, "Discourse on the Disciple in Higher Training," the fifty-third sutta in the Majjhimanikāya (no precise equivalent appears in the Chinese translations of the āgamas, but the sūtra is cited in the Dazhidu lun, indicating it was known in other mainstream Buddhist traditions); preached by the Buddha's attendant Ānanda to the leader of the Sakiya (Śākya) tribe, Mahānāma, and his entourage in the meeting hall of the Sakiyans in the city of Kapilavatthu (S. Kapilavastu). Ānanda teaches them about the higher training practiced by the disciple who has entered the path. Such a disciple practices morality (P. sīla, S. śīla) which includes observance of the monastic code, guarding the sense faculties, moderation in all things, and wakefulness. He is further possessed of seven wholesome qualities, including faith, a sense of shame, fear of blame, learning, energy, mindfulness, and wisdom. He is master of the four meditative absorptions (P. jhāna, S. dhyāna) and possesses the three knowledges (P.

tevijja, S. TRIVIDYĀ). The three knowledges are comprised of (1) recollection of one's previous existences (P. pubbenivasanusati, S. PŪRVANIVĀSĀNUSMṚTI); (2) the divine eye (P. dibbacakkhu, S. DIVYACAKṢUS) or the ability to see the demise and rebirth of beings according to their good and evil deeds; and (3) knowledge of the extinction of contaminants (P. āsavakkhayañāna, S. ĀSRAVAKṢAYAJÑĀNA), which encompasses knowledge of the FOUR NOBLE TRUTHS and is equivalent to arhatship.

sekishu kōan. (隻手公案). In Japanese, "the case of one-hand [clapping]"; a famous kōan (C. GONG'AN) attributed to the Japanese RINZAI ZEN master HAKUIN EKAKU (1685–1768), in which he asks, "What is the sound of one hand [clapping]?" The kōan is included in his 1752 collection *Yabukōji*, along with Hakuin's autocommentary. The sekishu kōan came to be used within some Rinzai kanna Zen (see KANHUA CHAN) systems as the first case given to neophytes in Zen training and, along with the mu kōan (C. WU GONG'AN), continues to be one of the emblematic kōans used in Japanese Rinzai Zen circles.

self-immolation. See DEHADĀNA; SHESHEN; YǑNJI.

sems sde. (sem de). In Tibetan, literally "mind class," one of the three divisions of RDZOGS CHEN, together with KLONG SDE, or "expanse class," and the MAN NGAG SDE, or "instruction class." It appears that the three classes were created simultaneously rather than sequentially, probably dating to the PHYI DAR, or later period of the dissemination of Buddhism in Tibet, that began in the eleventh century. It is possible that the classification scheme was invented by members of the Zur clan, who were involved in codifying the RNYING MA texts that were circulating at that time. Within the threefold division, the texts classified do not necessarily share a single set of characteristics. However, it can be said that the works in the sems sde are often earlier than those in the other two classes. The root tantra of the sems sde is the KUN BYED RGYAL PO, where a number of short early-period rdzogs chen texts were gathered into a single new tantra. The sems sde works tend toward simple, evocative statements that deny the need for any practice or moral concerns.

Senart, Émile. (1847–1928). French Indologist who made significant contributions to the study of Indian Buddhism. His knowledge of Middle Indic languages allowed him to do important work on Indian epigraphy, most notably the edicts of AŚOKA, in his *Les inscriptions de Piyadasi*, first published in a series of articles in *Journal Asiatique* between 1881 and 1886. His research suggested that the Aśoka inscriptions represented a popular Buddhism in which following an ethical code led to rebirth in heaven, with less emphasis on NIRVĀṆA. His most famous and controversial work was on the biography of the Buddha, presented in his *Essai sur la légende du Buddha* (1882). There, he argued that the life of the Buddha was not a series of originally historical events that over time became encrusted with legendary elements, but rather that those mythological elements of the Buddha's life formed a coherent whole that was fully formed in India before the Buddha's birth, with the Buddha as a solar deity. His argument was famously opposed by HERMANN OLDENBERG. Senart also argued that a pre-classical version of Yoga played a significant role in the formation of Buddhist thought and practice. Senart also made major contributions through his editing of Buddhist texts. Among his editions, the most substantial was his three-volume edition of the MAHĀVASTU, published between 1882 and 1897. He was also among the first to study the KHAROṢṬHĪ fragments of the DHARMAPADA. See also DHAMMAPADA.

Senchakushū. (選擇集). In Japanese, "Collection of Selections," composed by the Japanese PURE LAND monk HŌNEN in 1198; also known as *Senjakushū* or *Senchaku hongan nenbutsushū* ("Collection of Selections on Nenbutsu and the Original Vow"). Hōnen's *Senchakushū* is one of the most influential texts in Japan on the practice of nenbutsu (see NIANFO), i.e., the invocation of the name of the buddha AMITĀBHA; it is also traditionally regarded as the founding scripture of the JŌDOSHŪ tradition of Japanese pure land. Relying on the three pure land sūtras (JINGTU SANBUJING, viz., the longer and shorter SUKHĀVATĪVYŪHASŪTRA and the GUAN WULIANGSHOU JING) and a number of important commentaries by SHANDAO and TANLUAN, Hōnen attempted to elucidate the importance of the practice of nenbutsu in the context of Amitābha's original vows as described in the *Sukhāvatīvyūhasūtra*. He first cites DAOCHUO's division of Buddhist practice into that of the sacred path (that is, the traditional Buddhist path) and the pure land path, and then cites SHANDAO's division into proper and miscellaneous. These divisions are used as an argument for the practice of exclusive nenbutsu. Hōnen then demonstrates that exclusive nenbutsu is the practice advocated by Amitābha in his original vows. In the next few sections of his text, Hōnen also mentions the benefits of exclusive nenbutsu and explains why this practice is most appropriate for those in the age of the final dharma (J. mappō; see MOFA). The other sections of the *Senchakushū* provide further scriptural evidence for the importance of nenbutsu and discuss the proper method for practicing it. At Hōnen's request, the work was not widely circulated until after his death. Numerous commentaries on this text exist in Japanese.

Sengai Gibon. (仙崖義梵) (1750–1837). Japanese ZEN monk in the RINZAISHŪ, known for his whimsical teachings, his poetry, and especially for his calligraphy and sumi-e paintings. His best-known work in the West is a simple ink drawing of a circle, triangle, and square. He spent much of his life at SHŌFUKUJI, where he served as abbot.

Sengcan. (J. Sōsan; K. Sŭngch'an 僧粲) (d. 606?). Chinese monk and reputed third patriarch of the CHAN tradition. Although the influential Chan poem XINXIN MING ("Faith in Mind") is attributed to Sengcan, little is actually known of this mysterious figure, and he may simply have been a later

invention created to connect the BODHIDHARMA-HUIKE line of early Chan with the East Mountain teachings (DONGSHAN FAMEN) of DAOXIN (580–651) and HONGREN (602–675). Most of what is known of Sengcan is constructed retrospectively in such early Chan genealogical histories as the BAOLIN ZHUAN, LENGQIE SHIZI JI, CHUAN FABAO JI, and LIDAI FABAO JI, and in later Chan histories known as "transmission of the lamplight records" (CHUANDENG LU). Sengcan is claimed to have studied under Huike, the first Chinese disciple of the Chan founder, Bodhidharma, and the second patriarch of the Chan school. During Emperor Wu's (r. 502–549) persecution of Buddhism, Sengcan is said to have gone into hiding and later resided on Mt. Sikong in Shuzhou (present-day Anhui province). The *Lengqie shizi ji* and *Chuan fabao ji* claim that Daoxin became Sengcan's disciple sometime in the late-sixth century, but Daoxin's connection to this dubious figure is tenuous at best and most probably spurious. Sengcan was later given the posthumous title Chan Master Jingzhi (Mirror-like Wisdom).

Sengguo. (J. Sōka; K. Sŭngkwa 僧果) (b. 408). In Chinese, "Fruition of the Saṃgha"; a Buddhist nun from Xiuwu in northern China during the Liu-Song dynasty (420–479), the first of the four short-lived southern dynasties that formed during the Six Dynasties period. Her biography, contained in the BIQIUNI ZHUAN, exemplifies several prevalent characteristics of early Chinese Buddhist nuns' hagiographies. She engaged in a strict observance of the monastic rules (VINAYA), which inspired her disciples. Her contemplative practice, which began from a young age, was reputed to be so intense that it often produced trance states resembling death. She left secular life as an adult and practiced at a convent near the Song capital, where a number of Ceylonese nuns resided. Upon conversing with them, Sengguo discovered that while Chinese nuns had previously accepted monastic obligations from an assembly of monks (BHIKṢU), they had not received them from an assembly of nuns (BHIKṢUṆĪ), as was required by the VINAYA. After consulting with the Indian monk GUṆAVARMAN (367–431) on the issue, she resolved that she and her fellow nuns should be reordained. Thus in 433, in an ordination ceremony presided over by SAṂGHAVARMAN, Sengguo and over three hundred other nuns were ordained with both an assembly of monks and an assembly of nuns in attendance, thereby officially instituting the monastic order for women in China.

Sengmeng. (J. Sōmō; K. Sŭngmaeng 僧猛) (418–489). A Buddhist nun (BHIKṢUṆĪ) from Yanguan County in southeastern China during the Qi dynasty (479–502). As was common in the biographies collected in the BIQIUNI ZHUAN, she left secular life at a young age. Despite her family's long fealty to Daoism, Sengmeng alone rejected Daoism in favor of Buddhism, strictly adhering to the monastic precepts. Sengmeng demonstrated a penetrating grasp of scripture and was extremely diligent in her study. In addition, she could recite from memory extraordinary amounts of text, often after only a single reading. Sengmeng demonstrated her Buddhist compassion in many ways, including dramatic moments when she used her own body as a barricade to protects animals from predators, enduring pecks and bites as a result. Her exemplary deeds were cited as ideal models for Buddhist monastics and laity alike.

sengtang. (J. sōdō; K. sŭngdang 僧堂). In Chinese, the "SAṂGHA hall," or "monks' hall"; also known as the yuntang (lit. cloud hall; J. undō) or xuanfochang (site for selecting buddhas). The saṃgha hall was the center of monastic practice in the Chinese CHAN school. The hall, often large enough to hold hundreds of monks, was traditionally built on the west side of a Chan monastery. The foundation of the saṃgha hall is traditionally attributed to the Chan master BAIZHANG QINGGUI (749–814). According to Baizhang's CHANMEN GUISHI, Chan monks were obligated throughout the day and night to eat, sleep, and meditate in the saṃgha hall. There, they would sit according to seniority on a long platform. A similar description of the saṃgha hall is also found in the CHANYUAN QINGGUI of CHANGLU ZONGZE (d.u.; fl. c. late-eleventh to early-twelfth century). During the Song dynasty, the saṃgha hall became incorporated into the monastic plans of all large public monasteries (SHIFANG CHA) in China, regardless of sectarian affiliation. The saṃgha hall was introduced into Japan by the SŌTŌSHŪ master DŌGEN KIGEN (1200–1253), who built the first sōdō in 1236 at the monastery of Kōshōji; for this reason, the sōdō is most closely associated with the Sōtō tradition. Dōgen also wrote detailed instructions in his BENDŌHŌ ("Techniques for Pursuing the Way," 1246) on how to practice in the sōdō. Stemming from a practice initiated by DAO'AN, an image of the ARHAT PIṆḌOLA was usually placed in the middle of the saṃgha hall. Sometimes an image of MAÑJUŚRĪ, ĀJÑĀTAKAUṆḌINYA, or MAHĀKĀŚYAPA was installed in lieu of Piṇḍola. The Sōtō Zen tradition, for instance, often places a statue of Mañjuśrī in the guise of a monk in its saṃgha halls. The Japanese RINZAISHŪ chose to call their main monks' hall a zendō (meditation hall) rather than a saṃgha hall. Unlike the Sōtō sōdō, which was used for eating, sleeping, and meditating, the Rinzai zendō was reserved solely for meditation (J. ZAZEN). Japanese ŌBAKUSHŪ, following Ming dynasty (1368–1644) Chinese customs, also called their main hall a zendō. In Korea, the term sŭngdang is no longer used and the main meditation hall is typically known as a sŏnbang (lit. meditation room). See also PRAHĀṆAŚĀLĀ.

Sengyou. (J. Sōyū; K. Sŭngu 僧祐) (445–518). Early Chinese VINAYA teacher and scriptural cataloguer, whose career is indicative of early Chinese Buddhism's concerns to preserve the integrity of the dispensation and to transmit its beliefs and practices accurately. According to his biography in the GAOSENG ZHUAN ("Biographies of Eminent Monks"), Sengyou was born in Jianye (present-day Nanjing, Jiangsu province), the capital of the Liu-Song dynasty (420–479), the first of the four short-lived southern dynasties that formed during the Six Dynasties period. He became a monk at an early age, and studied under vinaya

master Faying (416–482). Later, Sengyou himself gained a reputation as a vinaya master; the *Gaoseng zhuan* says that, whenever he was invited by the prince Wenxuan (406–494) of the Qi dynasty (479–502) to lecture on the vinaya, typically seven or eight hundred people would attend. During the Yongming era (483–493) of the Qi dynasty, Sengyou received an imperial order to travel to the Wu region (in present-day Jiangnan) to lecture on the *Shisong lü*, the SARVĀSTIVĀDA VINAYA, as well as to explain the methods for receiving the precepts. In addition to his vinaya-related activities, Sengyou also tried to establish an authoritative canon of Buddhist texts by compiling the CHU SANZANG JIJI ("Compilation of Notices on the Translation of the TRIPIṬAKA"), the earliest extant Buddhist scriptural catalogue (JINGLU). In his catalogue, Sengyou introduced three criteria for distinguishing an apocryphal scripture (see APOCRYPHA) from a genuine one: (1) the meanings and expressions found in a text were "shallow and coarse"; (2) a text did not come from "foreign regions"; (3) a text was not translated by a "Western guest." While the first criterion was a more subjective form of internal evidence, the latter two were important pieces of external evidence that all subsequent cataloguers adopted as objective standards for determining textual authenticity. Sengyou's other extant major works include the *Shijia pu* ("Genealogy of ŚĀKYAMUNI"), in five rolls, and the Buddhist apologetic HONGMING JI ("Collection for the Propagation and Clarification [of Buddhism]"), in fourteen rolls.

Sengzhao. (J. Sōjō; K. Sŭngjo 僧肇) (374–414). Influential early Chinese monk and exegete, whose writings helped to popularize the works of the MADHYAMAKA school in China. Sengzhao is said to have been born into an improverished family but was able to support himself by working as a copyist. Thanks to his trade, he was able to read through much of traditional Chinese literature and philosophy, including such Daoist classics as the *Zhuangzi* and *Laozi*, and is said to have resolved to become a monk after reading the VIMALAKĪRTINIRDEŚA. He later became a disciple of KUMĀRAJĪVA and served as the Chinese-language stylist for Kumārajīva's translations. After Yao Xing (r. 394–416) of the Latter Qin dynasty (384–417) destroyed the state of Liang in 401, Sengzhao followed his teacher to Chang'an, where he and his colleague Sengrui (352–436) were appointed as two of the main assistants in Kumārajīva's translation bureau there. Yao Xing ordered them to elucidate the scriptures Kumārajīva had translated, so Sengzhao subsequently wrote his BORE WUZHI LUN to explicate the PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA that Kumārajīva and his team had translated in 404. This and other influential treatises by Sengzhao were later compiled together as the ZHAO LUN. Sengzhao's treatises and his commentary on the *Vimalakīrtinirdeśa* played a crucial role in the development of MAHĀYĀNA thought in China. Sengzhao is treated retrospectively as a vaunt courier in the SAN LUN ZONG, the Chinese analogue of the Madhyamaka school, which was formally established some two centuries later by JIZANG (549–623). The influential BAOZANG LUN is also attributed to Sengzhao, although that treatise is probably a later work of the early CHAN tradition.

Sensōji. (淺草寺). In Japanese, "Low Grass Monastery," located in the Asakusa (lit. Low Grass) district of Tōkyō; it is the oldest monastery in the current Japanese capital. Legend says that in 628 a statue of the BODHISATTVA Kannon (AVALOKITEŚVARA) was found by fishermen in the Sumida River and the village elder turned his home into a shrine for the image; this image remains an important object of veneration in Japanese Buddhism. Originally called Komagatadō, the current monastery was built in 645 and is the oldest in Tōkyō. Sensōji was formerly associated with the TENDAISHŪ (C. TIANTAI ZONG), but has been independent since after World War II. The monastery is entered through the Kaminarimon, or Thunder Gate, which is graced by a gigantic paper lantern that is vividly painted to evoke storm clouds and lightning. This gate was built by the governor of the Musashi District, Tairano Kinmasa, in 942, as was the inner Hōzō gate; both have subsequently been reconstructed following fires. The main Kannondō hall at Sensōji is devoted to Avalokiteśvara; it burned down during a World War II air raid but has been rebuilt. The monastery grounds also include a five-story pagoda, a beautiful garden, and many oracle stalls (omikuji). Next door is an important SHINTŌ shrine, the Asakusa Jinja, which may partially explain why Sensōji is the site of the biggest festival in Tōkyō, the Sanja Matsuri, which is held annually in the late spring.

Se ra. A large monastic complex counted among the "three seats" (GDAN SA GSUM) of the DGE LUGS sect of Tibetan Buddhism, located at the north end of the LHA SA valley. TSONG KHA PA wrote *Rtsa she ṭik chen rigs pa'i rgya mtsho*, his commentary on NĀGĀRJUNA'S MŪLAMADHYAMAKAKĀRIKĀ, in a hermitage above the future site of the monastery and predicted that it would become a great seat of learning. Foundations for the complex were laid in 1419 by Byams chen chos rje Shākya ye shes (Jamchen Chöje Shākya Yeshe, 1354–1435), a disciple of Tsong kha pa. Begun as a center for tantric studies, four colleges were later established, which were later consolidiated into two: Se ra smad (Sera Me) and Se ra byes (Sera Je). Se ra byes, the larger of the two, was constructed by Kun mkhyen blo gros rin chen seng ge (Künkyen Lodrö Rinchen Senge, fl. fifteenth century), a disciple of both Tsong kha pa and Byams chen chos rjes. A third college, the Sngags pa drwa tshang (Ngakpa Dratsang) or tantric college, was established in the eighteenth century, most likely under the patronage of the Mongolian ruler Lha bzang Khan. Traditionally said to house 5,500 monks, Se ra was home to roughly eight thousand monks at its peak, with some thirty-five regional dormitories (khams tshan). Monks from Se ra participated in the 1959 uprising against the Chinese People's Liberation Army, which led to the monastery being closed and used as an army barracks. It also suffered significant damage during the Chinese Cultural Revolution. After that, it

reopened as a monastery, but with a much smaller monastic population. Following the exodus of Tibetans into exile after 1959, a new Se ra monastery was also established in south India, near the town of Bylakuppe.

Sesshū Tōyō. (雪舟等楊) (1420–1506). A Japanese monk-painter of the Muromachi (1337–1573) period, best known for his use of realism in landscape painting. He was born to a warrior family in Bitchū province (present-day Okayama Prefecture, in the southwestern part of the main Japanese island of Honshū) and became a ZEN monk in the RINZAISHŪ tradition in 1431. From early in his monastic career, however, Sesshū (lit. Snow Boat) showed more interest in painting than in Zen training. Around 1440, he moved to SHŌKOKUJI, one of the GOZAN (five mountains) temples of Kyōto, where he received formal training in Chinese painting of the Song-dynasty (960–1279) style from Tenshō Shūbun (d. c. 1444–1450), the most famous monk-painter of his time. In 1467, Sesshū traveled to China, where he studied the emerging Ming style of painting. After returning to Japan in 1469, he established an atelier in present-day Ōita Prefecture in Kyūshū; subsequently, he moved to present-day Yamaguchi prefecture in the far west of Honshū in 1486. Using his "splashed-ink" (haboku) style, he established a style of realism in landscape painting, which included bold brush strokes and splashes of ink, with subtle tones. Many students gathered around him, later forming what became known as the Unkoku-rin (Cloud Valley) school, after the name of the monastery where Sesshū served as abbot. Sesshū's best-known works include his 1486 *Sansui chōkan* ("Long Landscape Scroll"), a fifty-foot-long scroll depicting the four seasons; *Haboku sansui* ("Splashed-Ink Landscape") of 1495; and the *Ama-no-Hashidate zu* ("View of Ama-no-Hashidate") of c. 1501–1505, which offers an unusual bird's-eye view of a picturesque sandbar, bay, and mountains in Tango province facing the Sea of Japan/East Sea. Sesshū is often judged to be the greatest of all Japanese painters.

Sgam po pa Bsod nams rin chen. (Gampopa Sönam Rinchen) (1079–1153). A principal disciple of the Tibetan YOGIN MI LA RAS PA and leading figure in the early formation of the BKA' BRGYUD sect of Tibetan Buddhism. At an early age, Sgam po pa trained as a physician but renounced his career and received monastic ordination at the age of twenty-five following the death of his wife and child. He is often known as Dwags po lha rje (Dakpo Lhaje), "the physician from Dakpo," because of his vocation. Sgam po pa initially trained in the BKA' GDAMS tradition under the master Snyug rum pa Brtson 'grus rgyal mtshan (Nyukrumpa Tsöndru Gyaltsen, b. eleventh century) as well as Po to ba Rin chen gsal. At the age of thirty-one, he heard three beggars discussing Mi la ras pa and experienced a strong feeling of faith. He asked permission of his Bka' gdams teachers to study with him, which they granted under the condition that he not renounce his monk's precepts. When he met Mi la ras pa in 1109, Sgam po pa offered him gold and tea, which he refused. Mi la ras pa offered him a skullcup full of wine, which Sgam po pa initially declined but then drank, even though it was a violation of his monk's vows. He received a number of teachings from Mi la ras pa, first concerning VAJARVĀRĀHĪ, and later the transmission of MAHĀMUDRĀ instructions and the "six yogas of Nāropa" (NĀ RO CHOS DRUG), stemming from the Indian MAHĀSIDDHAS TILOPA and NĀROPA. Later, Sgam po pa developed his own system of exposition, fusing elements of his Bka' gdams pa training with the perspectives and practices of mahāmudrā. This has been called the "confluence of the two streams of Bka' gdams pa and mahāmudrā" (bka' phyag chu bo gnyis 'dres). Unlike Mi la ras pa, he kept the practices of mahāmudrā and sexual yoga separate, teaching the latter only to select disciples. Sgam po pa remained a monk, founding his monastic seat at DWAGS LHA SGAM PO in southern Tibet and composing numerous works on Buddhist doctrine and practice. His work entitled THAR PA RIN PO CHE'I RGYAN ("Jewel Ornament of Liberation"), remains a seminal Bka' rgyud textbook. He also promulgated the controversial system of mahāmudrā instructions known as the DKAR PO CHIG THUB, or "self-sufficient white [remedy]." The lineage of Bka' brgyud masters and teachings following Sgam po pa came to be known collectively as the DWAGS PO BKA' BRGYUD. The division of the lineage into numerous subsects called the BKA' BRGYUD CHE BZHI CHUNG BRGYAD or "four major and eight minor Bka' brgyud subsects" stem from the disciples of Sgam po pa and his nephew Dwags po Sgom tshul (Dakpo Gomtsul, 1116–1169). Sgam po pa's principal disciples included the first KARMA PA DUS GSUM MKHYEN PA and PHAG MO GRU PA RDO RJE RGYAL PO.

Sgam po pa'i chos bzhi. (Gampope chöshi). In Tibetan, "the four dharmas of Sgam po pa," a series of brief instructions encompassing the entirety of the Buddhist path composed by the BKA' BRGYUD founder SGAM PO PA BSOD NAMS RIN CHEN. The instructions are often recited in the form of a prayer: Grant your blessings that my mind may turn toward the dharma. / Grant your blessings that the dharma may follow the path. / Grant your blessings that the path may clarify confusion. / Grant your blessings that confusion may arise as wisdom.

Sgang steng. (Gangteng). A monastery located in the Shar district of central Bhutan, founded by Padma 'phrin las (Pema Trinle, b. sixteenth century), son of the great treasure revealer PADMA GLING PA. It serves as the principal monastic seat for Padma gling pa's speech incarnation (gsung sprul) lineage.

Sgrag yang rdzong. (Drakyang Dzong). One of two labyrinthine cave complexes located near RDO RJE BRAG monastery, south of LHA SA in central Tibet; venerated as a site where the Indian adept PADMASAMBHAVA and his consort YE SHES MTSHO RGYAL remained in meditation retreat.

Sgrol ma lha khang. (Drölma Lhakhang). In Tibetan, "Tārā Temple," a temple in the central Tibetan region of Snye thang

(Nyetang) where the Bengali scholar ATIŚA DĪPAṂKARAŚRĪJÑĀNA lived for much of his time in Tibet, where he made his principal seat, and later died. The primary image is a statue of TĀRĀ (T. Sgrol ma), the female bodhisattva of compassion who served as Atiśa's personal protector, after which the temple takes its name. Constructed in the mid-eleventh century, it was spared major damage during the Chinese Cultural Revolution due to the intervention of officials from the Indian state of Bengal, which was ruled at the time by the Communist Left Front. Consequently, the temple still houses Atiśa's relics and original artwork of great value and beauty.

sgrub brgyud shing rta chen po brgyad. (drupgyü shingta chenpo gye). In Tibetan, literally "eight great conveyances that are lineages of achievement," referring to a system of classifying the various tantric traditions and transmission lineages in Tibet. This schema developed in about the thirteenth century, during the initial period of the later dissemination (PHYI DAR) of Buddhism, based upon the preeminence of individual masters, their regional affiliations, and especially their traditions of esoteric instruction. The classification of Tibetan tantric traditions into "eight great conveyances" was adopted by later Tibetan historians and exegetes, perhaps most famously by the Tibetan master 'JAM MGON KONG SPRUL BLO GROS MTHA' YAS in his GDAMS NGAG MDZOD ("Treasury of Practical Instructions"). According to his reckoning, the eightfold classification consists of the following categories:

1. SNGA' 'GYUR RNYING MA "Ancient Translation Tradition"
2. BKA' GDAMS "Tradition of Precepts and Instructions"
3. LAM 'BRAS "Tradition of the Path and Result"
4. MAR PA BKA' BRGYUD "Tradition of the Transmitted Precepts of Marpa"
5. SHANGS PA BKA' BRGYUD "Tradition of the Transmitted Precepts of the Shang Valley"
6. ZHI BYED GCOD "Traditions of Pacification and Severence"
7. RDO RJE'I RNAL 'BYOR "Tradition of Vajrayoga"
8. RDO RJE'I GSUM GYI BSNYEN SGRUB "Propitiation and Attainment of the Three Adamantine States."

sgrub pa bka' brgyad. (drup pa ka gye). In Tibetan, "eight transmissions for attainment," referring to the eight chief deities of the MAHĀYOGA class of RNYING MA doctrine together with their corresponding TANTRAS and SĀDHANAS. They are (1) 'Jam dpal sku, (2) Padma gsung, (3) Yang dag thugs, (4) Bdud rtsi yon tan, (5) Phur pa phrin las, (6) Ma mo rbod gtong, (7) Dmog pa drag snags, and (8) 'Jig rten mchod bstod.

shakumon. (C. jimen; K. chŏngmun 迹門). In Japanese, lit. "trace teaching," or "teaching involving traces"; the provisional teaching of the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), which appears in the first half of the twenty-four chapters of the scripture; in distinction to HONMON (fundamental teaching), the definitive final fourteen chapters of the scripture. The term is especially important in both the TIANTAI (J. TENDAI) and NICHIREN-oriented schools of East Asian Buddhism. The Tiantai master TIANTAI ZHIYI (538–597) first applied the two terms to refer to these two distinctive parts of the *Saddharmapuṇḍarīkasūtra*, adapting the terms traces (C. ji, J. shaku) and root (C. ben, J. hon) that had originally been used by SENGZHAO (374–414), a disciple of KUMĀRAJĪVA (344–413), to explain the inconceivable relationship between skillful means (UPĀYA) and enlightened wisdom (PRAJÑĀ). Zhiyi made a distinction between the transient buddha who attained the buddhahood during his lifetime in India and the universal buddha who attained buddhahood infinite numbers of KALPAS ago. Zhiyi regarded shakumon to be the teaching of the transient buddha, and honmon the teaching of the universal buddha. The shakumon of the *Saddharmapuṇḍarīkasūtra* is also called the practice or causal section of the sūtra, since it details the stages of BODHISATTVA practices over countless lifetimes that serve as the prerequisites of future buddhahood. The shakumon thus emphasizes the various skillful means that lead to the one buddha vehicle (see YISHENG; EKAYĀNA).

Shaku Sōen. (釋宗演) (1859–1919). Influential early ZEN figure in the West. Ordained as a novice in the RINZAISHŪ at the age of twelve, Shaku Sōen studied under the Rinzai master Imakita Kōsen (1816–1892). Shaku Sōen trained under Kōsen at the famous ENGAKUJI monastery in Kamakura, receiving dharma transmission, and the authority to teach, at the age of twenty-four. He attended Keiō University and then traveled to Ceylon to study Pāli and live as a THERAVĀDA monk. Upon his return, he became chief abbot of Engakuji in 1892. He gave instruction in Zen meditation to laymen and laywomen, both in Kamakura and Tōkyō. One of his most influential students was DAISETZ TEITARO SUZUKI. In 1893, Shaku Sōen was chosen to represent the Zen tradition at the World's Parliament of Religions in Chicago. While in the United States, he met PAUL CARUS, and later arranged for D. T. Suzuki to work with Carus in LaSalle, Illinois. He served as Buddhist chaplain to the Japanese First Army Division after the outbreak of the Russo-Japanese War in 1904. He later lectured on Zen in Europe, America, India, and Ceylon. He spent the remainder of his life lecturing extensively on Zen to lay audiences. He served as president of Rinzai College of Hanazono University in Kyōto from 1914 to 1917, before returning as abbot of Engakuji. His 1906 *Sermons of a Buddhist Abbot* was the first book on Zen to appear in English.

Shākya mchog ldan. (Shākya Chokden) (1428–1507). A celebrated Tibetan scholar associated with the SA SKYA sect. A renowned scholar of MADHYAMAKA, he defended the GZHAN STONG ("other emptiness") view of the JO NANG. He was a student of the Sa skya master Rong ston Shes bya kun rig (Rongtön Sheja Künrik, 1367–1149). His explanation of the SDOM GSUM RAB DBYE was intended as a defense of SA SKYA PAṆḌITA's views, but later Sa skya writers rejected it as authoritative in favor of the works of his contemporary, the Sa skya

master GO BO RAB 'BYAMS PA BSOD NAMS SENG GE. Shākya mchog ldan's collected works fill twenty-four volumes and are known for their consistently high quality of scholarship and erudition. He was particularly critical of the views of TSONG KHA PA, and engaged in a polemical exchange with Rje btsun pa Chos kyi rgyal mtshan (Jetsünpa Chökyi Gyeltsen, 1469–1546) whose works became the standard textbooks of the Byes (Je) college of SE RA monastery.

Shambhala. See ŚAMBHALA.

Shamen bujing wangzhe lun. (J. Shamon fukyōōsharon; K. Samun pulgyŏng wangja non 沙門不敬王者論). In Chinese, "The Śramaṇa Does Not Pay Homage to the Ruler Treatise." In response to the anticlerical policy of the monarch Huanxuan (who reigned for less than three months as King of Chu in 404) LUSHAN HUIYUAN compiled this apologetical treatise in 404. It is preserved in the fifth roll of the HONGMING JI. The treatise is comprised of five sections. The first two sections, on householders and monks, detail the differences in their social status and way of life. The other three sections are concerned with more doctrinal and theoretical issues, which are presented in the form of a debate between imaginary opponents. In the third section, Huiyuan, as the "host," argues that monks, unlike householders including the worldly ruler, seek the "truth" and thus strive to free the "spirit" from the realm of worldly desires and emotions, or SAṂSĀRA. In the fourth section, the opponent argues that there is no truth beyond that which has been revealed by the sages of the past. In the last section, Huiyuan replies that these sages are merely manifestations of the Buddha, or the immortal spirit. Although the immortal spirit "mutually resonates" (GANYING) with SAṂSĀRA, it is not, Huiyuan explains, a worldly thing itself. The argument for the immortality of the spirit also appears in Zongbing's (375–443) *Mingfo lun* ("Treatise on Clarifying Buddhism)," the MOUZI LIHUO LUN, and various other treatises found in the *Hongming ji*.

Shandao. (J. Zendō; K. Sŏndo 善導) (613–681). In Chinese, "Guide to Virtue"; putative third patriarch of the Chinese PURE LAND tradition; also known as Great Master Zhongnan. At an early age, Shandao became a monk under a certain DHARMA master Mingsheng (d.u.), with whom he studied the SADDHARMAPUṆḌARĪKASŪTRA and the VIMALAKĪRTINIRDEŚA; he later devoted himself to the study of the GUAN WULIANGSHOU JING, which became one of his major inspirations. In 641, Shandao visited the monk DAOCHUO (562–645) at the monastery of Xuanzhongsi, where he is said to have cultivated vaipulya repentance (fangdeng canfa). Shandao also continued to train himself there in the visualization practices prescribed in the *Guan Wuliangshou jing*, which led to a profound vision of the buddha AMITĀBHA'S PURE LAND (JINGTU) of SUKHĀVATĪ. Shandao subsequently eschewed philosophical exegesis and instead devoted himself to continued recitation of the Buddha's name (NIANFO) and visualization of the pure land as detailed in the *Guan jing*. After Daochuo's death, he remained in the Zongnan mountains before eventually moving to the Chinese capital of Chang'an, where he had great success in propagating the pure land teachings at the monastery of Guangmingsi. Shandao is also known to have painted numerous images of the pure land that appeared in his vision and presented them to his devotees. He was also famous for his continuous chanting of the AMITĀBHASŪTRA. Shandao's influential commentary on the *Guan Wuliangshou jing* was favored by the Japanese monk HŌNEN, whose teachings were the basis of the Japanese pure land tradition of JŌDOSHŪ.

Shangs pa bka' brgyud. (Shangpa Kagyü). In Tibetan, "Succession of the Transmitted Precepts of the Shang Valley"; a lineage of Tibetan Buddhism traced back to its founder KHYUNG PO RNAL 'BYOR TSHUL KHRIMS MGON PO who was active in the Shangs Valley of western Tibet. It is generally counted as one of the eight great conveyances that are lineages of attainment (SGRUB BRGYUD SHING RTA CHEN PO BRGYAD). The teachings and practice of the Shangs pa bka' brgyud are in many ways similar to those of the MAR PA BKA' BRGYUD and stem from two principal sources: (1) a tantric system of instruction known as the six doctrines of NIGUMA (Ni gu chos drug), similar to those associated with NĀROPA, of whom Niguma is said to have been the wife or sister; and (2) the MAHĀMUDRĀ text entitled PHYAG CHEN GA'U MA ("Amulet Box Mahāmudrā"). Few Shangs pa bka' brgyud institutions were ever constructed, and the sect has almost disappeared as an independent entity. However, the Shangs pa bka' brgyud was highly influential in Tibet and its most important instructions were also transmitted within the BKA' BRGYUD, DGE LUGS, SA SKYA, JO NANG, and RNYING MA sects. Shangs pa teachings have been especially promulgated in modern times by the late contemporary master KALU RINPOCHE.

shangtang. (J. jōdō; K. sangdang 上堂). In Chinese, lit. "ascending the hall"; a public lecture or sermon delivered by a CHAN, SŎN, or ZEN master at the dharma hall. The master, often the abbot of the monastery, would typically ascend the dais in the dharma hall to deliver his sermon, hence the term shangtang, or "ascending the hall." The dharma hall of a Chan monastery typically did not house any icons, for the master himself was considered a living buddha while he was preaching on the dais. These shangtang lectures came to be carefully recorded by the disciples of the master and were typically edited together with other minor sermons like the xiaocan into the "recorded sayings" (YULU) of the master. By the medieval period, shangtang became more formalized, taking place at regular intervals; thus there are several specific types of shangtang described in the literature. Those that occurred on a bi-monthly basis were called danwang shangtang, since the sermons were given on the first (dan) and the fifteenth (wang) of each lunar month. Those that took place on the fifth, tenth, fifteenth, twentieth, twenty-fifth of each lunar month were called wucan shangtang, because there were a total of five assemblies (wucan) each month. Those held once every three days were called

jiucan shangtang, because there were approximately nine such assemblies (jiucan) each lunar month. Shangtang that occurred on the birthday of the reigning emperor were called shengjie (occasion of His Majesty) shangtang, while those that took place as funerary memorials and deliverance rituals for a recently deceased emperor were called daxing zhuiyan shangtang. Shangtang that occurred after the abbot of the monastery had returned from a begging round were called chudui (troupe on a mission) shangtang. Those that took place to resolve an ongoing issue in the monastic community, such as quarrels, disputes, or other emergencies, were called yinshi shangtang (ascending the hall due to an exigency). Those that occurred to honor monastery staff overseeing internal affairs were called xie bingfu shangtang, while shangtang to honor monastery staff overseeing external and financial affairs were called xie dusizhai shangtang.

Shang Tianzhusi. (上天竺寺). In Chinese, "Upper Tianzhu Monastery," located on Mt. Tianzhu in Hangzhou, along the southern coast of China. (TIANZHU is one of the common Sinographic transcriptions of Sindu, or India.) Founded by King Qian Liu (852–932 CE) of the Kingdom of Wuyue (907–978 CE) during the Five Dynasties and Ten Kingdoms period following the demise of the Tang dynasty. According to certain sources, before he became king, Qian Liu dreamed of a woman dressed in white robes, who promised to protect him and his descendants if he was compassionate and did not kill living creatures. She then informed him that she could be found on Mt. Tianzhu in Hangzhou twenty years hence. When Qian Liu ascended the throne, he dreamed once more of this white-robed woman, whom he realized was BAIYI GUANYIN (White-Robed AVALOKITEŚVARA). In this dream, she informed Qian Liu that she needed a residence, in return for which she would bestow her patronage on his kingdom. When the king discovered that, of all the monasteries on Mt. Tianzhu, only one housed a Baiyi Guanyin icon, he became its patron and named it the Tianzhu Kanjing Yuan (Tianzhu Center for Reading Scriptures). Later renamed Upper Tianzhu monastery, it became renowned as a GUANYIN pilgrimage site. The monastery is also known for its association with the Song-dynasty legend of Princess MIAOSHAN (first complete rendition 1100 CE) when Jiang Zhiqi (1031–1104 CE), prefect of Ruzhou in Henan province, was transferred to Hangzhou in 1104 CE. Upon his arrival, he had the Miaoshan legend inscribed on a stele to be enshrined in Upper Tianzhu monastery.

Shanhui dashi. (C) (善慧大士) (497–569). See FU DASHI.

Shanjia Shanwai. (J. Sange Sangai; K. San'ga Sanoe 山家山外). In Chinese, "On-Mountain, Off-Mountain"; two factions in a debate that engulfed the TIANTAI ZONG during the eleventh century over issues of the school's orthodoxy and orthopraxy. The Shanjia (On-Mountain) faction was led by the monk SIMING ZHILI (960–1028) and his disciples; they pejoratively referred to their opponents within the Tiantai school, such as Ciguang Wu'en (912–988), Yuanqing (d. 997), Qingzhao (963–1017), Zhiyuan (976–1022) and their disciples, as Shanwai (Off-Mountain), for drawing on non-Tiantai elements in their exegeses. The debate began over an issue of textual authenticity, but soon came to cover almost all major facets of Tiantai doctrine and practice. The On-Mountain faction criticized their rivals for attempting to interpret Tiantai doctrine using concepts borrowed from texts such as the DASHENG QIXIN LUN, which had not previously been an integral text in Tiantai exegesis, and from rival exegetical traditions, such as the HUAYAN ZONG. These Shanwai monks argued that the doctrine of the "TRICHILIOCOSM in an single instant of thought" (YINIAN SANQIAN) should be understood in the Huayan framework of the suchness that is in accord with conditions (zhenru suiyuan): in this understanding, an instant of thought is identified with the true mind that in its essence is pure, unchanging, and inherently enlightened; subsequently, by remaining in accord with conditions, that suchness in turn produces the trichiliocosm in all its diversity. From this perspective, they argued that the true mind should be the focus of contemplative practice in Tiantai. Shanjia masters feared such interpretations were a threat to the autonomy of the Tiantai tradition and sought to remove these Huayan elements so that the orthodox teachings of Tiantai would be preserved. Zhili, the major proponent of the Shanjia faction, argued that the Shanwai concept of suchness involved the principle of separation (bieli), since it excluded the afflicted and the ignorant, and only encompassed the pure and the enlightened. According to Zhili, suchness does not produce the trichiliocosm only when it is in accord with conditions, as the Huayan-influenced Shanwai exegetes asserted, because suchness is in fact identical to the trichiliocosm; therefore the instant of thought that encompasses all the trichiliocosm, including both its pure and impure aspects, should be the true focus of contemplative practice in Tiantai. Zhili's disciple Renyue (992–1064) and his fourth-generation successor Congyi (1042–1091) were subsequently branded the "Later Off-Mountain Faction," because they accepted some of the Shanwai arguments and openly rejected parts of Zhili's argument. Nevertheless, the Shanjia faction eventually prevailed, overshadowing their Shanwai rivals and institutionalizing Zhili's interpretations as the authentic teachings of the Tiantai tradition. Two Tiantai genealogical histories from the Southern Song dynasty, the *Shimen zhengtong* ("Orthodox Transmission of Buddhism") and the FOZU TONGJI ("Chronicle of the Buddhas and Patriarchs"), list Zhili as the last patriarch in the dharma transmission going back to the Buddha, thus legitimating the orthodoxy of the Shanjia faction from that point forward.

Shannüren zhuan. (善女人傳). In Chinese, lit., "Record of Good Women," "Record of [Eminent] Laywomen," by the Qing-dynasty author PENG SHAOSHENG (1740–1796), a Confucian literatus turned Buddhist layman; in two rolls. The "Record" is the only surviving collection in Chinese Buddhist

literature of the biographies of exemplary laywomen disciples (UPĀSIKĀ). The collection compiles 138 biographies of Chinese Buddhist laywomen from the inception of Buddhism in China through the mid-Qing dynasty, including empresses, concubines, wives of officials, and commoners from various walks of life. The stories of these laywomen are characterized by their pious faith in the three jewels (RATNATRAYA) and their devout practice. Peng also explores the ways in which these exemplary Buddhist laywomen embodied such traditional Confucian values as filiality, chastity, and obedience to fathers, husbands, and eldest sons, in order to demonstrate how Buddhism was also concerned with women's broader social roles. Peng Shaosheng adapts the entries included in the anthology from such biographical, historical, and genealogical works as the GAOSENG ZHUANS, FAYUAN ZHULIN, CHUANDENG LU, *Wudeng huiyuan*, FOZU TONGJI, *Jingtu wen*, and *Mingxiang ji*, as well as various literary works. Prior to completing this record of female lay disciples of Buddhism, Peng also authored a parallel collection of the biographies of Buddhist laymen, the JUSHI ZHUAN. The *Shannüren zhuan* is also included as the last chapter of the *Moni zhukun jiyao* by the Qing-dynasty laywoman Shanyi.

Shansuibu. (C) (善歲部). The Suvarṣaka school. See KĀŚYAPĪYA.

Shaolinsi. (J. Shōrinji; K. Sorimsa 少林寺). In Chinese, "Small Grove Monastery"; located at the foot of SONGSHAN in Dengfeng county, Henan province. According to the XU GAOSENG ZHUAN ("Continued Biographies of Eminent Monks"), the Xiaowen emperor (r. 471–500 CE) of the Northern Wei dynasty built the monastery in 496 CE for the Indian monk Fotuo (d.u.). Shaolinsi initially was an important center of translation activities, and many famous monks, including BODHIRUCI, RATNAMATI, JINGYING HUIYUAN, and XUANZANG, resided at the monastery. But the monastery is best known in the East Asian tradition as the putative center of martial arts in China. Fotuo, the monastery's founder, is claimed to have had two disciples who displayed sublime acrobatic skills, perhaps a harbinger of later martial-arts exercises. Li Shimin (599–649; r. 626–649), second ruler and Taizong emperor of the Tang dynasty (618–907), is said to have used the Shaolin monks' martial talents, especially with the heavy cudgel, to help his father found their new dynasty. Within another century, Shaolinsi became associated with the legend of the Indian monk BODHIDHARMA (c. early fifth century), the putative founder of the CHAN school, who is said to have practiced wall-gazing meditation (BIGUAN) for nine years in a cave above the monastery; according to later traditions, Bodhidharma also taught himself self-defense techniques both to protect himself against wild animals and for exercise, which he transmitted to his disciples at the monastery. In subsequent years, the monastery continued to be renowned as a center of both martial arts and Chan Buddhism. In 1245, the Yuan emperor Shizu (r. 1260–1294) appointed the Chan master Xueting Fuyu (1203–1275) abbot of Shaolinsi, and under Xueting's guidance the monastery flourished. At least by the fifteenth century, the connection between Shaolinsi and the martial arts became firmly established in the Chinese popular imagination and "Shaolin monks" remain popular on the international performing-arts circuit.

shaoshen. (J. shōshin; K. sosin 燒身). In Chinese, "autocremation." See SHESHEN.

Shasekishū. (沙石集). In Japanese, "Sand and Pebbles Collection"; an anthology of edifying folkloric tales from the Kamakura period (1185–1333). The collection was compiled by a RINZAISHŪ monk named MUJŪ ICHIEN (1227–1312) between 1279 and 1283 and contains 150 stories in a total of ten rolls. After finishing his initial compilation, Mujū continued to add the stories to the collection, so there are different editions of varying length. The preface to the collection explains the title: "Those who search for gold extract it from sand; those who treasure jewels gather pebbles that they then polish." The collection, therefore, seeks to explain profound Buddhist truths as they are found in mundane affairs. Mujū demonstrates throughout the collection his belief in "crazy words and embellished phrases" (kyōgen kigo) as an expedient means of articulating ultimate religious goals. He even argues that the traditional waka style of Japanese poetry is in fact DHĀRAṆĪ, a mystic code that encapsulates the essence of Buddhist teachings. Most of the stories in the collection offer edifying lessons in such basic Buddhist beliefs as nonattachment and karmic retribution and in such ethical values as loyalty, filial piety, and fidelity. The idea of expedient means (UPĀYA) is also applied to the various Buddhist schools and to Japanese traditional religion: all the various teachings of Buddhism are depicted as expedient means of conveying the religion's beliefs, and Mujū denounces Buddhist practitioners who exclusively promote the teachings of only their own sects. The collection also introduced the idea of the "unity of SHINTŌ and Buddhism" (SHINBUTSU SHŪGŌ) by describing Japanese indigenous spirits, or KAMI, as various manifestations of the Buddha. The humorous tone of the collection attracted many readers during the Tokugawa period (1603–1868), when it was reprinted several times.

She dasheng lun. (J. Shōdaijōron; K. Sŏp taesŭng non 攝大乘論). See MAHĀYĀNASAṂGRAHA.

sheliju. (J. sharigu; K. sarigu 舍利具). In Chinese, a "reliquary container" containing the relics (ŚARĪRA) of the Buddha or a sage; also written as SHELIQI. The relics were deposited in a set of nested caskets and were placed inside or buried below the foundation of a STŪPA. A tiny glass bottle placed inside several layered caskets served as the innermost container for the crystalline relic-grains remaining after cremation. The shape of the caskets differed according to time and region, from a stūpa shape to the shape of a bowl or tube, and the caskets were made of gold, silver, gilt bronze, lacquered wood, porcelain, or stone.

The sides of the caskets were often incised with buddha images or guardian deities. In addition to the relic, the donors frequently deposited a multitude of objects of intrinsic or artistic value in the containers, including beads, pearls, jewelry, or coins. The earliest known reliquary is a steatite casket found in the stūpa of Piprāwā (fifth–fourth centuries BCE) in India. In China, the reliquary chamber excavated at the FAMENSI pagoda is the most widely researched. In contrast to most Chinese reliquary chambers, which were only accessible prior to the construction of a pagoda, the Famensi relic was escorted to and from the imperial palace. Further outstanding examples of reliquaries have been excavated at Songnimsa and Kamŭnsa in Korea. Both reliquaries date from the Silla period and show the refined amalgamation of foreign influences and native Silla craftsmanship. The center of the Songnimsa reliquary is a small green glass bottle, placed in a green glass cup decorated with twelve rings of coiled glass, which derives from Persian or Syrian prototypes. The Kamŭnsa reliquary contains a vessel in the shape of a miniature pavilion and an outer container decorated on each side with the four heavenly kings, pointing to the LOKAPĀLA cult that thrived in Silla society at that time.

sheliqi. (J. sharigu; K. sarigi 舍利器). In Chinese, "reliquary container." See SHELIJU.

She lun zong. (J. Shōronshū; K. Sŏp non chong 攝論宗). In Chinese, "School of the MAHĀYĀNASAṂGRAHA"; one of the early Chinese indigenous doctrinal schools, focusing on YOGĀCĀRA philosophy. The school has its origins in exegetical traditions that began with PARAMĀRTHA's (499–569) translation of ASAṄGA's *Mahāyānasaṃgraha* (C. *She Dasheng lun*). The school played a central role in early Chinese doctrinal controversies concerning the interpretation of consciousness in two different Indian Buddhist systems of thought: Yogācāra and TATHĀGATAGARBHA. The controversies revolved around the issue of the nature of the eighth storehouse consciousness (ĀLAYAVIJÑĀNA), based on VASUBANDHU's ambiguous position in the SHIDIJING LUN (DAŚABHŪMIVYĀKHYĀNA), a commentary on the DAŚABHŪMIKASŪTRA. In some passages, Vasubandhu implied that the ālayavijñāna was the tainted source from which SAṂSĀRA arises; in others, he implied instead that the ālayavijñāna was coextensive with suchness (TATHATĀ) and thus fundamentally pure. The northern branch of the DI LUN ZONG argued that the storehouse consciousness was impure; it is a tainted source that produces only defiled dharmas. By contrast, the southern branch argued that the ālayavijñāna was fundamentally pure but came to be adventitiously associated with impure elements: it was the functioning of suchness and thus was pure, but it also was subject to the same laws of conditioned origination (PRATĪTYASAMUTPĀDA) as the sensory consciousnesses and thus on that level was also impure. The She lun school sought to integrate these two interpretations by drawing on Paramārtha's concept of an immaculate consciousness (AMALAVIJÑĀNA). Paramārtha in his personal writings condemned the ālayavijñāna as being fundamentally impure, positing instead that only a ninth mode of consciousness, which he termed the immaculate consciousness, was pure. Following Paramārtha, She lun exegetes treated the ālayavijñāna as impure, and instead established the amalavijñāna as the pure ninth consciousness. They identified this new consciousness with suchness (tathatā) by using it as a synonym for PARINIṢPANNA, the perfected nature described in Yogācāra philosophy. In the She lun zong interpretation, amalavijñāna thus came to be regarded as the absolute basis for all previous eight types of consciousness; the eighth consciousness, the ālayavijñāna, was instead seen as the provisional basis of afflictions (KLEŚA). Several She lun masters advocated this admixture between ālayavijñāna and tathāgatagarbha thought, including Huikai (518–568), Daoni (fl. 590), Huikuang (534–613), and Tanqian (542–607). Tanqian was especially influential and was even invited by the Sui emperor Wendi (r. 581–604) to the imperial capital of Chang'an in 587 to preach the She lun teachings. The emperor later built the monastery of Chandingsi in the capital and appointed Tanqian as its first abbot, which became the center of the She lun zong. Sengbian (568–642), a She lun master from Daoni's lineage, was one of the teachers of the renowned Korean Yogācāra master WŎNCH'ŬK (613–696). Doctrinal positions held in the She lun zong were crucial in the evolution of the HUAYAN school of the mature Chinese tradition.

shenguang. (J. shinkō; K. sin'gwang 身光). In Chinese, lit. "body light"; a "mandorla" surrounding the body of holy figures in Buddhist painting and sculpture. See KĀYAPRABHĀ.

Shenhui. (C) (神會). See HEZE SHENHUI.

Shenxiu. (J. Jinshū; K. Sinsu 神秀) (606?–706). Chinese CHAN master of the Tang dynasty and putative founder of the "Northern school" (BEI ZONG) of early Chan Buddhism. Shenxiu was a native of Kaifeng in present-day Henan province. As an extraordinarily tall man with well-defined features, Shenxiu is said to have had a commanding presence. In 625, Shenxiu was ordained at the monastery of Tiangongsi in Luoyang, but little is known of his activities in the first two decades following his ordination. In 651, Shenxiu became a disciple of HONGREN (601–674), cofounder of the East Mountain Teachings (DONGSHAN FAMEN) and the monk later recognized as the fifth patriarch of the Chan school; indeed, by many early accounts, such as the CHUAN FABAO JI and LENGQIE SHIZI JI, Shenxiu became Hongren's legitimate successor. According to the famous story in the LIUZU TANJING ("Platform Sūtra of the Sixth Patriarch"), however, Shenxiu lost a verse-writing contest to the unlettered HUINENG (638–713), whom Hongren then in secret sanctioned as the sixth patriarch. However, it is unclear how long Shenxiu studied with Hongren. One source states that it was for a period of six years, in which case he would have left Hongren's monastery long before Huineng's arrival, making the famous poetry contest impossible. Regardless of the date of his

departure, Shenxiu eventually left Hongren's monastery for Mt. Dangyang in Jingzhou (present-day Hubei province), where he remained for over twenty years and attracted many disciples. Shenxiu and his disciples were the subjects of a polemical attack by HEZE SHENHUI (684–758), who disparaged Shenxiu as representing a mere collateral branch of BODHIDHARMA's lineage and for promoting what Shenhui called a "gradual" (jian) approach to enlightenment. Shenhui instead promoted a "sudden teaching" (DUNJIAO), which he claimed derived from a so-called "Southern school" (NAN ZONG) founded by Huineng, another (and relatively obscure) disciple of Hongren, whom Shenhui claimed was Hongren's authentic successor and the true sixth patriarch (LIUZU). Later Chan historians such as GUIFENG ZONGMI (780–841) began to use the designation "Northern school" (Bei zong) to describe the lineage of Shenxiu and his disciples YIFU (661–736), PUJI (651–739), and XIANGMO ZANG (d.u.). While Shenhui's characterization of Shenxiu and his supposed "gradualism" is now known to be misleading, subsequent histories of the Chan tradition (see CHUANDENG LU) more or less adopted Shenhui's vision of early Chan; thus Huineng, rather than Shenxiu, comes to be considered the bearer of the orthodox Chan transmission. As one mark of Shenxiu's high standing within the Chan tradition of his time, in 700, Shenxiu was invited to the imperial palace by Empress WU ZETIAN, where the empress prostrated herself before the nonagenarian monk. She was so impressed with the aged Chan master that she decided to build him a new monastery on Mt. Dangyang named Dumensi. She also gave him the title of state preceptor (GUOSHI). Upon his death, he was given a state funeral. He is one of only three Buddhist monks whose biography is included in the *Tang shi* ("Tang Annals"). This is clearly not the profile of an imposter within the Chan lineage. Shenxiu's teachings are known to have focused on the transcendence of thoughts (linian) and the five expedient means (fangbian; S. UPĀYA); these teachings appear in "Northern school" treatises discovered at Dunhuang, such as the YUANMING LUN, *Guanxin lun*, and DASHENG WUSHENG FANGBIAN MEN. Shenxiu was an expert on the LAṄKĀVATĀRASŪTRA, a text favored by Hongren and the early Chan tradition, and is also thought to have written a substantial commentary on the AVATAṂSAKASŪTRA. Despite the uncomplimentary portrayal of the "Northern school" in mainstream Chan materials, it is now recognized that Shenxiu and his disciples actually played a much more important role in the early growth and development of the Chan school than the mature tradition acknowledged.

Shes bya kun khyab mdzod. (Sheja Kunkyap Dzö). In Tibetan, "Treasury Embracing All Knowledge"; the title of a multivolumed encyclopedic compendium of Tibetan Buddhist thought, composed by the Tibetan luminary 'JAM MGON KONG SPRUL BLO GROS MKTHA' YAS between 1862 and 1864. The work consists of a brief root text in verse together with an extensive prose autocommentary, and is one of the earliest examples of the author's place in the nonsectarian (RIS MED) movement. The work is one of five "treasuries" (KONG SPRUL MDZOD LNGA) written and edited by the master.

sheshen. (S. ātmaparityāga/dehadāna; T. rang gi lus yongs su gtong ba / lus kyi sbyin pa; J. shashin; K. sasin 捨身). In Chinese, lit. "relinquishing the body," viz., "self-immolation"; a whole complex of religiously motivated types of suicide in the MAHĀYĀNA tradition, of which "autocremation" (shaoshen) is best known but which may also include suicide by drowning, starvation, feeding oneself to wild animals, etc. (The Sanskrit ātmabhāvapariyāga means "giving up one's self," as soldiers might for their country, and by extension an act of extreme charity.) This practice is associated with the perfection of giving (DĀNAPĀRAMITĀ) that occurs on the first BHŪMI, PRAMUDITĀ (joyful), of the bodhisattva path, where the bodhisattva learns to abandon everything that is most precious to him, including his wealth, his wife and family, and even his own body. Self-immolation is a common trope in Indian Mahāyāna literature, where this "gift of the body" (DEHADĀNA) is performed as an ultimate act of self-sacrifice. One of best-known examples is BHAIṢAJYAGURURĀJA (Medicine King) in the SADDHARMAPUṆḌARĪKASŪTRA, who pays homage to the buddhas by burning himself alive. Self-immolation goes back to at least the late-fourth century in Chinese Buddhism but is perhaps best known today through the suicides of such Vietnamese monks as THÍCH QUẢNG ĐỨC (1897–1963), whose autocremation in 1963 at his residence of THIÊN MỤ TỰ drew attention to the persecution of Buddhists by the pro-Catholic Vietnamese government of Ngô Đình Diệm. The legitimacy of the act of self-immolation was a matter of continued debate within the Buddhist tradition, since suicide could be viewed as a form of attachment or passion (RĀGA), viz., the attachment to "nonexistence" (S. abhavarāga; C. wuyou ai). But there were also vehement supporters of self-immolation, who saw it as the consummate expression of asceticism (see DHUTAṄGA) and selflessness (ANĀTMAN). The Chinese term sheshen is used interchangeably with the synonyms wangshen (to lose the body) and yishen (to let go of the body); an analogous Sanskrit term is svadehapariyāga (abandoning the body). See also DEHADĀNA.

Shes rab rgyal mtshan. (Sherap Gyaltsen) (1356–1415). One of the most influential Tibetan masters of the BON religion. In 1405 he founded the monastery of SMAN RI in central Tibet, which became one of Tibet's premier Bon religious institutions. He is often known as Mnyam med (Nyame), "the Incomparable."

shi. (J. ji; K. sa 事). In Chinese, "phenomenon," "event," "object"; the specific elements of the empirical world as they are experienced conventionally. In East Asian Buddhism, shi is typically used in distinction to "principle" (LI): li refers to the fundamental pattern or principle that underlies all phenomena, thus representing the true nature of reality; shi by contrast refers to all the particular expressions of this li in

the phenomenal world. This interrelationship thus implies the inherent presence of li within shi. Teachers within the TIANTAI ZONG were among the first to employ the two terms in their systematic analysis of Buddhist thought. TIANTAI ZHIYI (538–597), the systematizer of the Tiantai zong, applied the terms to refer not only to doctrinal but also to the practical dimensions of Buddhism. In the contexts of Buddhist practice, shi refers to such specific ritual and meditative activities as repentance, circumambulation, reciting the sūtras, and sitting meditation, which could lead to the realization of the principle of emptiness or the truth of the median (see SANDI). The term shi is especially crucial in HUAYAN doctrinal analysis, where it is deployed in the taxonomy of the four realms of reality (DHARMADHĀTU), four successively more profound levels of experience (see SI FAJIE). According to Huayan doctrine, because each and every individual phenomenon (shi) is pervaded by principle (li), all the various discrete phenomena pervade, and are in turn pervaded by, each and every other discrete phenomenon in the experience of what Huayan terms the "dharma-realm of the unimpeded interpenetration between phenomenon and phenomena" (SHISHI WU'AI FAJIE). As the individual products of dependent origination (PRATĪTYA-SAMUTPĀDA), shi thus represents the organic totality of reality, in which every phenomenon is in multivalent interaction with everything else in the universe, mutually creating, and being created by, all other things.

Shi. (J. Shaku; K. Sŏk; V. Thích 釋). The transcription of the first syllable of the Buddha's clan name, ŚĀKYA (C. Shijia), as found in the Buddha's appellation ŚĀKYAMUNI, "Sage of the Śākya Clan." In East Asian Buddhism since the time of DAO'AN (312–385), monks traditionally abandoned their family's surname and used in its place the Buddha's own clan name; hence, monks and nuns in premodern East Asia typically took the surname Shi. Before Dao'an, ordinands had adopted the surname of their preceptors, including using ethnikons in case their master was a foreigner, e.g., AN for monks and missionaries who hailed from PARTHIA, also known as Aršak or Arsakes (C. ANXI GUO)—viz., the Arsacid kingdom (c. 250 BCE–224 CE) southeast of the Caspian Sea; ZHU for Indians; ZHI for monks from KUSHAN (Yuezhi) in northwest India; YU for monks from KHOTAN; KANG for monks from SOGDIANA; and BO for monks from KUCHA. While Dao'an was resided in Xiangyang (in present-day Hubei province) between 365 and 379, he introduced the custom of adopting Shi as the monastic surname so that all Buddhist monks would have a common religious identity. The adoption of the Buddha's surname signified the monks' and nuns' severance of their ties with their natal families and worldly society, as well as the dedication of their lives to the lineage of the Buddha. The custom became general practice after 385, when there seemed to be textual justification for the practice in a translated passage from the *Zengyi ahan jing* (EKOTTARĀGAMA), which referred to "ŚRAMAṆAS who were sons of the Śākya" (C. shamen Shijiazi; S. śramaṇa-śākyaputrīyāḥ). Zhu DAOSHENG (355–434) was one of the last influential Chinese monks to adopt the surname of his preceptor, rather than that of the Buddha. See also FAMING; ŚĀKYABHIKṢU.

Shibei. (C) (師備) (835–908). See XUANSHA SHIBEI.

shi bushanye dao. (C) (十不善業道). In Chinese, "ten unwholesome ways of action." See KARMAPATHA.

shichidō garan. (七堂伽藍). In Japanese, "seven-halled temple"; an early Japanese monastic layout consisting of seven main structures (shichidō). The oldest extant example of this layout in Japan can be seen in the Kudara (viz., the Korean Paekche) layout at HŌRYŪJI. The seven halls of the monasteries built in the Nara period (646–794) generally included the golden hall (kondō), pagoda (tō), lecture hall (kōdō), bell tower (shurō), scriptorium (kyōzō), monks' dormitories (sōbō), and refectory (jikidō). This term, however, does not seem to appear in any Chinese or Japanese materials predating its use by the Japanese monk Ichijō Kanera (1402–1481) to refer to the layout of ZEN monasteries. His list of the seven halls consists of the mountain gate (sanmon), buddha hall (butsuden), DHARMA hall (hattō), kitchen-office (kuin), SAṂGHA hall (sōdō; see SENGTANG), bathhouse (yokushitsu), and latrine (seijō or tōsu). The seven-hall design is now commonly laid out in anthropomorphic form, consisting of a central axis—the mountain gate (the privates), buddha hall (heart), and dharma hall (head)—flanked by two pairs of buildings, namely (1) the latrine (left leg) and bathhouse (right leg) and (2) the saṃgha hall (left arm) and kitchen-office (right arm).

Shichifukujin. (七福神). In Japanese, "Seven Gods of Good Fortune"; an assembly of seven deities dating from at least the fifteenth century, which gained popularity in Japan's folk religious setting and are still well known today. Those who have faith in the group are said to gain happiness and good fortune in their lives. Before their grouping, each of the individual gods existed independently and historically shared little in common. Of the seven, Ebisu is the only god with an identity linked to the Japanese islands. Daikokuten (C. Dahei tian; S. MAHĀKĀLA), Bishamonten (C. Pishamen tian; S. VAIŚRAVAṆA), and Benzaiten (C. Biancai tian; S. SARASVATĪ) originated in India, and Hotei (C. BUDAI, d. 917), Jurōjin (C. Shoulaoren), and Fukurokuju (C. Fulushou) come from the Chinese Buddho-Daoist traditions. Their grouping into seven gods of good fortune likely occurred in the Japanese Kansai region, with the commerce-affiliated Daikoku and Ebisu gaining initial popularity among merchants. Early mention of them appears in a reference from 1420, when they were said to have been escorted in procession through Fushimi, a southern ward of Kyōto, in imitation of a daimyō procession. ¶ Ebisu (a.k.a. Kotoshiro-nushi-no-mikoto, the abandoned child of Izanami and Izanagi) is the god of fishermen and the sea, commerce, good fortune, and labor. Among its etymological roots, the term "ebisu" traces back to

the Ainu ethnic group of Hokkaidō, connecting them to fishermen who came from abroad. Ebisu is often depicted with a fishing rod in one hand and either a large red sea bream (J. tai) or a folding fan in the other. Since the inception of the Shichifukujin, he is often paired with Daikokuten as either son or brother. ¶ Daikokuten, or "Great Black Spirit," comes originally from India (where is he is called Mahākāla); among the Shichifukujin, he is known as the god of wealth, agriculture, and commerce. Typically portrayed as standing on two bales of rice, Daikokuten carries a sack of treasure over his shoulder and a magic mallet in one hand. He is also considered to be a deity of the kitchen and is sometimes found in monasteries and private kitchens. Prior to the Tokugawa period, he was called Sanmen Daikokuten (Three-Headed Daikokuten), a wrathful protector of the three jewels (RATNATRAYA). ¶ Bishamonten, also originally from India (where he is called Vaiśravaṇa), is traditionally the patron deity of the state and warriors. He is often depicted holding a lance in one hand and a small pagoda in the palm of his other hand with which he rewards those he deems worthy. Through these associations, he came to represent wealth and fortune. His traditional residence is Mt. SUMERU, where he protects the Buddha's dais and listens to the dharma. ¶ Benzaiten ([alt. Myōonten]; C. Miaoyin tian) is the Indian goddess Sarasvatī. She is traditionally considered to be a goddess of music, poetry, and learning but among the Shichifukujin, she also represents good fortune. She takes two forms: one playing a lute in both hands, the other with eight arms. ¶ Hotei is the Japanese name of Budai (d. 916), a Chinese thaumaturge who is said to have been an incarnation of the BODHISATTVA MAITREYA (J. Miroku bosatsu). The only historical figure among the Shichifukujin, Hotei represents contentment and happiness. Famous for his fat belly and broad smile, Hotei is often depicted holding a large cloth bag (Hotei literally means "hemp sack"). From this bag, which never empties, he feeds the poor and needy. In some places, he has also become the patron saint of restaurants and bars, since those who drink and eat well are said to be influenced by Hotei. ¶ Jurōjin and Fukurokuju, often associated with one another and said to share the same body, originated within the Chinese Daoist tradition. Jurōjin (lit. "Gaffer Long Life"), the deity of longevity within the Shichifukujin, is possibly a historical figure from the late eleventh through twelfth century. Depicted as an old man with a long, white beard, he is often accompanied by a crane or white stag. Fukurokuju (lit. "Wealth, Happiness, and Longevity") has an elongated forehead, a long, white beard and usually a staff in one hand; he is likely based on a mythical Daoist hermit from the Song period. ¶ This set of seven gods is most commonly worshipped in Japan. There are, however, other versions. Especially noteworthy is a listing found in the 1697 *Nihon Shichifukujinden* ("The Exposition on the Japanese Seven Gods of Good Fortune"), according to which Fukurokuju and Jurōjin are treated as a single god named Nankyoku rōjin and a new god, Kichijōten (C. Jixiang tian; S. Śrīmahādevī), the goddess of happiness or auspiciousness, is added to the group.

Shide. (J. Jittoku; K. Sŭptŭk 拾得) (d.u.). In Chinese, lit. "Picked Up"; a legendary layman of the Tang dynasty. The young Shide is said to have acquired his name from having been adopted or "picked up" by the hermit Fenggan (d.u.). Shide is known to have worked in the kitchen of the monastery of Guoqingsi on Mt. TIANTAI in present-day Zhejiang province. Shide became a favored subject in brushstroke art and was often depicted madly wielding his broom around the monastery, often together with the legendary poet HANSHAN. Fenggan, Hanshan, and Shide are collectively known as the "three hermits of Guoqing."

Shidijing lun. (T. Sa bcu'i rnam par bshad pa; J. Jūjikyōron; K. Sipchigyŏng non 十地經論). In Chinese, "Explanation of the DAŚABHŪMIKASŪTRA." See DAŚABHŪMIVYĀKHYĀNA; DI LUN ZONG.

Shi'ermen lun. (S. *Dvādaśamukhaśāstra, J. Jūnimonron; K. Sibimun non 十二門論). In Chinese, lit., "Twelve Gate Treatise," a Chinese translation of the **Dvādaśamukhaśāstra*, made by KUMĀRAJĪVA in 409. As one of the "three treatises" of the SAN LUN ZONG, the Chinese counterpart of the MADHYAMAKA school of Indian Buddhist philosophy, along with the BAI LUN (S. *ŚATAŚĀSTRA; "The Hundred Treatise") and the *Zhong lun* ("Middle Treatise"), the *Shi'ermen lun* is purportedly an introductory manual to NĀGĀRJUNA's MŪLAMADHYAMAKAKĀRIKĀ (C. *Zhong lun*), which was also translated by KUMĀRAJĪVA in the same year (409) as this text. No Sanskrit or Tibetan recensions of the *Shi'ermun lun* are known to have existed and the Sanskrit title is a tentative reconstruction. In this text, the putative author Nāgārjuna provides an interpretation of emptiness (ŚŪNYATĀ) in twelve chapters. Each chapter begins with an introductory verse, supplemented in some cases with additional exegetical verses; the text is thus composed of twenty-six verses in total. Prose exegeses follow, explaining each of the verses. All verses except the seven opening ones are quoted from the *Mūlamadhyamakakārikā* (seventeen verses) or the *Śūnyatāsaptatikārikā* (C. *Kong qishi lun*) (two verses), which is also attributed to Nāgārjuna. The authorship of this text has been questioned even within the tradition. The San lun exegete JIZANG (549–623), in his commentary to the text, the *Shi'ermun lun shu*, attributes the verses to Nāgārjuna and the prose part to Piṅgala (d.u.), the sixth patriarch of the Madhyamaka school.

shi fajie. (J. jihokkai; K. sa pŏpkye 事法界). In Chinese, "dharma-realm of phenomena," the first of the four DHARMADHĀTUS (see SI FAJIE), according to the HUAYAN ZONG. The "dharma-realm of phenomena" refers to the fact that all phenomena (SHI) are discrete events, created according to their own unique causal process and demonstrating their own distinctive function. They are characterized by a conditioned, and therefore illusory, nature, and stand as objects of cognizance that abide by rules of causality and conventional language.

A common Huayan simile compares the different phenomena to the waves on the ocean, each composed and sustained by different sets of causes and conditions. The Huayan school polemically designates this particular level of reality as belonging to the purview of the "HĪNAYĀNA teachings" (XIAOSHENG JIAO)—which is called the xiaojiao, or "lesser vehicle," in the Huayan school's fivefold taxonomy of the teachings (HUAYAN WUJIAO)—and specifically to the ABHIDHARMA, with its meticulous treatment of distinct factors (DHARMA), categories of dharmas, and the causal relations that pertain between them all.

shi fajie. (J. jippōkai; K. sip pŏpkye 十法界). In Chinese, "ten DHARMADHĀTUs"; the ten realms of reality according to Buddhist cosmology as described, e.g., in the Chinese TIANTAI ZONG: the realms of hell denizens (NĀRAKA), hungry ghosts (PRETA), animals (TIRYAK), demigods (ASURA), humans (MANUṢYA), and celestial divinities (DEVA) belong to the six destinies (GATI) of unenlightened beings, whereas the realms of ŚRĀVAKAs, PRATYEKABUDDHAs, BODHISATTVAs, and buddhas make up the four categories of enlightened beings. See also DAŚADHĀTU.

shifang cha. (J. jippōsetsu; K. sibang ch'al 十方刹). In Chinese, lit. "realms of the ten directions," referring to all the world systems or universes in existence. The "cha" in shifang cha is a transcription of the Sanskrit term KṢETRA, and means realm, world, land, etc.; thus, it may also refer to a universe consisting of three thousand large chiliocosms, thus a "trichiliocosm" (TRISĀHASRAMAHĀSĀHASRALOKADHĀTU). "Ten directions" (C. shifang; S. DAŚADIŚ) refers to the four cardinal directions (north, east, south, west), the four ordinal, or intercardinal, directions (northeast, southeast, southwest, northwest), plus the zenith and the nadir. By covering every possible direction, the "ten directions" therefore comes to be used by extension to mean "everywhere." Thus, shifang cha is similar in connotation to the expressions "worlds of the ten directions" (shifang shijie; daśadiglokadhātu) or "lands of the ten directions" (shifang chatu). ¶ Shifang cha is also used in Chinese to mean "monastery of the ten directions," referring to Song-dynasty public monasteries that adopted the "institution of the abbacy of the ten directions" (SHIFANG ZHUCHI ZHI). In this usage, "cha" is instead a transliteration of the first syllable of the Sanskrit term CAITYA, a reliquary cairn or STŪPA that often was placed in front of the main shrine hall in a monastery and thus by metonymy indicated the monastery itself. The abbacy of the ten directions referred to a system of monastic succession in which a monk of particular renown was invited to serve as abbot of the monastery, regardless of his personal connection to the lineage of the preceding abbot. Monasteries whose abbots were thus chosen from the broader "ten directions," rather than from within a single, narrow monastic or ordination lineage, were termed "monasteries of the ten directions" (shifang cha, alt. shifang conglin). Monasteries whose control was passed within a single monastic lineage were private monasteries, and called lit. "small temples" (XIAOMIAO).

shifang conglin. (十方叢林). In Chinese, "monasteries of the ten directions"; an alternate term for SHIFANG CHA.

shifang zhuchi zhi. (十方住持制). In Chinese, "institution of the abbacy of the ten directions." See SHIFANG CHA.

shijiao. (始教). In Chinese, "inception teaching" of the MAHĀYĀNA. See HUAYAN WUJIAO.

Shijingshan. (石經山). In Chinese, "Stone Scriptures Hill." See FANGSHAN SHIJING; YUNJUSI.

shijue. (J. shikaku; K. sigak 始覺). In Chinese, "acquired," or "actualized enlightenment," one of the two main subdivisions of enlightenment outlined in the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna"), along with "original" or "inherent enlightenment" (BENJUE). As the *Dasheng qixin lun* explains, although enlightenment is in fact innate in the mind of any sentient being, that mind is still subject to "production-and-cessation" (shengmie), viz., the continual process of creation and passing away that is inevitable in the conditioned realm of existence (SAṂSĀRA). But because that production-and-cessation aspect of mind is itself grounded on the embryo of buddhahood (TATHĀGATAGARBHA), conventional states of mind inherently retain the capacity to be transformed into "true thusness" (ZHENRU), the ultimate state of reality. This transformation takes place through the process of "actualized enlightenment," that is, undertaking religious cultivation, which in the *Dasheng qixin lun* specifically means serenity and insight meditation (ZHIGUAN) and no-thought practice (WUNIAN). This process of actualizing enlightenment occurs over four stages of cultivation: (1) the "nonenlightenment" (bujue) of the ordinary worldling who has just entered the path at the level of the ten stages of faith (shixin); (2) the "apparent enlightenment" (xiangsijue) of two-vehicle adherents (ER SHENG) and beginning BODHISATTVAs on the stages of the "three worthies" (sanxian), that is, the ten abodes (shizhu), ten practices (shixing), and ten transferences or dedications (shihuixiang); (3) the "approximate enlightenment" (suifen jue) of DHARMAKĀYA bodhisattvas (fashen pusa) at the stage of the first BHŪMI and above; and (4) the "ultimate enlightenment" (jiujingjue), which occurs at the consummation of the ten bhūmis (pusa jindi). At the completion of this actualization process, however, one realizes that the enlightenment one has achieved through practice is in fact identical to the enlightened dharma-body (DHARMAKĀYA) that has always been innate; thus "actualized enlightenment" is no different from "original enlightenment." Any apparent differences between these two are but a matter of perspective: the innate luminosity and purity of the tathāgatagarbha and dharmakāya are seen as "original" (viz., "intrinsic") by the sage, but as something that must be "actualized" by the ordinary person.

shikan taza. (C. zhiguan dazuo; K. chigwan t'ajwa 祇/只管打坐). In Japanese, "just sitting"; a style of meditation emblematic of

the Japanese SŌTŌSHŪ of ZEN, in which the act of sitting itself is thought to be the manifestation of enlightenment. The Sōtō school attributes the introduction of this style of practice to DŌGEN KIGEN (1200–1253), who claimed to have learned it from his Chinese CAODONG ZONG teacher TIANTONG RUJING (1162–1227). In this degenerate age of the dharma (J. mappō; C. MOFA), Sōtō claims, a radical simplification of practice was necessary. Rather than attempting to master the full range of meditative techniques used for concentrating the mind, such as counting the breaths (J. susokukan) or investigating a Zen question (J. kanna Zen; C. KANHUA CHAN), Dōgen is claimed to have advocated "just sitting" in the posture that had been used by the buddhas (e.g., ŚĀKYAMUNI's seven days beneath the BODHI TREE) and the patriarchs of Zen (e.g., BODHIDHARMA's "wall contemplation," C. BIGUAN). As the later Sōtō school interprets shikan taza, by maintaining this posture of "just sitting," the mind would also become stabilized and concentrated in a state of full clarity and alertness, free from any specific content (i.e., "with body and mind sloughed off," J. SHINJIN DATSURAKU). By adopting this posture of the buddhas and patriarchs, the student's own body and mind would thus become identical to the body and mind of his spiritual ancestors. Shikan taza is therefore portrayed as the most genuine form of meditation in which a Buddhist adept can engage. The Sōtō tradition also deploys shikan taza polemically against the rival RINZAISHŪ, whose use of kōans (C. GONG'AN) in meditation training was portrayed as an inferior, expedient attempt at concentration. In Dōgen's own writings, however, there is little of this later Sōtō portrayal of the psychological dimensions of "just sitting"; instead, Dōgen uses shikan taza simply as a synonym of "sitting in meditation" (zazen, C. ZUOCHAN), and may have spent most of his time while "just sitting" in the contemplation of kōans.

shi mi. (事密). In Chinese, "esoteric as to practices." See ER MI.

Shin Arahan. An eleventh-century Mon monk credited with bringing THERAVĀDA Buddhism to Burma (Myanmar). According to legend, Shin Arahan (in Pāli, Dhammadassi) was the reincarnation of a NAT, born to a brāhmaṇa virgin wife in the Thaton region in the south of Burma. He attained the state of ARHAT shortly after his ordination. He learned that the dharma was being practiced impurely in the "western regions" (viz., PAGAN [Bagan]) and proceeded there. In Pagan, monks called ari had polluted the dharma, proclaiming that murder was permissible if the proper spells (MANTRA) are recited. They also required that all virgins have intercourse with them before marriage. The newly ordained king ANAWRAHTA (Anuruddha, r. 1044–1077) recognized that these monks were corrupt but was unable to remove them from the order. When Shin Arahan arrived in Pagan, he was discovered by a hunter who had never seen a monk before. Mistaking him for a spirit, he took him to the king. Shin Arahan preached a sermon that impressed the king, who asked him where the Buddha was, how much of the dharma remained, and if there were other disciples of the Buddha. Shin Arahan recounted the history of the Buddha and his relics and described the Pāli canon and the monastic order. The king then adopted Theravāda as the practice of his kingdom and defrocked the ari monks. He asked the Mon king to send a copy of the tipiṭaka (S. TRIPIṬAKA) and some relics of the Buddha. When the Mon king refused, Anawrahta invaded Thaton in 1057, taking the Mon king and his family captive. He also took monks and skilled craftsmen, as well as Pāli scriptures, back with him to Pagan.

shinbutsu bunri. (神佛分離). In Japanese, lit. "separation of spirits and buddhas" (spirits here referring to the deities, or KAMI, associated with the indigenous Japanese religion now referred to as SHINTŌ); an official policy established at the beginning of the Meiji period (1868–1912) to dissociate all aspects of indigenous Japanese religion, or Shintō, from Buddhism. Prior to this separation, Buddhist temples (J. tera) and Shintō shrines (J. jinja) were intimately connected complexes (J. jingūji; see SHINBUTSU SHŪGŌ), as were the practice, beliefs, and vocations of the two traditions. The policy of shinbutsu bunri was based in part on an argument first broached by Nativist scholars during the Tokugawa period (1600–1868): viz., that Shintō reflected Japan's true spirit, while the "foreign" imports of Buddhism and Confucianism had corrupted Japanese culture and tainted Japanese indigenous religion. The Meiji government built its foundation on this rhetoric by making Shintō a state cult and asserting that the emperor was a descendant of the indigenous deities (kami) described in the *Kojiki* (712), an early historical collection. Shinbutsu bunri was a successful government policy in that it helped to strengthen Shintō and give the tradition its own identity independent from the Buddhist institutions that had been patronized by the earlier Tokugawa bakufu government. Moreover, shrines around the country were ranked in a national hierarchy and provided with state funding; all citizens were also required to register as adherents at these shrines. The policy, however, also had a damaging impact on both Shintō and Buddhism. By forcibly separating many practices that had previously been shared between Shintō and Buddhism, shinbutsu bunri ended up replacing many long-held traditions in local communities with a newly imposed set of national practices and beliefs. State-sponsored shrines were now expected to comply with nationally oriented ceremonies and carry out government-specific agendas. Many smaller Shintō shrines, which did not receive state sponsorship, were forced to merge with larger regional shrines, thus severely diminishing their presence in many communities. As for Buddhist institutions, the government remained silent as a wave of anti-Buddhist sentiment known as HAIBUTSU KISHAKU swept the country, leaving temples to face targeted violence and destruction. The mountain complexes of SHUGENDŌ, which had never differentiated between the two traditions, received the harshest treatment from the policy: all their established practices were abolished and Shugendō priests were forced either to laicize or to become Shintō priests.

shinbutsu shūgō. (神佛習合). In Japanese, "unity of spirits and buddhas" (spirits here referring to the KAMI associated with the indigenous Japanese religion now referred to as SHINTŌ). The practice of associating local gods and spirits with buddhas and BODHISATTVAs is documented as early as the late seventh century. By the eighth century, Shintō shrines (J. jinja) and Buddhist temples (J. TERA) were being jointly constructed beside one another. Over the course of the Heian period (794–1185), Buddhism gradually became ingrained deeply within local belief systems in communities across Japan, requiring some sort of accommodation between local and imported religions. As Buddhism became central to Japanese religious practice, the kami were sometimes either categorized as inferior beings subject to suffering who therefore needed the guidance of the Buddhist teachings, or tasked with guarding Buddhist temples and shrines. Ultimately, kami were redefined, using the principle of HONJI SUIJAKU, as local manifestations of the universal deities of the Buddhist religion. The development of temple-shrine complexes (J. jingūji), which did not differentiate between the two traditions, followed, although the shrine priests were generally subservient to their better educated, and politically and socially connected, Buddhist counterparts. During the Tokugawa period (1600–1868), tensions appeared as Nativist scholars began identifying "Shintō" as Japan's pure, indigenous religion, which they advocated should be decontaminated of so-called "foreign" elements like Buddhism and Confucianism. When the Meiji government took power in 1868, it instituted a policy known as SHINBUTSU BUNRI, which forcibly separated the putative native "Shintō" tradition from Buddhism. See also HAIBUTSU KISHAKU.

Shinchi Kakushin. (心地覺心) (1207–1298). Japanese ZEN teacher in the RINZAISHŪ, who is retrospectively regarded as the founder of the small FUKESHŪ branch of the Zen tradition; also known by his posthumous title HOTTŌ KOKUSHI. He became a monk at the age of fourteen in the SHINGONSHŪ esoteric tradition, and received full ordination at twenty-nine at TŌDAIJI in Nara, the ancient capital of Japan. Shinchi studied esoteric teachings at KŌYASAN, the headquarters of the Shingon school, and engaged in Zen training under the Rinzai master Taikō Gyōyū (1163–1241) and the SŌTŌSHŪ master DŌGEN KIGEN (1200–1253). Shinchi left for China in 1249 to study under the Chinese Linji master WUZHUN SHIFAN (1177–1249). Unfortunately, the master died before Shinchi arrived, so Shichi instead traveled to Hangzhou to study under WUMEN HUIKAI (1183–1260), in the YANGQI PAI of the LINJI ZONG. Wumen is said to have given Shinchi dharma transmission (CHUANFA) after just six months of training. Shinchi returned to Japan in 1254 with the master's robe and portrait, as well as a copy of the master's WUMEN GUAN, which was the first introduction of that famous GONG'AN (J. kōan) collection to the Japanese isles. In present-day Wakayama prefecture, Shinchi built a monastery called Saihōji, which was later renamed Kōkokuji. Shinchi resided there for the rest of his life, but often traveled to Kyōto to lecture on Buddhism before the retired monarchs Gofukakusa (r. 1246–1259), Kameyama (r. 1259–74) and Gouda (r. 1274–87). Kameyama granted him the honorary title "Hottō Zenji" (Zen Master Dharma Lamp). After his death, the Emperor Godaigo (r. 1318–1339) later bestowed on him the posthumous title of Hottō Enmyō Kokushi (State Preceptor Lamp of Dharma that is Perfectly Bright). Shinchi came to be regarded as the founder of the Fukeshū, a smaller secondary school of Japanese Zen, whose itinerant practitioners played the bamboo flute (shakuhachi) as a form of meditation and wore a distinctive bamboo hat that covered the entire face. The school was proscribed in 1871 and vanished from the scene.

Shingonshū. (眞言宗). In Japanese, lit. "True Word School." Shingon is the Japanese pronunciation of the Chinese term ZHENYAN (true word), which in turn is a translation of the Sanskrit term MANTRA. In Japan, Shingon has also come to serve as the name for the various esoteric (MIKKYŌ) traditions that traced their teachings back to the eminent Japanese monk KŪKAI. In his voluminous oeuvre, such as the HIMITSU MANDARA JŪJŪSHINRON, HIZŌ HŌYAKU, *Sokushin jōbutsugi*, and *Shōji jissōgi*, Kūkai laid the foundations of a new esoteric discourse that allowed the Buddhist institutions of the Heian period to replace Confucian principles as the ruling ideology of Japan. Kūkai was able to effect this change by presenting the court and the Buddhist establishment with an alternative conception of Buddhist power, ritual efficacy, and the power of speech acts. Through Kūkai's newly imported ritual systems, monks and other initiated individuals were said to be able to gain access to the power of the cosmic buddha Mahāvairocana, understood to be the DHARMAKĀYA, leading to all manner of feats, from bringing rain and warding off disease and famine, to achieving buddhahood in this very body (SOKUSHIN JŌBUTSU). Kūkai taught the choreographed ritual engagement with MAṆḌALA, the recitation of MANTRAS and DHĀRAṆĪ, and the performance of MUDRĀ and other ritual postures that were said to transform the body, speech, and mind of the practitioner into the body, speech, and mind of a particular buddha. Kūkai's ritual teachings grew in importance to the point that he was appointed to the highest administrative post in the Buddhist establishment (sōgō). From this position, Kūkai was able to establish ordination platforms at the major monasteries in Nara and the capital in Kyōto. Later, the emperor gave Kūkai both TŌJI in Kyōto and KŌYASAN, which subsequently came to serve as important centers of esoteric Buddhism. Kūkai's Shingon mikkyō lineages also flourished at the monasteries of Ninnaji and DAIGOJI under imperial support. Later, Tōji rose as an important institutional center for the study of Kūkai's esoteric Buddhist lineages under the leadership of the monk Kangen (853–925), who was appointed head (zasu) of Tōji, Kongōbuji, and Daigoji. The Mt. Kōya institution also grew with the rise of KAKUBAN, who established the monasteries of Daidenbōin and Mitsugonin on the mountain. Conflict brewed between the monks of Kongōbuji and Daidenbōin when Kakuban was appointed the

head of both institutions, a conflict that eventually resulted in the relocation of Daidenbōin to nearby Mt. Negoro in Wakayama. The Daidenbōin lineage came to be known as the Shingi branch of Shingon esoteric Buddhism. Attempts to unify the esoteric Buddhist traditions that claimed descent from Kūkai were later made by Yūkai (1345–1416), who eradicated the teachings of the "heretical" TACHIKAWARYŪ from Mt. Kōya, and worked to establish a Kūkai-centered Shingonshū orthodoxy. By the late medieval period, the major monastic landholding institutions in Kyōto, Nara, and Mt. Kōya, many of which were profoundly influenced by the teachings of Kūkai, suffered economic hardship with the initiation of the Warring States period (1467–1573) and the growing popularity of the so-called "Kamakura Schools" (e.g., JŌDOSHŪ, JŌDO SHINSHŪ, ZENSHŪ, and NICHIRENSHŪ). In particular, Oda Nobunaga (1534–1582) had crushed the major Buddhist centers on HIEIZAN. However, Mt. Kōya, which was still a thriving center for the study of Kūkai's Shingon esoteric Buddhism, was spared the same fate because the monks resident at the mountain successfully convinced Toyotomi Hideyoshi (1536–1598) not to burn down their center. Thanks to the political stability of the Tokugawa regime, studies of esoteric Buddhism thrived until the harsh persecution of Buddhism by the Meiji government (see HAIBUTSU KISHAKU). As an effort to recover from the Meiji persecution, the disparate traditions of esoteric Buddhism came together under the banner of the Shingonshū, but after World War II, the various sub-lineages reasserted their independence.

Shin hpyu Shin hla Pagoda. Shin hpyu Shin hla Pagoda or Zedi (Pāli, cetī) was built by the famous king of PAGAN (Bagan), Alaung-sithu (r. 1112/3–1168). It is located in the Sagaing Hills, which lie along the Irrawaddy (Ayeyarwady) River in Upper Burma (Myanmar). The pagoda receives its name from the two images of the Buddha interred in it, named Shin hpyu and Shin hla. It is said that Alaung-sithu received these statues as a gift from the king of the gods Thagya Min (P. Sakka; S. Śakra) when the latter descended from his abode in the heaven of the thirty-three (P. tāvatiṃsa; S. TRĀYASTRIṂŚA). King Alaung-sithu was particularly beloved by his subjects and is regarded in Burmese chronicles as one of the few Burmese monarchs to have been a hpaya-laung (P. bodhisatta; S. BODHISATTVA). An annual festival is held at Shin hpyu Shin hla Pagoda on the new moon day of the Burmese month of Tawthalin (September-October).

shinjin datsuraku. (C. shenxin tuoluo; K. sinsim t'allak 身心脫落). In Japanese, lit. "body and mind sloughed off," the psychological state generated during the practice of "just sitting" (SHIKAN TAZA), a style of meditation emblematic of the Japanese SŌTŌSHŪ of ZEN. The Sōtō school attributes this term to DŌGEN KIGEN (1200–1253), who claimed to have learned it from his Chinese CAODONG teacher TIANTONG RUJING (1162–1227). During the practice of "just sitting," the adept should sit with "body and mind sloughed off," that is, with the body and mind stabilized and concentrated in a state of full clarity and alertness that is free from any specific content. Once all conception of body and mind had fallen away, the "original face" (J. honrai menmoku, C. BENLAI MIANMU) of inherent enlightenment will then appear. Dōgen is said to have achieved enlightenment through hearing his teacher Rujing describe practice as "the sloughing off of body and mind." This phrase is mentioned in only a single passage of Rujing's discourse record (YULU), however. Rujing's record also includes the homophonous phrase shinjin datsuraku (C. xinchen tuoluo), or "defilements of mind sloughed off." It is uncertain which form of the phrase Dōgen might have heard, but it seems to have had much more significance for Dōgen than for Rujing.

Shinran. (親鸞) (1173–1262). Japanese priest who is considered the founder of the JŌDO SHINSHŪ, or "True PURE LAND School." After the loss of his parents, Shinran was ordained at age nine by the TENDAISHŪ monk Jien (1155–1225) and began his studies at HIEIZAN. There, he regularly practiced "perpetual nenbutsu" (J. nenbutsu; C. NIANFO), ninety-day retreats in which one circumambulated a statue of the buddha AMITĀBHA while reciting the nenbutsu. In 1201, he left Mt. Hiei and became the disciple of HŌNEN, an influential monk who emphasized nenbutsu recitation. Shinran was allowed to copy Hōnen's most influential (and at that time still unpublished) work, the SENCHAKUSHŪ. When Hōnen was exiled to Tosa in 1207, Shinran was defrocked by the government and exiled to Echigo, receiving a pardon four years later. He did not see Hōnen again. Shinran would become a popular teacher of nenbutsu practice among the common people, marrying (his wife Eshinni would later write important letters on pure land practice) and raising a family (the lineage of the True Pure Land sect is traced through his descendants), although he famously declared that he was "neither a monk nor a layman" (hisō hizoku). While claiming simply to be transmitting Hōnen's teachings, Shinran made important revisions and elaborations of the pure land doctrine that he had learned from Hōnen. In 1214, he moved to the Kantō region, where he took a vow to recite the three pure land sūtras (J. Jōdo sanbukyō; C. JINGTU SANBU JING) one thousand times. However, he soon stopped the practice, declaring it to be futile. It is said that from this experience he developed his notion of shinjin. Although literally translated as "the mind of faith," as Shinran uses the term shinjin might best be glossed as the buddha-mind realized in the entrusting of oneself to Amitābha's name and vow. Shinran often would contrast self-power (JIRIKI) and other-power (TARIKI), with the former referring to the always futile attempts to secure one's own welfare through traditional practices such as mastering the six perfections (PĀRAMITĀ) of the bodhisattva path to buddhahood, and the latter referring to the sole source of salvation, the power of Amitābha's name and his vow. Thus, Shinran regarded the Mahāyāna practice of dedicating merit to the welfare of others to be self-power; the only dedication of merit that was important was that made by the bodhisattva DHARMĀKARA, who vowed to become the buddha Amitābha

and establish his pure land of SUKHĀVATĪ for those who called his name. He regarded the deathbed practices meant to bring about birth in the pure land to be self-power; he regarded multiple recitations of NAMU AMIDABUTSU to be self-power. Shinran refers often to the single utterance that assures rebirth in the pure land. This utterance need not be audible, indeed not even voluntary, but is instead heard in the heart as a consequence of the "single thought-moment" of shinjin, received through Amitābha's grace. This salvation has nothing to do with whether one is a monk or layperson, man or woman, saint or sinner, learned or ignorant. He said that if even a good man can be reborn in the pure land, then how much more easily can an evil man; this is because the good man remains attached to the illusion that his virtuous deeds will somehow bring about his salvation, while the evil man has abandoned this conceit. Whereas Hōnen sought to identify the benefits of the nenbutsu in contrast to other teachings of the day, Shinran sought to reinterpret Buddhist doctrine and practice in light of Amitābha's vow. For example, the important Mahāyāna doctrine of the EKAYĀNA, or "one vehicle," the buddha vehicle whereby all sentient beings will be enabled to follow the bodhisattva path to buddhahood, is interpreted by Shinran to be nothing other than Amitābha's vow. Indeed, the sole purpose of ŚĀKYAMUNI Buddha's appearance in the world was to proclaim the existence of Amitābha's vow. These doctrines are set forth in Shinran's magnum opus, an anthology of passages from Buddhist scriptures, intermixed with his own comments and arranged topically, entitled KYŌGYŌ SHINSHŌ ("Teaching, Practice, and Realization of the Pure Land Way"), a work that he began in 1224 and continued to expand and revise over the next three decades. Shinran did not consider himself to be a master and did not establish a formal school, leading to problems of authority among his followers when he was absent. After he left Kantō for Kyōto, for example, problems arose among his followers in Kantō, leading Shinran to write a series of letters, later collected as TANNISHŌ ("Lamenting the Deviations").

Shintō. (J) (神道). In Japanese, lit. "The Way of the Spirits (KAMI)"; modern designation used to refer to a supposedly indigenous religion of Japan distinct from Buddhism. Shintō (alt. jindō) was originally a Buddhist term that designated the realm or course (tō) of the local gods and spirits (shin), in distinction to tendō, the Indian divinities who populated the Buddhist celestial heavens (SVARGA). The term therefore referred to an amorphous complex of local beliefs, myths, and rituals that were focused on village and clan tutelary gods called KAMI. During the medieval period, this amorphous set of beliefs was gradually being systematized on a broader scale, but always in conjunction with, and under the strong influence of, Buddhism. It was only in 1868, with the start of the Meiji Restoration, that there was a forced separation of the kami and the buddhas (SHINBUTSU BUNRI), which artificially created two distinct and autonomous religions: the putatively autochthonous Japanese religion of Shintō and the imported traditions of Japanese Buddhism. See HAIBUTSU KISHAKU; HONJI SUIJAKU; KAMI; SHINBUTSU BUNRI; SHINBUTSU SHŪGŌ.

Shin Upagot. A semi-immortal ARHAT who, according to Burmese (Myanmar) and Thai popular tradition, dwells in a gilded palace beneath the southern ocean. Shin Upagot (P. Upagutta, S. UPAGUPTA) is endowed with extraordinarily long life and is destined to survive until the coming of the future buddha, MAITREYA. According to Burmese legend, Shin Upagot was ordered by the Buddha not to pass into PARINIRVĀṆA until Maitreya had appeared so that he might protect the Buddha's religion during times of crisis. Shin Upagot is renowned for assisting King AŚOKA to construct eighty-four thousand STŪPAS, and for vanquishing MĀRA and converting him to Buddhism. The earliest known record of the legend of Shin Upagot as it is known in Southeast Asia is found in the *Lokapaññatti*, a Pāli cosmological text said to have been written at Thaton in the twelfth century. That recension of the legend, in turn, is based on Sanskrit Buddhist antecedents found in such works as the AŚOKĀVADĀNA, all of which recount the exploits of the Upagupta. The legend of Shin Upagot is celebrated in the Burmese royal chronicles (yazawin), *Mahayazawin-gyi* (c. 1730) and *Hmannan Mahayazawin-daw-gyi* (1829), while the story is omitted from all Burmese ecclesiastical chronicles (thathanawin), presumably because it is not attested in Pāli sources. Shin Upagot is regarded as a protector of sailors, and because of his powers to control the weather, he is propitiated to prevent rainfall at inopportune times. He is depicted iconographically as a monk seated cross-legged, looking skyward, with his right hand reaching into his alms bowl.

shi rushi. (J. jūnyoze; K. sip yŏsi 十如是). In Chinese, the "ten suchnesses" (also known as the shiru); ten "suchlike" aspects of reality, as outlined in the SADDHARMAPUṆḌARĪKASŪTRA: all dharmas are of suchlike characteristics (xiang), nature (xing), essence (TI), efficacy (li), function (YONG), causes (yin), conditions (yuan), fruitions (guo), retributions (bao), and suchlike "equivalency ultimately from beginning and end" (benmuo jiujing deng; referring to all the nine previous "suchnesses"). The doctrinal significance of these "ten suchnesses" was interpreted and promoted by the TIANTAI ZONG. TIANTAI ZHIYI argued that by reading this passage with different emphases, it corresponds respectively to each of the three independent modes of contemplation in the "threefold contemplation" system (see SANGUAN). By emphasizing the term "suchness"—i.e., the characteristics of all dharmas are such (shixiang ru), the nature of all dharmas is such (shixing ru), etc.—this passage illuminates the "contemplation of emptiness," because emptiness (ŚŪNYATĀ) is the unifying principle for all ten aspects of reality and the term "empty" is synonymous with "suchness." By emphasizing the suchlike characteristics (rushi xiang), suchlike nature (rushi xing), etc., this same passage could instead illuminate the "contemplation of conventional existence," since existence is characterized by

myriad distinct aspects that can be differentiated by such conventional categories as "characteristics," "nature," and "essence." Finally, by emphasizing "the suchness of characteristics" (xiang rushi), the "suchness of nature" (xing rushi), etc., the passage points out how this profound "suchness" contains and simultaneously affirms the aspects of both "emptiness" and "conventional existence," therefore corresponding to the "contemplation of the middle" in the "threefold contemplation" scheme. See also TATHATĀ.

shi shenme. (J. kore ikana; K. si simma 是甚麼). In Chinese, "What is it?"; the fundamental existential question (see GONG'AN, HUATOU) asked within the CHAN school, especially in association with the technique of "questioning meditation" (KANHUA CHAN). See also IMWŎTKO.

shishi wu'ai fajie. (J. jijimugehokkai; K. sasa muae pŏpkye 事事無礙法界). In Chinese, "dharma-realm of the unimpeded interpenetration between phenomenon and phenomena," the fourth of the four dharma-realms (DHARMADHĀTU), according to the HUAYAN ZONG. In this Huayan conception of ultimate reality, what the senses ordinarily perceive to be discrete and separate phenomena (SHI) are actually mutually pervading and mutually validating. Reality is likened to the bejeweled net of the king of the gods INDRA (see INDRAJĀLA), in which a jewel is hung at each knot in the net and the net stretches out infinitely in all directions. On the infinite facets of each individual jewel, the totality of the brilliance of the expansive net is captured, and the reflected brilliance is in turn re-reflected and multiplied by all the other jewels in the net. The universe is in this manner envisioned to be an intricate web of interconnecting phenomena, where each individual phenomenon owes its existence to the collective conditioning effect of all other phenomena and therefore has no absolute, self-contained identity. In turn, each individual phenomenon "creates" the universe as it is because the totality of the universe is inconceivable without the presence of each of those individual phenomena that define it. The function and efficacy of individual phenomena so thoroughly interpenetrate all other phenomena that the respective boundaries between individual phenomena are rendered moot; instead, all things are mutually interrelated with all other things, in a simultaneous mutual identity and mutual intercausality. In this distinctively Huayan understanding of reality, the entire universe is subsumed and revealed within even the most humble of individual phenomena, such as a single mote of dust, and any given mote of dust contains the infinite realms of this self-defining, self-creating universe. "Unimpeded" (wu'ai) in this context therefore has two important meanings: any single phenomenon simultaneously creates and is created by all other phenomena, and any phenomenon simultaneously contains and is contained by the universe in all its diversity. A common Huayan simile employs the image of ocean waves to describe this state of interfusion: because individual waves form, permeate, and infuse all other waves, they both define all waves (which in this simile is the ocean in its entirety), and in turn are defined themselves in the totality that is the ocean. The Huayan school claims this reputedly highest level of understanding to be its exclusive sectarian insight, thus ranking it the "consummate teaching" (YUANJIAO) in the scheme of the HUAYAN WUJIAO (Huayan fivefold taxonomy of the the teachings).

Shitennōji. (四天王寺). In Japanese, "Four Heavenly Kings Monastery," a Buddhist temple located in Ōsaka, Japan, which tradition presumes to be the oldest monastery in Japan. The *Nihon shoki* ("Chronicles of Japan"), compiled in 720, claims that the monastery was founded in 593 by the semilegendary figure Prince Shōtoku (SHŌTOKU TAISHI, 572–621) who made a vow that he would build a temple dedicated to the four heavenly kings (CĀTURMAHĀRĀJA), the guardian divinities (DEVA) of Buddhism, if his pro-Buddhist SOGA clan was able to defeat the anti-Buddhist Mononobe clan in battle in 587. At the time of its construction, as the monastery's name indicates, the four heavenly kings were enshrined as the main objects of veneration in the monastery; but from the Heian period (794–1185) onward, the bodhisattva Kannon (AVALOKITEŚVARA) replaced them as the main tutelary deity in the monastery. The temple was affiliated with the TENDAISHŪ until 1948, when it became nonsectarian. Shitennōji has been reconstructed several times during its history; the main basilica in the monastery was rebuilt in 1963.

Shitou Xiqian. (J. Sekitō Kisen; K. Sŏktu Hŭich'ŏn 石頭希遷) (700–790). In Chinese, "Rare Transformation Atop a Stone"; master in the Tang-dynasty CHAN ZONG, who was an important ancestor in the lineages of the CAODONG ZONG, YUNMEN ZONG, and FAYAN ZONG, three of the five major houses of the mature Song-dynasty Chan tradition (see WU JIA QI ZONG). Xiqian is claimed to have studied with the sixth patriarch (LIUZU) HUINENG (638–713) while still a youth and was present at the master's deathbed. He subsequently traveled to Qingyuanshan in modern-day Jiangxi province to study with a monk who was claimed to have been one of the sixth patriarch's most eminent disciples: QINGYUAN XINGSI (d. 740). Xingsi is said to have thought highly of his new disciple, famously calling him a unicorn among the other horned animals in his congregation, and eventually made Xiqian his principal dharma heir (FASI). In 742, after his teacher's death, he traveled to Mt. Nanyue (present-day Hunan province), where he lived in a hermitage built on top of a large boulder, hence his cognomen Shitou ("Atop a Stone"). In 762, he traveled to Tanzhou near present-day Changsha, before returning to Mt. Nanyue, where he passed away at the age of ninety. Although during his lifetime Xiqian seems to have been a fairly obscure teacher in a little-known regional lineage, he retrospectively came to be viewed as one of the two most influential teachers of the classical Chan period, along with MAZU DAOYI (709–788). This inflated appraisal is largely a result of the prominence of Xiqian's third–generation successor DONGSHAN LIANGJIE (807–869), one of

the two teachers after whom the Caodong school is named. Xiqian is the author of the CANTONG QI, regarded by the Chinese Caodong zong and Japanese SŌTŌSHŪ as one of their foundational scriptures. Xiqian's short verse, in a total of 220 Sinographs, is highly regarded for its succinct and unequivocal expression of the teaching of nonduality.

shiwang. (J. jūō; K. siwang 十王). In Chinese, "ten kings" [of hell]. See YAMA.

shi xuanmen. (J. jūgenmon; K. sip hyŏnmun 十玄門). In Chinese, "the ten mysteries"; the systematic elaboration of the implications of causality (PRATĪTYASAMUTPĀDA) and existence in the doctrinal system of the HUAYAN ZONG. ZHIYAN (602–668), the second patriarch of the Huayan lineage, first elaborated the ten profound mysteries in order to outline ten specific perspectives on the "dependent origination of the DHARMADHĀTU" (FAJIE YUANQI), viz., the perspectives of: (1) the interrelationship between all things, (2) simile (i.e., of Indra's Net, INDRAJĀLA), (3) conditionality, (4) characteristics, (5) time, (6) practice, (7) principle, (8) function, (9) mind, and (10) wisdom. This original listing was elaborated by FAZANG (643–712), the third patriarch of the school, to explain instead the dharmadhātu of the unimpeded interpenetration between all phenomena (see SHISHI WU'AI FAJIE): viz., all dharmas simultaneously have a distinct, independent existence, and yet are still thoroughly pervaded by one other; they thus mutually define, yet do not impede the distinctiveness of, each other. Fazang's revised listing of the "ten mysteries" comes to be definitive within the school:

1. Simultaneity (tongshi juzu xiangying men): The mutual creation of any one thing and all things does not take place sequentially, but simultaneously.
2. Immensity (guangxia zizai wu'ai men): The relative size of any single thing is derived from that of all things, just as the immensity of all things is derived from any one thing.
3. Abundance (yiduo xiangrong butong men): The number "one" is meaningful only in distinction to "many," and vice versa. "One" and "many" thus define and pervade one another, and yet the distinctiveness of the two concepts is left intact.
4. Identity (zhufa xiangji zizai men): Any one thing is defined by all other things, and vice versa; there is no identity of any one thing beyond the contextual definition it derives from the totality of all things, and vice versa.
5. Manifestation (yinmi xianliao jucheng men): The revelation of any one thing relies on the concealment of all other things, just as the manifestation of all other things requires the concealment (e.g., the shifting of attention away from) of any one thing, and vice versa.
6. Diminutiveness (weixi xiangrong anli men): The smallest number encapsulates infinity, the smallest mote of dust contains the most immense of world-systems, and the shortest duration of time spans incalculable eons. Yet, number, size, and time retain their logical order of magnitude amidst this scheme of things.
7. Indra's Net (Yintuoluo wang fajie men): Just as with the reflective jewels at each knot of the infinitely expansive Indrajāla, any one phenomenon captures and reflects the images of all phenomena. The images of all phenomena are thus reflected infinitely in a single instant as they are redirected to, and multiplied within, all the facets of the myriad jewels that make up Indra's Net.
8. Analogy (tuoshi xianfa shengjie men): The abstruse can be made known by analogies that draw on the plain and the obvious. Although the abstruse and the plain are distinct in their relative profundity, the principle they thus evince is one and the same.
9. Time (shishi gefa yicheng men): Although time can be divided into past, present, and future, from the perspectives of each of the three temporal periods, different sets of the past, present, and future can be delineated. All of the nine temporal periods (viz., the past, present, and future of the past, present, and future) are in turn subsumed in one instant of thought, which together make a total of ten temporal periods. These ten thus mutually "enter" (ru), subsume, and define each other.
10. Centrality (zhuban yuanming jude men): Each of the aforementioned categories explains and validates all the others. When focus is directed at any particular category, all the others become subordinate, and the one at hand becomes predominant. Each category involves the same principle of being collectively substantiated by all categories together. The same is true with all phenomena: the relation between centrality and marginality is relative and mutually substantiating.

Shiyuan. (C) (師遠). See KUO'AN SHIYUAN.

shizhong. (C) (示衆). See CHUISHI.

Shizun nianhua. (J. Seson nenge; K. Sejon yŏmhwa 世尊拈花). In Chinese, "The World-Honored One holding up a flower." See NIANHUA WEIXIAO.

Shōbōgenzō. (正法眼藏). In Japanese, "Treasury of the True Dharma Eye"; the magnum opus of the Japanese ZEN master DŌGEN KIGEN (1200–1253); the title refers to the Zen (C. CHAN) school, which is considered to be the repository of the insights of the buddha ŚĀKYAMUNI himself, transmitted through the lineage of the CHAN patriarchs (ZUSHI) starting with MAHĀKĀŚYAPA. A work bearing the same title (C. ZHENGFAYANZANG) by the eminent Song-dynasty Chinese monk DAHUI ZONGGAO was probably the inspiration for Dōgen's own title. Dōgen's oeuvre contains two works with this title. The first is a collection of 301 kōan (C. GONG'AN) cases, composed in literary Chinese, known as the *Shinji Shōbōgenzō* or the *Mana*

Shōbōgenzō. The second is a collection of essays written in Japanese, known as the *Kana* [viz., "vernacular"] *Shōbōgenzō*, which is the better known of the two and which will be the focus of this account. The *Shōbōgenzō* is a collection of individual essays and treatises that Dōgen composed throughout his eventful career. Its earliest included treatise is the BENDŌWA composed in 1231 and the latest is the *Hachidainingaku* composed in 1253, the year of Dōgen's death. Although the *Shōbōgenzō* seems to have been all but forgotten after Dōgen's death, later successors in the Japanese Sōtō Zen tradition, such as MANZAN DŌHAKU (1636–1715), TENKEI DENSON (1648–1735), and MENZAN ZUIHŌ (1683–1769), and the layman Ōuchi Seiran (1845–1918) rediscovered the text and their influential commentaries on it helped to make Dōgen's magnum opus the central scripture of the Sōtō Zen tradition. Six different editions of the *Shōbōgenzō* are known to exist: the "original" volume edited by Dōgen in seventy-five rolls, the twelve-roll Yōkōji edition, the sixty-roll Eiheiji edition edited by Giun (1253–1333), the eighty-four roll edition edited by Bonsei (d. 1427) in 1419, the eighty-nine roll edition edited by Manzan Dōhaku (1636–1715) in 1684 at Daishōji, and the ninety-five roll edition edited by Kōzen (1627–1693) in 1690 at Eiheiji. The seventy-five roll edition is today the most widely consulted and cited. Many of the essays were originally sermons delivered by Dōgen, such that some are written by him and others were recorded by his disciples. Late in his life, he began to revise the essays, completing the revision of twelve of them before his death. The essays are renowned for their subtle and elliptical style, clever word play, and sometimes enigmatic meanings. Part of their difficulty arises from the fact that Dōgen quotes liberally from Buddhist sūtras and the works of Chinese masters, but also interprets these passages quite ingeniously. Dōgen also invented a number of Buddhist neologisms that were largely unique to him, including creative "mis"-readings of original Chinese passages. For example, in his famous essay "Uji" ("Being Time"), Dōgen reads the quotidian Chinese compound youshi ("at a certain time") to suggest the identity of "being" (C. you, J. u) and "time" (C. shi, J. ji): i.e., since impermanency governs all compounded things, those things are in fact time itself. The text includes extensive discussions of the foundations of Zen thought, the meaning and significance of awakening (SATORI), as well as detailed instructions on the ritual procedures for performing sitting meditation (J. ZAZEN; C. ZUOCHAN), as in the chapter FUKAN ZAZENGI. The *Shōbōgenzō* remains a source of great interest to scholars and practitioners of Zen. See also SŌTŌSHŪ.

Shōbōgenzō zuimonki. (正法眼藏隨聞記). In Japanese, lit., "Treasury of the Eye of the True Dharma, Record of What Was Heard," a work by Koun Ejō (1198–1280), a disciple of DŌGEN KIGEN. The book is essentially a collection of notes taken by Kuon on talks, instructions, and advice given by Dōgen. Kuon's notes circulated in manuscript form before finally being printed in 1651. The text is considered to be more practical and accessible than Dōgen's much larger and prolix SHŌBŌGENZŌ.

Shōkokuji. (相国寺). In Japanese, "Ministering to the State Monastery," an important ZEN Buddhist monastery located just adjacent to the old imperial grounds in the ancient Japanese capital of Kyōto. The monastery was built in 1382 by Ashikaga Yoshimitsu (1358–1408), the third shōgun of the Muromachi (1337–1573) shogunate. The Zen master Shunnoku Myōha (1311–1388) was supposed to be installed as the abbot of the new monastery, but he instead insisted that his own teacher, MUSŌ SOSEKI (1275–1351), an eminent Zen master associated with the RINZAISHŪ, be posthumously designated its founding abbot. The temple was listed as the second of the so-called GOZAN (five mountains) temples of Kyōto, and served as a center of Zen culture during the period. The monastery continued to be sponsored by the subsequent Tokugawa (1603–1868) shogunate. The temple structures often suffered serious damage, including the monastery's complete destruction during the Ōnin war (1467–1477), and has been repeatedly reconstructed. The temple now serves as the head monastery of the Shōkokuji branch of the contemporary Rinzai school and has nearly a hundred affiliated branch temples, including the famous Golden Pavilion (KINKAKUJI).

Shōrai mokuroku. (J) (請來目錄). In Japanese, "Catalogue of Items Brought from China"; a roster of esoteric scriptures and ritual implements that the Japanese SHINGONSHŪ founder KŪKAI brought back with him to Japan in the early ninth century. See KŪKAI.

Shōshitsu rokumonshū. (少室六門集). In Japanese, "Collection of Six Treatises from Small Caves," a Japanese anthology of works attributed to BODHIDHARMA, the legendary Indian monk and founder of the CHAN school. "Small caves" (shaoshi) refers to the western peak of SONGSHAN, where Bodhidharma purportedly spent nine years facing a wall in meditation (see BIGUAN) near the monastery of SHAOLINSI. The anthology includes the *Xinjing song* ("Panegyric to the 'Heart Sūtra'"), *Poxiang lun*, *Erzhong ru* (see ERRU SIXING LUN), *Anxin famen*, *Wuxing lun*, and XUEMO LUN. The *Shōshitsu rokumonshū* was published sometime during the late Kamakura period and was republished in 1647, 1667, and 1675.

Shōtoku Taishi. (聖德太子) (572–622). Japanese statesman of the Asuka period (593–710) and second son of Emperor Yōmei (r. 585–587), who is traditionally assumed to have played an important role in the early dissemination of Buddhism in Japan. He is also known as Umayado no Miko (Prince Stable Door), but by the eighth century, he became known as Shōtoku Taishi (lit. Prince Sagacious Virtue). Given that the earliest significant writings on the life of Shōtoku Taishi come from two early histories, the *Kojiki* (712) and *Nihon shoki* (720), which are both written nearly a century after his death, little can

be said definitively about his biography. According to the traditional accounts in these two texts, Suiko (554–628), the aunt of Prince Shōtoku and the Japanese monarch, appointed her nephew regent in 593, giving him broad political powers. Thanks to his enlightened leadership, Prince Shōtoku is credited with numerous historical achievements. These include the promotion of Buddhism within the court under an edict he issued in 594; promulgation of the Seventeen-Article Constitution in 604, which stresses the importance of the monarchy and lays out basic Buddhist and Confucian principles; sponsorship of trade missions to China; construction of the monasteries of HŌRYŪJI and SHITENNŌJI; authorship of two chronological histories (*Tennōko* and *Kokki*); and composition of three of the earliest Buddhist commentaries in Japan, on the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), VIMALAKĪRTINIRDEŚA, and ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA ("Lion's Roar of Queen Śrīmālā"), which demonstrate his deep familiarity with Mahāyāna Buddhist doctrine. The credibility of Prince Shōtoku's achievements as described in the *Kojiki* and *Nihon Shoki* is undermined by fact that both texts were commissioned by the newly empowered monarchy in an attempt to strengthen its political standing. Some scholars have thus argued that because the new royal family wanted to identify itself with the powerful instrument of the new religion, they selected the person of Prince Shōtoku, who shared their lineage, to serve as the first political patron of Buddhism in Japan. This historical narrative focused on Prince Shōtoku thus denigrated the importance of the defeated SOGA clan's extensive patronage of Buddhism. As early as the Nara period (710–794), Prince Shōtoku began taking on legendary, even mythical status, and was eventually transformed into one of Japan's greatest historical figures, representing the quintessence of Buddhist religious virtue and benevolent political leadership. Priests often dedicated temples to him or transferred the merit of religious enterprises to Shōtoku. Both SHINRAN (1173–1263) and NICHIREN (1222–82) dedicated written works to his name. Throughout the Heian (794–1185) and Kamakura (1185–1333) periods, what is now referred to as the cult of Shōtoku Taishi was widely popular and members of the aristocracy regularly venerated him (a practice referred to as Taishi shinkō, lit. devotion to the Prince).

Shouduan. (C) (守端) (1025–1072). See BAIYUN SHOUDUAN.

Shousui. (C) (守遂) (1072–1147). See DAHONG SHOUSUI.

shouzuo. (J. shuza; K. sujwa 首座). In Chinese, "chief seat," the title held by one of the six prefects (C. TOUSHOU) of a CHAN monastery. The chief seat is in charge of dealing with any infractions of the monastic code and notifying the appropriate authorities of any problems within the monastery. His primary role is to serve as a model of good behavior for the other monks in the SAṂGHA hall (SENGTANG). The chief seat, for instance, leads the assembly in various matters such as eating, chanting, and meditating.

shuchao. (J. shuchō/juchō; K. such'o 竪超). In Chinese, "the tortuous (lit. vertical) deliverance/escape." In PURE LAND polemics, it is claimed that if a practitioner strictly relies on one's own effort (see JIRIKI) to attain liberation, it would involve an arduous, "vertical" ascent through successive stages of ever-deeper meditative absorptions and ever-more-daunting spiritual fruitions. Pure land followers argue that an expeditious, "horizontal" shortcut (cf. HENGCHAO) is possible, by which one simply has to travel "westward" instead of "upward"—i.e., by being reborn into AMITĀBHA Buddha's western pure land (see SUKHĀVATĪ), one will be liberated from the rounds of rebirth in one fell swoop.

Shugendō. (修驗道). In Japanese, lit. the "Way of Cultivating Supernatural Power," a Japanese esoteric tradition that is focused on an intensive ascetic regiment of training in the mountains. Its practitioners claim as their founder EN NO OZUNU ([alt. En no Gyōja], En the Ascetic) (b. 634), a semilegendary ascetic from the mountains of KATSURAGISAN on the border between present-day Nara and Ōsaka prefectures, who is venerated for his shamanic powers and for being the prototypical shugenja (lit. one who cultivates supernatural powers). Before it evolved into an independent religious entity, Shugendō was a wide-ranging set of religious practices that included elements drawn from many traditions, lineages, and institutions, including Japanese TENDAI (TIANTAI), SHINGON, Nara Buddhism, ZEN, PURE LAND movements, Daoism, and local indigenous beliefs. Its practitioners, who were known as YAMABUSHI (lit. those who lie down [or sleep] in the mountains), were largely itinerant, spending much of their time in the mountains, which Japanese regarded as numinous places that housed the spirits of the dead. Through severe austerities in the mountains, such as immersion under waterfalls, solitary confinement in caves, fasting, meditating, and the recitation of spells (MANTRA), practitioners strove to attain buddhahood in this very body (SOKUSHIN JŌBUTSU) and accumulate power that would benefit others. As Shugendō evolved into a distinctive tradition during the mid- to late-Heian period (794–1185), Shugendō mountain centers either became linked with Tendai and Shingon institutions or continued to operate and expand independently. Mountains that were especially important to Shugendō included the Yoshino peaks in Nara prefecture, KUMANO in Wakayama prefecture, Haguro in Yamagata prefecture, Hiko in Kyūshū, and Ishizuchi in Shikoku. During this period, the aristocratic nobility, including a long succession of monarchs and retired monarchs, patronized the Yoshino and Kumano mountains. Shugenja guided these visitors on pilgrimage and performed magical and religious rites for them. Pilgrimages became increasingly popular and became a significant source of revenue for many of these mountain centers. Under the temple regulations (J. jiin hatto) imposed by the shōgun Tokugawa Ieyasu (1543–1616) at the start of the Tokugawa period (1600–1868), Shugendō sites were forced to align with either the Tendai Shugen branch of Honzan, administered by

the temple of Shōgoin, or the Shingon branch of Tōzan, administered by Sanbōin, both located in Kyōto. Itinerant practitioners largely settled down and began performing rituals and offering prayers in villages. Due to sectarian strife between the two schools, in 1707 the Tōzan branch named as its founder Shōbō (a.k.a. Rigen Daishi; 832–909), who had established Daigoji at Mt. Yoshino. Shugendō was proscribed in 1872 during the Meiji persecution of Buddhism, as the government tried to purge Shintō-affiliated traditions of their "foreign" elements. However, Shōgoinryū, the primary branch of the Honzan school, was returned to the religious rolls in 1892. When religious freedom was restored in postwar Japan, many Shugendō institutions resumed their former rituals and traditions, although not to the same extent as they had previously. While a multitude of indigenous gods (KAMI), buddhas, and bodhisattvas have been venerated historically at Shugendō sites around Japan, Kongō Zaō Gongen, a deity in the Ōmine mountains who was venerated by En no Ozunu, gradually became the central deity in Shugendō. Other significant objects of worship include En no Ozunu himself, who is thought to have manifested himself as Hōki Bosatsu (the bodhisattva DHARMODGATA); Shōbō, an incarnation of Nyoirin Kannon (Cintāmaṇicakra AVALOKITEŚVARA); and Fudō Myōō (ACALANĀTHA-VIDYĀRĀJA), a wrathful DHARMAPĀLA of the VAJRAYĀNA pantheon.

shugenja. (J) (修驗者). In Japanese, lit. "one who cultivates supernatural powers"; a shaman or, in specific contexts, a practitioner of SHUGENDŌ. See also YAMABUSHI.

Shug gseb. (Shuksep). A Tibetan nunnery located south of LHA SA on a site originally sanctified by the great female adept MA GCIG LAB SGRON. The nunnery and its connected retreat center were established by GYER SGOM TSHUL KHRIM SENG GE, founder of the SHUG GSEB BKA' BRGYUD subsect of Tibetan Buddhism. Due to its close proximity to GANGS RI THOD DKAR, a favored retreat site of RNYING MA master KLONG CHEN RAB 'BYAMS, the nunnery developed a close relationship with the Rnying ma sect from the fourteenth century onwards. The nunnery was home to an important female incarnate lama (SPRUL SKU), the Shug gseb Rje btsun ma (Shuksep Jetsunma).

Shug gseb bka' brgyud. (Shuksep Kagyü). One of the four major and eight minor subsects of the BKA' BRGYUD sect of Tibetan Buddhism (BKA' BRGYUD CHE BZHI CHUNG BRGYAD), considered to have been founded by GYER SGOM TSHUL KHRIM SENG GE, a disciple of the Bka' brgyud hierarch PHAG MO GRU PA RDO RJE RGYAL PO.

Shūhō Myōchō. (J) 宗峰妙超. See SŌHŌ MYŌCHŌ.

shuilu hui. (J. suirikue; K. suryuk hoe 水陸會). In Chinese, "water and land assembly," a Buddhist ritual intended for universal salvation, although it was also sometimes directed only to deceased next of kin; the ceremony was also performed for a variety of this-worldly purposes, such as state protection (see HUGUO FOJIAO) and rain-making. The name "water and land" derives from its intent to save living creatures who inhabit the most painful domains of SAṂSĀRA, whether in water or on land. The ceremony, which typically took seven days to complete, was held at two different sites, the inner altar and the outer altar. The main performance was held at the inner altar, which was divided into an upper hall and a lower hall. The enlightened beings—buddhas, BODHISATTVAS, ARHATS, and guardian deities of the three jewels (RATNATRAYA)—were invited and feted with offerings at the upper hall; the unenlightened beings, specifically beings subject to the six rebirth destinies (GATI), were invited and feted at the lower hall. Once summoned to the lower hall at the inner altar, the unenlightened assembly was divested of its afflictions (KLEŚA), asked to pay homage to the enlightened assembly, and received offerings of both food and the dharma, which sent them on their way to the PURE LAND. According to the earliest extant records of the ceremony, none of which predate the Song period, the shuilu hui was first performed in 505 by the monk BAOZHI (418–514) at the behest of Emperor Wu (r. 502–549) of the Liang dynasty, with the VINAYA master and scriptural cataloguer SENGYOU (445–518) serving as chief celebrant. The same Song-period sources claim that the ceremony was revived by a monk during the Xianheng era (670–674), after its sudden disappearance following the collapse of the Liang dynasty. It was not until the tenth century, however, that there is independent confirmation in non-Buddhist sources of actual performances of the ceremony and it was not until the eleventh century that it seems to have achieved widespread popularity. According to the monk Zunshi (964–1032), the larger monasteries in the southeast of China maintained separate halls, called either shuilu tang or shuilu yuan, which were devoted entirely to the performance of the ceremony. In the Southern Song period, many of the largest monasteries throughout the realm had a "water and land hall" on their grounds. In Korea, the suryuk hoe was first performed in 971 and became popular during the early Chosŏn dynasty, with the royal family being its main supporter. There are several Chinese and Korean manuals that provide directions for performing the ritual, including the *Shuilu yiwen* ("Ritual Text for the Water and Land Ceremony") in three rolls, written by a Song-dynasty layman in 1071. The canonical locus classicus for the practice is the story of Jalavāhana in the SUVARṆAPRABHĀSOTTAMASŪTRA.

Shuiyue Guanyin. (J. Suigatsu Kannon; K. Suwŏl Kwanŭm 水月觀音). In Chinese, "Moon in the Water AVALOKITEŚVARA"; a representation of the BODHISATTVA GUANYIN that is frequently depicted in East Asian art. The name of this bodhisattva derives from this image's most characteristic feature: a luminous disk that encircles the bodhisattva and evokes both a nimbus (see KĀYAPRABHĀ) and a full moon, effectively suggesting its power to dispel the darkness of the night. Another connotation is

indicated in texts such as the DAZHIDU LUN (**Mahāprajñāpāramitāśāstra*), where the term "moon in the water" connotes that all phenomena are like reflections of the moon on the surface of the water, thereby signifying insubstantiality and impermanence. The origin of Shuiyue Guanyin and its iconography is said to be based on the GAṆḌAVYŪHA section of the AVATAṂSAKASŪTRA, which describes the quest for ultimate truth by the youth SUDHANA. During his pilgrimage, Sudhana encounters Guanyin at the latter's sacred island home of POTALAKA. Artists used this account of Potalaka as the basis for Shuiyue Guanyin images from the eighth century onwards. The first Shuiyue Guanyin is presumed to have been painted by Zhou Fang (active c. 780–810 CE), but the earliest extant depiction appears on a silk banner at DUNHUANG dated to 943: Shuiyue Guanyin appears in the lower right of a large painting of the thousand-armed and thousand-eyed Guanyin (SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA). There, the deity is seated on a rock outcropping surrounded by water, posed in majestic ease, attired in beautiful robes and sashes with intricate details on his robes and jewelry. Behind him is a lush bamboo grove with sheer, mountainous cliffs. Further standard attributes of Shuiyue Guanyin are the image of the buddha AMITĀBHA in his crown as well as a willow branch and a KUṆḌIKĀ bottle placed to the figure's right. Water spread by means of a willow branch was thought to have a healing effect on the believer. The island of Potalaka was believed to be located somewhere in the ocean south of India, but by the late Tang dynasty the Chinese had identified it with PUTUOSHAN, an island offshore from Zhejiang province near the seaport of Ningbo. It is probably due to maritime contacts between Ningbo and the Korean peninsula that Shuiyue Guanyin depictions became popular during the Koryŏ dynasty in Korea. Koryŏ images of Shuiyue Guanyin are especially renowned for their splendor and this form of the bodhisattva remains common in Korean Buddhist painting.

shuji. (J. shoki; K. sŏgi 書記). In Chinese, "scribe." Also known as the SHUZHUANG (lit. "letters"); one of the six prefects (C. TOUSHOU) at a CHAN monastery. The "scribe" was in charge of writing all the letters, prayers, and documents for the monastic community.

shumidan. (C. xumi tan; K. sumi tan 須彌壇). In Japanese, "MT. SUMERU altar," also known as the shumiza, or Mt. Sumeru throne; the elevated altar or platform in a Japanese Buddhist shrine, on which the central icons are placed. The shumidan is so named because it was modeled after Mt. Sumeru, the central axis of the world in Buddhist cosmology. The altar's origins are found in a legend about the buddha ŚĀKYAMUNI, who was said to have gone away for several months to TRĀYASTRIṂŚA heaven, located at the peak of Mt. Sumeru, to preach to his mother, MĀYĀ. Due to his long absence, some of his adherents made images of the missing Śākyamuni (see UDĀYANA BUDDHA), which they placed on a model of the mountain. Typically constructed in either square or octagonal shape, the shumidan is usually made of wood, metal, or stone and is decorated with various symbols. The square shape may symbolize the four sides of Mt. Sumeru, which are made of four types of jewels, generally listed as silver in the east, crystal in the west, lapis lazuli in the south, and gold in the north. The octagonal shape, by contrast, is said to represent the eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). The shumidan is composed of upper, middle, and lower tiers. The Kamakura-period shumidan is a square-shaped altar constructed in a sophisticated style rich with symbolic meaning: its middle level consists of one thick, but narrow, tier, along with sixteen thinner tiers that gradually widen out in each direction toward both the top and the bottom. According to Buddhist esoteric teachings, the sixteen tiers toward the top represent the sixteen great bodhisattvas in the wisdom gate (J. emon); the sixteen tiers toward the bottom represent the sixteen great bodhisattvas in the meditation gate (J. jōmon); the four jewels, represented by a square shape, symbolize the five wisdoms, because the four jewels as a group symbolize the "wisdom that is the essential nature of the dharma realm" (J. hokkai taishōchi) and each jewel symbolizes the remaining four of the five wisdoms. Finally, the total of these thirty-two square-shaped tiers symbolizes the beings depicted in the diamond realm (J. KONGŌKAI) MAṆḌALA. The shumidan as a whole represents the mind of awakening (J. bodaishin; S. BODHICITTA), with which all sentient beings are endowed. In CHAN and ZEN monasteries, a shumidan without any displayed icon is placed in the dharma hall for the abbot or master to ascend for such occasions as the SHANGTANG ceremony.

shuzhuang. (J. shojō; K. sŏjang 書狀). In Chinese, "letters." Epistolary exchanges between monks and their disciples seems to have been an important didactic technique in China, especially from the Song dynasty onwards. The most prominent monks were members of the lettered intelligentsia in China and letters were an important means of transmitting their teachings. Such didactic correspondence was typically not meant to be private and an eminent monk was well aware that the letters he wrote would circulate among his students and disciples. Such letters might be framed as an exchange with the recipient, but they typically remove the formulaic openings and conclusions common with personal letters and thus become virtually indistinguishable from essays. In addition to such didactic letters, a teacher's letters might also include formulaic ritual letters and personal notes between master and student or close acquaintances, which would typically not have circulated beyond the recipient. Chan masters in particular were well known for their wide-ranging epistolary exchanges with literatocrats (shidafu) and other monks. One of the most famous set of letters is the DAHUI PUJUE CHANSHI SHU, the letters of the LINJI ZONG CHAN teacher DAHUI ZONGGAO; of the sixty-two letters in Dahui's collection, sixty of them were written to laypeople and only two to fellow monks. ¶ The term shuzhuang can also refer to the "scribe" (SHUJI) at a Buddhist monastery, who was in charge

of drafting all letters, announcement posters, and written prayers for the monastic community. See also SŎJANG; YULU.

Shwedagon. In Burmese, "Golden Dagon"; monumental golden pagoda (B. JEDI; S. STŪPA; P. thūpa) that dominates the skyline of Rangoon (Yangon), capital of Burma (Myanmar); named after Dagon, the ancient name of Rangoon. According to Burmese and Mon legend, the pagoda was built during the Buddha's lifetime to house eight hair relics given to TRAPUṢA and BHALLIKA, two merchants from Ukkala who are said to have been the first disciples of the Buddha. The original account, which appears in the Pāli canon, places Ukkala in what is most likely modern-day ĀNDHRA, on the eastern coast of India. Mon-Burmese recensions of the story locate Ukkala at Dagon, acknowledgement of which is retained in the names Myauk Okkala-pa (North Ukkala) and Daung Okkala-pa (South Ukkala) given to Rangoon's suburbs. The Shwedagon is situated atop a two hundred-foot high hill, whose summit was leveled to create the four-acre plaza or platform that now surrounds the base of the shrine. The pagoda platform is approached by four covered stairways facing the cardinal directions, at the base of which are ornate entrances flanked by colossal Chinthe lions. The pagoda itself was repeatedly expanded and embellished over the centuries, reaching its current height of 326 feet in the fifteenth century. Constructed of brickwork, it is in the classical Burmese pagoda form of an inverted bell rising from an octagonal pyramidal base. These elements support a graceful spire crowned with a hti, or finial umbrella, that is encrusted with diamonds, rubies, pearls, and other gems of inestimable value. The hti also has many wind chimes, which gently tinkle in the constant breeze. The base of the pagoda is more than a quarter-mile in circumference and the entire structure is covered in gold, the accumulated munificence of generations of royal donors. Sixty-four smaller pagodas surround the main structure at its base, and at the four cardinal directions are shrines containing colossal statues of the four buddhas who have appeared in the world during the present fortunate eon (P. bhaddakappa; S. BHADRAKALPA). (See SAPTATATHĀGATA.) At one corner of the platform is a miniature replica of the main shrine, no more than a hundred feet tall. The smaller pagoda is affectionately known as the Shwedagon's older brother, as it was the model upon which the current main pagoda was based. At each corner of the Shwedagon's octagonal base is an alabaster statue of the Buddha dedicated to one of the eight days of the Burmese week (Wednesday being counted as two days), where it is believed to be especially auspicious for people born on those days to pray. A broad circumambulatory walkway paved in white marble rings the Shwedagon, which in turn is flanked with hundreds of lesser shrines dating mostly from the colonial period. Many types of religious piety are performed individually and in groups on the platform of the pagoda, such as the giving of DĀNA, freeing captured animals, processing candidates for the novitiate (B. shin-pyu), sweeping the plaza, lustrating images, reciting PARITTA texts, taking precepts, silent prayer, and meditation (B. taya a-to; P. BHĀVANĀ).

Shwegyin. The second largest monastic fraternity (B. GAING; P. GAṆA) of modern Myanmar (Burmese) Buddhism comprising approximately five percent of the monastic population of the country. It is preceded in size by the majority THUDHAMMA GAING, which comprises 85–90% of the Burmese monkhood. The Shwegyin gaing was founded in the mid-nineteenth century and was one of three reformist monastic gaing to emerge during the reign of the Burmese king, MINDON (r.1853–1878), along with the DWAYA GAING and the Hngettwin gaing. The Shwegyin gaing takes its name from its founder, the first SHWEGYIN SAYADAW, U Zagara (P. Jāgara) (1822–1893), a renowned scholar-monk from the village of Shwegyin in Upper Burma. U Zagara was especially strict in his observance of VINAYA and insisted, as did the leaders of the other reformist gaing, that monks who scrupulously followed the vinaya were in no need of oversight by the royally appointed THUDHAMMA Council, an ecclesiastical body established to govern the Burmese saṅgha (S. SAṂGHA) throughout the kingdom. King Mindon granted U Zagara and his disciples autonomy (P. gaṇavimutti) from Thudhamma control in 1860, marking the beginning of the Shwegyin gaing as an independent self-governing monastic fraternity. The Shwegyin Sayadaw established a network of monasteries in Upper and Lower Burma that were uniform in practice and institutional structure and regulated by its own gaing-specific hierarchical leadership. The Shwegyin gaing thus replicated for itself a system of monastic governance that the Thudhamma Council had been designed to provide for the Burmese saṅgha as a whole. This internal organization, along with the fraternity's emphasis on monastic discipline and Buddhist scholarship, enabled the Shwegyin gaing to survive and even flourish during the dislocations brought about by British conquest in 1885, which led to the dissolution of the Thudhamma Council and disestablishment of Buddhism as the state religion. Shwegyin monks can be distinguished from monks of other gaing by minor points of outward deportment. They are required to cover both shoulders with the upper robe whenever leaving their monastic compound, for example, unlike Thudhamma monks who require this style of attire only on such formal occasions as alms rounds or giving sermons. Shwegyin monks are not allowed to smoke tobacco, use umbrellas, or handle money. Shwegyin monasteries are also distinguished from those of other gaing in that they do not require lay people to remove their footwear when entering the monastic compound.

Shwegyin Sayadaw. (1822–1893). In Burmese, "Senior Monk from Shwegyin," honorific title of U Zagara (P. Jāgara), a prominent nineteenth-century reformist scholar-monk and founder of the SHWEGYIN GAING, which today is the second largest monastic fraternity (B. GAING; P. GAṆA) in the Burmese saṅgha (S. SAṂGHA). U Zagara was born in Shwegyin village near

Shwebo in Upper Burma. As a novice (P. sāmaṇera; S. ŚRĀMAṆERA) and as a young monk (P. BHIKKHU; S. BHIKṢU) he studied under many of the prominent abbots of his time, and according to some sources was a colleague of the learned and ultra-orthodox Okpo Sayadaw, U Okkamwuntha (P. Okkaṃvaṃsa), founder of the DWAYA GAING, in British-occupied Lower Burma. Like the Okpo Sayadaw, U Zagara emphasized Pāli scholarship and scrupulous attention to monastic discipline (P. VINAYA) as the foundation of the Buddha's religion (P. sāsana; S. ŚĀSANA), qualities which brought him to the attention of the Burmese king, MINDON (r. 1853–1878). King Mindon, who had inaugurated a revival and reform of Buddhism throughout his kingdom, appointed U Zagara as a royal preceptor (B. SAYADAW) and built for him an elaborate monastic complex at the foot of Mandalay Hill. This attention soon brought U Zagara into conflict with the powerful THUDHAMMA Council, a royally appointed ecclesiastical body charged with governing the Burmese saṅgha of the kingdom. After a falling out with the Thudhamma patriarch (B. thathanabaing; P. SAṄGHARĀJĀ), U Zagara petitioned the king for autonomy (P. gaṇavimutti) from Thudhamma control, which the king granted. He and his disciples thus formed the nucleus of the new Shwegyin gaing. Some years after the death of the Thudhamma patriarch, during the reign of Burma's last king, Thibaw (1878–1885), U Zagara was invited along with another senior monk to jointly head the Thudhamma Council. U Zagara declined the offer, focusing his energies instead on expanding the reach of the Shwegyin gaing throughout Upper and Lower Burma. The strong emphasis placed by U Zagara and his successors on Buddhist scholarship, monastic discipline, and strict institutional organization of member monasteries allowed the Shwegyin gaing to successfully weather the tumultuous years following the British conquest of the Burmese kingdom in 1885, which saw the dissolution of the Thudhamma Council and disestablishment of Buddhism as the state religion.

Śibi. (P. Sivi; T. Shi bi; C. Shipi; J. Shibi; K. Sibi 尸毘). A king who is the protagonist of a famous JĀTAKA tale. There are two different stories associated with him. In the first, versions of which also appear in the Hindu epics, Śibi is a king renowned for his generosity. Seeking to test the limits of his charity, the divinities (DEVA) ŚAKRA and AGNI take the form of a hawk and a dove. Pursued by the hawk, the dove seeks shelter in the king's lap. The hawk agrees to spare the dove if the king will offer in exchange flesh equal to the weight of the dove. A scale is produced and the king cuts off a piece of his own flesh. However, the gods manipulate the scale so that no matter how much of his flesh the king cuts off and places on the scale, it never equals the weight of the dove. Eventually, the king is reduced to a skeleton, at which point the gods reveal their true identity and make the king whole again. In the second version of the story, which appears in the JĀTAKAMĀLĀ and other sources, Śakra, the king of the gods, hears of the king's generosity and seeks to test it. He takes the form of a blind brāhmaṇa, who goes to King Śibi and asks that the king give him his eyes. The king agrees and has his eyes removed and given to the blind man, restoring his sight. Again, the god reveals his true identity and returns the king's eyes. Both versions are famous examples of the BODHISATTVA's "gift of the body" (DEHADĀNA), which he makes as part of his practice of the perfection of giving (DĀNA-PĀRAMITĀ). See also SHE SHEN.

sidalingshan. (C) (四大靈山). In Chinese, "four great numinous mountains"; the four major sacred mountains of Chinese Buddhism. See EMEISHAN; JIUHUASHAN; PUTUOSHAN; WUTAISHAN.

siddha. (T. grub thob). In Sanskrit, lit. "accomplished," viz., an "adept," referring especially in tantric literature to a person who is accomplished in tantric practice and has attained SIDDHI. The siddha began to emerge in India as a new kind of Buddhist saint as early as the fifth century, perhaps under the influence of Śaivism, and continuing through the decline of Buddhism in India. The siddha embodies an ideal that stands outside both the monastic context as well as that of conventional lay Buddhist practice. See MAHĀSIDDHA.

Siddham. (C. Xitan; J. Shittan; K. Siltam 悉曇). In Sanskrit, "Accomplished" or "Perfected"; a North Indian written script descended from BRAHMĪ and an ancestor of Devanāgarī, the script in which Sanskrit and Hindi are written today. The use of Siddham is preserved only in East Asian Buddhism, the script having been introduced to China in the eighth century in order to transcribe DHĀRAṆĪ and MANTRA. KŪKAI is said to have introduced the Siddham script to Japan from China in 806 CE. The script is closely associated with the esoteric Buddhist traditions of East Asia (J. MIKKYŌ), in which the writing system itself became an object of visualization and veneration, as a written representation of the sounds enunciated in mantra and dhāraṇī. Siddham is also said to have influenced the development of the indigenous Japanese kana writing system, which is associated with Kūkai. Often in traditional sources, when an East Asian monk is said to know "Sanskrit" (Fanwen), what is really meant is that he is able to read Siddham and to recite correctly passages written in that script.

siddhānta. (T. grub mtha'; C. zong; J. shū; K. chong 宗). In Sanskrit, "conclusion" or "tenet," the term is used to refer to the various schools of Indian philosophy (both Buddhist and non-Buddhist), to their particular positions, and to texts that set out those positions in a systematic fashion. The most important examples of Buddhist siddhānta texts in India are BHĀVAVIVEKA's [alt. Bhavya] autocommentary (called TARKAJVĀLĀ) on his MADHYAMAKAHṚDAYAKĀRIKĀ and ŚĀNTARAKṢITA's TATTVASAṂGRAHA; both set forth the positions of non-Buddhist and Buddhist philosophies in order to demonstrate the superiority of their respective MADHYAMAKA positions. They are paralleled in Indian non-Buddhist literature by

Śaṅkarācārya's *Brahmasūtrabhāsya*, for example, that sets forth the views of nāstika (heterodox) and āstika (orthodox) schools and shows the weaknesses and strengths in each as a strategy to demonstrate the superiority of Śaṅkara's own Advaita Vedānta philosophy. None of these Indian works were written simply as informative textbooks about the tenets of different Indian schools of thought. They instead have clear polemical agendas: namely, demonstrating the superiority of their own position, and showing how the lesser philosophies are either a hindrance or a stepping stone to their own philosophy, as revealed by the Buddha in the case of Buddhist siddhānta, and by the Vedas in the case of non-Buddhists. The *Sarvadarśanasaṃgraha*, a medieval work written from the perspective of a later Advaita school based on Śaṅkara's model, was important during the early reception of Buddhism in Europe and America in the nineteenth century because it cites the works of different schools of philosophy, including YOGĀCĀRA and Madhyamaka writers that were otherwise unknown at the time. As a literary genre, siddhānta reaches its full development in Tibet, where ever more detailed classifications of Indian and later Chinese, Tibetan, and Mongolian schools of Buddhism are found. Of particular importance are works known by the names of their authors: Dbu pa blo gsal (Upa Losel) (fl, fourteenth century), the first 'JAM DBYANGS BZHAD PA (1648–1721), and Lcang skya Rol pa'i rdo rje (1717–1786). Customarily Tibetan Buddhist siddhāntas employ the following structure: under the rubric of non-Buddhist (T. phyi pa) philosophies, they discuss the positions of the six schools that include Nyāya, Vaiśeṣika, JAINA, Sāṃkhya, Yoga, and Mīmāṃsā. They are all dismissed as inferior, based on their assertion of the existence of a self (ĀTMAN) and a creator deity (īśvara), both positions that are refuted in Buddhism. The Buddhist schools are set forth in ascending order, starting with the HĪNAYĀNA schools of VAIBHĀṢIKA and SAUTRĀNTIKA, followed by the Mahāyāna schools of Yogācāra and Madhyamaka. A typical structure for the presentation of each school was a tripartite division into the basis (gzhi), which set forth matters of epistemology and ontology; the path (lam), which set forth the structure of the path according to the particular school; and the fruition ('bras bu), which set forth the school's understanding of the enlightenment of ARHATs and buddhas. In Tibet, the genre of siddhānta was later expanded to include works that set forth the various sects and schools of Tibetan Buddhism and Chinese Buddhism. Cf. JIAOXIANG PANSHI.

Siddhārtha. (P. Siddhattha; T. Don grub; C. Xidaduo; J. Shiddatta/Shittatta; K. Siltalta 悉達多). In Sanskrit, "He Who Achieves His Goal," the personal name of GAUTAMA Buddha, also known as ŚĀKYAMUNI. In some accounts of the life of the Buddha, after his royal birth as the son of King ŚUDDHODANA, the BODHISATTVA was given this name and is referred to by that name during his life as a prince and his practice of asceticism. In the LALITAVISTARA, he is named Sarvārthasiddha, "He Who Achieves the Welfare of All." After his achievement of buddhahood, Siddhārtha is instead known as Gautama, Śākyamuni, or simply the TATHĀGATA. The name is perhaps best known in English as the title of the 1922 novel by Hermann Hesse, in which the protagonist (who is not the Buddha) is named Siddhartha.

siddhi. (T. dngos grub; C. xidi/chengjiu; J. shijji/jōju; K. silchi/sŏngch'wi 悉地/成就). In Sanskrit, "attainment" or "success," a power attained through tantric practice, often through the propitiation of a deity and the recitation of MANTRAS. Two types are identified: (1) mundane attainments (S. SĀDHĀRAṆASIDDHI), which are magical powers such as the ability to fly, to paralyze an enemy, to attract a lover, and to find buried treasure; and (2) the supreme attainment (S. UTTAMASIDDHI), viz., the attainment of buddhahood.

si fajie. (J. shihōkai/shihokkai; K. sa pŏpkye 四法界). In Chinese, "four DHARMADHĀTUS"; four successively more profound levels of reality as outlined in the HUAYAN ZONG: (1) the dharmadhātu of phenomena (SHI FAJIE); (2) the dharmadhātu of principle (LI FAJIE); (3) the dharmadhātu of the unimpeded interpenetration between phenomena and principle (LISHI WU'AI FAJIE); (4) the dharmadhātu of the unimpeded interpenetration between phenomenon and phenomena (SHISHI WU'AI FAJIE). This understanding of four successive levels of reality is widely used in Huayan classificatory schemata (see JIAOXIANG PANSHI; HUAYAN WIJIAO) of Buddhist doctrines and is also employed as a justification for the different soteriological techniques prescribed by the various Buddhist schools. See also DHARMADHĀTU.

Sifen lü. (J. Shibunritsu; K. Sabun yul 四分律). In Chinese, "Four-Part VINAYA"; the Chinese translation of the DHARMAGUPTAKA vinaya, the most influential of the different vinaya translations in East Asia, so-named because of the four main divisions into which the text was divided: (1) bhikṣuvibhaṅga, (2) bhikṣuṇīvibhaṅga, (3) SKANDHAKA, which includes a life of the Buddha and the twenty skandhaka, and (4) two Appendices, of saṃyuktavarga and vinayaikottara. The collection probably derives from some time in the first century BCE. With the support of the ruler Yao Xing (r. 394–416), the Kashmiri monk BUDDHAYAŚAS (d.u.; fl. c. early fifth century) recited the text from memory and translated it into Chinese with the help of the Chinese monk ZHU FONIAN (d.u.). Their work was carried out in the Chinese capital of Chang'an between 408 and 413 and was completed in sixty rolls. The Chinese translation is especially important because the Sanskrit recension is no longer extant and the text was never translated into Tibetan. The "Four-Part Vinaya" first circulated in the Chinese metropolitan centers of Chang'an and Luoyang, eventually replacing the other vinayas then circulating in China to became the definitive monastic code in East Asia. Exegetical schools such as DAOXUAN's NANSHAN LÜ ZONG (South Mountain vinaya school) and HUAISU's DONGTA LÜ ZONG (East Pagoda vinaya school), as well as the Korean YUL CHONG and the Japanese RITSUSHŪ, all focused on the explication of the "Four-Part

Vinaya." Among the numerous commentaries on the "Four-Part Vinaya," DAOXUAN's *Sifen lü shanfan buque xingshi chao* came to be regarded as most authoritative.

Sigālovādasutta. (S. Śīgālovādasūtra; C. Shansheng jing; J. Zenshōkyō; K. Sŏnsaeng kyŏng 善生經). In Pāli, "Instructions to Sigāla" (also known as the *Siṅgālovādasutta* and *Sigālakasutta*); thirty-first discourse in the Pāli DĪGHANIKĀYA (several different recensions appear in Chinese translations, including a DHARMAGUPTAKA recension that is the sixteenth sūtra in the DĪRGHĀGAMA, a SARVĀSTIVĀDA recension that is the 135th sūtra in the MADHYAMĀGAMA, and other recensions as well in the EKOTTARĀGAMA and SAṂYUKTĀGAMA); often interpreted within the tradition to offer the outlines of a code of conduct (VINAYA) for the laity. The buddha preached this discourse at Rājagaha (S. RĀJAGṚHA) to Sigāla [alt. Siṅgāla], a young brāhmaṇa householder. Following the wishes of his deceased father, it was Sigāla's practice to worship the six cardinal directions of east, south, west, north, nadir and zenith. The Buddha explains to him that the directions so worshipped are actually meant to symbolize, respectively, parents, teachers, wife and children, friends and associates, servants and workmen, and finally religious mendicants (ŚRAMAṆA) and brāhmaṇas. True veneration thus consists of fulfilling one's incumbent responsibilities toward each of these six groups of people, responsibilities that should be reciprocated in turn by each group. For instance, students should minister to teachers by rising to greet them, waiting on them, paying intention to their instructions, serving them, and mastering what they are taught; teachers in turn should minister to their students by thoroughly instructing them, making sure they have understood, grounding them in essential skills, recommending them to colleagues, and offering them security. The Buddha also offers practical advice on how to follow a well-lived life as a layperson, such as avoiding six ways of squandering wealth (viz., alcoholism, wandering the streets at inappropriate times, attending fairs and shows, gambling, keeping bad company, laziness), each of which in turn has six dangers.

sights, four. See CATURNIMITTA.

sign. See LAKṢAṆA; NIMITTA.

signless. See ĀNIMITTA.

Sīhaḷadīpa. In Pāli, "Island of Sīhaḷa"; the modern nation of Sri Lanka. According to Pāli sources, the island received the name Sīhaḷadīpa after it was colonized in the sixth century BCE by the Āryan Sīhaḷa peoples from northern India, led by Vijaya. Sīhaḷadīpa was the destination of one of nine Buddhist missions dispatched during the reign of King AŚOKA from Pātaliputta (S. PĀṬALIPUTRA, modern Patna) by the elder MOGGALIPUTTATISSA after the third Buddhist council (see COUNCIL, THIRD) in the third century BCE. Aśoka's son, the elder MAHINDA (S. Mahendra), was sent to Sīhaḷadīpa as a missionary, and since that time the island has been one of the major bastions of Buddhism in the region. Another common name for the island was Tambapaṇṇīdīpa, "Copper Island," named after the first capital, Tambapaṇṇī, founded by Vijaya.

siho. (C. shihao; J. shigō 諡號). In Korean, lit. "posthumous title," honorific title and/or name granted posthumously to an especially eminent Buddhist monk by the king. In ancient China, the shihao was originally a commendatory (or in some cases derogatory) title that was given to members of the royal clan and high government officials in accordance with their deeds. In Korea, the posthumous title came to be used in Confucian, secular, and Buddhist contexts, but virtually always in a commendatory denotation; it could signify both a name and/or an honorific title, presumably depending on the hierarchical status of the person. Siho became extremely popular in Korea, especially during the Chosŏn period, when Chosŏn kings received two-Sinograph-long siho from the Chinese emperor, which then became their posthumous names; officials also received siho, which were posthumous honorific titles bestowed by the king. Since the Koryŏ period, renowned Korean monks were given honorific titles such as "state preceptor" (KUKSA) and "royal preceptor" (wangsa), sometimes combined with posthumous names, as in the case of Chinul (1158–1210), who received both the posthumous title kuksa and the posthumous name Puril Pojo (Buddha Sun that Shines Universally; see POJO CHINUL). See also TANGHO.

si hongshiyuan. (J. shiguzeigan/shikuseigan; K. sa hongsŏwŏn 四弘誓願). In Chinese, the "four capacious vows," commonly known in English as the "four great vows"; a specific set of vows (S. PRAṆIDHĀNA) an adept takes that mark his initiation into the BODHISATTVA path and outline his continuing aspiration to seek buddhahood. There are two different formulations. By far the most common is the following list: (1) However innumerable sentient beings may be, I vow to save them all; (2) However inexhaustible the afflictions (KLEŚA) may be, I vow to eradicate them all; (3) However immeasurable the teachings may be, I vow to study them all; (4) However unsurpassed the path to buddhahood may be, I vow to attain it. This version of the bodhisattva vows is generally presumed to have first been formulated by TIANTAI ZHIYI (538–597) in his MOHE ZHIGUAN. These four great bodhisattva vows are frequently recited at the conclusion of MAHĀYĀNA Buddhist rituals in East Asia targeting both ordained and lay adherents. There is also an alternate list, known in India and Tibet, which runs as follows: (1) Those who are yet to be saved, I will save; (2) Those who are frightened, I will soothe; (3) Those who are unenlightened, I will awaken; (4) Those who are not yet in NIRVĀṆA, I will bring to nirvāṇa.

sihuo. (J. shiwaku; K. sahok 思惑). In Chinese, "misapprehensions associated with [instinctive] mentation"; the afflictions

with which a person is born, also called "misapprehensions that arise at birth (jusheng qi)." The "misapprehensions associated with mentation" are ingrained patterns of reacting to sensory stimuli that involve clinging, revulsion, restlessness, or confusion. In contrast to the related "misapprehensions associated with [wrong] views" (JIANHUO), which are misapprehensions acquired and developed through wrong views (MITHYĀDṚṢṬI) and fallacious ideologies in the postnatal environment, sihuo operate at a level that is more subtle and reflexive. Jianhuo must be eradicated first before one can proceed to attenuate, and eventually eradicate, sihuo on the path of cultivation (BHĀVANĀMĀRGA); for this reason, sihuo are also known as "afflictions [that are eradicated at the stage of] the path of practice" (xiuhuo/xiudao suoduan huo). See also PARIKALPITAKLEŚĀVARAṆA; SAHAJAKLEŚĀVARAṆA.

sikkhāpaccakkhāna. [alt. sikkhāpaccakkhāta] (S. śikṣāpratyākhyāna; T. bslab pa spong ba/bslab pa 'bul pa; C. shexuejie; J. shagakukai; K. sahakkye 捨學戒). In Pāli, lit "disavowing/abandoning the training"; "secession from the order," or more colloquially "disrobing." In the contemporary THERAVĀDA tradition, monks (P. BHIKKHU; S. BHIKṢU) are free to leave the SAṂGHA at any time and, upon secession are no longer bound by the monastic rules of conduct. However, a set procedure must be followed for that act to be considered valid. If that procedure is not followed, the person will still officially continue to be considered a monk, for whom the monastic code remains binding. According to the Pāli VINAYA, for the act of secession from the order to be valid for a monk or a nun, four conditions must be met. (1) The monk or nun must be sane, and not overwhelmed by pain, delirium, or intoxication, or be possessed by spirits. (2) The monk or nun must have the intention of leaving the saṃgha; the act does not count if it is performed in jest or is coerced. (3) The monk or nun must make a clear, definitive statement that he or she is leaving the order; this statement must be made in the present tense, not in a conditional or a future tense. (4) The monk or nun must make his or her declaration before a competent human witness, who must be conscious and sane and understand what the monk or nun is saying and doing; making the declaration before a nonhuman being or an image, etc., is not sufficient. In addition to these minimum requirements laid down in the vinaya, the various national traditions of Sri Lanka and Southeast Asia typically enjoin further steps in the procedure to solemnify the ritual aspects of the act. In the Theravāda tradition of Thailand, a monk is allowed to secede from the order and reordain a maximum of seven times.

śikṣā. (P. sikkhā; T. bslab pa; C. xue; J. gaku; K. hak 學). In Sanskrit, "training," a general term for the practice of the dharma. It occurs in two major contexts. The first is the three trainings (TRIŚIKṢĀ), three overarching categories of Buddhist practice. They are (1) the training in higher morality (ADHIŚĪLAŚIKṢĀ), which encompasses all forms of restraint of body and speech, including lay and monastic precepts that serve as the foundation for the cultivation of concentration and wisdom; (2) the training in higher meditation (ADHISAMĀDHIŚIKṢĀ, also called adhicittaśikṣā), which encompasses all forms of meditative practice directed toward the achievement of states of concentration; and (3) the training in higher wisdom (ADHIPRAJÑĀŚIKṢĀ), which includes all study and meditation directed toward developing insight into the nature of reality. The second major denotation appears in the VINAYA, where the term śikṣā refers to the proper conduct of a monk, nun, novice, or layperson. In this context, śikṣā means behavior that conduces to following enjoined conduct. For laymen (UPĀSAKA) and laywomen (UPĀSIKĀ), for example, behavior conducive to keeping the five lay precepts (PAÑCAŚĪLA) would include treating even old and discarded cloth from the robe of a monk or nun with respect, making offerings of food and other requisites to monks and nuns, and refraining from privileging any doctrine above the Buddha's teachings.

śikṣādattaka. (T. bslab pa sbyin pa; C. yuxue; J. yogaku; K. yŏhak 與學). In Sanskrit, lit. "one who has been given [penance] training," viz., a "pārājika penitent"; a monk (or nun) who had transgressed one of the major precepts that bring "defeat" (PĀRĀJIKA) but continues to live in the monastery as a lifelong penitent. A pārājika monk or nun, such as one who engaged in sexual intercourse, would be given the lifelong punishment of being "not in communion" (ASAṂVĀSA) with the monastic community. The monk who is asaṃvāsa is not permitted to participate in any of the official monastic proceedings or ecclesiastical acts (KARMAN), thus effectively ostracizing him from the formal activities of the monastery. But in almost all extant recensions of the VINAYA (including those associated with the SARVĀSTIVĀDA, MŪLASARVĀSTIVĀDA, MAHĀSĀṂGHIKA, DHARMAGUPTAKA, and MAHĪŚĀSAKA schools), monks who have received the asaṃvāsa punishment could continue to live in the monastery even after their transgressions in the special status of a śikṣādattaka (or śikṣādattā for a nun). (The Pāli vinaya of the THERAVĀDA school is apparently the only recension that does not recognize the status of a śikṣādattaka, although the term is known to the Pāli commentarial tradition.) The śikṣādattaka was superior in status to regular novices (ŚRĀMAṆERA), the subordinate members of the SAṂGHA, but inferior to the most junior of monks (BHIKṢU). The śikṣādattaka was assigned such menial daily tasks as serving food to the senior monks or cleaning the toilets, and his actions were severely restricted: he was forbidden from teaching others, making extended trips outside the monastery, accepting the types of salutations and respect that monks normally would receive, or, in some traditions, listening to the PRĀTIMOKṢA recitation. These penances are similar to those meted out to monks on temporary probation (PARIVĀSA and MĀNATVA) for committing the SAṂGHĀVAŚEṢA offenses. The lifelong penance of the śikṣādattaka could be rescinded and the penitent restored to good standing if he subsequently became an ARHAT.

śikṣamāṇā. (P. sikkhamānā; T. dge slob ma; C. shichamona; J. shikishamana; K. sikch'amana 式叉摩那). In Sanskrit, female

"postulant," or "probationer"; one of the categories of ordained women. Prior to receiving the full ordination (UPASAṂPADĀ) of a nun (BHIKṢUṆĪ), a female novice (ŚRĀMAṆERIKĀ) was required to undergo a concurrent two-year period of probationary postulancy. During this period, she was expected to observe six specific rules of training (ŚIKṢĀPADA): (1) abstention from killing, (2) abstention from stealing, (3) abstention from sexual activity, (4) abstention from false speech, (5) abstention from intoxicants, and (6) abstention from eating after midday. (As a śrāmaṇerikā, she would also be expected to follow the usual set of ten precepts, or DAŚAŚĪLA, for novices, which subsume these six rules.) Only after completing this period would a śrāmaṇerikā be allowed to take full ordination. This postulancy requirement was the sixth of the eight "weighty rules" (GURUDHARMA) that the Buddha imposed on nuns as a condition of establishing the nun's SAṂGHA. Male novices (ŚRĀMAṆERA) were not required to undergo such a probationary period of training.

śikṣamāṇāsaṃvara. (T. dge slob ma'i sdom pa; C. shichamona jie; J. shikishamanakai; K. sikch'amana kye 式叉摩那戒). In Sanskrit, "restraints for a probationer"; the VINAYA rules to be followed by a female postulant (ŚIKṢAMĀṆĀ) during the probationary period before a female novice (ŚRĀMAṆERIKĀ) received full ordination (UPASAṂPADĀ) as a nun (BHIKṢUṆĪ). In conjunction with the typical set of ten precepts (DAŚAŚĪLA) taken by novices (subdivided into thirty-six separate rules in the MŪLASARVĀSTIVĀDA school), these are six specific rules of training (ŚIKṢĀPADA): (1) abstention from killing, (2) abstention from stealing, (3) abstention from sexual activity, (4) abstention from false speech, (5) abstention from intoxicants, and (6) abstention from eating after midday. This additional set of rules, which had to be followed for two years before full ordination was allowed, constituted the sixth of the eight "weighty rules" (GURUDHARMA) that the Buddha imposed on nuns as a condition of establishing the nun's SAṂGHA. Some commentators say their purpose was to ensure that a probationer was not pregnant at the time of full ordination.

Śikṣānanda. (C. Shichanantuo; J. Jisshananda; K. Silch'anant'a 實叉難陀) (652–710). A monk from KHOTAN (C. Yutian), who was an important translator of Buddhist texts into Chinese during the Tang dynasty. The Empress WU ZETIAN (r. 690–705) invited Śikṣānanda to the Chinese capital of Luoyang, asking him to bring from Khotan its Sanskrit recension of the AVATAṂSAKASŪTRA (alt. *Buddhāvataṃsakasūtra*; C. *Dafangguang Fo huayan jing*), which was longer and more comprehensive than the sixty-roll version then in use in China, which had previously been translated by the Indian monk BUDDHABHADRA (359–429). Śikṣānanda arrived in Luoyang in 695 and supervised a translation team in rendering this Khotanese recension into Chinese; his team included BODHIRUCI (693–727), YIJING (635–713), and WŎNCH'ŬK (613–696). Śikṣānanda and his team finished their translation in 699, after four years of work, in a total of eighty rolls. The translation that Śikṣānanda supervised is typically called within the tradition the "new" (xin) translation, in contrast to Buddhabhadra's "old" translation. (LI TONGXUAN's commentary to Śikṣānanda's new rendering of the text is, for example, called the *Xin Huayan jing lun*; see HUAYAN JING HELUN.) Śikṣānanda continued with his translation projects until 705, when he returned to Khotan to care for his aged mother. Some thirteen other translations are attributed to him, including the LAṄKĀVATĀRASŪTRA and several shorter DHĀRAṆĪ sūtras, as well as a version of the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna"). Emperor Zhongzong (r. 705–710) invited Śikṣānanda to return once again to China in 708, but he died of illness in 710 at the age of fifty-nine without beginning any new translation work. It is reported that after his cremation, his tongue remained untouched by flames—an indication of his remarkable erudition.

śikṣāpada. (P. sikkhāpada; T. bslab pa'i gzhi; C. xuechu; J. gakusho; K. hakch'ŏ 學處). In Sanskrit, lit. "training step"; "training rules," "precepts," or "moral instructions"; viz., various rules of conduct incumbent on both lay and monastic adherents of Buddhism. Theoretically, the number of śikṣāpadas, in the sense of situations where it is incumbent on an adherent to maintain proper moral decorum, is infinite, but the number of rules a specific adherent was expected to follow depended on his or her level of commitment. All these moral instructions are administered in the formula, "I undertake the training rule (śikṣāpada) to abstain from…" Thus, the Buddhist moral codes are not regarded as commandments handed down from on high, but steps in training that are found to be useful in promoting wholesome actions (KUŚALA-KARMAN) and in weaning the individual from clinging and attachment. It is generally understood that the practitioner must become adept in following these basic rules of training before he or she can go on to higher levels of training: the effective engagement in the cultivation of concentration (SAMĀDHI), wisdom (PRAJÑĀ), and so on. The five basic rules of conduct required of all Buddhists, and specifically the laity, are the five precepts (PAÑCAŚĪLA), viz., "undertaking the training rule to abstain from": (1) killing, (2) stealing, (3) sexual misconduct, (4) false speech, and (5) intoxicants. On full- and new-moon days (S. UPOṢADHA, P. uposatha), the laity had the option of increasing the number of śikṣāpada for their training in morality and keeping an expanded set of eight precepts (P. uposathasīla, see AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ) as a sort of temporary renunciation. These added three precepts to the preceding list of five, viz., abstaining from: (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, and using garlands, perfumes, and unguents (viz., cosmetics) to adorn the body, and (8) using high and luxurious beds and couches. Additionally on that day, the layperson was also expected to abstain from all sexual activity, rather than just sexual misconduct defined specifically for the lay person. Ordination as a male

novice (ŚRĀMAṆERA) or female novice (ŚRĀMAṆERIKĀ) required the ordinand to increase the number of śikṣāpada (grounds for moral training) to ten (DAŚAŚĪLA) in the Pāli VINAYA, a number expanded to thirty-six in the MŪLASARVĀSTIVĀDA VINAYA. Fully ordained monks (BHIKṢU) and nuns (BHIKṢUṆĪ) observed, in turn, a greatly expanded set of śikṣāpada codified in hundreds of specific training rules, set out in great detail in the various vinaya traditions. In MAHĀYĀNA and tantric Buddhist traditions, the śikṣāpada are expanded to include various activities, even those that seem antithetical to morality, under the general rubric of skillful means (UPĀYA). See also ŚĪLA; SAṂVARA; PRĀTIMOKṢA.

Śikṣāsamuccaya. (T. Bslab pa kun las btus pa; C. Dasheng ji pusa xue lun; J. Daijōjū bosatsugakuron; K. Taesŭng chip posal hak non 大乘集菩薩學論). In Sanskrit, "Compendium of Training," a work by the eighth-century Indian MAHĀYĀNA master ŚĀNTIDEVA. It consists of twenty-seven stanzas on the motivation and practice of the BODHISATTVA, including BODHICITTA, the six perfections (PĀRAMITĀ), the worship of buddhas and bodhisattvas, the benefits of renunciation, and the peace derived from the knowledge of emptiness (ŚŪNYATĀ). The topic of each of the stanzas receives elaboration in the form of a prose commentary by the author as well as in illustrative passages, often quite extensive, drawn from a wide variety of Mahāyāna SŪTRAS. Some ninety-seven texts are cited in all, many of which have been lost in their original Sanskrit, making the *Śikṣāsamuccaya* an especially important source for the textual history of Indian Buddhism. These citations also offer a window into which sūtras were known to a Mahāyāna author in eighth-century India. The digest of passages that Śāntideva provides was repeatedly drawn upon by Tibetan authors in their citations of sūtras. Although Śāntideva's BODHICARYĀVATĀRA and *Śikṣāsamuccaya* both deal with similar topics, the precise relation between the two texts is unclear. Several of the author's verses appear in both texts and some of the sūtra passages from the *Śikṣāsamuccaya* also appear in the *Bodhicaryāvatāra*. One passage in the *Bodhicaryāvatāra* also refers readers to the *Śikṣāsamuccaya*, but this line does not occur in the DUNHUANG manuscript of the text and may be a later interpolation.

siku. (J. shiko; K. sago 四枯). In Chinese, "four witherings." When the Buddha passed into PARINIRVĀṆA, there were said to be four pairs of ŚĀLA trees surrounding his body in the four cardinal directions. At his passing, one tree in each pair blossomed and the other withered. The four witherings are said to represent the four inverted views (VIPARYĀSA) as they pertain to the Buddha. These four views are typically listed as to see that which is painful as pleasurable, to see that which is impermanent as permanent, to see that which is impure as pure, and to see that which is without self as having self. In some texts, such as the ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA, the TATHĀGATAGARBHA is said to be endowed with the four perfect qualities (GUṆAPĀRAMITĀ) of blissfulness, permanence, purity, and selfhood; however, in the context of the "four witherings," it is said to be a mistake to view NIRVĀṆA as blissful, the DHARMAKĀYA as eternal, the body of the Buddha as pure, and the tathāgatagarbha as self.

śīla. (P. sīla; T. tshul khrims; C. jie; J. kai; K. kye 戒). In Sanskrit, "morality"; those practices whose aim is to restrain nonvirtuous deeds of body and speech, often in conjunction with the keeping of precepts. Morality constitutes one of the three trainings (TRIŚIKṢĀ), together with SAMĀDHI and PRAJÑĀ, and the second of the six perfections (PĀRAMITĀ). In the traditional organization of the constituents of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA) under the rubrics of the three higher trainings (adhiśikṣā), the "morality group" (śīlaskandha; see ADHIŚĪLAŚIKṢĀ) consists of right speech (S. SAMYAGVĀC; P. sammāvācā), right action (S. SAMYAKKARMĀNTA; P. sammākammanta), and right livelihood (S. SAMYAGĀJĪVA; P. sammājīva). The term also appears in the five precepts, or PAÑCAŚĪLA, the five precepts taken by the Buddhist laity: "I undertake the training rules (ŚIKṢĀPADA) to abstain from" (1) killing living creatures, (2) stealing, (3) sexual misconduct, (4) false speech, and (5) consuming intoxicants. On full- and new-moon days (UPOṢADHA), the laity had the option of taking a modified version of these precepts as a sort of temporary renunciation, which are termed the eight precepts (S. see AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ; BAGUAN ZHAI). They are (1) not to kill living beings, (2) not to steal, (3) not to engage to sexual activity, (4) not to lie about spiritual attainments, (5) not to use intoxicants, (6) not to eat after twelve noon, (7) not to sing, dance, play music, or attend entertainments and not to wear perfumes, garlands, or cosmetics, (8) not to sleep on high beds. All male novices (ŚRĀMAṆERA) and female novices (ŚRĀMAṆERIKĀ) were required to follow as part of their training the ten precepts (DAŚAŚĪLA), which were an expansion and enhancement of the five lay precepts (pañcaśīla): "I undertake the training rule to abstain from" (1) killing, (2) stealing, (3) sexual activity, (4) false speech, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8) using garlands, perfumes, and cosmetics to adorn the body, (9) using high and luxurious beds and couches, (10) handling money. In the context of the bodhisattva's perfection of morality (ŚĪLAPĀRAMITĀ), the meaning of śīla is expanded to encompass the taking and keeping of the bodhisattva precepts (BODHISATTVASAṂVARA); see SAṂVARA; ŚĪLAPĀRAMITĀ; ŚĪLATRAYA.

Śīlabhadra. (T. Ngang tshul bzang po; C. Jiexian; J. Kaigen; K. Kyehyŏn 戒賢) (529–645). Indian YOGĀCĀRA monk who hailed from the NĀLANDĀ monastic university in India. A native of the Samataṭa kingdom in eastern India, he resided at Nālandā after meeting DHARMAPĀLA (530–561) there. Śīlabhadra is perhaps best known as the principal teacher of XUANZANG, the great Chinese pilgrim and translator. Through Xuanzang's contact with Śīlabhadra, Dharmapāla's scholastic lineage was brought back to China, where it served as the foundation of

the Chinese FAXIANG ZONG, which was developed by Xuanzang and his two main disciples, WǑNCH'ǓK and KUIJI. It is recorded that Śīlabhadra was already 106 years old when Xuanzang came to Nālandā to study with him. FAZANG (643–712) in his *Dasheng qixinlun yiji* quotes Divākara (613–687, C. Rizhao), a monk from central India, who describes the controversy between Śīlabhadra, as the successor of Dharmapāla within the Indian Yogācāra tradition, and Jñānaprabha (d.u., C. Zhiguang), a successor of BHĀVAVIVEKA (c. 490–570) in the SVĀTANTRIKA-MADHYAMAKA tradition.

Śīladharma. (C. Shiluodamo/Jiefa; J. Shiradatsuma/Kaihō; K. Siradalma/Kyebŏp 尸羅達摩/戒法) (d.u., fl. c. eighth-ninth centuries). A translator-monk from KHOTAN (C. Yutian), who stayed at the monastery of Longxingsi in Beiting (present-day Inner Mongolia), during the Tang dynasty. Wukong (d. 812), a Chinese pilgrim who spent some forty years sojourning in India and Central Asia, arrived in Beiting in 789 with several Sanskrit manuscripts of Indian scriptures. Wukong asked Śīladharma to collaborate with him in translating two of the sūtras he brought back with him into Chinese: the DAŚABHŪMIKASŪTRA (*Foshuo shidi jing*) and the *Pariṇāmacakrasūtra* (*Huixianglun jing*). Upon completing the translations, Śīladharma accompanied Wukong to the Tang capital of Chang'an in 790, where they had an audience at the imperial court, after which Śīladharma returned to his home country.

śīlapāramitā. (P. sīlapāramī; T. tshul khrims kyi pha rol tu phyin pa; C. jie boluomi; J. kaiharamitsu; K. kye p'aramil 戒波羅蜜). In Sanskrit, "perfection of morality," the second of the six or ten "perfections" (PĀRAMITĀ) of the BODHISATTVA, along with the perfection of charity (DĀNAPĀRAMITĀ), forbearance (KṢĀNTIPĀRAMITĀ), effort (VĪRYAPĀRAMITĀ), meditation (DHYĀNAPĀRAMITĀ), and wisdom (PRAJÑĀPĀRAMITĀ); and, in the longer list, the perfection of expedients (UPĀYAPĀRAMITĀ), vow (PRAṆIDHĀNAPĀRAMITĀ), power (BALAPĀRAMITĀ), and knowledge (JÑĀNAPĀRAMITĀ). In the MAHĀYĀNA tradition, the perfection of morality is accomplished through the bodhisattva precepts, and specifically "three sets of pure precepts" (trividhāni śīlāni; C. sanju jingjie, see ŚĪLATRAYA): (1) the saṃvaraśīla (see PRĀTIMOKṢASAṂVARA), or "restraining precepts," which refers to the rules of discipline (PRĀTIMOKṢA) and deportment that help adepts restrain themselves from all types of unwholesome conduct; (2) the accumulation of wholesome qualities (kuśaladharmasaṃgrāhaka), which accumulates all types of wholesome conduct that give rise to the buddhadharmas; and (3) SATTVĀRTHAKRIYĀ, acting for the welfare of beings, which involve giving aid and comfort to sentient beings. Here, the first group corresponds to the preliminary "HĪNAYĀNA" precepts, while the second and third groups are regarded as reflecting a Mahāyāna position on morality. Thus, the perfection of morality, through the three sets of pure precepts, is conceived as a comprehensive description of Buddhist views on precepts, which incorporates both hīnayāna and Mahāyāna perspectives into an overarching system. According to the CHENG WEISHI LUN (**Vijñaptimātratāsiddhi*), each of the ten stages (BHŪMI) of the bodhisattva path leads to the attainment of one of the ten kinds of suchness (TATHATĀ), through practicing one of the ten perfections (pāramitā) and thus overcoming one of the ten types of obstructions (ĀVARAṆA). As the second perfection, śīlapāramitā is practiced on the second stage of the bodhisattva path, the VIMALĀ (immaculate, stainless) bhūmi, and leads to the attainment of supreme suchness (paramarthatathatā; C. zuisheng zhenru), by overcoming the obstruction of deluded conduct (mithyāpratipattyāvaraṇa; C. xiexing zhang).

śīlatraya. (T. tshul khrims gsum; C. sanju jingjie; J. sanju jōkai; K. samch'wi chŏnggye 三聚淨戒). In Sanskrit, "three categories of morality" (also called the trividhāni śīlāni); a categorization of moral codes found typically in YOGĀCĀRA-oriented materials, which also becomes especially popular in indigenous East Asian scriptures (see APOCRYPHA). They are: (1) the restraining precepts, which maintain both the discipline and the deportments (saṃvaraśīla; see PRĀTIMOKṢASAṂVARA); (2) the accumulation of wholesome qualities (kuśaladharmasaṃgrāhaka); and (3) acting for the welfare of beings (SATTVĀRTHAKRIYĀ). Here, the first group corresponds to the preliminary "HĪNAYĀNA" precepts, while the second and third groups are regarded as reflecting a Mahāyāna position on morality. Thus, the three sets of pure precepts are conceived as a comprehensive description of Buddhist views on precepts, which incorporates both hīnayāna and Mahāyāna perspectives into an overarching system; and it is these three categories that are said to constitute the perfection of morality (ŚĪLAPĀRAMITĀ). These three categories are explained in such Yogācāra materials as the BODHISATTVABHŪMI section of the YOGĀCĀRABHŪMIŚĀSTRA and in the MAHĀYĀNASŪTRĀLAṂKĀRA and in several East Asian apocryphal scriptures, including the FANWANG JING, PUSA YINGLUO BENYE JING, *VAJRASAMĀDHISŪTRA (KŬMGANG SAMMAE KYŎNG), and the ZHANCHA SHAN'E YEBAO JING. See also SAṂVARA; SDOM GSUM.

śīlaviśuddhi. (P. sīlavisuddhi; T. tshul khrims rnam par dag pa; C. jingjie; J. jōkai; K. chŏnggye 淨戒). In Sanskrit, "purity of morality." In Pāli sources, the "purity of morality" was the first of seven "purities" (P. VISUDDHI) that were to be developed along the path to liberation. According to the treatment in BUDDHAGHOSA's VISUDDHIMAGGA, purity of morality refers to the proper observance of morality by a monk and is of four kinds: (1) "Morality of restraint according to the monastic code" (P. pāṭimokkhasaṃvarasīla; see S. PRĀTIMOKṢASAṂVARA); here the monk is perfect in observance of the rules of discipline laid down in the VINAYA, seeing danger in even minor offenses. (2) "Morality of restraint of the senses" (INDRIYASAṂVARA-sīla); the monk guards his senses so that unwholesome states of mind do not arise. (3) "Morality of the purity of livelihood" (P. ājīvapārisuddhisīla); the monk refrains from means of support that are not allowed by the rules of discipline. (4) "Morality

with regard to the requisites" (P. paccayasannissitasīla); the monk mindfully makes proper use of the four requisites (see NIŚRAYA; PARIṢKĀRA) allowed to the monk; namely, alms food (PIṆḌAPĀTA), robes (CĪVARA), dwelling places, and medicine. Alms food is to be consumed merely to support the body. Robes are to be used merely to protect the body from heat and cold. Dwelling places are to be used merely to protect the body from the elements and to encourage solitude. Medicine is to be used merely to alleviate symptoms of illness and pain so that the monk may pursue the religious life.

śīlavrataparāmarśa. (P. sīlabbataparāmāsa; T. tshul khrims dang brtul zhugs mchog tu 'dzin pa; C. jiejinqu jian; J. kaigonjuken; K. kyegŭmch'wi kyŏn 戒禁取見). In Sanskrit, "attachment to rites and rituals" or "clinging to faulty disciplinary codes and modes of conduct" (lit. "holding [mistaken] rites and conduct to be superior"); the third of ten fetters (SAṂYOJANA) that keep beings bound to the cycle of rebirth (SAṂSĀRA). This type of attachment is one of the first three fetters that are permanently abandoned upon becoming a stream-enterer (SROTAĀPANNA), along with belief in the existence of a perduring self (SATKĀYADṚṢṬI) and doubts about the efficacy of the path (VICIKITSĀ). This specific type of attachment constitutes the wrong view (DṚṢṬI) that certain purificatory rites, such as bathing in the Ganges River or performing ritual sacrifices, can free a person from the consequences of unmeritorious action (AKUŚALA-KARMAN). Attachment to rites and rituals thus often constitutes either a belief in non-Buddhist religious systems, or a clinging to those elements of non-Buddhist systems that run contrary to Buddhist doctrine. Attachment to rites and rituals is also one of the four kinds of clinging (UPĀDĀNA), along with clinging to sensuality (RĀGA), which is a strong attachment to pleasing sense objects; clinging to false views and speculative theories (DṚṢṬI); and clinging to mistaken beliefs in a perduring self (ĀTMAVĀDA), viz., the attachment to the transitory mind and body as a real I and mine.

Silent Illumination Zen. See MOZHAO CHAN.

Silk Road. (C. Silu 絲路; J. Shiruku rōdo シルクロード; K. Pidan kil 緋緞길). Term coined by the German geographer Baron Ferdinand von Richthofen in 1877 to describe the ancient caravan routes through Central Asia that connected China, India, Syria, and the Roman Empire; also called the Silk Route. (Translations or transcriptions of the English term are now widely used in Asian languages as well, as in the CJK examples above.) Because silk was among the most highly prized commodities in this East–West trade, von Richthofen chose it as the symbolic designation for these trade routes. Other commodities that were traded along these routes included spices, livestock, perfumes, precious metals, and ceramics. The term Silk Road does not refer to a single road, but rather to a network of major and minor trade routes running through Central Asia that connected East and West. Looked at broadly, the Silk Road ultimately extended as far west as the Mediterranean Sea and as far east as modern Guangzhou (Canton) in China. In addition to facilitating trade, these routes also served as a principal conduit for cultural and religious interaction between the peoples of the different regions of Asia. Thus, it was via the Silk Road that Buddhism migrated out of its Indian homeland and into Central and East Asia; over the centuries, adherents of other religions, such as Nestorian Christianity, Manichaeism, and eventually Islam, would follow the same routes into India and China. From the Indian subcontinent, the Silk Road led northwest through KASHMIR to the outpost of Kashgar; there, it split, with a western route leading to SOGDIANA and eventually Damascus in the Middle East, and an eastern route leading through Central Asia into China and the rest of East Asia. There were two main routes through the oasis kingdoms of Central Asia, both skirting the Takla Makan desert in the Tarim basin. Starting at the city of Kashgar in the west, the northern route moved along the oases kingdoms of KUCHA, TURFAN, and KIZIL along the Tian Mountains; the southern route traveled along the base of the Kunlun Mountains through Niya and KHOTAN, until both routes reconnected at DUNHUANG, often the farthest outpost of the Chinese empire. From Dunhuang the route continued east until it terminated in the Chinese co-capitals of Chang'an and Luoyang, whence it connected to domestic feeder routes spreading throughout East Asia. Many of these Central Asian city-states were populated by various Indo-European peoples. The only remaining evidence of the long-lost native languages of these peoples are inscriptions and fragments of religious and civil-government manuscripts, such as the Niya documents, Gandhāran texts in the KHAROṢṬHĪ script, documents written in the TOCHARIAN and Kuchean languages, and so on. Scores of these documents were discovered in the nineteenth and twentieth centuries. In missions that began shortly after the death of the Buddha, Indian Buddhist monks accompanied the trading caravans that plied the overland Silk Road. These missions lasted for centuries and changed the religious and cultural landscape of Asia. Buddhist inscriptions, sculptures, manuscripts, reliquary mounds (STŪPA), and paintings have been discovered along the Silk Road. From northwestern India, Buddhism was taken to Central Asia. We find a host of inscriptions, texts, and images in the regions of modern-day Pakistan, Afghanistan, Russia, and the Islamic states of the former Soviet Union. By the first century CE, there existed a network of Buddhist religious centers stretching from northwestern India, to the Tarim basin, and into China. Buddhism entered East Asia along the Silk Road as well. According to Chinese sources, interaction between Indian and Chinese culture began as early as the first century BCE, when an emperor of the Han dynasty—by some accounts Emperor Wu (156–87 BCE), by others Emperor Ming (MINGDI) (r. 58–76 CE)—is said to have sent an emissary to the west along the Silk Road in response to the expansion of the KUSHAN empire to gather evidence of the new religion of Buddhism. In the second century CE, monks from India and the oasis kingdoms along the

Silk Road began translating Indian and Central Asian Buddhist texts into Chinese. One of the earliest of these translators was AN SHIGAO, who translated dozens of Indian works into Chinese. In the centuries that followed, East Asian pilgrims such as FAXIAN, XUANZANG, YIJING, and HYECH'O used the Silk Road to make their way back and forth between East Asia and the Buddhist homeland of India. From India, these pilgrims brought back manuscripts, relics, and insights into proper religious practice. Today the travelogues of these East Asian monks provide invaluable information regarding the development of Buddhism in Asia. Of the regions along the Silk Road where Buddhism flourished, China, Tibet, and Mongolia are the only ones where Buddhism survived beyond the first millennium CE. This decline was the result of a number of historical factors, including the revival of brahmanical Hinduism in India and the expansion of Islam into Central Asia.

śilpanirmāṇakāya. [alt. śilpinirmāṇakāya] (T. bzo bo sprul sku). In Sanskrit, "artisan emanation body," one of the various of emanation bodies (NIRMĀṆAKĀYA) in which a buddha may appear to the world. As the name suggests, in this case, a buddha may appear as a skilled artisan. The example that is typically cited for this type of body is when the Buddha, shortly before his passage into NIRVĀṆA, took the form a celestial musician (GANDHARVA) and challenged Sunanda, the king of the celestial musicians, to a lute-playing competition. The Buddha defeated him by playing a beautiful melody on a lute that had no strings. It is said that an artisan emanation body may also take the form of a work of art that is inspiring or calming.

sīmā. (T. mtshams; C. jiejie; J. kekkai; K. kyŏlgye 結界). In Sanskrit and Pāli, lit. "boundary"; the line that marks the geographical area within which monks and nuns gather fortnightly to recite the PRĀTIMOKṢA and perform other required acts and duties, called collectively ecclesiastical acts (SAṂGHAKARMAN). The term is used by extension to refer to the area itself and the congregation that resides within it. The area encompassed by a sīmā boundary may vary in size and include more than one VIHĀRA or monastic residence within its perimeter. In order to establish a sīmā, the SAṂGHA enacts a JÑAPTIDVITĪYĀ KARMAVĀCANĀ, an ecclesiastical act comprised of a resolution and a proclamation, whereby the boundaries of the sīmā are marked. A marker (nimitta) may be a natural object or be man-made; possible markers include a mountain, a large stone, a grove, a tree, a road, an ant hill, a river, or an expanse of water. In some cases, sīmās are not demarcated with physical objects and do not require a resolution and proclamation to establish them. For example, when monks live near a village, the natural boundary of the village itself may be taken as the sīmā. When dwelling in a forest, an area encompassed by seven specific units of length could comprise the sīmā. When monks were on a boat in a river, lake, or the sea, the sīmā could be established by the distance a person of average strength could throw water in a perimeter around the boat. In tantric Buddhism, sīmā is used to describe the boundaries practitioners draw for themselves when they enter into a retreat (T. mtshams). The boundaries can be drawn (T. mtshams tho) narrowly when there are others to bring food and other requisites, or more widely as circumstances require.

sīmāsamūhana. (T. mtshams 'jig pa; C. shejie/jiejie; J. shakai/gekai; K. sagye/haegye 捨界/解界). In Sanskrit and Pāli, "abolition of a boundary"; an ecclesiastical act (P. saṅghakamma; S. SAṂGHAKARMAN) whereby an existing boundary (SĪMĀ) is either abolished or altered. The sīmāsamūha may be performed when the resident SAṂGHA determines that the existing sīmā boundaries are either too small or too large. Since the boundaries of separate sīmās may neither overlap nor encompass one another, it is customary (as, for example, in Burma) when preparing an area for a new sīmā to perform a sīmāsamūhana ceremony beforehand in order to remove any sīmā that might previously have been established at the spot. The MŪLASARVĀSTIVĀDA VINAYA describes five ways in which a sīmā boundary may be abolished (including by a complete sex change for the entire saṃgha).

siṃhanāda. (P. sīhanāda; T. seng ge'i nga ro; C. shizi hu; J. shishiku; K. saja hu 師子吼). In Sanskrit, "lion's roar," a phrase commonly used to describe the teaching of the Buddha or his disciples. It is said that when the lion roars in the forest, all other animals become silent and listen; in the same way, the Buddha's proclamation of the DHARMA silences all non-Buddhist teachers (TĪRTHIKA), who are afraid to challenge him. The Buddha is often compared to a lion, the king of beasts: "lion among men" (S. narasiṃha) is an epithet of the Buddha, the Buddha's seat is called the lion's throne (SIṂHĀSANA), and his walk is called the lion's gait (siṃhavikrānta). According to the Pāli commentaries, there are two kinds of lion's roar: that of the Buddha and that of his disciples. The former applies specifically to those cases in which the Buddha proclaims his own attainments or the power of the dharma. The latter refers to those cases when disciples announce their attainment of the rank of ARHAT and their subsequent inspiriational teachings. The Buddha declared that PIṆḌOLA-BHĀRADVĀJA was the foremost lion-roarer (siṃhanādin) among his disciples. These utterances are described as a lion's roar in the ĀGAMAs and Pāli NIKĀYAs because of their incontrovertible veracity, boundless self-confidence, and ability to inspire others to urgency in their practice. Just as the lion's roar may horrify other creatures, a lion's roar may also instill fear in lesser beings, such as teachings on impermanence that strike fear into the hearts of long-lived divinities (DEVA) who mistakenly presume they are immortal. One of the best-known siṃhanāda in the literature (as recorded, e.g., in the NIDĀNAKATHĀ), is the lion's roar that GAUTAMA is said to have uttered immediately after his birth. Pointing to heaven and earth, he took seven steps and said: "I am the chief of the world." The term figures prominently in Buddhist literature, as in the MAHĀSĪHANĀDASUTTA and the CŪḶASĪHANĀDASUTTA of the MAJJHIMANIKĀYA, and in the ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA. It also occurs in the names of deities, such as Lokeśvara Siṃhanāda, a form of AVALOKITEŚVARA.

siṃhāsana. (P. sīhāsana; T. seng ge'i khri; C. shizi zuo; J. shishiza; K. saja chwa 師子座). In Sanskrit, "lion's throne," or "lion's seat"; the seat that a buddha or an enlightened master uses when delivering a discourse. One of the buddha's epithets is "lion among men" (narasiṃha, P. narasīha) and where he sits therefore comes to be called the "lion's throne," regardless of whether that seat is a high platform or the bare ground. Throughout the Buddhist tradition, images of lions are carved not only on the seats of buddha images but on various other Buddhist architectural structures, such as STŪPAS. The siṃhāsana is also one of two most prevalent platforms for a buddha image in East Asian Buddhism, along with the "lotus seat" (padmasaṃstha, C. lianhwa zuo).

Siming shiyi shu. (J. Shimei jūgisho; K. Samyŏng sibŭi sŏ 四明十義書). In Chinese, "Siming's Letters on Ten Issues"; a collection of letters compiled by the TIANTAI monk SIMING ZHILI (960–1028) and edited together in 1006. The *Siming shiyi shu* is a valuable source of information on the SHANJIA SHANWAI, or "Home-Mountain/Off-Mountain," debate within the Song-dynasty Tiantai school. Two recensions of TIANTAI ZHIYI's commentary on the SUVARṆAPRABHĀSOTTAMASŪTRA, an expanded and an abridged version, were known to have circulated during the late Tang and early Five Dynasties period. Zhili and the Shanjia faction, which later came to define Tiantai orthodoxy, defended the expanded recension when the monk Ciguang Wu'en (912–986) and others of the so-called Shanwai faction began questioning the authenticity of certain of its passages, particularly the ten modes of contemplation found in the text. The *Siming shiyi shu* speaks of Zhiyi's teachings on contemplation in ten general points: (1) not discerning the subject of contemplation, (2) not discerning the object of contemplation, (3) not distinguishing between inside and outside, (4) not constructing the duality of principle and phenomena, (5) not elucidating the workings of contemplation, (6) not lingering on the difficulties of the mind, (7) not knowing the levels of contemplation, (8) not collecting the meanings of contemplation, (9) not being skilled at collecting passages, (10) not being skilled at studying principle.

Siming Zhili. (J. Shimei Chirei; K. Samyŏng Chirye 四明知禮) (960–1028). Chinese monk of the TIANTAI tradition. Zhili was a native of Siming in present-day Zhejiang province. After losing his mother at an early age, Zhili resolved to become a monk and he received the full monastic precepts at age fifteen. He then studied the VINAYA and the scriptures of the Tiantai tradition. In 991, he became the abbot of Ganfusi, and four years later he began his residence at the monastery Bao'enyuan on Mt. Siming, whence his toponym. In 1009, he completed the restoration of Bao'enyuan and the following year his monastery received the official plaque renaming it Yanqingsi. Zhili later found himself at the center of the SHANJIA SHANWAI or "Home-Mountain/Off-Mountain" debate that racked the Song-dynasty Tiantai school. Zhili's Shanjia (Home Mountain) faction and the Tiantai monk Ciguang Wu'en's (912–986) Shanwai (Off Mountain) faction were split over the authenticity of one of TIANTAI ZHIYI's texts and the practice of contemplation, as well as the role and value of practices and concepts generated from outside the Tiantai tradition in explicating Tiantai doctrine. In response to this debate, Zhili composed a series of letters, which were edited together as the SIMING SHIYI SHU. Zhili also composed the *Shibu'er men zhiyao chao* and wrote extensively on various PURE LAND-related repentance rituals. Zhili's disciples later comprised three separate branches of the Chinese Tiantai tradition.

Simsang. (C. Shenxiang; J. Shinjō 審祥) (d. c. 744). Putative Korean disciple of FAZANG (643–712) in the Chinese HUAYAN ZONG. Simsang is considered the first transmitter of the Huayan teachings in Japan, and his Japanese disciple RYŌBEN (689–773) is considered the official founder of the Japanese Kegonshū during the Nara period.

sin. See PĀPA; AKUŚALA; AKUŚALAKARMAPATHA; KARMAN; KARMAPATHA.

Sindu. (S). One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA.

Sin'gyesa. (神溪寺). In Korean, "Divine Brook Monastery"; one of the major monasteries on the Korean sacred mountain of KŬMGANGSAN (Diamond Mountains), now in North Korea. The monastery is claimed to have been constructed in 519 during the Silla dynasty by the monk Poun (d.u.). Its original name, Sin'gyesa, "Silla Brook Monastery," uses instead the homophonous sin (lit. new), the first character in Silla (Sin-la), presumably in honor of the Silla dynasty. The monastery received its current name after the founding monk Poun is said to have used his magical powers (ṚDDHI) to move fish that people were trying to catch out of the brook next to the monastery, because he thought that fishing corrupted the sacred place. The monastery underwent frequent repairs and reconstructions, before being completely destroyed in 1950 during the Korean War (1950–1953). Sin'gyesa was reconstructed starting in 2004 through the cooperative efforts of the South Korean CHOGYE CHONG and the North Korean Buddhist Federation.

Sinhŭngsa. (神興寺). In Korean, "Divinely Flourishing Monastery"; the third district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located in Outer Sŏraksan (Snowy Peaks Mountain) near the town of Sokch'o. The monastery was founded in 652 by the Silla VINAYA master CHAJANG (d.u.; fl. c. mid-seventh century), who named it Hyangsŏngsa, or City of Fragrances [see GANDHAVATĪ] (monastery), but it has been nicknamed "Monastery of Frequent Changes" because it has changed its location, name, and school affiliation so many times over the centuries. When Hyangsŏngsa burned down in 698, the Silla Hwaŏm (C. HUAYAN) teacher ŬISANG (625–702)

had it rebuilt three years later near its current site and renamed it Sŏnjŏngsa (Meditative Absorption Monastery). The monastery was damaged during the Japanese Hideyoshi invasions of 1592–1598 and burned to the ground in 1642. The three monks who remained after the conflagration each dreamed of a spirit who told them that relocating the monastery's campus would protect it from any future damage by fire, water, or wind. Following the spirit's recommendation, the monks moved the site ten leagues (K. i; C. li) below where the monastery was then located and renamed it Sinhŭngsa, the name it has kept ever since. Sinhŭngsa proper is built on a foundation of natural stone with four large cornerstones. The visitor reaches the monastery along a half-mile-long path that is flanked by reliquaries and memorial stele until reaching the Ilchumun (Single Pillar Gate). Sinhŭngsa's main shrine hall is the Kŭngnak pojŏn (SUKHĀVATĪ Basilica), which faces west and is decorated on the outside by the ten ox-herding paintings (see OXHERDING PICTURES, TEN). Inside, AMITĀBHA is enshrined together with his companion BODHISATTVAS, AVALOKITEŚVARA and MAHĀSTHĀMAPRĀPTA; they sit below a canopy of yellow dragons and in front of a painting of ŚĀKYAMUNI with an elderly KĀŚYAPA and a young-looking ĀNANDA. Right after entering the Ilchumun is found the 14.6-meter (48 foot) high T'ongil Taebul (Unification Great Buddha) sitting on a 4.3 meter (14 foot) pedestal. Casting of this bronze image started in 1987 and was finished ten years later; it is now the largest seated bronze buddha image in the world, larger even than the Japanese KAMAKURA DAIBUTSU (at 13.35 meters, or 44 feet, high). Its pedestal is decorated with images of the sixteen ARHAT protectors of Buddhism (see ṢOḌAŚASTHAVIRA). This monastery should be distinguished from the homophonous Sinhŭngsa (Newly Flourishing Monastery), located in the T'aebaek Mountains near the city of Samch'ŏk in Kangwŏn province; that temple is the fourth district monastery of the Chogye order.

sinjung. (C. shenzhong; J. shinshū 神衆). In Korean, "host of spirits"; referring to the LOKAPĀLAS, the protectors of the dharma (DHARMAPĀLA). The sinjung are often headed by KUMĀRABHŪTA (K. Tongjin), who appears in a grand, feathered headdress accompanied by over a dozen associates, who aid him in protecting the religion. Originally Hindu deities, the sinjung were adopted into Buddhism as guardian deities after being converted by the Buddha's teachings. In particular, BRAHMĀ (K. Pŏm Ch'ŏnwang), INDRA (K. Chesŏk ch'ŏn), the four heavenly kings (S. CATURMAHĀRĀJA; K. sa ch'ŏn wang), and WEITUO (K. Wit'a) were so popular that many statues and paintings were made of them. As the SUVARṆAPRABHĀSOTTAMASŪTRA gained popularity in East Asian Buddhism, the sinjung also came to be regarded as protectors of the state as well as the dharma. Imported to Korea along with Buddhism, the sinjung also came to be worshipped in state Buddhist services. During the Chosŏn dynasty, when Neo-Confucianism replaced Buddhism as the state religion, the role of the sinjung stretched into the personal realm as well, including protecting against disease. Many of the sinjung derive from such Buddhist sūtras as the AVATAṂSAKASŪTRA, the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), and the RENWANG JING ("Scripture for Humane Kings"), but there are also indigenous sinjung who originated from within the Chinese and Korean religious traditions. Hanging paintings (T'AENGHWA) of the sinjung are often displayed on the right wall of the main shrine halls (TAEUNG CHŎN) in Korean monasteries. These paintings vary widely, and the main figures include: (1) Chesŏk ch'ŏn (Indra), alone without associates; (2) Yejŏk Kŭmgang (the vajra-ruler who purifies unclean places), with Chesŏk ch'ŏn on his left side and Pŏm Ch'ŏnwang (Brahmā) on his right; (3) Wit'a (Weituo) with the same associates of Yejŏk Kŭmgang to his sides; (4) thirty-nine sinjung from the *Avataṃsakasūtra*; (4) 104 sinjung, including all the indigenous sinjung.

Siri Sanga Bō. (P. Saṅghabodhi). A Sri Lankan king (r. 252–254 CE) whose story of utter devotion to Buddhism is told in the MAHĀVAṂSA. The king was said to have been so committed to the Buddha's teachings that he refused to execute criminals. When his prime minister led a rebellion against him, he could not bear the thought of the bloodshed that would result from putting down the rebellion, so he voluntarily abdicated and retired to the forest to live as an ascetic. The prime minister, now King Gathābhaya, fearing the return of the rightful king, offered a reward to anyone who would bring him the head of Siri Sanga Bō. One day, a poor peasant shared his meal with Siri Sanga Bō who, having nothing to give him in return, informed the man of his identity and offered him his head, decapitating himself. Siri Sanga Bō is regarded as a great Buddhist saint in Sri Lanka.

Sishi'er zhang jing. (J. Shijūnishōgyō; K. Sasibi chang kyŏng 四十二章經). In Chinese, "Scripture in Forty-two Sections," a short collection of aphorisms and pithy moralistic parables traditionally regarded as the first Indian Buddhist scripture to be translated into Chinese, but now generally presumed to be an indigenous scripture (see APOCRYPHA) that was compiled in either China or Central Asia. Most scholars believe that the "Scripture in Forty-Two Sections" began to circulate during the earliest period of Buddhism in China. According to tradition, the "Scripture in Forty-Two Sections" was translated at the behest of MINGDI of the Han dynasty (r. 58–75 CE). According to the earliest surviving account, Emperor Ming had a dream one evening in which he saw a spirit flying in front of his palace. The spirit had a golden body and the top of his head emitted rays of light. The following day the emperor asked his ministers to identify the spirit. One minister replied that he had heard of a sage in India called "Buddha" who had attained the way (dao) and was able to fly. The emperor presumed that this must have been the spirit he observed in his dream, so he dispatched a group of envoys led by Zhang Qian who journeyed to the Yuezhi region (Indo-Scythia) to search out this sage; he returned with a copy of the "Scripture in Forty-Two Sections." A fifth-century source reports that the envoys also managed to secure

the famous image of the UDĀYANA BUDDHA, the first buddha-image. In fifth- and sixth-century materials, there is additionally mention of two Indian monks, KĀŚYAPA MĀTAṄGA (d. u.) and Dharmaratna (d. u.), who returned with the Chinese envoys. By the medieval period these monks are regularly cited as cotranslators of the scripture. According to a relatively late tradition, the Emperor Ming also built the first Chinese Buddhist temple—BAIMASI in Luoyang—as a residence for the two Indian translators. Early Buddhist catalogues refer to the text simply as "Forty-Two Sections from Buddhist Scriptures," or "The Forty-Two Sections of Emperor Xiao Ming." The text consists largely of snippets culled from longer Buddhist sūtras included in the Buddhist canon; parallel sections are found in the ĀGAMAS and NIKĀYAS, as well as the MAHĀVAGGA. The text also bears a number of Chinese stylistic features. The most obvious is the phrase "The Buddha said" which is used to introduce most sections, rather than the more common Buddhist opening "Thus have I heard" (EVAṂ MAYĀ ŚRUTAM). This opening is reminiscent of Confucian classics such as the *Xiaojing* ("Book of Filial Piety") and the *Lunyu* ("Analects"), where maxims and illustrative anecdotes are often prefaced with the phrase, "The master said." The terminology of the *Sishi'er zhang jing* borrows heavily from Daoism and the philosophical tradition known as XUANXUE (Dark Learning).

sishijiu [ri] zhai. (J. shijūku[nichi]sai; K. sasipku [il] chae 四十九[日]齋). In Chinese, "forty-ninth day ceremony," the final funeral service performed on the day when rebirth will have occurred. The "forty-ninth day ceremony" is the culmination of the funeral observances performed every seventh day for seven weeks after a person's death, lit. the "seven sevens [days] services" (C. QIQI JI/qiqi [ri] zhai; J. shichishichi no ki/shichishichi [nichi] sai; K. ch'ilch'il ki/ch'ilch'il [il] chae), a term that is also used as an alternate for "forty-ninth day ceremony." Many traditions of Buddhism believe that the dead pass through an "intermediate state" (ANTARĀBHAVA) that leads eventually to the next rebirth. The duration of this intermediate period is variously presumed to be essentially instantaneous, to one-week long, indeterminate, and as many as forty-nine days; of these, forty-nine days eventually becomes a dominant paradigm. Ceremonies to help guide the transitional being (GANDHARVA) through the rebirth process take place once each week, at any point of which rebirth might occur; these observances culminate in a "forty-ninth day ceremony" (SISHIJIU [RI] ZHAI), which is thought to mark the point at which rebirth certainly will have taken place. Since the transitional being in the antarābhava is released from the physical body, it is thought to be unusually susceptible to the influence of the dharma during this period; hence, the preliminary weekly ceremonies and the culminating forty-ninth day ceremony both include lengthy chanting of SŪTRAS and MANTRAS, often accompanied by the performance of MUDRĀS, in order to help the being understand the need to let go of the attachment to the previous life and go forward to at least a more salutary rebirth, if not to enlightenment itself. In Korea, the forty-ninth-day ceremony is usually performed in the Hall of the Dark Prefecture (MYŎNGBU CHŎN), the shrine dedicated to KṢITIGARBHA, the patron bodhisattva of the denizens of hell, and the ten kings of hell (SHIWANG; see YAMA), the judges of the dead.

Sitātapatrā. (T. Gdugs dkar; C. Baisangaifoding; J. Byakusangaibutchō; K. Paeksan'gae Pulchŏng 白傘蓋佛頂). In Sanskrit, "White Parasol," an important female bodhisattva in the MAHĀYĀNA and tantric pantheons. In some accounts, she is said to have emerged from the Buddha's crown protrusion (UṢṆĪṢA) and therefore is sometimes called Uṣṇīṣasitātapatrā. She has numerous forms, but the most famous has a thousand heads, a thousand arms, and a thousand feet, with three eyes in each head and an eye in each hand and foot. Sitātapatrā is regarded as a powerful deity, capable of destroying enemies and removing obstacles. During the Mongol Yuan dynasty, she was venerated by emperors because she was believed to be able to destroy armies and overcome disasters. She continues to be highly venerated in Tibetan Buddhism.

Sitatārā. (T. Sgrol dkar). In Sanskrit, "White Tārā," one of the two most significant forms of the goddess TĀRĀ, one of the most important female deities of late Indian Mahāyāna and an object of particular devotion in Tibet. Her other famous form is "Dark Tārā" or "Green Tārā" (ŚYĀMATĀRĀ). Sitatārā is white in color and is depicted seated in the lotus posture (PADMĀSANA). Her right hand makes the boon-granting gesture (VARADAMUDRĀ) and her left hand make the gesture of protection (ABHAYAMUDRĀ). She has seven eyes: her two eyes, a third eye in her forehead, and eyes in the palms of her hands and the soles of her feet. She has a somewhat more peaceful mien than Green Tārā, and is propitiated especially for health and long life. In the story of King SRONG BTSAN SGAM PO and his two wives, one Chinese and one Nepalese, the Chinese wife, Princess WENCHENG, is said to have been an incarnation of Sitatārā.

Si tu incarnations. See TAI SI TU INCARNATIONS.

Sīvalī. (C. Shipoluo; J. Shibara; K. Sibara 尸婆羅). In Sanskrit and Pāli, the proper name of an eminent ARHAT who was foremost among the Buddha's disciples in receiving gifts. According to the Pāli account, Sīvalī was the son of Princess Suppavāsā of Koḷiya (see SUPPAVĀSĀ-KOḶIYADHĪTĀ), who was pregnant with him for seven years. For another seven days she was in labor and, believing that she was about to die from the ordeal, she sent a gift to the Buddha to earn merit. The Buddha accepted the gift and blessed her, and immediately she gave birth to a son. Sīvalī was possessed of extraordinary powers from infancy. ŚĀRIPUTRA is said to have conversed with him on the day of his birth and ordained him with Suppavāsā's consent. He attained the stage of stream-enterer (SROTAĀPANNA) and once-returner (SAKṚDĀGĀMIN) during his ordination as a novice, and while dwelling alone in the jungle, subsequently attained

arhatship by contemplating the reasons for his delayed birth. (Some accounts say that Sīvalī learned he had been compelled to stay in his mother's womb for so long in retribution for having once laid siege for seven days to the city of Vārāṇasī during a previous existence.) Sīvalī's good luck at receiving gifts was the result of generosity shown by him in previous lifetimes to previous buddhas and the resolution he made during the time of Padmottara (P. Padumuttara) Buddha to one day be preeminent in this regard. The Buddha took Sīvalī with him on his journey to visit Khadiravaniya Revata because he knew provisions were scarce along the way. When Sīvalī and five hundred others journeyed to the desolate Himālaya mountains, the gods provided him and his companions with everything they needed. In Burma, Sīvalī is believed never to have passed into PARINIRVĀṆA, but to still remain in the world today; he is worshipped for good fortune and is depicted as a standing monk, holding a fan and an alms bowl.

sixteen arhats/sthaviras. See ṢOḌAŚASTHAVIRA.

Siyam Nikāya. The largest of the monastic orders in Sri Lanka, dating from 1753, so named because it derives from an ordination lineage that came from Thailand (Siam); today approximately half of the monks in Sri Lanka belong to this order. In the preceding five centuries, the tradition of full ordination (UPASAṂPADĀ) of BHIKṢUS had died out in Sri Lanka because there was not the requisite number of five fully ordained monks to ordain new monks. Thus, all Sri Lankan monks remained as novices (ŚRĀMAṆERA). The tradition of full ordination had been reintroduced twice before, but it had died out each time. In 1753, with the support of King Kīrti Śrī Rājasiṃha, the novice SARAṆAṂKARA invited the Thai elder Upāli to come to Sri Lanka to officiate at an ordination ceremony. The Siyam Nikāya is principally based around the city of Kandy and only accepts upper-caste males for full ordination.

skandha. (P. khandha; T. phung po; C. yun; J. un; K. on 蘊). In Sanskrit, lit. "heap," viz., "aggregate," or "aggregate of being"; one of the most common categories in Buddhist literature for enumerating the constituents of the person. According to one account, the Buddha used a grain of rice to represent each of the many constituents, resulting in five piles or heaps. The five skandhas are materiality or form (RŪPA), sensations or feeling (VEDANĀ), perception or discrimination (SAṂJÑĀ), conditioning factors (SAṂSKĀRA), and consciousness (VIJÑĀNA). Of these five, only rūpa is material; the remaining four involve mentality and are collectively called "name" (NĀMA), thus the compound "name-and-form" or "mentality-and-materiality" (NĀMARŪPA). However classified, nowhere among the aggregates is there to be found a self (ĀTMAN). Yet, through ignorance (AVIDYĀ or MOHA), the mind habitually identifies one or another in this collection of the five aggregates with a self. This is the principal wrong view (DṚṢṬI), called SATKĀYADṚṢṬI, that gives rise to suffering and continued existence in the cycle of rebirth (SAṂSĀRA).

skandhaka. (T. phung po; P. khandhaka; C. jiandu; J. kendo; K. kŏndo 犍度). In Sanskrit, "chapter," or "division," especially referring to a major section of the VINAYA. Whereas the PRĀTIMOKṢA largely deals with the conduct of individual monk or nuns, the skandhaka primarily deals with the conduct of monks and nuns in their capacity as collective members of the SAṂGHA. In the extant Sanskrit vinayas, this section is sometimes called the VINAYAVASTU. The Pāli vinaya has twenty-two sections (khandhaka). Most of the Sanskrit vinayas have twenty skandhaka, as follows. (1) pravrajyāvastu: this section deals with matters related to admission into the order as a novice (pravrajyā; see PRAVRAJITA), ordination as a fully ordained monk (UPASAṂPADĀ), admission of novices (ŚRĀMAṆERA), regulations for the interactions with the preceptor (UPĀDHYĀYA) or teacher (ĀCĀRYA), and circumstances that disqualify one from being admitted to the monastic order; (2) poṣadhavastu: this section deals with the UPOṢADHA, or confession ceremony, including a history of its origin and the rules for its performance. (3) varṣāvastu: this section deals with the annual rains retreat (VARṢĀ) and the rules to be observed during that period, including what kinds of dwelling are permitted. (4) pravāraṇāvastu: this section deals with the ceremony that marks the end of the annual rains retreat (PRAVĀRAṆĀ) and elimination of any disharmony that may have arisen during the retreat. (5) carmavastu: this section deals with leather and especially the usage of shoes. (6) bhaiṣajyavastu: this section deals with both medicine and food, setting forth which medicines are permitted and when they may be used; the rules concerning food set forth which foods may be accepted, how invitations from the laity should be treated; how food is to be prepared, and how the monastery storeroom should be utilized. (7) cīvaravastu: this section deals with robes (CĪVARA), including how may robes a monk may possess, how robes are to be received from the laity, how robes are to worn, and how robes are to sewn; (8) kaṭhinavastu: this section deals specifically with the cloth (KAṬHINA) that monks receive from the laity at the end of the rains retreat; (9) kośambakavastu: this section deals with the dispute that occurred between the Kauśāmbī monks and how it was resolved by the Buddha, who allowed an expelled monk to be reinstated upon confession. (10) karmavastu: this section deals with ecclesiastical acts (SAṂGHAKARMAN) taken by the community in various assemblies. (11) pāṇḍulohitavastu: this section deals with disciplinary measures that are taken when violations of the monastic code occur. (12) pudgalavastu: this section deals with SAṂGHĀVAŚEṢA infractions, the types of probationary periods (e.g., MĀNATVA; PARIVĀSA), and the procedure for reinstatement after probation. (13) pārivāsikavastu: this section describes the

proper conduct of a monk during the probationary period. (14) poṣadhasthāpanavastu: this section sets forth the circumstances under which a monk may be excluded from the UPOṢADHA ceremony. (15) śamathavastu: this section deals with legal cases (ADHIKARAṆA) and their resolution. (16) saṃghabhedavastu: this section deals with the schisms in the saṃgha (SAṂGHABHEDA), including the schism caused by DEVADATTA. (17) śayanāsanavastu: this section deals with the various dwelling places of members of the saṃgha. (18) ācāravastu: this section deals with conduct, especially in interactions with others, including laity, visiting monks, and forest-dwelling monks. (19) kṣudrakavastu: this section deals with miscellaneous minor rules. (20) bhikṣuṇīvastu: this section deals with the rules specific to nuns. The skandhaka begins with a biography of the Buddha that includes his genealogy, his birth, and his life up to the conversion of ŚĀRIPUTRA and MAHĀMAUDGALYĀYANA. It concludes with the story of the Buddha's death and goes on to describe the first Buddhist council (SAṂGĪTI, see COUNCIL, FIRST) at RĀJAGṚHA and the second council (COUNCIL, SECOND) at VAIŚĀLĪ. In the Tibetan BKA' 'GYUR, the vinaya section includes the above materials in the following sections: 'dul ba'i gzhi (vinayavastu), so sor thar pa (prātimokṣa), 'dul ba rnam par 'byed pa (vinayavibhaṅga), dge slong ma'i so sor thar pa'i mdo (bhikṣuṇī prātimokṣasūtra), dge slong ma'i 'dul ba rnam par 'byed pa (bhikṣuṇī vinayavibhaṅga), 'dul ba phran tshegs (vinayakṣudraka), 'dul ba gzhung bla ma/dam pa (vinayottaragrantha).

skandhamāra. (T. phung po'i bdud; C. yunmo; J. unma; K. onma 蘊魔). In Sanskrit, "Māra of the aggregates," one of the four forms of the demon MĀRA, along with the Māra of the afflictions (kleśamāra), the Māra of death (MṚTYUMĀRA), and the divinity Māra (DEVAPUTRAMĀRA). The deity Māra refers to the demonic entity that attacked the Buddha on the night of his enlightenment; the other three are figurative forms, which are also called Māra to indicate their pernicious nature. Skandhamāra is said to have two forms. The coarse form is the five appropriated aggregates (UPĀDĀNASKANDHA) that arise in dependence on KARMAN. The subtle form is the mental body that arises as a result of the predispositions of ignorance (AVIDYĀ-VĀSANĀ).

skill-in-means. See UPĀYAKAUŚALYA.

Sku 'bum. (Kumbum). In Tibetan, literally "one hundred thousand images," referring to a general architectural style of elaborate, multistories CAITYAS, including the Rgyal rtse sku 'bum (Gyantse Kumbum), GCUNG RI BO CHE, Jo nang sku 'bum, and Rgyang 'bum mo che (Gyang Bumoche). ¶ Sku 'bum is also the name of a Tibetan monastery founded in 1560 by Rin chen brtson 'grus rgyal mtshan (d.u.) commemorating the birthplace of DGE LUGS founder TSONG KHA PA BLO BZANG GRAGS PA; it is situated near Lake Kokonor and close to Xining, the capital of Qinghai province (incorporating much of the Tibetan A mdo region) in China. In 1583, the third DALAI LAMA, BSOD NAMS RGYA MTSHO, expanded the site by adding a temple dedicated to MAITREYA (T. Byams pa), after which the complex became known as Sku 'bum Byams pa gling (Kumbum Jampa Ling). The institution is centered around a miraculous tree marking Tsong kha pa's actual birthplace. It is also the site where Tsong kha pa's mother is said to have fashioned a STŪPA in 1379. Unlike other Tibet sites with the name sku 'bum, the name of the monastery does not derive from its architectural style but rather from a white sandalwood tree that grew at the spot where Tsong kha pa's father planted his placenta (in other versions, it grew from a drop of blood from the umbilical cord). The tree is said to have one hundred thousand leaves, with each leaf bearing an image of the seed syllables (BĪJA) and hand implements of the buddha Siṃhanāda, the buddha whom Tsong kha pa will eventually become. Over the centuries, Sku 'bum developed into an enormous complex, one of the largest in the region, with thirty temples, over a thousand buildings, and some 3,600 monks. It had four colleges, one each for the study of doctrine, tantra, medicine, and the KĀLACAKRATANTRA. The monastery's hereditary abbot was the A skya Rin po che, considered the incarnation of Tsong kha pa's father. Sku 'bum is counted among the six great Dge lugs monasteries in Tibet, traditionally drawing large numbers of monks from Mongolia, as well as parts of eastern Tibet. Since 1959, the size of the monastic population has been drastically reduced and, since the 1990s, the monastery has become a popular destination for Han Chinese tourists.

skull (cup). See KAPĀLA.

Skyid grong. (Kyirong). A village and surrounding region in southwestern Tibet, on the border with Nepal. Numerous religious centers and pilgrimage sites are located in the area including the 'PHAGS PA WA TI LHA KHANG, RI BO DPAL 'BAR, and the YOGIN MI LA RAS PA's hermitage BRAG DKAR RTA SO. Skyid grong was an important staging post on the foremost ancient trade route between Tibet and Nepal.

śloka. (P. siloka; T. tshigs bcad; C. ji/song; J. ge/ju; K. ke/song 偈/頌). In Sanskrit, "stanza," referring to a unit of metrical verse in traditional Sanskrit literature. Although the exact form of the verse may vary, the most common form of ŚLOKA is composed of four "feet" (pāda), each foot consisting of eight syllables, for a total of thirty-two; this form is called the anuṣṭubh. Other forms include the triṣṭubh, which has four feet of eleven syllables each, and the gāyatrī, which has three feet of eight syllables each. The form is widely used in Buddhist and non-Buddhist Indian literature, which is often composed in a mixture of prose and verse. The term is implied in the titles of the PRAJÑĀPĀRAMITĀ SŪTRAS: e.g., in the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ, which is often translated as "The Perfection of Wisdom in Eight Thousand Lines," where lines refers to ślokas.

Sman ri. (Menri). One of the largest and most influential BON monasteries, founded in 1405 by SHES RAB RGYAL MTSHAN in central Tibet.

Smar tshang bka' brgyud. (Martsang Kagyü). One of the four major and eight minor subsects of the BKA' BRGYUD sect of Tibetan Buddhism (BKA' BRGYUD CHE BZHI CHUNG BRGYAD), originating with Smar pa Shes rab seng ge (Marpa Sherap Senge, d.u.), student of Bka' brgyud hierarch PHAG MO GRU PA RDO RJE RGYAL PO.

śmaśāna. (P. susāna; T. dur khrod; C. shilin/hanlin; J. shirin/kanrin; K. sirim/hallim 屍林/寒林). In Sanskrit, "charnel ground," "cemetery"; funerary sites in ancient India where corpses were left to decompose. The charnel ground was recommended as a site for monks to practice meditation in order to overcome attachment to the body. In the MAHĀSATIPAṬṬHĀNASUTTA, the Buddha recommends nine "charnel ground contemplations" (sīvathikā manasikāra). There is a set of "contemplations on the foul" (AŚUBHABHĀVANĀ) described in mainstream Buddhist literature that were to take place in the charnel grounds, where the monks would sit next to the dead and contemplate the nine or ten specific stages in the decomposition of a corpse; this meditation was a powerful antidote to the affliction of lust (RĀGA). The traditional list of thirteen authorized ascetic practices (S. dhūtaguṇa; P. DHUTAṅGA) also includes dwelling in a charnel ground (no. 11) and wearing only discarded cloth (no. 1), which typically meant to use funerary cloth taken from rotting corpses to make monastic raiments (CĪVARA), thus weaning the monk or nun from attachment to material possessions. The ideal charnel ground is described as a place where corpses are cremated daily, where there is the constant smell of decomposing corpses, and where the weeping of the families of the dead can be heard. The practice of meditation there is said to result in an awareness of the inevitability of death, the abandonment of lust, and the overcoming of attachment to the body. In India, the charnel ground was a frightful place not only because of the presence of corpses but also for the creatures, including wild animals and various demons, that frequented it at night. Thus, in tantric Buddhism, the charnel ground was considered to be inhabited by wrathful deities, ḌĀKINĪS, and MAHĀSIDDHAS, making it a potent place for the performance of ritual and meditation. Mahāsiddhas are sometimes depicted in charnel grounds, sitting on corpses and drinking from skull cups. ANUTTARAYOGATANTRA texts also refer to a set of "eight great charnel grounds" (S. AṢṬAMAHĀŚMAŚĀNA), which are also frequently depicted in tantric Buddhist art. While the eight sites are often equated with actual geographic locations in India, they also carry a deeper symbolism, referring to regions of tantric sacred geography, points on a MAṆḌALA or a deity's body, and elements of tantric physiology such as the channels (NĀḌĪ) in the subtle body of a meditating YOGIN. Their origin myth describes the defeat of the demon Rudra, after which the charnel grounds arose in the eight cardinal and intermediate directions, each from a piece of his dismembered body. They are described as wild and terrifying places, littered with human corpses and wild animals, each with their own trees, protectors, STŪPAS, NĀGAS, jewels, fires, clouds, mountains, and lakes. They are inhabited by a host of spirits and nonhuman beings, as well as meditating yogins and YOGINĪS. In general, charnel grounds and similar frightening locations are said to be efficacious for the practice of tantric meditation. The aṣṭamahāśmaśāna are also usually depicted as forming part of the outer protection wheel in maṇḍalas of anuttarayogatantra. There are varying lists of the eight great charnel grounds, one of which is: caṇḍogrā (most fierce), gahvara (dense thicket), vajrajvala (blazing vajra), endowed with skeletons (karaṅkin), cool grove (śītavana), black darkness (ghorāndhakāra), resonant with "kilikili" (kilikilārava), and cries of "ha ha" (aṭṭahāsa); Tibetan sources give the names of the eight great charnel grounds as gtum drag (caṇḍogra), tshang tshing 'khrigs pa (gahvara), rdo rje bar ba (vajrajvala), keng rus can (karaṅkin), bsil bu tshal (śītavana), mun pa nag po (ghorāndhakāra) ki li ki lir sgra sgrog pa (kilikilārava), and ha ha rgod pa (aṭṭahāsa).

Smin grol gling. (Mindroling). Largest monastery of the RNYING MA sect of Tibetan Buddhism in central Tibet; established in 1670 by GTER BDAG GLING PA, the brother of LO CHEN DHARMA SHRI, and a close associate and supporter of the fifth DALAI LAMA. It was founded on the site of an earlier structure built in the early eleventh century by Klu mes Shes rab tshul khrims (Lume Sherap Tsultrim, b. c. tenth century). Smin grol gling flourished as the center of the Southern Treasure tradition (LHO GTER), which originated with the teachings and revelations of Gter bdag gling pa. The monastic compound was severely damaged by the Dzungar army in the early eighteenth century and again during the Chinese Cultural Revolution, although it has since undergone significant restoration. The abbots of Smin grol gling became known as the Smin gling khri can (Throne Holder of Mindroling), a line of important masters descending in a familial lineage from Gter bdag gling pa. The lineage of Smin grol gling throneholders is

1. Gter bdag gling pa 'Gyur med rdo rje (1646–1714)
2. Padma 'gyur med rgya mtsho (Pema Gyurme Gyatso, 1686–1717)
3. Rin chen rnam rgyal (Rinchen Namgyal, 1694–1758)
4. 'Gyur med padma bstan 'dzin (Gyurme Pema Tendzin, b. eighteenth century.)
5. 'Phrin las rnam rgyal (Trinle Namgyal, 1765–1812)
6. Padma dbyang rgyal (Pema Wangyal, b. eighteenth century)
7. 'Gyur med sangs rgyas kun dga' (Gyurme Sangye Kunga, born c. late eighteenth/early nineteenth century)
8. Khri can Yid bzhin dbyang rgyal (Trichen Yishin Wangyal, d.u)
9. Bde chen chos grub (Dechen Chödrup, d.u.)
10. Kun dga' bstan 'dzin (Kunga Tendzin, d.u.)
11. Don grub dbang rgyal (Döndrup Wangyal, d.u.)
12. Kun bzang dbang rgyal (Kunzang Wangyal, b. 1931).

Smon lam chen mo. (Mönlam Chenmo). In Tibetan, "great prayer," the great prayer festival that took place in the Tibetan capital of LHA SA as part of the celebration of the Tibetan lunar New Year (and thus occurring in February and sometimes March). The festival was established by TSONG KHA PA, the founder of the DGE LUGS sect, in 1409, to commemorate the Buddha's defeat of the heretical teachers (TĪRTHIKA) at ŚRĀVASTĪ. Lasting until the twenty-fifth day of the first month of the new year, the festival included prayers performed three times each day at the JO KHANG, the chief temple of Lha sa, as well as rituals for the expiation of misdeeds committed during the previous year and a rededication to the principles of Buddhism for the coming year. During the festival, the city would be filled with pilgrims from all over Tibet as well as with monks from the three Dge lugs monasteries in the vicinity of Lha sa. Elaborate butter sculptures (GTOR MA) were made and 'CHAM dances were performed. The examinations for the granting of the DGE BSHES lha ram pa degree took place at this time. For the period of the festival, the lay officials of the city of Lha sa turned over civil authority to the monks of 'BRAS SPUNGS monastery. The festival was suspended after the Tibetan uprising in 1959, but began again in 1986 with the political liberalization that followed the death of Mao Zedong, but was banned again in 1990. In times of conflict it has served as a focus for Tibetan political and cultural identity.

smṛti. (P. sati; T. dran pa; C. nian; J. nen; K. yŏm 念). In Sanskrit, "mindfulness" or "memory" and often seen in Western sources in the Pāli equivalency sati; a polysemous term, but commonly used in meditative contexts to refer to the ability to remain focused on a chosen object without forgetfulness or distraction. The SARVĀSTIVĀDA school of ABHIDHARMA lists smṛti as one of a group of five determinative (VINIYATA) mental concomitants (CAITTA), whose function is to aid the mind in ascertaining or determining its object. The five are: aspiration or desire-to-act (CHANDA), determination or resolve (ADHIMOKṢA), mindfulness or memory (smṛti), concentration (SAMĀDHI), and wisdom or cognition (PRAJÑĀ). According to ASAṄGA, these five determinative factors accompany wholesome (KUŚALA) states of mind, so that if one is present, all are present. Mindfulness is crucial to all types of formal meditative practice because of its role in bringing clarity to the perceptual process; it leaves the mind in a purely receptive state that inhibits the unwholesome responses to sensory stimuli, such as greed, hatred, and delusion. Mindfulness also contributes to control of the mind, by eliminating distraction and helping the meditator gain mastery of his thought processes. Smṛti is also a catalyst of the related term "circumspection" or "introspection" (SAṂPRAJANYA) and ultimately of wisdom (PRAJÑĀ). As the third of the five spiritual faculties (PAÑCENDRIYA), smṛti helps to balance faith (ŚRADDHĀ) and wisdom (prajñā)—which could degenerate into blind faith or skepticism, respectively—as well as vigor (VĪRYA) and concentration (SAMĀDHI)—which could degenerate respectively into restlessness and indolence. Smṛti is thus the keystone that ensures the uniform development of all five faculties; for this reason, unlike the other four factors, there can never be too much mindfulness, because it cannot degenerate into a negative state. The emphasis on mindfulness is one of the most distinctive features of Buddhist meditation theory. Consequently, the term appears in numerous lists of virtuous qualities, especially in those pertaining to meditation. For example, in perhaps its most popular usage, right mindfulness (SAMYAKSMṚTI) is the seventh of the eight aspects of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA). Generally in this context, the cultivation of the "foundations of mindfulness" (SMṚTYUPASTHĀNA) is understood to serve as a basis for the development of liberating wisdom (prajñā). Thus, meditation exercises involving smṛti are often discussed in connection with those related to VIPAŚYANĀ, or "insight." In one of the most widely read discourses on mindfulness, the MAHĀSATIPAṬṬHĀNASUTTANTA, the Buddha offers four specific foundations of mindfulness training, namely, on the body (KĀYA), sensations (VEDANĀ), mental states (CITTA), and specific factors (P. dhamma; S. DHARMA). In his *Prajñāpāramitāhṛdayanāmaṭīkā*, a commentary on the PRAJÑĀPĀRAMITĀHṚDAYASŪTRA ("Heart Sūtra"), KAMALAŚĪLA lists mindfulness as the third of five "powers" (BALA) that are attained on the path of preparation (PRAYOGAMĀRGA). In another popular schema, smṛti is listed as the first of seven "limbs of awakening" or factors of enlightenment (BODHYAṄGA); these are seven factors that contribute to enlightenment. See also ANUSMṚTI; SMṚTYUPASTHĀNA; SATIPAṬṬHANASUTTA.

smṛtyupasthāna. (P. satipaṭṭhāna; T. dran pa nyer bzhag; C. nianchu; J. nenjo; K. yŏmch'ŏ 念處). In Sanskrit, "foundations of mindfulness," a meditative training in which one contemplates with mindfulness (SMṚTI): one's (1) body (KĀYĀNUPAŚYANĀ; P. kāyānupassanā), by mean of mindfulness of breathing, mindfulness of postures, full awareness of bodily actions, contemplation of bodily impurities, contemplation of elements, and nine cemetery meditations; (2) sensations (vedanānupaśyanā; P. vedanānupassanā), viz., pleasant, unpleasant, or neutral sensations (VEDANĀ); (3) mental states (cittānupaśyanā; P. cittānupassanā), such as whether the mind (CITTA) generally is elated or depressed, distracted or concentrated; and (4) factors (dharmānupaśyanā; P. dhammānupassanā), such as the five hindrances (NĪVARAṆA), the five aggregates (SKANDHA), the seven factors of enlightenment (BODHYAṄGA); the FOUR NOBLE TRUTHS, etc. The explanation of smṛtyupasthāna, as the first of the thirty-seven dharmas associated with enlightenment (bodhyaṅga) details the role of mindfulness in the eightfold noble path (ĀRYĀṢṬĀṄGAMĀRGA). See also SMṚTI; SATIPAṬṬHĀNASUTTA.

Smṛtyupasthānasūtra. In Sanskrit, "Discourse on the Foundations of Mindfulness." See SATIPAṬṬHĀNASUTTA.

Snar thang. (Nartang). A Tibetan monastery famous as the source for an important printed edition of the Buddhist canon,

the BKA' 'GYUR and BSTAN 'GYUR. It was located a short distance west of Gzhis ka rtse (Shigatse). The monastery was founded in 1153 and was originally a BKA' GDAMS center. The edition of the canon produced there appears to derive from a manuscript edition prepared between 1312 and 1320. The engraving of the woodblocks was completed in 1730. The main buildings of the monastery, the woodblock collection, and many of its art treasures were destroyed in 1966 during the Chinese Cultural Revolution.

snga dar. (ngadar). In Tibetan, "earlier dissemination" or "first dissemination," the first of two historical periods when Buddhism was disseminated to Tibet. The beginning of the period is variously indicated, sometimes being traced as far back as the first (and likely legendary) Tibetan king, Gnya' khri btsan po, sometimes to the king Lha tho tho ri. However, it is agreed that the dissemination became well established during the reign of king SRONG BTSAN SGAM PO in the seventh century, with his marriage to a Chinese princess and a Nepalese princess, each a Buddhist and each of whom brought a statue of the Buddha with her to Tibet. It continued through the reign of King KHRI SRONG LDE BTSAN, during which ŚĀNTARAKṢITA and PADMASAMBHAVA came to Tibet, the first Tibetan monastery at BSAM YAS was founded, and the BSAM YAS DEBATE took place. Traditionally the end of the first dissemination is associated with the murder of the great patron of Buddhism, King RAL PA CAN, by his brother GLANG DAR MA in 838, who then seized the throne and instituted a suppression of Buddhism. The beginning of the second or later dissemination (PHYI DAR) is traditionally dated from the first journey of the translator RIN CHEN BZANG PO to India. Subsequent research has shown that the dissemination of Buddhism in general did not end with the death of Ral pa can, but that there was a decline in particular forms of monasticism that disadvantaged institutional forms of religious expression. See JO KHANG.

Sngags rim chen mo. (Ngak rim chenmo). In Tibetan, "Great Exposition of the Stages of MANTRA," an extensive theoretical work on the classes and stages of TANTRA, written by the DGE LUGS savant TSONG KHA PA BLO BZANG GRAGS PA. The work is regarded as the tantric companion to his most famous work, the LAM RIM CHEN MO, or "Great Exposition of the Stages of the Path." The work begins with an influential discussion of what distinguishes the MAHĀYĀNA from the HĪNAYĀNA, and within Mahāyāna, what distinguishes the perfection vehicle (PĀRAMITĀYĀNA, phar phyin theg pa) from the mantra vehicle (MANTRAYĀNA, sngags kyi theg pa), with Tsong kha pa arguing that the practice of "deity yoga" (DEVATĀYOGA, lha'i rnal 'byor) is the distinguishing feature of tantric practice. The text then goes on to set forth the principal practices of each of the four major divisions of tantras according to Dge lugs: KRIYĀTANTRA, CARYĀTANTRA, YOGATANTRA, and ANUTTARAYOGATANTRA, with the greater part of the text devoted to the last of these divisions, regarded as essential for the achievement of buddhahood.

Snga 'gyur rnying ma. (Ngagyur nyingma). A Tibetan term referring to the RNYING MA sect of Tibetan Buddhism, lit. "Early Translation Ancient Tradition," referring to the fact that the Rnying ma sect relies on translations, especially translations of TANTRAs, that were made prior to the later dissemination (PHYI DAR) of Buddhism to Tibet. In distinction, the other sects of Tibetan Buddhism are called "new" (GSAR MA).

sngon 'gro. (ngöndro). In Tibetan, lit "going before," viz., "preliminary practices"; referring generally to practices that are performed in order to establish proper motivation, to purify the mind of afflictions, and to remove obstacles before embarking upon tantric practice. Although present in all sects of Tibetan Buddhism, "preliminary practices" are especially associated with the RNYING MA and BKA' BRGYUD sects. One of the most famous presentations of the preliminary practices is found in the nineteenth-century Rnying ma pa work, the KUN BZANG BLA MA'I ZHAL LUNG ("Words of My Perfect Teacher") by DPAL SPRUL RIN PO CHE. The text first sets forth the "common preliminaries," reflections on central points of Buddhist doctrine, intended to turn one's interests away from SAṂSĀRA and toward the wish for liberation from rebirth. These are: (1) the rarity of human birth, (2) the uncertainty of the time of death, (3) the causes and effect of actions, (4) and the sufferings incumbent in the six rebirth destinies (GATI) of SAṂSĀRA. The "uncommon preliminary practice" entail the accumulation of a specific number (usually one hundred thousand) of specific practices. It is these practices that are intended to purify afflictions and remove obstacles. These are (1) recitation of the refuge formula while performing a hundred thousand prostrations; (2) cultivation of BODHICITTA (often in the form of a hundred thousand repetitions of a prayer); (3) recitation of the hundred-syllable MANTRA of the buddha VAJRASATTVA; (4) a hundred thousand offerings of a MAṆḌALA; (5) the practice of GURU yoga through a hundred thousand repetitions of the name mantra of the guru. In each case, these practices are to be performed with the appropriate visualization. In order to complete the uncommon preliminary practices, disciples would often go on retreat, during which they would devote all their time to the practices.

snyan brgyud. (nyen gyü). In Tibetan, "hearing lineage" or "aural lineage," a term used to refer to teachings, especially tantric teachings, that are not committed to writing but that are instead transmitted orally from master to disciple from one generation to the next.

snyan brgyud skor gsum. (nyen gyü kor sum). In Tibetan, "the three aural lineage cycles"; a compilation of instructions based on the CAKRASAṂVARATANTRA, including liturgies, ritual manuals, and commentarial works, together with their oral commentaries, stemming from MI LA RAS PA's three principal disciples: RAS CHUNG PA RDO RJE GRAGS, SGAM PO PA BSOD NAMS RIN CHEN, and Ngan rdzongs ras pa Byang chub rgyal po (Ngendzong Repa Jangchup Gyalpo). The three cycles are

respectively known as the RAS CHUNG SNYAN BRGYUD, Dwags po snyan brgyud (Dakpo nyengyu), and Ngan rdzongs snyan brgyud (Ngendzong nyengyu). They were later edited and systematized by the adept GTSANG SMYON HERUKA during the fifteenth century. See also SNYAN BRGYUD.

Snyder, Gary. (1930–). American poet and prominent figure in Zen Buddhism in America. Gary Snyder was born in San Francisco and raised on a farm outside Seattle, Washington. He attended Reed College in Oregon, where he studied literature and anthropology. Inspired by DAISETZ TEITARO SUZUKI's *Essays in Zen Buddhism*, he taught himself to meditate, and devoted himself to the practice of Zen meditation while working as a fire lookout in Washington state. In 1952, he enrolled in the Department of Oriental Languages at the University of California, Berkeley, to study Chinese and Japanese. He met ALLEN GINSBERG and JACK KEROUAC in San Francisco and participated in the famous Six Gallery reading in 1955, where Ginsberg first read *Howl*. Snyder traveled to Japan in 1956, returning again in 1958 to spend seven years practicing Zen meditation at the monastery of DAITOKUJI. He returned to San Francisco in 1966. His work and his poetry have remained committed both to the exploration of Buddhist, especially Zen, practice and to the protection of the environment. Snyder served on the California Arts Council from 1974 to 1980 and taught at the University of California, Davis, where he helped found the Nature and Culture curriculum. He founded the Ring of Bone Zendo at his mountain farm in the northern Sierra Nevada range in California.

snying thig. (nyingtik). In Tibetan, "heart drop" or "heart essence" (an abbreviation of snying gi thig le), a term used to describe an important genre of texts of the RNYING MA sect of Tibetan Buddhism. The master ŚRĪSIṂHA is said to have divided the "instruction class" (MAN NGAG SDE) of the great completion (RDZOGS CHEN) teachings into four cycles: the outer, inner, secret, and the most secret unexcelled cycle (yang gsang bla na med pa). In Tibet, VIMALAMITRA organized the teachings of this fourth cycle into an explanatory lineage with scriptures and an aural lineage without scriptures and then concealed these teachings, which were later revealed as the BI MA'I SNYING THIG ("Heart Essence of Vimalamitra"). During his stay in Tibet, PADMASAMBHAVA concealed teachings on the most secret unexcelled cycle, called "heart essence of the ḌĀKINĪ" (MKHA' 'GRO SNYING THIG). In the fourteenth century, these and other teachings were compiled and elaborated upon by KLONG CHEN RAB 'BYAMS into what are known as the "four heart essences" (SNYING THIG YA BZHI): (1) the "heart essence of VIMALAMITRA" (Bi ma'i snying thig), (2) the "ultimate essence of the lama" (bla ma yang thig), (3) the "heart essence of the ḍākinī" (mkha' 'gro snying thig), and (4) two sections composed by Klong chen pa, the "ultimate essence of the ḍākinī" (mkha' 'gro yang thig) and the "ultimate essence of the profound" (zab mo yang thig). Although tracing its roots back to Padmasambhava and Vimalamitra in the eighth century, the snying thig texts and their practices likely derive from Tibetan reformulations of great completion teachings beginning in the eleventh century, when new translations of Indian tantras were being made in Tibet. A wide range of new meditative systems were added into the rdzogs chen corpus, which would prove to be essential to Tibetan Buddhist practice, especially in the RNYING MA and BKA' BRGYUD sects in subsequent centuries.

snying thig ya bzhi. (T). See SNYING THIG.

Sobhana Mahāthera. (1904–1982). See MAHASI SAYADAW.

Śobhita. (P. Sobhita; T. Mdzes pa; C. Guoyi; J. Kae; K. Kwaŭi 菓衣). An eminent ARHAT elder declared by the Buddha to be foremost among his monk disciples in remembering past births (PŪRVANIVĀSĀNUSMṚTI). He was born the son of a brāhmaṇa family and dwelled in the city of ŚRĀVASTĪ. Hearing the Buddha preach one day, he resolved to renounce the world and enter the order as a monk. After some time he attained arhatship. During the time of Padmottara (P. Padumuttara) Buddha, when he was a householder living in the city of Haṃsavatī, he heard the Buddha praise a monk disciple as foremost in his ability to recall previous lives. It was then that he resolved to earn that same distinction during the dispensation of a future buddha. During the time of Sumedha Buddha, Śobhita was a learned brāhmaṇa who was expert in the Vedas. He renounced the householder's life to observe piety as a hermit in the environs of the Himālaya mountains. When he heard a Buddha had appeared in the world, he rushed to Bandhumatī to sing the Buddha's praises.

ṣoḍaśasthavira. (T. gnas brtan bcu drug; C. shiliu zunzhe; J. jūrokusonja; K. simnyuk chonja 十六尊者). In Sanskrit, "the sixteen elders" (most commonly known in the East Asian tradition as the "sixteen ARHATs"); a group of sixteen venerated arhat (C. LUOHAN) disciples of the Buddha whom the Buddha orders to forgo NIRVĀṆA and to continue to dwell in this world in order to preserve the Buddhist teachings until the coming of the future buddha, MAITREYA. Each of these arhats is assigned an (often mythical) residence and a retinue of disciples. With Maitreya's advent, they will gather the relics of the current buddha ŚĀKYAMUNI and erect one last STŪPA to hold them, after which they will finally pass into PARINIRVĀṆA. The *Śāriputra-paripṛcchā* ("Sūtra on Śāriputra's Questions"), which was translated at least by the Eastern Jin dynasty (317–420 CE) but may date closer to the beginning of the millennium, mentions four great monks (mahā-BHIKṢU) to whom the Buddha entrusted the propagation of the teachings after his death: MAHĀKĀŚYAPA, PIṆḌOLA, Kundovahan (C. Juntoupohan, "Holder of the Mongoose," apparently identical to BAKKULA), and RĀHULA. The MILE XIASHENG JING ("Sūtra on the Advent of Maitreya"), translated in 303 CE by DHARMARAKṢA, states instead that the Buddha instructed these same four monks to wait until after the

buddhadharma of the current dispensation was completely extinct before entering PARINIRVĀṆA. The *Śāriputraparipṛcchā*'s account is also found in the FAHUA WENJU by TIANTAI ZHIYI (538–597) of the Sui dynasty. The *Mahāyānāvatāra* (C. *Ru dasheng lun*; "Entry into the Mahāyāna"), a treatise written by Sāramati (C. Jianyi) and translated into Chinese c. 400 CE by Daotai of the Northern Liang dynasty (397–439) first mentions "sixteen" great disciples (mahā-ŚRĀVAKA) who disperse throughout the world to preserve the Buddha's teachings after his death, but does not name them. Indeed, it is not until the Tang dynasty that the full list of sixteen disciples who preserve the buddhadharma is first introduced into the Chinese tradition. This complete list first appears in the *Nandimitrāvadāna* (*Da aluohan Nantimiduo luo suoshuo fazhu ji*, abbr. *Fazhu ji*, "Record of the Duration of the Dharma Spoken by the Great Arhat NANDIMITRA"), which was translated by XUANZANG in 654 CE. (Nandimitra [C. Qingyou zunzhe] was born in the second century CE in Sri Lanka.) This text tells the story of the Buddha's special charge to this group of elders and offers each of their names, residences, and numbers of disciples. JINGQI ZHANRAN's (711–782) *Fahua wenju ji*, a commentary to TIANTAI ZHIYI'S (538–597) FAHUA WENJU, also cites an account from the apocryphal *Ratnameghasūtra* (*Bao yun jing*) that the Buddha charged sixteen "worthy ones" (S. arhat; C. luohan) with preserving the BUDDHADHARMA until the advent of Maitreya, after which they could then enter parinirvāṇa. Zhanran's citation of this sūtra gives the names of each of the sixteen arhats, along with their residence and the number of their followers; but while Piṇḍola's and Rāhula's names are included in the sixteen, Mahākāśyapa is not mentioned. According to the *Xuanhe huapu* ("The Xuanhe Chronology of Painting"), the earliest Chinese iconography showing a group of sixteen disciples probably dates to the Liang dynasty (502–557), when ZHANG SENGYAO (d.u.; fl c. 502–549) first painted a rendering of the ṣoḍaśasthavira. After the *Nandimitrāvadāna* was translated into Chinese in the middle of the seventh century, the group of sixteen elders became so universally revered within China that many verses, paintings, and sculptures were dedicated to them. As a group, they appear frequently in East Asian monastic art, each arhat specifically identified by his unique (and often wildly exaggerated) physical characteristics. The most renowned such painting was made at the end of the ninth century by the monk CHANYUE GUANXIU (832–912); his work became the standard presentation of the sixteen. His vivid portrayal of the arhats offers an extreme, stylized rendition of how the Chinese envisioned "Indians" (fan) or "Westerners" (hu). He gives each of his subjects a distinctive bearing and deportment and unique phrenological features and physical characteristics; these features are subsequently repeated routinely in the Chinese artistic tradition. The standard roster of arhats now recognized in the East Asian tradition, in their typical order, are (1) PIṆḌOLA BHĀRADVĀJA; (2) KANAKAVATSA; (3) KANAKA BHĀRADVĀJA; (4) SUBINDA [alt. Suvinda]; (5) BAKKULA [alt. Bākula, Nakula]; (6) BHADRA; (7) KĀLIKA [alt. Karīka]; (8) VAJRAPUTRA; (9) JĪVAKA; (10) PANTHAKA; (11) RĀHULA; (12) NĀGASENA; (13) AṄGAJA; (14) VANAVĀSIN; (15) AJITA; (16) CŪḌAPANTHAKA. Sometime before the Song dynasty, the Chinese occasionally added two extra arhats to the roster, possibly in response to Daoist configurations of teachers, giving a total of eighteen. The most common of these additional members were Nandimitra (the putative subject of the text in which the protectors are first mentioned by name) and Piṇḍola Bhāradvāja (another transcription of the arhat who already appears on the list), although Mahākāśyapa also frequently appears. The Tibetan tradition adds still other figures. In a standard form of the Tibetan ritual, the sixteen elders are listed as Aṅgaja, Ajita, Vanavāsin, Kālika, Vajraputra, Bhadra, Kanakavatsa, Kanaka Bhāradvāja, Bakkula, Rāhula, Cūḍapanthaka, Piṇḍola Bhāradvāja, Panthaka, Nāgasena, GOPAKA (Sbed byed), and Abheda (Mi phyed pa). They are visualized together with Śākyamuni Buddha whose teaching they have been entrusted to protect, their benefactor the layman (UPĀSAKA) Dharmatāla [alt. Dharmatāra, Dharmatrāta], and the four great kings (CATURMAHĀRĀJA) VAIŚRAVAṆA [alt. Kubera], DHṚTARĀṢṬRA, VIRŪḌHAKA, and VIRŪPĀKṢA. Each of the elders is described as having a particular scroll, begging bowl, staff, and so on, and in a particular posture with a set number of arhats. They come miraculously from their different sacred abodes, assemble, are praised, and worshipped with the recitation of the bodhisattva SAMANTABHADRA's ten vows in the BHADRACARĪPRAṆIDHĀNA. Then, with solemn requests to protect the dispensation by watching over the lives of the gurus, they are requested to return to their respective homelands. In other rituals, one finds BUDAI heshang (Cloth-Bag Monk, viz., AṄGAJA), the Buddha's mother, Queen MĀYĀ, and his successor, Maitreya; or the two ancient Indian Buddhist sages "Subduer of Dragons" (C. Xianglong) and "Subduer of Lions" (C. Fuhu). See also LUOHAN; and individual entries on each of the sixteen arhats/sthaviras.

Soga. (蘇我). A powerful clan (J. uji) in Japan from the sixth through the mid-seventh centuries and early patrons of Buddhism in the Japanese isles. The Soga may have been descendants of immigrants from the Korean peninsula, as suggested in part by their close ties with the Korean Paekche kingdom; Soga no Iname (d. 570) appears to have been one of the first supporters of Buddhism in Japan, learning about the tradition via Paekche. As no textual sources exist from this early period, ascertaining their role in the Yamato court remains a difficult task and a topic much debated among scholars. Not until the *Nihon shoki* ("Chronicles of Japan"; 720) do we arrive at a historical account of the clan. This text was commissioned by the lineage of Tenmu (r. 672–686), who may have wanted to cast the Soga in negative light. Nevertheless, it offers the following narrative. Beginning with Soga no Iname, four generations of the Soga clan served as chief ministers (J. ōomi) to the Yamato court. Two of Iname's daughters were married to the emperor Kinmei (r. 531 or 539?–571), and three of his

grandchildren are purported in the *Nihon shoki* to have been monarchs: Yōmei (r. 585–587), Sushun (r. 587–592), and Suiko (r. 593–628). It is also asserted that Soga no Umako (d. 626), son of Iname, commissioned the construction of the monastery of ASUKADERA. Archeological evidence suggests that this monastery was the greatest temple of its time in size and influence, despite the fact that it receives little attention in the *Nihon shoki*. By the mid-seventh century, the Soga clan heads, notably Umako's son, Emishi (d. 645), and Emishi's son, Soga no Iruka (d. 645), appear to have been the most powerful members of the Yamato court. According to the *Nihon shoki*, in 643, Iruka made a successful attack on SHŌTOKU TAISHI's surviving son, Yamashiro no Ōe and others. Prince Naka no Ōe, later enthroned as Tenji (r. 661–672), counterattacked in 644, killing Iruka and other Soga family members. Emishi and much of the rest of the Soga clan are said to have been forced to commit suicide the following day. Soga no Akae (623–672?), grandson of Umako, survived the coup, serving as ōomi through the Taika Reform (645). With the massacre of most of the clan, however, its power was substantially diminished.

Sogdiana. A kingdom in Inner Asia (the Greek Transoxiana) centered on the Zeravshan River in modern Uzbekistan. The Sogdians dominated trade between China and India from the second through the tenth centuries CE. Their language, Sogdian (a branch of Indo-Iranian), was used along the SILK ROAD as a mercantile language and Buddhist texts from China were translated into Sogdian and used by Buddhists in this region. (There is no evidence that Buddhist texts in Indian languages were translated into Sogdian.) In East Asia, monks from the kingdom of Sogdiana were designated with the ethnikon KANG, as in the case of the early translator KANG SENGHUI (d. 280).

sōhei. (僧兵). In Japanese, "monks' militia." During the mid-Heian period, the major Buddhist monasteries near Nara and Kyōto, such as KŌFUKUJI, ENRYAKUJI, and Onjōji (later called MIIDERA), became large landholders and were deeply immersed in political activities. The monasteries maintained small armies of private warriors to protect their assets and promote their interests. Although these warriors wore Buddhist robes and lived inside the temple complexes, they were not formally ordained; on the battlefield, they also wore full armor, making them virtually indistinguishable from ordinary warriors. During this period, these warriors were called simply "members of the congregation" (shuto; daishu) or pejoratively referred to as "evil monks" (akusō); the term sōhei seems not to have been used until 1715, when it first appeared in the *Dainihon shi* ("The History of Great Japan"). These monks' militias were mustered against both rival temples and secular authorities. From the tenth to the twelfth centuries, monks' militias engaged in pitched battles with their rivals, as in the intrasectarian rivalry between the Tendai monasteries of Enryakuji and Onjōji, and the intersectarian rivalries between Kōfukuji and its two Tendai counterparts. During this same period, monks' militias also participated in the Genpei War of 1180–1185, which led to the establishment of the Kamakura shogunate. There were more than two hundred major violent incidents involving monks' militias between the late-tenth and early-sixteenth centuries. The monks' militia of Enryakuji also battled the temples established by the new schools of JŌDO SHINSHŪ and NICHIRENSHŪ, which gained popularity among commoners and local warlords during the fifteenth and sixteenth centuries: for example, Enryakuji sōhei attacked and destroyed the original HONGANJI in Ōtani (east of Kyōto) in 1465 and twenty-one Nichiren temples in Kyōto in 1536. However, the power of monks' militias diminished significantly after 1571, when the warlord Oda Nobunaga (1534–1582) massacred the Buddhist clerics and sōhei on HIEIZAN and burned down Enryakuji, which had threatened him with its military power. Monks' militias are not an exclusively Japanese phenomenon but are found across much of the Buddhist tradition. See also HUGUO FOJIAO.

Sōhō Myōchō. [alt. Shūhō Myōchō] (宗峰妙超) (1282–1337/8). Japanese ZEN master of the RINZAISHŪ; commonly known as DAITŌ KOKUSHI (State Preceptor Great Lamp). Daitō was a native of Harima in present-day Hyōgo prefecture. At the age of ten, he entered the nearby TENDAI monastery of Engyōji on Mt. Shosha and received Tendai training under a VINAYA master Kaishin (d.u.). Later, Daitō visited the Zen master KŌHŌ KENNICHI at the monastery of Manjuji in Kamakura and received the full monastic precepts. In 1304, Daitō began his training under NANPO JŌMYŌ at the temple of Tōkōan in Kyoto. He followed Nanpo to Manjuji in Kyōto and again to KENCHŌJI in Kamakura. At Kenchōji, Daitō had his first awakening. According to legend, Daitō is said to have been instructed by Nanpo to continue his post-SATORI (awakening) cultivation for another twenty years. During this period of training, Daitō is said to have once lived as a beggar underneath the Gojō Bridge in Kyōto. Shortly after his teacher's death in 1308, Daitō left for Kyōto where he did indeed live for twenty years in a hermitage known as Ungoan. Later, Daitō moved to the Murasakino district in Kyōto and established the monastery of DAITOKUJI. In 1323, he was summoned by retired Emperor Hanazono (r. 1308–1318) and was given the title State Preceptor Master Daitō. Daitō also received the patronage of Emperor Godaigo (r. 1318–1339). They elevated the status of Daitokuji to that of NANZENJI, then the most powerful GOZAN monastery in Kyōto. Daitō and Nanpo's lineage, now known as the Ōtōkan, came to dominate the Rinzai Zen tradition.

sojae toryang. (消災道場). In Korean, "calamities-solving ritual"; one of the four most important annual rituals performed at court during the Koryŏ dynasty (918–1392), second only to the YŎNDŬNGHOE (lantern ritual). The sojae toryang is a representative of the esoteric Buddhist rituals that became popular in Korea during the Koryŏ dynasty. The first record of the ritual's performance dates from 1046, the last from 1399, a short time after the demise of the dynasty. This ritual to prevent natural

calamities probably derives originally not from Buddhist cosmology but from the theory of heavenly retribution that was foundational in traditional East Asian thought. Koryŏ's ritual system, modeled after that of Tang China, presumed that cosmological influences dominated human life and activities. Since droughts, floods, and epidemics were considered "calamities from Heaven" (Ch'ŏnjae), and indicated Heaven's dissatisfaction with the quality of terrestrial governance, the sojae toryang sought to draw on various religious and astral powers in order to ward off these threats and to enhance the longevity of its royal sponsors. Koryŏ kings lavished riches on the monasteries whose monks performed these rituals, particularly when Koryŏ was threatened by foreign invasion or occupation. This concern explains why the majority of the recorded performances of the sojae toryang occurred during the reigns of kings Kojong (1231–1259), Wŏnjong (1259–1274), and Ch'ungnyŏl (1274–1308), who all ruled during the period of Mongol domination in Korea. During King Wŏnjong's thirteen-year reign, for example, the sojae toryang was performed twenty-three times, or about three times every two years. Historical sources provide little information on how the ritual was actually performed, but its conduct can be inferred from esoteric Buddhist sources. These sources require the monks to establish a purified ritual venue, install a buddha image there, and then make offerings of incense, flowers, and lanterns; once the site is prepared, they are then to recite various codes or spells (DHĀRAṆĪ) in order to invoke the power of the BODHISATTVAs, the seven stars of the Big Dipper (see BEIDOU QIXING), the gods of the zodiacal mansions and the constellations, the sun and moon, etc., to overcome calamities and transform disasters into blessings. In the case of the Koryŏ dynasty, the ritual was always held at court, and the king himself was both participant and presider at the ritual, indicating the close association between court and the religion during this period in Korean history.

Sōjiji. (總持寺). In Japanese, "DHĀRAṆĪ Monastery"; one of the two main monasteries of the SŌTŌSHŪ of ZEN Buddhism, located in Tsurumi, Yokohama. This monastery was originally established on the Noto peninsula (present-day Ishikawa prefecture) in 740 as Morookadera by the monk GYŌGI (668–749), who also founded TŌDAIJI. In 1321, KEIZAN JŌKIN (1268–1325), the founding patriarch of the Sōtō Zen institution, came into possession of this local monastery, which he renamed Sōjiji. In 1322, Sōjiji were sanctioned as an official monastery by Emperor Godaigo (r. 1318–1339), an event that is traditionally considered to mark the official establishment of Sōtō as an independent Zen institution in Japan. Keizan later entrusted Sōjiji to his disciple Gasan Jōseki (1276–1366). Sōjiji was an important government-sponsored monastery during the Muromachi and Edo periods and its status rivaled that of the other main Sōtō monastery, EIHEIJI; in its heyday, the monastery is said to have had more than seventy buildings within its precincts. After burning to the ground in 1898, the monastery was rebuilt in Yokohama in 1911, because Sōtō Zen leaders calculated that a location near Tokyo would have strategic value for the growth of the sect. Sōjiji is entered through a gigantic copper-roofed gate (sanmon) that was built in 1969. The butsuden, or main buddha hall, was completed in 1915 and enshrines a statue of ŚĀKYAMUNI with his disciples MAHĀKĀŚYAPA and ĀNANDA. There is a founders' hall (taisodō) for Keizan Jōkin that displays statues of the major historical figures of the Sōtō Zen tradition and that also doubles as a lecture hall; in addition, there is a large SAṂGHA hall (daisōdō) for ordaining and training monks, which displays a statue of the BODHISATTVA MAÑJUŚRĪ. Other buildings at the monastery include additional living quarters for the monks, a hall for Emperor Godaigo, and a hōmotsukan, or treasure house, full of important cultural properties held at the monastery, including a hanging tapestry from the Edo period that originally served as a cover for the chair of senior monks delivering sermons, and several precious buddha images.

sōjō. (僧正). In Japanese, "SAṂGHA primate"; one of the two earliest ecclesiastical positions created within the Japanese Buddhist church. According to the *Nihon shoki* ("Chronicles of Japan"), the first person to hold this position was the early-seventh-century Korean monk KWALLŬK (d.u.). Kwallŭk came to Japan in 602 from the southwestern Korean kingdom of Paekche and was appointed as sōjō in 624, when the government, alarmed by a widespread lack of discipline among the monks, established the sōgō (office of monastic affairs) to supervise national ecclesiastical affairs. The sōjō was later divided into three sub-positions, each of which was appointed by the government on the recommendation of the Buddhist order. In the early-Heian period, monks from the Nara Buddhist establishment (see NARA BUDDHISM, SIX SCHOOLS OF) dominated the sōjō positions. By the middle of the ninth century, however, monks from the TENDAISHŪ and SHINGONSHŪ schools held most of the appointments, and during the Kamakura period, Zen and pure land monks also were appointed sōjō. By the time of the Tokugawa regime, almost all Buddhist sects, including Tendai, Shingon, PURE LAND, and NICHIRENSHŪ, had adherents who were appointed to the sōjō positions. Once the Meiji government in 1872 split Buddhist ecclesiastical positions off from official government posts, each sect then established its own sōjō positions, each with slightly different administrative systems.

Sōka Gakkai. (創價學會/創価学会). In Japanese, "Value-Creating Society," a Japanese Buddhist lay organization associated with the NICHIRENSHŪ, founded by MAKIGUCHI TSUNESABURO (1871–1944) and his disciple Toda Jōsei (1900–1958). Formerly a teacher, Makiguchi became a follower of Nichiren's teachings, finding that they supported his own ideas about engendering social and religious values, and converted to NICHIREN SHŌSHŪ in 1928. In 1930, he established a lay organization under the umbrella of the

Nichiren Shōshū, which initially called itself the Sōka Kyōiku Gakkai (Creating Educational Values Society), and led its first general meeting. After its inauguration, the society began to take on a decidedly religious character, focusing on missionary work for Nichiren Shōshū. As the Pacific War expanded, Makiguchi and his followers refused to cooperate with state-enforced SHINTŌ practices, leading to a rift between them and TAISEKIJI, the head monastery of Nichiren Shōshū. In 1943, the society almost disintegrated with the imprisonment of Makiguchi and Toda, along with twenty other leaders charged with lèse-majesté and violations of the Public Order Act, which required each family to enshrine a Shintō talisman in its home. Makiguchi died in 1944 in prison, but Toda survived and was released on parole in July 1945. After his release, Toda took charge of the organization, renaming it Sōka Gakkai in 1946. He successfully led a massive proselytization campaign that gained Sōka Gakkai and Nichiren Shōshū vast numbers of new converts and by the late 1950s, upwards of 750,000 families had become adherents. After Toda died in 1958, IKEDA DAISAKU (b. 1928) became its third president and the society grew even more rapidly in Japan during the 1960s and the 1970s. In 1975, Ikeda also founded Sōka Gakkai International (SGI), which disseminated the society's values around the world. Sōka Gakkai publishes numerous books and periodicals, as well as a daily newspaper in Japan. During this period, Sōka Gakkai also became involved in Japanese domestic politics, establishing its own political party, the Kōmeitō (Clean Government Party) in 1964, which became completely separate and independent from the Sōka Gakkai in 1970. The society also supported Taisekiji with massive donations, including raising the funds for a new main shrine hall for the monastery. Sōka Gakkai, like other groups in the Nichiren lineage, focuses on worship of the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") and its adherents are expected to chant daily the title (DAIMOKU) of the sūtra, NAM MYŌHŌRENGEKYŌ, as well as recite the most important sections of the sūtra and study Nichiren's writings. Sōka Gakkai believes that all beings possess the capacity to attain buddhahood and emphasizes the ability of each person's buddha-nature to overcome obstacles and achieve happiness. Sōka Gakkai followers can accomplish these goals through a "human revolution" (the title of one of Ikeda's books) that creates a sense of oneness between the individual and the environment, thus demonstrating how each individual can positively affect the surrounding world. As tensions grew between the Nichiren Shōshū and its increasingly powerful lay subsidiary, Nikken (b. 1922), the sixty-seventh chief priest of Nichiren Shōshū, tried to bring its membership directly under his control. His efforts were ultimately unsuccessful and he excommunicated the Sōka Gakkai in 1991, forbidding Sōka Gakkai followers from having access to the holiest shrines associated with Nichiren. Sōkka Gakkai remains at the center of controversy because of its strong emphasis on recruitment and proselytization, its demonization of enemies, and a mentorship structure within the organization that some claim creates a cult of personality centered on Ikeda. Sōka Gakkai remains among the largest Buddhist organizations in the Western world.

Sŏkkuram. (石窟庵). In Korean, "Stone Grotto Hermitage"; a Silla-period, man-made grotto located high on Mt. T'oham behind the monastery of PULGUKSA, which houses what is widely considered to be the most impressive buddha image in Korea. According to the SAMGUK YUSA ("Memorabilia of the Three Kingdoms," written c. 1282–1289), the master builder Kim Taesŏng (d. 774), who also designed Pulguksa, constructed the cave as an expression of filial piety toward his deceased parents. However, because the grotto directly faces the underwater tomb of the Silla king Munmu (r. 661–680) in the East Sea/Sea of Japan, the site may be also have been associated with a funerary cult surrounding the Silla royal family or with state-protection Buddhism (K. hoguk Pulgyo; C. HUGUO FOJIAO). The construction of both monasteries began around 751 CE, during the reign of the Silla king Kyŏngdŏk (r. 742–764), and the grotto temple was completed a few years after Kim Taesŏng's death in 774 CE. The site was originally named SŌKPULSA, or "Stone Buddha Monastery." Since the Korean peninsula has no natural stone grottos like those found in India or Central Asia, the cave was excavated out of the mountainside, and some 360 large granite blocks in various shapes were used to create the ceiling of the shrine. In addition, granite carvings were attached to the inner walls. The result was what appears for all intents and purposes to be a natural cave temple. The finished grotto combines two different styles of Buddhist architecture, the domed rotunda design of the CAITYA halls of India and the cave-temple design of Central Asia and China as seen in DUNHUANG and others sites along the SILK ROAD. At the Sŏkkuram grotto, a rectangular antechamber with two guardians carved on either side leads into a short, narrow passageway that opens onto the thirty-foot-(nine m.) high domed rotunda. In the vestibule itself are carvings of the four heavenly kings as guardians of the dharma. The center of the rotunda chamber enshrines the Sŏkkuram stone buddha, a seated-buddha image in the "earth-touching gesture" (BHŪMISPARŚAMUDRĀ). This image is 10 ft. 8 in. (3.26 meters) in height and carved from a single block of granite; it sits atop a lotus-throne base that is 5 ft. 2 in. (1.58 meters) high. The image is generally accepted to be that of ŚĀKYAMUNI Buddha, although some scholars instead identify it as an image of VAIROCANA or even AMITĀBHA. In the original layout of the grotto, the morning sunshine would have cascaded through the cave's entrance and struck the jeweled ŪRṆĀKEŚA in the Buddha's forehead. On the inner walls surrounding the statue are thirty-nine carvings of Buddhist figures, including the Indian divinities BRAHMĀ and INDRA, the two flanking bodhisattvas SAMANTABHADRA and MAÑJUŚRĪ, and the buddha's ten principal ARHAT-disciples. On the wall directly behind the main image is a carving of the eleven-headed AVALOKITEŚVARA. The combination of exquisite architectural beauty and sophisticated design is widely considered to be the pinnacle of Silla Buddhist culture. Despite its fame and reputation during the Silla kingdom,

Sŏkkuram fell into disrepair during the suppression of Buddhism that occurred during the Chosŏn dynasty (1392–1910). Almost everyone except locals had forgotten the grotto until one rainy day in 1909, when a weary postman traveling over the ridge of Mt. T'oham accidentally rediscovered the grotto as he sought shelter from a sudden thunderstorm. He found a narrow opening to a small cave, and as his eyes adjusted to the dark, he was startled to see the massive stone image of the Buddha along with exquisite stone wall carvings. In 1913, the Japanese colonial government spent two years dismantling and repairing the structure, using cement and iron, which later collected moisture and began to decay, threatening the superstructure of the grotto. In 1920, the earth was removed in order to secure the foundation and tar and asphalt were used to waterproof the roof. No further renovations were made until a UNESCO survey team came to evaluate the cave temple and decided to aid the Korean government in further restoring the site between 1961 and 1964. Nowadays, visitors enter the grotto from the side, rather than its original front entrance, and must view the buddha image from behind a protective glass window. Sŏkkuram is Korean National Treasure No. 24 and was also added to the list of UNESCO World Heritage Sites in 1995.

Sŏkpulsa. (K) (石佛寺). See SŎKKURAM.

sokushin jōbutsu. (C. jishen chengfo; K. chŭksin sŏngbul 即身成佛). In Japanese, "attainment of buddhahood in this very body." This doctrine is generally first attributed to KŪKAI (774–835), the founder of the SHINGONSHŪ, who argued in a work entitled *Sokushin jōbutsugi* ("The Meaning of Attaining Buddhahood in This Very Body") that the ultimate goal of practice was to attain awakening in this lifetime. By strictly adhering to Kūkai's ritualization of the body (through gestures, or MUDRĀ), speech (through spells, or MANTRA) and mind (as a MAṆḌALA), one could therefore align oneself with the cosmic buddha, MAHĀVAIROCANA, and become a buddha in one's own right. Kūkai's contemporary, SAICHŌ (767–822) of the TENDAISHŪ, located the notion of sokushin jōbutsu in the exoteric teachings of the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"). By following its teachings, he believed that anyone could achieve universal salvation and become a buddha. In contrast to Kūkai's esoteric interpretation of sokushin jōbutsu, however, Saichō presumed this process of achieving buddhahood would require several lifetimes to complete. Given the two models, it is easy to understand the appeal of Kūkai's esoteric version, which promised immediate transformation into buddhahood, over the traditional Tendai doctrine cited by Saichō. As the interest in esotericism increased among the aristocracy during the Heian period (794–1185), Tendai Buddhism became more associated with esoteric ritual and less with practice derived from the *Saddharmapuṇḍarīkasūtra*. This shift toward esoteric Buddhism was completed under the Tendai master ANNEN (841–889?), who asserted not only that sokushin jōbutsu was attainable in a single lifetime, but that it was central to the Tendai ordination procedure. Given that the two dominant institutions of Heian Buddhism relied heavily on the doctrine of sokushin jōbutsu, it is not surprising that SHUGENDŌ, a movement heavily influenced by both of these schools, would also develop its own interpretation of this doctrine. The means Shugendō advocated for attaining buddhahood, however, were quite varied, as most Shugen mountains operated independently up until the Tokugawa period. One common ritual performed in both the Yoshino/KUMANO region and on Mt. Haguro, for instance, was passage through the ten realms of being (J. jikkai, S. DAŚADHĀTU). Physical structures placed along a pilgrimage route, such as torii gates and steps, served as symbolic gateways through the realms. By progressing from the lowest realm of the hells (see S. NĀRAKA) to the highest realm of the buddhas, the pilgrim could ritually enact his journey toward his own attainment of buddhahood. Furthermore, the concept of mountain geography as a maṇḍala in Shugendō created a space through which one entered the sacred realm of buddhahood. By crossing the border separating the mundane from the sacred, the practitioner would undergo a spiritual transformation by directly encountering the Buddha and immediately awakening. In a more severe example, ascetics at Mt. Yudono known as isse gyōnin (lifetime ascetics) practiced sokushin jōbutsu during the Tokugawa period by undergoing strict austerities in the mountains for from one to three thousand days. Once this period ended, a handful of these gyōnin ascetics, following the alleged precedent of Kūkai, entered a nearly airtight, underground chamber to die. Soon afterward, they were mummified as buddhas "in this very body" and venerated by their followers. During the Kamakura period, NICHIREN (1222–1282), who, like Saichō, emphasized the superiority of the *Saddharmapuṇḍarīkasūtra*, further claimed that chanting the title (DAIMOKU) of the sūtra could lead to the attainment of buddhahood in this very body. Relying on the FAHUA XUANYI, an important commentary on the *Saddharmapuṇḍarīkasūtra* by the Chinese monk TIANTAI ZHIYI (538–597), Nichiren claimed that the essence of the sūtra was distilled in its title and that chanting the title (see NAMU MYŌHŌRENGEKYŌ) could therefore lead to the attainment of sokushin jōbutsu.

solitary buddha. See PRATYEKABUDDHA.

Sŏltu Yuhyŏng. (雪竇有炯) (1824–1889). Korean SŎN master of the Chosŏn dynasty, also known as Pongmun and Ponggi. In 1842, Sŏltu entered the monastery under the guidance of Chŏnggwan K'waeil (d.u.) on Mt. Paegyang, and the following year he received the precepts from Ch'immyŏng Hansŏng (1801–1876). Sŏltu studied at various places throughout the country before visiting the Sŏn master PAEKP'A KŬNGSŎN. In 1870, Sŏltu began restoration of the monastery of Pulgapsa on Mt. Moak. In 1889, he taught Sŏn meditation at the monastery of Ponginsa at the request of Hwanong Hwanjin (1824–1904). Sŏltu became ill shortly after his trip to Ponginsa, so he entrusted his robe and

bowl to his disciple Sŏryu Ch'ŏmyŏng (1858–1903) and retired to the hermitage of Sorimgul, where he passed away in 1889. Sŏltu was a prolific writer whose works include the *Haejŏng nok*, *T'ongbang chŏngan*, *Sŏnwŏn soryu*, *Sŏltu sijip* and others. His *Sŏnwŏn soryu* was written as a response to CH'OŬI ŬISUN (1786–1866) and UDAM HONGGI (1822–1881) who criticized Paekp'a's influential treatise, *Sŏnmun sugyŏng* ("Hand Mirror of the Sŏn School").

Somapura. A large Buddhist monastery in northern Bangladesh, near the modern town of Ompur, probably built in the early-ninth century by the Pāla dynasty ruler Devapāla (r. 810–850 CE), the son of Dharmapāla, who had built VIKRAMAŚĪLA. Somapura was a mahāvihāra, or "great monastery," under royal supervision and was known as the Dharmapāla Mahāvihara of Somapura. The monastery, which had a unique architectural style, included 177 monks' cells organized on four floors around a courtyard. It was one of the largest monasteries of its day, probably housing some eight hundred monks at the apex of its influence. The most architecturally significant element of the monastery is the Pāhārpur Temple, which is unlike other Indian temples, Hindu or Buddhist. It has a cruciform base, a terraced structure with inset chambers, and a pyramid form, quite similar to Buddhist temples in Burma, Java, and Cambodia. It remains a matter of controversy whether Somapura monastery might have served as a model for Southeast Asian temple architecture. In the mid-eleventh century, the monastery was burned by a Hindu king, but seems to have been restored. It is said that ATIŚA DĪPAṂKARAŚRĪJÑĀNA stopped at Somapura on his way to Tibet, translating there BHĀVAVIVEKA's MADHYAMAKARATNAPRADĪPA into Tibetan.

Somdej Toh. [alt. Somdet Toh] (1788–1872). The popular name of Phra Buddhacharn Toh Phomarangsi, one of the most famous Thai monks of the nineteenth century. He was born in Kamphaeng Phet province and, according to some accounts, was the son of King Rāma II. After his ordination, he distinguished himself as a scholar of Pāli scriptures and was eventually appointed as preceptor to Prince Mongkut (later King RĀMA IV) when the prince was ordained as a novice. Somdej Toh retired to the forest shortly thereafter, returning to Bangkok when he was summoned by Mongkut after his coronation as king. He remained a mentor to the king throughout his life and many stories are told of their friendship. He served first as abbot of Wat Rakhang, across the river from the Thai royal palace. Somdej Toh was renowned for his eloquent sermons and his skills as a poet, as well as for being a meditation and VINAYA master. He also was famous as a maker of highly prized amulets. After his death, he became the object of a devotional cult, with mediums who claim to speak in his voice.

Sŏn. (禪). In Korean, "Meditation"; the Korean branch of the broader East Asian Chan school, which includes Chinese CHAN, Japanese ZEN, and Vietnamese THIỀN. Sŏn is the Korean pronunciation of the Chinese term CHAN, which in turn is a transcription of the Sanskrit term DHYĀNA, or meditative absorption. More specifically, Sŏn denotes the Korean Buddhist traditions that trace their origins back to the Chinese Chan school, or CHAN ZONG. Koreans such as CHŎNGJUNG MUSANG were important participants in the development of the new teachings of the Chan zong on the Chinese mainland; in addition, Korean pilgrims were bringing this tradition home to the peninsula no later than the early-ninth century during the Silla dynasty. At least nine of these pilgrims are known to have established their own Sŏn lineages, which are traditionally referred to as the Nine Mountains School of Sŏn (KUSAN SŎNMUN). Eight of these nine traditions were associated with the lineage of MAZU DAOYI and the HONGZHOU ZONG, which was known for its iconoclastic approach to Chan pedagogy. The Sŏn tradition flourished during the Koryŏ dynasty largely through the efforts of POJO CHINUL and his successor CHIN'GAK HYESIM, and the late-Koryŏ and early-Chosŏn figures T'AEGO POU, MUHAK CHACH'O, and NAONG HYEGŬN. During this period, the teachings of masters associated with the Chinese Imje chong (C. LINJI ZONG) lineage became especially influential in Korea, and Sŏn practice came to focus on the meditative technique of "observing the meditative topic," or "questioning meditation" (K. kanhwa Sŏn, C. KANHUA CHAN). The Sŏn schools, like all of the religion, suffered under the centuries-long suppression of Buddhism during the Chosŏn dynasty, which reduced all the different strands of Korean Buddhism to the "two traditions of Sŏn (Meditation) and Kyo (Doctrine)" (SŎN KYO YANGJONG). Even during this period of crisis, however, Korean Sŏn produced some of its most eminent teachers, including CH'ŎNGHŎ HYUJŎNG and his student SAMYŎNG YUJŎNG. Sŏn was revitalized during the late-nineteenth and early-twentieth centuries thanks to the efforts of such monks as KYŎNGHŎ SŎNGU and MAN'GONG WŎLMYŎN. Two of the dominant schools of contemporary Korean Buddhism, the CHOGYE CHONG and T'AEGO CHONG, both consider themselves predominantly Sŏn traditions.

Soṇā. (C. Shuna; J. Shuna; K. Suna 輸那). The Sanskrit and Pāli proper name of an eminent nun declared by the Buddha to be foremost among nuns in her capacity for effort. According to the Pāli account, she belonged to a clan from Sāvatthi (S. Śrāvastī) and had ten sons and daughters, whence she acquired the epithet Bahuputtikā, meaning "possessed of many children." Her husband left home to become a mendicant, after which she distributed her estate among her children. Despite her generosity, her children neglected her in her old age, so she entered the nuns' order. She devoted herself to serving the other nuns by performing chores and menial tasks for them and in the evening she devoted herself to study. When the Buddha became aware of her efforts, he magically appeared before her to encourage her striving, whereupon she became an ARHAT. Since the other nuns had been in the habit of finding fault with Soṇā despite her services, Soṇā was concerned that they would accrue

demerit if they continued to do so now that she had attained arhatship. She devised a display of magical power to demonstrate her superior attainment: in the morning when the nuns arrived at the refectory, she supplied them with water heated not with fire but with the supernatural power (ṚDDHI). Recognizing her attainment, the other nuns begged her forgiveness for their previous wrongdoing.

Soṇa and Uttara. [alt. Soṇuttara] (S. *Śroṇa; C. Xunajia; J. Shunaka; K. Sunaga 須那迦; S. Uttara; C. Yuduoluo; J. Uttara; K. Ultara 鬱多羅). According to Pāli sources, two ARHAT elders dispatched as missionaries to SUVAṆṆABHŪMI (S. Suvarṇabhūmi) to convert its inhabitants to Buddhism; one of nine missions commissioned by the elder MOGGALIPUTTATISSA after the conclusion of the third Buddhist council (SAṂGĪTI; see COUNCIL, THIRD) to propagate the doctrine. When Soṇa and Uttara arrived in Suvaṇṇabhūmi, they subdued a group of ocean-dwelling ogres who used to devour the newborn sons of the king; in memory of this victory, all the princes of the royal house were thereafter named Soṇuttara. The elders then went on to convert sixty thousand inhabitants of Suvaṇṇabhūmi by preaching the BRAHMAJĀLASUTTA. In addition, five hundred noblemen became monks and fifteen hundred women became nuns. The Mons identify their homeland of Rāmaññadesa in Lower Burma as Suvaṇṇabhūmi and date the second foundation of their religion to the mission of Soṇa and Uttara. They attribute the first foundation of the dharma to the elder Gavaṃpati (S. GAVĀṂPATI), who first invited the Buddha to preach in Suvaṇṇabhūmi and who, after the Buddha's death, brought thirty-two tooth relics of the Buddha for interment in STŪPAS throughout the country.

Soṇadaṇḍasutta. (S. *Suvarṇadaṇḍasūtra; C. Zhongde jing; J. Shutokugyō; K. Chongdŏk kyŏng 種德經). In Pāli, "Sermon to Soṇadaṇḍa," the fourth sutta of the DĪGHANIKĀYA (a DHARMAGUPTAKA recension appears as the twenty-second sūtra in the Chinese translation of the DĪRGHĀGAMA); a discourse delivered by the Buddha to the learned and wealthy brāhmaṇa Soṇadaṇḍa (S. Suvarṇadaṇḍa) on what makes a person a true brāhmaṇa. Despite the protests of his fellow brāhmaṇas, Soṇadaṇḍa visited the Buddha while the latter sojourned in Campā on the banks of the Gaggarā lake. There, the Buddha convinces Soṇadaṇḍa that family lineage is of no consequence, and that only by virtue and moral action is one rightly called a brāhmaṇa. The Buddha describes how the mendicant refrains from evil deeds through the observance of morality and guards his senses (INDRIYASAṂVARA) with mindfulness (P. sati, S. SMṚTI) whereby he achieves contentment. He goes on to say that being content, the mendicant becomes glad and calm, whereby he can attain the four meditative absorptions (P. JHĀNA, S. DHYĀNA). Further, on the basis of having mastered the four meditative absorptions, the mendicant can develop the six higher knowledges or supranormal powers (P. abhiññā, S. ABHIJÑĀ), which culminate in enlightenment and liberation from the cycle of rebirth. Soṇadaṇḍa was pleased with the discourse and requests that the Buddha, together with a group of his monks, accept a meal from him. At the conclusion of the meal, Soṇadaṇḍa asks the Buddha to pardon him for not showing enough deference to him; the commentary explains that this was because Soṇadaṇḍa had been embarrassed to make obeisance to the Buddha in the presence of his brāhmaṇa colleagues.

Soṇa-Kolivīsa. (S. Śrona-Viṃśatikoṭi/Śrona-Koṭiviṃśa; T. Gro bzhin skyes bye ba nyi shu pa; C. Shoulongna/Ershiyi'er; J. Shurōna/Nijūokuni; K. Surongna/Isibŏgi 守籠那/二十億耳). Pāli name of an ARHAT declared by the Buddha to be foremost among his monk disciples in striving energetically. According to the Pāli account, he was born the son of a wealthy man in the country of Campā. Because he had given a precious ring to a PRATYEKABUDDHA (P. paccekabuddha) in a previous life, his body was the color of burnished gold. His hands and feet were delicate, and fine curly hair covered his feet. King BIMBISĀRA of MAGADHA wished to see the unusual markings of the youth and sent for him. While at the Magadha capital of RĀJAGṚHA, Soṇa and eighty thousand companions went to see the Buddha, who was preaching at that time in the city. Impressed by the miraculous powers displayed by Sāgata (S. SVĀGATA), the Buddha's attendant, Soṇa asked his parents to allow him to enter the order. After his ordination, the Buddha gave Soṇa a subject of meditation (KAMMAṬṬHĀNA), and Soṇa retired to the Śītavana grove to practice. Soṇa strove diligently, taking up walking meditation as his main practice; however, because he was interrupted by frequent visitors, he made little progress and grew despondent. His feet became blistered and bled, so much so that the meditation path (P. caṅkama, S. CAṄKRAMA) upon which he walked was soaked in blood like a slaughter house. Seeing this scene, the Buddha instructed Soṇa on how to temper his energy with tranquility, and in due time he attained arhatship. Because of his delicate feet, the Buddha is said to have given Soṇa dispensation to wear sandals of a single layer, even though monks and nuns were required to go barefoot. Soṇa declined the exemption, however, for he did not wish to be treated more leniently than his fellow monks. In response, the Buddha then gave permission to all his monks to use such sandals.

Soṇa-Koṭikaṇṇa. (S. Śroṇa-Koṭikarṇa; T. Gro bzhin skyes rna ba bye ba; C. Yi'er; J. Okuni; K. Ŏgi 億耳). Pāli name of an ARHAT declared by the Buddha to be foremost among monks in eloquence (S. PRATIBHĀNA; P. paṭibhāna). Soṇa's mother was Kālī Kuraragharikā and his father a wealthy merchant. He received the epithet Koṭikaṇṇa (S. Koṭikarṇa) because he wore an earring (kaṇṇa) worth a crore (KOṬI). Soṇa's mother had become a stream-enterer (SROTAĀPANNA) on the night he was born. The monk MAHĀKĀŚYAPA was a family friend and often visited the family in the town of Kuraraghara. As a young man, Soṇa once traveled with a caravan headed towards Ujjayinī

(P. Ujjeni), but along the way got left behind. Continuing the journey alone, he encountered a hungry ghost in the form of a man eating his own flesh. He learned that in an earlier existence the ghost had been a miserly merchant who cheated his customers. He then encountered two ghosts in the form of boys spitting up blood. In a previous life they had criticized their mother for feeding an arhat. Filled with misgiving, he returned to his home and related what he had seen to Mahākāśyapa, after which he requested permission to enter the order. Mahākāśyapa immediately ordained Soṇa as a novice and after three years gave him the UPASAṂPADĀ higher ordination as a monk (P. bhikkhu, S. BHIKṢU). The delay was caused by the fact that in the outlying town of Kuraraghara it was difficult to gather the quorum of ten monks needed to perform the upasaṃpadā ceremony. Soṇa gained preeminence for perfectly reciting the AṬṬHAKAVAGGA for the Buddha, a text he had learned from Mahākāśyapa. To reward his skill, the Buddha granted Soṇa a boon. Soṇa requested to be allowed to ordain new monks using a quorum of only five rather than ten monks to facilitate the performance of the ritual procedure in outlying areas.

Sŏnamsa. (仙巖寺). In Korean, "Monastery of the Peaks of the Perfected," one of the main mountain monasteries of the T'AEGO CHONG of Korean Buddhism; located on the opposite side of CHOGYE Mountain from SONGGWANGSA, and near the city of Sunch'ŏn, in South Chŏlla province. The monastery claims to have been founded in 529 by the legendary Koguryŏ monk ADO. In 861, the monk TOSŎN (827–898) enlarged the monastery and gave it its current name Sŏnamsa. During the Koryŏ dynasty, the royal monk ŬICH'ŎN (1055–1101) expanded the monastery again, making it a center for ecumenical training in both Doctrine (KYO) and Meditation (SŎN). The monastery was destroyed during the Japanese Hideyoshi invasions of the late-sixteenth century; rebuilt, it burned again in the eighteenth century and was reconstructed by the monks Nuram Sikhwal (1752–1830) and Haebung Chollyŏng (d. 1826) during the reign of the Chosŏn King Sunjo (r. 1800–1834). During the Japanese colonial period (1910–1945), Sŏnamsa was one of the thirty-one major district monasteries (ponsan) of the Buddhist ecclesiastical administration. After the purification movement (chŏnghwa undong) that occurred in Korean Buddhism after the end of Japanese colonial rule and the Korean War, Sŏnamsa was the only major mountain monastery to remain under the control of the married monks in the T'aego order. The contemporary CHOGYE CHONG claims legal title to Sŏnamsa and lists it officially as the twentieth of its twenty-five parish monasteries (PONSA), but has ceded control to the T'aego order. In 1985, the T'aego order opened a center at Sŏnamsa to train a new generation of priests in its order. The entrance to Sŏnamsa is graced by two bridges, one of which, the Sŭngsŏn Bridge, is considered one of the most beautiful in Korea, especially when its view is combined with nearby Kangsŏllu Tower and a pond that includes a tree-studded island. Sŏnamsa also preserves one of the largest hanging pictures (see KWAEBUL, T'AENGHWA) in Korea, which depicts in intricate detail all the assemblies of the AVATAṂSAKASŪTRA (K. *Hwaŏm kyŏng*).

Sŏn chong. (禪宗). In Korean, "Sŏn school." See SŎN.

Sŏn'ga kwigam. (C. Chanjia guijian; J. Zenke kikan 禪家龜鑑). In Korean, "Mirror of the Sŏn House"; one of the most widely read SŎN texts not only in Korea but also in Japan and China, composed by the Chosŏn-period Sŏn master CH'ŎNGHŎ HYUJŎNG (1520–1604), a.k.a. SŎSAN TAESA, to whom most modern Korean Sŏn teachers trace their lineage. Hyujŏng composed the text around 1564 by adding his own commentary to excerpts he had culled from about fifty different Buddhist scriptures and CHAN and Sŏn texts. The text was originally written in literary Chinese, but was first published in a 1569 Korean vernacular (ŏnhae) edition. The first literary Chinese edition was published in 1579; the Chinese edition was introduced into China and Japan and has been frequently reprinted since in all three countries. The text is also included as the last section of Hyujŏng's *Samga kwigam* ("Mirror of the Three Houses" [of Confucianism, Daoism, and Buddhism]), but that version records only the excerpts without Hyujŏng's commentary. Hyujŏng wrote the *Sŏn'ga kwigam* as a concise primer of Korean Buddhist doctrines and practices for his students. According to Hyujŏng's preface and the postface of his disciple SAMYŎNG YUJŎNG (1544–1610), the primary motive for composing the text was to advocate the fundamental harmony between Sŏn and the scriptural teachings of Buddhism (KYO). While supporting the unity between these two major strands of the Buddhist tradition, Hyujŏng's treatment ultimately subordinates Kyo beliefs to Sŏn practices. This approach is adopted from that of the eminent Koryŏ state preceptor POJO CHINUL (1158–1210). In particular, the text proposes the practical model of "relinquishing Kyo and entering into Sŏn" (sagyo ipsŏn), by integrating doctrinal studies and the technique of "questioning meditation" (K. kanhwa Sŏn; C. KANHUA CHAN) into Chinul's preferred soteriological schema of sudden awakening/gradual cultivation (K. tono chŏmsu; C. DUNWU JIANXIU). In addition, the *Sŏn'ga kwigam* also offers the technique of reciting the name of the buddha AMITĀBHA (K. yŏmbul; C. NIANFO) as an alternative practice for those of inferior spiritual capacity who are not yet able to cultivate the kanhwa Sŏn technique. The text also outlines the styles and lineages of the "five houses" (see WU JIA QI ZONG) of the mature Chan school: in particular, the text promotes the LINJI ZONG as the true heir of the sixth patriarch (LIUZU) of Chan, HUINENG (638–713), and presents a different lineage from the traditional one by suggesting that the four Chan lineages of Linji zong, GUIYANG ZONG, FAYAN ZONG, and YUNMEN ZONG all originated from MAZU DAOYI (707–788). The text thus provides a basic framework for the doctrines and practices that most of the modern Korean tradition follows, and thus remains widely read and studied in Korea today.

Sŏngch'ong. (K) (性聰). See PAEGAM SŎNGCH'ONG.

Song gaoseng zhuan. (J. Sō kōsōden; K. Song kosŭng chŏn 宋高僧傳). In Chinese, "Biographies of Eminent Monks [compiled during the] Song dynasty"; a thirty-roll hagiographical collection compiled by the Buddhist historian and VINAYA master ZANNING (919–1001). The compilation of the text began in 980 by Song-dynasty imperial edict and was entered into the official canon (DAZANGJING) in 988. The text records the lives of monks who primarily were active during the period between the early Tang dynasty and the early Song, or some 340 years after the period covered by DAOXUAN's (596–667) XU GAOSENG ZHUAN ("Continued Biographies of Eminent Monks"). The *Song gaoseng zhuan* contains 531 major and 124 appended biographies, for a total of 655 biographies. The text offers valuable material on the Buddhist history of the Tang dynasty, including information that is not recorded in the official dynastic history. The collection is organized according to the ten categories of monastic expertise used in Daoxuan's collection: translators (yijing), exegetes (yijie), practitioners of meditation (xichan), specialists in vinaya (minglü), protectors of the DHARMA (hufa), sympathetic resonance (gantong), self-immolators (YISHEN), chanters (dusong), benefactors (xingfu), and miscellaneous (zake). What is noteworthy in comparison to its immediate predecessor is that the number of the monks categorized as exegetes (yijie) was reduced significantly from 246 in Daoxuan's collection to ninety-four in Zanning's. This traditional nonsectarian approach to Buddhist biographical writing was soon supplanted by genealogical collections, such as Daoyuan's (d.u.) 1004 JINGDE CHUANDENG LU, which organized the biographies of Chan monks according to explicit sectarian lineages, and ZHIPAN's (1220–1275) FOZU TONGJI, which did the same for the lineage of the TIANTAI ZONG. The *Song gaoseng zhuan* is not included in the Korean Buddhist canon (KORYŎ TAEJANGGYŎNG), but does appear in Chinese canons compiled during the Song, Yuan, and Ming periods. Unlike its two predecessor collections, the *Song gaoseng zhuan* is included in the Qing-dynasty imperial archive, the *Siku quanshu* ("Complete Library of the Four Repositories"), compiled between 1773 and 1782.

songgu. (J. juko; K. songgo 頌古). In Chinese, "[attaching] verses to ancient [cases]"; a "lettered Chan" (WENZI CHAN) literary style, which used verses to comment on the prose narratives of CHAN public cases (GONG'AN). See HUANGLONG PAI.

Songgwangsa. (松廣寺). In Korean, "Piney Expanse Monastery"; the twenty-first district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located on Mount Chogye in South Chŏlla province. Along with HAEINSA and T'ONGDOSA, Songgwangsa is one of the "three-jewel monasteries" (SAMBO SACH'AL), which represent one of the three jewels (RATNATRAYA) of Buddhism; Songgwangsa has traditionally been considered the "SAṂGHA-jewel monastery" (sŭngbo sach'al), because of the succession of sixteen state preceptors (K. kuksa; C. GUOSHI) who resided at the monastery during the Koryŏ dynasty. According to legend, Songgwangsa began as a small monastery named Kilsangsa, which was founded by a certain Hyerim (d.u.). In 1197, that monastery was restored and expanded by the eminent Sŏn master POJO CHINUL, who moved his SAMĀDHI and PRAJÑĀ Community (CHŎNGHYE KYŎLSA) to the Kilsangsa site. To commemorate the establishment of the expanded monastery, King Hŭijong (r. 1204–1211) renamed it SUSŎNSA, or Sŏn Cultivation Community, in 1208. (Still today, the meditation hall at the monastery uses the name Susŏnsa.) Chinul's reliquary STŪPA, the Kamno t'ap (Sweet Dew Reliquary), sits on a hill behind the meditation hall, overlooking the monastery he founded. During the Chosŏn dynasty, Songgwang, the original name of the mountain on which Susŏnsa was built, became the name of the monastery itself, and the mountain came to be known instead as Mt. Chogye. One of the most famous buildings at the monastery is the Kuksa chŏn (State Preceptors Hall), built in 1369 and now listed as Korean National Treasure no. 56, which enshrined early Chosŏn-period portraits (CHINYŎNG) of Chinul and the sixteen state preceptors at Songgwangsa. (The portraits were themselves collectively listed as cultural treasure no. 1043.) The portraits were stolen in 1995 in a brazen late-night heist and only three have been recovered. In 1969, Songgwangsa was elevated to the status of an ecumenical monastery (CH'ONGNIM), and is one of the five such centers in the contemporary Chogye order, which are all expected to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition. Songgwangsa is thus also known as the Chogye Ch'ongnim.

Songshan. (J. Sūzan; K. Sungsan 嵩山). In Chinese, "Lofty Mountain"; sacred mountain located in northern Henan province. Mt. Song, also known as Zhongyue (Middle Marchmount), belongs to what is known as the wuyue, or five marchmounts. Mt. Song is actually a mountain range consisting of two groups of peaks. To the east there are twenty-four peaks known collectively as Taishi, and to the west twenty-six peaks known as Shaoshi. Since ancient times, Mt. Song has been considered sacred. Emperors frequently made visits to the mountain and many who sought physical immortality found it to be an ideal dwelling place. Mt. Song has also been the home of many Buddhist monks. Sometime during the Han dynasty, a monastery known as Fawangsi (Dharma King Monastery) was built on Mt. Song. For centuries, the monastery received the support of many emperors, such as Emperor Wendi of the Sui dynasty, who renamed it Shelisi (ŚARĪRA Monastery), Emperor Taizong (r. 626–649) who renamed it Gongdesi (Merit Monastery), and Emperor Daizong (r. 762–779) who renamed it Wenshushili Guangde Bao'ensi (Mañjuśrī's Vast Virtue, Requiting Kindness Monastery). During the Song dynasty, the monastery was supported by Emperor Renzong (r. 1022–1063), who once again renamed it Fawangsi. Mt. Song was also

the home of the famous monastery of SHAOLINSI, which is claimed to have been built on its Shaoshi peaks by a certain Indian monk named Fotuo (d.u.) in 496. Shaolinsi is perhaps best remembered as the home of the semilegendary Indian monk BODHIDHARMA, who is presumed to have dwelled in a cave nearby for nine years, engaged in BIGUAN (wall contemplation). To the west of Fawangsi, there was also a monastery by the name of Xianjusi (Tranquil Dwelling Monastery), which had once been the private villa of Emperor Xuanwudi (r. 499–515) of the Northern Wei dynasty. Xianjusi was the residence of the meditation master Sengchou (480–560), and also PUJI (651–739), the disciple of CHAN master SHENXIU, and his disciple YIXING. Other monasteries such as Yongtaisi, Fengchansi, and Qingliangsi were also built on Mt. Song.

Sŏngu. (K) (惺牛). See KYŎNGHŎ SŎNGU.

Sōnirei. (僧尼令). In Japanese, "Regulations for Monks and Nuns"; a decree issued in 701 by the Japanese imperial court to regulate the activities of Buddhist clerics; the extant twenty-seven-article recension of these regulations was codified within the *Yōrō ritsurei* ("Civil and Penal Codes of the Yōrō Era"), which was compiled in 718 and promulgated in 757. The *Sōnirei* is believed to be modeled after the Tang-dynasty code regulating the activities of Daoist and Buddhist clerics, the *Daoseng ge*. The *Sōnirei* was also based on the traditional Buddhist precepts of the Chinese translation of the DHARMAGUPTAKA VINAYA (C. SIFEN LÜ): for example, it stipulated that committing a PĀRĀJIKA transgression, the most serious category of monastic offense—viz., sexual intercourse, murder, grand theft, and false claims of spiritual achievement—required punishment in accord with civil law. The code also forbade monks from consuming alcohol, meat, and strong-smelling herbs, and prohibited a monk from entering a nun's cell, and vice versa. The *Sōnirei* also reflected the state's concern about the possible threat to its power from an unregulated Buddhist clergy, as shown in the example of GYŌGI (668–749), a Hossō (FAXIANG ZONG) monk who disseminated Buddhism among the commoners and gained widespread popularity as a charismatic teacher and thaumaturge. Many of the *Sōnirei* regulations targeted such maverick clerics: to give but a few examples, monks and nuns were prohibited from predicting good and bad fortunes based on heavenly portents; speaking against the state; studying military tactics; living outside the temples or building a Buddhist chapel off temple grounds; giving scriptures or buddha images to a layperson or teaching outside the monastery; or accumulating private property or wealth. The *Sōnirei* also required all monks and nuns to receive official permission before ordaining. However, violations of the *Sōnirei* were widespread and the regulations had lost much of their effectiveness by the middle of the Heian period.

Sŏnjong sŏn. (禪宗選). In Korean, the "Meditation (SŎN) School examination"; see SŬNGKWA.

Sŏn Kyo yangjong. (禪敎兩宗). In Korean, "Two Traditions of SŎN (Meditation) and KYO (Doctrine)"; a Chosŏn-dynasty period designation for the two major strands of the Korean Buddhist tradition. See KUSAN SŎNMUN; KYO; OGYO KUSAN; OGYO YANGJONG; SŎN.

Sŏnmun ch'waryo. (禪門撮要). In Korean, "Selected Essentials from the Gate of Sŏn"; a Korean anthology of the essential canon of the Korean SŎN (CHAN) school, in two rolls. Although the *Sŏnmun ch'waryo* is often attributed to the late-Chosŏn-period Sŏn master KYŎNGHŎ SŎNGU (1849–1912), its authorship remains a matter of debate. The text uses as its primary source material the *Pŏphae poböl* ("Precious Raft on the Ocean of Dharma"), which was compiled in 1883 at Kamnosa. The *Sŏnmun ch'waryo* contains texts that are foundational to the Korean Sŏn tradition. The first roll consists of the writings of the Chinese Chan patriarchs and teachers: the *Xuemo lun* ("Treatise of the Blood Lineage"), the *Guanxin lun* ("Treatise of Contemplating the Mind," sometimes otherwise attributed to SHENXIU [606?–706]), and the ERRU SIXING LUN ("Treatise on the Two Accesses and Four Practices"), all attributed to the first Chan patriarch, BODHIDHARMA; the *Xiuxin yao lun* ("Treatise on the Essentials of Cultivating the Mind"), attributed to the fifth patriarch HONGREN (600–674); the *Wanleng lu* ("Wanleng Record") and the CHUANXIN FAYAO ("Essential Teachings on Transmitting the Mind"), attributed to HUANGBO XIYUN (d. 850); the *Mengshan fayu* ("Mengshan's Dharma Discourses") composed of eleven dharma-talks by five masters including Mengshan Deyi (1231–1308) and NAONG HYEGŬN (1320–1376); and an excerpt from the *Canchan jingyu* ("Words of Admonition on Investigating Chan") attributed to Boshan Wuyi (1575–1630). The second roll consists of the writings of eminent Korean Sŏn monks from the Koryŏ and Chosŏn periods: POJO CHINUL's (1158–1210) SUSIM KYŎL ("Secrets on Cultivating the Mind"), *Chinsim chiksŏl* ("Straight Talk on the True Mind"), *Kwŏnsu Chŏnghye kyŏlsa mun* ("Encouragement to Practice: The Compact of the Samādhi and Prajñā Community"), and KANHWA KYŎRŬI NON ("Resolving Doubts About Observing the Hwadu"); the SŎNMUN POJANG NOK ("Record of the Treasure Trove of the Sŏn Tradition") and the *Sŏnmun kangyo* ("Essentials of the Sŏn Gate"), both attributed to CH'ŎNCH'AEK (b. 1206); and the *Sŏn'gyo sŏk* ("Explication of Sŏn and Kyo") attributed to CH'ŎNGHŎ HYUJŎNG (1520–1604). The first roll of the *Sŏnmun ch'waryo* was published in 1907 at the monastery of Unmunsa and the second in 1908 at PŎMŎSA. Among the 118 total xylographs of the book, the seventy-eighth and 118th xylographs list the names of people involved in the publication of the text, such as proofreaders, transcribers, and engravers, as well the donors, government officials, and landed gentry who contributed to the cost of the publication.

Sŏnmun pojang nok. (禪門寶藏錄). In Korean, "Record of the Treasure Trove of the Sŏn Tradition"; an anthology, in

three rolls, of stories excerpted from various Chinese CHAN and Korean SŎN texts. Although the preface of the *Sŏnmun pojangnok* was written in 1293 by the Koryŏ CH'ŎNTAE (Ch. TIANTAI) monk CH'ŎNCH'AEK (1206–?) to whom it is attributed, the exact authorship of the anthology is still a matter of some debate. The epilogue to the text was written in 1294 by the Koryŏ lay Buddhist literatus Yi Hon (1252–1312). The first roll, "The Gate That Compares Sŏn and Kyo" (Sŏn'gyo taebyŏn mun) advocates that Sŏn is distinct from, and surpasses, KYO (Doctrinal Teachings) because, unlike Kyo, Sŏn directly reveals Buddhist truth without relying on verbal explanation. The second roll, "The Gate through which all Kyo Lecturers Return and Yield" (Chegang kwibok mun) illustrates this superiority of Sŏn over Kyo by citing several examples in which Kyo monks were embarrassed, or guided to an authentic awakening, by Chan or Sŏn monks. The third roll, "The Gate Revered and Trusted by Kings and Vassals" (Kunsin sungsin mun) includes stories of kings and government officials respecting and honoring Chan and Sŏn monks. One of the most interesting stories collected in the *Sŏnmun pojang nok* relates to the otherwise-unknown Patriarch Chin'gwi (Chin'gwi chosa). The story is recited twice in the first roll and once in the third, excerpted respectively from the *Talma millok* ("Secret Record of Bodhidharma"), the *Haedong ch'iltae nok* ("Record of the Seven Generations of the Patriarchs of Haedong [Korea]"), and the *Wimyŏngje somun chegyŏng p'yŏn* ("Section on the Emperor Ming of Wei Inquires about the Sūtras"), none of which are extant. The story is extremely controversial, because it states that because ŚĀKYAMUNI Buddha's awakening under the BODHI TREE was still imperfect, he continued to wander looking for guidance, until he met a Chan patriarch in the Snowy Mountains (Himālaya) who was finally able to lead him to true awakening. Later, the renowned Chosŏn monk SŎNSAN HYUJŎNG also included the same story in his *Sŏn'gyo sŏk* ("Exposition of Sŏn and Kyo"), but cited it instead from the *Pŏmil kuksa chip* ("Collected Works of the State Preceptor Pŏmil"), which is also not extant. However, since neither the story itself nor even the titles of any of the three texts cited in the *Sŏnmun pojang nok* are found in any Chinese Buddhist sources, it is presumed that the story itself was fabricated in Korea sometime between the times of PŎMIL (810–889) and Ch'ŏnch'aek. The *Sŏnmun pojang nok* is now embedded in the SŎNMUN CH'WARYO and is also published in volume six of the *Han'guk Pulgyo chŏnsŏ* ("Collected Works of Korean Buddhism").

Sŏnmun yŏmsong chip. (禪門拈頌集). In Korean, "Collection of Analyses and Verses on [Ancient Precedents] of the Sŏn School," the first and largest indigenous Korean kongan (C. GONG'AN, J. kōan; public case) anthology, compiled in thirty rolls by CHIN'GAK HYESIM (1178–1234) in 1226. The collection covers 1,463 kongan, along with annotations (yŏm), verses (song), and variant explanations, such as responding on behalf of a figure who does not answer during the kongan exchange (tae, lit. on his behalf), responding in a different way from the response given in the kongan exchange (pyŏl, lit. differently), and inquiring about the exchange (ch'ŏng, lit. soliciting, or verifying). The first xylographic edition of the collection was destroyed in 1232, just six years after its publication, during the Mongol invasions of the Korean peninsula. The second woodblock edition was carved sometime between 1244 and 1248 as a part of the massive project to remake the entire Koryŏ Buddhist canon (KORYŎ TAEJANGGYŎNG). The postface to the second edition notes that 347 more kongan was added to the original for a total of 1,472; the current edition, however, includes only 1,463 kongan, a discrepancy that remains unexplained. The collection shows the influence of the Song gong'an literature, especially the *Chanzong songgu lianzhu tongji* ("Comprehensive Collection of the Chan School's Verses on Ancient [Precedents] That Are a String of Jewels"), compiled in 1179. The ancient cases (viz., the kongan) are arranged in the order of the three jewels (RATNATRAYA), i.e., the Buddha, dharma, and saṃgha. The first thirty-seven kongan are attributed to ŚĀKYAMUNI Buddha himself. The next set of twenty-four is derived from Buddhist sūtras, including the AVATAṂSAKASŪTRA, the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), the *ŚŪRAṂGAMASŪTRA, and the VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA ("Diamond Sūtra"). The remaining 1,402 kongan are taken from stories of the Indian and Chinese Sŏn (Chan) patriarchs and teachers, along with a few unknown lay Sŏn masters. The *Sŏnmun yŏmsong chip* was one of the official textbooks used for the monastic examinations (SŬNGKWA) in the Sŏn school during the early Chosŏn dynasty. There are a few important Korean commentaries to the anthology, including the *Sŏnmun yŏmsong sŏrhwa* ("Tales about the Sŏn School's Analyses and Verses") in thirty rolls, by Hyesim's disciple Kagun (c. thirteenth century), IRYŎN's (1206–1289) *Sŏnmun yŏmsong sawŏn* ("Garden of Affairs on the Sŏn School's Analyses and Verses") in thirty rolls, and PAEKP'A KŬNGSŎN's (1767–1852) *Sŏnmun yŏmsong ki* ("Record of the Sŏn School's Analyses and Verses") in five rolls.

Sŏnsu. (K) (善修). See PUHYU SŎNSU.

Sŏnunsa. (禪雲寺). In Korean, "Cloud of Meditation Monastery"; the twenty-fourth district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located on Mount Tosol (TUṢITA) in North Chŏlla province. There are several conflicting narratives concerning its foundation, but the prevailing view is that the monastery was founded by the meditation master Kŏmdan (fl. c. 577) during the reign of the Paekche king Widŏk (r. 554–598). Sŏnunsa has a history of repeated destruction and reconstruction through the Koryŏ and Chosŏn periods. Most of the monastery's present structures, including its main shrine hall (TAEUNG CHŎN), were built during the reign of the Chosŏn-dynasty King Kwanghae (r. 1608–1623). The monastery is famous for its associations with worship of KṢITIGARBHA (K. Chijang posal) and is well known for its many camellia bushes, one of the few flowers that bloom during the harsh Korean winter.

sopadhiśeṣanirvāṇa. (P. sopādisesanibbāna; T. phung po lhag ma dang bcas pa'i mya ngan las 'das pa/lhag bcas myang 'das; C. youyu niepan; J. uyonehan; K. yuyŏ yŏlban 有餘涅槃). In Sanskrit, "nirvāṇa with remainder"; one of the two kinds of NIRVĀṆA, along with the "nirvāṇa without remainder" (ANUPADHIŚEṢANIRVĀṆA), "with remainder" here meaning the residue of the aggregates (SKANDHA). At the time of his enlightenment under the BODHI TREE, the Buddha achieved the nirvāṇa with remainder, because he had destroyed all causes for future rebirth, but the "remainder" of his mind and body, viz., a substratum (UPADHI) of existence, persisted. At the time of his death, there was nothing more of the skandhas remaining, thus producing the "nirvāṇa without remainder," a synonym for PARINIRVĀṆA. According to those MAHĀYĀNA schools which assert that there is only one vehicle (EKAYĀNA) and that all sentient beings will achieve buddhahood, ARHATs who appear to enter the nirvāṇa without remainder at death actually do not do so; for if they did, it would be impossible for them to enter the bodhisattva path. Instead, they enter the uncontaminated realm (ANĀSRAVADHĀTU), where they remain in states of deep concentration (inside lotus flowers according to some texts) until they are roused by the buddhas and exhorted to abandon their "unafflicted ignorance" (AKLIṢṬĀJÑĀNA) and proceed on the path to buddhahood. ¶ In a *PRĀSAṄGIKA-MADHYAMAKA interpretation, the vision of reality free from all elaborations (PRAPAÑCA) or dualistic subject-object conceptualization (GRĀHYAGRĀHAKAVIKALPA) in a state of absorption or equipoise (samāhitajñāna)—a state that occurs on the path of vision (DARŚANAMĀRGA) and the path of cultivation (BHĀVANĀMĀRGA)—is referred to as "nirvāṇa without remainder," because there is no appearance of any conventional reality (SAṂVṚTI) while the meditator is in that state. In the subsequent state (PṚṢṬHALABDHAJÑĀNA), conventional reality reappears; this state is called nirvāṇa with remainder. In this explanation, upadhi means any appearance of conventional reality.

Sŏsan taesa. (西山大師) (1520–1604). In Korean, "Great Master West Mountain." See CH'ŎNGHŎ HYUJŎNG.

Soseki. (J) (疎石) (1275–1351). See MUSŌ SOSEKI.

Sot'aesan. (K) (少太山) (1891–1943). Cognomen of the founder of the Korean new religion of WŎNBULGYO. See PAK CHUNGBIN.

Sōtōshū. (曹洞宗). One of the three major branches of the Japanese Zen tradition, along with the RINZAISHŪ and ŌBAKUSHŪ. The Sōtō tradition traces its lineage back to DŌGEN KIGEN (1200–1253), who is credited with transmitting to Japan the CAODONG ZONG line of the Chinese CHAN teacher TIANTONG RUJING (1162–1227). After returning from China in 1227, Dōgen settled in Kyōto and sought to create a new Zen community. Because of resistance from the TENDAI and Rinzai traditions that were already firmly entrenched in the capital (see ENNI BEN'EN), Dōgen and his followers eventually left for the rural area of Echizen (in the northern part of present-day Fukui prefecture), and founded EIHEIJI, which came to serve as the center of this new Zen institution. In Echizen, Dōgen devoted his time and energy to securing the doctrinal and institutional bases for his community. Dōgen's venture was aided by several adherents of the DARUMASHŪ, who joined the community. Among them were Koun Ejō (1198–1280), the editor of the seventy-five-roll version of Dōgen's magnum opus, the SHŌBŌGENZŌ, and Tettsū Gikai (1219–1309), whose lineage subsequently came to dominate the Sōtō school; these monks later served as the second and the third abbots of Eiheiji. Modern scholars believe that a dispute between Gikai and a fellow disciple of Koun Ejō named Gien (d. 1313) concerning the abbotship of Eiheiji prompted Gikai to move to Daijōji in Ishikawa. Gikai was succeeded by his disciple KEIZAN JŌKIN (1268–1325), who is honored as "the second patriarch" of Sōtō by the school's modern followers. Keizan revitalized the Sōtō community by synthesizing Zen practice with the worship of local gods (KAMI), thus appealing to the local populace. Keizan also established SŌJIJI, which along with Eiheiji came to serve as the headquarters (honzan) of the Sōtō tradition. Gazan Shōseki (1275–1365), a successor of Keizan, produced several disciples, including Taigen Sōshin (d. c. 1371) and Tsūgen Jakurei (1322–1391), who are credited with the Sōtō school's rapid expansion throughout Japan during the medieval period. Sōtō monks of this period, especially those belonging to Keizan-Gazan lines, proselytized in the rural areas of Japan, which had been largely neglected by the established Buddhist traditions at court, and attracted a following among commoners and local elites by engaging in such social activities as building bridges and irrigation systems, as well as by performing rituals that met their religious needs, such as funeral services and mass ordinations (jukai e). Each lineage of the Sōtō tradition also developed its own secret kōan manuals (monsan), only available to selected monks, which gave a received set of questions and answers regarding each kōan (C. GONG'AN). During the Tokugawa period, the Sōtō school developed into one of the largest Buddhist sects in Japan, with a stable financial base, thanks to the mandatory parish system (DANKA SEIDO) that the government launched, in which every household was required to register as a member of a local Buddhist temple and was responsible for the financial support for the temple. By the middle of the eighteenth century, there were more than 17,500 Sōtō temples across Japan. Although the religious life of the majority of the Sōtō monks and lay followers during this period was focused on practical religious benefits, such as faith healing and funeral services, a restoration movement eventually developed that sought to return to the putative "original teachings and practices" of the founder Dōgen. MANZAN DŌHAKU (1636–1714) opposed the custom of IN'IN EKISHI, or "changing teachers according to temple," which was widespread in the Sōtō tradition during the sixteenth and seventeenth centuries and was required in order to inherit the dharma lineage of a temple

(GARANBŌ). Instead, Manzan called for a direct, face-to-face transmission (menju shihō) from one master to his disciple (isshi inshō), which he claimed Dōgen had established for the Sōtō tradition. After several failed attempts, he finally succeeded in persuading the bakufu government to ban the in'in ekishi and garanbō practice in 1703. TENKEI DENSON (1648–1735) and MENZAN ZUIHŌ (1683–1769) also composed influential commentaries to Dōgen's magnum opus, the *Shōbōgenzō*, which led to a renaissance in Dōgen studies. After the Meiji reforms of 1868, the two head monasteries of Eiheiji and Sōjiji, which had remained rivals through the Tokugawa period, worked together to reform the school, issuing several standardizations of the rules for temple operation, ritual procedures, etc. In 1890, Azegami Baisen (d.1901) from Sōjiji and Takiya Takushū (d. 1897) from Eiheiji edited the layman Ōuchi Seiran's (1845–1918) introductory work on the *Shōbōgenzō* and distributed it under the title of the *Sōtō kyōkai shushōgi* ("Meaning of Practice and Realization in the Sōtō Sect"). This text played a major role in the popularization of the school's meditative practice of "just sitting" (SHIKAN TAZA), which fosters a psychological state in which "body and mind are sloughed off" (SHINJIN DATSURAKU); sitting practice itself is therefore regarded as the manifestation of the perfect enlightenment of buddhahood. The Sōtō school continues to thrive today, with the great majority of its more than fourteen thousand contemporary temples affiliated with Sōjiji.

sotthika/sotthiya. (P). See SVASTIKA.

sound of one hand clapping. See SEKISHU KŌAN.

Southern School (of Chan). See NAN ZONG.

sparśa. (P. phassa; T. reg pa; C. chu; J. soku; K. ch'ok 觸). In Sanskrit, "contact," used technically as the sixth of the twelve links of dependent origination (PRATĪTYASAMUTPĀDA), referring to the sensory contact between a sense organ (INDRIYA) and a sense object (ĀLAMBANA), resulting in a corresponding sensory consciousness (VIJÑĀNA), with the function of distinguishing an object as pleasant, unpleasant, or neutral. Based on this contact, sensation or feeling (VEDANĀ), the next link in the chain (NIDĀNA), occurs. Thus, the term sparśa does not refer to the physical contact of the body and a physical object. It is instead the mental factor by which consciousness "touches" the object, setting in motion the process of cognition. The Buddha said that prior to his enlightenment, he sought to understand the nature of sensation, including its origin (SAMUDAYA) and its cessation (NIRODHA). He understood that sensation arose from contact, which in turn arose from the coming together of an object and one of the six sense organs (ṢAḌĀYATANA), such that if the six sense organs ceased, contact would cease, and sensation would cease. The six sense organs are sometimes referred to as the sparśāyatana, the "bases of contact" or "sources of contact."

Spa tshab lo tsā ba Nyi ma grags. (Patsap Lotsawa Nyima Drak) (1055–1145?). A Tibetan scholar of the eleventh and twelfth centuries who played a major role in establishing MADHYAMAKA in Tibet during the period of the second dissemination (PHYI DAR) of the dharma, through his translation of the two major works of CANDRAKĪRTI, the PRASANNAPADĀ and the MADHYAMAKĀVATĀRA, as well as ĀRYADEVA's CATUḤŚATAKA and Candrakīrti's commentary on it. At any early age, he made the arduous journey to Kashmir, where he spent the next twenty-three years, the first ten studying Sanskrit and the remaining years translating Madhyamaka works into Tibetan in collaboration with Kashmiri paṇḍitas at the monastery of Ratnaguptavihāra near modern-day Srinagar. His teachers and collaborators included Mahājana and Sūkṣmajana, the sons of the master Sajjana, as well as Mahāsumati, the disciple of Parahita. He eventually returned to Tibet, accompanied by two Kashmiri scholars: Kanakavarman and Tilakakalaśa. Basing himself at the RA MO CHE temple in LHA SA, he taught Madhyamaka and revised earlier translations of Madhyamaka texts. He thus played a major role in introducing what came to be known as *PRĀSAṄGIKA into Tibet and providing the texts upon which the distinction between Prāsaṅgika and *SVĀTANTRIKA could be made. Those terms were not names of branches of Madhyamaka school in India; rather, those designations were coined in Tibet, and Spa tshab may have been the first to use the term *Prāsaṅgika (thal 'gyur pa). He is credited by Tibetan historians as making the *Prāsaṅgika perspective, that is, the perspective of Candrakīrti, the prevailing interpretation of the works of Nāgārjuna and Āryadeva in Tibet.

Sphuṭārthā. (T. 'Grel pa don gsal). A common abbreviated title of the SPHUṬĀRTHĀ-ABHIDHARMAKOŚAVYĀKHYĀ by YAŚOMITRA (fl. sixth century?); also a mistaken Sanskrit reconstruction of the PRAJÑĀPĀRAMITĀ writer HARIBHADRA's short commentary (vivṛti) on the ABHISAMAYĀLAṂKĀRA, known in Tibetan sources (based on Haribhadra's description of his work) as *'Grel pa don gsal*; see ABHISAMAYĀLAṂKĀRAVIVṚTI.

Sphuṭārthā-Abhidharmakośavyākhyā. [alt. Abhidharmakośaṭīkā] (T. Chos mngon pa'i mdzod kyi 'grel bshad). A widely cited exegesis of Vasubandhu's ABHIDHARMAKOŚABHĀṢYA by YAŚOMITRA (fl. sixth century?). Written in Sanskrit, the title means "Clear Meaning Explanation of [Vasubandhu's] *Abhidharmakośabhāṣya*." Yaśomitra calls his work *Sphuṭārthā* ("in which the topics burst forth clearly") at the beginning of his text.

spraṣṭavya. (P. phoṭṭhabba; T. reg bya; C. suochu; J. shosoku; K. soch'ok 所觸). In Sanskrit, lit., "object of touch," or "tangible object," the object of tactile consciousness (KĀYAVIJÑĀNA) and one of the five sense objects (ĀLAMBANA), the others being visible form (RŪPA), sounds (ŚABDA), smells (GANDHA), and tastes (RASA). The contact (SPARŚA) between a tangible object and the tactile sense organ (KĀYENDRIYA) produce tactile

consciousness (KĀYAVIJÑĀNA). In the ABHIDHARMA, tangible objects are divided into two main categories, the physical elements (BHŪTA; MAHĀBHŪTA) and those derived from the elements (BHAUTIKA). The four elements are earth, water, fire, and wind. The seven tangible objects derived from the elements are smoothness, roughness, heaviness, lightness, cold, hunger, and thirst.

spraṣṭavyāyatana. (P. phoṭṭhabbāyatana; T. reg bya'i skye mched; C. chuchu; J. sokusho; K. ch'okch'ŏ 觸處). In Sanskrit, "tactile sense-field," that is, tangible objects (SPRAṢṬAVYA) as they occur in the list of twelve sense faculties or "bases of cognition" (ĀYATANA), which serve as the bases for the production of consciousness: viz., the six internal sense bases, or sense organs (eye, ear, nose, tongue, body, and mind) and the six external sense objects (forms, sounds, odors, tastes, tangible objects, and mental phenomena). In the case of tangible objects, the contact (SPARŚA) between the tactile sense base and its corresponding tangible object leads to tactile consciousness (KĀYAVIJÑĀNA).

sprul sku. A Tibetan term often seen transcribed in English as "tulku"; it is the Tibetan translation of the Sanskrit term NIRMĀṆAKĀYA, the third of the three bodies of a buddha (TRIKĀYA), the "emanation body" that appears in the world for the benefit of sentient beings. Although the term retains this standard Buddhological meaning in Tibetan, sprul sku is used by extension to refer to an "incarnate lama," and the term is sometimes translated as such. It is not believed in every case that each incarnate lama is the emanation body of a buddha. However, the implication is that there is a difference in the processes whereby ordinary beings and incarnate lamas take birth in the world. For the former, rebirth is process over which one has no control, with a strong possibility that one's new life will be in the lower rebirth destinies (DURGATI) as an animal, hungry ghost, or hell denizen. The rebirth of an "emanation body" is instead considered to be a voluntary choice. The sprul sku are said to exercise control over their rebirth; a dying incarnation will often leave instructions for his disciples as to where to find his next rebirth. The practice of identifying children as the incarnations of deceased masters may date from as early as the eleventh or twelfth century. By the fifteenth century, all sects of Tibetan Buddhism had adopted the practice of identifying the successive rebirths of a great teacher, the most famous instance of which are the DALAI LAMAS. There were some three thousand lines of incarnation in Tibet (only several of whom are female). It was also the case that a single lama may have more than one incarnation; there were sometimes three, which were considered individual incarnations of the body, speech, and mind of the deceased master. The institution of the incarnate lama became a central component of Tibetan society, providing the means by which authority and charisma, both symbolic and material, was passed from one generation to another. The spread of Tibetan Buddhism can be traced by the increasingly large geographical areas in which incarnate lamas have been discovered. A variety of types and levels of sprul sku are identified. A mchog gi sprul sku (choki tulku) (UTTAMANIRMĀṆAKĀYA) is a buddha, such as ŚĀKYAMUNI, who appears in the world with a body adorned with the major and minor marks of a MAHĀPURUṢA. A skye ba'i sprul sku (kyewe tulku) (JANMANIRMĀṆAKĀYA) is the appearance of a buddha in the form of an animal, human, or divinity. Tibetan incarnate lamas would fall into this category. Also in this category would be those cases in which a buddha appears as an inanimate object that provides benefit to sentient beings, such as a bridge across a river, a path, a tree, or a cooling breeze. A bzo bo sprul sku (sowo tulku) (ŚILPANIRMĀṆAKĀYA) is an artisan or craftsman or a particular manifestation of artistic beauty that subdues the afflictions (KLEŚA). Within the the large DGE LUGS PA monasteries, a monk with the title of tshogs chen sprul sku (tsokchen tulku, "great assembly tulku") is excused from performing regular assembly duties. In Tibetan, an incarnate lama is addressed and referred to as RIN PO CHE (precious one), although that term is also used for abbots and other holders of high ecclesiastical office; it may also be used for one's teacher, even if he or she is not an incarnate lama. The term BLA MA (lama) is typically used to refer to incarnations but is also used widely for a teacher.

śraddhā. (P. saddhā; T. dad pa; C. xin; J. shin; K. sin 信). In Sanskrit, "faith" or "confidence," a term that encompasses also the sense of "belief." Faith has a wide range of meanings in Buddhism, ranging from a kind of mental clarity and positive disposition toward the Buddha (which is often attributed to an encounter with a buddha or with the bodhisattva in a former life), to a sense of conviction about the efficacy of the Buddhist path (MĀRGA), to a commitment to follow that path. In addition to its cognitive dimensions, which will be described more fully below, faith also has important conative and affective dimensions that are frequently recounted in Buddhist literature. The conative is suggested in the compulsion towards alms-giving (DĀNA), as described for example in encounters with previous buddhas in the Pāli APADĀNA, or in the pilgrim's encounter with an object of devotion. The affective can be seen, perhaps most famously, in Ānanda's affection-driven attachment to the Buddha, which is described as a result of his deep devotion to, and faith in, the person of the Buddha. These multiple aspects of faith find arguably their fullest expression in the various accounts of the story of the Buddha's ARHAT disciple VAKKALI, who is said to have been completely enraptured with the Buddha and is described as foremost among his monk disciples in implicit faith. In the ABHIDHARMA, faith is listed as the first of the ten major omnipresent wholesome factors (KUŚALAMAHĀBHŪMIKA) in the seventy-five dharmas list of the SARVĀSTIVĀDA school and as a virtuous (KUŚALA) mental factor (CAITTA) in the hundred-dharmas roster (BAIFA) of the YOGĀCĀRA school and in the Pāli abhidhamma. Faith is one of the foundational prerequisites of attainment, and its cognitive dimensions are described as a clarity of mind required for realization, as conviction that arises from the study of the dharma, and as a source of aspiration that encourages one to continue to develop

the qualities of enlightenment. Faith is listed as the first of the five spiritual faculties (INDRIYA), together with diligence (VĪRYA), mindfulness (SMṚTI), concentration (SAMĀDHI), and wisdom (PRAJÑĀ). The faculty of faith is usually considered to be the direct counteragent (PRATIPAKṢA) of ill-will (DVEṢA), not of doubt (VICIKITSĀ), demonstrating its affective dimension. Faith generates bliss (PRĪTI), by which brings about serenity of mind and thought; in addition, faith also produces self-confidence, engendering the conative characteristic of diligence (vīrya). Faith and wisdom (prajñā) were to be kept constantly counterpoised by the faculty of mindfulness (smṛti). By being balanced via mindfulness, faith would guard against excessive wisdom, which could lead to skepticism, while wisdom would protect against excessive faith, which could lead to blind, uncritical acceptance. Thus faith, in the context of the spiritual faculties, is a tacit acceptance of the soteriological value of specific beliefs, until such time as those beliefs are verified through practice and understood through one's own insight. There are four main soteriological objects of faith: (1) the efficacy of moral cause and effect (viz., KARMAN) and the prospect of continued rebirth (PUNARJANMAN) based on one's actions; (2) the core teachings about the conditioned nature of the world, such as dependent origination (PRATĪTYASAMUTPĀDA) and the three marks of existence (TRILAKṢAṆA), viz., impermanence (ANIYATA), suffering (DUḤKHA), nonself (ANĀTMAN); (3) the three jewels (RATNATRAYA) of the Buddha, DHARMA, and SAṂGHA; and (4) the general soteriological outline of the path (MĀRGA) and the prospect of release from affliction through the experience of NIRVĀṆA.

śraddhādhimukta. (P. saddhādhimutta; T. dad pas lhag par mos pa; C. xinjie; J. shinge; K. sinhae 信解). In Sanskrit, "one who aspires through faith" or "one inclined to faith"; one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). In Sanskrit sources, the name is given to those with dull faculties (MṚDVINDRIYA) when they reach one of the first three results of the noble path (ĀRYAMĀRGA) or religious life (ŚRĀMAṆYAPHALA). They reach the result when they pass from the path of vision's (DARŚANAMĀRGA) uninterrupted path (ĀNANTARYAMĀRGA) to its path of freedom (VIMUKTIMĀRGA). While on the uninterrupted path, they are called ŚRADDHĀNUSĀRIN. Contingent on the number of sets of afflictions (KLEŚA) causing rebirth in the sensuous realm (KĀMADHĀTU) that they have already eliminated prior to reaching the uninterrupted path, they become either SROTAĀPANNAPHALASTHA, SAKṚDĀGĀMIPHALASTHA, or ANĀGĀMIPHALASTHA when they reach the path of liberation (VIMUKTIMĀRGA). Both the name śraddhānusārin and the śraddhādhimukta appear to have been borrowed from the list of noble persons (ĀRYAPUDGALA) found, for example, in the *Kīṭāgirisutta* of the MAJJHIMANIKĀYA. The name ŚRADDHĀVIMUKTA found in the list of seven noble persons is changed to śraddhādhimukta in the expanded list of twenty members of the āryasaṃgha. See ŚRADDHĀVIMUKTA.

śraddhānusārin. (P. saddhānusāri; T. dad pa'i rjes su 'brang ba; C. suixin xing; J. zuishingyō; K. susin haeng 隨信行). In Sanskrit, "follower of faith." The SARVĀSTIVĀDA (e.g., ABHIDHARMAKOŚABHĀṢYA) and Pāli (e.g., VISUDDHIMAGGA) traditions of mainstream Buddhism both recognize seven types of noble ones (ĀRYA, P. ariya): (1) follower of faith (S. śraddhānusārin; P. saddhānusāri); (2) follower of the dharma (S. DHARMĀNUSĀRIN, P. dhammānusāri); (3) one liberated through faith (S. ŚRADDHĀVIMUKTA; P. saddhāvimutta); (4) one who has formed right view (S. DṚṢṬIPRĀPTA; P. diṭṭhippatta), by developing both faith and wisdom; (5) the bodily witness (S. KĀYASĀKṢIN; P. kāyasakkhi), viz., through the temporary suspension of mentality in the equipoise of cessation (NIRODHASAMĀPATTI); (6) one who is freed by wisdom (S. PRAJÑĀVIMUKTA; P. paññāvimutta), by freeing oneself through analysis; and (7) one who is freed both ways (S. UBHAYATOBHĀGAVIMUKTA; P. ubhatobhāgavimutta), by freeing oneself through both meditative absorption and wisdom. A follower of faith is a person who has attained the fruit of stream-enterer (SROTAĀPANNA) and in whom the faculty (INDRIYA) of faith (ŚRADDHĀ) is predominant. Such a person will eventually become one who is freed through faith (ŚRADDHĀVIMUKTA). In the *Abhidharmakośabhāṣya*, there is a basic division of path types and personality types, where a faith-follower and a dharma-follower eliminate hindrances to goals all at once or in a series, and respectively either pass through the intermediate stages of once-returner and nonreturner, or else skip such stages completely, before finally becoming ARHATS. In general, dharma-followers are those who proceed based on knowledge of the FOUR NOBLE TRUTHS as it pertains to all three realms of existence; they eliminate hindrances to all goals all at once, while the achievements of faith-followers are more progressive. According to the Sarvāstivāda VAIBHĀṢIKA school of ABHIDHARMA, an ARHAT whose liberation is grounded in faith may be subject to backsliding from that state, whereas those who are dharmānusārin are unshakable (AKOPYA), because they have experienced the knowledge of nonproduction (ANUTPĀDAJÑĀNA), viz., that the afflictions (KLEŚA) can never occur again, the complement of the knowledge of extinction (KṢAYAJÑĀNA). In the MAHĀYĀNA interpretation of the terms, bodhisattvas who are dharma-followers have knowledge of emptiness (ŚŪNYATĀ), i.e., they have gained a knowledge of the way things are (TATTVA) even at early stages of the path and will never revert to the HĪNAYĀNA; the faith-followers are not irreversible (AVAIVARTIKA) in that way until higher levels of the path. The śraddhānusārin is also found in the list of the members of the saṃgha when it is subdivided into twenty (VIṂŚATIPRABHEDASAṂGHA). Among the śraddhānusārin, there are candidates for the fruit of stream-enterer (SROTAĀPANNAPHALAPRATIPANNAKA), once-returner (SAKṚDĀGĀMIPHALAPRATIPANNAKA), and nonreturner (ANĀGĀMIPHALAPRATIPANNAKA). The first has eliminated up to five of the nine sets of afflictions (KLEŚA) that cause rebirth in the sensuous realm (KĀMADHĀTU), the second all but the final set, and the last all of the afflictions. The first takes a number of births (never more than seven) in the

sensuous realm before reaching nirvāṇa, the second has only one rebirth in the sensuous realm left, and the nonreturner will never again take rebirth in the sensuous realm prior to reaching nirvāṇa.

śraddhāvimukta. (P. saddhāvimutta; T. dad pas rnam par grol ba; C. xinshengjie; J. shinshōge; K. sinsŭnghae 信勝解). In Sanskrit, "liberated through faith." In the *Kīṭāgirisutta* of the MAJJHIMANIKĀYA, the Buddha describes seven types of noble persons (ĀRYAPUDGALA, P. ariyapuggala). They are: (1) the follower of faith (ŚRADDHĀNUSĀRIN, P. saddhānusāri), (2) the one liberated through faith (śraddhāvimukta), (3) the bodily witness (KĀYASĀKṢIN, P. kāyasakkhi), (4) the one liberated both ways (UBHAYATOBHĀGAVIMUKTA, P. ubhatobhāgavimutta), (5) the follower of the dharma (DHARMĀNUSĀRIN, P. dhammānusāri), (6) the one who has attained understanding (DṚṢṬIPRĀPTA, P. diṭṭhippatta), and (7), the one liberated through wisdom (PRAJÑĀVIMUKTA, P. paññāvimutta). A person liberated through faith is a noble person at any stage of the path, from the fruit of stream-enterer to the path of the arhat, who has understood the FOUR NOBLE TRUTHS and eliminated some of the defilements, but has not attained any of the DHYĀNA levels of the immaterial realm and who has a predominance of faith. Such a person may or may not have attained the levels of the subtle-materiality realm. The śraddhāvimukta is also found in the list of the members of the saṃgha when it is subdivided into twenty (VIṂŚATIPRABHEDASAṂGHA). There are three śraddhāvimukta: recipients of the fruit of stream-enterer (SROTAĀPANNAPHALASTHA), once-returner (SAKṚDĀGĀMIPHALASTHA), and nonreturner (ANĀGĀMIPHALASTHA). These parallel the three śraddhānusārin that are candidates for these same first three fruits of the noble path. See ĀRYAPUDGALA; ĀRYAMĀRGAPHALA.

śramaṇa. (P. samaṇa; T. dge sbyong; C. shamen; J. shamon; K. samun 沙門). In Sanskrit "renunciant," "mendicant," or "recluse," a term used in ancient India to refer to male religious of a number of different itinerant sects, including Buddhism, often associated with the warrior (KṢATRIYA) caste, which challenged the hegemony of the brāhmaṇa priests and mainstream Brahmanical religion deriving from the Vedas. Whereas the Brahmanical tradition traces itself back to a body of literature centered on the Vedas, the śramaṇa movements instead derive from historical persons who all flourished around the sixth century BCE. Six different śramaṇa groups are mentioned in the SĀMAÑÑAPHALASUTTANTA of the DĪGHANIKĀYA, each representing different trends in Indian thought, including antinomianism (PŪRAṆA-KĀŚYAPA); fatalism (MASKARIN-GOŚĀLĪPUTRA of the Ājīvaka school); materialism (AJITA-KEŚAKAMBALA of the LOKĀYATA school); atomism (KAKUDA-KĀTYĀYANA); and agnosticism (SAÑJAYA-VAIRĀṬĪPUTRA); the sixth group is the JAINA tradition of NIRGRANTHA JÑĀTĪPUTRA, also known as MAHĀVĪRA, with which Buddhism shares many affinities. These six are typically referred to in Buddhist materials as the six "heterodox teachers" (TĪRTHIKA) and are consistently criticized by the Buddha for fostering wrong views (MITHYĀDṚṢṬI). Some scholars suggest that these groups were loosely associated with a third phase in the development of pan-Indian religion called the āraṇyaka (forest dwellers) movement, where the highly specialized fire rituals (HOMA) set forth in the *Brāhmaṇas* for the propitiation of Vedic gods gave way to a more internalized form of spiritual praxis. These itinerant asetics or wanders were also called PARIVRĀJAKA (P. paribbājaka; "those who go forth into homelessness"), in direct contrast to the householders (GṚHASTHA) whose behavior was governed by the laws set down in dharmaśāstras. Because so many of the beliefs and practices emblematic of the śramaṇa movement have no direct Vedic antecedents, however, other scholars have proposed that the śramaṇa groups may instead exemplify the resurfacing in Indian religion of aboriginal elements that had long been eclipsed by the imported rituals and beliefs that the Āryans brought with them to India. These doctrines, all of which have their parallels in Buddhism, include rebirth and transmigration (e.g., PUNARJANMAN); notions that actions have effect (e.g., KARMAN); asceticism (TAPAS, DHUTAṄGA) and the search for ways of behavior that would not bind one to the round of SAṂSĀRA; and liberation (MOKṢA, VIMOKṢA) as the goal of religious practice. In Buddhism, śramaṇa is also used generically to refer to all monks, including the Buddha, whose epithets include Śramaṇa Gautama and Mahāśramaṇa, "Great Renunciant." The term often occurs in the compound śramaṇabrāhmaṇa (P. samaṇabrāhmaṇa), "recluses and brāhmaṇas." This compound has a range of meanings. In some cases, it refers simply to those who practice and benefit from the Buddha's teachings. In other cases, it refers to non-Buddhist religious practitioners. In the edicts of AŚOKA, the term is used to refer to those who are worthy of respect and offerings, with śramaṇa taken to mean Buddhist monks (and possibly other ascetics) and brāhmaṇa taken to mean brāhmaṇa priests. The term śramaṇa should be carefully distinguished from ŚRĀMAṆERA (s.v.), a novice monk.

śrāmaṇera. (P. sāmaṇera; T. dge tshul; C. shami; J. shami; K. sami 沙彌). In Sanskrit "[male] novice"; a preliminary stage a man must pass through before he can be ordained as a fully ordained monk (BHIKṢU). The admission into the order (S. pravrajyā, P. pabbajjā; see PARIVRĀJAKA) of a novice is performed with a simple ceremony. The candidate shaves his hair and beard, attires himself in a monk's robe received from a donor, and presents himself before an assembly of monks, or a single monk of ten years' standing or more. Squatting on his haunches and folding his hands, he recites the three refuges (TRIŚARAṆA) formula three times, whereupon he is made a novice. According to the Pāli VINAYA, a novice must observe ten precepts (DAŚAŚĪLA) or "rules of training" (ŚIKṢĀPADA), viz., abstaining from: (1) killing, (2) stealing, (3) sexual misconduct, (4) false speech, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8), using garlands, perfumes, and cosmetics to adorn the body, (9) using high and luxurious beds and couches, and (10) accepting gold and silver. The MŪLASARVĀSTIVĀDA VINAYA expands these ten precepts to thirty-

six. After receiving the lower ordination, the novice is required to live under the guidance (NIŚRAYA) of a teacher until he receives higher ordination (UPASAṂPADĀ) as a bhikṣu. The novice may not attend the reading of the PRĀTIMOKṢA during the bimonthly UPOṢADHA (P. uposatha) ceremony, or participate in any formal ecclesiastical acts (SAṂGHAKARMAN) such as giving ordination and so on. There are a variety of lists of persons who are not permitted to be ordained as novices: one list names branded thieves, fugitives from the law, registered thieves, those punished by flogging or branding, patricides, matricides, murderers of ARHATS, those who have shed the blood of a buddha, eunuchs, false monks, seducers of nuns, hermaphrodites, persons who are maimed, disabled, or deformed in various ways, and those afflicted with various communicable diseases.

śrāmaṇerasaṃvara. (P. sāmaṇerasaṃvara; T. dge tshul gyi sdom pa; C. qince lüyi; J. gonsakuritsugi; K. kŭnch'aek yurŭi 勤策律儀). In Sanskrit, "restraints for novices"; the ten precepts (DAŚAŚĪLA) that govern the conduct of a ŚRĀMAṆERA (male novice). The ten are framed in terms of training rules (ŚIKṢĀPADA): viz., "I undertake the training rule to abstain from": (1) killing, (2) stealing, (3) sexual activity, (4) false speech, (5) intoxicants, (6) eating after midday, (7) dancing, singing, music, and other unseemly forms of entertainment, (8) using garlands, perfumes, and cosmetics to adorn the body, (9) using high and luxurious beds and couches, (10) handling gold and silver (viz., money). On full- and new-moon days (UPOṢADHA), the laity had the option of taking all these precepts except no. 10; nos. 7 and 8 were then combined to give a set of eight precepts to be specially followed on these retreat days (see S. AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ) as a sort of temporary renunciation. In the MŪLASARVĀSTIVĀDA VINAYA these ten precepts are expanded to thirty-six.

śrāmaṇerikā. [alt. śrāmaṇerī] (P. sāmaṇerī; T. dge tshul ma; C. shamini; J. shamini; K. samini 沙彌尼). In Sanskrit, [female] "novice"; also spelled śrāmaṇerakā. The rules of admission and observance as a female novice are the same as for the ŚRĀMAṆERA (male novice) with the exception that a female novice is required to practice as a ŚIKṢAMĀṆĀ ("postulant" or "trainee") for at least two years before being granted permission to receive the UPASAṂPADĀ higher ordination as a BHIKṢUṆĪ, or fully ordained nun. In addition, in the case of a woman, the higher ordination must be conferred twice instead of only once, first by the bhikṣuṇī SAṂGHA (nuns' order), and a second time by the BHIKṢU saṃgha.

śrāmaṇerikāsaṃvara. (T. dge tshul ma'i sdom pa; C. qince lüyi; J. gonsakuritsugi; K. kŭnch'aek yurŭi 勤策律儀). In Sanskrit, the restraints, or precepts, governing the conduct of a ŚRĀMAṆERIKĀ (female novice); see ŚRĀMAṆERASAṂVARA.

śrāmaṇyaphala. (P. sāmaññaphala; T. dge sbyong gi tshul gyi 'bras bu; C. shamen'guo; J. shamonka; K. samun'gwa 沙門果). In Sanskrit, "the fruit of recluseship," viz., "the beneficial effects of religious practice." "Fruit" in this compound refers to the benefits that come to fruition in a recluse's current or future life. The latter type includes both merit (PUṆYA) and a favorable rebirth. The former benefits are expounded by the Buddha in various versions of the *Śrāmaṇyaphalasūtra* (see SĀMAÑÑAPHALASUTTANTA). These benefits include respect from members of higher classes, sensory restraint, contentedness, abandonment of the hindrances, attainment of the four meditative absorptions, insight, supranormal powers, clairaudience, recollection of past lives, and so on. In regard to the progressive path to liberation, śrāmaṇyaphala refers to the four stages of sanctity that culminate in the realization of NIRVĀṆA: the fruits of the stream-enterer (SROTAĀPANNA), once-returner (SAKṚDĀGĀMIN), nonreturner (ANĀGĀMIN), and worthy one (ARHAT).

Sras mkhar dgu thog. (Sekar Gutok). In Tibetan, "Nine-Storied Son's Tower"; a tower purportedly constructed in the late eleventh century by the Tibetan saint MI LA RAS PA as part of his training under the master MAR PA CHOS KYI BLO GROS. Located in the LHO BRAG region of southern Tibet, on the bank of the Gsas River, the nine-storied tower was originally constructed as a memorial for Mar pa's son DAR MA MDO SDE, although because of its location it likely had strategic value as well. The building was renovated in the sixteenth century by DPA' BO GTSUG LAG PHRENG BA, who fashioned a golden roof and added a large monastic institution at the site. The tower remains an important pilgrimage site for Tibetan Buddhists.

śrāvaka. (P. sāvaka; T. nyan thos; C. shengwen; J. shōmon; K. sŏngmun 聲聞). In Sanskrit, lit. "listener"; viz., a direct "disciple" of the Buddha who "listened" to his teachings (and sometimes seen translated over-literally from the Chinese as "sound-hearer"). In the MAHĀYĀNA, the term was used to describe those who (along with PRATYEKABUDDHAS) sought their own liberation from suffering as an ARHAT by following the HĪNAYĀNA path (see ER SHENG), and was contrasted (negatively) to the BODHISATTVAS who seeks buddhahood for the sake of all beings. There is an issue in the Mahāyāna concerning whether śrāvakas will eventually enter the bodhisattva path and become buddhas, or whether arhatship is a final state where no further progress along the path (MĀRGA) will be possible (see ŚRĀVAKAGOTRA). The SADDHARMAPUṆḌARĪKASŪTRA, for example, declares that they will, and in the sūtra the Buddha makes prophecies about the future buddhahood of several famous śrāvakas. In many Mahāyāna sūtras, śrāvakas are often described as being in the audience of the Buddha's teaching, and certain śrāvakas, such as ŚĀRIPUTRA, play important roles as interlocutors. In the third chapter of the VIMALAKĪRTINIRDEŚA, a series of śrāvakas explain why they are reluctant to visit the bodhisattva VIMALAKĪRTI, because of the insurmountable challenge his profound understanding of the dharma will present to them.

Śrāvakabhūmi. (T. Nyan thos kyi sa; C. Shengwen di; J. Shōmonji; K. Sŏngmun chi 聲聞地). In Sanskrit, the "Stage

of the Listener" or "Stage of the Disciple," a work by ASAṄGA included in the first and main section (Bahubhūmika/Bhūmivastu, "Multiple Stages") of his massive compendium, the YOGĀCĀRABHŪMI. The work, which also circulated as an independent text, deals with practices associated with the ŚRĀVAKA (disciples) and consists of four major sections (yogasthāna), which treat spiritual lineage (GOTRA), different types of persons (PUDGALA), preparation for practice (PRAYOGA), and the mundane path (LAUKIKAMĀRGA) and supramundane path (LOKATTARAMĀRGA). The first yogasthāna on spiritual lineage is divided into three parts. First, the stage of lineage (gotrabhūmi) discusses the spiritual potentiality or lineage (gotra) of the śrāvaka from four standpoints: its intrinsic nature, its establishment or definition (vyavasthāna), the marks (LIṄGA) characterizing the persons belonging to that lineage, and the classes of people in that lineage. Second, the stage of entrance (avatārabhūmi) discusses the stage where the disciple enters upon the practice; like the previous part, this section treats this issue from these same four standpoints. Third, the stage of deliverance (naiṣkramyabhūmi) explains the stage where the disciple, after severing the bonds of the sensual realm (KĀMADHĀTU), practices to obtain freedom from passion (VAIRĀGYA) by following either the mundane or supramundane path; this section subsequently discusses thirteen collections or equipment (saṃbhāra) necessary to complete both paths, such as sensory restraint, controlling food intake, etc. This stage of deliverance (naiṣkramyabhūmi) continues over the second through fourth yogasthānas to provide an extended treatment of śravāka practice. The second yogasthāna discusses the theoretical basis of śravāka practice in terms of persons (pudgala), divided into nineteen subsections on such subjects as the classes of persons who cultivate the śravāka path, meditative objects, descriptions of various states of concentration (SAMĀDHI), hindrances to meditation, etc. The third yogasthāna concerns the preliminary practices (prayoga) performed by these persons, describing in detail the process of training. This process begins by first visiting a teacher. If that teacher identifies him as belonging to the śrāvaka lineage, the practitioner should then cultivate in five ways: (1) guarding and accumulating the requisites of samādhi (samādhisaṃbhāra-rakṣopacaya), (2) selection (prāvivekya), (3) one-pointedness of mind (CITTAIKĀGRATĀ), (4) elimination of hindrances (ĀVARAṆA-viśuddhi), and (5) cultivation of correct mental orientation (MANASKĀRA-bhāvanā). Among these five, the section on cittaikāgratā contains one of the most detailed discussions in Sanskrit sources of the meditative procedures for the cultivation of ŚAMATHA and VIPAŚYANĀ. In the fourth yogasthāna, the practitioner, who has accomplished the five stages of application (prayoga), proceeds to either the mundane (laukika) or supramundane (lokottara) path. On the mundane path, the practitioner is said to be reborn into the various heavens of the subtle-materiality realm (RŪPADHĀTU) or the immaterial realm (ĀRŪPYADHĀTU) by cultivating the four subtle-materiality meditative absorptions (RŪPĀVACARADHYĀNA) or the four immaterial meditative absorptions (ĀRŪPYĀVACARADHYĀNA). On the supramundane path, the śravāka practices to attain the stage of worthy one (ARHAT) by relying on the insight of the FOUR NOBLE TRUTHS (catvāry āryasatyāni). See also BODHISATTVABHŪMI.

śrāvakagotra. (T. nyan thos kyi rigs; C. shengwen zhongxing; J. shōmon shushō; K. sŏngmun chongsŏng 聲聞種姓). In Sanskrit, "lineage of the disciples," a term that is used in the MAHĀYĀNA to describe a person who is predisposed toward the practice of the HĪNAYĀNA. Certain strands of the YOGĀCĀRA school advocated that there were five distinct spiritual lineages or destinies (PAṄCAGOTRA): (1) the TATHĀGATA lineage (GOTRA), for those destined to become buddhas; (2) the PRATYEKABUDDHA lineage, for those destined to become ARHATs via the pratyekabuddha path; (3) the ŚRĀVAKAYĀNA lineage, for those who will become arhats via the ŚRĀVAKA vehicle; (4) those of indefinite (ANIYATA) lineage, who may follow any of three vehicles; and (5) those without lineage (agotra), who are incapable of liberation, or who have lost the potential to achieve enlightenment by becoming incorrigibles (ICCHANTIKA). Persons are predisposed to follow the path of their lineage, with śrāvakas and pratyekabuddhas eventually achieving the enlightenment of the arhat and bodhisattvas achieving the enlightenment of a buddha, or tathāgata. A person of indeterminate lineage may become either an arhat or a buddha, and the icchantikas neither of the two.

śrāvakayāna. (T. nyan thos kyi theg pa; C. shengwen sheng; J. shōmonjō; K. sŏngmun sŭng 聲聞乘). In Sanskrit, "vehicle of the disciples," in MAHĀYĀNA treatments of the path, one of the two constituents (along with PRATYEKABUDDHAYĀNA) of the so-called "lesser vehicle" (HĪNAYĀNA). These two vehicles (C. ER SHENG), together with the third vehicle of the BODHISATTVA, are the "three vehicles" (TRIYĀNA) often mentioned in Mahāyāna sūtras. The proponents of the various Mahāyāna philosophical schools disagree as to whether or not the śrāvakayāna is an expedient stratagem (UPĀYA), with the MADHYAMAKA arguing that it is and that all beings, including ŚRĀVAKAs, will eventually enter the Mahāyāna and achieve buddhahood, and the some YOGĀCĀRA thinkers holding that śrāvakas will only become arhats and cannot go on to become buddhas.

Śrāvastī. (P. Sāvatthi; T. Mnyan yod; C. Shewei guo; J. Shae koku; K. Sawi kuk 舍衛國). Capital city of KOŚALA and one of the major cities of India at the time of the Buddha. The Pāli commentator BUDDHAGHOSA states implausibly that there were 5.7 million families living in Śrāvastī during the Buddha's lifetime. The Buddha spent many years there after he attained enlightenment, and he is reported to have passed twenty-five rains retreats (VARṢĀ) in the city. Śrāvastī was ruled by the Buddha's royal patron, King PRASENAJIT, and was home to his wealthiest patron, ANĀTHAPIṆḌADA, who offered to the Buddha the famous JETAVANA grove and its residences. Hundreds of sūtras are set in Śrāvastī. The city is also the site where the

Buddha (and, according to some accounts, all previous buddhas) performed two miracles: the "great miracle" (MAHĀPRĀTIHĀRYA), in which the Buddha creates various replicas of himself and appears simultaneously in various terrestrial and celestial abodes; and the "twin miracle" (YAMAKAPRĀTIHĀRYA) in which the Buddha, in response to a challenge from non-Buddhist YOGINS, rose into the air and simultaneously emitted fire and water from his body.

Śrāvastī miracles. See MAHĀPRĀTIHĀRYA; YAMAKAPRĀTIHĀRYA.

Śreṇika heresy. (C. Xianni waidao, J. Senni gedō, K. Sŏnni oedo 先尼外道). A heresy that originated with Śreṇika VATSAGOTRA, an ascetic wanderer (PARIVRĀJAKA) and contemporary of GAUTAMA Buddha, who claimed that the impermanent physical body was simply a temporary vessel for a permanent self (ĀTMAN); also known as the Senika heresy. In the *Aggi-Vacchagottasutta* ("Discourse to Vatsagotra on the [Simile of] Fire"), the seventy-second sutta in the Pāli MAJJHIMANIKĀYA, Vacchagotta (the Pāli equivalent of Vatsagotra) has a celebrated exchange with the Buddha concerning ten "indeterminate questions" (AVYĀKṚTA)—i.e., whether the world is eternal or not eternal, infinite or finite, what is the state of the TATHĀGATA after death, etc. The Buddha refuses to respond to any of the questions, since an answer would entangle him in an indefensible philosophical position. Instead, to convey some semblance of the state of the tathāgata after death, the Buddha uses the simile of extinguishing of fire: just as, after a fire has been extinguished, it would be inappropriate to say that it has gone anywhere, so after the tathāgata has extinguished each of the five aggregates (SKANDHA), they cannot be said to have gone anywhere. At the conclusion of the discourse, Vatsagotra accepts the Buddha as his teacher. (The *Ānandasutta* of the SAṂYUTTANIKĀYA explains that the Buddha kept silent in response to Vatsagotra's questions about the nature of the self in order to prevent him from falling into the extremes of either ŚĀŚVATAVĀDA, "eternalism," or UCCHEDAVĀDA, "annihilationism.") The DAZHIDU LUN (**Mahāprajñāpāramitāśāstra*) identifies the Vacchagotta of the Pāli suttas with Śreṇika Vatsagotra, the namesake of what in MAHĀYĀNA sources is termed the Śreṇika heresy. The locus classicus for this heresy appears in the MAHĀPARINIRVĀṆASŪTRA. There, when Śreṇika raises the question about whether there is a self or not, the Buddha keeps silent, so Śreṇika himself offers a fire simile, but with a radically different interpretation from what is found in the *Aggi-Vacchagottasutta.* He instead compares the physical body and the self to a house and its owner: even though the house may burn down in a fire, the owner is safe outside the house; thus, the body and its constituents (skandha) may be impermanent and subject to dissolution, but not the eternal self. The Śreṇika heresy is a frequent topic in the CHAN literature of East Asia. NANYANG HUIZHONG (675?–775), a successor of the sixth patriarch (LIUZU) HUINENG (638–713), is said to have criticized the "mind itself is buddha" (zixin shi fo) teaching of MAZU DAOYI (709–788) and other HONGZHOU ZONG teachers as being akin to the Śrenika heresy. The Japanese SŌTŌSHŪ ZEN master DŌGEN KIGEN (1200–1253), in his BENDŌWA and SHŌBŌGENZŌ, criticizes as equivalent to the Śreṇika heresy the view that the mind-nature is eternal (shinshō jōjū) even though the body perishes. There is much scholarly debate about whether Dōgen's criticism was directed at the "original enlightenment" (HONGAKU; cf. BENJUE) thought of the medieval TENDAISHŪ, or against the teachings of his rival Zen school, the DARUMASHŪ, whose similar declarations that the mind is already enlightened and that practice was not necessary opened it to charges of antinomianism.

Śṛgālakamātṛ. (P. Sigālakamātā; C. Shikeluoge zhangzhe mu; J. Shikaraka chōjamo; K. Silgaraga changja mo 室珂羅哥長者母). In Sanskrit, "Śṛgālaka's ("Jackal") Mother"; an eminent ARHAT declared by the buddha to be foremost among his nun disciples who aspire through faith (ŚRADDHĀDHIMUKTA, P. saddhādhimutta). According to the Pāli account, she was born into a wealthy merchant's family in Rājagaha (S. RĀJAGṚHA) and after marriage gave birth to a son named Sigālaka (S. Śṛgālaka), hence her epithet. Once she overheard the Buddha preach to her son concerning the brahmanical practice of worshipping the four directions and, immediately comprehending his words, she instantly became a stream-enterer (SROTAĀPANNA, P. sotāpanna). When later she renounced the world and entered the order (P. saṅgha; S. SAṂGHA), she was filled with faith and would gaze at the Buddha during his sermons, infatuated with his beauty. Knowing her nature, the Buddha preached to her in such a way that her infatuation would lead her to enlightenment. Many lifetimes before, during the time of Padmottara Buddha, she is said to have resolved to be foremost among those who aspire through faith. She was at that time the daughter of a minister and once accompanied him to hear the Buddha preach. Inspired by faith, she entered the order and, hearing the Buddha praise someone as foremost in faith, vowed to attain the same distinction in a future life.

Śrīmālādevīsiṃhanādasūtra. (T. Lha mo dpal phreng gi seng ge'i sgra'i mdo; C. Shengman shizihou yisheng da fangbian fangguang jing; J. Shōman shishiku ichijōdaihōben hōkōgyō; K. Sŭngman sajahu ilsŭng tae pangp'yŏn panggwang kyŏng 勝鬘師子吼一乘大方便方廣經). In Sanskrit, "Sūtra on the Lion's Roar of Queen Śrīmālā," one of the earliest TATHĀGATAGARBHA texts, composed about the third century CE, probably by MAHĀSĀṂGHIKA adherents in the ĀNDHRA region of southern India. The original Sanskrit has not survived, except in quotations in such texts as the RATNAGOTRAVIBHĀGA. The first translation of this sūtra into Chinese was made by the central Indian missionary DHARMAKṢEMA (d. 433) in the 420s, which was no longer extant by the Yuan dynasty. The second and most popular Chinese translation was made in 436 by GUṆABHADRA (394–468), also a native of central India. Although its full title is *Shengman shizihu yisheng da fangbian fangguang jing*, Guṇabhadra's title is abbreviated in six different ways in the

Chinese commentarial literature, the shortest and the best-known of which is simply as the *Shengman jing* (*Śrīmālā Sūtra*). A third translation was made in the early eighth century by BODHIRUCI (672–727), a native of southern India. The sūtra is exceptional in its distinctive stance on laypeople and laywomen. The chief character of the sūtra is Queen Śrīmālā, the daughter of King PRASENAJIT. The sūtra is considered one of the authoritative texts for the doctrine of tathāgatagarbha and buddha-nature (S. BUDDHADHĀTU; C. FOXING), even though the concept of tathāgatagarbha does not receive extensive treatment in the text. In the sūtra, the tathāgatagarbha is the basis of the one vehicle (EKAYĀNA); since all sentient beings share in the same tathāgatagarbha, they will all equally reach NIRVĀṆA. The *Śrīmālā Sūtra* criticizes rigidly apophatic interpretations of the doctrine of emptiness (ŚŪNYATĀ), maintaining that tathāgatagarbha is both empty (śūnya) and nonempty (aśūnya), because it simultaneously is empty of all afflictions (KLEŚA) but "nonempty" (viz., full) of all the Buddha's virtues. The sūtra explains the Buddha's virtues using kataphatic language, such as permanence (nitya) and selfhood (ĀTMAN). The *Śrīmālā Sūtra* was especially influential in East Asian Buddhism. Over twenty Chinese commentaries were composed, the most influential being those by JINGYING HUIYUAN (523–592), JIZANG (549–623), and KUIJI (632–682).

Śrīmālā Sūtra. (S). See ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA.

Śrīsiṃha. (T. Shrī sing ha) (fl. eighth century). Sanskrit proper name of an important figure in the early dissemination (SNGA DAR) of Buddhism to Tibet, especially in the propagation of the RDZOGS CHEN teachings. According to some Tibetan accounts, he was born in China, although other sources identify his birthplace as Khotan or Kinnaur. At the age of eighteen, he is said to have traveled to Suvarṇadvīpa, often identified as the island of Sumatra. There he has a vision of AVALOKITEŚVARA, who advised him to go to India. Before doing so, he studied at "five-peak mountain," which some sources assume is WUTAISHAN in China. He next went to the Sosadvīpa charnel ground (ŚMAŚĀNA), where he studied with MAÑJUŚRĪMITRA for twenty-five years. After his teacher's death, he traveled to BODHGAYĀ, where he unearthed tantric texts hidden there by Mañjuśrīmitra. Śrīsiṃha is especially remembered in Tibet as the teacher of VAIROCANA, one of the most important figures in the earlier dissemination of Buddhism to Tibet. Vairocana was one of the first seven Tibetans (SAD MI BDUN) ordained as Buddhist monks by ŚĀNTARAKṢITA at the monastery of BSAM YAS, and he soon became an illustrious translator. He is said to have been a disciple of PADMASAMBHAVA and a participant on the Indian side in the BSAM YAS DEBATE. After Padmasambhava's departure from Tibet, the king required a fuller exposition of TANTRA and sent Vairocana to India to obtain further tantric instructions. After many trials, he arrived in India, where he was instructed by Śrīsiṃha. Fearing that other Indian masters would object to his imparting the precious esoteric teachings to a foreigner, Śrīsiṃha insisted that he study sūtras and less esoteric tantric texts with other teachers during the day, conveying the most secret teachings to him under the cover of darkness; these were the rdzogs chen teachings that Vairocana took back to Tibet and taught to king KHRI SRONG LDE BTSAN. Among other esoteric teachings that Vairocana gave to Śrīsiṃha is Śrīsiṃha's tantric commentary on the PRAJÑĀPĀRAMITĀHṚDAYASŪTRA.

śrīvatsa. (T. dpal be'u; C. jixiang haiyun; J. kichijōkaiun; K. kilsang haeun 吉祥海雲). In Sanskrit, literally, "beloved of Śrī," an epithet of Viṣṇu but used to describe a triangular pattern on the chest of Viṣṇu. The term is generally translated as "endless knot," and is considered to be one of the eight auspicious symbols (AṢṬAMAṄGALA) of Buddhism. Usually depicted as a closed design of intertwined lines at right angles, it is said to symbolize the endless wisdom and compassion of the Buddha. It is often listed as the last of the eighty secondary marks (ANUVYAÑJANA) of a superman (MAHĀPURUṢA), and is said to adorn the soles of a buddha's feet.

Śrīvijaya. (T. Dpal rnam par rgyal ba; C. Shilifoshi; J. Shitsuribussei; K. Sillibulsŏ 室利佛逝). A kingdom located on the island of Sumatra (in modern Indonesia) which was an important center of Buddhism from the seventh through the eleventh centuries. Located along the key maritime routes of Southeast Asia, it was a major political power in the region. The Chinese pilgrim YIJING (635–713 CE) made extended stays in the kingdom on both his trip to India and his return to China, stopping there first for six months to study Sanskrit, and then making a more lengthy stay beginning in 687, where he translated a number of texts, including much of the massive MŪLASARVĀSTIVĀDA VINAYA, and wrote an account of his journey, the NANHAI JIGUI NEIFA ZHUAN; because there was no paper and ink in Sumatra, Yijing made a short trip to China to retrieve these items before returning to Śrīvijaya to continue his work. He reported that in the city of Bhoga there were more than a thousand monks, whom he praised for their learning and their adherence to the vinaya, which he said was the same as that practiced in India. He advised Chinese monks to stop in Śrīvijaya for preparatory studies before proceeding to India. In the eleventh century, the Bengali monk ATIŚA DĪPAṂKARAŚRĪJÑĀNA may have visited Śrīvijaya to study with DHARMAKĪRTIŚRĪ; the sources say that he visited Suvarṇadvīpa, a term that seemed to encompass a larger region, which included Sumatra.

Śroṇāparānta. (P. Sunāparanta; C. Shuluna; J. Shurona; K. Surona 輸盧那). The region lying along the Narmadā River and traversing the present western Indian states of Rajasthan and Gujarat, most likely identical to Aparanta. The elder PŪRṆA (P. Puṇṇa) hailed from Śroṇāparānta. According to the Pāli legend, the elder Puṇṇa once invited the Buddha to accept the donation of a sandalwood monastery constructed by the inhabitants of Sunāparanta. The Buddha accepted this offer and traveled there by flying, accompanied by a host of 499 arhats. Along the way he descended to Saccabaddha (S. Satyabaddha)

mountain and converted the sage dwelling there. The Burmese (Myanmar) identify Sunāparanta as a portion of their homeland named Sunāparanta-Tambdīpa along the northern reaches of the Irrawaddy (Ayeyarwady) river basin in Upper Burma. On the basis of the Puṇṇa legend, Burmese chroniclers also claim that Buddhism was established among the Burmese during the lifetime of the Buddha and therefore is older than the Buddhism of Sri Lanka. Later Burmese chroniclers also identify Sunāparanta with Aparanta, thus allowing them to claim that their homeland received the AŚOKA-era Buddhist mission of the Yavana (Greek) Dharmarakṣita (P. Yonaka Dhammarakkhita).

Srong btsan sgam po. (Songtsen Gampo) (r. c. 605–650). The thirty-third Tibetan religious king (chos kyi rgyal po) who reigned during the period of the Yar klungs dynasty; credited with establishing Buddhism as the predominant religion in Tibet. He is considered the first of three great religious kings, along with KHRI SRONG LDE BTSAN and RAL PA CAN. Although the historical facts of his life are somewhat murky, stories of Srong btsan sgam po's activities pervade Tibetan culture. His rule forged a cohesive national center and brought Tibet to the zenith of it military expansion, shaping an empire that rivaled any in Asia. During Srong btsan sgam po's reign, Tibet was surrounded by Buddhist currents to the south and west, which appear to have had a particularly profound effect on Tibetan civilization. According to traditional sources, the king and his two wives, the Nepalese BHṚKUTI and the Chinese WENCHENG, were instrumental in the early promulgation of Buddhist practice in his kingdom. An important Tibetan text, the MAṆI BKA' 'BUM ("One Hundred Thousand Instructions on the Maṇi"), describes the monarch as an earthly manifestation of AVALOKITEŚVARA, the BODHISATTVA of compassion, and his wives as forms of the female bodhisattva TĀRĀ. These accounts are at the heart of Tibet's Buddhist myth of origin and play a central role in how most Tibetans understand the history of their country and religion. After ascending the throne, Srong btsan sgam po moved his capital from the heartland of the Yar klungs Valley in the south to its modern location in LHA SA. With the support of their monarch, each queen established an important Buddhist temple to house a statue she had carried to Tibet: Bhṛkuti founding the JO KHANG temple for an image of ŚĀKYAMUNI called JO BO MI BSKYOD RDO RJE, Wencheng founding what is now the RA MO CHE temple for her statue of Śākyamuni called JO BO SHĀKYAMUNI or Jo bo rin po che. These images were later switched, and today the Jo bo Śākyamuni statue sits in the Jo khang, where it is venerated as Tibet's holiest Buddhist relic. According to legend, the Tang princess Wencheng also imported Chinese systems of geomancy and divination through which the Tibetan landscape was viewed as a supine demoness requiring subjugation in order for Buddhism to take root and flourish. Srong btsan sgam po purportedly constructed a series of "taming temples" that acted as nails pinning down the limbs of the demoness (T. srin mo), rendering her powerless. The Jo khang was constructed over the position of the demoness' heart. In addition to the Jo khang, traditional sources count twelve main taming (T. 'dul) temples spread across the Himalayan landscape, each pinning down a point on the demoness's body. These structures appear to be in concentric circles radiating out from her heart at Lha sa. Out from the heart are the "edge-pinning temples" (MTHA' 'DUL GTSUG LAG KHANG) of KHRA 'BRUG, 'GRUM, BKA' TSHAL, and GRUM PA RGYANG, said to pin down her right and left shoulders and right and left hips, respectively; and beyond that four "extra-pinning temples" (YANG 'DUL GTSUG LAG KHANG) BU CHU, MKHO MTHING, DGE GYES, and PRA DUM RTSE that pin down her right and left elbows and right and left knees, respectively. In 637, Srong btsan sgam po established an eleven-storied palace on the hill of northeast Lha sa called Mar po ri. While this structure was later destroyed by fire, it served as the foundation for the PO TA LA palace constructed in the seventeenth century under the direction of the fifth DALAI LAMA NGAG DBANG BLO BZANG RGYA MTSHO. The king is also said to have commissioned his minister Thon mi Saṃbhota to create a new script (what is now known as Tibetan) in order to translate Buddhist texts from Sanskrit. He also established what is known as the "great legal code" (gtsug lag bka' khrims chen po). While contemporary scholars now question the portrait of Srong btsan sgam po as a pious convert to Buddhism (it is known, for example, that he maintained close ties to the early BON religion), many of Tibet's most important Buddhist institutions were established during his time.

srotaāpanna. [alt. srotāpanna; śrotāpanna] (P. sotāpanna; T. rgyun du zhugs pa; C. yuliu [guo]/xutuohuan; J. yoru[ka]/shudaon; K. yeryu [kwa]/sudawŏn 預流[果]/須陀洹). In Sanskrit, "stream-enterer" or "stream-winner"; the first of four stages of sanctity (see ĀRYAPUDGALA) in mainstream Buddhism, followed by the once-returner (SAKṚDĀGĀMIN), non-returner (ANĀGĀMIN) and worthy one (ARHAT). These four stages are together referred to as "the fruits of recluseship" (ŚRĀMAṆYAPHALA), viz., "the effects of religious practice." The term srotaāpanna appears very often in the Buddhist sūtras, with members of the Buddha's audience said to have attained this stage immediately upon hearing him preach the dharma. The stage of stream-enterer begins with the initial vision of the reality of NIRVĀṆA, at which point one "enters the stream" leading to liberation. Because of this achievement, the srotaāpanna has abandoned completely the first three of ten fetters (SAṂYOJANA) that bind one to the cycle of rebirth (SAṂSĀRA): (1) belief in the existence of a self in relation to the body (SATKĀYADṚṢṬI), (2) doubt about the efficacy of the path (VICIKITSĀ), (3) belief in the efficacy of rites and rituals (ŚĪLAVRATAPARĀMARŚA). For this reason, after becoming a stream-enterer, the adept will never again be reborn into the unfortunate rebirth destinies (APĀYA, DURGATI) as a demigod, animal, ghost, or hell denizen and is destined to become an arhat in a maximum of seven more lifetimes (see SAPTAKṚDBHAVAPARAMA). There are two stages to stream-entry: SROTAĀPANNAPHALAPRATIPANNAKA, or one who is practicing, or is a

candidate for, the fruition of stream-entry; and SROTAĀPANNAPHALASTHA, or one who has reached, or is the recipient of, the fruition of stream-entry. The srotaāpannaphalapratipannaka has only reached the ĀNANTARYAMĀRGA (unimpeded path), whereas the srotaāpannaphalastha has reached the VIMUKTIMĀRGA (path of freedom). In the five-path system (PAÑCAMĀRGA), stream-entry is equivalent to the path of vision (DARŚANAMĀRGA) on the ŚRĀVAKA and PRATYEKABUDDHA paths. The srotaāpanna is also one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). In this context srotaāpanna is the name for candidates (pratipannaka) for srotaāpanna (the first fruit of the noble path). They may be either a follower through faith (ŚRADDHĀNUSĀRIN) or a follower through doctrine (DHARMĀNUSĀRIN) with either dull (MṚDVINDRIYA) or keen faculties (TĪKṢṆENDRIYA). In all cases, they may have destroyed from none up to as many as five of the sets of afflictions (KLEŚA) that cause rebirth in the sensuous realm (KĀMADHĀTU) that the ordinary (LAUKIKA) path of meditation (BHĀVANĀMĀRGA) removes, but they will not have eliminated the sixth to the ninth sets. Were they to have removed the sixth set they would be called candidates for the second fruit of once-returner (sakṛdāgāmin), and were they to have removed the ninth set they would be called candidates for the third fruit of nonreturner (anāgāmin).

srotaāpannaphalapratipannaka. (P. sotāpattimagga; T. rgyun du zhugs pa'i 'bras bu la zhugs pa; C. yuliu xiang; J. yorukō; K. yeryu hyang 預流向). In Sanskrit, one who is practicing, or is candidate for the fruit of stream-enterer. Both the srotaāpannaphalapratipannaka and SROTAĀPANNAPHALASTHA (one who has reached, or is the recipient of the fruit of stream-enterer) are called "stream-enterer" (SROTAĀPANNA) and are noble persons (ĀRYA); the srotaāpannaphalapratipannaka has only reached the ĀNANTARYAMĀRGA (unimpeded path), the srotaāpannaphalastha has reached the VIMUKTIMĀRGA (path of freedom) of the path of vision (DARŚANAMĀRGA). The level of ordinary humans is the sensuous realm (KĀMADHĀTU), viz., the level where beings are dominated by sense pleasure (KĀMA). Those whose prior store of actions is such that, prior to reaching the path of vision, they have eliminated as many as five of the nine sets of afflictions (KLEŚA) that cause rebirth in the sensuous realm, are candidates for the fruit stream-enterer when they reach the path of vision's unimpeded path; and they are recipients of the fruit of stream-enterer when they reach the path of freedom. This is one of the VIṂŚATIPRABHEDASAṂGHA ("twenty varieties of the ārya saṃgha") based on the list given in the ABHISAMAYĀLAṂKĀRA; srotaāpannaphalapratipannaka is also included in the category of follower of faith (ŚRADDHĀNUSĀRIN).

srotaāpannaphalastha. (P. sotāpattiphala; T. rgyun du zhugs pa'i 'bras bu la gnas pa; C. zheng yuliu guo; J. shōyoruka; K. chŭng yeryu kwa 證預流果). In Sanskrit, one who has reached, or is the recipient of the fruit of stream-enterer, one of the eight ĀRYAPUDGALA ("noble persons") and one of the VIṂŚATIPRABHEDASAṂGHA ("twenty varieties of the āryasaṃgha") based on the list given in the ABHISAMAYĀLAṂKĀRA. The srotaāpannaphalastha is also included in the category of those who have aspired through faith (ŚRADDHĀDHIMUKTA). See SAKṚDĀGĀMIPHALASTHA.

sroto'nugato nāma samādhiḥ. (T. rgyun gyi rje su song ba zhes bya ba'i ting nge 'dzin/chos rgyun gyi ting nge 'dzin; C. suiliuxiang chanding; J. zuirukō zenjō; K. suryuhyang sŏnjŏng 隨流向禪定). In Sanskrit, "continuous instruction concentration"; a SAMĀDHI achieved on the path of accumulation (SAṂBHĀRAMĀRGA), in which a BODHISATTVA is able to magically receive continuous instruction (AVAVĀDA) in the dharma. The path of accumulation is subdivided into three sections, lesser, intermediate, and greater; when one reaches the intermediate stage, a bodhisattva is no longer capable of retrogressing from the MAHĀYĀNA and gains an initial capacity to hear the voice of an actual buddha. The bodhisattva hears instructions systematized in ten topics: practice (S. pratipatti, see PAṬIPATTI), FOUR NOBLE TRUTHS, three refuges (TRIŚARAṆA), nonattachment (asakti), indefatigability (apariśrānti), full acceptance (saṃparigraha) of infinite instructions from infinite buddhas, the five types of eyes (PAÑCACAKṢUS), the six supranormal powers (ABHIJÑĀ), the path of vision (DARŚANAMĀRGA), and the path of cultivation (BHĀVANĀMĀRGA).

śrotravijñāna. (P. sotaviññāṇa; T. rna ba'i rnam par shes pa; C. ershi; J. nishiki; K. isik 耳識). In Sanskrit, "auditory consciousness," or "ear consciousness," one of the five sensory consciousnesses (along with those of the eye, nose, tongue, and body) and one of the six sensory consciousnesses (adding the mental consciousness, or MANOVIJÑĀNA). The auditory consciousness perceives sounds (ŚABDA). Like the other sensory consciousnesses, auditory consciousness is produced through the contact (SPARŚA) between an auditory sensory object (śabda) and the auditory sense base (ŚROTRENDRIYA) and in dependence on three conditions (pratyaya): the object condition (ĀLAMBANAPRATYAYA), in this case, a sound; a dominant condition (ADHIPATIPRATYAYA), here, the ear sense organ (śrotrendriya); and the immediately preceding condition (SAMANANTARAPRATYAYA), a prior moment of consciousness. The auditory consciousness is counted as one of the six consciousnesses (VIJÑĀNA) and eighteen elements (DHĀTU).

śrotrāyatana. (P. sotāyatana; T. rna ba'i skye mched; C. erchu; J. nisho; K. ich'ŏ 耳處). In Sanskrit, "auditory sense-base," or "base of cognition"; the auditory sense base or ear sense organ (ŚROTRENDRIYA) as it occurs in the list of the twelve sense fields (ĀYATANA), which are called "bases of cognition" because each pair of sense-base and sense-object produces its respective sensory consciousness. In this case, the contact (SPARŚA) between an auditory sensory object (ŚABDA) and the auditory sense base (śrotrendriya) produces an auditory consciousness (ŚROTRAVIJÑĀNA).

śrotrendriya. (P. sotindriya; T. rna ba'i dbang po; C. ergen; J. nikon; K. igŭn 耳根). In Sanskrit, "auditory sense base," the physical organ located in the ear that makes it possible to hear auditory objects or "sounds" (ŚABDA). This sense base is not the ear itself, but a form of subtle materiality (RŪPA) located within the ear and invisible to the naked eye. It is said to be round in shape with many hollow openings, like a sheaf of hay that has been cut. If this sense organ is absent or damaged, hearing is not possible. The auditory sense organ serves as the dominant condition (ADHIPATIPRATYAYA) for the production of auditory consciousness (ŚROTRAVIJÑĀNA).

śrutamayīprajñā. (P. sutamayāpaññā; T. thos pa las byung ba'i shes rab; C. wenhui; J. mon'e; K. munhye 聞慧). In Sanskrit, "wisdom derived from hearing [viz., learning]," the first of the three types of wisdoms, which refers to understanding derived from listening to (and, by extension, reading and studying about) the dharma. This type of wisdom provides a grounding for the development of mental attention and concentration, which is crucial for meditative calmness (ŚAMATHA). It is not as profound as the second type of wisdom, which arises as a result of thinking about or reflecting on what one has learned (CINTĀMAYĪPRAJÑĀ); or the third type of wisdom, which is generated through meditation (BHĀVANĀMAYĪPRAJÑĀ) at the level of VIPAŚYANĀ.

Ssanggyesa. (雙溪[磎]寺). In Korean, "Twin Brooks Monastery"; the thirteenth district monastery (PONSA) in the contemporary CHOGYE CHONG of Korean Buddhism. Ssanggyesa was founded in 722 during the Silla dynasty by two monks, Taebi (d.u.) and Sampŏp (d.u.). The pair returned to Korea from Tang-dynasty China after having a dream that instructed them to enshrine the head of the sixth patriarch (LIUZU) HUINENG (638–713) of the Chinese CHAN school at a place where arrowroot flowers were blooming in the snow. Guided by a tiger (symbolizing the mountain spirit), they found the intended location on the mountain of CHIRISAN and constructed a monastery at the spot. The SŎN monk CHIN'GAM HYESO (774–850) rebuilt the monastery with the new name of Okch'ŏnsa (Jade Fount Monastery) after returning to Korea in 840 from studying Chan on the Chinese mainland. The name Ssanggyesa was eventually given to the monastery in 887 by the Silla king Chŏnggang (r. 886–887). Ssanggyesa is said to have been the site where Hyeso first introduced tea and tea culture to the Korean peninsula and the green tea grown in the mountains surrounding the monastery is still renowned in Korea for its quality. Ssanggyesa was burned to the ground during the Japanese Hideyoshi invasions (1592–1598) and the present monastery dates from the reconstruction spearheaded by PYŎGAM KAKSŎNG (1575–1660) in 1632.

stage of completion. See NIṢPANNAKRAMA.

stage of generation. See UTPATTIKRAMA.

Stag lung. (Taklung). The central Tibetan monastic seat of the STAG LUNG subsect of the BKA' BRGYUD sect of Tibetan Buddhism. Originally founded north of LHA SA in 1180 by STAG LUNG THANG PA BKRA SHIS DPAL, the monastery flourished under the guidance of his successors Sku yal ba Rin chen mgon po (Kuyalwa Rinchen Gönpo, 1191–1236) and Sangs rgyas yar byon (Sangye Yarjön, 1203–1272; also known as Prajñāguru). Under the latter's stewardship, Stag lung attained considerable power within the SA SKYA-Mongol political structure at the Yuan court. Together with his disciple and eventual successor Maṅgalaguru (T. Bkra shis bla ma, 1231–1297), he forged close ties with the Sa skya hierarch 'PHAGS PA BLO GROS RGYAL MTSHAN and towards the end of his life entrusted the monastery's welfare and security to the Sa skya prelate. Stag lung was renowned for its strict adherence to monastic discipline as well as for its prodigious atelier, which produced some of central Tibet's finest paintings of the period. During its peak, the monastic population grew to some seven thousand monks. At that time, the saying originated that monks of other monasteries were "unable to rival even a dog of Stag lung." After Sangs rgyas yar byon's death, the throne fell briefly to his nephew Sangs rgyas dbon (Sangye Wön, 1250/1–1296, better known as Dbon po bla ma). Sangs rgyas dbon was compelled to flee into exile after a single year, due to Maṅgalaguru's close ties with the politically powerful 'Phags pa Blo gros rgyal mtshan. In 1276, Sangs rgyas dbon established a new seat for the Stag lung bka' brgyud tradition at RI BO CHE monastery in the eastern Tibetan region of Khams. This eventually came to eclipse the original monastery in importance. From the sixteenth century onwards, Stag lung was increasingly influenced by officials from SE RA and 'BRAS SPUNGS monasteries in LHA SA. Stag lung monastery was completely destroyed during the Chinese Cultural Revolution.

Stag lung bka' brgyud. (Taklung Kagyü). One of the four major and eight minor subsects of the BKA' BRGYUD sect of Tibetan Buddhism (BKA' BRGYUD CHE BZHI CHUNG BRGYAD), founded by STAG LUNG THANG PA BKRA SHIS DPAL, a principal disciple of the Bka' brgyud hierarch PHAG MO GRU PA RDO RJE RGYAL PO. Its original seat was STAG LUNG monastery located north of LHA SA, although a branch institution was later founded in the eastern Tibetan region of Khams at RI BO CHE, which eventually eclipsed the former as a center of learning and formed a strong, nearly independent lineage.

Stag lung Thang pa bkra shis dpal. (Taklung Tangpa Tashipel) (1142–1210). Founder of the STAG LUNG BKA' BRGYUD, one of the four major and eight minor subsects of the BKA' BRGYUD. After being ordained as a novice, he studied the main texts of the BKA' GDAMS PA. In 1165, inspired by a vision, he went to meet the great Bka' brgyud hierarch PHAG MO GRU PA RDO RJE RGYAL PO, becoming his personal attendant and scribe. He received many teachings from him, including "the six yogas of Nāropa" (NĀ RO CHOS DRUG). He was ordained as a BHIKṢU in

1172. Stag lung thang pa was known for his commitment to monastic discipline; he was a vegetarian and did not enter the homes of laypeople. He would teach during the first half of the month and remain in retreat in the second half. He also maintained silence during each morning. He was also renowned for his tantric practice, especially MAHĀMUDRĀ and of the HEVAJRATANTRA. In 1180, he founded STAG LUNG monastery, which came to have more than three thousand monks in residence during his lifetime. He is also known as Stag lung thang pa chen po, "the Great Stag lung thang pa."

Stag tshang. (Taktsang). In Tibetan, "Tiger's Lair," a complex of meditation caves and temples located in Paro, Bhutan, considered one of the most important sacred Buddhist sites in the Himalayan region associated with the Indian adept PADMASAMBHAVA; also known as Spa gro Stag tshang (Paro Taktsang). Situated on a sheer cliff more than two thousand feet above the valley floor, the complex is the best known among numerous Stag tshang, or "Tiger's Lair," sites located across eastern Tibet. According to traditional accounts, Padmasambhava miraculously flew to the spot in wrathful form as RDO RJE DROD LO, seated on the back of a tigress believed to have been his consort YE SHES MTSHO RGYAL, and remained there for three months. In 853, one of Padmasambhava's twenty-five main disciples, Glang chen Dpal gyi seng ge (Langchen Palkyi Sengye), went to meditate in the main cave at Stag tshang, after which it became known as Stag tshang dpal phug, or "Pal's cave at Taktsang." Later, many great masters undertook meditation retreats there; these include PHA DAM PA SANGS RGYAS, MA GCIG LAB SGRON, THANG STONG RGYAL PO, and, according to one tradition, the great YOGIN MI LA RAS PA. The first buildings were likely erected in the fourteenth century. However, it was under the direction of the Bhutanese reformer ZHABS DRUNG NGAG DBANG RNAM RGYAL and later his regent Bstan 'dzin rab rgyas, that the modern structure was completed in 1692. In 1998, the complex was destroyed by fire.

State-Protection Buddhism. See HUGUO FOJIAO.

stavakāya. (T. bstod tshogs). In Sanskrit, "collection of hymns," or "corpus of hymns"; the devotional works attributed to NĀGĀRJUNA. There are traditionally four works in this group, known collectively as the CATUḤSTAVA. They are the LOKĀTĪTASTAVA, the NIRAUPAMYASTAVA, the ACINTYASTAVA, and the PARAMĀRTHASTAVA, although a number of other important hymns, including the DHARMADHĀTUSTAVA, are also ascribed to Nāgārjuna. This group of texts is often referred to in connection with YUKTIKĀYA, the "corpus of reasoning" or "collection of reasoning," a term used to refer collectively to six works that traditionally constitute NĀGĀRJUNA's philosophical oeuvre. Those six works are the MŪLAMADHYAMAKAKĀRIKĀ, the YUKTIṢAṢṬIKĀ, the ŚŪNYATĀSAPTATI, the VIGRAHAVYĀVARTANĪ, the VAIDALYASŪTRANĀMA, and the RATNĀVALĪ. In some versions, there are only five works in this corpus, with the *Ratnāvalī* eliminated. These two collections of Nāgārjuna's works figure prominently in the "self-emptiness, other-emptiness" (RANG STONG GZHAN STONG) debate in Tibetan Buddhism, where the parties disagree on the question of which corpus represents Nāgārjuna's definitive view. The proponents of the rang stong, or "self-empty" position, see a consistent philosophical view between the two collections, whereas the proponents of gzhan stong, or "other-emptiness," find a more substantialist position in the corpus of hymns and regard this as Nāgārjuna's true position.

Stcherbatsky, Fyodor Ippolitovich. (1866–1942). The leading Russian scholar of Buddhism of the early twentieth century; born in Kielce, Poland, to a Russian military family. Stcherbatsky was one of the first Russian Orientalists to study Buddhism; his main areas of scholarly interest were SARVĀSTIVĀDA and MAHĀYĀNA literature. He worked with EUGÈNE OBERMILLER (1901–1935), who was also his student, and knew SYLVAIN LÉVI (1863–1935) and other members of the French school of Buddhist Studies. Stcherbatsky conveyed messages between the Russian monk AGVAN DORZHIEV and the thirteenth DALAI LAMA, and traveled extensively in Mongolia and Trans-Baikalia. Stcherbatsky taught Sanskrit at St. Petersburg (Leningrad) University from 1900–1941. He was also the head of the Oriental Institute of the Imperial Russian Academy of Sciences. He often worked with Dorzhiev, and rescued him from jail on at least one occasion. He helped construct Dorzhiev's St. Petersburg Temple, which was consecrated in 1915, and was eventually entrusted with its care when the monks were forced to flee in 1918. He traveled to western Europe on a book-buying mission for the academy, and attended the First All-Russian Buddhist Congress in 1927. Because he supported the Bolshevik revolution, Stcherbatsky was not personally persecuted; his teacher, SERGE OLDENBURG, was a friend of Lenin. He remained an active scholar during the Soviet period, leading an expedition to acquire Tibetan manuscripts from Buryat monasteries in 1924. Along with other scholars, Stcherbatsky was evacuated from Leningrad to Khazakhstan in 1941, and died there the following year. Stcherbatsky's published works include *The Soul Theory of Buddhists* (1920), *The Central Conception of Buddhism and the Meaning of the Word Dharma* (1923), *The Conception of Buddhist Nirvana* (1927), and *Buddhist Logic* (1932).

Stein, Sir Marc Aurel. (1862–1943). Hungarian-born archaeologist who led four British expeditions through Central Asia to document and collect artifacts from the lost cultures of the ancient SILK ROAD. After receiving his doctorate in Sanskrit and Oriental religions under Rudolf von Roth at the University of Tübingen, Stein moved to England where he made use of the resources at the Ashmolean Museum, the Bodleian Library, the India Office Library, and the British Museum to further his study of Sanskrit. During his service in the Hungarian military, Stein learned both surveying and map-making, skills that would aid him in his career. Stein's greatest discovery was made at the

DUNHUANG caves in northwest China. There, he came across a hidden library cave (Cave 17) containing over forty thousand scrolls, many of which he sent back to England for study. The Stein collection at the British Library contains over thirty thousand manuscripts and printed documents in languages as varied as Chinese, Tibetan, Sanskrit, Mongolian, Tangut, Khotanese, Kuchean, Sogdian, and Uighur. The art objects Stein collected are now divided between the British Museum, the British Library, the Srinigar Museum, and the Indian National Museum at New Delhi. In addition, thousands of photographs taken by Stein dating from the 1890s to 1938 have been preserved, as well as several volumes published by Stein detailing his explorations. These items are critical to the study of the history of Central Asia generally and the spread of Buddhist art and literature. Stein died and was buried in Kabul, Afghanistan.

***sthāpyabhāvanā**. (T. 'jog sgom). In Sanskrit, "stabilizing meditation," the one-pointed concentration on a single object without discursive reflection. An example of such stabilizing meditation would be the concentration on the breath or the golden body of the Buddha, eventually resulting in a state of ŚAMATHA or DHYĀNA. The term is often paired with *VICĀRABHĀVANĀ, those forms of meditation that involve discursive reflection on points of Buddhist doctrine, such as the investigation of the constituents of mind and body. In instructions on meditation practice, advice is often given to alternate between these two forms of meditation, first arriving at a conclusion or conviction through analytical meditation and then focusing on that conclusion through stabilizing meditation, resulting in VIPAŚYANĀ.

Sthāvarā. (T. Sa'i lha mo; C. Anzhu dishen; J. Anjūjijin; K. Anju chisin 安住地神). In Sanskrit, "Immovable," the goddess of the earth, also known as PṚTHIVĪ. She plays an important role in the story of ŚĀKYAMUNI Buddha's enlightenment. After MĀRA and his armies were unable to unseat the BODHISATTVA, Māra challenged his right to occupy the space beneath the BODHI TREE, claiming that he, Māra, had a greater right since, as a god, he had greater merit; his army boisterously attested to Māra's claim. The bodhisattva responded that his merit was greater because he had practiced the ten perfections (PĀRAMITĀ) for many lifetimes. When Māra asked who would attest to the Bodhisattva's claim, he touched the earth with his right hand in the famous "earth-touching gesture" (BHŪMISPARŚAMUDRĀ), calling on the goddess of the earth to attest to the truth of his statement. She responded by causing a tremor; in some versions, she emerges from the earth to bear witness. In the GAṆḌAVYŪHA (the final chapter of the AVATAṂSAKASŪTRA), the bodhisattva SUDHANA sets out in search of a teacher, encountering fifty-two beings (twenty of whom are female), including the Buddha's mother MAHĀMĀYĀ, the future buddha MAITREYA, as well as AVALOKITEŚVARA and MAÑJUŚRĪ. The thirtieth being he encounters is Sthāvarā, whom he meets at BODHGAYĀ. She also bears witness to his practice of virtue and predicts that he will achieve buddhahood. See also THORANI.

sthavira. (P. thera; T. gnas brtan; C. shangzuo; J. jōza; K. sangjwa 上座). In Sanskrit, "elder," a term of respect for a senior monk, and typically one with at least a decade of seniority as a fully ordained monk or nun (BHIKṢU, BHIKṢUNĪ), with seniority measured not by age but by the length of time since the monk or nun's full ordination (UPASAṂPADĀ). One's years of ordination as a novice monk or nun (ŚRĀMAṆERA, ŚRĀMAṆERIKĀ) do not count in determining one's seniority within the order. The term also refers to sixteen (or in some lists, eighteen) ARHAT-disciples of the Buddha and were entrusted by him with preserving the teaching until the coming of the future buddha, MAITREYA. These monks became objects of devotion, especially in Tibet and East Asia; see ṢOḌAŚASTHAVIRA.

***Sthaviranikāya**. (T. Gnas brtan sde pa; C. Shangzuo bu; J. Jōzabu; K. Sangjwa pu 上座部). In Sanskrit, "School of the Elders"; one of the important "mainstream" (that is, non-MAHĀYĀNA) schools of Indian Buddhism, which later split into several other important MAINSTREAM BUDDHIST SCHOOLS. The Sthaviranikāya is thought to have come into existence in a dispute over monastic practice that occurred about a century after the Buddha's death, at the so-called second Buddhist council (SAṂGĪTI; see COUNCIL, SECOND) held at VAIŚĀLĪ. The Sthaviranikāya resolved that ten rules of the VINAYA must be observed, while another faction, which came to call itself the MAHĀSĀṂGHIKA ("Great Congregation") held that these rules could be ignored. The ten violations of monastic practice that the Sthaviranikāya sought to proscribe were: (1) carrying salt in an animal horn, (2) eating when the shadow of the sundial is two fingerbreadths past noon, (3) after eating, traveling to another village on the same day to eat another meal, (4) holding several monastic assemblies within the same boundary (SĪMĀ) during the same fortnight, (5) making an ecclesiastical decision with an incomplete assembly and subsequently receiving the approval of the absent monks, (6) citing precedent as a justification for violating monastic procedures, (7) drinking milk whey after mealtime, (8) drinking unfermented wine, (9) using mats with fringe, and (10) accepting gold and silver. A rival, and apparently larger, group of monks held that these actions did not constitute violations of the vinaya and thus called themselves the "Great Congregation." The other NIKĀYAS or schools subsequently branched off from the Sthaviranikāya and the Mahāsāṃghika strands of mainstream Buddhism. The Sthaviranikāya itself subsequently divided into three major branches. The earliest subgroup to evolve was the VĀTSĪPUTRĪYA or SAṂMITĪYA, commonly known as the PUDGALAVĀDA (Teaching of the Person), which advocated that the continuity of karmic experience and the prospect of rebirth demanded some sort of entity (the person, or PUDGALA) that was neither identical to, nor distinct from, the aggregates (SKANDHA). Despite the reproach the school received from virtually all other mainstream schools—which viewed this doctrine of the person as tantamount to a teaching about a perduring self (ĀTMAN), anathema to the quintessential Buddhist teaching of ANĀTMAN—the Pudgalavāda seems in fact to have been widespread and popular.

The second major school was the SARVĀSTIVĀDA (Teaching that All Exists), a highly influential school especially in the northwest regions of KASHMIR and GANDHĀRA, which developed one of the most elaborate ABHIDHARMA traditions in mainstream Buddhism, and which had a significant influence on the development of later MAHĀYĀNA scholasticism. The third was the VIBHAJYAVĀDA (Teaching of Differentiation), a broad designation for non-Sarvāstivāda strands of the Sthaviranikāya, which included such later mainstream schools as MAHĪŚĀSAKA, DHARMAGUPTAKA, and KĀŚYAPĪYA. The only surviving strand of the Sthaviranikāya is the THERAVĀDA. However, the Sanskrit form *Sthaviravāda, which would be the rendering for the Pāli term Theravāda, is not attested in any Indian source; attested Sanskrit forms (both very rare) include sthāvira or sthāvarīya ("followers of the elders"). In addition, the Tibetan and Sinographic renderings of the term would both be reconstructed in Sanskrit as *Sthaviranikāya, suggesting again that Sthaviravāda or Theravāda was not the traditional designation of this school. Scholars have therefore questioned the historical ties between the Sthaviranikāya and the Theravāda, especially given the rare use of the term Theravāda as a term of self-identification prior to the early twentieth century.

***Sthaviravāda**. See STHAVIRANIKĀYA; THERAVĀDA.

Sthiramati. (T. Blo gros brtan pa; C. Anhui; J. An'e/Anne; K. Anhye 安慧) (475–555). Indian Buddhist philosopher associated particularly with YOGĀCĀRA school. His dates are uncertain (leading one scholar to posit three figures with this name), but he is generally placed in the sixth century, although he is said to have been a disciple of both VASUBANDHU and Guṇamati. Sthiramati seems to have been primarily based in VALABHĪ, but may have also studied at NĀLANDĀ. He wrote a number of important commentaries on such Yogācāra works as the MAHĀYĀNASŪTRĀLAṂKĀRA and MADHYĀNTAVIBHĀGA of MAITREYANĀTHA and VASUBANDHU's TRIṂŚIKĀ.

sthiti. (P. ṭhiti; T. gnas pa; C. zhu; J. jū; K. chu 住). In Sanskrit, "continuance," "abiding," or "duration," one of the four characteristics (CATURLAKṢAṆA) governing all conditioned objects, along with origination or birth (JĀTI), "senescence" or decay (JARĀ), and "desinence" or extinction (ANITYA). Sthiti refers to the characteristic of impermanent things to remain for one moment prior to their senescence and ultimate extinction. In the SARVĀSTIVĀDA school, sthiti was treated as a "force dissociated from thought" (CITTAVIPRAYUKTASAṂSKĀRA): in this case, the force "continuance" remained in place until the object began to decay through the force of "senescence" and ultimately was extinguished through the force "desinence." This rather tortured explanation was necessary in order to explain how factors (DHARMA) that the school presumed continued to exist in all three time-periods nevertheless still appeared to undergo change. Some Sarvāstivāda ABHIDHARMA texts, however, accept only three characteristics, omitting continuance.

sthūlātyaya. (P. thullaccaya; T. nyes pa sbom po; C. toulanzhe; J. chūranja/chūransha; K. t'uranch'a 偸蘭遮). In Sanskrit, "grave offense" or "important fault"; a category of misdeed in the Buddhist VINAYA, it includes the most serious offenses that can be expiated through simple confession to another monk, rather than the more severe sanction of "defeat" (PĀRĀJIKA) or the sanction of confession at a formal meeting of the order (SAṂGHĀVAŚEṢA). The misdeeds that fall under this category generally involve a failed or lesser version of a misdeed that would otherwise entail a stronger sanction. Such transgressions would include, for example, attempting to kill someone but only inflicting injury, testing poison on a human being, killing a nonhuman being, such as a PRETA, NĀGA, or YAKṢA, stealing something of little or no value (defined in the Pāli vinaya as being worth more than one māsaka and less than five māsaka), touching the hem of a woman's garment with a lustful motivation, making lustful contact with an animal that one has mistaken for a woman, seeking to ejaculate but failing to do so, attempting to have sexual intercourse with a corpse, lustfully touching the genitals of cattle, making lascivious reference to a woman's private parts without her understanding the reference, performing two of the three deeds of a go-between (accepting the request, inquiring, reporting back), going naked, wearing a garment made of owls' wings, wearing a garment of bark, castrating oneself, eating human flesh, giving away a monastery, giving away a metal pot, causing a boat to rock in place although it does not move up or down stream, delivering the penultimate blow in chopping down a tree, causing an animal to move any of its feet, moving a boundary marker (SĪMĀ), causing an owner to give up attempts to regain possession of property, implying (although not stating explicitly) that one is endowed with supranormal powers, and unsuccessfully attempting to cause a schism in the order (SAṂGHABHEDA).

storehouse consciousness. See ĀLAYAVIJÑĀNA.

stream-enterer. See SROTAĀPANNA.

stūpa. (P. thūpa; T. mchod rten; C. ta; J. tō; K. t'ap 塔). In Sanskrit, "reliquary"; a structure, originally in the shape of a hemispherical mound, that contains the relics (ŚARĪRA) or possessions of the Buddha or a saint, often contained within a reliquary container. In the MAHĀPARINIBBĀNASUTTA, the Buddha says that after he has passed away, his relics should be enshrined in a stūpa erected at a crossroads, and that the stūpa should be honored with garlands, incense, and sandalwood paste. Because of a dispute among his lay followers after his death, his relics were said to be divided into ten portions and distributed to ten groups or individuals, each of whom constructed a stūpa to enshrine their share of the relics in their home region. Two of these sites were the Buddha's home city of KAPILAVASTU, and KUŚINAGARĪ, the place of his death, as well as RĀJAGṚHA and VAIŚĀLĪ. The original stūpas were later said to have been opened and the relics collected by the emperor AŚOKA in the third

century BCE so that he could subdivide them for a larger number of stūpas in order to accumulate merit and protect his realm. Aśoka is said to have had eighty-four thousand stūpas constructed. The stūpa form eventually spread throughout the Buddhist world (and during the twentieth century into the Western hemisphere), with significant variations in architectural form. For example, the dagoba of Sri Lanka and the so-called "PAGODA" (derived from a Portuguese transcription of the Sanskrit BHAGAVAT ["blessed," "fortunate"] or the Persian but kadah ["idol house"]), which are so ubiquitous in East Asia, are styles of stūpas. The classical architectural form of the stūpa in India consisted of a circular platform surmounted by a hemisphere made of brick within which the relics were enshrined. At the summit of the hemisphere, one or more parasols were affixed. A walking path (see CAṄKRAMA) enclosed by a railing was constructed around the stūpa, to allow for clockwise circumambulation of the reliquary. Each of these architectural elements would evolve in form and eventually become imbued with rich symbolic meaning as the stūpa evolved in India and across Asia. The relics enshrined in the stūpa are considered by Buddhists to be living remnants of the Buddha (or the relevant saint) and pilgrimage to, and worship of, stūpas has long been an important type of Buddhist practice. For all Buddhist schools, the stūpa became a reference point denoting the Buddha's presence in the landscape. Although early texts and archeological records link stūpa worship with the Buddha's life and especially the key sites in his career, stūpas are also found at places that were sacred for other reasons, often through an association with a local deity. Stūpas were constructed for past buddhas and for prominent disciples (ŚRĀVAKA) of the Buddha. Indeed, stūpas dedicated to disciples of the Buddha may have been especially popular because the monastic rules stipulate that donations to such stūpas became the property of the monastery, whereas donations to stūpas of the Buddha remained the property of the Buddha, who continued to function as a legal resident of most monasteries. By the seventh century, the practice of enshrining the physical relics of the Buddha ceases to appear in the Indian archeological record. Instead, one finds stūpas filled with small clay tablets that have been stamped or engraved with a four-line verse (often known by its first two words YE DHARMĀ) that was regarded as conveying the essence of the Buddha's teaching: "For those factors that are produced through causes, the TATHĀGATA has set forth their causes (HETU) and also their cessation (NIRODHA). Thus has spoken the great renunciant." For the MAHĀYĀNA, the stūpa conveyed a variety of meanings, such as the Buddha's immortality and buddhahood's omnipresence, and served a variety of functions, such as a site of textual revelation and a center guaranteeing rebirth in a PURE LAND. Stūpas were also pivotal in the social history of Buddhism: these monuments became magnets attracting monastery building and votive construction, as well as local ritual traditions and regional pilgrimage. The economics of Buddhist devotion at these sites generated income for local monasteries, artisans, and merchants. The great stūpa complexes (which often included monasteries with endowed lands, a pilgrimage center, a market, and support from the state) were essential sites for the Buddhist polities of Asia. See CAITYA and entries for specific stūpas, including FAMENSI, RATNAGIRI, SĀÑCĪ, SHWEDAGON, SVAYAṂBHŪ/SVAYAṂBHŪNĀTH, THIÊN MỤ TỰ, THŪPĀRĀMA.

styāna. (P. thina; T. rmug pa; C. hunchen; J. konjin; K. honch'im 惛沉). In Sanskrit, "torpor," often paired with "sloth" (MIDDHA). As a compound, styānamiddha constitute the third of the five "hindrances" (NĪVARAṆA) to the attainment of the first meditative absorption (DHYĀNA), along with sensual desire (KĀMACCHANDA), malice or ill-will (VYĀPĀDA), restlessness and worry (AUDDHATYA-KAUKṚTYA), and skeptical doubt (VICIKITSĀ). Because of the laziness generated by this mental concomitant, styānamiddha specifically hinders the meditative constituent (DHYĀNĀṄGA) of applied thought (VITARKA). This hindrance is countered by the spiritual faculty (INDRIYA) of effort (VĪRYA). Ways of countering sloth and torpor include memorizing the doctrine, developing the perception of light, or simply walking around in the open air.

Subāhuparipṛcchātantra. (T. Dpung bzangs kyis zhus pa'i rgyud; C. Supohu tongzi qingwen jing; J. Sobakodōji shōmongyō; K. Sop'aho tongja ch'ŏngmun kyŏng 蘇婆呼童子請問經). In Sanskrit, "Tantra Requested by Subāhu," an important Buddhist TANTRA, translated into Chinese by ŚUBHAKARASIṂHA in 726. In the text, the bodhisattva VAJRAPĀṆI explains a range of tantric practices at the request of the youth Subāhu. It is one of the earliest tantras to set forth elements that would come to be considered standard in tantric practice, especially of the wrathful variety, including the performance of rituals to obtain magical powers (SIDDHI), the importance of cemeteries and charnel grounds (ŚMAŚĀNA) as a site for tantric practice, the use of human corpses in the MAṆḌALA, the use of bones, and the practice of sexual rites with semi-divine women (yakṣiṇī/yakṣī).

Subhadra. (T. Rab bzang; P. Subhadda; C. Xubatuoluo; J. Shubatsudara; K. Subaltara 須跋陀羅). The last person converted by the Buddha before he passed into PARINIRVĀṆA. According to some accounts, he was a 120-year-old brāhmaṇa, according to others, a young ascetic. Hearing that the Buddha would be passing away that night at KUŚINAGARĪ, Subhadra went to see the Buddha and asked ĀNANDA for permission to speak with him. Ānanda refused the request three times, saying that the Buddha was weary. The Buddha overheard their conversation and told Subhadra to come forward, saying, "Do not keep out Subhadra. Subhadra may be allowed to see the Tathāgata. Whatever Subhadra will ask of me, he will ask from a desire for knowledge, and not to annoy me, and whatever I may say in answer to his questions, that he will quickly understand." Subhadra began to ask the Buddha about the doctrines of various other teachers, but the Buddha cut him short, explaining that only one who knows the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA) is a true ŚRAMAṆA. Subhadra then asked to be ordained. The Buddha replied that adherents of other sects

first had to undergo a probationary period of four months before ordination. When Subhadra announced his willingness to do so, the Buddha waived the requirement and instructed Ānanda to shave the hair and beard of Subhadra. He was then escorted back to the Buddha who ordained him, making him the last person that Buddha personally ordained. The Buddha then gave him a subject of meditation. Walking up and down in the grove, he quickly became an ARHAT and came and sat by the Buddha. According to some accounts, Subhadra felt that he was unworthy to witness the passage of the Buddha into parinirvāṇa and thus asked the Buddha for permission to die first. The Buddha gave his permission. ¶ Subhadra is also the name of a former barber who entered the order late in life. He always carried a certain animus against the Buddha, because, while Subhadra was still a layman, the Buddha refused to accept a meal that he had prepared for him. After the Buddha's death, Subhadra told monks who were weeping at his passing that they should instead rejoice: since the Buddha would no longer be telling them what they could and could not do, monks would now be free to do as they pleased. MAHĀKĀŚYAPA overheard this remark and was said to have been so alarmed by it that he convened what came to be known as the first Buddhist council (SAṂGĪTI; see COUNCIL, FIRST) to codify the monastic rules and the Buddha's discourses.

Śubhakarasiṃha. (C. Shanwuwei; J. Zenmui; K. Sŏnmuoe 善無畏) (637–735). Buddhist ĀCĀRYA and Chinese translator, who played a major role in the introduction into China and translation of seminal Buddhist texts belonging to what is now known as the esoteric tradition, or MIJIAO (see MIKKYŌ; TANTRA); also known as Śubhakara. Śubhakarasiṃha's place of origin is unclear. Some sources say he hailed from the Indian kingdom of Oḍra, and others say MAGADHA or the Central Asian kingdom of Udyāna. According to his biography in the SONG GAOSENG ZHUAN, Śubhakarasiṃha was born into a royal family of Oḍra. A fratricidal feud over the throne led Śubhakarasiṃha to renounce the throne and become a monk. He later visited the famed monastic university of NĀLANDĀ and became the disciple of a certain Dharmagupta. His mastery of morality (ŚĪLA), concentration (DHYĀNA), and wisdom (PRAJÑĀ) under Dharmagupta earned him the title of TREPIṬAKA, and he later also gained fame as a thaumaturge. With Dharmagupta's permission, Śubhakarasiṃha left for China. Traveling north on the Central Asian trade routes, in 716, Śubhakarasiṃha arrived in the western capital of the Tang dynasty, Chang'an. The emperor invited him to stay at the monastery of Xingfusi. In 717, Śubhakarasiṃha began translating some of the Sanskrit texts that he had brought with him to China. In 724, he accompanied the emperor to the eastern capital of Luoyang, where he continued his translation work. During his stay in Luoyang, Śubhakarasiṃha translated the MAHĀVAIROCANĀBHISAṂBODHISŪTRA, a central scripture of the East Asian esoteric traditions. He was assisted by his Chinese disciple YIXING, who also composed an important commentary on the sūtra. In 726, Śubhakarasiṃha also translated the important *SUSIDDHIKARASŪTRA. Five years after his death, Śubhakarasiṃha's body was buried on the grounds of the monastery of Guanghuasi in LONGMEN. According to his biography, Śubhakarasiṃha's body did not decay (see ŚARĪRA) and thus became an object of fervent worship.

śubhakṛtsna. (P. subhakiṇṇā; T. dge rgyas; C. bianjing tian; J. henjōten; K. pyŏnjŏng ch'ŏn 遍淨天). In Sanskrit, "pervasive purity," the highest of the three heavens of the third absorption (DHYĀNA) of the realm of subtle materiality (RŪPADHĀTU). The divinities of this heaven are so-called because the radiance emanating from their bodies is of a steady brightness and does not occur in flashes. As with all the heavens of the realm of subtle materiality, one is reborn as a divinity there through achieving during one's practice of meditation in the preceding lifetime the same level of absorption as the divinities of that heaven. When the universe is destroyed by flood, the waters are said to rise to the level of this heaven.

Subhasuttanta. (C. Yingwu jing; J. Ōmukyō; K. Aengmu kyŏng 鸚鵡經). In Pāli, "Discourse to Subha"; tenth sutta of the DĪGHANIKĀYA (a related Pāli recension is included as the ninety-ninth sūtra of the MAJJHIMANIKĀYA and a separate SARVĀSTIVĀDA recension as the 152nd sūtra in the Chinese translation of the MADHYAMĀGAMA); preached by Ānanda at Sāvatthi (S. ŚRĀVASTĪ) to the brāhmaṇa Subha Todeyyaputta shortly after the Buddha's demise. In content that is very similar to the SĀMAÑÑAPHALASUTTANTA (S. Śrāmaṇyaphalasūtra), Subha invites Ānanda to tell him what things the Buddha extolled, what he inspired others to follow, and what he established others in. Ānanda responds that there were three bodies, or categories, of things which the Buddha extolled, inspired others to follow, and established them in. These were the noble body of morality (P. ariyasīlakkhandha, S. āryaśīlaskandha), the noble body of concentration (P. ariyasamādhikkhandha, S. āryasamādhiskandha), and the noble body of wisdom (P. ariyapaññākkhandha, S. āryaprajñāskandha). Under the noble body of morality (ŚĪLA), Ānanda enumerates the following points: the appearance of the Buddha in the world, understanding his teachings and entering the Buddhist order, training in the restraint of action and speech, and observance of minor points of morality, all of which leads to an absence of fear and a confidence of heart. Under the noble body of concentration (SAMĀDHI), he enumerates guarding the senses, mindfulness, contentment with little, freedom from the five hindrances, joy and peace of mind, and the four meditative absorptions (P. JHĀNA, S. DHYĀNA). Under the noble body of wisdom (PRAJÑĀ), he enumerates insight into the conditioned nature and impermanence of body and mind, the power to conjure up mind-made bodies (MANOMAYAKĀYA), knowledge of the FOUR NOBLE TRUTHS, and destruction of the contaminants (P. āsava, S. ĀSRAVA).

Subhūti. (T. Rab 'byor; C. Xuputi; J. Shubodai; K. Subori 須菩提). Sanskrit and Pāli proper name of an eminent ARHAT who

was foremost among the Buddha's disciples in dwelling at peace in remote places and in worthiness to receive gifts. He was the younger brother of ANĀTHAPIṆḌADA and took ordination on the day the JETAVANA grove was dedicated, when he heard the Buddha preach. He mastered the ubhatovibhaṅga, the two collections comprising the VINAYAPIṬAKA, after which he retired to the forest to practice meditation. He attained arhatship on the basis of maitrīdhyāna (P. mettājhāna), meditative absorption cultivated through contemplation of loving-kindness (MAITRĪ). On his alms-rounds, Subhūti would cultivate loving-kindness at the door of every house where he stopped, thus expanding the amount of merit accrued by his donor. Subhūti taught the dharma without distinction or limitation, for which reason the Buddha singled him out for praise. Subhūti was widely revered for his holiness and was sought out as a recipient of gifts. King BIMBISĀRA once promised to build a cave dwelling for him in RĀJAGṚHA but later forgot. Without a dwelling place, Subhūti sat in the open air to practice meditation. Over time, this caused a drought in the region, for the clouds would not rain lest this disturb the saint's meditations. When Bimbisāra became aware of this issue, he built a grass hut for him, and as soon as Subhūti sat inside it, the clouds poured down rain. During the time of Padmottara Buddha, Subhūti had been a famous hermit named Nanda with forty thousand disciples. Once when the Buddha was visiting his hermitage, he directed one of his monks proficient in loving-kindness and foremost in worthiness to receive gifts to preach to his host. Upon hearing the sermon, all forty thousand disciples of Nanda became arhats, while Nanda, enthralled by the charisma of the preaching monk, resolved one day to earn the same distinction. Subhūti also plays a prominent role in a number of MAHĀYĀNA sūtras. The most famous of these roles is as the Buddha's chief interlocutor in PRAJÑĀPĀRAMITĀ sūtras like the VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA. In the SADDHARMAPUṆḌARĪKASŪTRA, Subhūti is one the four ŚRĀVAKAS who understands the parable of the burning house; later his buddhahood is prophesied by the Buddha. In the VIMALAKĪRTINIRDEŚA, Subhūti is one of the arhats who is reluctant to visit Vimalakīrti. Among the Buddha's ten major disciples, he is said to have been foremost in the knowledge of insubstantiality.

Subinda. [alt. Suvinda] (C. Supintuo; J. Sobinda; K. Sobint'a 蘇頻陀). The Sanskrit name of the fourth of the sixteen ARHAT elders (ṢOḌAŚASTHAVIRA), according to the roster of arhats now recognized in the East Asian tradition; he is said to reside in UTTARAKURU with seven hundred disciples. Subinda is said to have been the last personal disciple of the Buddha and for this reason is shown holding a small STŪPA (symbolizing the Buddha), which he carried with him wherever he went; he is thus known in Chinese as the "Pagoda-Holding Arhat." Subinda has various portrayals in Chinese paintings. In the Mogao caves of DUNHUANG, he is shown sitting in full-lotus posture on a rock, with his right arm bent upwards and his left hand holding a water bottle in front of his chest. In CHANYUE GUANXIU's standard Chinese depiction, Subinda sits in meditation on a rock, with his robe worn across both his shoulders, his right fist holding fast to the front of his chest, and his left hand placed on his knee. He is not included in the Tibetan list of the sixteen.

subitism. See DUNWU; DUNWU JIANXIU.

Sucandra. (T. Zla ba bzang po). The king of ŚAMBHALA who requested the Buddha to deliver the KĀLACAKRATANTRA. According to legend, the king traveled to India from śambhala and asked that the Buddha set forth a teaching that would allow him to practice the dharma without renouncing the world. In response, the Buddha, while continuing to wear the robes of a monk on Vulture Peak (GṚDHRAKŪṬA) in RĀJAGṚHA, set forth the *Kālacakratantra* at Dhānyakaṭaka in southern India in the guise of the buddha Kālacakra. The king returned to śambhala, where he transcribed this tantra in twelve thousand verses. This text is referred to as the root tantra (mūlatantra) and is no longer extant. Sucandra also wrote a commentary in sixty thousand verses, now also lost. The king finally built a three-dimensional Kālacakra MAṆḌALA at the center of the kingdom, which was transformed into an ideal realm for Buddhist practice. The king, considered an incarnation of VAJRAPĀṆI, died two years after receiving the *Kālacakratantra* from the Buddha.

suchness. See TATHATĀ.

Sudāna Jātaka. (C. Xudana bensheng; J. Shudainu honjō; K. Sudaena ponsaeng 須大拏本生). An alternate name for the bodhisattva Viśvaṃtara and the popular *Viśvantara Jātaka* (P. VESSANTARA-JĀTAKA).

sudarśana. (P. sudassī; T. shin tu mthong ba; C. shanjian tian; J. zenkenten; K. sŏn'gyŏn ch'ŏn 善見天). In Sanskrit, "perfect vision," the name of the second highest of the eight heavens of the fourth meditative absorption (DHYĀNA) of the realm of subtle materiality (RŪPADHĀTU), and one of the five heavens that constitute the ŚUDDHĀVĀSA, the "pure abodes" where those who have attained the rank of ANĀGĀMIN become ARHATS. As with all the heavens of the realm of subtle materiality, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one's practice of meditation in a previous lifetime.

Sudatta. (T. Legs byin; C. Xuda; J. Shudatsu; K. Sudal 須達). The personal name of the Buddha's patron ANĀTHAPIṆḌADA. See ANĀTHAPIṆḌADA.

sudden enlightenment. See DUNWU; DUNWU JIANXIU.

sudden-gradual issue. See BSAM YAS DEBATE; DUNJIAO; DUNWU; DUNWU JIAOXIU; GUIFENG ZONGMI; KAMALAŚĪLA; POJO CHINUL.

sudden teachings. See DUNJIAO.

śuddhāvāsa. (P. suddhāvāsa; T. gnas gtsang; C. wujingju tian; J. gojōgoten; K. ojŏnggŏ ch'ŏn 五淨居天). In Sanskrit, "pure abodes," the term used to refer collectively to the five highest of the eight heavens that constitute the fourth meditative absorption (DHYĀNA) of the subtle-materiality realm (RŪPADHĀTU); the divinities residing there are called the śuddhāvāsakāyika gods. In some traditions, the śuddhāvāsa are said to be the abode of nonreturners (ANĀGĀMIN), the third of the four types of advanced adepts (ĀRYAPUDGALA), who are in their final rebirth before achieving arhatship (see ARHAT) and thus need never again to be reborn in, or return to, the sensuous realm (KĀMADHĀTU). Since nonreturners have removed the first five fetters (SAṂYOJANA) associated with the sensuous realm, and weakened the latter five, they are "nonreturners" to the sensuous realm and are instead reborn into the pure abodes, whence they will complete their practice and attain enlightenment as an arhat. The pure abodes therefore serve as a kind of way station for advanced beings (ĀRYA) in their last lives before final liberation. In the ABHIDHARMAKOŚABHĀṢYA, the explanation of nonreturners differs; before they reach NIRVĀṆA they never take rebirth in the sensuous realm, but they may pass through each of the heavens before entering nirvāṇa, or skip over one or more heavens and enter into nirvāṇa from any heaven, depending on their aptitude. In certain Mahāyāna interpretations, such as in the ABHISAMAYĀLAṂKĀRA, the pure abodes are adjacent to the fourth dhyāna, like suburbs of that meditative absorption, and the AKANIṢṬHA heaven of the pure abodes is considered to be the abode of the enjoyment body (SAṂBHOGAKĀYA) of a buddha. Some say the pure abodes remain empty even for several eons (KALPA) when there are no buddhas. When a bodhisattva is in his last life before attaining buddhahood, it is said that the divinities of the pure abodes provide the four portents (CATURNIMITTA, viz., an old man, a sick man, and corpse, and a mendicant) that cause the bodhisattva to renounce the life of the householder and go forth to the homeless life. The five heavens that constitute the pure abodes are AVṚHA, ATAPA, SUDṚŚA, SUDARŚANA, and AKANIṢṬHA.

śuddhāvāsakāyika. (S; T. gnas gtsang ma'i ris; C. jingju tian; J. jōgoten; K. chŏnggŏ ch'ŏn 淨居天). Beings belonging to the ŚUDDHĀVĀSA, or "pure abodes," a region of the fourth dhyāna of the subtle-materiality realm (RŪPADHĀTU) where only noble beings (ĀRYA) are reborn.

Śuddhipanthaka. (S; C. Zhoulipante; J. Shurihandoku; K. Churibant'ŭk 周利槃特). See CŪḌAPANTHAKA.

Śuddhodana. (P. Suddhodana; T. Zas gtsang; C. Jingfan wang; J. Jōbon ō; K. Chŏngban wang 淨飯王). In Sanskrit, lit. "Pure Rice"; the royal father of GAUTAMA Buddha. Śuddhodana was the son of Siṃhahanu (P. Sīhahanu), a king of the ŚĀKYA clan, and ruled in KAPILAVASTU (P. Kapilavatthu) in the foothills of the Himālayas, in present-day Nepal. Śuddhodana's wife was MAHĀMĀYĀ, who died seven days after giving birth to prince Gautama. According to some accounts of the Buddha's life, Śuddhodana was also already married to, or subsequently married, MAHĀPRAJĀPATĪ, Māyā's sister and thus Gautama's aunt, who raised the infant and eventually became the first woman to be ordained as a Buddhist nun (BHIKṢUṆĪ). At the time of the bodhisattva's birth, his father asked eight priests to examine the child and predict his future. There are several versions of this event, but in the Pāli NIDĀNAKATHĀ, seven predict that he will become either a CAKRAVARTIN or a buddha, while one, Koṇḍañña (S. KAUṆḌINYA; see ĀJÑĀTAKAUṆḌINYA), predicts that it is certain that he will become a buddha, and will do so after seeing four portents (CATURNIMITTA)—viz., of a sick man, an old man, a corpse, and a religious mendicant. Koṇḍañña and the sons of four of the eight court priests would eventually become the group of five ascetics (S. PAÑCAVARGIKA, P. pañcavaggiyā) who would be the Buddha's first disciples. In order to prevent his son's exposure to the sufferings of life, the king built three palaces filled only with youth and beauty. His father paid homage to his young son on two occasions, first when the ascetic Asita bowed to the infant and second, when, during a ploughing festival, he saw his young son meditating under a tree; the sun had stopped its course across the sky in order that the child would remain in shadow of a jambu tree. Despite his attempts to distract his son with all manner of sensual pleasures in his three palaces, the king's efforts were ultimately in vain and the prince eventually determined to leave behind the household life (PRAVRAJITA) after witnessing each of the portents. His father sought unsuccessfully to dissuade him, saying that it was not the right time for the prince, now with a wife and child, to renounce the world. Years later, when Gautama returned to Kapilavastu as an enlightened buddha, Śuddhodana became a devoted follower of his son. However, he objected to the Buddha's ordination of his young son RĀHULA, causing the Buddha to promulgate a rule that in the future, parents must give permission before their son is ordained. The king became a stream-enterer (SROTAĀPANNA) himself, his success at meditation initially hindered by his excessive joy that his son was the Buddha. Shortly before his death, the king became an ARHAT.

Sūden. (J) (崇傳) (1569–1633). See ISHIN SŪDEN.

Sudhana. (T. Nor bzang; C. Shancai; J. Zenzai; K. Sŏnjae 善財). A youth who is the major protagonist of the GAṆḌAVYŪHA, the final section of the AVATAṂSAKASŪTRA. The story of Sudhana's search is related in the *Avataṃsakasūtra*'s massive final chapter, the "Entrance into the Dharmadhātu" (C. Ru fajie pin), which also circulated independently as the GAṆḌAVYŪHA. On the instructions of the BODHISATTVA MAÑJUŚRĪ, Sudhana sets out to the south in search of a spiritual mentor (KALYĀṆAMITRA), ultimately encountering fifty-two beings (sometimes counted as fifty-three, because Mañjuśrī is repeated) including the future buddha MAITREYA, as well as the bodhisattvas AVALOKITEŚVARA

and Mañjuśrī; twenty of his teachers are female, including the Buddha's mother MAHĀMĀYĀ. His final teacher is the bodhisattva SAMANTABHADRA, who sets forth in the famous BHADRACARĪPRAṆIDHĀNA the ten vows he took to realize and access the DHARMADHĀTU, which thereby enable him to benefit sentient beings. After this encounter, Sudhana attains enlightenment and roams freely himself in the dharmadhātu. Sudhana's pilgrimage has been the inspiration for much East Asian Buddhist art and his statue often appears at the side of Buddhist altars as a boy bowing to the Buddha.

Sudinna. (T. Bzang byin; C. Xutina; J. Shudaina; K. Sujena 須提那). The Buddhist Hybrid Sanskrit and Pāli name of a disciple of the Buddha whose actions prompted the Buddha to formulate the first rule of the monastic code, the "defeat" offense (S. PĀRĀJIKA) forbidding sexual intercourse (abrahmacarya); his name is a Middle Indic form of the classical Sanskrit Sudatta. The monastic code (VINAYA; PRĀTIMOKṢA) was not formulated as a complete system. Rather, it is said that the Buddha formulated each rule in response to a specific misdeed by a monk, with the Buddha subsequently declaring a rule prohibiting that particular misdeed. Sudinna had been ordained with the grudging consent of his parents; he was their only child, was already married, and had not had a child at the time of his ordination. During a period of famine, he returned to his home region in order to beg for alms. When he was offered food at his parents' house, they, together with his wife, urged him to return to lay life. He refused, addressing his wife as "sister," which caused her to faint. His mother later visited him, imploring him to impregnate his wife so that his family would at least have an heir, thus preventing their property from being confiscated upon the death of his parents. Sudinna agreed and had intercourse with his wife three times, supposedly not out of lust but out of concern for the financial future of his family. He soon felt remorse for his deed. Upon learning of the reason for his remorse, his fellow monks informed the Buddha, who told him it would have been better for him to have inserted his penis into the mouth of a poisonous snake than to have placed it in a woman's vagina. The Buddha then established a rule of "defeat" (PĀRĀJIKA) forbidding monks from engaging in sexual intercourse, the first rule that the Buddha had ever had to promulgate in some twenty years of teaching. It was by no means the last: the monks' and nuns' codes of conduct (prātimokṣa) eventually included hundreds of specific rules of conduct.

Sudŏksa. (修德寺). In Korean, "Cultivating Merit Monastery"; the seventh district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located on the slopes of Tŏksung (Virtue Exalted) mountain in South Ch'ungch'ŏng province. According to Sudŏksa's monastic records, the monastery was first constructed at the end of the Paekche dynasty by Sungje (d.u.). During the reign of the Paekche king Mu (r. 600–641) the monk Hyehyŏn (d.u.) is said to have lectured there on the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"). Alternate records state, however, that the monastery was founded by Chimyŏng (d.u.) during the reign of the Paekche king Pŏp (r. 599–600). The monastery was subsequently repaired by the renowned Koryŏ-dynasty Sŏn monk NAONG HYEGŬN (1320–1376), and since that time Sudŏksa has been one of the major centers of SŎN (C. CHAN) practice in Korea. Sudŏksa is best known for its TAEUNG CHŎN, the main shrine hall. The taeung chŏn was rebuilt in 1308 and is presumed to be the oldest wooden building in Korea, having been spared the conflagrations that struck many Korean monasteries during the Japanese Hideyoshi invasions (1592–1598). It was constructed in the Chusimp'o style, so that its support pillars are wider in the middle than they are at the bottom or top. The Tap'o-style bracketing, imported from Fujian during the Southern Song dynasty, is similar to other Koryŏ-era monasteries, such as Pongjŏngsa and PUSŎKSA. Inside the hall are images of three buddhas, ŚĀKYAMUNI, AMITĀBHA and BHAIṢAJYAGURU, and two bodhisattvas, MAÑJUŚRĪ and SAMANTABHADRA. Paintings depict KṢITIGARBHA, the ten kings of hell (see SHIWANG; YAMA), and some indigenous Korean divinities. Many of the oldest original wall paintings were damaged during the Korean War and have now been removed to the safety of the monastery's museum. The courtyard holds two STŪPAS, a three-story stone pagoda probably from the Koryŏ dynasty, and an older seven-story granite pagoda from the late Paekche dynasty, with typical upward curving corners. There is a thirty-three foot high statue of Maitreya a short walk up the mountain; the statue is unusual in that it is wearing Korean clothes, including a double cylindrical hat. It was erected by the Sŏn master MAN'GONG WŎLMYŎN (1872–1946), one of the renowned Sŏn teachers of the modern era who taught at Sudŏksa; other famous masters associated with the monastery include KYŎNGHŎ SŎNGU (1849–1912), the nun KIM IRYŎP (1869–1971), and Hyeam Hyŏnmun (1884–1985). Sudŏksa recently opened a museum near its entrance to hold the large number of important historical artistic and written works the monastery owns, such as the exquisite wall paintings that formerly were located in the taeung chŏn. In 1996, Sudŏksa was elevated to the status of an ecumenical monastery (CH'ONGNIM), and is one of the five such centers in the contemporary Chogye order, which are all expected to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition; the monastery is thus also known as the Tŏksung Ch'ongnim.

sudṛśa. (P. sudassā; T. gya nom snang ba; C. shanxian tian; J. zengenten; K. sŏnhyŏn ch'ŏn 善現天). In Sanskrit, "perfect form," or "skillful manifestation"; the name of the third highest of the eight heavens of the fourth meditative absorption (DHYĀNA) of the realm of subtle materiality (RŪPADHĀTU), and one of the five heavens that constitute the ŚUDDHĀVĀSA, the "pure abodes" where those who have attained the rank of ANĀGĀMIN become ARHATs. As with all the heavens of the realm

of subtle materiality, one is reborn as a divinity there through achieving the same level of concentration (dhyāna) as the gods of that heaven during one's practice of meditation in a previous lifetime.

sudurjayā. (T. sbyang dka' ba; C. nansheng di; J. nanshōji; K. nansŭng chi 難勝地). In Sanskrit, "unconquerable," the name of the fifth of the ten bodhisattva stages (BHŪMI). A list of ten stages (DAŚABHŪMI) is most commonly enumerated, deriving from the DAŚABHŪMIKASŪTRA ("Sūtra on the Ten Bhūmis"), a sūtra that is later subsumed into the massive scriptural compilation, the AVATAṂSAKASŪTRA. The first bhūmi coincides with the attainment of the path of vision (DARŚANAMĀRGA) and the remaining nine to the path of cultivation (BHĀVANĀMĀRGA). This bhūmi is called "unconquerable" because, from this point on the path, the bodhisattva cannot be overcome by demons. On this bhūmi, the bodhisattva practices the perfection of meditative absorption (DHYĀNAPĀRAMITĀ), the fifth of the ten perfections (PĀRAMITĀ), achieving myriad forms of SAMĀDHI. Here, the bodhisattva also gains understanding of the subtle nature of the FOUR NOBLE TRUTHS. The bodhisattva remains on his stage as long as his distress deriving from his analysis of SAṂSĀRA prevents him entering into meditative equipoise (SAMĀHITA) on the signless (ĀNIMITTA).

suffering. See DUḤKHA.

sugata. (T. bde bar gshegs pa; C. shanshi; J. zenzei; K. sŏnsŏ 善逝). In Sanskrit and Pāli, lit., "well gone," one in a standard list of epithets of the Buddha. Su (cognate with Greek eu) is a prefix meaning good and gata is the past passive particle of "to go." Among other meanings, BUDDHAGHOSA says the Buddha is sugata because both the way he took (gata) is good (su) and where he has gone (gata) is good (su). The MAHĀYĀNA author HARIBHADRA also says the Buddha is sugata because he is one from whom all faults are totally (suṣṭhu) gone (gata), or into whom all good qualities have gone (gata) with none remaining (suparipūrṇa). It is customary to relate three denotations of sugata with three stages through which a buddha must pass in order to reach the goal of enlightenment: he has gone well beyond rebirth in SAṂSĀRA, he has gone well into NIRVĀṆA, and he has gone well into the state of perfect buddhahood (SAMYAKSAṂBUDDHA).

sugatagarbha. (T. bde bar gshegs pa'i snying po). In Sanskrit, "essence of the SUGATA," a synonym for TATHĀGATAGARBHA.

sugati. (T. bde 'gro; C. shanqu; J. zenshu; K. sŏnch'wi 善趣). In Sanskrit and Pāli, lit. "good destiny," a term used to refer to the realms of rebirth as a human or a divinity of either the sensuous realm (KĀMADHĀTU), the realm of subtle materiality (RŪPADHĀTU), or the immaterial realm (ĀRŪPYADHĀTU). This term contrasts with DURGATI, or "baleful destiny," which refers to the realms of rebirth as an animal, ghost, or hell denizen. One is reborn as a human or divinity as a result of virtuous practice in the past.

Sugi. (守其) (c. mid-thirteenth century). Korean monk during the Koryŏ dynasty who served as editor-in-chief of the second carving of the Korean Buddhist canon (KORYŎ TAEJANGGYŎNG). To supervise this massive editorial project, Sugi established a main editorial headquarters at Kanghwa Island, off the west-central coast of Korea, and a branch at Namhae in the far south of the Korean peninsula. Sugi gathered an army of scholars, first to collate the various editions of the scriptures and to establish the correct reading, and then to proofread meticulously the finished xylographs to ferret out any misprints. In editing this new canon, Sugi and his editorial team consulted principally three earlier canons: (1) the Chinese canon, carved during the Song-dynasty's Kaibao reign era between 971 and 983, which he called variously the Old Song edition (Ku-Song pon), Song edition (Song pon), etc.; (2) the Khitan Liao canon, printed c. 1031–1055, which he generally referred to as the Khitan edition (Tan pon); and (3) the first Koryŏ canon of 1011, which he usually called the State edition (Kuk pon). Foremost among these editions was the Liao canon of the Khitans, a complete copy of which Koryŏ had received in 1064. The xylographs of 1,514 texts in 6,815 rolls were carved between 1236 and 1251 in a total of 81,258 wood blocks—the oldest of the few complete xylographic canons still extant in East Asia. This second Koryŏ canon continues to be stored today in paired wooden archives at HAEINSA in Kyŏngsang province, as they have been since 1398. Sugi documented in remarkable detail the process he and his editorial team followed in compiling this new canon in his thirty-roll KORYŎGUK SINJO TAEJANG KYOJŎNG PYŎLLOK ("Supplementary Record of Collation Notes to the New Carving of the Great Canon of the Koryŏ Kingdom"), which was finished around 1247. In these notes, Sugi collated seventy-six passages from sixty-five different texts. In his textual analysis of a specific scripture, Sugi generally treated major issues of structure, translator attribution, textual lineage, and the like; he did not discuss minor variations in readings of a few Sinographs. In a typical entry for a specific text, Sugi lists the case character in the second Koryŏ canon where the work appears; the title of the text and the roll (K. kwŏn; C. quan) in which the disputed point appears; followed by the passage itself, generally indicated by kwŏn, scroll (p'ok) and line (haeng) numbers. The most common types of textual problems noted by Sugi in earlier canons were transpositions of passages (K. chŏnhu toch'ak) and dittographies (K. chungsa; chungch'ŏm). After evaluating the discrepancies in the different canonical editions, Sugi then indicated which reading he preferred and this reading was then entered into the second Koryŏ carving. Sugi also treated issues of textual authenticity in the course of editing his canon, especially in attempting to adjudicate the authenticity of some of the variant Chinese translations of Indic Buddhist scriptures. The information Sugi provides in his "Collation Notes" offers important information on how East Asian Buddhist scholars in the premodern era went about the task of collating and editing multiple recensions of thousands of scriptures into a definitive canonical collection.

Sugi's notes also help to document the textual genealogies of the various East Asian canons and provide definitive proof that, in style and format, the second Koryŏ canon imitated both the Chinese Kaibao and first Koryŏ canons, but its readings followed more closely those found in the Khitan Liao canon. Sugi's annotations are thus an extremely valuable source for detailing medieval Chinese xylographic lineages. In making editorial decisions, Sugi rejects such discredited techniques as following the reading of the majority of manuscripts—as when he rejects the readings of both the Kaibao and first Koryŏ canons—or following uncritically the "best" manuscript, as in the cases where he rejects the reading of the Khitan edition. Sugi's reputation for scholarly accuracy was such that Japanese scholars adopted the second Koryŏ canon as the textus receptus for the modern Taishō printed edition of the canon, the TAISHŌ SHINSHŪ DAIZŌKYŌ, compiled in Japan between 1922 and 1934.

Suhṛllekha. (T. Bshes pa'i spring yig; C. Longshu pusa quanjie wang song; J. Ryūju bosatsu kankaiōju; K. Yongsu posal kwŏn'gye wang song 龍樹菩薩勸誡王頌). In Sanskrit, "Friendly Letter," a famous work by the Madhyamaka exegete NĀGĀRJUNA. Like the RATNĀVALĪ, the work takes the form of advice to a king. In this case, scholars speculate that the king may be Gautamīputra Śatakarṇī of the Śātavāhana dynasty. The work is not concerned with philosophical doctrine but instead consists of advice to a Buddhist layperson on how to live an ethical life and accumulate merit (PUṆYA). It is clearly a MAHĀYĀNA work, mentioning AVALOKITEŚVARA and AMITĀBHA, but also contains numerous allusions to the Sanskrit ĀGAMAS.

suishen sheli. (J. saishinshari; K. swaesin sari 碎身舍利). In Chinese, "partial-body relics," crystalline substances that are the condensation of the remains of a holy person after death and cremation. See ŚARĪRA.

Sujātā. (T. Legs skyes ma; C. Xusheduo; J. Shujata; K. Susada 須闍多). The Sanskrit and Pāli proper name of a female lay disciple declared by the Buddha to be foremost among laywomen who had taken refuge in the three jewels (RATNATRAYA). According to the Pāli account, Sujātā was the daughter of a landowner named Senānī who lived in a village near Uruvelā. She had petitioned the spirit (YAKṢA) of a banyan tree for a son and when she gave birth to a boy she resolved to make an offering of rice milk to the spirit in gratitude. On the day of her offering, she sent her servant Puṇṇā to prepare a place beneath the tree. There, the servant encountered the bodhisattva SIDDHĀRTHA sitting in meditation, soon after he had decided to give up the practice of strict asceticism. Seeing the bodhisattva's emaciated body, the servant mistook him for the tree spirit and informed Sujātā of his physical presence. Sujātā prepared rice milk and offered it to the bodhisattva in a golden bowl. This offering was praised by the gods as important and praiseworthy, for it enabled the bodhisattva to regain his strength so that he could make the final push to achieve enlightenment as a perfect buddha (SAMYAKSAṂBUDDHA). One of Sujātā's sons was YAŚAS (P. Yasa), who became the Buddha's sixth convert after the enlightenment. Yaśas attained arhatship and was ordained, after which he received alms at his parents' house in the company of the Buddha. At that time, having listened to the Buddha's sermon, Sujātā and Yaśas' former wife became stream-enterers (SROTAĀPANNA) and took refuge in the three jewels, thus becoming the first female disciples to do so.

sūkaramaddava. (S. sūkaramārdava; C. zhantanshu'er; J. sendanjuni; K. chŏndansui 栴檀樹耳). In Pāli, lit., "soft pig," the last meal of the Buddha before his passage into PARINIRVĀṆA. According to the MAHĀPARINIBBĀNASUTTA, the Buddha and his disciples were invited to a meal by CUNDA, the son of a goldsmith. He served them sweet rice, cakes, and sūkaramaddava. The Buddha told Cunda to serve the sūkaramaddava only to him and to bury the rest in the ground because no one other than the Buddha would be able to digest it. The Buddha praised Cunda for the meal but shortly thereafter suffered an attack of dysentery. He proceeded to KUŚINAGARĪ, where he instructed ĀNANDA to visit Cunda and tell him that he should not feel remorse; he had in fact gained great merit by serving the Buddha his last meal. There has been much debate as to the meaning of sūkaramaddava. It is unclear whether this means something soft that is consumed by pigs, such as a type of mushroom or truffle, or perhaps bamboo shoots that had been trampled by pigs. The compound could also be the name of some kind of pork dish. The Indian and Sinhalese commentators prefer, although not unanimously, the latter interpretation. The Chinese rendering for the term means "sandalwood tree fungus," implying perhaps a kind of truffle, and the passage in the DĪRGHĀGAMA recension of the sūtra suggests that the dish was a delicate broth boiled with this ingredient. Some modern interpreters, trying to avoid the suggestion that the Buddha consumed pork, have insisted, following the Chinese, that it was a mushroom dish.

sukha. (T. bde ba; C. le; J. raku; K. nak 樂). In Sanskrit and Pāli, "bliss," "ease," or "joy"; the fourth of the five constituents of meditative absorption (DHYĀNĀṄGA). A sustained sense of sukha is obstructed by restlessness and worry (AUDDHATYA-KAUKṚTYA), the fourth of the five hindrances (NĪVARAṆA) to DHYĀNA. Sukha is the maturation of the physical and mental tranquillity (PRAŚRABDHI) that is associated with the coarser experience of physical "rapture" (PRĪTI). Sukha always appears in conjunction with prīti, but not necessarily the converse; whereas sukha is part of the perception aggregate (SAṂJÑĀ), prīti is instead grouped with the conditioning factors aggregate (SAṂSKĀRA). Sukha leaves one "feeling well" and catalyzes the development of expansive mental states. Sukha is present in the first, second, and third of the meditative absorptions (dhyāna) associated with the realm of subtle materiality (RŪPĀVACARADHYĀNA), but fades into equanimity (UPEKṢĀ) in the even subtler fourth dhyāna, wherein the meditator experiences

neither pleasure nor pain and is left only with one-pointedness of mind (CITTAIKĀGRATĀ). The term sukha is also important in Buddhist TANTRA, especially ANUTTARAYOGATANTRA, where the movement of winds (PRĀṆA) and drops (BINDU) up and down the central channel generate various forms of bliss; the bliss created by the upward movement of the winds and drops are particularly powerful. In order to achieve buddhahood, the bliss consciousness is used to understand emptiness (ŚŪNYATĀ).

sukhāvatī. (T. bde ba can; C. jile jingtu; J. gokurakujōdo; K. kŭngnak chŏngt'o 極樂淨土). In Sanskrit, "blissful" or "full of happiness" (the Chinese translates the name as "ultimate bliss"); the name of the buddha-field (BUDDHAKṢETRA) or PURE LAND of the buddha AMITĀBHA as described in what are referred to in East Asia as the three pure land sūtras (JINGTU SANBUJING): the larger and smaller SUKHĀVATĪVYŪHASŪTRAS (see AMITĀBHASŪTRA) and GUAN WULIANGSHOU JING (**Amitāyurdhyānasūtra*). Although many buddha-fields are enumerated and described in the Mahāyāna sūtras, sukhāvatī is the most famous and is often referred to as "the western pure land" in East Asia. In India, rebirth in sukhāvatī appears to have been something of a generalized soteriological goal, disconnected from devotion to the buddha Amitābha; references to sukhāvatī appear in a number of important Mahāyāna sūtras, including the SAMĀDHIRĀJASŪTRA, which likely dates to the second century CE. The most detailed description of sukhāvatī appears in the larger *Sukhāvatīvyūhasūtra*, discussed in the next entry. See also PURE LAND and ANLE GUO.

Sukhāvatīvyūhasūtra. (T. Bde ba can gyi bkod pa'i mdo; C. Wuliangshou jing; J. Muryōjukyō; K. Muryangsu kyŏng 無量壽經). Literally, the "Sūtra Displaying [the Land of] Bliss," the title of the two most important Mahāyāna sūtras of the "PURE LAND" tradition. The two sūtras differ in length, and thus are often referred to in English as the "larger" and "smaller" (or "longer" and "shorter") *Sukhāvatīvyūhasūtras*; the shorter one is commonly called the AMITĀBHASŪTRA. Both sūtras are believed to date from the third century CE. The longer and shorter sūtras, together with the GUAN WULIANGSHOU JING (**Amitāyurdhyānasūtra*), constitute the three main texts associated with the pure land tradition of East Asia (see JINGTU SANBUJING). There are multiple Sanskrit, Chinese, and Tibetan versions of both the longer and shorter sūtras, with significant differences among them. ¶ The longer *Sukhāvatīvyūhasūtra* begins with ĀNANDA noticing that the Buddha is looking especially serene one day, and so asks him the reason. The Buddha responds that he was thinking back many millions of eons in the past to the time of the buddha LOKEŚVARARĀJA. The Buddha then tells a story in the form of a flashback. In the audience of this buddha was a monk named DHARMĀKARA, who approached Lokeśvararāja and proclaimed his aspiration to become a buddha. Dharmākara then requested the Buddha to describe all of the qualities of the buddha-fields (BUDDHAKṢETRA). Lokeśvararāja provided a discourse that lasted one million years, describing each of the qualities of the lands of trillions of buddhas. Dharmākara then retired to meditate for five eons, seeking to concentrate all of the marvelous qualities of the millions of buddha-fields that had been described to him into a single pure buddha-field. When he completed his meditation, he returned to describe this imagined land to Lokeśvararāja, promising to create a place of birth for fortunate beings and vowing that he would follow the bodhisattva path and become the buddha of this new buddha-field. He described the land he would create in a series of vows, stating that if this or that marvel was not present in his pure land, may he not become a buddha: e.g., "If in my pure land there are animals, ghosts, or hell denizens, may I not become a buddha." He made forty-eight such vows. These included the vow that all the beings in his pure land will be the color of gold; that beings in his pure land will have no conception of private property; that no bodhisattva will have to wash, dry, or sew his own robes; that bodhisattvas in his pure land will be able to hear the dharma in whatever form they wish to hear it and whenever they wish to hear it; that any woman who hears his name, creates the aspiration to enlightenment (BODHICITTA), and feels disgust at the female form, will not be reborn as a woman again. Two of these vows would become the focus of particular attention. In the eighteenth vow (seventeenth in the East Asian versions), Dharmākara vows that when he has become a buddha, he will appear at the moment of death to anyone who creates the aspiration to enlightenment, hears his name, and remembers him with faith. In the nineteenth vow (eighteenth in the East Asian versions), he promises that anyone who hears his name, wishes to be reborn in his pure land, and dedicates their merit to that end, will be reborn there, even if they make such a resolution as few as ten times during the course of their life. Only those who have committed one of the five inexpiable transgressions bringing immediate retribution (ĀNANTARYAKARMAN, viz., patricide, matricide, killing an ARHAT, wounding a buddha, or causing schism in the SAṂGHA) are excluded. The scene then returns to the present. Ānanda asks the Buddha whether Dharmākara was successful, whether he did in fact traverse the long path of the bodhisattva to become a buddha. The Buddha replies that he did indeed succeed and that he became the buddha Amitābha (Infinite Light). The pure land that he created is called sukhāvatī. Because Dharmākara became a buddha, all of the things that he promised to create in his pure land have come true, and the Buddha proceeds to describe sukhāvatī in great detail. It is carpeted with lotuses made of seven precious substances, some of which reach ten leagues (YOJANA) in diameter. Each lotus emits millions of rays of light and from each ray of light there emerge millions of buddhas who travel to world systems in all directions to teach the dharma. The pure land is level, like the palm of one's hand, without mountains or oceans. It has great rivers, the waters of which rise as high or sink as low as one pleases, from the shoulders to the ankles, and vary in temperature as one pleases. The sound of the river takes the form of whatever auspicious words one wishes to hear, such as "buddha," "emptiness," "cessation," and "great compassion." The words "hindrance,"

"misfortune," and "pain" are never heard, nor are the words "day" and "night" used, except as metaphors. The beings in the pure land do not need to consume food. When they are hungry, they simply visualize whatever food they wish and their hunger is satisfied without needing to eat. They dwell in bejeweled palaces of their own design. Some of the inhabitants sit cross-legged on lotus blossoms while others are enclosed within the calyx of a lotus. The latter do not feel imprisoned, because the calyx of the lotus is quite large, containing within it a palace similar to that inhabited by the gods. Those who dedicate their merit toward rebirth in the pure land yet who harbor doubts are reborn inside lotuses where they must remain for five hundred years, enjoying visions of the pure land but deprived of the opportunity to hear the dharma. Those who are free from doubt are reborn immediately on open lotuses, with unlimited access to the dharma. Such rebirth would become a common goal of Buddhist practice, for monks and laity alike, in India, Tibet, and throughout East Asia. ¶ The "shorter" *Sukhāvatīvyūhasūtra* was translated into Chinese by such famous figures as KUMĀRAJĪVA and XUANZANG. It is devoted largely to describing this buddha's land and its many wonders, including the fact that even the names for the realms of animals and the realms of hell-denizens are not known; all of the beings born there will achieve enlightenment in their next lifetime. In order to be reborn there, one should dedicate one's merit to that goal and bear in mind the name of the buddha here known as AMITĀYUS (Infinite Life). Those who are successful in doing so will see Amitāyus and a host of bodhisattvas before them at the moment of death, ready to escort them to sukhāvatī, the land of bliss. In order to demonstrate the efficacy of this practice, the Buddha goes on to list the names of many other buddhas abiding in the four cardinal directions, the nadir, and the zenith, who also praise the buddha-field of Amitāyus. Furthermore, those who hear the names of the buddhas that he has just recited will be embraced by those buddhas. Perhaps to indicate how his own buddha-field (that is, our world) differs from that of Amitāyus, Śākyamuni Buddha concludes by conceding that it has been difficult to teach the dharma in a world as degenerate as ours.

Sukhothai. The first Thai polity in mainland Southeast Asia. Located in the central Menam valley, it began as a frontier outpost of the Khmer empire. In 1278 two local princes raised a successful rebellion to create a new kingdom with the city of Sukhothai as its capital. Under King Ramkhamhaeng (r. 1279–1298), Sukhothai brought several neighboring states under its sway and by the early 1300s enjoyed suzerainty over entire the Menam river basin, and westward across the maritime provinces of Lower Burma. Ramkhamhaeng established diplomatic and commercial relations with China and its envoys twice visited the Chinese capital on tributary missions to the emperor. Having won independence, the kings of Sukhothai chose a new cultural orientation to buttress their rule. The former Khmer overlords were votaries of Hinduism and MAHĀYĀNA Buddhism and the earliest CAITYAS in the city display the architectural features of traditional Khmer tower pyramids. The Thai ruling house abandoned these traditions in favor of Sinhalese-style Pāli Buddhism. In the 1330s a charismatic monk named Si Satha introduced a Sinhalese ordination lineage into the kingdom along with a collection of buddha relics around which was organized a state cult. The shift in religious affiliation is reflected in the lotus-bud and bell-shaped caityas built during the period, which have their prototypes in Sri Lanka. Sukhothai is upheld as a golden age in Thai cultural history. Known for its innovations in architecture and iconography, the kingdom also gave definitive form to the modern Thai writing system which is based on Mon and Khmer antecedents. By the mid-fourteenth century, with the rise of the kingdom of AYUTHAYA to its south, Sukhothai entered a period of decline from which it never recovered. In 1378, Ayuthaya occupied Sukhothai's border provinces, reducing it to the status of a vassal state. After unsuccessful attempts to break free from her southern overlord, Sukhothai was finally absorbed as a province of the Ayuthaya kingdom in the fifteenth century.

sukkhavipassaka. In Pāli, lit., "dry insight worker," i.e.,"one supported by insight alone." It refers to a person who has attained any of the four fruits of recluseship (ŚRĀMAṆYAPHALA)—stream-enterer (SROTAĀPANNA), once-returner (SAKṚDĀGĀMIN), nonreturner (ANĀGĀMIN), or ARHAT—by mere insight (P. VIPASSANĀ, S. VIPAŚYANĀ) without reliance on any of the meditative absorptions (P. JHĀNA, S. DHYĀNA). Some contemporary Burmese VIPASSANĀ meditation theory emphasizes this style of practice.

Sule Paya. A famous Burmese (Myanmar) pagoda complex located in the center of Rangoon (Yangon), with entrances in the four cardinal directions. It likely was first constructed by the Mon people, but has been restored and expanded repeatedly. The central STŪPA, which is octagonal in shape, is 152 feet tall, is said to contain one of the hairs that the Buddha gave to his first lay disciples, the merchants TRAPUṢA and BHALLIKA. The name Sule comes from a Burmese word for "gathering." The location of the pagoda is said to mark the place where divinities and humans gathered to ask an ancient NAT where the hairs of the Buddha should be enshrined. His answer led to construction of the pagoda of SHWEDAGON. When the British redesigned the surrounding city in the 1880s, they used the central pagoda as the center point of the grid design. The pagoda served as an important gathering place for monks during the uprisings of 1988 and 2007.

Sumaṅgala. (Venerable Hikkaduva Sri Sumaṅgala Nayaka Mahāthera) (1827–1911). Sumaṅgala, whose given name was Niclaus, was born in the town of Hikkaduwa in the Galle District of southern Sri Lanka. Sumaṅgala received his early education at the local village temple and, at age thirteen, began his monastic education at Totagamuwa. He received full

ordination from the Malwatte chapter in Kandy in 1848. Sumaṅgala is considered to be one of the most influential Pāli scholars of his time. He took a significant role in the Sinhalese Buddhist revival, especially in Colombo. He helped GUṆĀNANDA prepare for the famous Panadura debate. An accomplished scholar, Sumaṅgala studied Buddhist history, arithmetic, and archeology; he also knew Sinhala, Pāli, Sanskrit, and English. In 1867 he received the title Sripada from the British government, making him the high priest of Adam's Peak (Mt. Sumanakūta). The principal and founder of Vidyodaya College, Sumaṅgala worked with Colonel HENRY STEEL OLCOTT and together they established Ananda College and Mahinda College in Colombo and Dharmaraja College in Kandy during the early 1890s. These schools helped to revitalize Buddhist education, which had dwindled under British colonialism. In 1891, Sumaṅgala became the president of the Bodh Gaya Maha Bodhi Society in Colombo. SUMAṄGALA was an inspirational figure for ANAGĀRIKA DHARMAPĀLA and the next generation of Sinhalese Buddhist scholars.

Sumaṅgalavilāsinī. A Pāli commentary on the DĪGHANIKĀYA written by BUDDHAGHOSA. It is quoted in the AṄGUTTARANIKĀYA commentary, MANORATHAPŪRAṆĪ.

Sumedha. [alt. Sumegha] (C. Shanhui; J. Zen'e; K. Sŏnhye 善慧). Sanskrit and Pāli name of the BODHISATTVA who would become GAUTAMA Buddha. He was an ascetic at the time of DĪPAṂKARA Buddha. Sumedha was born into a wealthy brāhmaṇa family of AMARĀVATĪ. Disenchanted with the vanities of the householders' life, he renounced the world and took up his abode in the Himalaya mountains as an ascetic. There, he practiced assiduously and ultimately gained great yogic power. Once, when flying over the town of Ramma Nagara, he saw a crowd. He landed and asked a member of the crowd why they had gathered and was told that Dīpaṃkara Buddha was approaching. When he heard the word "buddha," he was overcome with joy. Seeing that people of the town were festooning the road Dīpaṃkara would be using with decorations, Sumedha decided to prepare and decorate a portion of the road himself. The Buddha arrived before his work was completed and, seeing that the Buddha was walking toward a mud puddle, Sumedha lay facedown and spread his long matted locks over the mud. While lying in the mud, Sumedha realized that, were he to follow Dīpaṃkara's teachings, he could become an ARHAT in that very lifetime. However, he resolved instead to achieve enlightenment at a time when there was no other buddha in the world, vowing to become a fully enlightened buddha (SAMYAKSAṂBUDDHA) like Dīpaṃkara himself. Dīpaṃkara, using his supranormal powers, looked into the future and confirmed that Sumedha's vow (PŪRVAPRAṆIDĀNA) would be fulfilled and he would one day become GAUTAMA Buddha, the fourth of five perfect buddhas of the present age. It was with this vow, and with this confirmation by Dīpaṃkara Buddha, that the bodhisattva began the path to buddhahood, which, according to the Pāli tradition, he would complete four innumerable plus one hundred thousand eons later.

Sumeru, Mount. (T. Ri rab; C. Xumishan/Miaogaoshan; J. Shumisen/Myōkōsen; K. Sumisan/Myogosan 須彌山/妙高山). The central axis of the universe in Buddhist cosmology; also known as Mount Meru. Mount Sumeru stands in the middle of the world as its axis and is eight leagues (YOJANA) high. It is surrounded by seven mountain ranges of gold, each separated from the other by an ocean. At the foot of the seventh range, there is a great ocean, contained at the perimeter of the world by a circle of iron mountains (CAKRAVĀḌA). In this vast ocean, there are four island continents in the four cardinal directions, each flanked by two island subcontinents. The northern continent is square, the eastern semicircular, the southern triangular, and the western round. Although humans inhabit all four continents, the "known world" is the southern continent, named JAMBUDVĪPA, where the current average height is four cubits and the current life span is one hundred years. The four faces of Mount Sumeru are flat, and are each composed of a different precious stone: gold in the north, silver in the east, lapis lazuli in the south, and crystal in the west. The substance determines the color of the sky over each of the four continents. The sky is blue in the southern continent of Jambudvīpa because the southern face of the Mount Sumeru is made of lapis. The slopes of Sumeru are the abode of demigods (ASURA), and its upper reaches are the heavens of the four heavenly kings (see CĀTURMAHĀRĀJAKĀYIKA, LOKAPĀLA). At the summit of the mountain is the heaven of the thirty-three (TRĀYASTRIṂŚA), ruled by the king of the gods, ŚAKRA. Above Mount Sumeru are located the remaining heavens of the sensuous realm (KĀMADHĀTU). Different Buddhist traditions identify Mount Sumeru with different local mountains, including Mount KAILĀSA in the Indian and Tibetan traditions, NAMSAN in the Korean tradition, etc. See also SHUMIDAN.

Sum rtags. (Sumtak). In Tibetan, lit. "the Thirty and Signs"; a common abbreviation for two works on Tibetan grammar, the *Lung du ston pa rtsa ba sum cu pa* ("Root Grammar in Thirty Verses") and *Lung du ston pa rtags kyi 'jug pa* ("Grammatical Guide to Signs"). The former is often called simply *Sum cu pa* ("The Thirty") and the latter *Rtags 'jug* ("Guide to Signs"). These works are traditionally said to have been composed c. 650, and are the only two extant treatises of eight works on grammar attributed to Thon mi Saṃbhota, the scholar who, according to legend, was dispatched to India by the Tibetan king SRONG BTSAN SGAM PO in order to devise an alphabet and grammar for the Tibetan language. The remaining six works in his oeuvre are said to have been destroyed during the persecution of Buddhism under the Tibetan king GLANG DAR MA. Both texts are still included as a part of the Tibetan Buddhist curriculum. The traditional dating of the texts as we now have them has been called into question because neither appears in its present redaction until about the twelfth century.

Sunakṣatra. (P. Sunakkhatta; T. Legs pa'i skar ma; C. Shanxing; J. Zenshō; K. Sŏnsŏng 善星). The Sankrit proper name of the man who, according to some sources, was the Buddha's half-brother and personal attendant prior to that position being held by ĀNANDA. Despite his personal connection to the Buddha and his extensive knowledge of his teachings, Sunakṣatra had no respect for the Buddha, saying that in his twenty-four years of service to him, he saw no difference whatsoever between the Buddha and himself apart from the fact that the Buddha had a six-foot aura. One week after resigning from his position, he died and was reborn as a PRETA. His story is often told as a cautionary tale about disparaging one's teacher. He appears in several Pāli suttas, both before and after he left the order, living longer than seven days after disparaging the Buddha. There, he is described as a Licchavi prince from Vesāli (S. VAIŚĀLĪ), who served as the Buddha's personal attendant but then left the order to become a disciple of the naked ascetic Korakkhattiya, the "dog man" who walked on all fours, barked like a dog, and ate like a dog without using his hands. Sunakṣatra (P. Sunakkhatta) disparaged the Buddha and said that the dharma did not put an end to suffering, criticizing the Buddha for not performing miracles and showing the origin of things. The Buddha warned him that Korakkhattiya would die in seven days and be reborn as an ASURA, which in fact occurred. Sunakṣatra then became the disciple of another naked ascetic, who also died according to the Buddha's prediction. In the MAHĀPARINIRVĀṆASŪTRA, Sunakṣatra is described as a monk who achieved the four levels of DHYĀNA but later, under the influence of other teachers, came to lose faith in the Buddha.

Sundarananda. (T. Mdzes dga'; C. Suntuoluonantuo; J. Sondarananda; K. Sondaranant'a 孫陀羅難陀). In Sanskrit and Pāli, "Handsome Nanda," an epithet of NANDA, either the cousin or a younger half-brother of the buddha GAUTAMA. In the second century CE, the Indian poet AŚVAGHOṢA wrote a famous verse retelling of Nanda's journey from enamored paramour and fiancé to enlightened ascetic in his verse narrative SAUNDARANANDA. See NANDA.

Sundarīnandā. (T. Mdzes dga' mo; C. Suntuoli; J. Sondari; K. Sondari 孫陀利). In Pāli and Sanskrit, "Gorgeous Nandā"; one of three prominent nuns named Nandā mentioned in the Pāli canon (the others being ABHIRŪPĀ-NANDĀ and JANAPADAKALYĀṆĪ-NANDĀ), all of whom share similar stories. She is also called simply Sundarī. According to the Pāli account, she was an eminent ARHAT declared by the Buddha to be foremost among his nun disciples in meditative powers. She was the daughter of ŚUDDHODANA and MAHĀPRAJĀPATĪ and so the sister of the arhat NANDA and the half-sister of the Buddha. Most of her male and female relatives had joined the order of monks and nuns, and so out of loyalty to them rather than strong faith she also joined. She received the sobriquet Sundarī because of her extraordinary beauty. She was by nature extremely vain about her looks and so reluctant to visit the Buddha lest he rebuke her for her vanity. When finally one day she accompanied other nuns to hear the Buddha preach, he, knowing her disposition, created an apparition of a most beautiful woman fanning him. Sundarī was entranced by the beauty of the conjured female, whom the Buddha then caused to age, grow haggard, die, and rot. Having shocked her with this horrible vision, the Buddha then preached to her of the frailty of physical beauty, whereupon Sundarī became a stream-enterer (SROTAĀPANNA). He then gave her a suitable subject of meditation (P. KAMMAṬṬHĀNA) through which, after intense practice, she gained insight into the impermanence (ANITYA), suffering (DUḤKHA) and absence of self (ANĀTMAN) of all conditioned things and attained arhatship. She won preeminence through the strength of her meditation, a distinction she had resolved to earn during the time of Padmottara Buddha.

Sundo. (C. Shundao 順道) (c. late-fourth century). In Korean, "In Accordance with the Way"; proper name of the Chinese monk to whom Korean historical sources attribute the official introduction of Buddhism into the Korean peninsula. In 372, King Fu Jian (337–385) of the Former Qin dynasty (351–394) is said to have sent Sundo as his personal envoy to the court of King Sosurim (r. 371–384) of the northern Korean kingdom of Koguryŏ. Sundo's mission appears to have been an expression of gratitude for Koguryŏ's help in vanquishing their common foe, the Former Yan (337–370) state. Sundo is said to have brought Buddhist images and scriptures with him to Koguryŏ. We have no record of specifically which images or texts Sundo may have brought; however, since Fu Jian actively supported the dissemination of MAITREYA images throughout his realm, we may assume Sundo's gifts would probably have included such images. This hypothesis is also supported by the prevalence of Maitreya piety in the early Korean tradition. The scriptures he brought were probably early texts of the MAHĀYĀNA tradition, or perhaps SARVĀSTIVĀDA materials. The Former Qin kingdom had established hegemony over eastern Turkestan, which exposed northern China, and thus Koguryŏ, to influences from across the Asian continent. Three years after his arrival in Korea, Sundo is said to have collaborated with two other monks in founding a Buddhist monastery in the new Koguryŏ capital near present-day P'yŏngyang, the first such monastery established on Korean soil. See also ZHI DUN.

sŭngkwa. (C. sengke; J. sōka 僧科). In Korean, "ecclesiastical examinations," a clerical examination system used in Korea from the early Koryŏ through early Chosŏn dynasties to exert state control over the ecclesiastical institution, by selecting monks who would hold official monastic positions. The examination system was established in 958 during the reign of the Koryŏ king Kwangjong (r. 949–975) and the examinations were originally administered every three years. There is no direct Chinese analogue for this kind of selective examination system conducted at the state level and it seems to have been a

distinctively Korean creation. There were two separate examinations to select official monks: the Doctrinal (KYO, C. Jiao) school selection (KYOJONG SŎN) and the Meditation (SŎN, C. CHAN) school selection (SŎNJONG SŎN). The selection examination for the Doctrinal (Kyo) school was held at WANGNYUNSA, one of the ten major monasteries built in the Koryŏ capital of Kaesŏng by Wang Kŏn (T'aejo, r. 918–943), the first king of the Koryŏ dynasty; the Meditation (Sŏn) exams were held at KWANGMYŎNGSA, also located in the capital. Monks who passed the examination were qualified to hold official ecclesiastical status. Monks in both the Kyo and Sŏn schools who passed the examinations were appointed, in ascending order, to the positions of taedŏk (great virtue), taesa (great master), ijungdaesa (second-grade great master), and samjungdaesa (third-grade great master). Beyond these positions common to both schools, there were two supreme positions exclusive to each school: sujwa (head seat) and SŬNGT'ONG for Kyo monks; and sŏnsa (Sŏn master) and taesŏnsa (great Sŏn master) for Sŏn monks. State preceptors (KUKSA) and royal preceptors (WANGSA), the highest ecclesiastical offices during the Koryŏ dynasty and the symbolic religious teachers to the state and the king, were appointed from monks who held the positions of sŭngt'ong or taesŏnsa. The subject matter for the Kyo examination was derived from the AVATAṂSAKASŪTRA (*Huayan jing*) and the DAŚABHŪMIVYĀKHYĀNA (SHIDIJING LUN); for the Sŏn examination, materials were taken from the JINGDE CHUANDENG LU and the SŎNMUN YŎMSONG CHIP. The examination system continued during the Chosŏn dynasty despite the state suppression of Buddhism, but was abolished during the reign of King Chungjong (r. 1506–1544). The monastic examinations were subsequently revived in 1550 during the reign of King Myŏngjong (r. 1545–1567), but again abolished in 1565.

sŭngmu. (僧舞). In Korean, "monk's dance"; a form of Korean Buddhist ritual dance that was originally performed by monks. During the Chosŏn dynasty (1392–1910), the sŭngmu gradually transformed into a dance performed primarily for artistic and entertainment purposes and is nowadays regarded as one of the major types of Korean traditional folk dance. The dance is typically performed to the accompaniment of a single drum. Modern professional solo dancers wear a white jacket with long and trailing sleeves, a white hood, a blue skirt, and a red sash crossing from shoulder to waist. The sophisticated gestures and delicate rhythmic sequences, as well as the mobile lines created by the long sleeve extension that cover the dancer's hands, create a peaceful yet dynamic composition. The delicate unison of dynamism and stillness in the sŭngmu is emblematic of Korean dance aesthetics. The T'AEGO CHONG of modern Korean Buddhism has sought to revive the sŭngmu as a specifically Buddhist dance form.

Sŭngnang. (C. Senglang; J. Sōrō 僧朗) (c. 450–c. 520). A monk putatively from the early Korean kingdom of Koguryŏ, whom JIZANG (549–623) credits with being an important vaunt courier in the development of the Chinese SAN LUN ZONG (K. Sam non chong), the Chinese counterpart of the MADHYAMAKA branch of Indian philosophical exegesis. Sŭngnang is claimed to have taught the notion of "three truths" or "three judgments" (SANDI)—the truths of emptiness, provisional reality, and their mean—an exegetical schema that was influential in the subsequent development of both the San lun and TIANTAI schools. It is uncertain whether Sŭngnang actually hailed from Koguryŏ, or was instead either a Koguryŏ hostage of the Northern Wei dynasty or a person of Chinese ancestry from the Liaodong region (which had been captured in 397 CE by the Koguryŏ king Kwanggaet'o).

sŭngt'ong. (僧統). In Korean, "SAṂGHA overseer," the highest ecclesiastical position that could be achieved by KYO (Doctrine) monks in the Korean monastic examination system (SŬNGKWA), especially during the Koryŏ dynasty. The position was first established in 551 by the Silla king Chinhŭng (r. 540–576) for the monk Hyeryang (c. sixth century). Initially, the appointee's major role was to help protect the court by hosting such national Buddhist services as the Inwang Paekkojwa hoe (Renwang Assembly of One-Hundred Seats) (see HUGUO FOJIAO). Later, as the Silla institution developed, the saṃgha overseer took actual charge of the national ecclesiastical affairs. During the Koryŏ dynasty, sŭngt'ong was the highest of the six positions that could be achieved by Kyo monks through the monastic examinations (sŭngkwa) (the equivalent in the Sŏn school of great Sŏn master, or taesŏnsa). The six Kyo positions in descending order were sŭngt'ong, sujwa (head seat), samjung taesa (third-grade great master), ijung taesa (second-grade great master), taesa (great master), and taedŏk (great virtue). Appointing an official national leader of the saṃgha became a long-standing Chinese tradition starting in the Six Dynasties period, when the Emperor Daowu (r. 386–409) of the Northern Wei dynasty appointed Faguo (fl. fourth century) as overseer of religion (daoren tong) probably around 396 and 397. During the Northern Dynasties, the position was called shamen tong (ŚRAMAṆA overseer) or zhaoxuan tong (luminous mystery overseer); under the Southern Dynasties, it was called sengzheng (saṃgha rectifier), sengzhu (saṃgha head), or daseng tong (great saṃgha overseer). Many later dynasties, including the Sui and Tang, had an equivalent ecclesiastical post.

sŭnim. (스님). In Korean, lit. "honored monastic"; a generic term used to refer to any ordained monk, nun, or novice. These different categories of the saṃgha are distinguished as pigu (BHIKṢU) sŭnim, piguni (BHIKṢUṆĪ) sŭnim, etc. Individual monastics in Korea are always referred to by their ordained names followed by sŭnim, thus Kusan sŭnim, Hyemyŏng sŭnim, etc. The term is a contraction of the Korean pronunciation of sŭng, the Sinograph that transcribes SAṂGHA (monastic congregation), plus the vernacular honorific suffix -nim.

śūnyatā. (T. stong pa nyid; C. kong; J. kū; K. kong 空). In Sanskrit, "emptiness"; the term has a number of denotations,

but is most commonly associated with the perfection of wisdom (PRAJÑĀPĀRAMITĀ) sūtras and the MADHYAMAKA school of Mahāyāna philosophy. In its earlier usage, "emptiness" (as śūnya) is the third of the four aspects of the truth of suffering (DUḤKHASATYA), the first of the FOUR NOBLE TRUTHS: viz., the aggregates (SKANDHA) are (1) impermanent, (2) associated with the contaminants, (3) empty of cleanliness, and (4) nonself. There are a number of explanations of emptiness in this early usage, but most suggest the absence of cleanliness or attractiveness in the body that would lead to grasping at the body as "mine" (S. ātmīya, mama). This misapprehension is counteracted by the application of mindfulness with regard to the body (KĀYĀNUPAŚYANĀ), which demonstrates the absence or emptiness of an independent, perduring soul (ĀTMAN) inherent in the skandhas. In its developed usage in the Madhyamaka school, as set forth by NĀGĀRJUNA and his commentators, emptiness becomes an application of the classical doctrine of no-self (ANĀTMAN) beyond the person (PUDGALA) and the skandhas to subsume all phenomena (DHARMA) in the universe. Emptiness is the lack or absence of intrinsic nature (SVABHĀVA) in any and all phenomena, the final nature of all things (DHARMATĀ), and the ultimate truth (PARAMĀRTHASATYA). Despite its various interpretations among the various Madhyamaka authors, emptiness is clearly neither nothingness nor the absence of existence, but rather the absence of a falsely imagined type of existence, identified as svabhāva. Because all phenomena are dependently arisen, they lack, or are empty of, an intrinsic nature characterized by independence and autonomy. Nāgārjuna thus equates śūnyatā and the notion of conditionality (PRATĪTYASAMUTPĀDA). The YOGĀCĀRA school introduces the concept of the "three natures" (TRISVABHĀVA) to give individual meanings to the lack of intrinsic existence (NIḤSVABHĀVA) in the imaginary nature (PARIKALPITASVABHĀVA), the dependent nature (PARATANTRASVABHĀVA), and the consummate nature (PARINIṢPANNASVABHĀVA). Pariniṣpanna in this Yogācāra interpretation is emptiness in the sense of the absence of a difference of entity between object and subject; it is the emptiness of the parikalpitasvabhāva or imagined nature in a paratantra or dependent nature. In Tibet, the question of the true meaning of emptiness led to the RANG STONG GZHAN STONG debate.

Śūnyatāsaptati. (T. Stong pa nyid bdun cu pa). In Sanskrit, "Seventy Stanzas on Emptiness"; one of the major works of NĀGĀRJUNA, and counted by Tibetans as part his philosophical corpus (YUKTIKĀYA). It is a work in seventy-three stanzas, which serves as a kind of appendix to the MŪLAMADHYAMAKAKĀRIKĀ, summarizing what is said there while adding some new topics. It declares that all phenomena, including the twelve links in the chain of dependent origination (PRATĪTYASAMUTPĀDA) exist only conventionally; the statement that everything is impermanent does not imply the existence of entities that have the property of impermanence. Reasoning (YUKTI) demonstrates that ultimately everything is unproduced (ANUTPANNA), including NIRVĀṆA. All entities (BHĀVA) are dependently arisen and empty (śūnya), including KARMAN and the five aggregates (SKANDHA). Ignorance (AVIDYĀ) disappears when it is understood that there is no self. The ultimate (PARAMĀRTHA) is emptiness (ŚŪNYATĀ) but this realization is gained through the conventional (SAṂVṚTTI); the person endowed with faith (ŚRADDHĀ) who investigates dependent origination with reasoning will achieve tranquility. There is an autocommentary (svavṛtti) to the text ascribed to Nāgārjuna. There is also a commentary by CANDRAKĪRTI, the *Śūnyatāsaptativṛtti*. The *Śūnyatāsaptati* is not included in the Chinese canon.

śūnyatāśūnyatā. (T. stong pa nyid kyi stong pa nyid; C. kongkong; J. kūkū; K. konggong 空空). In Sanskrit, lit. the "emptiness of emptiness," the most famous of the sixteen, eighteen, or twenty types of emptiness, indicating that emptiness is itself devoid of intrinsic nature (NIḤSVABHĀVA) and is therefore itself empty. YOGĀCĀRA-influenced interpretations of śūnyatāśūnyatā associate it with the emptiness of knowledge (jñānaśūnyatā). According to these interpretations, the first three in the list of emptinesses are inner (adhyātma) emptiness, outer (bahirdhā) emptiness, and the emptiness of both (ubhaya), where inner is a word for the six sense bases (INDRIYA), outer for their six sensory objects (VIṢAYA) and both for the physical receptacles (the physical eye and so on) of the six sense bases. Having understood the emptiness of all those elements, only the knowledge of emptiness remains; hence, the emptiness of that knowledge is called the emptiness of emptinesses, the fourth in the list.

Śūnyavāda. (T. Stong pa nyid smra ba; C. Kong zong; J. Kūshū; K. Kong chong 空宗). In Sanskrit, "Proponent of the Empty," another name for the MADHYAMAKA school, one usually used by the Buddhist and non-Buddhist opponents of Madhyamaka, who regarded the Madhyamaka view as a form of nihilism. However, it is important to note that CANDRAKĪRTI uses the term śūnyatādarśana, "the philosophical school of emptiness." The term also indicates that, although the terms śūnya and ŚŪNYATĀ are employed in all schools of Buddhist philosophy, they were associated particularly with the Madhyamaka.

Suppavāsā-Koḷiyadhītā. (S. Supravāsā-Koliyadhītṛ). The Pāli name of an eminent lay disciple of the Buddha declared by him to be foremost among laywomen who give choice alms food. According to the Pāli account, she was the daughter of the king of Koḷiya and was married to a Licchavi chieftain named Mahāli. She lived in the village of Sajjanela and later moved to ŚRĀVASTĪ. On a visit to Sajjanela, the Buddha once preached to her on the merits of giving alms food. She was always careful to give the best of foods to the Buddha and his monks, for which reason she attained preeminence in this regard, an honor she aspired to in a previous life during the time of Padmottara Buddha. She is praised along with the renowned donors ANĀTHAPIṆḌADA and VIŚĀKHĀ for her exceptional gifts, which were always welcomed by members of the order. Suppavāsā is most famous as the mother of the arhat SĪVALI.

She was pregnant with him for seven years and for seven days she was suffering through protracted labor. Believing that she would not survive the ordeal, she sent a gift to the buddha through her husband so that she could earn merit before her death. The buddha received the gift and she immediately gave birth to her son. Sīvali was compelled to stay in her womb for so long in retribution for having once laid siege to the city of Vārāṇasī for seven days while he was a prince in a previous existence. Suppavāsā had been his mother in that life as well.

Supriyā. (P. Suppiyā; T. Rab dga' ba; C. Xupiye nü; J. Shubiyanyo; K. Subiyanyŏ 須毘耶女). Sanskrit name of an eminent lay disciple (UPĀSIKĀ) of the Buddha, whom he declared foremost among laywomen who comfort the sick. Supriyā lived in Vārāṇasī with her husband Supriya. Both were devoted followers of the Buddha and generous patrons of the order. Once, while visiting a monastery, Supriyā encountered a sick monk in need of meat broth. She sent a servant to market to fetch some meat but none was to be had in all of Vārāṇasī. She therefore cut a piece of flesh from her thigh and gave it to her servant to make into broth, after which, ill from her injury, she lay on her bed. Her husband rejoiced at her piety and invited the Buddha to the morning meal the next day. When the Buddha was informed of her deed, he praised her for her generosity and through his supranormal powers magically healed her wounds. As a consequence of Supriyā's offering, however, the Buddha passed a rule forbidding monks to eat human flesh, even when it is freely given.

Sūra Ambaṭṭha. (S. Śūra Āmraṣṭha; C. Yongjian zhangzhe; J. Yūken chōja; K. Yonggŏn changja 勇健長者). The Pāli name of an eminent lay disciple (UPĀSAKA) of the Buddha declared by him to be foremost among laymen in unwavering trust. Sūra Ambaṭṭha in Pāli means "hero who stays by the mango tree"; he was born into the family of a wealthy banker dwelling in ŚRĀVASTĪ. According to the Pāli account, he was originally the follower of a rival sect of recluses (ŚRAMAṆA). One day, the Buddha saw Sūra and, noting that he was ripe for conversion, went to his door for alms. Although his allegiance was to another teacher, out of deference Sūra invited the Buddha into his home to partake of his morning meal. When the Buddha spoke to him after the meal, Sūra became a stream-enterer (SROTAĀPANNA), thus marking his conversion. MĀRA, hoping to shake Sūra's newfound faith, appeared at his door in the guise of the Buddha. He said he had returned to correct a mistake he had made when preaching to him earlier. Believing Māra's conjured body to be the Buddha, Sūra let him in. Māra stated that whereas he had explained that all conditioned things were impermanent, he should have said that only some were impermanent. Since Sūra was already a stream-enterer, he easily saw through the ruse and promptly drove Māra from his house.

śūraṃgamasamādhi. (T. dpa' bar 'gro ba'i ting nge 'dzin; C. shoulengyan sanmei; J. shuryōgon zanmai; K. sunŭngŏm sammae 首楞嚴三昧). In Sanskrit, "heroic-march concentration," a SAMĀDHI in which the mind becomes free and unimpeded like the "march" (gama) of a "hero" (śūra), who "walks alone, fearlessly, like a lion." The śūraṃgama concentration (samādhi) as taught in the ŚŪRAṂGAMASAMĀDHISŪTRA, an eponymously titled early MAHĀYĀNA sūtra, not only enables BODHISATTVAS quickly to attain complete, perfect enlightenment (ANUTTARASAMYAKSAṂBODHI), but also ensures that even ŚRĀVAKAS, PRATYEKABUDDHAS, and ARHATS who benightedly believe themselves to be practicing correctly by following the HĪNAYĀNA are actually put on the right path leading to buddhahood. In addition, the śūraṃgamasamādhi also permits enlightened beings to manifest themselves in any variety of forms in order to teach sentient beings, so that ultimately anyone one encounters in life may in fact be an enlightened buddha. In the Chinese apocryphon, *Shoulengyan jing* (*ŚŪRAṂGAMASŪTRA), the Buddha also teaches a different version of the śūraṃgamasamādhi, where the concentration counters the false views about the aggregates (SKANDHA) and consciousness (VIJÑĀNA) and reveals the TATHĀGATAGARBHA that is inherent in all sentient beings. This tathāgatagarbha, or buddha-nature, is made manifest through the śūraṃgamasamādhi, which constitutes the "heroic march" forward toward enlightenment.

Śūraṃgamasamādhisūtra. (T. Dpa' bar 'gro ba'i ting nge 'dzin gyi mdo; C. Shoulengyan sanmei jing; J. Shuryōgon zanmaikyō; K. Sunŭngŏm sammae kyŏng 首楞嚴三昧經). In Sanskrit, "Sūtra on the Heroic-March Concentration," an early MAHĀYĀNA sūtra that explains how the mind becomes free and unimpeded like the "march" (gama) of a "hero" (śūra), who "walks alone, fearlessly, like a lion." (This translated sūtra should be distinguished from the *ŚŪRAṂGAMASŪTRA, a Chinese apocryphal scripture of similar name, which dates from the early eighth century.) The ŚŪRAṂGAMASAMĀDHI as taught in this sūtra not only enables BODHISATTVAS quickly to attain complete, perfect enlightenment (ANUTTARASAMYAKSAṂBODHI), but also ensures that even ŚRĀVAKAS, PRATYEKABUDDHAS, and ARHATS are put on the right path leading to buddhahood. In addition, the śūraṃgamasamādhi also permits enlightened beings to manifest themselves in any variety of forms in order to teach sentient beings. The sūtra also includes descriptions of the world systems of many other buddhas (BUDDHAKṢETRA), including ABHIRATI, the buddha-land of AKṢOBHYA. Although some fragments of the Sanskrit recension of the *Śūraṃgamasamādhisūtra* have survived, the full sūtra is extant only in an early-fifth-century translation attributed to the eminent Kuchean translator KUMĀRAJĪVA, in two rolls, and in an early-ninth-century Tibetan translation.

***Śūraṃgamasūtra**. (T. Dpa' bar 'gro ba'i mdo; C. Shoulengyan jing; J. Shuryōgongyō; K. Sunŭngŏm kyŏng 首楞嚴經). A Chinese indigenous scripture (see APOCRYPHA), usually known in the West by its reconstructed Sanskrit title *Śūraṃgamasūtra*, meaning "Heroic March Sūtra." Its full title is *Dafoding rulai miyin xiuzheng liaoyi zhu pusa wanxing Shoulengyan jing*; in ten rolls. (This indigenous scripture should

be distinguished from an early-fifth century Chinese translation of the ŚŪRAṂGAMASAMĀDHISŪTRA, attributed by KUMĀRAJĪVA, in two rolls, for which Sanskrit fragments are extant.) According to the account in the Chinese cataloguer Zhisheng's *Xu gujin yijing tuji*, the *Śūraṃgamasūtra* was brought to China by a ŚRAMAṆA named Pāramiti. Because the *Śūraṃgamasūtra* had been proclaimed a national treasure, the Indian king had forbidden anyone to take the sūtra out of the country. In order to transmit this scripture to China, Pāramiti wrote the sūtra out in minute letters on extremely fine silk, then he cut open his arm and hid the small scroll inside his flesh. With the sūtra safely hidden away, Pāramiti set out for China and eventually arrived in Guangdong province. There, he happened to meet the exiled Prime Minister Fangrong, who invited him to reside at the monastery of Zhizhisi, where he translated the sūtra in 705 CE. Apart from Pāramiti's putative connection to the *Śūraṃgamasūtra*, however, nothing more is known about him and he has no biography in the GAOSENG ZHUAN ("Biographies of Eminent Monks"). Zhisheng also has an entry on the *Śūraṃgamasūtra* in his KAIYUAN SHIJIAO LU, but there are contradictions in these two extant catalogue accounts of the sūtra's transmission and translation. The *Kaiyuan Shijiao lu* merely records that the śramaṇa Huidi encountered an unnamed Western monk at Guangdong, who had with him a copy of the Sanskrit recension of this sūtra, and Huidi invited him to translate the scripture together. Since the names of this Western monk and his patron Fangrong are not mentioned, the authenticity of the scripture has been called into question. Although Zhisheng assumed the *Śūraṃgamasūtra* was a genuine Indian scripture, the fact that no Sanskrit manuscript of the text is known to exist, as well as the inconsistencies in the stories about its transmission to China, have led scholiasts for centuries to questions the scripture's authenticity. There is also internal evidence of the scripture's Chinese provenance, such as the presence of such indigenous Chinese philosophical concepts as yin-yang cosmology and the five elements (wuxing) theory, the stylistic beauty of the literary Chinese in which the text is written, etc. For these and other reasons, the *Śūraṃgamasūtra* is now generally recognized to be a Chinese apocryphal composition. The sūtra opens with one of the most celebrated stories in East Asian Buddhist literature: the Buddha's attendant ĀNANDA's near seduction by the harlot Mātaṅgī. With Ānanda close to being in flagrante delicto, the Buddha sends the bodhisattva MAÑJUŚRĪ to save him from a PĀRĀJIKA offense, by employing the śūraṃgama DHĀRAṆĪ to thwart Mātaṅgī's seductive magic. The Buddha uses the experience to teach to Ānanda and the congregation the ŚŪRAṂGAMASAMĀDHI, which counters the false views about the aggregates (SKANDHA) and consciousness (VIJÑĀNA) and reveals the TATHĀGATAGARBHA that is inherent in all sentient beings. This tathāgatagarbha, or buddha-nature, is made manifest through the śūraṃgamasamādhi, which constitutes the "heroic march" forward toward enlightenment. The *Śūraṃgamasūtra* was especially influential in the CHAN school during the Song and Ming dynasties, which used the text as the scriptural justification for the school's distinctive teaching that Chan "points directly to the human mind" (ZHIZHI RENXIN), so that one may "see the nature and achieve buddhahood" (JIANXING CHENGFO). Several noted figures within the Chan school achieved their own awakenings through the influence of the *Śūraṃgamasūtra*, including the Ming-dynasty master HANSHAN DEQING (1546–1623), and the sūtra was particularly important in the writings of such Ming-dynasty Chan masters as YUNQI ZHUHONG (1535–1615). The leading Chan monk of modern Chinese Buddhism, XUYUN (1840–1959), advocated the practice of the *Śūraṃgamasūtra* throughout his life, and it was the only scripture that he ever annotated. As a mark of the sūtra's influence in East Asian Buddhism, the *Śūraṃgamasūtra* is one of the few apocryphal scriptures that receives its own mention in another indigenous sūtra: the apocryphal *Foshuo fa miejin jing* ("The Sūtra on the Extinction of the Dharma") states that the first sūtra to disappear from the world during the dharma-ending age (MOFA) will in fact be the *Śūraṃgamasūtra*. The Tibetan translation of this Chinese apocryphon was produced during the Qianlong era (1735–1796) of the Qing dynasty; the scripture was apparently so important in contemporary Chinese Buddhism that it was deemed essential for it to be represented in the Tibetan canon as well.

***Susiddhikarasūtra**. (C. Suxidi jieluo jing; J. Soshijjikarakyō; K. Sosilchi kalla kyŏng 蘇悉地羯羅經). In Sanskrit, "Perfect Achievement Sūtra"; an important SŪTRA of the esoteric Buddhist traditions (see TANTRA and MIKKYŌ). No Sanskrit edition of the *Susiddhikarasūtra* is known to exist; the Sanskrit title is reconstructed from the Chinese translation (726) attributed to the Indian TREPIṬAKA ŚUBHAKARASIṂHA. The *Susiddhikaramahātantrasādhanopāyikapaṭala* found in the Tibetan canon is a translation in seventy-five folios (*Legs par grub par byed pa'i rgyud chen po las sgrub pa'i thabs rim par phye pa*) and is categorized by the editor BU STON as an important KRIYĀTANTRA. The Tibetan title means "SĀDHANA Section of the Susiddhikara Great Tantra." The *Susiddhikarasūtra*, along with the MAHĀVAIROCANĀBHISAṂBODHISŪTRA and the SARVATATHĀGATATATTVASAṂGRAHA, is considered one of the three central texts of the esoteric branch of the TENDAI tradition known as TAIMITSU.

Susim kyŏl. (C. Xiuxin jue 修心訣). In Korean, "Secrets on Cultivating the Mind," one of the most popular tracts on the practice of SŎN (C. CHAN), by the Korean Sŏn master POJO CHINUL (1158–1210); composed c. 1203–1205 at the newly established SUSŎNSA religious community. The tract provides a detailed outline of Chinul's preferred soteriological stratagem of "sudden awakening/gradual cultivation" (K. tono chŏmsu; DUNWU JIANXIU), that is, an initial sudden awakening to one's buddha-nature, followed by gradual cultivation of that awakening until one is able not only to be but also to act enlightened. Chinul also covers here the cultivation in tandem of concentration (SAMĀDHI) and wisdom (PRAJÑĀ), which treats these two meditative

aids not as stages in a sequential series of meditative practices but instead as the calm and alert aspects of the mind-nature itself. The *Susim kyŏl* was lost in Korea following the Mongol invasions of the mid-thirteenth century and was not reintroduced to the peninsula (via a Northern Ming edition) until about two centuries later. It was translated into the Korean vernacular in 1467 and remains today one of the most widely read Korean Sŏn works.

Susŏnsa. (修禪社). In Korean, "SŎN Cultivation Community"; the later name for the meditation retreat known originally as the CHŎNGYE KYŎLSA or "SAMĀDHI and PRAJÑĀ Community," established by the Korean Sŏn master POJO CHINUL (1158–1210) at the monastery of Kŏjosa on Mt. Kong in 1188. As the community grew, Chinul had to search for a more suitable location that would accommodate the large number of participants. In 1197, Chinul's disciple Suu (d.u.) began reconstruction of a small, dilapidated temple known as Kilsangsa on Mt. Songgwang. The community was relocated to the new site in 1200, but because a nearby monastery was also called Chŏnghyesa (Samādhi and Prajñā Monastery), Chinul was forced to seek another name for his community. King Hŭijong (r. 1204–1211) gave the community its new name of Susŏnsa, or Sŏn Cultivation Community. Largely through the efforts of Chinul's successor CHIN'GAK HYESIM, the Susŏnsa community became an influential Buddhist institution and remained so throughout the Koryŏ dynasty. Susŏnsa eventually became the influential monastery that has been known since the Chosŏn dynasty as SONGGWANGSA. The meditation hall at Songgwangsa is still called Susŏnsa.

sūtra. (P. sutta; T. mdo; C. jing; J. kyō; K. kyŏng 經). In Sanskrit, lit. "aphorism," but in a Buddhist context translated as "discourse," "sermon," or "scripture"; a sermon said to be delivered by the Buddha or delivered with his sanction. A term probably used originally to refer to sayings of the Buddha that were preserved orally by his followers (and hence called "aphorisms"), the sūtra developed into its own genre of Buddhist literature, with a fairly standard set of literary conventions. The most famous of these conventions was the phrase used to begin a sūtra, "Thus have I heard" (EVAṂ MAYĀ ŚRUTAM), intended to certify that what was to follow was the first-person report of the Buddha's attendant ĀNANDA (see SAṂGĪTIKĀRA) who was most often in the Buddha's presence and was renowned for his prodigious memory. Also standard was the NIDĀNA, which describes the setting of the sūtra, noting where the Buddha was residing at the time, who was in the audience, who was the interlocutor, etc. According to tradition, the sūtras were first codified when Ānanda recited them at the first Buddhist council (see COUNCIL, FIRST), shortly after the Buddha's death. This conceit of orality was maintained even for sūtras that were literary compositions, written long after the Buddha, most notably, the hundreds of MAHĀYĀNA sūtras that began to appear in India starting some four hundred years after the Buddha's NIRVĀṆA. An important theme in these sūtras and their commentaries is the claim that they are indeed the word of the Buddha (BUDDHAVACANA). In the standard threefold division of the Buddha's teachings, sūtra indicates the contents of the SŪTRAPIṬAKA, a grouping of texts that together with the VINAYA and ABHIDHARMA together constitute the TRIPIṬAKA, or "three baskets." In tantric literature, sūtra is used to refer to the exoteric teachings of the Buddha, in contrast to the tantras, his esoteric teachings. It is also one of the nine (NAVAṄGA[PĀVACANA]) (Pāli) or twelve (DVĀDAŚĀṄGA [PRAVACANA]) (Sanskrit) categories (AṄGA) of Buddhist scripture, according to structure or literary style.

Sūtrālaṃkāra. (S). See MAHĀYĀNASŪTRĀLAṂKĀRA.

sūtrānta. (P. suttanta; T. mdo sde). A synonym for SŪTRA, used also to designate the category of sūtras. In Pāli, SUTTANTA is typically reserved for the longer suttas collected in the DĪGHANIKĀYA.

sūtrapiṭaka. (P. suttapiṭaka; T. mdo sde'i sde snod; C. jingzang; J. kyōzō; K. kyŏngjang 經藏). In Sanskrit, "basket of discourses," one of the three constituents of the TRIPIṬAKA (together with the VINAYAPIṬAKA and the ABHIDHARMAPIṬAKA). This basket is a disparate collection of thousands of texts attributed to the Buddha (or said to be spoken with his sanction), varying in length from extended narrative accounts to short epigrams. The Pāli suttapiṭaka is divided into five groups, or NIKĀYA. These are the DĪGHANIKĀYA, or "Long Group," comprising thirty-four lengthier sūtras; the MAJJHIMANIKĀYA, or "Middle [Length] Group," comprising 152 sūtras; the SAṂYUTTANIKĀYA or "Related Group," comprising (by some counts) some seven thousand sūtras, organized largely by subject matter in fifty-six categories; the AṄGUTTARANIKĀYA, literally, the "Group Increasing by a Factor," or more generally, the "Numerical Group," an anthology of nearly ten thousand brief texts organized by the number of the subject, with the first group dealing with single things, the second dealing with pairs, the third dealing with things that occur in threes, up to things that occur in groups of eleven; and finally the KHUDDAKANIKĀYA, or "Small Group," a diverse collection of miscellaneous texts, including such famous works as the Pāli DHAMMAPADA. Although the *Khuddakanikāya* contains some early works, as an independent nikāya, it appears to have been the last to be added to the tipiṭaka and is not mentioned in early accounts. The suttapiṭaka seems to have been preserved orally for centuries, before being committed to writing in Sri Lanka at the end of the first century BCE. The sūtrapiṭakas of other Indian NIKĀYAS (schools) translated from a number of Indian languages into Chinese and Tibetan use the word ĀGAMA (tradition) in place of nikāya (group) for the groupings of sūtras in their respective canons. In their Chinese translations, the DĪRGHĀGAMA or "Long Discourses," belonging to the DHARMAGUPTAKA school, corresponds to the Pāli *Dīghanikāya*; the MADHYAMĀGAMA or "Middle-Length Discourses" of the SARVĀSTIVĀDA school corresponds to the Pāli *Majjhimanikāya*; the SAṂYUKTĀGAMA or "Connected Discourses," belonging to the Sarvāstivāda school (with a partial translation perhaps belonging

to the KĀŚYAPĪYA school) corresponds to the Pāli *Saṃyuttanikāya*; and the EKOTTARĀGAMA or "Numerically Arranged Discourses," variously ascribed to the DHARMAGUPTAKAS, or less plausibly the MAHĀSĀṂGHIKA school or its PRAJÑAPTIVĀDA offshoot, corresponds to the Pāli *Aṅguttaranikāya*. Despite the similarities in the titles of these collections, there are substantial differences between the contents of the Sanskrit āgamas and the Pāli nikāyas. The Khuddakanikāya ("Miscellaneous Collection"), the fifth nikāya in the Pāli canon, has no equivalent in the extant Chinese translations of the āgamas; such miscellanies, or "mixed baskets" (S. kṣudrakapiṭaka), were however known to have existed in several of the mainstream Buddhist schools, including the Dharmaguptaka, Mahāsāṃghika, and MAHĪŚĀSAKA.

Sūtrasamuccaya. (T. Mdo kun las btus pa; C. Dasheng baoyaoyi lun; J. Daijō hōyōgiron; K. Taesŭng poyoŭi non 大乘寶要義論). In Sanskrit, "Compendium of Sūtras," a work attributed to NĀGĀRJUNA, an anthology of passages from sixty-eight mainly MAHĀYĀNA sūtras (or collections of sūtras), organized under thirteen topics. These topics extol the bodhisattva and the Mahāyāna path, noting the rarity and hence precious nature of such things as faith in the Buddha, great compassion, and laymen who are able to follow the bodhisattva path. The text is of historical interest because it provides evidence of the Mahāyāna sūtras that were extant at the time of Nāgārjuna. These include, in addition to various PRAJÑĀPĀRAMITĀ sūtras, such famous works as the LAṄKĀVATĀRASŪTRA, the DAŚABHŪMIKASŪTRA, the SADDHARMAPUṆḌARĪKASŪTRA, and the VIMALAKĪRTINIRDEŚA. The Chinese translation was made by Dharmarakṣa (c. 1018–1058) during the Northern Song dynasty and was among the last stratum of Indian materials to be entered into the Chinese Buddhist canon (C. DAZANGJING).

sūtravibhaṅga. (P. suttavibhaṅga; T. mdo rnam par 'byed pa; C. jingfenbie; J. kyōfunbetsu; K. kyŏngbunbyŏl 經分別). In Sanskrit, "analysis of the SŪTRAS," a section of the VINAYA that comments on the PRĀTIMOKṢA; also known as the VINAYAVIBHAṄGA. The prātimokṣa is a list of rules that monks and nuns must follow. The sūtravibhaṅga comments on each rule according to a fourfold structure. First, the text recounts the occasion for the formulation of the rule. According to the tradition, the Buddha did not initially impose rules on the SAṂGHA, but created the monastic code gradually as misconduct that required correction began to appear in the order. Thus, each rule was declared by the Buddha in a specific circumstance, only after a misdeed had occurred. The Buddha would then make a rule prohibiting that deed, without any retrospective sanction against the original perpetrator, since no rule was in place at the time of the misdeed. This section explains the circumstances that led to the Buddha's announcement of the rule and may include more than one story. (In the case of subcategories of a misdeed, the Buddha is not always mentioned.) This section of the text provides important insights into monastic life in India at the time. Second, the specific prātimokṣa rule is stated. Third, the text provides a word-for-word commentary on the rule as it is set forth in the prātimokṣa. Finally, accounts are provided of circumstances under which the rule might be violated without sanction or with reduced sanction. The sūtravibhaṅga is organized according to the eight sections of the prātimokṣa. There are separate versions of the text for BHIKṢUS and BHIKṢUṆĪS, with the former also being known as the mahāvibhaṅga. In most vinaya traditions, a prātimokṣa exists as a separate text, but in the Pāli vinaya, the pāṭimokkha is embedded within the SUTTAVIBHAṄGA.

sutta. In Pāli, "discourses." See SŪTRA.

Suttanipāta. In Pāli, "Sutta Collection"; the fifth book of the KHUDDAKANIKĀYA of the Pāli SUTTAPIṬAKA, which includes texts that derive from the earliest stratum of the Pāli canon. It is comprised of five VAGGAS or chapters, the *Uragavagga*, *Cūḷavagga*, MAHĀVAGGA, AṬṬHAKAVAGGA, and the *Pārāyaṇavagga*. The *Aṭṭhakavagga* and *Pārāyaṇavagga* are believed to have been early collections that circulated independently, as there is a canonical commentary on them, the NIDDESA, that ignores the other vaggas. They also include verse passages that metrical evidence places as among the most archaic in the canon.

suttanta. In Pāli, a synonym for SŪTRA, used also to designate the category of scriptural literature. In Pāli, suttanta is typically reserved for the longer suttas collected in the DĪGHANIKĀYA. See also SŪTRĀNTA.

suttapiṭaka. In Pāli, "basket of discourses," the first of the "three baskets" (P. TIPIṬAKA; S. TRIPIṬAKA) of the Buddhist canon. See SŪTRAPIṬAKA.

suttavibhaṅga. In Pāli, "analysis of the suttas"; the first major section of the Pāli VINAYAPIṬAKA. Embedded within the suttavibhaṅga is the pāṭimokkha (S. PRĀTIMOKṢA), a collection of 227 rules (311 for nuns) that were to be followed by fully ordained members of the Buddhist monastic community. The bulk of the suttavibhaṅga contains narratives and commentaries related to the promulgation of the pāṭimokkha rules, which explain the events that led to the Buddha's decision to establish a specific rule. Following the Buddha's pronouncement of the rule, the rule may be interpreted with word-for-word commentary and/or details that might justify an exception to the rule. In the suttavibhaṅga, these narrative and commentarial treatments are organized in the same way as the pāṭimokkha itself, that is, according to the category of offense. Thus, the suttavibhaṅga begins with the PĀRĀJIKA (defeat) offenses and works its way through the remaining sections of the pāṭimokkha. See also SŪTRAVIBHAṄGA.

Suvaṇṇabhūmi. (S. Suvarṇabhūmi). In Pāli, "The Golden Land," a territory generally identified with the Mon homeland of Rāmaññadesa in Lower Burma (Myanmar) lying along the coast

of the Bay of Bengal from the Irrawaddy (Ayeyarwady) river delta in the west to Martaban in the east. Some chroniclers locate Suvaṇṇabhūmi to the east of the Isthmus of Kra along the southern Thai coast. According to Pāli sources, it was the destination of one of nine Buddhist missions dispatched during the reign of AŚOKA from Pātaliputra (S. PĀṬALIPUTRA, modern Patna) to adjacent lands by the elder MOGGALIPUTTATISSA after the convention of the third Buddhist council (see COUNCIL, THIRD) in the third century BCE. The elders SOṆA AND UTTARA were sent as missionaries to convert Suvaṇṇabhūmi. The third Buddhist council at Pātaliputra and the nine Buddhist missions are known only in Pāli sources and are first recorded in the fifth-century DĪPAVAṂSA.

Suvarṇadvīpa. (S). One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA.

Suvarṇaprabhāsottamasūtra. (T. Gser 'od dam pa'i mdo; C. Jinguangming zuishengwang jing; J. Konkōmyō saishōōkyō; K. Kŭmgwangmyŏng ch'oesŭngwang kyŏng 金光明最勝王經). In Sanskrit, "Sūtra of Supreme Golden Light," an influential MAHĀYĀNA sūtra, especially in East Asia. Scholars speculate that the text originated in India in the fourth century and was gradually augmented. It was translated into Chinese by YIJING in 703. The sūtra contains many DHĀRAṆĪ and is considered by some to be a proto-tantric text; in some editions of the Tibetan canon it is classified as a TANTRA. It is important in East Asian Buddhism for two main reasons. First was the role the sūtra played in conceptualizing state-protection Buddhism (HUGUO FOJIAO). The sūtra declares that deities will protect the lands of rulers who worship and uphold the sūtra, bringing peace and prosperity, but will abandon the lands of rulers who do not, such that all manner of catastrophe will befall their kingdoms. The sūtra was thus central to "state protection" practices in East Asia, together with the SADDHARMAPUṆḌARĪKASŪTRA and the RENWANG JING. Second, the sūtra provides the locus classicus for the "water and land ceremony" (SHUILU HUI), a ritual intended for universal salvation, but especially of living creatures who inhabit the most painful domains of SAṂSĀRA; the ceremony was also performed for a variety of this-worldly purposes, including state protection and rain-making. According to the sūtra, in a previous life, the Buddha was a merchant's son named Jalavāhana, who one day encountered a dried-up pond in the forest, filled with thousands of dying fish. Summoning twenty elephants, he carried bags of water from a river into the forest and replenished the pond, saving the fish. He then sent for food with which to feed them. Finally, recalling that anyone who hears the name of the buddha Ratnaśikhin will be reborn in the heavens, he waded into the pond and pronounced the Buddha's name, followed by an exposition of dependent origination. When the fish died, they were reborn in the TRĀYASTRIṂŚA heaven. Recalling the reason for their happy fate, they visited the world of humans, where each offered a pearl necklace to Jalavāhana's head, foot, right side, and left side. The sūtra also tells the story of Prince Mahāsattva who sees a starving tigress and her cubs. He throws himself off a cliff to commit suicide so that the tiger might eat his body (see NAMO BUDDHA). This is one of the most famous cases of DEHADĀNA, or gift of the body.

Suvarṣaka. (C. Shansui; J. Zensai; K. Sŏnse 善歲). In Sanskrit, the surname of the founder of the KĀŚYAPĪYA school, one of the eighteen traditional schools of mainstream Indian Buddhism. See KĀŚYAPĪYA.

***suvibhaktadharmacakra**. (T. legs par rnam par phye ba dang ldan pa'i chos 'khor; C. zhengzhuan falun; J. shōtenpōrin; K. chŭngjŏn pŏmnyun 證轉法輪). In Sanskrit, lit., "the dharma wheel that makes a fine delineation"; the third of the three turnings of the wheel of the dharma described in the SAṂDHINIRMOCANASŪTRA, said to have been delivered in VAIŚĀLĪ. It is also known as the PARAMĀRTHAVINIŚCAYADHARMACAKRA, or "the dharma wheel for ascertaining the ultimate," as the pravicayadharmacakra, or "the dharma wheel of investigation," and simply as the antyadharmacakra or "final wheel of the dharma." The sūtra identifies this as a teaching for bodhisattvas and classifies it as definitive (NĪTĀRTHA); this third turning of the wheel is the teaching of the *Saṃdhinirmocanasūtra* itself. According to the commentators, in this sūtra the Buddha, through his anamuensis Paramārthasamudgata, sets forth in clear and plain language what he means by his provisional statements in the first wheel of the dharma (see CATUḤSATYADHARMACAKRA), namely, that the FOUR NOBLE TRUTHS exist; and his statement in his middle wheel of the dharma in the PRAJÑĀPĀRAMITĀ SŪTRAS (perfection of wisdom sūtras) (see ALAKṢAṆADHARMACAKRA) that no dharmas exist. Both of the first two wheels are declared to be provisional (NEYĀRTHA). Here, in this definitive teaching called "the dharma wheel that makes a fine delineation," he says that dharmas have three natures (TRISVABHĀVA), and each of those in its own way lacks an intrinsic nature (SVABHĀVA). The three natures are the PARIKALPITA or imaginary nature, the PARATANTRA or dependent nature, and the PARINIṢPANNA or consummate nature. ¶ In Tibet there were different schools of interpretation of the three wheels of doctrine. The third Karma pa RANG 'BYUNG RDO RJE, DOL PO PA SHES RAB RGYAL MTSHAN, and the nineteenth-century RIS MED masters assert that the *Saṃdhinirmocanasūtra*'s third wheel of dharma is definitive and teaches a great MADHYAMAKA (DBU MA CHEN PO). They say this great Madhyamaka is set forth with great clarity in the ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA and, particularly, in the RATNAGOTRAVIBHĀGA ("Delineation of the Jewel Lineage"; alt. title, *Uttaratantra*). They argue that in the second turning of the wheel, the prajñāpāramitā sūtras, the Buddha uses apophatic language to stress the need to eliminate KLEŚAS and false superimpositions. He does not clearly delineate, as he does in the third turning, the TATHĀGATAGARBHA, which is both empty (śūnya) of all afflictions (kleśa) and nonempty (aśūnya), viz., full of all the Buddha's virtues. Hence they assert that the third turning of dharma in the *Samdhinirmocanasūtra* sets forth the "great Madhyamaka" (dbu ma chen po), and

is a definitive teaching that avoids both apophatic and kataphatic extremes. Others, most notably TSONG KHA PA, disagree, asserting that the *Saṃdhinirmocanasūtra*'s second turning of the wheel is the definitive teaching of the Buddha, and say that its third turning, i.e., the presentation of Buddhist tenets in the *Saṃdhinirmocanasūtra,* is a Yogācāra teaching intended for those temporarily incapable of understanding Madhyamaka.

Suvikrāntavikrāmiparipṛcchāprajñāpāramitā. (T. Rab kyi rtsal gyis rnam par gnon pas shus pa shes rab kyi pha rol tu phyin pa; C. Shengtian wang bore boluomi jing; J. Shōtennō hannya haramikkyō; K. Sŭngch'ŏn wang panya paramil kyŏng 勝天王般若波羅蜜經). In Sanskrit, the "Perfection of Wisdom Requested by Suvikrāntavikrāmin." A PRAJÑĀPĀRAMITĀ ("perfection of wisdom") sūtra in seven chapters, it is closely related to the first two chapters of the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ in its themes, and displays a great familiarity with the various categories of the ABHIDHARMA, more so than other prajñāpāramitā sūtras. In the fourth chapter, it uses twelve similes for dharmas and the PRAJÑĀPĀRAMITĀ, including a reflection, a mirage, an echo, the pith of a banana tree, and a bubble (cf. LIUYU, AṢṬAMĀYOPĀMA). The PRAJÑĀPĀRAMITĀ is described as inaccessible and unestablished (aparinișpannā) but pure and infinite. In the fifth chapter, ŚĀRIPUTRA asks SUBHŪTI to explain the dharma but Subhūti replies that there is nothing to explain.

Suvinda. (S). See SUBINDA.

Suyŏn. (K) (秀演). See MUYONG SUYŎN.

Suzuki, Daisetz Teitaro. (鈴木大拙[貞太郎]) (1870–1966). A Japanese scholar of Zen Buddhism, widely regarded as the person most responsible for introducing ZEN thought to the West. Born in Kanazawa, D. T. Suzuki, as he is usually known in Western writings, was the son of a physician. He taught English in primary schools before enrolling in what is now Waseda University in Tokyo. While he was a university student, he traveled to Kamakura to practice Zen meditation at the monastery of ENGAKUJI under the direction of the RINZAI master SHAKU SŌEN. He became Sōen's disciple and translated into English Sōen's lecture for the 1893 World's Parliament of Religions. Sōen subsequently arranged for Suzuki to travel to America to work with PAUL CARUS, author of *The Gospel of Buddha* and a leading proponent of Buddhism in America. Suzuki lived with Carus' family in LaSalle, Illinois from 1897 to 1908, producing translations and writing his first book in English, *Outlines of Mahayana Buddhism* (1907). He returned to Japan in 1909, where he taught English until 1921, when he accepted a chair in Buddhist philosophy at Ōtani University in Kyoto. In 1911, he married an American student of Buddhism, Beatrice Erskine Lane (1878–1939), who served as the coeditor of many of his books and published her own studies of Mahāyāna Buddhism. Suzuki remained in Japan during World War II, but in 1950, after the war, he returned to the United States and lectured on Zen Buddhism at a number of universities, including Columbia University, where he was a long-time visiting professor. Suzuki was a prolific author in both Japanese and English, and eventually came to be renowned in both academic traditions. Because Suzuki was something of an autodidact in Buddhism, he initially struggled to be accepted into the mainstream of Japanese academe, but his prodigious output (his writings in Japanese filled thirty-two volumes) and his emphasis on the Indian and Chinese foundations of Japanese Buddhism (at a time when Japanese nationalist interpretations of Buddhism were the order of the day) eventually brought him wide respect at home. In the West, he wrote on both Mahāyāna Buddhism and Zen. His writings on Mahāyāna Buddhism include his highly regarded English translation and study of the LAṄKĀVATĀRASŪTRA and a critical edition of the Sanskrit recension of the GAṆḌAVYŪHA. But Suzuki's most influential works in English scholarship are his voluminous writings on the Zen tradition, including his three-volume *Essays in Zen Buddhism*, *An Introduction to Zen Buddhism*, *The Training of a Zen Buddhist Monk*, and *Zen and Japanese Culture*. These books, for the first time, made Zen philosophy and history serious topics of Buddhological research, and also inspired many Zen popularizers, such as ALAN WATTS and JACK KEROUAC, whose works introduced the notion of "Zen" to the Western popular imagination. Suzuki also mentored many of the preeminent Western Buddhologists of the mid-twentieth century; even the notorious curmudgeon EDWARD CONZE gushed over Suzuki, such was his high regard for his Japanese colleague. Suzuki died in Tokyo at the age of ninety-six.

Suzuki Shōzan. [alt. Suzuki Shōsan] (鈴木正三) (1579–1655). Japanese ZEN monk of the Tokugawa period. Suzuki Shōzan was born into a samurai family in Mikawa, present-day Aichi prefecture. He is said to have fought under Tokugawa Ieyasu (1543–1616) at Sekigahara in 1600 and again at Ōsaka fourteen years later. He retired from lay life at the age of forty-one, and during this retirement he studied under various teachers such as DAIGU SŌCHIKU and GUDŌ TŌSHOKU of the RINZAISHŪ and Bannan Eishu (1591–1654) of the SŌTŌSHŪ. Whether he inherited the lineages of any of these figures is unclear. He established several temples throughout the country, which are now registered with the Sōtō Zen sect. At these temples, he taught a unique form of Zen called Niōzen or Ninōzen, which emphasized the fearsome cultivation of Zen in everyday life. He left many writings including the *Roankyō* ("Donkey-Saddle Bridge"), *Ninin bikuni* ("Two Nuns"), *Mōanjō* ("A Safe Staff for the Blind"), and *Banmin dokuyō* ("Right Action for All").

Suzuki Shunryū. (鈴木俊隆) (1904–1971). Japanese ZEN priest influential in American Buddhism during the mid-twentieth century. Suzuki Shunryū was born in a village forty miles southwest of Tokyo, the son of a poor Zen priest. After elementary school, he went to live at a temple run by a disciple of his father. He was ordained as a novice monk in 1917. After

completing his secondary school education, where he excelled at English, he attended Komazawa University in Tokyo, the university affiliated with the Sōtō sect of Zen, graduating in 1930. He then went on to train at EIHEJI, the head temple of the SŌTŌSHŪ. In 1932, he took over as priest of his father's temple before moving on to serve as abbot at the larger temple of Rinsōin. He married in 1935. He spent the war years at Rinsōin and, unlike many Buddhist priests, did not actively support the war, although his temple was used to house soldiers, Korean laborers, and children displaced by the bombing of Tokyo. After the war, he engaged in a common occupation of Zen priests: performing services for the dead, while also opening a kindergarten. In 1959, he accepted a post offered by the headquarters of the Sōtō sect to serve as priest at a Japanese-American Zen temple in San Francisco, where he performed religious services for a community of some sixty families. He began to give lectures in English and to lead meditation retreats at the San Francisco temple. He continued to serve as priest to the Japanese community until 1969, when the tensions between his Japanese parishioners and his American disciples led him to resign from his original position. He then founded the San Francisco Zen Center, which eventually established both a residential center in the city, a mountain center in Tassajara, and a farm at Green Gulch. In 1970, an edited version of some of his lectures were published as *Zen Mind, Beginner's Mind*, a work that became a bestseller and classic of American Zen. Suzuki died in San Francisco in 1971.

svabhāva. (T. rang bzhin; C. zixing; J. jishō; K. chasŏng 自性). In Sanskrit, "self-nature," "intrinsic existence," or "inherent existence," the term has a general sense of "essence" or "nature," but is used in philosophical literature. It has at least three important, and different, usages, in MAHĀYĀNA Buddhist doctrine. In the MADHYAMAKA school, it refers to a hypostatized and reified nature that is falsely attributed to phenomena by ignorance, such that phenomena are mistakenly conceived to exist in and of themselves. In this sense, it is used as a synonym for ĀTMAN. Therefore, there is no svabhāva, nothing possesses svabhāva, and all phenomena are said to lack, or be empty of, svabhāva. This doctrine is sufficiently central to Madhyamaka that the school is also called NIḤSVABHĀVAVĀDA, the "Proponents of No Svabhāva." In YOGĀCĀRA, as represented in the SAṂDHINIRMOCANASŪTRA, all phenomena can be categorized into three natures (TRISVABHĀVA): the imaginary (PARIKALPITA), the dependent (PARATANTRA), and the consummate (PARIṆIṢPANNA). In the LAṄKĀVATĀRASŪTRA, seven forms of svabhāva or natures are enumerated to account for the functioning of phenomena: (1) samudayasvabhāva (C. jixing zixing), the nature of things that derives from the interaction between various conditions; (2) bhāvasvabhāva (C. xing zixing), the nature that is intrinsic to things themselves; (3) lakṣaṇasvabhāva (C. xiangxing zixing), the characteristics or marks (LAKṢAṆA) that distinguish one thing from another; (4) mahābhūtasvabhāva (C. dazhongxing zixing), the nature of things that derives from being constituted by the four physical elements (MAHĀBHŪTA); (5) hetusvabhāva (C. yinxing zixing), the nature of things that is derived from the "proximate causes" (HETU) that are necessary for their production; (6) pratyayasvabhāva (C. yuanxing zixing), the nature derived from the "facilitating conditions" (PRATYAYA); (7) niṣpattisvabhāva (C. chengxing zixing), the consummate, actualized buddha-nature that is the fundamental reality of things. See also NIḤSVABHĀVA.

svabhāvakāya. (T. ngo bo nyid sku; C. zixing shen; J. jishōshin; K. chasŏng sin 自性身). In Sanskrit, lit. "self-nature body," the buddha-body in its most elemental nature (also seen written as svābhāvikakāya); one of the four types of buddha bodies (BUDDHAKĀYA) discussed in the BUDDHABHŪMIŚĀSTRA (*Fodijing lun*), the MAHĀYĀNASAṂGRAHA (*She dasheng lun*), and the CHENG WEISHI LUN (**Vijñaptimātratāsiddhiśāstra*), along with the "body intended for personal enjoyment" (SVASAṂBHOGAKĀYA), the "body intended for others' enjoyment" (PARASAṂBHOGAKĀYA), and the "transformation body" (NIRMĀṆAKĀYA). This type of buddha-body is functionally equivalent to the DHARMAKĀYA in the two or "three bodies" (TRIKĀYA) schema of buddha-bodies. ¶ A different understanding of the svabhāvakāya derives from the PRAJÑĀPĀRAMITĀ literature. The final chapter of the ABHISAMAYĀLAṂKĀRA sets forth an elliptic presentation of the svabhāvakāya that led to a number of different later interpretations. According to Ārya VIMUKTISENA's interpretation, the svabhāvakāya is not a separate buddha-body, but rather the ultimate nature (in essence, the emptiness or ŚŪNYATĀ) that locates or underpins the other three bodies (the dharmakāya, SAṂBHOGAKĀYA, and nirmāṇakāya). He proposes just three bodies. HARIBHADRA disagrees with this interpretation and proposes four bodies. Strongly influenced by YOGĀCĀRA thought, he privileges the dharmakāya and says it has two parts: a knowledge body (JÑĀNADHARMAKĀYA), which is a buddha's omniscient mind, and a svabhāvakāya, which is the ultimate nature of that mind. This controversy was widely debated in Tibet in the commentarial tradition.

svabhāvaśūnya. (T. rang bzhin gyis stong pa; C. zixing kong; J. jishōkū; K. chasŏng kong 自性空). In Sanskrit, "empty of intrinsic nature," a term used in the MADHYAMAKA school to specify that all persons and phenomena are empty of an intrinsic nature (SVABHĀVA). The term svabhāva is used in Madhyamaka to refer to a hypostatized and reified nature that is falsely attributed to phenomena by ignorance, such that phenomena are mistakenly conceived to exist in and of themselves. In this sense, it is used as a synonym for ĀTMAN. All phenomena are declared to lack, or be empty of, svabhāva and hence are svabhāvaśūnya. The term svabhāvaśūnyatā, "emptiness of intrinsic nature," is one in the list of emptinesses, sometimes as long as twenty, beginning with adhyātmaśūnyatā ("emptiness of the internal"), bahirdhāśūnyatā ("emptiness of the external"), ubhayaśūnyatā ("emptiness of both,"), and including abhāvaśūnyatā ("emptiness of nonbeing").

svabhāvavikalpa. (T. rang bzhin la rnam par rtog pa; C. zixing fenbie; J. jishō funbetsu; K. chasŏng punbyŏl 自性分別). In Sanskrit, "intrinsic discrimination"; the first of the three types of conceptual discrimination (VIKALPA). See TRIVIKALPA.

Svāgata. (P. Sāgata; T. Legs 'ongs; C. Shanlai; J. Zenrai; K. Sŏllae 善來). Sanskrit proper name of an eminent ARHAT elder declared by the Buddha to be foremost among his monk disciples in contemplation of the heat element (tejadhātu); also written in BUDDHIST HYBRID SANSKRIT as Sāgata. According to the Pāli account, Sāgata was the personal attendant of the Buddha when SOṆA KOLIVĪSA (S. Śrona-Viṃśatikoṭi/Śrona-Koṭiviṃśa) and eighty thousand companions visited RĀJAGṚHA at the request of King BIMBISĀRA. Sāgata appears to have been naturally endowed with supernatural powers (P. iddhi, S. ṚDDHI) and left such an impression on Soṇa Kolavīsa that he joined the order. At the king's request, Sāgata displayed numerous marvels in the sky and, when asked to show an even greater wonder, he fell at the Buddha's feet and declared him to be his teacher. In the hermitage of the Jaṭilas in Ambatittha (S. Āmratirtha), Sāgata dwelt in a powerful NĀGA's cave, angering him, yet he was easily able to defeat the creature. When the people of Kosambī (S. KAUŚĀMBĪ) heard of this feat, they resolved to honor Svāgata with a feast. The wicked chabbaggīyā (S. ṢAḌVĀRGIKA) monks, jealous of Sāgata's fame, were intent on his undoing, and so recommended to the citizens of Kosambī that they offer him liquor. Sāgata was offered liquor at every house until he fell unconscious and had to be carried back to the Buddha. Although he was laid down properly with his head facing the Buddha, he turned around and lay with his feet towards the Buddha. The Buddha used this occasion to preach about the heedlessness (PRAMĀDA) that arises from intoxication and passed a rule against the use of alcohol and other intoxicants. The next day when Sāgata awoke, he was informed of what had happened and begged the Buddha for forgiveness. After a short while, through diligent practice, he attained insight into the three marks of existence and became an arhat.

svalakṣaṇa. (T. rang mtshan; C. zixiang; J. jisō; K. chasang 自相). In Sanskrit, "own characteristic," or "specifically characterized," a term used in contrast to "general" or "generic" "characteristic" (SĀMĀNYALAKṢAṆA). In views that Tibetan doxographers have associated with the SAUTRĀNTIKA school, as set forth in the early chapters of DHARMAKĪRTI's PRAMĀṆAVĀRTTIKA, svalakṣaṇa is used to refer to impermanent things, which are objects of direct perception (PRATYAKṢA) and hence can be perceived in all of their specificity, as opposed to the objects of thought, which must be apprehended through the medium of mental images. For the *PRĀSAṄGIKA branch of MADHYAMAKA, svalakṣaṇa takes on the meaning of "established by means of it own characteristic," and thus is identified as a quality falsely ascribed to persons and phenomena by ignorance, a quality that all phenomena in the universe lack and of which they are empty. Thus, in Madhyamaka, nothing is svalakṣaṇasiddha, or "established by way of own nature." All phenomena lack this quality and are therefore described as SVALAKṢAṆAŚŪNYA.

svalakṣaṇaśūnya. (T. rang mtshan gyis stong pa; C. zixiang kong; J. jisōkū; K. chasang kong 自相空). In Sanskrit, "empty of own characteristic," a term is used in the perfection of wisdom (PRAJÑĀPĀRAMITĀ) literature to describe the fundamental truth of all phenomena. According to some ABHIDHARMA schools, the factors (DHARMA) that constitute physical and mental existence were real and were endowed with specific essential qualities (SVALAKṢAṆA). One of the major doctrinal developments present in prajñāpāramitā literature is the assertion that ultimate reality should be properly understood as devoid of such characteristics (svalakṣaṇaśūnya). The term svalakṣaṇa was used in the *PRĀSAṄGIKA branch of MADHYAMAKA to specify an intrinsic nature. In this context, the term svalakṣaṇa takes on the meaning of "established by means of it own characteristic," and thus is identified as a false quality imagined to exist by ignorance, a quality that all phenomena in the universe lack and of which they are empty; hence, they are svalakṣaṇaśūnya.

Svalpākṣaraprajñāpāramitā. (T. Shes rab kyi pha rol tu phyin pa yi ge nyung ngu; C. Shengfomu xiaozi bore boluomiduo jing; J. Shōbutsumo shōji hannya haramittakyō; K. Sŏngbulmo soja panya p'aramilta kyŏng 聖佛母小字般若波羅蜜多經). In Sanskrit, "Perfection of Wisdom in a Few Words"; also known as the *Alpākṣaraprajñāpāramitā*. Sometimes referred to in Western scholarship as the "Tantric Heart Sūtra," this brief PRAJÑĀPĀRAMITĀ sūtra that takes the form of a dialogue between the Buddha and AVALOKITEŚVARA, in which the buddha enjoins the bodhisattva to recite the "heart of the perfection of wisdom." The sūtra is directed to those beings of little merit and of limited intellectual capacity. The Buddha enters the SAMĀDHI called "liberation from all suffering" (sarvaduḥkhapramocana) and provides a MANTRA and DHĀRAṆĪ to his audience. The mantra is connected with an earlier buddha called Mahāśākyamuni. By reciting the mantra and the dhāraṇī, hindrances from past actions are extinguished and beings turn toward enlightenment.

svarga. (P. sagga; T. mtho ris; C. tianshang; J. tenjō; K. ch'ŏnsang 天上). In Sanskrit, "heaven," the realm of the divinities within the cycle of rebirth (SAṂSĀRA). The terms encompasses the six heavens of the sensuous realm (KĀMADHĀTU) as well as the heavens of the subtle-materiality realm (RŪPADHĀTU) and the immaterial realm (ĀRŪPYADHĀTU). Although sublime states, none of these are permanent abodes; the beings reborn there eventually die and are reborn elsewhere when the causes that led to their celestial births are exhausted. However, the Buddha repeatedly teaches the virtues that result in rebirth in heaven, and such rebirth has been one of the primary goals of Buddhist practice, especially among the laity, throughout the history of Buddhism. Rebirth as a divinity (DEVA) is presumed to be the reward of wholesome acts (KUŚALA-KARMAN) performed

in previous lives and is thus considered a salutary, if provisional, religious goal. For example, in his typical "graduated discourse" (P. ANUPUBBIKATHĀ) the Buddha uses the prospect of heavenly rebirth, and its attendant pleasures, as one means of attracting laypersons to the religious life. Despite the many appealing attributes of these heavenly beings, such as their physical beauty, comfortable lives, and long life spans, even heavenly existence is ultimately unsatisfactory because it does not offer permanent release from the continued cycle of birth and death (SAṂSĀRA). Since devas are merely enjoying the rewards of their previous good deeds rather than performing new wholesome actions, they are considered to be spiritually stagnant, such that when the karmic effect of the deed that led to rebirth in heaven is exhausted, they are inevitably reborn in a lower realm of existence (GATI), perhaps even in one of the baleful destinies (DURGATI). For these reasons, Buddhist soteriological literature sometimes condemns religious practice performed solely for the goal of achieving rebirth in the heavens. It is only in certain higher level of the heavens, such as the those belonging to the five pure abodes (ŚUDDHĀVĀSA), that beings are not subject to further rebirth, because they have already eliminated all the fetters (SAṂYOJANA) associated with that realm and are destined to achieve ARHATship. ¶ In traditional Indian cosmology, the heavens of the sensuous realm are thought to rest on and extend far above the peak of Mt. SUMERU, the axis mundi of the universe. They are ranked according to their elevation, so the higher the heaven, the greater the enjoyments of their inhabitants. The lowest of these heavens is the heaven of the four heavenly kings (CĀTURMAHĀRĀJAKĀYIKA), who are protectors of the dharma (DHARMAPĀLA). The highest is the heaven of the divinities who have power over the creations of others, or the divinities who partake of the pleasures created in other heavens (PARANIRMITAVAŚAVARTIN), which is said to be the heaven where MĀRA resides. TUṢITA, the heaven into which ŚĀKYAMUNI was born as the divinity ŚVETAKETU in his penultimate life, is the fourth of the kāmadhātu heavens, in ascending order. ¶ The heavens of the subtle-materiality realm are grouped into four categories that correspond to the four stratified levels of DHYĀNA—states of profound meditative concentration. Thus, rebirth into any one of these heavens is dependent on the attainment of the dhyāna to which it corresponds in the immediately preceding lifetime. Each of the four dhyāna has various heavens. The lowest of these heavens is the heaven of brahmā's retainers (BRAHMAKĀYIKA), which corresponds to the first subtle-materiality absorption (RŪPĀVACARADHYĀNA), and the highest is the highest heaven (AKANIṢṬHA), which is also classified as one of the "pure abodes," or ŚUDDHĀVĀSA. ¶ The heavens of the immaterial realm similarly correspond to the four immaterial dhyānas (ĀRŪPYĀVACARADHYĀNA), beginning with the sphere of infinite space (ĀKĀŚĀNANTYĀYATANA) and so on up to the sphere of neither perception nor nonperception (NAIVASAṂJÑĀNĀSAṂJÑĀYATANA). As noted, despite their many enjoyments, none of these realms is eternal and all are thus understood to fall within the realm of saṃsāra. For a full account of all the heavens, see DEVA.

svārtha. (T. rang don; C. zili; J. jiri; K. chari 自利). In Sanskrit, "self-benefit," "benefitting oneself." The term is used in several contexts. First, it may refer to the goal of worldly actions that selfishly seek happiness but, because they are motivated by the afflictions (KLEŚA), in fact result in suffering. Second, the term may be used to describe the goal of the ŚRĀVAKA and PRATYEKABUDDHA, who seek their own welfare by becoming an ARHAT, in contrast to the BODHISATTVA who seeks the welfare of others (PARĀRTHA), willingly relinquishing motivations and deeds that would lead to his own personal benefit. In the case of the bodhisattva, it is said that by following the bodhisattva path to buddhahood, the bodhisattva fulfills both his own welfare (because he achieves the omniscience of a buddha) as well as the welfare of others (because he teaches the dharma so that others may also become buddhas).

svārthānumāna. (T. rang don rjes dpag; C. zibiliang; J. jihiryō; K. chabiryang 自比量). In Sanskrit, "inference for oneself," a term used in Buddhist logic to refer to what would generally be referred to as a correct inference, that is, a mental process of reasoning that results in a factual assumption about a particular state of affairs. Technically speaking, inference for oneself is a conceptual consciousness that discerns an object by means of a sign or reason (LIṄGA) that has the three qualities (trirūpa) of legitimate evidence. This refers to three relations that must obtain between the three elements of a syllogism: the subject, the predicate, and the reason. The three qualities are (1) the PAKṢADHARMA, that the reason is a quality of the subject; (2) the forward pervasion (anvayavyāpti), that whatever is the reason is necessarily the predicate; and (3) the "exclusion" or reverse pervasion (vyatirekavyāpti), that whatever is not the predicate is necessarily not the reason. DIGNĀGA contrasted the inference for oneself with the inference for others (PARĀRTHĀNUMĀNA), which is not an inference in a technical sense, but is used only metaphorically. Inference for others refers to a proof that would be stated to another person, such as an opponent in a debate, in order for that person to arrive at the correct conclusion that one oneself has understood. Because the proof serves as the cause of the other person's inference, it is called an inference for others.

svasaṃbhogakāya. (C. zi shouyong shen; J. jijuyūshin; K. cha suyong sin 自受用身). In Sanskrit, "body intended for personal enjoyment," in contrast to the PARASAṂBHOGAKĀYA, "body intended for others' enjoyment"; one of the four types of buddha bodies (BUDDHAKĀYA) discussed in the BUDDHABHŪMIŚĀSTRA (*Fodijing lun*), the MAHĀYĀNASAṂGRAHA (*She dasheng lun*), and the CHENG WEISHI LUN (**Vijñaptimātratāsiddhiśāstra*), along with the "self-nature body" (SVABHĀVAKĀYA or svābhāvikakāya), the "body intended for others' enjoyment" (parasaṃbhogakāya), and the "transformation body" (NIRMĀṆAKĀYA). This fourfold schema of buddha bodies derives from the better-known three bodies of a buddha (TRIKĀYA)—viz., dharma body (DHARMAKĀYA), reward body (SAṂBHOGAKĀYA),

and transformation body (nirmāṇakāya)—but distinguishes between these two different types of reward bodies. The svasaṃbhogakāya derives from the countless virtues that originate from the accumulation of immeasurable merit and wisdom over a buddha's infinitely-long career; this body is a perfect, pure, eternal and omnipresent material body that enjoys the bliss of dharma (DHARMAPRĪTI) for oneself until the end of time. By contrast, the parasaṃbhogakāya is a subtle virtuous body deriving from the cognition of equality (SAMATĀJÑĀNA), which resides in a PURE LAND and displays supernatural powers in order to enhance the enjoyment of the dharma by bodhisattvas at all ten stages of the bodhisattva's career (BODHISATTVABHŪMI).

svasaṃvedana. (T. rang rig; C. zizheng/zijue; J. jishō/jikaku; K. chajŭng/chagak 自證/自覺). In Sanskrit, lit. "self-knowledge" or "self-awareness," also seen written as svasaṃveda, svasaṃvit, svasaṃvitti. In Buddhist epistemology, svasaṃvedana is that part of consciousness which, during a conscious act of seeing, hearing, thinking, and so on, apprehends not the external sensory object but the knowing consciousness itself. For example, when a visual consciousness (CAKṢURVIJÑĀNA) apprehends a blue color, there is a simultaneous svasaṃvedana that apprehends the cakṣurvijñāna; it is directed at the consciousness, and explains not only how a person knows that he knows, but also how a person can later remember what he saw or heard, and so on. There is disagreement as to whether such a form of consciousness exists, with proponents (usually YOGĀCĀRA) arguing that there must be this consciousness of consciousness in order for there to be memory of past cognitions, and opponents (MADHYAMAKA) propounding a radical form of nonessentialism that explains memory as a mere manipulation of objects with no more than a language-based reality. Beside the basic use of the term svasaṃvedana to explain the nature of consciousness and the mechanism of memory, the issue of the necessary existence of svasaṃvedana was pressed by the Yogācāra school because of how they understood enlightenment (BODHI). They argued that the liberating vision taught by the Buddha consisted of a self-reflexive act that was utterly free of subject-object distortion (GRĀHYAGRĀHAKAVIKALPA). In ordinary persons, they argued, all conscious acts take place within a bifurcation of subject and object, with a sense of distance between the two, because of the residual impressions or latencies (VĀSANĀ) left by ignorance. Infinite numbers of earlier conscious acts have been informed by that particular deeply ingrained ignorance. These impressions are carried at the foundational level of consciousness (ĀLAYAVIJÑĀNA). When they are finally removed by the process of BHĀVANĀ, knowledge (JÑĀNA) purified of distortion emerges in a fundamental transformation (ĀŚRAYAPARĀVṚTTI), thus knowing itself in a nondual vision. Such a vision presupposes self-knowledge. In tantric literature, svasaṃvedana has a less technical sense of a profound and innate knowledge or awareness. See also RIG PA.

svastika. (P. sotthika/sotthiya; T. bkra shis ldan/g.yung drung; C. wan/wanzi; J. man/manji; K. man/mancha 卍/萬字). In Sanskrit, lit. "well-being," "auspicious"; a mark of good fortune that is widely used in the Buddhist world as an auspicious symbol in both its right-facing and left-facing forms. It is one of the auspicious marks on the soles of a buddha's feet and it often appears on the chest of buddha images in East Asia (see ANUVYAÑJANA). It commonly appears as a pattern in Buddhist vestments and in various decorative patterns in works of art. Even in the most ancient of Indian art, where the Buddha is represented in aniconic rather that physical form, this symbol is sometimes used to indicate his presence. Although the symbol originated in India, it is subsequently transmitted throughout the Buddhist world and is commonly used as a decorative element on Buddhist temples and shrines. In East Asia, the symbol itself was even constituted as the Sinograph wan ("myriad"). In Tibet, it was translated as g.yung drung, a pre-Buddhist term meaning "eternal" or "unchanging." A variety of theories have been offered on the origin of the svastika symbol, one of the more widely accepted being that it was originally connected with solar worship. ¶ Svastika was also the name of the grass cutter who prepared a seat for the buddha beneath the BODHI TREE.

svatantrānumāna. (S). See SVATANTRAPRAYOGA.

svatantraprayoga. (T. rang rgyud kyi sbyor ba). In Sanskrit, "autonomous syllogism." Among the many meanings of the term PRAYOGA is its use as a technical term in logic, where it is often translated as "syllogism," and refers to a statement that contains a subject, a predicate, and a reason. A svatantraprayoga leads to a svatantrānumāna (T. rang rgyud rjes dpag), an "autonomous inference." The correct syllogism that gives rise to correct inference is composed of three parts, the subject (dharmin), the property being proved (SĀDHYADHARMA), and the reason (HETU or LIṄGA). For example, consider the syllogism "Sound is impermanent because of being produced." The subject is sound, the property being proved is impermanence, and the reason is being produced. For the syllogism to be correct, three relations must exist among its three components: (1) the reason must be a property (DHARMA) of the subject, also called the "position" (PAKṢA); (2) there must be a relationship of forward pervasion (anvayavyāpti) between the reason and the property being proved (SĀDHYADHARMA), such that whatever is the reason is necessarily the property being proved, and (3) there must be a relationship of "exclusion" or reverse pervasion (vyatirekavyāpti) between the property being proved and the reason such that whatever is not the property being proved is necessarily not the reason. In the example ("Sound is impermanent because of being produced"), the syllogism is correct because the reason ("being produced") is a quality of the subject ("sound"), there is forward pervasion in the sense that whatever is produced is necessarily impermanent, and there is reverse pervasion because whatever is not impermanent is necessarily not produced. It is generally the case in Indian logic that all elements of the syllogism must be accepted by both parties in a debate (see SAMĀNAPRATIBHĀSADHARMIN);

such a syllogism is referred to as an "autonomous syllogism" (svatantrānumāna or svatantraprayoga). In the Madhyamaka school of Indian Buddhist philosophy, there was a controversy over whether such syllogisms were acceptable when a Madhyamaka debated with a proponent of another school. The locus classicus of the controversy is the debate between BHĀVAVIVEKA and CANDRAKĪRTI concerning BUDDHAPĀLITA's commentary on the first chapter of NĀGĀRJUNA's MŪLAMADHYAMAKAKĀRIKĀ. It was Candrakīrti's position that the Madhyamaka should only use consequences (PRASAṄGA) or an inference familiar to others (PARAPRASIDDHĀNUMĀNA), i.e., that they should only draw out the unintended consequences in others' positions; to use an autonomous syllogism implied acceptance of intrinsically established relations among the elements of the syllogism. Bhāvaviveka had argued that it was necessary for the Madhyamaka to state an autonomous syllogism at the conclusion of a debate. Based on this controversy, the Tibetans coined the terms *SVĀTANTRIKA and *PRĀSAṄGIKA to designate these two positions.

***Svātantrika**. (T. rang rgyud pa). In Sanskrit, "Autonomist," one of the two main branches (together with the *PRĀSAṄGIKA or "Consequentialist") of the MADHYAMAKA school in India. It is important to note that the designation Svātantrika as a subschool of Madhyamaka does not occur in Indian literature and was coined retrospectively in Tibet to describe the developments of the Madhyamaka in India. The name *Svātantrika is derived from the insistence on the use of autonomous syllogisms (SVATANTRAPRAYOGA) in debates about the nature of reality, as set forth by BHĀVAVIVEKA and rejected by CANDRAKĪRTI in their respective commentaries on NĀGĀRJUNA's MŪLAMADHYAMAKAKĀRIKĀ. In the Tibetan doxographies, the leading proponents of the *Svātantrika include BHĀVAVIVEKA and ŚĀNTARAKṢITA; the former is regarded as the founder of the SAUTRĀNTIKA-SVĀTANTRIKA branch and the latter is considered the founder of the YOGĀCĀRA-SVĀTANTRIKA branch.

Svayaṃbhū. [alt. Svayaṃbhūnāth] (T. 'Phags pa shing kun). A large CAITYA complex located atop a hill at the western edge of the Kathmandu Valley, forming one of Nepal's most ancient and venerated Buddhist sites. The caitya of Svayaṃbhū, whose name literally means "self-arisen" or "self-created," is closely tied to the mythic origins of the Kathmandu Valley. According to legend, in prehistoric times the Kathmandu Valley formed a lake above which the summit of Svayaṃbhū hill rose. The buddha VIPAŚYIN, who is said to predate ŚĀKYAMUNI by several eons, cast a lotus seed into the waters. A lotus blossom grew from this seed, upon which appeared a spontaneously manifested (svayaṃbhū) crystalline caitya radiating five-colored rays of light. This light attracted the attention of the bodhisattva MAÑJUŚRĪ, who was residing at WUTAISHAN in China. Mañjuśrī traveled to Nepal where he miraculously drained the lake, thereby making the Kathmandu Valley an inhabitable land for the spread of Buddhism. The earliest Newar inscriptions at Svayaṃbhū date to the reign of the fifth-century Buddhist king Vṛṣadeva. Over the next 1,500 years, the stūpa and surrounding complex were renovated and expanded numerous times by Newar and Tibetan Buddhist priests. The complex of temples at Svayaṃbhū is under the guardianship of Newar Budddhist priests and it continues to play a central role in the religious lives of Newari and Tibetan Buddhists. According to some accounts, the Tibetan name (literally "Noble All Trees") stems from a legend recounting how the Buddhist sage NĀGĀRJUNA scattered his hair about Svayaṃbhū hill, from which many types of trees miraculously arose. Later Tibetan commentators have argued, however, that shing kun is likely a corruption of the Newar name Shinggu in use during the eighteenth century. According to Tibetan tradition, the Svayaṃbhū caitya is counted as one of Nepal's three great stūpas, along with BODHNĀTH and NAMO BUDDHA.

Śvetaketu. (P. Setaketu; T. Dam pa tog dkar po; C. Baijing/Baiying; J. Byakujō/Byakuei; K. Paekchŏng/Paegyŏng 白淨/白英). Proper name of ŚĀKYAMUNI when he was a divinity in the TUṢITA heaven, during his lifetime immediately preceding his attainment of buddhahood. He was a BODHISATTVA of the tenth BHŪMI, appointed as regent of tuṣita by the preceding buddha KĀŚYAPA. As Śvetaketu, he surveyed JAMBUDVĪPA to determine the proper time, place, caste, and family of his final lifetime. Upon his descent into the womb of Queen MĀYĀ, he appointed MAITREYA as regent. Depictions of Śvetaketu in heaven, alongside INDRA and BRAHMĀ, appear at a number of ancient Indian Buddhist sites, including NĀGĀRJUNAKOṆḌĀ and AMARĀVATĪ.

Swam-oo Ponnya-shin Pagoda. A gilded pagoda (Burmese, JEDI) located at the center of the Sagaing range of hills in Upper Burma (Myanmar). It is situated atop a prominence known as Dhammika Taung, or the "Hill of the Practitioners," because it has always been surrounded by monasteries suitable for study and meditation. The pagoda was built in 1332 by a royal minister named Ponnya (meaning "Brāhmaṇa") shortly after Sagaing was made the Burmese capital. The minister had neglected to seek the king's permission prior to the monument's construction, and because its foundation buried two earlier pagodas, the king ordered the minister to be drowned. At the last moment the execution order was rescinded, for which reason the pagoda received the name, "Ponnya-shin," meaning, "Ponnya lives." Ponnya made it a practice of donating his first offering of alms during the period of the Buddhist rains retreat (VARṢĀ) at this pagoda. For this reason it also became known as "Swam-oo," or "First alms-offering." To the present day, people pray at this pagoda to ward off any prospect of sudden death, and in Sagaing it is customary to make one's first donation of alms at the beginning of the Buddhist rains retreat season at this pagoda.

Swāt. A valley in present-day northern Pakistan, commonly identified with the ancient region known as OḌḌIYĀNA, Uḍḍiyāna, or Udyāna; an important center in the history of

Indian Buddhism. Buddhism moved into this area shortly after the time of King AŚOKA and flourished there in the periods that followed. Swāt contains many important archeological sites including STŪPAS and such relics as the footprints of the Buddha (BUDDHAPĀDA). Many of the first buddha images also come from this region. Swāt's geographical location between Central Asia and the Indian subcontinent made it an important trading and religious center. According to Chinese pilgrims, beginning with FAXIAN, who visited this region in the fifth century CE, this area was at one time home to five hundred Buddhist monasteries. This area is also fabled as the birthplace of PADMASAMBHAVA and the origin of numerous tantric texts and lineages, including the GUHYASAMĀJATANTRA. Several Tibetan masters also wrote accounts of their travels through Oḍḍiyāna, including O RGYAN PA RIN CHEN DPAL, whose name literally means "the man of Oḍḍiyāna," Stag tshang ras pa (Taktsangrepa), and BUDDHAGUPTA. Muslim armies began to moving into the region in the eighth century, which eventually led to the demise of Buddhism.

Śyāmatārā. (T. Sgrol ljang). In Sanskrit, "Dark Tārā"; in Tibetan "Green Tārā"; according to a widely held Tibetan myth, the goddess who consorted with a monkey (an emanation of AVALOKITEŚVARA) and gave birth to the Tibetan people. Later, she took the form of the princess BHṚKUTĪ, Nepalese wife of King SRONG BTSAN SGAM PO. After Avalokiteśvara, Śyāmatārā is perhaps the most widely worshipped Buddhist deity in Tibet and the focus of the nonsectarian Tārā cult. The *Namas Tāre Ekaviṃśatistotra* ("Twenty-One Praises of Tārā") is one of the most widely known prayers in Tibet, and her MANTRA, oṃ tāre tuttāre ture svāha, is second in popularity only to OṂ MAṆI PADME HŪM, AVALOKITEŚVARA's mantra. Each Tibetan sect has its own tantric rituals (SĀDHANA) and ritual propitiations (VIDHI) for Green Tārā, who is considered particularly helpful to those building monasteries and other religious structures, and to those starting business ventures. Green Tārā is iconographically represented as sitting in LALITĀSANA with her left leg bent and resting on her lotus seat, her right leg pendant, with the knee slightly raised, the foot resting on a second smaller lotus. ATIŚA DĪPAṂKARAŚRĪJÑĀNA, an Indian Buddhist monk and scholar revered by Tibetan Buddhists as a leading teacher in the later dissemination (PHYI DAR) of Buddhism in Tibet, was a devotee of Green Tārā, and the temple commemorating his principal residence during his later years in central Tibet, in Snye thang (Nyethang), is the Sgrol ma lha khang (Drolma Lhakang) "Tārā Temple," which is widely believed by Tibetans to have a statue of Śyāmatārā that can speak. See also TĀRĀ.

Śyāmāvatī. (P. Sāmāvatī; T. Sngo bsangs can; C. Ganrong; J. Kon'yō; K. Kamyong 紺容). Lay disciple whom the Buddha declared to be foremost among laywomen who live in kindness. She was the daughter of a wealthy man from the city of Bhadravatī. When plague broke out in the city, she and her parents fled to Kauśāmbī (P. Kosambī) where her parents fell ill and died. She was adopted by two donors of alms to the poor, Mitra and Ghoṣaka, who noticed her virtue and intelligence. Śyāmāvatī was exceptionally beautiful and one festival day, Udāyana (P. Udena), the king of Kauśāmbī, noticed her on her way to the river to bathe and fell in love with her. Initially rebuffed in his advances, Udāyana eventually wed Śyāmāvatī and made her his chief queen. Śyāmāvatī's slave girl was Kṣudratārā (P. Khujjutarā) who each day was given eight coins to buy flowers from the market. Kṣudratārā was dishonest and would spend four coins on flowers and pocket the rest. One day on her way to the market, Kṣudratārā listened to the Buddha preach and at once became a stream-enterer (SROTAĀPANNA). She then confessed her thievery to Śyāmāvatī, who immediately forgave her, and she told her mistress about the Buddha's teachings. Enthralled, Śyāmāvatī asked Kṣudratārā to listen to the Buddha's sermons daily and report his message to her and her attendants. In this way, under Kṣudratārā's instruction, Śyāmāvatī and her attendants also became stream-enterers. On Kṣudratārā's advice, Śyāmāvatī had holes made in the walls of the women's quarters so that she and her attendants could watch the Buddha as he passed through the lane below. Śyāmāvatī had a wicked co-wife, Māgandiyā, who, out of jealousy of her and a hatred for the Buddha, sought her destruction. Śyāmāvatī survived three plots, which were eventually revealed, winning in compensation the boon to have ĀNANDA preach daily to her and her companions. Finally Māgandiyā had the palace set afire and Śyāmāvatī along with her attendants burned to death. The Buddha declared, however, that none of the deceased had attained less than the state of stream-enterer, while some had even reached the state of once-returners (SAKṚDĀGĀMIN) and nonreturners (ANĀGĀMIN).

syllogism. See PRAYOGA.

T

Tachikawaryū. (立川流). A strand of Japanese esoteric Buddhism that is generally regarded as heterodox by the mainstream SHINGONSHŪ tradition because of its involvement in ritual sex and magical elements. The school was established in 1114 in the town of Tachikawa (Izu province) by Ninkan (1057–1123), who is known to have combined Daoist yin-yang cosmology with Shingon rituals and taught sexual union as a direct way of attaining buddhahood. Its teachings were subsequently systematized by Raiyu (1226–1304). The school sought to achieve buddhahood in this very body (SOKUSHIN JŌBUTSU) and taught that the loss of self that occurs through ritual sexuality was the most immediate approach to enlightenment; sexual climax, which the school termed the lion's roar (see SIṂHANĀDA), constituted the moment of awakening. The Tachikawaryū was officially proscribed in the thirteenth century and its practices eliminated from the mainstream esoteric tradition through the efforts of the Shingon monk Yūkai (1345–1416). Although its scriptures were lost (except for a few that are said to have been sealed so that they would never be reopened), some of its practices are thought to have continued to circulate in secret in Shingon circles.

Taegak Ŭich'ŏn. (K) (大覺義天). See ŬICH'ŎN.

T'aego chong. (太古宗). In Korean, "T'aego Order"; an order of Korean married monks established in 1969, in response to the post–Korean War domination of Korean Buddhism by the CHOGYE CHONG of celibate monks. The name of the school is taken from the late Koryŏ-period monk T'AEGO POU (1310–1382), who was presumed to have introduced the lineage of the Chinese LINJI ZONG (K. Imje chong) to Korea at the end of the Koryŏ dynasty. The Korean monastic tradition had traditionally institutionalized celibacy throughout its history, but during the Japanese colonial period in Korea (1910–1945), the Japanese government-general had officially sanctioned clergy marriage along with many other reforms of Korean Buddhism that mirrored Japanese policies toward Buddhism in Japan during the Meiji Restoration. Following liberation from Japan in 1945, the celibate monks of Korea launched a purification movement (chŏnghwa undong) in 1955 to remove all vestiges of Japanese influence from Korean Buddhism, including the institution of clergy marriage. This campaign was supported by the Korean president Syngman Rhee, who issued a series of orders calling for the resignation of all "Waesaek sŭngnyŏ" (Japanized monks) from monastic positions. The married monks regarded these orders as the beginning of a pŏmnan (C. fanan), or persecution, of their way of life. The schism between the two sides deepened, often involving violent confrontations and continuing litigation. In 1961, a Korean Supreme Court ruling formally returned administrative control of virtually all the major monasteries to the celibate monks of the Chogye chong. In 1969, the remaining married monks who refused to leave their families split from the Chogye chong and, under the leadership of TAERYUN (1884–1979), organized themselves into the T'aego chong. The T'aego chong is now the second largest Buddhist order in Korea, following the Chogye chong, which continues officially to observe celibacy. The major monasteries that remain under the control of the T'aego chong are T'AEGOSA and PONGWŎNSA in Seoul and SŎNAMSA in South Chŏlla province.

T'aego Pou. (太古普愚) (1301–1382). In Korean, "Grand Ancient, Universal Stupidity"; SŎN master of the late Koryŏ dynasty, who is presumed to have introduced the lineage of the LINJI ZONG (K. Imje chong) of the Chinese CHAN school to Korea. T'aego was a native of Hongju in present-day South Ch'ungchŏng province. He is said to have been born into the prominent family of a court official and ordained as a youth in 1313 by the monk Kwangji (d.u.) at the monastery of Hoeamsa (Kyŏnggi province). T'aego later passed the clerical examinations (SŬNGKWA) for specialists of the Hwaŏm (C. HUAYAN) school in 1329. While investigating the Chan case (GONG'AN) "the ten thousand dharmas return to one" (case 45 of the BIYAN LU) in 1333, T'aego is said to have attained his first awakening at the monastery of Kamnosa in Sŏngsŏ (South Chŏlla province). Four years later, he is said to have had another awakening while investigating ZHAOZHOU CONGSHEN'S WU GONG'AN. In 1341, he built a hermitage near the monastery Chŭnghŭngsa on Mt. Samgak (Kyŏnggi province) named T'aegoam, whence he acquired his toponym. In 1346, T'aego headed for China, where he resided at the monastery of Daguangsi in the Yuan capital of Yanjing. T'aego is also said to have visited the eminent Chan master Shiwu Qinggong (1272–1352) and received his seal of transmission (C. YINKE, K. in'ga) and thus an affiliation with Shiwu's Linji lineage. After T'aego returned to Korea in 1348, he retired to Miwŏn on Mt. Sosŏl (Kyŏnggi province). In

1356, he was summoned to the Koryŏ capital of Kaesŏng, where he taught at the influential monastery of Pongŭnsa. That same year he was appointed the king's personal instructor, or "royal preceptor" (wangsa), and abbot of the monastery KWANGMYŎNGSA, the major Sŏn monastery in the capital. T'aego continued to serve as the personal advisor to successive kings until his death on Mt. Sosŏl in 1382. His teachings are recorded in the *T'aego hwasang ŏrok*. ¶ In the last half of the twentieth century, attempts to trace the orthodox lineage of the contemporary Korean CHOGYE CHONG back to T'aego and his Chinese Linji lineage rather than to POJO CHINUL (1158–1210) caused a rift within the Korean Buddhist community. The focus of the critique is Chinul's putatively "gradualist" approach to Sŏn Buddhist soteriology (viz., his advocacy of tono chŏmsu, C. DUNWU JIANXIU) and Chinul's lack of an authentic dharma transmission from a recognized Chan or Sŏn master (he is known to have been an autodidact). T'aego was therefore credited with initiating true Sŏn orthodoxy in Korea, based on T'aego's transmission from Shiwu Qinggong, an authentic successor in the Chinese Linji school with its quintessentially "sudden awakening" (DUNWU) soteriology. This issue remains a matter of unremitting controversy in contemporary Chogye order politics. T'aego's name has also been adopted by the T'AEGO CHONG, a modern order of Korean married monks, in order to give a patina of orthodoxy to its school as well.

Taehan Pulgyo Chogye Chong. (大韓佛教曹溪宗). In Korean, "Chogye Order of Korean Buddhism"; full name of the largest contemporary order in the Korean Buddhist tradition. See CHOGYE CHONG.

Taehŭngsa. (大興寺). In Korean, "Monastery of Great Flourishing"; the twenty-second district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located on Turyun Mountain in near Haenam County in South Chŏlla province. According to memorial stele erected for early Koryŏ-dynasty monks, the monastery was founded some time before 900 CE, perhaps by either Chŏnggwan (fl. c. 426) or TOSŎN (827–898). During the Japanese Hideyoshi invasions of the late sixteenth century, the monk CH'ŎNGHŎ HYUJŎNG (1520–1604), also known as SŎSAN TAESA, led a monastic militia based at the monastery in fighting the Japanese. After the fighting ended in 1598, Sŏsan proclaimed that Taehŭngsa would never be touched by the "three disasters" (samjae) of flood, fire, or wind, and it was in part due to his efforts that Taehŭngsa became an important Buddhist center. Sŏsan requested that his personal belongings be kept there even after his death, and today his calligraphy, portrait, robe, and bowls can be seen in the monastery's museum. A famous resident was the Sŏn master CH'OŬI ŬISUN (1786–1866), the eighteenth-century reviver of the tea traditions of Korea, who developed the tea ceremony as a form of religious practice and is known for synthesizing the tea ceremony and Sŏn practice, as exemplified in his slogan ta Sŏn ilmi (tea and Sŏn are a single taste). The monastery's main shrine hall (TAEŬNG CHŎN) is approached by use of the Sinjin Bridge and enshrines images of ŚĀKYAMUNI, AMITĀBHA, and BHAIṢAJYAGURU. Taehŭngsa is also known for its Ch'ŏnbul chŏn, "Thousand-Buddha Hall," which enshrines a thousand miniature jade statues of the Buddha, all carved in Kyŏngju about 250 years ago. There is a story that the ship transporting the buddha images was hijacked by Japanese pirates, but the pirates later had a dream in which the Buddha severely admonished them and voluntarily returned the statues to Taehŭngsa. The grounds of the monastery also include a three-story stone pagoda from the Koryŏ dynasty, which is said to have held relics (K. sari; S. śarīra) of the Buddha brought to Korea by the VINAYA master CHAJANG (608–686). A five-inch (twelve-cm) high, seated bronze Buddha was found inside the base during repairs in 1967 to one of the other three-story pagodas, which appears to date back to the Silla dynasty. A seated MAITREYA Buddha is carved on a rock at Taehŭngsa, which is dated to the early Koryŏ dynasty. Taehŭngsa is also the home of a highly decorated bronze bell formerly owned by T'apsansa, which is held aloft by a hook shaped like a dragon.

Taehwi. (大煇) (fl. c. 1748). Renowned Korean chanting (pŏmp'ae) monk during the Chosŏn dynasty and author of the *Pŏmŭmjong po* ("Lineage of the Brahmā's Voice School"). See FANBAI.

Taehyŏn. [alt. T'aehyŏn] (C. Daxian/Taixian; J. Daiken/Taigen 大賢/太賢) (d.u.; fl. c. mid-eighth century). In Korean, "Great/Grand Sagacity"; Silla-dynasty monk during the reign of king Kyŏngdŏk (r. 742–765) and reputed founder of the Yuga (YOGĀCĀRA) tradition in Korea; also known as Ch'ŏnggu Samun ("Green Hill [viz., Korea] ŚRAMAṆA") and often referred to as Yuga cho, "Patriarch of Yogācāra," due to his mastery of that school's complex doctrine. As one of the three most productive scholars of the Silla Buddhist tradition, Taehyŏn is matched in his output only by WŎNHYO (617–686) and Kyŏnghŭng (fl. c. eighth century). Although renowned for his mastery of Yogācāra doctrine, his fifty-two works, in over one hundred rolls, cover a broad range of Buddhist doctrinal material, including Yogācāra, MADHYAMAKA, Hwaŏm (C. HUAYAN ZONG), and bodhisattva-precept texts. It is presumed that Taehyŏn was a disciple of WŎNCH'ŬK's (613–696) student Tojŭng (d.u.), and that his scholastic positions were therefore close to those of the Ximing school, a lineage of FAXIANG ZONG thought that derived from Wŏnch'ŭk; their connection remains, however, a matter of debate. Taehyŏn's *Sŏng yusik non hakki* ("Study Notes to the CHENG WEISHI LUN [**Vijñaptimātratāsiddhi-śāstra*]") (six rolls), the only complete Korean commentary on the *Cheng weishi lun* that is still extant, is particularly important because of its copious citation of the works of contemporary Yogācāra exegetes, such as KUIJI (632–682) and Wŏnch'ŭk. Taehyŏn appears to have been influenced by the preeminent Silla scholiast Wŏnhyo, since Taehyŏn accepts in his *Taesŭng kisin non naeŭi yak tamgi* ("Brief

Investigation of the Inner Meaning of the DASHENG QIXIN LUN") Wŏnhyo's ecumenical (HWAJAENG) perspective on the "Awakening of Faith According to the Mahāyāna." Although Taehyŏn never traveled abroad, his works circulated throughout East Asia and were commented upon by both Chinese and Japanese exegetes. His *Pŏmmang kyŏng kojŏkki* ("Record of Old Traces of the FANWANG JING"), for example, was widely consulted in Japan and more than twenty commentaries on Taehyŏn's text were composed by Japanese monks, including EISON (1201–1290) and GYŌNEN (1240–1321). Unfortunately, only five of Taehyŏn's works are extant; in addition to the above three texts, these are his *Yaksa ponwŏn kyŏng kojŏkki* ("Record of Old Traces of the BHAIṢAJYAGURUSŪTRA") and *Pŏmmang kyŏng posalgyebon chongyo* ("Doctrinal Essentials of the Bodhisattva's Code of Morality from the 'Sūtra of Brahmā's Net'").

t'aenghwa. (幀畵). In Korean, lit. "painting"; referring to the large "hanging paintings" painted on cloth or paper, which are hung on the inside walls of Korean shrine halls or behind buddha images on the altars. The term t'aenghwa may have been in use since the Koryŏ dynasty (918–1392), since a painting from 1306 includes the Sinograph t'aeng in its title. Because of their vulnerability to fire, most extant t'aenghwa date from the seventeenth century onward, the period following the depredations caused by the Japanese Hideyoshi invasions (1592–1598) of the Korean peninsula. T'aenghwa tend to depict different arrangements of various buddhas, BODHISATTVAS, and ARHATS, with guardians illustrated around the perimeter of the painting. Although t'aenghwa are usually painted in full color, it is possible to find them in various restrained formats such as gold and white on a black or red background; in this type, the lines are generally drawn in gold, while the skin is painted in white. There are no examples of this restrained type of t'aenghwa before the late 1800s. In main shrine halls, t'aenghwa tend to come in sets of three, with a main painting behind the central image and accompanying paintings on the walls to the left and right of the altar. Popular themes for such central t'aenghwa include the Buddha lecturing at Vulture Peak (GṚDHRAKŪṬAPARVATA), the PURE LAND of AMITĀBHA, the medicine buddha BHAIṢAJYAGURU with the twelve zodiacal signs, and stories from Buddhist history. The t'aenghwa on the right is usually the "host of spirits" (SINJUNG) hanging painting, and shows the LOKAPĀLAS, with the dharma protector KUMĀRABHŪTA (K. Tongjin) prominently featured. Kumārabhūta is typically portrayed wearing a grand, feathered headdress accompanied by over a dozen associates, who aid him in protecting the religion. The t'aenghwa on the left often commemorates the deceased and features the bodhisattva KṢITIGARBHA, who has vowed to rescue all beings from the hells. Sometimes monasteries with restricted budgets or space will use t'aenghwa without accompanying statues, especially for the t'aenghwas to the left and right. T'aenghwa in smaller shrine halls may include paintings of the mountain spirit (K. sansin), the guardian kings, and the seven star (ch'ilsŏng; see BEIDOU QIXING) spirits of the Big Dipper. ¶ Large hanging t'aenghwa, which were traditionally displayed outdoors during Buddhist ceremonies, are known as KWAEBUL. Kwaebul are generally twenty-five to forty feet (eight to twelve m.) high, although one at SSANGGYESA is fifty feet (fifteen m.) in height. Kwaebul with a depiction of a standing MAITREYA are common. The kwaebul are displayed on the Buddha's birthday and during rites such as YŎNGSANJAE, as well as for the funerals of important monks. Kwaebul are the equivalent of the Tibetan THANG KA and were especially popular in the seventeenth century.

Taeryun. (大輪) (1884–1979). In Korean, "Great Wheel"; founder of the T'AEGO CHONG of Korean Buddhism. In 1898, at the age of fifteen, he was ordained by Kwagun (d.u.) at the monastery of YUJŎMSA in the Diamond Mountains (KŬMGANGSAN), and later received the full BHIKṢU precepts from the VINAYA master Tongsŏn Chŏngŭi (1856–1936). In 1908, upon the completion of his studies at a Buddhist seminary (kangwŏn), Taeryun left for Seoul, where he served as the administrative director of the monastery of Kakhwangsa (present-day CHOGYESA) for six years. In 1915, he established a branch of Yujŏmsa in Pyongyang. He actively participated in the anti-Japanese and Buddhist reformation movements led by HAN YONGUN. In 1929, he established the monastery of Pŏmnyunsa in Sagandong, Seoul, and became the abbot of Yujŏmsa in 1945. In the 1950s, he served as both the chairman of the board of trustees of what is now Tongguk University and the chief of the general affairs bureau of the CHOGYE CHONG. As a result of an internal conflict between Korean monks over the issue of clerical marriage, he left the Chogye order in 1960 and established the T'aego chong of married monks in 1969.

Taesŭng kisin non pyŏlgi. (C. Dasheng qixin lun bieji; J. Daijō kishinron bekki 大乗起信論別記). In Korean, "Separate Record on the 'Awakening of Faith According to the Mahāyāna,'" written by WŎNHYO (617–686); a short commentary on the "Establishing the Meaning" (Liyi fen) and "Explanation" (Jieshi fen) chapters of the DASHENG QIXIN LUN. As Wŏnhyo himself explains, the *Taesŭng kisin non pyŏlgi* was meant to serve as personal notes for future reference, and the ideas broached in the *Taesŭng kisin non pyŏlgi* are expanded upon in detail in Wŏnhyo's longer commentary on the text, the TAESŬNG KISIN NON SO. There is also some evidence that the *pyŏlgi* may have been a transcription of his oral lectures on the *Dasheng qixin lun*, which was to be kept separate from Wŏnhyo's more formal commentary to the text.

Taesŭng kisin non so. (C. Dasheng qixin lun shu; J. Daijō kishinron sho 大乗起信論疏). In Korean, "Commentary on the 'Awakening of Faith According to the Mahāyāna'"; an influential commentary on the DASHENG QIXIN LUN composed by the eminent Korean monk WŎNHYO (617–686); also known as the *Haedong so* (lit. the "Korean commentary"). Wŏnhyo's commentary is traditionally regarded as one of the three great commentaries on the

"Awakening of Faith," along with FAZANG's (643–712) DASHENG QIXIN LUN YI JI and JINGYING HUIYUAN's (523–592) *Dasheng qixin lun yishu*. Wŏnhyo's exegesis was especially influential in Fazang's (643–712) understanding of the text. The *Taesŭng kisin non so* builds upon the ideas developed in Wŏnhyo's earlier work, the *Taesŭng kisin non pyŏlgi*, but provides an exhaustive line-by-line exegesis of the entire text. In this commentary, Wŏnhyo attempts to combine MADHYAMAKA and YOGĀCĀRA thought by demonstrating that the "one mind" (K. ilsim; see YIXIN) or TATHĀGATAGARBHA is the ground of all existence. He explains "mind as suchness" (K. sim chinyŏ; C. xin zhenru) and "mind that is subject to production-and-cessation" (K. sim saengmyŏl; C. xin shengmie) as being two aspects of the "one mind." Although Yogācāra and tathāgatagarbha materials formed the basis of his analysis of the *Dasheng qixin lun*, Wŏnhyo introduces Madhyamaka method as well into this commentary; for example, he uses the Madhyamaka tetralemma to explicate ineffable suchness. In distinction to Huiyuan, Wŏnhyo explains the ĀLAYAVIJÑĀNA as consisting of "three subtle characteristics," namely, the characteristic of KARMAN (K. ŏpsang; C. yexing), perceiving subject (K. nŭnggyŏn sang; C. nengjian xiang), and perceived objects (K. kyŏnggye sang; C. jingjie xing), which was adopted later by the Chinese Huayan master Fazang in his own commentary on the *Dasheng qixin lun*.

taeung chŏn. (大雄殿). In Korean, "basilica of the great hero"; the main worship hall in a Korean Buddhist monastery, where the main Buddha image of the monastery will be enshrined. The taeung chŏn is typically the largest shrine hall on the monastic campus and is intended to serve as the center of institutional life. Most of the monastery's residents will gather in this basilica for daily services in the early morning, before the noontime meal, and in the evening; other ceremonies and rituals that require the attendance of most of the monks will also be held in this hall. "Great hero" is an epithet for a buddha, and which "great hero" is enshrined in the hall will vary from monastery to monastery, although VAIROCANA and ŚĀKYAMUNI are most common. The taeung chŏn at T'ONGDOSA is unusual in Korea for having no enshrined image; instead, the back of the basilica is open and looks out on a STŪPA that is said to contain relics (K. sari; S. ŚARĪRA) of the Buddha himself; the relics thus represent the Buddha's presence in the monastery, rendering an image superfluous.

taigong. (C) (胎宮). See BIANDI.

taimitsu. (J) (台密). See MIKKYŌ.

Taisekiji. (大石寺). In Japanese, lit., "Great Stone Temple"; located on the lower slopes of Mount Fuji in Shizuoka Prefecture. The temple was originally named Daibō (Great Lodging) but takes its current name after Ōishigahara (Great Stone Field), the tract of land where it was first established. Taisekiji is the administrative head temple (sōhonzan) of the NICHIREN SHŌSHŪ school of Japanese Buddhism, and its abbot serves as the sect's leader. Taisekiji was founded in 1290 by NICHIREN's (1222–1282) principal successor Nichikō (1246–1333), who enshrined at the temple the DAI-GOHONZON (lit. great object of adoration), Nichiren's unique cosmological chart (MAṆḌALA) of the spiritual universe, along with his teacher's ashes and extant writings. The temple's Sanmon gate, built in 1717, is well known, as is the Mutsubō, most recently rebuilt in 1988. The Grand Reception Hall, Daikyakuden, was built in 1465 and rebuilt in 1995. Taisekiji's five-storied wooden pagoda, dating from 1749, faces toward the west rather than the usual south, signifying that Nichiren Buddhism would eventually spread back to the homeland of Buddhism. The Founders Hall, Mieidō, built in 1522, houses an image of Nichiren made in 1388, and Nichiren's autograph of the Dai-gohonzon is enshrined in the sanctuary (kaidan), known also as the Hōanden. Because the temple is the home of the sanctuary where the Dai-gohonzon is enshrined, Taisekiji has long been a major pilgrimage center for both Nichiren Shōshū and later SŌKA GAKKAI adherents; since the 1991 excommunication of the Sōka Gakkai lay organization from the Nichiren Shōshū, however, Sōka Gakkai members are barred from viewing the Dai-gohonzon.

Taishō shinshū daizōkyō. (大正新修大藏經). In Japanese, "The Taishō New Edition of the Buddhist Canon"; a modern Japanese edition of the East Asian Buddhist canon (DAZANGJING), edited by TAKAKUSU JUNJIRŌ and Watanabe Kaigyoku and published using movable-type printing between 1924 and 1935, during the Taishō reign era. This edition of the Buddhist canon has become the standard reference source for East Asian Buddhist materials; in Western sources, it is often referred to simply as "The Taishō"; in Korea, it is usually called the *Sinsu taejanggyŏng*. The Taishō canon includes 2,920 texts in eighty-five bound volumes (each volume is about one thousand pages in length), along with twelve volumes devoted to iconography, and three volumes of bibliography and scriptural catalogues, for a total of one hundred volumes. The Taishō's arrangement is constructed following modern scholarly views regarding the historical development of the Buddhist scriptural tradition, with scriptures of the MAINSTREAM BUDDHIST SCHOOLS opening the canon, followed by Indian MAHĀYĀNA materials, indigenous Chinese (and some Korean) writings, and finally Japanese writings:

1. ĀGAMA (vols. 1–2, nos. 1–151)
2. AVADĀNA (vols. 3–4, nos. 152–219)
3. PRAJÑĀPĀRAMITĀ (vols. 5–8, nos. 220–261)
4. SADDHARMAPUṆḌARĪKA (vol. 9, nos. 262–277)
5. AVATAṂSAKA/GAṆḌAVYŪHA (vols. 9–10, nos. 278–309)
6. RATNAKŪṬA (vols. 11–12, nos. 310–373)
7. MAHĀPARINIRVĀṆA (vol. 12, nos. 374–396)
8. MAHĀSAṂNIPĀTA (vol. 13, nos. 397–424)
9. Miscellaneous sūtras (vols. 14–17, nos. 425–847), e.g., YOGĀCĀRABHŪMI (nos. 602–620)

Ratnamegha (nos. 658–660)
Suvarṇaprabhāsa (nos. 663–665)
Tathāgatagarbha (nos. 666–667)
Laṅkāvatāra (nos. 670–672)
Saṃdhinirmocana (nos. 675–679)
Buddhabhūmi (no. 680)
Ghanavyūha (nos. 681–682)
10. Esoteric Buddhism (vols. 18–21, nos. 848–1420), e.g.,
Sarvatathāgatatattvasaṃgraha (vol. 18, no. 866)
Mahāmāyūrī (vol. 19, nos. 982–988)
11. Vinaya (vols. 22–24, nos. 1421–1506), e.g.,
Mahīśāsaka (nos. 1421–1424)
Mahāsāṃghika (nos. 1425–1427)
Dharmaguptaka (nos. 1428–1434)
Sarvāstivāda (nos. 1435–1441)
Mūlasarvāstivāda (nos. 1442–1459)
Mahāyāna-Bodhisattva (nos. 1487–1504)
12. Commentaries to Sūtras (vols. 24–26, nos. 1505–1535), e.g.,
Āgamas (nos. 1505–1508)
Mahāyāna sūtras (nos. 1509–1535)
13. Abhidharma (vols. 26–29, nos. 1536–1563), e.g.,
Jñānaprathāna (nos. 1543–1544)
Abhidharmamahāvibhāṣā (nos. 1545)
Vibhāṣā (nos. 1546–1547)
Abhidharmakośabhāṣya (nos. 1558–1559)
14. Madhyamaka (vol. 30, nos. 1564–1578), e.g.,
Mūlamadhyamakakārikā (no. 1564)
*Śataśāstra (no. 1569)
15. Yogācāra (vols. 30–31, nos. 1579–1627), e.g.,
Yogācārabhūmiśāstra (no. 1579)
*Vijñaptimātratāsiddhiśāstra (Cheng weishi lun; no. 1585)
Mahāyānasaṃgraha (nos. 1592–1598)
16. Treatises (vol. 32, nos. 1628–1692), e.g.,
Sūtrasamuccaya (no. 1635)
Śikṣāsamuccaya (no. 1636)
Dasheng qixin lun (nos. 1667–1668)
17. Chinese sūtra commentaries (vols. 33–39)
18. Chinese vinaya commentaries (vol. 40)
19. Chinese śāstra commentaries (vols. 40–44)
20. Chinese sectarian writings (vols. 44–48), e.g.,
Huayan school (vol. 45, nos. 1866–1890)
Tiantai school (vol. 46, nos. 1911–1950)
Pure Land school (vol. 47, nos. 1957–1984)
Chan school (vols. 47–48, nos. 1985–2025)
21. Histories (vols. 49–52, nos. 2026–2120), e.g.,
Fozu tongji (vol. 49, no. 2035)
Gaoseng zhuan collections (vols. 50–51, nos. 2059–2066)
Guang hongmingji (vol. 52, no. 2103)
22. Encyclopedias and references (vols. 53–54, nos. 2121–2136), e.g.,
Fayuan zhulin (vol. 53, no. 2122)
Yiqiejing yinyi (vol. 54, no. 2128)
23. Non-Buddhist schools (vol. 54, nos. 2137–2144), e.g.,
Saṃkhyakārikā (vol. 54, no. 2137)
24. Scriptural Catalogues (vol. 55, nos. 2145–2184), e.g.,
Kaiyuan Shijiao Lu (vol. 55, no. 2152)
25. Japanese Buddhist writings (vols. 56–84)
26. Buddhist apocrypha and fragments (vol. 85)
27. Iconography (vols. 86–92)
28. Bibliography and catalogues (vols. 93–100).

The textus receptus for the Taishō was the second Korean xylographic edition of the Buddhist canon, the Koryŏ taejanggyŏng. This second Koryŏ canon enjoyed such a strong reputation for scholarly accuracy that the Japanese Taishō editors adopted its readings wholesale in preparing their canon—meaning that where there was a Koryŏ edition available for a text, the Taishō editors simply copied it verbatim, listing in footnotes any alternate readings appearing in other canonical editions. Although the Taishō is often considered to be the definitive East Asian canon, it is therefore not a true "critical edition" but, to a large extent, a modern typeset reprint of the xylographical Koryŏ canon, with an updated arrangement of its contents according to modern historiographical criteria. The standard format of the Taishō uses a page with three columns or registers, each register with twenty-nine lines of Sinographs; therefore, it is typical to cite texts included in the Taishō by sequential number in the canon, and/or volume number in the canon, followed by page, register (either a, b, or c) and line number, e.g., *Dafangguang fo huayan jing* (*Buddhāvataṃsakasūtra*) 23, *T* 278:9.542c27 = Chinese text name (Sanskrit name, where relevant), roll (juan) no. 23, *T*[*aishō* canon], sequential no. 278, volume no. 9, page no. 542, register c, line 27. (Note that sometimes the sequential number and the Taishō volume number are reversed, or the sequential number is dropped.) See also dazangjing; Koryŏ taejanggyŏng; Sugi; tripiṭaka.

Tai Si tu incarnations. An influential incarnation (sprul sku) lineage in the Karma bka' brgyud sect of Tibetan Buddhism. The Tai Si tu incarnations are traditionally venerated as emanations of the future buddha Maitreya and, according to Tibetan sources, early members of the line include the Indian mahāsiddha Ḍombī Heruka and the Tibetans Mar pa Chos kyi blo gros and Tāranātha. As one of the leading incarnate lamas of the Karma bka' brgyud, the Si tu incarnations traditionally maintained a close relationship with the Karma pas, the sect's spiritual leader; indeed, the two often alternated as guru and disciple. The first of the line, Chos kyi rgyal mtshan (Chökyi Gyaltsen, 1377–1448), trained under the fifth Karma pa and in 1407 received the honorary title from the Ming Emperor Yongle (r. 1403–1425). Perhaps most famous in the lineage is the eighth Si tu, Chos kyi 'byung gnas, who is renowned for his erudition and literary accomplishments. The Tai Si tu lineage includes:

1. Chos kyi rgyal mtshan (1377–1448)
2. Bkra shis rnam rgyal (Tashi Namgyal, 1450–1497)

3. Bkra shis dpal 'byor (Tashi Paljor, 1498–1541)
4. Mi 'khrugs chos kyi go cha (Mitruk Chökyi Gocha, 1542–1585)
5. Chos kyi rgyal mtshan dge legs dpal bzang (Chökyi Gyaltsen Gelek Palsang, 1586–1657)
6. Mi pham phrin las rab brtan (Mipam Trinle Rapten, 1658–1682)
7. Legs bshad smra ba'i nyi ma (Lekshe Mawe Nyima, 1683–1698)
8. Chos kyi 'byung gnas (Chökyi Jungne, 1699–1774)
9. Padma nyin byed dbang po (Pema Nyinje Wangpo, 1774–1853)
10. Padma kun bzang (Pema Kunsang, 1854–1885)
11. Padma dbang mchog rgyal po (Pema Wangchok Gyalpo, 1886–1952)
12. Padma don yod nyin byed dbang po (Pema Dönyö Nyinje Wangpo, b. 1954)

Taixu. (太虛) (1889–1947). In Chinese, "Grand Voidness"; a leading figure in the Chinese Buddhist revival during the first half of the twentieth century. Taixu was ordained at the age of fourteen, purportedly because he wanted to acquire the supernatural powers of the buddhas. He studied under the famous Chinese monk, "Eight Fingers" (Bazhi Toutou), so called because he had burned off one finger of each hand in reverence to the Buddha, and achieved an awakening when reading a PRAJÑĀPĀRAMITĀ SŪTRA. In 1908, he joined a group of radicals, including other Buddhist monks, intent on revolution. In 1911, he organized the first of many groups (many of them short-lived) to revitalize Buddhism during this time of national crisis following the fall of the Qing dynasty. In 1912, he was involved in a failed attempt to turn the famous monastery of Chinshansi into a modern school for monks. After this disgrace, beginning in 1914, he went into retreat for three years, during which time he studied Buddhist scriptures and formulated plans to revitalize Buddhism, outlined in such works as his 1915 *Zhengli sengqie zhidu lun* ("The Reorganization of the SAṂGHA System"). He drafted a number of such plans over the remainder of his career, although none was ever implemented. In general, these plans called for improved and modernized education for monks and their participation in community and governmental affairs. He believed that Buddhism had become ossified in China and needed to be reformed into a force that would both inspire and improve society. In his view, for an effective reform of the monastic system to take place, Chinese Buddhists had to be educated according to the same standards as those in other Buddhist countries, beginning with Japan. For Taixu, the revival of Chinese Buddhism entailed starting a dialogue with the Buddhist traditions of other Asian countries; hence, a modern Buddhism had to reach out to these traditions and incorporate their intuitions and original insights. It was from these initial ideas that, during the 1920s, Taixu developed a strong interest in Japanese MIKKYŌ and Tibetan VAJRAYĀNA, as well as in the THERAVĀDA tradition of Sri Lanka. Taixu's participation in the "Revival of Tantra" (mijiao chongxing) debates with Wang Hongyuan (1876–1937), a Chinese convert to Japanese SHINGON, demonstrated his eclectic ideas about the reformation of Chinese Buddhism. The first of Taixu's activities after his return to public life was the founding of the Bodhi Society (Jueshe) in Shanghai in 1918. He was involved in the publication of a wide variety of Buddhist periodicals, such as "Masses Enlightenment Weekly," "Sound of Enlightenment," "Buddhist Critic," "New Buddhist Youth," "Modern Saṃgha," "Mind's Light," and the most enduring, "Sound of the Tides" (*Haichaoyin*). In 1922, he founded the Wuchang Buddhist Institute, where he hoped to produce a new generation of Buddhist leaders in China. In 1923, he founded the first of several "world Buddhist organizations," as a result of which he began to travel and lecture widely, becoming well known in Europe and America. He encouraged several of his students to learn the languages and traditions of Buddhist Asia. Among his students who went abroad in Tibet and Sri Lanka, FAZUN was the most accomplished in making several commentaries of late Indian Buddhism available to the Chinese public, thus fostering a comparison between the historical and doctrinal developments of Buddhism in China and in Tibet. In 1928 in Paris, Taixu donated funds for the establishment of the World Buddhist Institute, devoted to the unification of Buddhism and science; it would eventually be renamed Les Amis du Bouddhisme. He lectured in Sri Lanka and arranged an exchange program under which Chinese monks would study there. In 1929, he organized the Chinese Buddhist Society, which would eventually attract millions of members. During the Japanese occupation of China in the 1930s and 1940s, Taixu followed the Nationalist government into retreat in Sichuan. In this period, as a result of his efforts to internationalize Chinese Buddhism, Taixu founded two branches of the Wuchang Institute of Buddhist Studies specializing in Pāli and Tibetan Buddhism: the Pāli Language Institute in Xi'an, and the Sino-Tibetan Institute in Chongqing. In 1937, at the Sino-Tibetan Institute, in his famous essay "Wo de fojiao geming shibai shi" ("History of My Failed Buddhist Revolutions"), Taixu began an earnest self-reflection on his lifelong efforts to reform Chinese Buddhism, deeming them a failure in three domains: conceiving a Buddhist revolution, globalizing Buddhist education, and reorganizing the Chinese Buddhist Association. When the first global Buddhist organization, the WORLD FELLOWSHIP OF BUDDHISTS, was founded in 1950, Taixu, who had died three years earlier, was credited as its inspiration. His insights would eventually be developed and implemented by later generations of Buddhists in China and Taiwan. His collected works were published in sixty-four volumes. Several of the leading figures of modern and contemporary Chinese and Taiwanese Buddhism were close disciples of Taixu, including Fazun (1902–1980), Yinshun (1905–2005), Shengyan (1930–2009), and Xingyun (1927–).

taizōkai. (S. *garbhadhātu; C. taizang jie; K. t'aejang kye 胎藏界). In Japanese, "womb realm" or "womb world"; one of the

two principal diagrams (MAṆḌALA) used in the esoteric traditions of Japan (see MIKKYŌ), along with the KONGŌKAI ("diamond realm"); this diagram is known in Sanskrit as the garbhadhātu maṇḍala. The taizōkai maṇḍala is believed to be based on instructions found in the MAHĀVAIROCANĀBHISAṂBODHISŪTRA (*Dainichikyō*); the term, however, does not actually appear in any Buddhist scripture and its pictorial form seems to have developed independently of any written documents. Although KŪKAI (774–835) is often recognized as introducing the taizōkai maṇḍala to Japan, in fact various versions developed over time. Use of the two maṇḍalas flourished during the Heian period, gradually becoming central to Japanese TENDAI Buddhism and SHUGENDŌ. The taizōkai consists of twelve cloisters, which contain various bodhisattvas and deities. At the very center of the maṇḍala is located the Cloister of the Central Dais with Eight Petals (J. Chūdaihachiyōin). There, the DHARMAKĀYA MAHĀVAIROCANA sits in the center of an eight-petaled lotus flower, with four companion buddhas and bodhisattvas sitting on its petals. In the four cardinal directions sit the buddhas Ratnaketu (J. Hōdō), Saṃkusumitarāja (J. Kaifukeō), AMITĀBHA (J. Muryōju), and Divyadundubhi-meghanirghoṣa (J. Tenkuraion). In the four ordinal directions sit the bodhisattvas SAMANTABHADRA (J. Fugen), MAÑJUŚRĪ (J. Monju), AVALOKITEŚVARA (J. Kanjizai; Kannon), and MAITREYA (J. Miroku). The central Buddha and the surrounding four buddhas and bodhisattvas represent the five wisdoms (PAÑCAJÑĀNA). ¶ Mahāvairocana's central cloister is surrounded by a series of cloisters in all the four directions. In the eastern section (the topside of the maṇḍala), there are three cloisters from the central cloister at the outside: (1) Cloister of Universal Knowledge (J. Henchiin), in which three deities sit on each side of a triangle; (2) Cloister of ŚĀKYAMUNI (J. Shakain), where Śākyamuni sits surrounded by his disciples, as a manifestation of Mahāvairocana in the phenomenal world; and (3) Cloister of Mañjuśrī (J. Monjuin), in which Mañjuśrī sits surrounded by many attendants. In the western section (the bottom of the maṇḍala), there are also three cloisters: (1) The Cloister of the Mantra Holders (J. Jimyōin) includes the bodhisattva Prajñā surrounded by the four VIDYĀRĀJA: ACALANĀTHA (Fudō), TRAILOKYAVIJAYA (Gōzanze), YAMĀNTAKA (Daiitoku), and an alternate manifestation of Trailokyavijaya. (2) The Cloister of ĀKĀŚAGARBHA (Kokūzōin) represents worldly virtue and merit in the form of Ākāśagarbha. (3) The Cloister of Unsurpassed Attainment (Soshitchiin) includes eight bodhisattvas, symbolizing the achievement of the various virtues through which Mahāvairocana benefits sentient beings. In the southern section (the right side of the maṇḍala), there are two cloisters: (1) Cloister of VAJRAPĀṆI (Kongōshuin); in this cloister, VAJRASATTVA is the main deity, representing the Buddha's wisdom inherent in all sentient beings; and (2) Cloister of Removing Obstacles (Jogaishōin), where sits the bodhisattva SARVANĪVARAṆAVIṢKAMBHIN, representing the elimination of the hindrances to enlightenment. In the northern section (the left side of the maṇḍala), there are also two cloisters: (1) Cloister of the Lotus Division (Rengebuin) where Avalokiteśvara is the central deity; and (2) Cloister of KṢITIGARBHA (Jizōin), dedicated to the bodhisattva who saves those suffering in hell. All of these eleven cloisters are then enclosed by the Cloister of Outer VAJRADHARAS (Ge Kongōbuin), where there are 205 deities, many of them deriving from Indic mythology. In one distinctively Shingon usage, the maṇḍala was placed in the east and the kongōkai stood in juxtaposition across from it. The initiate would then invite all buddhas, bodhisattvas, and divinities into the sacred space, invoking all of their power and ultimately unifying with them. In Shugendō, the two maṇḍalas were often spatially superimposed over mountain geography or worn as robes on the practitioner while entering the mountain.

Takakusu Junjirō. (高楠順次郎) (1866–1945). One of the leading Japanese scholars of Indian Buddhism of the early twentieth century, who played a leading role in establishing Japan as a major center of scholarship in Buddhist Studies. He was born, surnamed Sawai, in today's Hiroshima prefecture. He was raised in a JŌDO SHINSHŪ family belonging to the NISHI HONGANJIHA, and he remained a devout layman throughout his life. After primary school, he studied at the leading Jōdo Shinshū educational institution, today's Ryūkoku University, from 1885 to 1889, during which time, through Jōdo Shinshū connections, he was adopted into the Takakusu merchant house of Kōbe. With the support of his adoptive father, he spent the period from 1890 to 1897 in Europe. Through the introduction of the Jōdo Shinshū cleric NANJŌ BUN'YŪ, Takakusu was able to study Indology under FRIEDRICH MAX MÜLLER at Oxford University, receiving a B.A. in 1894 and an M.A. in 1896. While at Oxford, he assisted Müller with the Sacred Books of the East project. The final volume of the series, entitled *Buddhist Mahāyāna Texts* (1894), included the VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA, the PRAJÑĀPĀRAMITĀHṚDAYA, and the three PURE LAND sūtras, all Indian works (or at least so regarded at the time) but selected because of their importance for Japanese Buddhism. Müller's choice of these texts was influenced by Takakusu and Nanjō Bun'yū. The works in *Buddhist Mahāyāna Texts* were translated by Müller, with the exception of the GUAN WULIANGSHOU JING, which was translated by Takakusu. Takakusu also studied in Paris with SYLVAIN LÉVI, with whom he would later collaborate on the *Hōbōgirin* Buddhist encyclopedia project. He returned to Japan in 1897 to lecture in Indian philosophy at Tokyo Imperial University, where he served as professor from 1899 to 1927, being appointed to the chair of Sanskrit studies in 1901. He was a devoted supporter of Esperanto and in 1906 was a founding member of the Japanese Esperantists Association. He supervised and contributed substantially to three monumental publishing projects: (1) the *Upanishaddo zensho*, a Japanese translation of the Upaniṣads (1922–1924); (2) the TAISHŌ SHINSHŪ DAIZŌKYŌ, a modern typeset edition of the East Asian Buddhist canon (see DAZANGJING) (1922–1934); and (3) the *Kokuyaku nanden*

daizōkyō, a Japanese translation of the Pāli canon of what he called "Southern Buddhism" (1936–1941). For his work on editing the Taishō canon, he was awarded the Prix Stanislas Julien in Sinology from the Institut de France in 1929. Among his English-language publications, he is known especially for *A Record of the Buddhist Religion as Practised in India and the Malay Archipelago* (1896), which is his translation of YIJING's pilgrimage record (NANHAI JIGUI NEIFA ZHUAN), and *Essentials of Buddhist Philosophy* (1947). He died in Shizuoka Prefecture, outside Tokyo.

Takṣaśilā. (P. Takkasilā; T. Rdo 'jog; C. Shishi guo; J. Sekishitsu koku; K. Sŏksil kuk 石室國). Capital of GANDHĀRA (in the Punjab province of modern Pakistan), often known in the West by its Greek name Taxila; an important early center of Indian Buddhist learning and transcontinental trade. The city is mentioned frequently in the JĀTAKAS, but not in the Pāli suttas, although it is presumed that the Buddha's physician JĪVAKA studied there. AŚOKA is said to have built a dharmarājika STŪPA and monastery there, which were enlarged when the city was rebuilt following Scythian invasions. Takṣaśilā was a center for both Hindu and Buddhist scholarship, which flourished especially between the first and fifth centuries CE. Among the schools of Indian Buddhism, the SARVĀSTIVĀDA was especially strong in the city. Takṣaśilā was visited by the Chinese pilgrims FAXIAN and XUANZANG, who described it in their travel records.

Takuan Sōhō. (沢庵宗彭) (1573–1645). Japanese ZEN master in the RINZAISHŪ, especially known for his treatments of Zen and sword fighting. A native of Tajima in Hyōgo prefecture, he was ordained at a young age and later became a disciple of Shun'oku Sōon (1529–1611) at Sangen'in, a subtemple of the monastery DAITOKUJI, who gave him the name Sōhō. In 1599, Takuan followed Shun'oku to the Zuiganji in Shiga prefecture, but later returned to Sangen'in. In 1601, Takuan visited Itō Shōteki (1539–1612) and became his disciple. In 1607, Takuan was appointed first seat (daiichiza) at DAITOKUJI, but he opted to reside at Tokuzenji and Nanshūji, instead. Takuan was appointed abbot of Daitokuji in 1609, but again he quickly abandoned this position. Takuan later became involved in a political incident (the so-called purple-robe incident; J. shi'e jiken), which led to the forced abdication of Emperor Gomizunoo (r. 1611–1629) and in 1629 to Takuan's exile to Kaminoyama in Uzen (present-day Yamagata prefecture). Takuan had befriended Yagyū Munenori (1571–1646), the swordsman and personal instructor to the shōgun, and while he was in exile composed for him the FUDŌCHI SHINMYŌROKU ("Record of the Mental Sublimity of Immovable Wisdom"). This treatise on Zen and sword fighting draws on the concept of no-mind (J. mushin; C. WUXIN) from the LIUZU TAN JING ("Platform Sūtra of the Sixth Patriarch") to demonstrate the proper method of mind training incumbent on adepts in both the martial arts and Zen meditation. Takuan later returned to Edo (present-day Tōkyō) and, with the support of prominent patrons, became the founding abbot of Tōkaiji in nearby Shinagawa in 1638. He died at the capital in 1645.

takuhatsu. (C. tuobo; K. t'akbal 托鉢). In Japanese, lit. "lifting up the bowl," viz., "to seek alms"; the Japanese form of the traditional monastic practice of alms-round (PIṆḌAPĀTA). In Japan, takuhatsu is most commonly associated with the ZEN school and is typically conducted by a small group of monks who walk together through the streets with walking staffs (khakkhara) and bells that alert residents to their presence. Monks typically receive money or uncooked rice in their bowls as alms, rather than the cooked food received by monks in Southeast Asia. See also PĀTRA.

Tambadīpa. The region occupied by PAGAN and Sirīkhettarā (Prome) in Middle Burma (Myanmar), it is the southern portion of the Burmese homeland of Sunāparanta-Tambadīpa. The name is most probably derived from Tambapannidīpa, one of several names of Sri Lanka.

tamnan. In northern (Lānnā) Thai, "chronicle"; a genre of northern Thai historical writing combining local legends, myths, and Buddhist literary traditions, and written in Lānnā Thai, Mon, or Pāli; this genre flourished in the Lānnā kingdom between the fourteenth and seventeenth centuries. A tamnan generally begins with events in the life of Gotama (S. GAUTAMA) Buddha and continues on to the establishment of the dispensation (P. sāsanā; S. ŚĀSANA) at a specific location. Notable tamnan include the CĀMADEVĪVAṂSA, the JINAKĀLAMĀLĪ, and the MŪLASĀSANA.

tanch'ŏng. (丹靑). In Korean, "red and blue," or more literally "cinnabar and azure-green"; a style of painting colors and patterns on the wooden beams, rafters, and pillars of Korean Buddhist monastery buildings, as well as on palaces and other traditional-style wooden buildings. The five colors used in tanch'ŏng painting are red, azure-green, yellow, black, and white. These colors are related to the five Chinese elements (metal, wood, fire, water, earth) and the five directions (the four cardinal directions plus the center). The paint, made from a thick coating of minerals mixed with glue, protects the wood from burrowing insects and water damage and sets the monasteries and palaces apart from the buildings of private citizens, who were prohibited by law from using the same decorative techniques. Tanch'ŏng painting may date from early in the inception of Buddhism in Korea during the fourth or fifth centuries, and there is evidence of the use of tanch'ŏng during both the Koguryŏ and Silla kingdoms. There are various types of tanch'ŏng, which range from applying a utilitarian base coat, usually in azure-green, to protect the wood, to much more elaborate styles that uses all five colors in geometric patterns, sometimes interspersed with stylized flowers, water lilies, pomegranates, and bubbles. Tanch'ŏng is usually painted using stencils made from perforated paper dusted with chalk to imprint

the pattern on the surface to be painted. After the painting is done, an oil coat is spread over the paint to protect and brighten the colors. Some of the best-known examples of tanch'ŏng can be found at the monasteries of PUSŎKSA and SUDŎKSA.

tanengi. (多念義). In Japanese, "the doctrine of multiple recitations," in the Japanese PURE LAND traditions, the practice of multiple or even continuous recitations of the buddha Amitābha's name (J. nenbutsu; C. NIANFO). The debate between multiple recitations and a single recitation (ICHINENGI) emerged in the early JŌDOSHŪ movement of HŌNEN (1133–1212). Hōnen himself emphasized faith, stating that even a single moment of faith would be sufficient to bring about rebirth in Amitābha's pure land of SUKHĀVATĪ. However, he himself practiced assiduously, chanting the nenbutsu tens of thousands of times a day. Hōnen's disciples Ryūkan (1148–1228) and Shōkōbō Benchō (1162–1238) are especially well known for promoting the tanengi position. Tanengi emphasized the value of a lifetime of practice, in which each moment of a disciple's life would come to be imbued with the power of the nenbutsu. It is said that, thanks to such constant practice, a disciple would gain the assurance of rebirth in sukhāvatī through a vision of Amitābha in the moments before death.

Tang gaoseng zhuan. (C) (唐高僧傳). See GAOSENG ZHUAN; XU GAOSENG ZHUAN.

tangho. (堂號). In Korean, lit. "hall epithet"; a new cognomen given to an especially eminent monk, which is bestowed by his teacher some twenty to thirty years after his ordination, often in conjunction with transmitting the master's lineage to his pupil; this name subsequently serves as the monk's funerary name. The name is typically selected to reflect the designated monk's spiritual attainments and/or the specific practices with which he is identified. For example, the monk CH'ŎNGHŎ HYUJŎNG (1520–1604) was given the hall epithet Ch'ŏnghŏdang (Clear and Pure) in recognition of his enlightened understanding. The hall epithet of the monk HWANSŎNG CHIAN (1664–1729), Hwansŏngdang (Calling [People] to Awake), refers to his efforts to disseminate the Buddhist teachings, while Nuram Sikhwal's (1725–1830) epithet Nuramdang (Reticent at the Hermitage) referred to the fact that he often meditated in seclusion deep in the mountains. The term originates from the designation of a person's dwelling and thus signifies the owner of a house. The term also is employed in both Confucian and secular contexts, but its usage in Buddhism seems to be unique to Korea, where it became customary to bestow such names from the late Koryŏ period onward. See also SIHO.

tanju. (短珠). In Japanese and Korean, "short rosary." See JAPAMĀLĀ.

Tanluan. (J. Donran; K. Tamnan 曇鸞) (c. 476–542). Chinese monk and putative patriarch of the PURE LAND traditions of East Asia. He is said to have become a monk at an early age, after which he devoted himself to the study of the MAHĀSAṂNIPĀTASŪTRA. As his health deteriorated from his intensive studies, Tanluan is said to have resolved to search for a means of attaining immortality. During his search in the south of China, Tanluan purportedly met the Daoist master Tao Hongjing (455–536), who gave him ten rolls of scriptures of the Daoist perfected. Tanluan is then said to have visited BODHIRUCI in Luoyang, from whom he received a copy of the GUAN WULIANGSHOU JING. Tanluan subsequently abandoned his initial quest for immortality in favor of the teachings of the buddha AMITĀBHA's pure land (see SUKHĀVATĪ). He was later appointed abbot of the monasteries of Dayansi in Bingzhou (present-day Shaanxi province) and Xuanzhongsi in nearby Fenzhou. Tanluan is famous for his commentary on the WULIANGSHOU JING YOUPOTISHE YUANSHENG JI attributed to VASUBANDHU.

Tannishō. (歎異抄). In Japanese, "Record of Lamentations on Divergences"; a short collection of the sayings of the JŌDO SHINSHŪ teacher SHINRAN (1173–1263), compiled by his disciple Yuien (1222–1289). The work consists of eighteen short sections: the first ten sections are direct quotations of Shinran's sayings as recalled by the author; the remaining eight are Yuien's responses to what he considers misinterpretations of Shinran's teachings that arose after his death. The first part of the text, in particular, describes such characteristic teachings of Shinran as "evil people have the right capacity" (AKUNIN SHŌKI), i.e., that Amitābha's compassion is directed primarily to evildoers. The text was little known for centuries after its compilation, even to followers of Jōdo Shinshū, until it was popularized during the Meiji era by the HIGASHI HONGANJI reformer KIYOZAWA MANSHI (1863–1903).

tantra. (T. rgyud; C. tanteluo; J. dantokura; K. tant'ŭngna 檀特羅). In Sanskrit, lit. "continuum"; a term derived from the Sanskrit root √tan ("to stretch out," "to weave"), having the sense of an arrangement or a pattern (deployed not only in a ritual, but in military and political contexts as well). The term is thus used to name a manual or handbook that sets forth such arrangements, and is not limited to Buddhism or to Indian religions more broadly. Beyond this, the term is notoriously difficult to define. It can be said, however, that tantra does not carry the connotation of all things esoteric and erotic that it has acquired in the modern West. In Buddhism, the term tantra generally refers to a text that contains esoteric teachings, often ascribed to ŚĀKYAMUNI or another buddha. Even this, however, is problematic: there are esoteric texts that do not carry the term tantra in their title (such as the VAJRAŚEKHARASŪTRA), and there are nonesoteric texts in whose title the term tantra appears (such as the UTTARATANTRA). Scholars therefore tend to define tantra (in the textual sense) based on specific sets of elements contained in the texts. These include MANTRA, MAṆḌALA, MUDRĀ, initiations (ABHIṢEKA), fire sacrifices (HOMA), and feasts

(GAṆACAKRA), all set forth with the aim of gaining powers (SIDDHI), both mundane and supramundane. The mundane powers are traditionally enumerated as involving four activities: pacification of difficulties (ŚĀNTIKA), increase of wealth (PAUṢṬIKA), control of negative forces (VAŚĪKARAṆA), and destruction of enemies (ABHICĀRA). The supramundane power is enlightenment (BODHI). The texts called tantras began to appear in India in the late seventh and early eighth centuries CE, often written in a nonstandard (some would say "corrupt") Sanskrit that included colloquial elements and regional terms. These anonymous texts (including such famous works as the GUHYASAMĀJATANTRA, the CAKRASAṂVARATANTRA, and the HEVAJRATANTRA), typically provided mantras and instructions for drawing maṇḍalas, among a variety of other elements, but their presentation and organization were usually not systematic; these texts came to serve as the "root tantra" for a cycle of related texts. The more systematic of these were the SĀDHANA (lit. "means of achievement"), a ritual manual by a named author, which set forth the specific practices necessary for the attainment of siddhi. The standard form was to create a maṇḍala into which one invited a deity. The meditator would either visualize himself or herself as the deity or visualize the deity as appearing before the meditator. Various offerings would be made, mantras would be recited, and siddhis would be requested. Although scholars continue to explore the relation between the tantras and the MAHĀYĀNA sūtras, tantric exegetes viewed the tantras, like the Mahāyāna sūtras, as being the word of the Buddha (BUDDHAVACANA) and as setting forth forms of practice consistent with the bodhisattva vow and the quest for buddhahood, albeit more quickly than by the conventional path, via what came to be referred to as the VAJRA vehicle (VAJRAYĀNA). Thus, it was said that the Mahāyāna was divided into the pāramitānaya, the "mode of the perfections" set forth in the Mahāyāna sūtras, and the mantranaya, the "mode of the mantras" set forth in the tantras. These two are also, although less commonly, known as the sūtrayāna and the TANTRAYĀNA. In this context, then, the term "tantra" is often used by tantric exegetes in contrast to "sūtra," which is taken to mean the corpus of exoteric teachings of the Buddha. For those who accept the tantras as the word of the Buddha, the term "sūtras and tantras" would thus refer to the entirety of the Buddha's teachings. The corpus of tantras was eventually classified by late Indian Buddhist exegetes into a number of schemata, the most famous of which is the fourfold division into KRIYĀTANTRA, CARYĀTANTRA, YOGATANTRA, and ANUTTARAYOGATANTRA.

tantrayāna. In Sanskrit, "vehicle of the tantras"; see TANTRA.

tantric vows. (T. rig 'dzin gyi sdom pa; *vidyādharasaṃvara). Any of a number of vows taken as part of a tantric initiation and to be maintained as part of tantric practice. Many tantras list disparate sets of rules, the best known being that found in the *Rgyud rdo rje rtse mo* (the Tibetan version of the VAJRAŚEKHARASŪTRA, a SARVATATHĀGATATATTVASAṂGRAHA explanatory tantra). Such texts enumerate "restraints" or "vows" (SAṂVARA) and pledges (SAMAYA) connected with the five buddha families (BUDDHAKULA; PAÑCATATHĀGATA), and possibly an ordination and confession ceremony modeled on the PRĀTIMOKṢA. These disparate rules were later codified more systematically in a number of tantric texts: the so-called root infractions in the *Vajrayānamūlāpatti* attributed to AŚVAGHOṢA, and an even shorter list of secondary vows in the *Vajrayānasthūlāpatti* attributed to NĀGĀRJUNA. In addition, rules of deportment toward the guru were set forth in works such as the GURUPAÑCĀŚIKĀ ("Fifty Stanzas on the Guru"), also attributed to Aśvaghoṣa. In Tibet, these rules were codified and commented on at length in the "three vow" (SDOM GSUM) literature. The "root infractions" are the following: (1) to disparage the guru, (2) to overstep the words of the buddhas, (3) to be cruel to one's VAJRA siblings (disciples of the same guru), (4) to abandon love for sentient beings, (5) to abandon the two types of BODHICITTA, (6) to disparage the doctrines of one's own and others' schools, (7) to proclaim secrets to the unripened, (8) to scorn the aggregates, (9) to have doubts about the essential purity of all phenomena, (10) to show affection to the wicked, (11) to have false views about emptiness, (12) to disillusion the faithful, (13) not to rely on the pledges, and (14) to disparage women. It is noteworthy that, unlike the prātimokṣa, the infractions here involve attitudes and beliefs, in addition to transgressions of body and speech. It was generally said that receiving the bodhisattva vows was a prerequisite for receiving tantric vows; the prior receipt of prātimokṣa precepts was optional. In expositions of the "three vows," tantric vows are the third, after the prātimokṣa precepts and the bodhisattva precepts. Especially in Tibet there is extensive discussion of the compatibility of the three sets of vows. See also TRISAṂVARA.

tao. (C) (道). The obsolete Wade–Giles transcription for the Sinograph DAO (way, path).

tāpana. (T. tsha ba; yanre diyu; J. ennetsujigoku; K. yŏmyŏl chiok 炎熱地獄). In Sanskrit and Pāli, "heating"; one of the hot hells, usually identified as the sixth in descending order of depth beneath the continent of JAMBUDVĪPA and in ascending order of the suffering incumbent on denizens of that realm. According to some accounts, the denizens of this hell are burned in a great cauldron of molten metal; according to others, they are impaled on burning staves.

tapas. (P. tapa; T. dka' thub; C. kuxing; J. kugyō; K. kohaeng 苦行). In Sanskrit, "severe austerities"; mortification of the flesh, or other extreme forms of religious penance. The Buddha rejected self-mortification as a valid means of practice, after having practiced it himself, to no avail, prior to his enlightenment. For the authorized list of ascetic practices, see DHUTAṄGA.

Ta pho gtsug lag khang. (Tapo Tsuklakang). An important Tibetan Buddhist institution, also known as Ta pho chos 'khor, located at an altitude of ten thousand feet (3,050 m.)

along the Spiti River in the modern-day Lahoul and Spiti region of Himachal Pradesh in northwest India. It is situated along two of the former routes of travel between India and Tibet. Over its long existence, Ta pho has been an important center for both scholarship and artistic activity and remains an active Tibetan monastery, preserving many important Buddhist manuscripts, scroll paintings, statues, and murals. It was established in 996 by the king of the western Tibetan region of GU GE YE SHES 'OD and the translator RIN CHEN BZANG PO. According to traditional histories, at the age of seventeen, Rin chen bzang po was sent to India together with a group of twenty other youths by King Ye shes 'od to study Sanskrit and Indian vernacular languages. Rin chen bzang po made several trips to India, spending a total of seventeen years in Kashmir and the Buddhist monastic university of VIKRAMAŚĪLA before returning to Tibet. He is said to have founded 108 monasteries, among which was Ta pho. Among the many monasteries of western Tibet, it was second in importance only to THO LING and was the repository of a trove of old Tibetan texts that contributed to greater understanding of the formation of the Tibetan canon (BKA' 'GYUR). In 1996, the fourteenth DALAI LAMA gave the KĀLACAKRA initiation at Ta pho in commemoration of the one thousandth anniversary of the monastery's founding.

Tārā. (T. Sgrol ma; C. Duoluo; J. Tara; K. Tara 多羅). In Sanskrit, lit. "Savioress"; a female bodhisattva who has the miraculous power to be able to deliver her devotees from all forms of physical danger. Tārā is said to have arisen from either a ray of blue light from the eye of the buddha AMITĀBHA, or from a tear from the eye of the BODHISATTVA AVALOKITEŚVARA as he surveyed the suffering universe. The tear fell into a valley and formed a lake, out of which grew the lotus from which Tārā appeared. She is thus said to be the physical manifestation of the compassion of Avalokiteśvara, who is himself the quintessence of the compassion of the buddhas. Because buddhas are produced from wisdom and compassion, Tārā, like the goddess PRAJÑĀPĀRAMITĀ ("Perfection of Wisdom"), is hailed as "the mother of all buddhas," despite the fact that she is most commonly represented as a beautiful sixteen-year-old maiden. She is often depicted together with BHṚKUTĪ (one of her forms) as one of two female bodhisattvas flanking Avalokiteśvara. Tārā is the subject of much devotion in her own right, serving as the subject of many stories, prayers, and tantric SĀDHANAS. She can appear in peaceful or wrathful forms, depending on the circumstances, her powers extending beyond the subjugation of these worldly frights, into the heavens and into the hells. She has two major peaceful forms, however. The first is SITATĀRĀ, or White Tārā. Her right hand is in VARADAMUDRĀ, her left is at her chest in VITARKAMUDRĀ and holds a lotus and she sits in DHYĀNĀSANA. The other is ŚYĀMATĀRĀ, or Green Tārā. Her right hand is in varadamudrā, her left is at her chest in vitarkamudrā and holds an utpala, and she sits in LALITĀSANA. Her wrathful forms include KURUKULLĀ, a dancing naked YOGINĪ, red in color, who brandishes a bow and arrow in her four arms. In tantric MAṆḌALAS, she appears as the consort of AMOGHASIDDHI, the buddha of the northern quarter; together they are lord and lady of the KARMAKULA. But she is herself also the sole deity in many tantric SĀDHANAS, in which the meditator, whether male or female, visualizes himself or herself in Tārā's feminine form. Tārā is best-known for her salvific powers, appearing the instant her devotee recites her MANTRA, oṃ tāre tuttāre ture svāhā. She is especially renowned as Aṣṭabhayatrāṇatārā, "Tārā Who Protects from the Eight Fears," because of her ability to deliver those who call upon her when facing the eight great fears (mahābhaya) of lions, elephants, fire, snakes, thieves, water, imprisonment, and demons. Many tales are told recounting her miraculous interventions. Apart from the recitation of her mantra, a particular prayer is the most common medium of invoking Tārā in Tibet. It is a prayer to twenty-one Tārās, derived from an Indian TANTRA devoted to Tārā, the *Sarvatathāgatamātṛtārāviśvakarmabhavatantra* ("Source of All Rites to Tārā, the Mother of All the Tathāgatas"). According to some commentarial traditions on the prayer, each of the verses refers to a different form of Tārā, totaling twenty-one. According to others, the forms of Tārā are iconographically almost indistinguishable. Tārā entered the Buddhist pantheon relatively late, around the sixth century, in northern India and Nepal, and her worship in Java is attested in inscriptions dating to the end of the eighth century. Like Avalokiteśvara, she has played a crucial role in Tibet's history, in both divine and human forms. One version of the creation myth that has the Tibetan race originating from a dalliance between a monkey and an ogress says the monkey was a form of Avalokiteśvara and the ogress a form of Tārā. Worship of Tārā in Tibet began in earnest with the second propagation and the arrival of ATIŚA DĪPAṂKARAŚRĪJÑĀNA in the eleventh century; she appears repeatedly in accounts of his life and in his teachings. He had visions of the goddess at crucial points in his life, and she advised him to make his fateful journey to Tibet, despite the fact that his life span would be shortened as a result. His sādhanas for the propitiation of Sitatārā and Śyāmatārā played a key role in promoting the worship of Tārā in Tibet. He further was responsible for the translation of several important Indic texts relating to the goddess, including three by Vāgīśvarakīrti that make up the 'chi blu, or "cheating death" cycle, the foundation of all lineages of the worship of Sitatārā in Tibet. The famous Tārā chapel at Atiśa's temple at SNYE THANG contains nearly identical statues of the twenty-one Tārās. The translator Darmadra brought to Tibet the important ANUYOGA tantra devoted to the worship of Tārā, entitled *Bcom ldan 'das ma sgrol ma yang dag par rdzogs pa'i sangs rgyas bstod pa gsungs pa*. Tārā is said to have taken human form earlier in Tibetan history as the Chinese princess WENCHENG and Nepalese princess Bhṛkutī, who married King SRONG BTSAN SGAM PO, bringing with them buddha images that would become the most revered in Tibet. Which Tārā they were remains unsettled; however, some sources identify Wencheng with Śyāmatārā and Bhṛkutī with the goddess of the same name, herself said to be a form of Tārā. Others argue that the Nepalese

princess was Sitatārā, and Wencheng was Śyāmatārā. These identifications, however, like that of Srong btsan sgam po with Avalokiteśvara, date only to the fourteenth century, when the cult of Tārā in Tibet was flourishing. In the next generation, Tārā appeared as the wife of King KHRI SRONG LDE BTSAN and the consort of PADMASAMBHAVA, YE SHES MTSHO RGYAL, who in addition to becoming a great tantric master herself, served as scribe when Padmasambhava dictated the treasure texts (GTER MA). Later, Tārā is said to have appeared as the great practitioner of the GCOD tradition, MA GCIG LAP SGRON (1055–1149). Indeed, when Tārā first vowed eons ago to achieve buddhahood in order to free all beings from SAṂSĀRA, she swore she would always appear in female form.

Tāranātha. (1575–1634). The appellation of Kun dga' snying po (Kunga Nyingpo), a Tibetan scholar affiliated with the JO NANG tradition. Tāranātha was an author of exceptional scope, writing on a vast range of philosophical and doctrinal topics. Born in Drong, he was a precocious child, famously declaring himself to be an incarnate lama (SPRUL SKU) at the age of one, an identification that was eventually confirmed. He was installed at Chos lung rtse monastery at the age of four. By age fifteen, he had studied many tantric cycles, becoming adept at both the six yogas of NĀROPA (NA RO CHOS DRUG) and MAHĀMUDRĀ. He also developed an interest in Indian languages; several of his translations of Sanskrit works are included in the Tibetan canon. Tāranātha had a strong interest in India throughout his life, not simply its ancient past but also its contemporary present, chronicling events of the Mughal period. He even declared that he and the Mughal emperor Jahangir were emanations of the same person. He also had a strong interest in the SIDDHA tradition and studied with many Buddhist and non-Buddhist YOGINs. At the age of sixteen, Tāranātha met his most influential Indian teacher, Buddhaguptanātha, who had traveled throughout the Buddhist world and studied directly with some of the last remaining members of the siddha tradition. Tāranātha surveyed the Indian siddha lineages in his BKA' BABS BDUN LDAN GYI RNAM THAR ("Biographies of the Seven Instruction Lineages"). His most famous work, informally called the RGYA GAR CHOS 'BYUNG ("History of Indian Buddhism"), is highly regarded by later Tibetan historians. Tāranātha was a great master of the KĀLACAKRATANTRA and its surrounding topics, writing extensively about them. He restored the STŪPA built by the Jo nang founder DOL PO PA SHES RAB RGYAL MTSHAN. Tāranātha saw Dol po pa in many visions and strongly promoted his teachings, writing in support of the GZHAN STONG view. In 1615, with the patronage of the rulers of Gtsang, he began work on JO NANG PHUN TSHOGS GLING, northwest of Gzhis ka rtse (Shigatse) in central Tibet. It was completed in 1628. Renowned for its beautiful design and sumptuous artwork, the monastery would be his primary residence in the last years of his life. After his death, the fifth DALAI LAMA suppressed the Jo nang sect, converting the monastery into a DGE LUGS establishment. He also identified Tāranātha's incarnation in Mongolia as the first RJE BTSUN DAM PA, a line of incarnations who would serve as titular head of the Dge lugs sect in Mongolia until the twentieth century. The reasons for this identification are debated. The Dalai Lama claimed in one of his autobiographies that his mother had been the tantric consort of Tāranātha and that Tāranātha was his biological father. It was also the case that Tāranātha had been supported by the rulers of Gtsang, the opponents that the Dalai Lama's faction had defeated in the civil war that resulted in the Dalai Lama gaining political control over Tibet.

tariki. (C. tali; K. t'aryŏk 他力). In Japanese, "other power." The term tariki came to be used frequently by followers of SHINRAN and his JŌDO SHINSHŪ tradition. Tariki often appears in contast with JIRIKI, or "self-power." While tariki refers to the practitioner's reliance on the power or grace of the buddha AMITĀBHA, jiriki is often used in a pejorative sense to refer to practices requiring personal effort, such as keeping the precepts and cultivating the six PĀRAMITĀs. Reliance on jiriki was often condemned as a more difficult path than that based on tariki, such as reciting Amitābha's name (see NIANFO). The tariki and jiriki distinction is traditionally attributed to the Chinese monk TANLUAN and his commentary on the WULIANGSHOU JING YOUPOTISHE YUANSHENG JI. Basing his claims on the vows of Amitābha that appear in the SUKHĀVATĪVYŪHASŪTRA, Tanluan argued that true power belonged not to the practitioner but to Amitābha. While Tanluan himself did not condemn practices involving self-power, SHINRAN and his Japanese followers argued for exclusive faith in the power of Amitābha and denounced jiriki as inappropriate for the final age of the DHARMA (J. mappō; C. MOFA).

tarjanīmudrā. (T. sdigs mdzub phyag rgya; C. qike yin; J. kikokuin; K. kigŭk in 祈克印). In Sanskrit, "wrathful" or "threatening gesture." The tarjanīmudrā may be formed in several ways: with the index finger raised like a hook from the loosely closed fist of either hand, or with index and pinky fingers extended and remaining fingers closed lightly in a fist. This gesture is common in images of semiwrathful and wrathful deities, such as Acala and VAJRAPĀṆI, as well as dharma protectors (DHARMAPĀLA), and may be formed in combination with other hand gestures. See also MUDRĀ.

tarjanīyakarman. (P. tajjaniyakamma; T. bsdigs pa'i las; C. yinghe/lingbu; J. ōka/ryōfu; K. ŭngga/yŏngp'o 應訶/令怖). In Sanskrit, "act of censure" or "act of rebuke"; a formal and public criticism of a monk or nun for untoward behavior that does not require a formal punishment. Such behavior would include being quarrelsome, living among householders, and speaking disrespectfully about the Buddha, DHARMA, or SAṂGHA. A monk or nun who acknowledges such misbehavior may then request that the censure be rescinded.

tarka. (T. rtog ge; C. size; J. shichaku; K. sat'aek 思擇). In Sanskrit, "logic"; conceptual knowledge that relies on reasoning.

Although often used in this neutral sense, in some contexts the term is used pejoratively to refer to a pedantic logic that is unrelated, and in some cases detrimental, to progress on the path of enlightenment. In this latter sense, the term might be better translated as "sophistry."

Tarkajvālā. (T. Rtog ge 'bar ba). In Sanskrit, the "Blaze of Reasoning"; the extensive prose autocommentary on the MADHYAMAKAHṚDAYA, the major work of the sixth-century Indian MADHYAMAKA (and, from the Tibetan perspective, *SVĀTANTRIKA) master BHĀVAVIVEKA (also referred to as Bhavya and Bhāviveka). The *Madhyamakahṛdaya* is preserved in both Sanskrit and Tibetan; the *Tarkajvālā* only in Tibetan. It is a work of eleven chapters, the first three and the last two of which set forth the main points in Bhāvaviveka's view of the nature of reality and the Buddhist path, dealing with such topics as BODHICITTA, the knowledge of reality (tattvajñāna), and omniscience (SARVAJÑATĀ). The intervening chapters set forth the positions (and Bhāvaviveka's refutations) of various Buddhist and non-Buddhist schools, including the ŚRĀVAKA, YOGĀCĀRA, Sāṃkhya, Vaiśeṣika, Vedānta, and Mīmāṃsā. These chapters (along with ŚĀNTARAKṢITA's TATTVASAṂGRAHA) are an invaluable source of insight into the relations between Madhyamaka and the other Indian philosophical schools of the day. The chapter on the śrāvakas, for example, provides a detailed account of the reasons put forth by the śrāvaka schools as to why the MAHĀYĀNA sūtras are not the word of the Buddha (BUDDHAVACANA). Bhāvaviveka's response to these arguments, as well as his refutation of Yogācāra in the subsequent chapter, are particularly spirited.

tārkika. (T. rtog ge ba). In Sanskrit, "logician," but generally used in a pejorative sense of a sophist or pendant obsessed with argumentation and thus prevented from perceiving reality.

tathāgata. (T. de bzhin gshegs pa; C. rulai; J. nyorai; K. yŏrae 如來). In Sanskrit and Pāli, lit., "one who has thus come/gone," and generally translated into English as the "thus gone one." Tathāgata is, along with BHAGAVAT, one of the most common epithets of the Buddha and a term the Buddha commonly uses in the SŪTRAS to refer both to himself and to the buddhas of the past. The Sanskrit compound may be parsed to mean either "one who is thus gone" (tathā + gata), or "one who has thus come" (tathā + āgata), and for this reason the translations of the Sanskrit vary across languages. The Sanskrit root √gam is also used with prepositions in words that mean "understand," so a secondary denotation of the term is to "understand" things "as they are" (tathā). The Chinese settled on the translation "thus come one" (rulai). The Tibetan translation de bzhin gshegs pa reflects the ambiguity of the Sanskrit and can mean either "one who has thus gone" or "one who has thus come." The Pāli commentaries typically provide eight (and sometimes as many as sixteen) denotations of tathāgata, some of which may be of pre- or non-Buddhist origin, perhaps deriving from the JAINA tradition. In the early Pāli scriptures, the term seems to evoke the infinite knowledge of the Buddha, with little attempt to provide a clear etymology. Later commentators would offer a number of interpretations, among the most common of which are that the Buddha has "thus come" into the world like the other buddhas of the past, or that he has "thus gone" on to achieve NIRVĀṆA like the other buddhas of the past. Other explanations equate it with the word TATHATĀ.

tathāgatabhūmi. (T. de bzhin gshegs pa'i sa; C. rulai di; J. nyoraiji; K. yŏrae chi 如來地). The "stage of a thus gone one," the name given in the LAṄKĀVATĀRASŪTRA to an eleventh ground or stage (BHŪMI) of the BODHISATTVA path that constitutes the fruition of buddhahood (buddhaphala). The tenth BODHISATTVABHŪMI, DHARMAMEGHĀ, the culminating stage of the "path of cultivation" (BHĀVANĀMĀRGA), still contains both subtle remnants of the cognitive obstructions (JÑEYĀVARAṆA) as well as seeds of the afflictive obstructions (KLEŚĀVARAṆA). These obstructions will be completely eradicated through the diamond-like samādhi (VAJROPAMASAMĀDHI), which marks the transition to the "ultimate path" (NIṢṬHĀMĀRGA), or the "path where no further training is necessary" (AŚAIKṢAMĀRGA). This stage is the tathāgatabhūmi, which is also sometimes known as the "universally luminous" (samantaprabhā).

tathāgatagarbha. (T. de bzhin gshegs pa'i snying po; C. rulaizang; J. nyoraizō; K. yŏraejang 如來藏). In Sanskrit, variously translated as "womb of the TATHĀGATAS," "matrix of the tathāgatas," "embryo of the tathāgatas," "essence of the tathāgatas"; the term probably means "containing a tathāgatha." It is more imprecisely interpreted as the "buddha-nature," viz., the potential to achieve buddhahood that, according to some MAHĀYĀNA schools, is inherent in all sentient beings. The tathāgatagarbha is the topic of several important Mahāyāna sūtras, including the TATHĀGATAGARBHASŪTRA (with its famous nine similes about the state), the ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA, the MAHĀPARINIRVĀṆASŪTRA, and the LAṄKĀVATĀRASŪTRA (where it is identified with the ĀLAYAVIJÑĀNA), as well as the important Indian ŚĀSTRA, the RATNAGOTRAVIBHĀGA (also known as the *Uttaratantra*), with a commentary by ASAṄGA. The concept is also central to such East Asian apocryphal scriptures as the DASHENG QIXIN LUN and the KŬMGANG SAMMAE KYŎNG. The concept of tathāgatagarbha seems to have evolved from a relatively straightforward inspiration that all beings are capable of achieving buddhahood to a more complex doctrine of an almost genetic determination that all beings would eventually become buddhas; the *Laṅkāvatāra* goes so far as to describe the tathāgatagarbha itself as possessing the thirty-two marks of a superman (MAHĀPURUṢALAKṢAṆA). Tathāgatagarbha thought seeks to answer the question of why ignorant beings are able to become enlightened by suggesting that this capacity is something innate in the minds of all sentient beings, which has become concealed by adventitious afflictions (ĀGANTUKAKLEŚA) that are extrinsic to the mind. "Concealment" (S. saṃdhi/abhisaṃdhi; C. yinfu) here suggests that the

tathāgatagarbha is first, a passive object that is obscured by the presence of the afflictions; or, second, it is an active agent of liberation, which secrets itself away inside the minds of sentient beings so as to inspire them toward enlightenment. The former passive sense is more common in Indian materials; the latter sense of tathāgatagarbha as an active soteriological potency is more typical of East Asian presentations of the concept. Tathāgatagarbha thought could thus claim that enlightenment need involve nothing more rigorous than simply relinquishing the mistaken notion that one is deluded and accepting the fact of one's inherent enlightenment (see also BENJUE; HONGAKU). The notion of tathāgatagarbha was a topic of extensive commentary and debate in India, Tibet, and East Asia. It was not the case, for example, that all Mahāyāna exegetes asserted that all sentient beings possess the tathāgatagarbha and thus the capacity for enlightenment; indeed, the FAXIANG ZONG, an East Asian strand of YOGĀCĀRA, famously asserted that some beings could so completely lose all aspiration for enlightenment that they would become "incorrigible" (ICCHANTIKA) and thus be forever incapable of liberation. There was also substantial debate as to the precise nature of the tathāgathagarbha, especially because some of its descriptions made it seem similar to the notion of a perduring self (ĀTMAN), a doctrine that is anathema to most schools of Buddhism. The *Śrīmālādevīsiṃhanāda*, for example, described the tathāgatagarbha as endowed with four "perfect qualities" (GUṆAPĀRAMITĀ): permanence, purity, bliss, and self, but states that this "self" is different from the "self" (ĀTMAN) propounded by the non-Buddhists. In an effort to avoid any such associations, CANDRAKĪRTI explains that the tathāgatagarbha is not to be understood as an independent quality but rather refers to the emptiness (ŚŪNYATĀ) of the mind; it is this emptiness, with which all beings are endowed, that serves as the potential for achieving buddhahood. In Tibet, Candrakīrti's view was taken up by the DGE LUGS sect, while the more literal view of the tathāgatagarbha as an ultimately real nature obscured by conventional contaminants was asserted most famously by the JO NANG. Both the extensive influence of the doctrine and the controversy it provoked points to an ongoing tension in the Mahāyāna between the more apophatic discourse on emptiness, found especially in the PRAJÑĀPĀRAMITĀ sūtras, and the more substantialist descriptions of the ultimate reality implied by such terms as tathāgatagarbha, DHARMADHĀTU, and DHARMAKĀYA. The term is also central to the larger question of whether enlightenment is something to be achieved through a sequence of practices or something to be revealed in a flash of insight (see DUNWU). See also HIHAN BUKKYŌ.

Tathāgatagarbhasūtra. (T. De bzhin gshegs pa'i snying po'i mdo; C. Dafangdeng rulaizang jing; J. Daihōdō nyoraizōkyō; K. Taebangdŭng yŏraejang kyŏng 大方等如來藏經). In Sanskrit, "Discourse on the Embryo of the TATHĀGATAS"; also known by the longer title of *Tathāgatagarbhanāmavaipulyasūtra*, an influential Mahāyāna sūtra, and the earliest to set forth the doctrine of the womb or embryo of buddhahood (TATHĀGATAGARBHA). The sūtra, which is preserved only in Chinese and later Tibetan translations, was probably composed in the second half of the third century CE. The sūtra, set ten years after the Buddha's enlightenment, opens with the Buddha seated on Vulture Peak (GṚDHRAKŪṬAPARVATA) surrounded by one hundred thousand monks and bodhisattvas equal in number to the sands of the Ganges (GAṄGĀNADĪVĀLUKĀ). The Buddha causes myriad closed lotuses to fill the sky, each enclosing a buddha who is emitting rays of light. The petals of the lotuses open and then became wilted and finally rotten, but the buddhas seated upon them remain pristine. The bodhisattva Vajramati then asks the Buddha to explain what has occurred. In the most famous section of the sūtra, the Buddha then sets forth nine similes of the tathāgatagarbha. (1) Just as there was a buddha seated cross-legged within decaying lotus petals, so in each sentient being, there is a buddha encased in the sheaths of the afflictions. (2) Just as a honeycomb is surrounded by bees, so the buddhahood within each being is surrounded by afflictions and impurities; just as the beekeeper removes the bees, so the Buddha removes the afflictions and impurities of sentient beings. (3) Just as a kernel is encased in a husk, so buddhahood is encased by the afflictions. (4) Just as a piece of gold covered with excrement would be hidden until its presence was revealed by a god, so the buddha within each being, covered as he is by the filth of the afflictions, remains unknown until a buddha reveals his presence. (5) Just as a treasure buried deep beneath the house of a poor man would be unknown to him, leaving him to presume he was poor, so is the buddha-nature hidden deeply within all beings unknown to them, causing them to wander in SAṂSĀRA. The Buddha sees the body of a buddha within all beings and teaches them how to become treasures of the dharma. (6) Just as hidden within a fruit is a seed and sprout that will produce a tree, so the Buddha sees the body of a buddha within the sheaths of the afflictions. (7) Just as a jeweled image of the Buddha wrapped in putrid rags would lie unnoticed by the side of the road until its presence was revealed by a god, so the body of a buddha wrapped in afflictions inside even an animal is seen only by the Buddha. (8) Just as a poor and ugly woman who carried the embryo of a universal emperor (CAKRAVARTIN) in her womb would remain discouraged by her lot, so sentient beings who carry a buddha within them continue to be distressed by saṃsāra. (9) Just as a golden statue remains hidden within a blackened clay mold until the goldsmith breaks the mold with a hammer, so the knowledge of a buddha remains invisible within the afflictions until the Buddha uses the dharma to remove the afflictions.

tathāgatagotra. (T. de bzhin gshegs pa'i rigs; C. rulai xing; J. nyoraishō; K. yŏrae sŏng 如來性). In Sanskrit, "tathāgata lineage"; a term used to describe that element in the mental continuum (SAṂTĀNA) of a sentient being that makes it destined to achieve enlightenment as a buddha. In this sense, the term is roughly synonymous with TATHĀGATAGARBHA and BUDDHADHĀTU ("buddha element," or "buddha-nature"). The Mahāyāna schools differ on the question of whether all sentient

beings are endowed with this lineage, with the MADHYAMAKA asserting that they are, while some followers of the YOGĀCĀRA argue that beings are endowed with different lineages, which will lead them to follow the paths of the ŚRĀVAKA or PRATYEKABUDDHA to become an ARHAT, and still other beings have no spiritual lineage at all (see ICCHANTIKA).

tathāgatakula. (T. de bzhin gshegs pa'i rigs; C. rulai bu; J. nyoraibu; K. yŏrae pu 如來部). In Sanskrit, the "tathāgata family"; one of the three families of the KRIYĀTANTRA, together with the VAJRAKULA (whose chief deity is VAJRASATTVA) and the PADMAKULA (whose chief deity is AVALOKITEŚVARA). The chief deity of the tathāgatakula is often ŚĀKYAMUNI. In the three-family schema, the tathāgatakula is considered the supreme of the three families, with initiates of this family allowed to perform the rituals of the other two. In the evolution to four and then five buddha families (with the addition of the RATNAKULA and then the KARMAKULA), the tathāgatakula remains supreme, with VAIROCANA then becoming the main deity of the tathāgatakula and holding the central position in many MAṆḌALAs. Each of the five families is associated with one of the five SKANDHAs, five wisdoms (JÑĀNA), five afflictions (KLEŚA), five elements, and five colors. For the tathāgata or buddha family, these are the form (RŪPA) skandha, the wisdom (JÑĀNA) of the DHARMADHĀTU (dharmadhātujñāna), the affliction of ignorance (AVIDYĀ), the element space (ĀKĀŚA), and the color blue. See PAÑCATATHĀGATA.

Tathāgatoṣṇīṣasitātapatrā. (T. De bzhin gshegs pa'i gtsug tor nas byung ba'i gdugs dkar po can). In Sanskrit, "She of the White Parasol [who arose from] the UṢṆĪṢA of the TATHĀGATA"; also known as Uṣṇīṣasitātapatrā. This goddess is a female protective deity, sometimes associated with TĀRĀ, who is propitiated to remove illness and other obstacles. Her most famous form is depicted with a thousand heads, a thousand hands, and a thousand feet.

tathatā. (T. de bzhin nyid/de kho na nyid; C. zhenru; J. shinnyo; K. chinyŏ 眞如). In Sanskrit, "suchness" or "thusness"; a term for ultimate reality, especially in the MAHĀYĀNA schools. Along with terms such as DHARMATĀ, DHARMADHĀTU, and BHŪTAKOṬI, it has a more "positive" connotation than emptiness (ŚŪNYATĀ), referring to the eternal nature of reality that is "ever thus" or "just so" and free of all conceptual elaborations. In YOGĀCĀRA/VIJÑĀNAVĀDA, the term refers to the ultimate wisdom that is free from the subject–object distinction (GRĀHYAGRĀHAKAVIKALPA). Buddhahood is sometimes described as tathatāviśuddhi, or "purity of suchness," that is, ultimate reality purified of all obstructions. In the MADHYAMAKA school, any attempt to substantiate the nature of reality is rejected, and tathatā is instead identified with emptiness and the cessation of all dichotomizing tendencies of thought. The Chinese equivalent, ZHENRU, is a seminal term in in East Asian Buddhist philosophy, figuring prominently, for example, in the DASHENG QIXIN LUN. See also TATTVA.

tathyasaṃvṛti. (T. yang dag pa'i kun rdzob). In Sanskrit, "real conventionality"; a term used in MADHYAMAKA philosophy in connection with MITHYĀSAṂVṚTI, "false conventionality." Real conventionality is a conventional truth (SAṂVṚTISATYA) in the sense that it is not the object of an ultimate consciousness and is falsely imagined to possess SVABHĀVA, or intrinsic existence. However, although it is falsely conceived, it is not utterly non-existent (like a false conventionality) because a real conventionality is capable of performing its function (ARTHAKRIYĀ). For example, a lake would be a true conventionality because it can perform the function of a lake, whereas a mirage would be a false conventionality because it could not perform the function of a lake. Only a real conventionality is a conventional truth; it is true in the sense that it can perform a function. A false conventionality is not a conventional truth because it does not exist even conventionally.

tatpṛṣṭhalabdhajñāna. (S). See PṚṢṬHALABDHAJÑĀNA.

tattva. (T. de nyid/de kho na nyid; C. shixiang; J. jissō; K. silsang 實相). In Sanskrit, lit., "thatness"; a term with two important denotations. First, it can mean "ultimate reality," a synonym of PARAMĀRTHA, the reality, free from all conceptual elaboration, that must be understood in order to be liberated from rebirth as well as the inexpressible reality that is the object of the Buddha's omniscient consciousness. Second, more prosaically, the term may be translated as "principle" and refer to the central doctrine of a particular philosophical school, as in the title of the works TATTVASAṂGRAHA or TATTVASIDDHI. When contrasted with TATHATĀ, tattva is the essential identity of a particular dharma, while tathatā is the common essential reality in which all dharmas partake.

Tattvaratnāvalī. (T. De kho na nyid rin po che'i phreng ba). In Sanskrit, the "Necklace of Principles"; a scholastic exposition of Buddhist TANTRA by Advayavajra, the apparent pen name of the Indian master Maitrīpāda, who flourished in the late tenth and early eleventh centuries CE. The work provides some insight into how Buddhism was understood in the late period of Indian Buddhism, dividing it into the three vehicles of the ŚRĀVAKAYĀNA, PRATYEKABUDDHAYĀNA, and MAHĀYĀNA, with the Mahāyāna further subdivided into the "way of the perfections" (pāramitānaya) and the "way of mantra" (mantranaya). The work also states that the Madhyamaka school is divided into the two, the Māyopamādvayavāda, or "Proponents of Illusion-like Nonduality," and the Sarvadharmāpratiṣṭhānavāda, or "Proponents That All Dharmas Are Nonabiding."

Tattvasaṃgraha. (T. De kho na nyid bsdus pa). In Sanskrit, the "Compendium of Principles"; one of the major works of the eighth-century Indian master ŚĀNTARAKṢITA. It is a massive work in 3,646 verses, in twenty-six chapters. The verses themselves are called the *Tattvasaṃgrahakārikā*; there is also an extensive prose commentary by Śāntarakṣita's student, KAMALAŚĪLA, entitled the

Tattvasaṃgrahapañjikā. The *Tattvasaṃgraha* is a polemical text, surveying the philosophical positions of a wide variety of non-Buddhist (and some Buddhist) schools on a number of topics or principles (TATTVA) and demonstrating their faults. These topics include matter (prakṛti), the person (PURUṢA), God (īśvara), the self (ĀTMAN), and valid knowledge (PRAMĀṆA), among many others. Among the schools whose positions are presented and critiqued are Sāṃkhya, Nyāya, Vaiśeṣika, Mīmāmsā, Advaita Vedānta, JAINA, and VĀTSĪPUTRĪYA. The work is of great value to scholars for its presentation (albeit polemical) of the tenets of these schools as they existed in eighth-century India. The commentary often provides the names and positions of specific philosophers of these schools. ¶ The term is also the abbreviated title of the *Sarvatathāgatatattvasaṃgraha*; see SARVATATHĀGATATATTVASAṂGRAHA.

Tattvasiddhi. [alt. Tattvasiddhi-nāma-prakaraṇa] (T. De kho na nyid grub pa zhes bya ba'i rab tu byed pa). In Sanskrit, "Proof of Reality"; a work of tantric philosophy, extant in Sanskrit, attributed to the eighth-century Indian master ŚĀNTARAKṢITA. The text presents a philosophical argument in support of the achievement of the states of yogic perception (YOGIPRATYAKṢA) and bliss (SUKHA) through tantric practice, citing a number of early tantras by name. In the work, the author argues that bodhisattvas endowed with PRAJÑĀ and UPĀYA are not bound by ethical conventions.

***Tattvasiddhi**. (C. Chengshi lun; J. Jōjitsuron; K. Sŏngsil non 成實論). In Sanskrit, the "Proof of Reality"; an important ABHIDHARMA text by HARIVARMAN, probably composed between 250 and 350 CE. (The Sanskrit reconstruction **Tattvasiddhi* is now generally preferred over the outmoded rendering **Satyasiddhi*.) The text was translated into Chinese by KUMĀRAJĪVA and was studied widely in China during the fifth and sixth centuries. The text is valued for its presentation of the abhidharma of the BAHUŚRUTĪYA school of Indian Buddhism and for its refutations of the positions of rival schools, which are organized in terms of ten points of controversy, including the person (PUDGALA), the status of past and present, and the existence of an intermediate state (ANTARĀBHAVA) between death and rebirth. See the extensive discussion in CHENGSHI LUN.

Taung-hpila Pagoda. A pagoda (Burmese, JEDI) built by King Thalun of AVA (r. 1629–1648) on the Taung-hpila spur of the Sagaing Hills in Upper Burma (Myanmar). Thalun also built a monastery at this locale, whose abbot came to be known as the royal preceptor, or "SAYADAW," of Taung-hpila. This first Taung-hpila Sayadaw wrote a famous commentary in Pāli on the five books of the VINAYA titled the *Vinayālaṅkāraṭīkā*. He also composed a bilingual Pāli–Myanmar commentary (nissaya) on the same five books, but when he discovered that another monk had already written such a treatise, Taung-hpila Sayadaw buried his own commentary in Thalun's pagoda. It was because of this act that the pagoda came to be known as Taung-hpila Pagoda. The works of Taung-hpila Sayadaw and other scholars of the Ava period were renowned throughout the THERAVĀDA world and were highly praised by the monks of Sri Lanka for their erudition.

Taxila. The Greek name for the Indian city of TAKṢAŚILĀ, an important center of Buddhist learning in the GANDHĀRA region (in Punjab province of modern Pakistan). See TAKṢAŚILĀ.

Teishō. (J) (提唱). In Japanese, "ZEN lecture." See TICHANG.

Tejaprabha. (C. Chishengguang rulai; J. Shijōkō nyorai; K. Ch'isŏnggwang yŏrae 熾盛光如來). In Sanskrit, "Effulgence"; proper name for a buddha who personifies the Pole Star as master of all asterisms, and especially the seven stars of the Big Dipper, viz., Ursa Major (see BEIDOU QIXING); this buddha is so named because light is said to stream out from every pore of his body. Tejaprabha was a popular figure within Chinese esoteric Buddhist circles after the eighth century, when the worship of the seven stars became well established during the Tang dynasty. While the cult of Tejaprabha Buddha gradually disappeared in China after the thirteenth century, the worship of the seven stars (K. ch'ilsŏng) was transmitted to Korea, where it continues even today. Starting in the twelfth century, during the Koryŏ dynasty, court rituals to the seven stars and Tejaprabha TATHĀGATA were frequently performed, and worship of the seven stars spread widely during the following Chosŏn dynasty (1392–1910). Chosŏn-period monasteries commonly included "seven-stars shrines" (ch'ilsŏnggak), inside of which were hung seven-stars paintings (T'AENGHWA), which typically depicted the seven-star tathāgatas, with Tejaprabha presiding at the center. There were also several comprehensive ritual and liturgical manuals compiled during the Chosŏn dynasty and Japanese colonial period in Korea, which include rituals and invocations to the seven stars and Tejaprabha Tathāgata, most dedicated to the prolongation of life.

tejas. [alt. tejodhātu] (P. tejo; T. me; C. huoda; J. kadai; K. hwadae 火大). In Sanskrit, lit. "fire," viz., the property of "temperature" or "luminosity"; one of the four "great elements" (MAHĀBHŪTA) or "major elementary qualities" of which the physical world of materiality (RŪPA) is composed, along with earth (viz., solidity, PṚTHIVĪ), water (viz., cohesion, ĀPAS), and wind (viz., motion, movement, VĀYU). "Fire" is understood to be that which gives light and provides the other elements with varying temperatures. Because fire, however, persists (viz., earth), has cohesion (viz., water), and moves (viz., wind), the existence of all the other three elements may also be inferred even in that single element. In the physical body, this element is associated with physical warmth, digestion, and maturation or aging.

tejokasiṇa. (S. tejaskṛtsnāyatana; T. me zad par gyi skye mched; C. huo bianchu; J. kahensho; K. hwa p'yŏnch'ŏ 火遍處).

In Pāli, "fire device"; one of the ten devices (KASIṆA) described in the PĀLI tradition for developing meditative concentration (P. JHĀNA, S. DHYĀNA); the locus classicus for their exposition is the VISUDDHIMAGGA of BUDDHAGHOSA. Ten kasiṇa are enumerated there: visualization devices that are constructed from the elements (MAHĀBHŪTA) of earth, water, fire, air; the colors blue, yellow, red, white; and light and empty space. In each case, the meditation begins by looking at the physical object; the perception of the device is called the "beginning sign" or "preparatory sign" (P. PARIKAMMANIMITTA). Once the object is clearly perceived, the meditator then memorizes the object so that it is seen as clearly in his mind as with his eyes. This perfect mental image of the device is called the "eidetic sign," or "learning sign" (P. UGGAHANIMITTA), and serves as the subsequent object of concentration. As the internal visualization of this eidetic sign deepens and the five hindrances (NĪVARAṆA) to mental absorption are temporarily allayed, a "representational sign" or "counterpart sign" (P. PAṬIBHĀGANIMITTA) will emerge from out of the eidetic image, as if, the texts say, a sword is being drawn from its scabbard or the moon is emerging from behind clouds. The representational sign is a mental representation of the visualized image, which does not duplicate what was seen with the eyes but represents its abstracted, essentialized quality. Continued attention to the representational sign will lead to all four of the meditative absorptions of the subtle-materiality realm (RŪPADHĀTU). In the case of the tejokasiṇa, the meditator begins by making a fire of dried heartwood, hanging a curtain of reeds, leather, or cloth in front of it, then cutting a hole four fingerwidths in size in the curtain. He then sits in the meditative posture and observes the flame (rather than the sticks or the smoke) through the hole, thinking, "fire, fire," using the perception of the flame as the preparatory sign. The eidetic sign, which is visualized without looking at the flame, appears as a tongue of flame and continually detaches itself from the fire. The representational sign is more steady, appearing motionless like a red cloth in space, a gold fan, or a gold column. With the representational sign achieved, progress through the various stages of absorption may begin. The tejokasiṇa figures prominently in the dramatic story of the passing away of the Buddha's attendant, ĀNANDA. According to FAXIAN, when Ānanda was 120 years old, he set out from MAGADHA to VAIŚĀLĪ in order to die. Seeking control of the saint's relics after his death, AJĀTAŚATRU followed him to the Rohīni River, while a group for Vaiśālī awaited him on the other side. Not wishing to disappoint either group, Ānanda levitated to the middle of the river in the meditative posture, preached the dharma, and then meditated on the tejokasiṇa, which caused his body to burst into flames, with his relics dividing into two parts, one landing on each side of the river.

temple. See VIHĀRA; CHŎL; TERA; DGON PA.

Tendaishū. (天台宗). In Japanese, "Platform of Heaven School," the Japanese counterpart of the Chinese TIANTAI ZONG, the name of the Chinese tradition from which Tendai derives. The pilgrim–monk SAICHŌ (767–822) is presumed to have laid the doctrinal and institutional foundations on which the Tendai tradition in Japan was eventually constructed. Like its Chinese counterpart, the Japanese Tendai tradition took the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") and the commentaries on this sūtra by TIANTAI ZHIYI as its central scriptures. The Tendai tradition also came to espouse the doctrine of original or inherent enlightenment (HONGAKU). An important step in the development of an autonomous Japanese Tendai tradition was the establishment of a MAHĀYĀNA precepts platform (daijō kaidan). Saichō made numerous petitions to the court to have an independent Mahāyāna precepts platform established on HIEIZAN (see ENRYAKUJI), which would provide him with institutional autonomy from the powerful monasteries of the well-established Buddhist sects in Nara. Saichō's petition was finally granted after his death in 823. The following year, his disciple GISHIN (781–833) was appointed head (zasu) of the Tendai tradition, and several years later, a precepts platform was constructed at the monastery of Enryakuji on Mt. Hiei. The Tendai tradition prospered under the leadership of ENNIN (794–864) and ENCHIN (814–891). A controversy in 993 between the lineages of Enchin and Ennin over the issue of succession led to a schism between Ennin's Sanmon branch at Mt. Hiei and Enchin's Jimon branch at Onjōji (see MIIDERA). The Tendai tradition also produced important figures in the history of the PURE LAND movement in Japan, such as GENSHIN, RYŌNIN, HŌNEN, and SHINRAN. DŌGEN KIGEN, founder of the SŌTŌSHŪ of ZEN, began his career in the Tendai tradition, practicing as a monk at Mt. Hiei, as did NICHIREN. From the medieval period up through the Tokugawa era (1600–1868), Tendai was a dominant force in Japanese Buddhism. By extension, it had considerable political influence at the court in Kyōto and later with the Tokugawa Bakufu. In order to weaken the powerful Mt. Hiei institution, at the start of the Tokugawa era, the shogunate constructed Tō Eizan in the capital of Edo ("tō" means eastern, thus setting up a juxtaposition with the western Mt. Hiei), which received more funding and prestige than its western counterpart. A major factor in the success of the Tendai institution in Japan was its incorporation of esoteric Buddhism, or MIKKYŌ, beginning with a limited number of tantric practices that Saichō brought back with him from China. The extensive training that KŪKAI (774–835), the founder of the SHINGONSHŪ, received in esoteric Buddhism in China ultimately rivaled that of Saichō, a challenge that would eventually threaten Tendai's political sway at court. However, after Saichō's disciples Ennin, Enchin, and ANNEN (841–889?) returned from China with the latest esoteric practices, Tendai's preeminence was secured. This Tendai form of mikkyō, which Ennin called TAIMITSU, was considered equal to the teachings of the *Saddharmapuṇḍarīkasūtra*. Tendai also heavily influenced the esoteric practices of SHUGENDŌ centers around the country. During the Tokugawa era, many of these mountain practice sites became formally institutionalized under Tendai Shugendō (referred to as Honzan), and were administered by the monastery of Shōgoin in Kyōto. In addition,

Tendai monks were among those who made major efforts to incorporate local native spirits (KAMI) into Tendai practice, by acknowledging them as manifestations of the Buddha (see HONJI SUIJAKU).

ten directions. See DAŚADIŚ.

Tenkei Denson. (天桂傳尊) (1648–1735). Japanese ZEN master and scholar in the SŌTŌSHŪ. Tenkei was born in Kii (present-day Wakayama prefecture). He left home at an early age and served under various teachers during his youth. In 1677, he became the dharma heir of Gohō Kaion (d.u.) at the temple of Jōkoji in Suruga (present-day Shizuoka prefecture). He served as abbot of various other temples throughout his career. Tenkei is often remembered as the opponent of fellow Sōtō adept MANZAN DŌHAKU and his efforts to reform the practice of IN'IN EKISHI, or "changing teachers according to temple," whereby a monk would take the dharma lineage of the monastery where he was appointed abbot. Tenkei rejected Manzan's call for direct, face-to-face transmission (menju shihō) from a single master to a disciple (isshi inshō) and supported the in'in ekishi custom. The military bakufu favored Manzan's reforms and Tenkei's efforts were ultimately to no avail. Tenkei is also remembered for his extensive commentary to DŌGEN KIGEN's magnum opus SHŌBŌGENZŌ, entitled the *Shōbōgenzō benchū*.

Ten Oxherding Pictures. See OXHERDING PICTURES, TEN.

tera. (寺). Vernacular Japanese term for a Buddhist "temple" or "monastery"; synonymous with the Sino-Japanese reading of ji. The term is presumed to derive either from the vernacular Korean term CHŎL or the Pāli/Prakrit term THERA (elder).

Tevijjasutta. (C. Sanming jing; J. Sanmyōkyō; K. Sammyŏng kyŏng 三明經). In Pāli, "Discourse on the Three-fold Knowledge"; the thirteenth sutta of the DĪGHANIKĀYA (a DHARMAGUPTAKA recension appears as the twenty-sixth SŪTRA in the Chinese translation of the DĪRGHĀGAMA); preached by the Buddha to the two brāhmaṇa youths, Vāseṭṭha and Bhāradvāja, in a mango grove outside the village of Manasākaṭa in Kosala. Vāseṭṭha and Bhāradvāja request the Buddha to resolve their debate as to which path proposed by various brāhmaṇa teachers learned in the three Vedas truly leads to union with the god BRAHMĀ. The Buddha responds that since none of the brāhmaṇa teachers learned in the three Vedas themselves have attained union with Brahmā, none of the paths they teach can lead there. They are unable to attain this goal, he continues, because their minds are obstructed by the five hindrances (NĪVARAṆA) of sensuous desire (KĀMACCHANDA), malice (VYĀPĀDA), sloth and torpor (P. thīnamiddha, S. STYĀNA-MIDDHA), restlessness and worry (P. uddhaccakukkucca, S. AUDDHATYA-KAUKṚTYA), and doubt (P. vicikicchā, S. VICIKITSĀ) about the efficacy of the path. The Buddha then describes the true path by means of which a disciple may attain union with Brahmā as follows: the disciple awakens to the teaching, abandons the household life, and enters the Buddhist order, trains in the restraint of action and speech, and observes even minor points of morality, guards the senses, practices mindfulness, is content with little, becomes freed from the five hindrances and attains joy and peace of mind. Then the disciple pervades the four quarters with loving-kindness (P. mettā; S. MAITRĪ), then compassion (KARUṆĀ), sympathetic joy (MUDITĀ), and finally equanimity (P. upekkhā; S. UPEKṢĀ). In this way one attains union with Brahmā. Vāseṭṭha and Bhāradvāja are pleased with the discourse and become disciples of the Buddha. In adapting the term tevijja (S. TRIVIDYĀ), the Buddha is intentionally redefining the meaning of the three Vedas, contrasting his three knowledges with that of brāhmaṇa priests who have merely memorized the three Vedas.

Thammakai. (Thai). See DHAMMAKĀYA.

Thammayut. (P. Dhammayuttika). In Thai, "Adherents of the Dharma," the name of the "reformed" minority school (NIKĀYA) of the Thai tradition of Buddhism; sometimes also seen transcribed as Thommayut, or by its Pāli equivalency, Dhammayuttika. This fraternity was founded in 1830 by King RĀMA IV (Mongkut), who ruled from 1851 to 1868. From 1824 to 1851, before ascending the throne, Mongkut was a monk (P. BHIKKHU; S. BHIKṢU) in the Thai monastic community (P. SAṄGHA; S. SAṂGHA). Mongkut believed that superstition had corrupted the contemporary monastic community, obscuring the pure teachings of the tradition; he was also concerned that the monks of the predominate order, the MAHANIKAI (P. Mahānikāya), did not adhere strictly to the precepts of the PĀLI VINAYA. In response, Mongkut drew on an ordination lineage from the Mon people of Burma (Myanmar) to establish this new reform tradition of Thai Buddhism. Mongkut also emphasized the rational aspects of Buddhism that made it compatible with science and modernity. Mongkut eventually became abbot of WAT BOWONNIWET in the Thai capital of Bangkok, which continues to this day to be the headquarters of the Thammayut sect. After becoming king, Mongkut continued to promote and sponsor his new school. In the nineteenth century, the Thammayut movement was also introduced into both Cambodia and Laos. Thammayut monks are known for being strict constructionists in their understanding of the precepts and seek to adhere closely to both the word and the spirit of the vinaya. For example, Thammayut monks strictly adhere to the practice of eating nothing in the afternoon (and often eating only one meal a day), never wearing sandals outside the monastery grounds, and never handling money. Since the time of AJAHN MUN BHŪRIDATTA (1870–1949), the Thammayut tradition has also been closely associated with the Thai forest-dwelling tradition (see ARAÑÑAVĀSĪ), whose monks engage in ascetic practices (Thai, THUDONG, P. DHUTAṄGA) and meditation.

thang ka. In Tibetan, "scroll painting"; a Tibetan term for an image (usually of a deity or religious figure) drawn, painted, or sewn onto cloth (or sometimes paper), sewn into a border of silk brocade, and then mounted on dowels at the top and the bottom to allow the image to be rolled up and transported. It is the most common format for the presentation of Tibetan art. The term is also seen spelled as thang kha and thang ga. See also KWAEBUL; T'AENGHWA.

Thang stong rgyal po. (Tangtong Gyalpo) (1361–1485). A great adept famed throughout the Tibetan Buddhist world for his illustrious career as a YOGIN and teacher, as well as his many contributions to the fields of engineering, metallurgy, temple construction, and the performing arts. His biographies credit him with a life span of 124 years, during which he traveled widely throughout Tibet and the Himālayan regions, including India, Ladakh, Mongolia, China, and Bhutan. As a youth he studied under numerous masters and spent much of early life in meditation retreat. He received, and is said to have mastered, the corpus of teachings of the SHANG PA BKA' BRGYUD sect as well as the BYANG GTER (Northern Treasure) tradition of the RNYING MA. He is venerated as a treasure revealer (GTER STON) who extracted treasure teachings (GTER MA) from the CHIMS PHU retreat complex near BSAM YAS monastery, from STAG TSHANG in Bhutan, and the region of TSA RI in southern Tibet. His best known teachings include instructions on the system known as "severance" (GCOD) and a visionary meditation SĀDHANA based on the bodhisattva of compassion AVALOKITEŚVARA called *'Gro don mkha' khyab ma* ("The Benefit of Others, Vast as Space"), which continues to be practiced by Tibetan Buddhists of many sectarian affiliations. Thang stong rgyal po is also remembered for his construction of iron chain-link bridges throughout Tibet and Bhutan—an activity inspired directly by visions of Avalokiteśvara. For this reason, he is often called Lcags zam pa, literally the "Iron Bridge Man," and his lineage the "Iron Bridge" (lcags zam) tradition. He is most commonly depicted as holding links of iron chains in one hand. Thang stong rgyal po founded numerous geomantically important religious structures, including the great STŪPA of GCUNG RI BO CHE in western Tibet, which became an important seat of the master's tradition, and the ZLUM BRTSEGS temple in Bhutan. Thang stong rgyal po is also traditionally acknowledged as the father of the Tibetan performing arts, with his image commonly displayed prior to theatrical performances.

Thảo Đường. (草堂) (c. eleventh century). Vietnamese monk traditionally regarded as the founder of the third school of THIỀN in Vietnam. The THIỀN UYỂN TẬP ANH does not provide a full biography of Thảo Đường, giving only a list of the monks belonging to his school with a remark that he was the abbot of Khai Quốc monastery in the capital city of Thăng Long, and that he transmitted the lineage of the XUEDOU CHONGXIAN (980–1052) line of the YUNMEN ZONG of Chinese CHAN. The legend about Thảo Đường in the Vietnamese Buddhist tradition can be found in the *An Nam Chí Lược*. According to this source, Thảo Đường followed his teacher to live in Champa. King Lý Thánh Tông (1023–1072), in an expedition against Champa in 1069, captured him and gave him to a monk scribe as a servant. The king came to have great respect for Thảo Đường's virtue and learning and made him state preceptor.

Thar pa rin po che'i rgyan. (Tarpa rinpoche gyen). In Tibetan, "Jewel Ornament of Liberation"; a systematic presentation of Buddhist teachings and a seminal textbook for the BKA' BRGYUD sect of Tibetan Buddhism written by SGAM PO PA BSOD RNAM RIN CHEN. The text belongs to the genre of Tibetan literature known as LAM RIM, or "stages of the path," presenting an overview of the elementary tenets of MAHĀYĀNA doctrine through scriptural citation, philosophical reflection, and direct illustration. Its clear, concise, and unpedantic style has made it accessible to generations of readers. The doctrinal content reflects Sgam po pa's training in both the BKA' GDAMS sect and the tradition of MAHĀMUDRĀ, fusing Buddhist theory prevalent in both SŪTRA and TANTRA and presenting what has been called sūtra mahāmudrā—a tradition of mahāmudrā that does not rely on prerequisite tantric initiations and commitments. Sgam po pa thus transmits the underlying insights of tantric theory outside traditional methods of the VAJRAYĀNA. This system was later criticized by certain scholars such as SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN. The work is also commonly known as the *Dwags po thar rgyan*, after the author's residence in the region of Dwags po (Dakpo).

that. In Thai, "a relic" (S. DHĀTU), typically of the Buddha; in Thailand there are numerous monasteries known as "Wat Phra That" or WAT MAHATHAT, which are said to house authentic relics of the Buddha. These monasteries are popular pilgrimage sites and have legends concerning their founding filled with descriptions of miraculous events and sometimes recounting the Buddha's visit to that site. See also ŚARĪRA.

theg pa dgu. In Tibetan, the "nine vehicles"; an important formulation of the Buddhist path, especially in the RNYING MA sect of Tibetan Buddhism. In this schema, the three vehicles of ŚRĀVAKAYĀNA, PRATYEKABUDDHAYĀNA, and BODHISATTVAYĀNA and the three vehicles of HĪNAYĀNA, MAHĀYĀNA, and VAJRAYĀNA are reorganized into nine, with three groups of three. The first group is called the "causal vehicle of characteristics" (rgyu mtshan nyid kyi theg pa) and consists of the śrāvakayāna, pratyekabuddhayāna, and bodhisattvayāna. The second group is called the "outer tantras" (phyi'i rgyud) and consists of KRIYĀTANTRA, CARYĀTANTRA (also called upatantra), and YOGATANTRA. The third group is called the "inner tantras" (nang gi rgyud) and consists of MAHĀYOGA, ANUYOGA, and ATIYOGA (also called RDZOGS CHEN). Although there are precedents for such a schema in Indian sources, this specific formulation appears to have originated in Tibet.

Theragāthā. In Pāli, "Verses of the [Male] Elders"; the eighth book of the KHUDDAKANIKĀYA of the Pāli SUTTAPIṬAKA, a collection of 1,279 verses ascribed to 264 elder monks (P. thera, S. STHAVIRA), organized by the number of verses in each poem. The *Theragāthā* contains verses said to have been composed by enlightened elder monks during the lifetime of the Buddha or shortly thereafter. In some instances, the verses recount the life stories of the elders, in others they record their spontaneous utterances of ecstasy at the moment of their enlightenments. Not all verses are said to have been recited by the monk in question; sometimes they are addressed to a particular monk or describe that monk. The dates of the verses are difficult to determine; according to tradition, the collection was recited at the first Buddhist council (see COUNCIL, FIRST), but some of its verses are said to have been recited at the second or third Buddhist councils (SAṂGĪTI), suggesting that the verses were composed over the course of several centuries. A large number of the verses describe the path to and attainment of enlightenment, while others take the form of religious instruction. The pervasive sense of ecstasy appearing in these verses belies the common Western scholarly portrayal of the ARHAT as apathetic, cool, and aloof.

Theravāda. (S. *Sthaviravāda/*Sthaviranikāya; T. Gnas brtan sde pa; C. Shangzuo bu; J. Jōzabu; K. Sangjwa pu 上座部). In Pāli, "Way of the Elders" or "School of the Elders"; a designation traditionally used for monastic and textual lineages, and expanded in the modern period to refer to the dominant form of Buddhism of Sri Lanka and Southeast Asia, which is associated with study of the Pāli Buddhist canon (P. tipiṭaka; S. TRIPIṬAKA). The denotation of the term Theravāda is fraught with controversy. Buddhaghosa's commentaries to the four Pāli NIKĀYAS typically refer to himself and his colleagues as MAHĀVIHĀRAVĀSIN (lit. "Dweller in the Great Monastery"), the name of the then dominant religious order and ordination lineage in Sri Lanka; in his fifth-century commentary to the Pāli VINAYA, the SAMANTAPĀSĀDIKĀ, Buddhaghosa uses the term Theravāda, but in reference not to a separate school but to a lineage of elders going back to the first Buddhist council (see SAṂGĪTI; COUNCIL, FIRST). According to some accounts, the term Theravāda is equivalent to the Sanskrit term *STHAVIRAVĀDA ("School of the Elders"), which is claimed to have been transmitted to Sri Lanka in the third century BCE. However, the term Sthaviravāda is not attested in any Indian source; attested forms (both very rare) include sthāvira or sthāvarīya ("followers of the elders"). In addition, the Tibetan and Sinographic renderings of the term both translate the Sanskrit term *STHAVIRANIKĀYA, suggesting again that Sthaviravāda or Theravāda was not the traditional designation of this school. By the eleventh century CE, what is today designated as the Theravāda became the dominant form of Buddhism in Sri Lanka, achieving a similar status in Burma in the same century, and in Cambodia, Thailand, and Laos by the thirteenth and fourteenth centuries. As a term of self-designation for a major branch of Buddhism, Theravāda does not come into common use until the early twentieth century, with ĀNANDA METTEYYA playing a key role. In the nineteenth century, the Buddhism of Sri Lanka and Southeast Asia was typically referred to in the West as "Southern Buddhism," in distinction to the "Northern Buddhism" of Tibet and East Asia. (See, e.g., EUGÈNE BURNOUF and TAKAKUSU JUNJIRŌ, whose treatments of Pāli materials described them as belonging to the "Southern tradition.") With increased interest in Sanskrit MAHĀYĀNA texts and the rise of Japanese scholarship on Buddhism, the term "Southern Buddhism" began in some circles to be replaced by the term HĪNAYĀNA ("lesser vehicle"), despite that term's pejorative connotations. Perhaps in an effort to forestall this usage, Pāli scholars, including THOMAS W. RHYS DAVIDS (who often referred to Pāli Buddhism as "original Buddhism"), began referring to what had been known as "Southern Buddhism" as Theravāda. The term has since come to be adopted widely throughout Sri Lanka and Southeast Asia. "Theravāda" had often been mistakenly regarded as a synonym of "hīnayāna," when the latter term is used to designate the many non-Mahāyāna schools of Indian Buddhism. In fact, to the extent that the Theravāda is a remnant of the Sthaviranikāya, it represents just one of the several independent traditions of what many scholars now call MAINSTREAM BUDDHIST SCHOOLS. In the 1950s, the WORLD FELLOWSHIP OF BUDDHISTS adopted a formal resolution replacing the pejorative term hīnayāna with the designation Theravāda in descriptions of the non-Mahāyāna tradition. This suggestion was reasonable as a referent for the present state of Buddhism, since the only mainstream Buddhist school that survives in the contemporary world is Theravāda, but it is not historically accurate. Despite the way in which scholars have portrayed the tradition, Theravāda is neither synonymous with early Buddhism, nor a more pristine form of the religion prior to the rise of the Mahāyāna. Such a claim suggests a state of sectarian statis or inertia that belies the diversity over time of doctrine and practice within what comes to be called the Theravāda tradition. In fact, the redaction of Pāli scriptures postdates in many cases the redaction of much of Mahāyāna literature. Even conceding this late coinage of the term Theravāda, it should still be acknowledged that many South and Southeast Asian Buddhists who self-identify as Theravāda do in fact regard the Pāli tipiṭaka (S. TRIPIṬAKA) as representing an earlier and more authentic presentation of the word of the Buddha (BUDDHAVACANA) than that found in other contemporary Buddhist traditions, in much that same way that many North and Northeast Asian Mahāyāna Buddhists hold that certain sūtras that most scholars identify as being of later date are authentically the teachings of the historical Buddha. Although Theravāda soteriological theory includes a path for the bodhisatta (S. BODHISATTVA), the bodhisattva is a much rarer sanctified figure here than in the Mahāyāna; the more common ideal being in Theravāda is instead the ARHAT. The difference between the Buddha and the arhat is also less pronounced in the Theravāda than in the Mahāyāna schools; in the Theravāda, the Buddha and the arhat achieve the same type of NIRVĀṆA, the

chief difference between them being that the Buddha finds the path to nirvāṇa independently, while the arhat achieves his or her enlightenment by following the path set forth by the Buddha. (For other distinctive beliefs of the Theravāda tradition, see STHAVIRANIKĀYA.)

Therīgāthā. In Pāli, "Verses of the [Female] Elders"; the ninth book of the KHUDDAKANIKĀYA of the Pāli SUTTAPIṬAKA. It contains 522 verses in seventy-three poems, organized according to the number of verses in each poem, composed by approximately one hundred female elders (although one poem is said to have been uttered by thirty therīs, another by five hundred). It said to have been composed by enlightened therīs, or elder nuns, during the lifetime of the Buddha, including many of his most famous female disciples, such as his stepmother MAHĀPRAJĀPATĪ. According to tradition, the collection was recited at the first Buddhist council (SAṂGĪTI; see COUNCIL, FIRST) held shortly after the death of the Buddha, although some verses are clearly added later. In any case, it represents one of, if not the earliest record of women's religious experience. It corresponds to the THERAGĀTHĀ in content. The precise date and authorship of the verses is difficult to determine, although many of the poems are written from the women's points of view, describing the sufferings of childbirth, marriage, and the loss of a child, a husband, and physical beauty, experiences that lead the author to enter the SAṂGHA. The spontaneous ecstatic utterances that are said to have accompanied these women's experiences of enlightenment belie the common Western scholarly portrayal of the ARHAT as apathetic, cool, and aloof.

Thích. (V) (釋). The Vietnamese pronunciation of the Chinese transcription of the first syllable of the Buddha's clan name, Śākya. In East Asian Buddhism, monks traditionally have abandoned their family's surname and replaced it with the Buddha's own clan name. See also SHI; FAMING.

Thích Minh Châu. (釋明珠) (1918–2012). Vietnamese monk born in Quảng Nam (Central Vietnam), he received ordination in 1946 from Venerable Thích Tịnh Khiết at Tường Vân Temple in Huế. In 1951, he went to India to study Pāli and Buddhism at Nalanda University. He obtained a PhD in 1961 with a thesis entitled "A Comparative Study between the Pāli MAJJHIMA NIKĀYA and the Chinese MADHYAMA ĀGAMA." After returning to South Vietnam, he became a founding member of Vạn Hạnh University as well as its rector from 1964 until its disestablishment in 1975 when South Vietnam fell to communist forces from the North. A prolific writer and translator, Thích Minh Châu single-handedly translated into Vietnamese more than thirty works from the PĀLI canon. He also wrote a three-volume Pāli grammar. After the closing of Vạn Hạnh University, he founded the Vạn Hạnh Buddhist Institute, where he continued his research and translation. In 1989, he became president of the Vietnam Institute of Buddhist Studies and head of the Committee on the Translation of the Tripiṭaka. Many expatriate Vietnamese Buddhists regard Thích Minh Châu with some suspicion because of his alleged collaboration with the Communist government after 1975, while acknowledging his important contributions to Vietnamese Buddhist literature.

Thích Nhất Hạnh. (釋一行) (1926–). Internationally renowned Vietnamese monk and one of the principal propounders of "Engaged Buddhism." He was born in southern Vietnam, the son of a government bureaucrat. Nhất Hạnh entered a Buddhist monastery as a novice in 1942, where he studied with a Vietnamese Zen master, and received full ordination as a monk in 1949. His interests in philosophy, literature, and foreign languages led him to leave the Buddhist seminary to study at Saigon University. While teaching in a secondary school, he served as editor of the periodical "Vietnamese Buddhism," the organ of the Association of All Buddhists in Vietnam. In 1961, he went to the United States to study at Princeton University, returning to South Vietnam in December 1963 after the overthrow of the government of the Catholic president Ngô Đình Diem, which had actively persecuted Buddhists. The persecutions had led to widespread public protests that are remembered in the West through photographs of the self-immolation of Buddhist monks. Nhất Hạnh worked to found the Unified Buddhist Church and the Institute of Higher Buddhist Studies, which later became Vạn Hạnh University. He devoted much of his time to the School of Youth for Social Service, which he founded and of which he was the director. The school's activities included sending teams of young people to the countryside to offer various forms of social assistance to the people. He also founded a new Buddhist sect (the Order of Interbeing), and helped establish a publishing house, all of which promoted what he called Engaged Buddhism. A collection of his pacifist poetry was banned by the governments of both North and South Vietnam. While engaging in nonviolent resistance to the Vietnam War, he also sought to aid its victims. In 1966, Nhất Hạnh promulgated a five-point peace plan while on an international lecture tour, during which he met with Dr. Martin Luther King Jr. (who would later nominate him for the Nobel Peace Prize) and Thomas Merton in the United States, addressed the House of Commons in Britain, and had an audience with Pope Paul VI in Rome. The book that resulted from his lecture tour, *Vietnam*: *Lotus in a Sea of Fire*, was banned by the South Vietnamese government. Fearing that he would be arrested or assassinated if he returned to Vietnam after the lecture tour, his supporters urged him to remain abroad and he has lived in exile ever since, residing primarily in France. He founded a center called Plum Village in southern France, whence he has sought to assist Vietnamese refugees and political prisoners and to teach Engaged Buddhism to large audiences in Europe and the Americas. A prolific writer, he has published scores of books on general, nonsectarian Buddhist teachings and practices, some of which have become bestsellers. He has made numerous trips abroad to teach and lead meditation retreats. In his teachings, Nhất Hạnh calls for a

clear recognition and analysis of suffering, identifying its causes, and then working to relieve present suffering and prevent future suffering through nonviolent action. Such action in bringing peace can only truly succeed when the actor is at peace or, in his words, is "being peace."

Thích Quảng Đức. (釋廣德) (1897–1963). Vietnamese monk who became internationally known for his self-immolation (see SHESHEN) to protest the oppression of Buddhism by the government of the partisan Catholic president Ngô Đình Diệm. Thích Quảng Đức was born in Khánh Hòa province (Central Vietnam) and his personal name was Lâm Văn Tức. He left home to become a monk at the age of seven and received full ordination at the age of twenty. Subsequently, he went to Mount Ninh Hòa to practice austerities and led the life of a mendicant monk for five years. In 1932, he was invited to be a preceptor at the Ninh Hòa branch of the An Nam Association of Buddhist Studies. In 1934, he moved to South Vietnam, working with Buddhist communities in various provinces for several years. He then traveled to Cambodia and lived there for three years, devoting himself to rebuilding monasteries and studying Pāli literature. In 1953, the Nam Việt Association of Buddhist Studies invited him to be the abbot of Phước Hòa Temple. The last temple he supervised was Quán Thế Âm Temple in Gia Định. On June 11, 1963, when the tension between Buddhism and the government reached a high point, he led a procession of more than one thousand monks through the streets of Saigon. At a crossroad, he calmly sat down in lotus posture, doused himself in gasoline, and set himself on fire. He is revered by Vietnamese Buddhists, who refer to him as Bodhisattva Quảng Đức.

Thích Thiên Ân. (釋天恩) (1926–1980). The first Vietnamese Buddhist monk to spread Buddhism in the West. He was born in 1926 in Huế (Central Vietnam) in a Buddhist family. He was ordained at age fourteen. In 1953, he went to Japan to study and earned a doctorate in literature at Waseda University in 1963. He returned to Vietnam and took a teaching position in the Department of Buddhist Studies at Vạn Hạnh University in 1964. In 1966 he was invited by the University of California, Los Angeles (UCLA), to be a visiting professor. At the urging of American students, he founded the International Buddhist Meditation Center (IBMC) in 1970 in Los Angeles, the first Vietnamese center to offer full monastic ordination to Westerners. In 1973 the College of Oriental Studies was established. After South Vietnam fell in 1975, many Vietnamese refugees relocated to Southern California and the IBMC became a shelter and residence for many of them. Eventually, it could no longer accommodate the increasing number of refugees who kept arriving in Southern California. Thích Thiên Ân purchased two houses in the same neighborhood and converted them into the Vietnamese Buddhist Temple and Amida Temple. These were the first Vietnamese Buddhist temples in North America. He was also the first Vietnamese monk to write books on Chan history and practice in Japanese and English.

Thích Trí Quang. (釋智光) (1923–). Vietnamese monk born into a Buddhist family in Đồng Hới (Central Vietnam). He became a monk at the age of thirteen in 1936. The following year he entered the Buddhist Studies Institute of the Huế Association of Buddhist Studies. He graduated in 1945 and received full ordination in 1946. In 1947, he joined the resistance movement against the French together with his three brothers. In 1949, he went to Huế to teach at the Báo Quốc Institute of Buddhist Studies. He traveled to Saigon for the first time in 1950. During his sojourn there he campaigned to found the Nam Việt Institute of Buddhist Studies and the Nam Việt Association of Buddhist Studies, and assumed editorship of the Buddhist periodical *Viên Âm*. He also contributed to the founding of the General Association of Vietnamese Buddhism, whose goal is to unify Vietnamese Buddhism. In 1956, two years after the French withdrew from Vietnam, he became director of the Association of Buddhist Studies and fought to change the term "Buddhist Studies" to "Buddhism" (during French rule, Buddhism was not recognized as a religion). Thích Trí Quang was one of the most eminent Buddhist figures in numerous protests against the oppression of Buddhism by the Ngô Đình Diệm and subsequent South Vietnamese regimes throughout the 1960s.

Thiền. (禪). In Vietnamese, "Meditation"; the Vietnamese strand of the broader East Asian Chan school, which includes Chinese CHAN, Japanese ZEN, and Korean SŎN. According to the THIỀN UYỂN TẬP ANH ("Outstanding Figures in the Thiền Garden"), one of the few primary sources of the school's history, Chan teachings were assumed to have been transmitted to Vietnam by VINĪTARUCI (d. 594), a South Indian brāhmaṇa who is claimed (rather dubiously) to have studied in China with the third Chan patriarch SENGCAN before heading south to Guangzhou and Vietnam. In 580, he is said to have arrived in Vietnam and settled at Pháp Vân monastery, where he subsequently transmitted his teachings to Pháp Hiền (d. 626), who carried on his Chan tradition. In addition to the Vinītaruci lineage, there are two other putative lineages of Vietnamese Thiền, both named after their supposed founders: VÔ NGÔN THÔNG (reputedly a student of BAIZHANG HUAIHAI), and THẢO ĐƯỜNG (reputedly connected to the YUNMEN ZONG in China). Much of this history is, however, a retrospective creation. The Thiền school is in reality a much more amorphous construct than it is in the rest of East Asia: in Vietnam, there is no obvious Chan monasticism, practices, or rituals as there were in China, Korea, and Japan. Thiền is instead more of an aesthetic approach or a way of life than an identifiable school of thought or practice. Some of the few recognizable influences of Thiền in Vietnam are the traces of Chan literary topoi in Vietnamese Buddhist literature. There is little else, whether physical sites, ecclesiastical institutions, or textual or praxis evidence, that points to a concrete school of Thiền in Vietnam. See also CHAN; CHAN ZONG.

Thiên Mụ Tự. [alt. Linh Mụ Tự] (天姥寺/靈姥寺). In Vietnamese, "Heavenly Matron Monastery"; important Vietnamese

Buddhist sacred site, located in Huế, the ancient capital of Vietnam; also commonly known as the Chùa Thiên Mụ, or Thiên Mụ Pagoda. The pagoda was the residence of THÍCH QUANG ĐỨC (1897–1963), the monk whose self-immolation (see SHESHEN) in 1963 drew attention to the persecution of Buddhists by the pro-Catholic Vietnamese government of Ngô Đình Diệm. The pagoda is sometimes known as the Numinous Matron monastery (Linh Mụ Tự), because it was built in 1601 by the governor of Huế, Nguyễn Hoàng (d.u.), after a vision in which an old woman told him that the site was rife with numinous power. Afterward, the site was renovated several times by the local governors or the kings of the Nguyễn dynasty (1802–1945). It consists largely of two parts: the Phúc Điền tower, a seven-story octagonal tower at the entrance to the site that was erected in 1884, and the main hall at the center. Since its construction, the Thiên Mụ Pagoda has been an important center of Buddhist religious and political activity in modern and contemporary Vietnam. In 1993, it was listed as a UNESCO World Heritage Site.

Thiền Uyển Tập Anh. (禪苑集英). In Vietnamese, "Outstanding Figures in the THIỀN Garden." Compiled by an unknown author around the third decade of the fourteenth century, this anthology is a collection of the biographies of eminent Thiền masters in Vietnam from the sixth to the thirteenth centuries, organized around the transmission of the three major Vietnamese Thiền schools: VINĪTARUCI, VÔ NGÔN THÔNG, and THẢO ĐƯỜNG. The *Thiền Uyển* purports to be a narrative history of Vietnamese Buddhism and as such is modeled upon the Chinese CHAN literary genre known as the "transmission of the lamplight" (CHUANDENG LU). According to the account presented in the *Thiền Uyển*, Vietnamese Buddhist history is a continuation of the development of the Chinese Chan tradition. In the same period during which the *Thiền Uyển* was compiled, there emerged a number of texts of the same genre, but only fragments of those are extant. The *Thiền Uyển* is the only such lineage history that appears to have been preserved in its entirety and is the only text that attempts to provide a cohesive narrative history of Vietnamese Buddhism. The *Thiền Uyển*, however, was all but forgotten for centuries until a later recension of the text was accidentally discovered by the scholar Trần Văn Giáp in 1927. Trần wrote a long article outlining the content of text, which accepts the record of the *Thiền Uyển* as veridical history. Since that time, the account of the order provided in the *Thiền Uyển* has been widely regarded as the official history of Vietnamese Buddhism.

thirty-two major marks of a buddha. See MAHĀPURUṢALAKṢAṆA.

Thissa Zedi. A pagoda located on a small hill named Hkamin-wei in the southern Sagaing Range in Upper Burma (Myanmar). It was built in 1108 CE by the king of PAGAN, Kyansittha (r. 1084–1112), in fulfillment of an oath (Burmese, thissa; P. sacca) he made while still a soldier (Burmese, sit-tha). The similarity of these two words has led to this pagoda receiving several names, viz., Thissa Zedi (Pagoda of the Oath), Sit-tha Hpaya (Pagoda of the Soldier), and Thissa-hpaya Zedi (a spoonerism based on "Sit-tha Hpaya" meaning, again, Pagoda of the Oath).

thod rgal. (tögel). In Tibetan, "crossing the crest" or "leap over" (in the sense of skipping over one or more of the stages in a sequence); a special practice of ATIYOGA and one of the two main practices in the SNYING THIG tradition of RDZOGS CHEN, the other being "breakthrough" (KHREGS CHOD). Falling specifically within the "instruction class" (MAN NGAG SDE) of rdzogs chen, thod rgal follows khregs chod, in which the experience of innate awareness or RIG PA is cultivated. With this foundation, in thod rgal, the meditator uses specific physical postures to induce visions that reveal the luminous nature of external phenomena. Whereas thod rgal signifies a type of cultivated spontaneous imagery culminating in visions of MAṆḌALAS of buddhas, and is paired with the spontaneous energy (lhun grub) of pure awareness (rig pa), khregs chod (literally, "breaking through the hard") is paired with the essential purity (ka dag) of awareness. It is said that thod rgal is a method of contemplating light that enables rdzogs chen practitioners to attain the 'JA' LUS (rainbow body) without leaving any bodily traces at death. The term also renders the Sanskrit vyutkrāntaka, described in the ABHIDHARMA as jumping at will from one meditative state (a DHYĀNA or SAMĀPATTI) to any other without having to go through the intermediate stages. Thod rgal ba is also used in Tibetan commentarial literature to describe a type of meditator who does not go sequentially through each of the four fruitions of the religious life, viz., the stream-enterer (SROTAĀPANNA), once-returner (SAKṚDĀGĀMIN), nonreturner (ANĀGĀMIN), and ARHAT, but rather jumps over the intermediate results to the final goal. Some sources suggest thod rgal may also be a translation of the pluta (sometimes rendered "floater"), a meditator who jumps over the intermediate heavens in the subtle-materiality and immaterial realms and proceeds directly to the AKANIṢṬHA and BHAVĀGRA heavens.

Tho ling gtsug lag khang. (Toling Tsuklakang). One of the principal religious institutions of the GU GE kingdom in the western Tibetan region of Mnga' ris, established in 996 by King YE SHE 'OD and translator RIN CHEN BZANG PO; also spelled Mtho lding, Tho gling, and 'Thon 'thing. It was the first residence of the Bengali scholar ATIŚA DĪPAṂKARAŚRĪJÑĀNA during his stay in Tibet, where he composed his famous treatise, the BODHIPATHAPRADĪPA. It also served as the seat for much of Rin chen bzang po's literary career. The main image in the central temple was of the buddha VAIROCANA.

Thomas, Edward Joseph. (1869–1958). British scholar of Pāli and Sanskrit Buddhism. He was the son of a Yorkshire gardener and worked as a gardener himself in his early life

before studying at St. Andrews and then Cambridge, where he received his BA in 1905. He spent the remainder of his life at Cambridge, holding various positions at the university library, where he was renowned for his knowledge of languages (along with his work in Indian languages, he also published a book on Danish conversational grammar). He wrote both general works on Buddhist thought and translated Buddhist texts, including a collection of JĀTAKA stories from the Pāli. His most influential work was *The Life of the Buddha as Legend and History* (1927), in which he focused upon the structure of various biographical fragments and texts, and their role within the wider tradition. Thomas stressed the importance of studying all available language sources and the need to understand the mythic and fabulous elements of the religion as important traditions in their own right.

Thomas, Frederick William. (1867–1956). British scholar of Sanskrit and Tibetan who served as librarian at the India Office Library in London before being appointed Boden Professor of Sanskrit at Oxford, a position he held from 1927 to 1937. His research, some in collaboration with Jacques Bacot, included work on ancient Tibetan historical texts discovered at DUNHUANG. He catalogued the Tibetan manuscripts from SIR MARC AUREL STEIN's third expedition to Dunhuang.

Thommayut. (Thai). See THAMMAYUT.

Thông Biện. (通辨) (d. 1134). The first Vietnamese Buddhist author to write a history of Vietnamese Buddhism based on the model of the "transmission of the lamplight" (CHUANDENG) histories of the Chinese CHAN school. He was a native of Đan Phượng (which is now in Hà Tây province, North Vietnam). His family name was Ngô and he was born into a Buddhist family. He was respected by the Lý court and was bestowed the title *quốc sư* (state preceptor; C. GUOSHI). The THIỀN UYỂN TẬP ANH relates that in a lecture in 1096 he interpreted Vietnamese Buddhist history as the continuation of the transmission of both the scriptural school and the mind (or Chan) school of Chinese Buddhism. According to Thông Biện, the Scriptural School began with Mou Bo and Kang Senghui, and the Chan school was transmitted by BODHIDHARMA. He further claimed that Chan came to Vietnam through two streams, represented, respectively, by VINĪTARUCI (d. 594) and VÔ NGÔN THÔNG (d. 826). Vinītaruci and Vô Ngôn Thông thus were the ancestral teachers of the two streams of Chan that produced numerous side branches in Vietnam. Later in his life, Thông Biện founded a great teaching center and taught the SADDHARMAPUṆḌARĪKASŪTRA. His contemporaries referred to him as Ngộ Pháp Hoa (Awakened to the Lotus). Thông Biện's model of Vietnamese Buddhist history was subsequently adopted by Buddhist authors of later generations and thus exercised lasting influence on the traditional understanding of Vietnamese Buddhist history. Many modern Vietnamese Buddhist leaders still accept Thông Biện's views about the history of Buddhism in Vietnam.

Thorani. In Thailand and Laos, Phra Mae (Mother) Thorani or Nang (Lady) Thorani; a female deity depicted in mural depictions of the life of the Buddha. The name Thorani is the Thai and Lao pronunciation of the Sanskrit term DHĀRAṆĪ, which, in addition to its common Buddhist denotation of "code" or "spell," also means "the earth," "soil," or "ground." In a variation of the story of STHĀVARĀ, as the future Buddha sat in meditation about to attain enlightenment, he was attacked by MĀRA and his minions. Māra taunted him, saying that the bodhisattva had no one to attest to his worthiness of becoming a buddha, whereas his vast retinue was present to attest that he, Māra, should be acknowledged as the awakened one. The Buddha then touched the earth with his right hand and summoned the earth to bear witness to his meritorious acts (see BHŪMISPARŚAMUDRĀ), particularly acts of giving (DĀNA), that he had performed in past existences. Lady Thorani then appeared from out of the earth in the form of a beautiful woman with long wet hair. As she wrung out her hair, all the water that had accumulated on the earth each time the Buddha offered donative libations during his myriad past lives became such a torrential deluge that it swept away Māra and all his minions. (Pouring a ceremonial libation of water is a common way to conclude many ceremonies and offering rituals in Southeast Asian Buddhism.) In paintings, Lady Thorani stands beneath the VAJRĀSANA of the Buddha while Māra and his retinue are off to either side, caught in the floodwaters. Central city shrines to Lady Thorani can be found in both Laos and northeastern Thailand, and in the past, it was common for households in northeastern Thailand to have a small shrine dedicated to Lady Thorani in their household compounds.

Thub bstan rgya mtsho. (Tupten Gyatso) (1876–1933). The thirteenth DALAI LAMA of Tibet, remembered as a particularly forward-thinking and politically astute leader. Born in southeastern Tibet, he was recognized as the new Dalai Lama in 1878 and enthroned the next year. Surviving an assassination attempt (using black magic) by his regent, he assumed the duties of his office in 1895 during a period of complicated international politics between Britain, Russia, and China. British troops under the command of Col. Francis Younghusband entered Tibet in 1903. Before the British arrived in LHA SA the following year, the Dalai Lama fled to Mongolia and then continued to China, not returning to Lha sa until 1909. The following year, Chinese Manchu troops invaded Tibet and the Dalai Lama fled to India, returning in 1912. In 1912, the Manchu troops were expelled, and in 1913 the Dalai Lama declared Tibet's de facto independence. A progressive thinker, the thirteenth Dalai Lama made direct contact with Europe and the United States, and befriended Sir Charles Bell, the British political officer in Sikkim, Bhutan, and Tibet. He tried, unsuccessfully, to have Tibet admitted to the League of Nations, developed Tibet's first modern army, and sent the first young Tibetans to be educated in England. Most of his progressive plans, however, were thwarted by conservative religious and political forces within Tibet. The thirteenth Dalai Lama died in 1933, leaving behind a chilling prophecy, which read in part: "The monasteries will be looted and destroyed, and the monks and nuns killed or chased away. The great works of the noble dharma kings of old will be undone, and all of our cultural and spiritual institutions persecuted, destroyed, and forgotten. The birthrights and property of the people will be stolen. We will become like slaves to our conquerors, and will be made to wander helplessly like beggars. Everyone will be forced to live in misery, and the days and nights will pass slowly, with great suffering and terror."

Thubten Yeshe. (Thub bstan ye shes) (1935–1984). Influential teacher of Tibetan Buddhism in the West. Born to a farming family, in a village near LHA SA, Thubten Yeshe's first experience with monasticism began when, as a toddler, he was discovered to be an incarnation of the abbess of 'Chi med lung monastery. He displayed strong leanings toward the monastic life from a very early age and, when he was six, his parents put him in the care of an uncle at SE RA monastery outside Lha sa. He spent the next nineteen years at Se ra, where he studied diligently but was unable to complete his DGE BSHES (geshe) degree prior to fleeing Tibet at the time of the Lha sa uprising of 1959. He escaped to India with two of his brothers, going to the refugee camp in Buxador in northeast India. He began teaching Western students at Kopan monastery, near BODHNĀTH in Kathmandu, Nepal. He also traveled the world with his main disciple and fellow monk, Zopa Rinpoche. Together they created the Foundation for the Preservation of the Mahāyāna Tradition in 1975, along with Wisdom Publications, the Root Institute in BODHGAYĀ, the Tushita Dharma Center in DHARMAŚĀLĀ, India, and Nalanda monastery near Toulouse, France.

Thudhamma. (P. Sudhamma). The majority Buddhist monastic fraternity (B. GAING; P. gaṇa, cf. NIKĀYA) in contemporary Myanmar (Burma), comprising 85–90 percent of the monastic population of the country. The name derives from the Thudhamma Council, an ecclesiastical body appointed by royal decree in 1782, which was charged with reforming the Burmese saṅgha (S. SAṂGHA) and uniting its various factions into a single fraternity under Thudhamma leadership. The Thudhamma Council established a common monastic curriculum and in general promoted uniformity of doctrinal interpretation and VINAYA practice among the kingdom's monasteries. With the exception of a short hiatus in the 1810s, the council remained a permanent governing body of the Burmese saṅgha until the late nineteenth century, when it was dissolved following the British conquest of Upper Burma in 1885 and the deposition of the Burmese king. Even before that event, the authority of the council had declined in Lower Burma as a consequence of Britain's seizure of Burma's maritime provinces in 1824 and 1852. During the reign of MINDON MIN (1853–1878), Burmese monks living in British-controlled Lower Burma refused to recognize the authority of the Thudhamma Council and organized themselves into an independent fraternity called the DWAYA GAING (P. Dvāragaṇa). In the Burmese kingdom itself, the council's policies were not supported by ultra-orthodox monks who, because of their prominent disciplinary observances and scriptural expertise, gained popular support and royal patronage. From among these reformist monks, two prominent factions emerged, the SHWEGYIN and Hngettwin, both of which eventually organized themselves into independent fraternities with their own network of monasteries. After the disestablishment of Buddhism as the state religion of Burma by the British, all "unreformed" monasteries, which were the vast majority in the country, came to be designated Thudhamma by default, even though there was no longer an ecclesiastical umbrella under which they operated nor a hierarchy to which they were answerable. This allowed for the politicization of Thudhamma monks during the British colonial period, some of whom became leaders of the Burmese independence movement. In 1980, the Burmese government's Ministry of Religious Affairs recognized the Thudhamma gaing as one of nine officially sanctioned monastic fraternities comprising the Burmese saṅgha. Somewhat more relaxed in matters

of outward deportment than especially the Shwegyin and Dwaya, the Thudhamma gaing is renowned for its scholarship and maintains major monastic colleges in Yangon (Rangoon), Mandalay, and Pakokku.

thudong. (P. dhutaṅga). In Thai, "ascetics"; the tradition of forest monks (P. ARAÑÑAVĀSI) who observe the strict set of thirteen austerities (DHUTAṄGA), such as eating only one meal a day, living in the forest or at the root of a tree, meditating in charnel grounds, eating only from the alms bowl, etc. In Thailand, the thudong tradition is strongest in the Northeast, near the Laotian border, and is particularly, but not exclusively, associated with the reformed THAMMAYUT (P. Dhammayuttika) order. The thudong tradition experienced a resurgence in the late nineteenth and twentieth centuries, when it was revitalized through the efforts of AJAHN MUN BHŪRIDATTA, Ajahn Sao Kantasīla (1861–1941), and, later, AJAHN CHAH BODHIÑĀṆA.

Thun mong ma yin pa'i mdzod. (Tunmong Mayinpe Dzö). In Tibetan, "The Uncommon Treasury"; an encyclopedic work written by the nineteenth-century Tibetan scholar 'JAM MGON KONG SPRUL BLO GROS MTHA' YAS. The text is counted among the five treasuries of Kongtrül (KONG SPRUL MDZOD LNGA). It preserves numerous tantric ritual and liturgical texts of the RNYING MA sect of Tibetan Buddhism, as well as works on philosophy, poetry, astrology, and descriptions of local Buddhist practices and sites.

Thūpārāma. In Pāli, "Monastery of the STŪPA"; a monastery situated to the south of the Sinhalese capital of ANURĀDHAPURA in the MAHĀMEGHAVANA grove. Built by King DEVĀNAṂPIYATISSA, the monastery derives its name from the thūpa reliquary mound located within its precincts. The thūpa houses the Buddha's collarbone and was the first shrine of its kind on the island. The spot where the thūpa stands is where Gotama (S. GAUTAMA) Buddha and other buddhas were thought to have once meditated. Also within the grounds of the Thūpārāma was planted a sapling taken from a branch of the BODHI TREE that had been brought to Sri Lanka by the nun SAṄGHAMITTĀ. Once, during the first century BCE, the monks of the Thūpārāma conspired with counselors to deny kingship to the island's rightful heir, the crown prince Lañjatissa, giving it instead to his younger brother, Thūlatthana. When Lañjatissa regained the throne, he chastised the saṅgha by causing its junior monks to be honored first, and its senior monks last—thus repaying them in kind. During the reign of King Mahāsena, the heretical monk, Saṅghamitta, planned to disassemble the Thūpārāma, but was assassinated before he could carry out the deed. The Thūpārāma has been restored and renovated numerous times and is richly ornamented with plates and bricks made of gold and silver.

Thūpavaṃsa. In Pāli, "Chronicle of the Thūpa"; a twelfth-century Pāli work in verse in sixteen chapters. (Thūpa is the Pāli term for S. STŪPA.) The text is attributed to Vācissara. The text includes accounts of the lives of previous buddhas, the life and parinibbāna (S. PARINIRVĀṆA) of Gotama (S. GAUTAMA) Buddha, the distribution of his relics, the meritorious deeds of AŚOKA, the dispatch of missions to Sri Lanka and other foreign lands, culminating with the construction of the MAHĀTHŪPA, or "Great Stūpa," by the Sinhala hero–king, DUṬṬHAGĀMAṆĪ, at ANURĀDHAPURA.

ti. (J. tai; K. ch'e 體). In Chinese, lit. "body," and by extension "essence," or "substance"; a term widely used in East Asian religious traditions, including Buddhism. "Essence" often constitutes a philosophical pair together with the term "function" (YONG). In early Confucian texts, such as the *Lunyu* ("Analects") and the *Mengzi*, ti simply referred to a "body" or the "appearance" of a person or a thing. It was Wang Bi (226–249), the founder of the "Dark Learning" (XUANXUE) school of Chinese philosophy, who imbued the term with philosophical implications, using ti as a synonym for the Daoist concepts of "nonbeing" (WU) or "voidness" (xu). However, ti, along with its companion yong, was not widely used until the Buddhists adopted both terms to provide a basic conceptual frame for reality or truth. For example, the Later Qin (384–417) monk SENGZHAO (384–414?) identified ti as the nature of calmness (ji) and advocated its unity with yong, which he defined as the function of illumination (zhao). The SAN LUN ZONG master JIZANG (549–623), in discussing the two-truth (SATYADVAYA) theory of MADHYAMAKA, argued that "neither ultimate nor conventional" (feizhen feisu) was the ti ("essence") of the two truths, while "both ultimate and conventional" (zhensu) were their yong ("function"). The LIUZU TAN JING ("Platform Sūtra of the Sixth Patriarch") associates ti and yong with two modes of meditation: concentration (SAMĀDHI) is the ti or essence of wisdom (PRAJÑĀ); wisdom is the yong or function of concentration. GUIFENG ZONGMI (780–841), the Tang master of both the HUAYAN ZONG scholastic and the Heze Chan traditions, systematized the Chinese discourse of the terms. Based on the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna"), Zongmi interpreted ti as the unchanging essence of true thusness (ZHENRU), calling this absolute aspect of mind the "void and calm, numinous awareness" (KONGJI LINGZHI; see LINGZHI). Yong instead referred to the diverse functional aspects of true thusness, which corresponded to the "production-and-cessation" aspect of mind (shengmie). He also aligned ti and yong with other indigenous Chinese philosophical polarities such as, respectively, "nature" (XING) and "characteristics" (xiang), "principle" (LI) and "phenomena" (SHI), and "root" (ben) and "branches" (mo). Subsequently, Neo-Confucian thinkers, such as Cheng Yi (1033–1107) and Zhu Xi (1130–1200), adopted this paradigm into their own philosophical systems. In particular, Zhu Xi connected ti to the "nature bestowed by the heavenly mandate" (tianming zhixing) and yong to the "physical nature" (qizhi zhixing).

Tiantai. (C; J. Tendai; K. Ch'ont'ae 天台). See TIANTAI ZONG.

Tiantai bajiao. (J. Tendai hakkyō; K. Ch'ŏnt'ae p'algyo 天台八教). In Chinese, "The Eight [Classes of] Teachings according to the TIANTAI." According to the TIANTAI ZONG's system of doctrinal classification (JIAOXIANG PANSHI), the entirety of the Buddhist canon and its teachings can be divided into two groups of four teachings each. The first group of four was called "the four modes of transformative teachings" (huafa sijiao), which categorizes Buddhist teachings based on the content of their teachings and different doctrinal themes and their scriptural bases. The second group of four was called "the four styles of transformative edification" or "four modes of exposition" (huayi sijiao), which categorizes different strands of Buddhism primarily according to their means of conversion or pedagogical styles. ¶ The first group of four teachings, the transformative teachings (huafa sijiao), classifies Buddhism into four categories based on content: (1) zangjiao, the "TRIPIṬAKA teachings," the basic teachings that are foundational to the HĪNAYĀNA schools, such as the notions of impermanence, suffering, and no-self, and the imperative of attaining NIRVĀṆA; (2) tongjiao, the "joint" or "common teachings," a basic strand of MAHĀYĀNA teaching that shares many of the preceding doctrinal themes jointly with the "hīnayāna teachings," the main difference being that it additionally embraces the BODHISATTVA aspiration of helping others; (3) biejiao, the "distinct" or "separate teachings," so named because, unlike the previous category, this strand of Mahāyāna includes notions exclusive to that tradition and not shared with the "hīnayāna"; (4) yuanjiao, the "consummate" or "perfect teaching," which is the exclusive domain of the SADDHARMAPUṆḌARĪKASŪTRA, the main scripture the Tiantai school itself espouses. ¶ The second group of four teachings, the modes of exposition or conversion (huayi sijiao), contains the following divisions based on pedagogical style: (1) dunjiao, the "sudden teachings" or a direct pedagogical style. Epitomized by the AVATAṂSAKASŪTRA, this mode of teaching is characterized by a direct revelation of the stage of buddhahood, circumventing the gradual, and more conventional, stages of beginning bodhisattva practices and the "hīnayāna" tradition. (2) Jianjiao, the "gradual teachings" or pedagogical style. Representing these sequential, step-by-step soteriological approaches and pedagogical styles are the ĀGAMAS, the PRAJÑĀPĀRAMITĀ sūtras, and the VAIPULYA sūtras. (3) Budingjiao, the "indefinite teachings" or pedagogical style. The same utterance of the Buddha might be given without differentiation to various members of the audience, but the depth to which they were able to penetrate to that message, and the different interpretations they gave to it, varied depending on their spiritual maturity. (4) Mimijiao, the "esoteric teachings" or pedagogical style. Not to be confused with tantric teachings, "esoteric" here refers to the Tiantai belief that the Buddha sometimes preached in such a way that his same utterance resonated differently with various members within the audience, so that each received the instruction most suitable to his needs and temperament; with this pedagogical style, the Buddha essentially left members of the audience free to fathom an inexhaustibly elastic teaching and be benefited from it according to their unique conditions. See also WUSHI; CH'ŎNT'AE SAGYO ŬI.

Tiantai sijiao. (C) (天台四教). See TIANTAI BAJIAO.

Tiantai wushi. (J. Tendai goji; K. Ch'ŏnt'ae osi 天台五時). In Chinese, "the five periods [of the Buddha's teaching]"; the TIANTAI ZONG's temporal taxonomy of Buddhist doctrines, according to which the Buddha's teachings differ because he preached them at different points during his pedagogical career. The five are (1) Huayan (AVATAṂSAKASŪTRA), (2) ĀGAMA, (3) VAIPULYA, (4) PRAJÑĀPĀRAMITĀ, and (5) Lotus (SADDHARMAPUṆḌARĪKASŪTRA) and Nirvāṇa (MAHĀPARINIRVĀṆASŪTRA). See WUSHI; WUWEI.

Tiantai xiaozhiguan. (C) (天台小止觀). See XIUXI ZHIGUAN ZUOCHAN FAYAO.

Tiantai Zhiyi. (J. Tendai Chigi; K. Ch'ŏnt'ae Chiŭi 天台智顗) (538–597). One of the most influential monks in Chinese Buddhist history and de facto founder of the TIANTAI ZONG. A native of Jingzhou (in present-day Hunan province), Zhiyi was ordained at the age of eighteen after his parents died during the wartime turmoil that preceded the Sui dynasty's unification of China. He studied VINAYA and various MAHĀYĀNA scriptures, including the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") and related scriptures. In 560, Zhiyi met NANYUE HUISI (515–577), who is later listed as the second patriarch of the Tiantai lineage, on Mt. Dasu in Guangzhou and studied Huisi's teachings on the suiziyi sanmei (cultivating SAMĀDHI wherever mind is directed, or the samādhi of freely flowing thoughts), the "four practices of ease and bliss" (si anle xing), a practice based on the *Saddharmapuṇḍarīkasūtra*, and the lotus repentance ritual. Zhiyi left Huisi at his teacher's command and headed for the southern capital of Jinling (present-day Jiangsu province) at the age of thirty (567) to teach the *Saddharmapuṇḍarīkasūtra* and the DAZHIDU LUN for eight years at the monastery of Waguansi. The *Shi chanboluomi cidi famen* [alt. *Cidi chanmen*] are his lecture notes from this period of meditation and teaching. In 575, he retired to Mt. Tiantai (present-day Zhejiang province), where he built a monastery (later named Xiuchansi by the emperor) and devoted himself to meditative practice for eleven years. During this time he compiled the *Fajie cidi chumen* and the *Tiantai xiao zhiguan*. After persistent invitations from the king of Chen, Zhiyi returned to Jinling in 585 and two years later wrote the FAHUA WENJU, an authoritative commentary on the *Saddharmapuṇḍarīkasūtra*. Subsequently in Yangzhou, Zhiyi conferred the bodhisattva precepts on the crown prince, who later became Emperor Yang (r. 604–617) of the Sui dynasty. Zhiyi was then given the title Great Master Zhizhe (Wise One). Zhiyi also established another monastery on Mt. Dangyang in Yuquan (present-day Hunan province), which Emperor Wen (r. 581–604) later named Yuquansi. Zhiyi then began lecturing on what became his masterpieces, the FAHUA

XUANYI (593) and the MOHE ZHIGUAN (594). At the request of the king of Jin, in 595 Zhiyi returned to Yangzhou, where he composed his famous commentaries on the VIMALAKĪRTINIRDEŚA, i.e., the *Weimojing xuanshou* and the *Weimojing wenshou*, before dying in 597. Among the thirty or so works attributed to Zhiyi, the *Fahua xuanyi*, *Fahuawenju*, and *Mohe zhiguan* are most renowned and are together known as the Tiantai san dabu (three great Tiantai commentaries).

Tiantai zong. (J. Tendaishū; K. Ch'ŏnt'ae chong 天台宗). In Chinese, "Terrace of Heaven School"; one of the main schools of East Asian Buddhism; also sometimes called the "Lotus school" (C. Lianhua zong), because of its emphasis on the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"). "Terrace of Heaven" is a toponym for the school's headquarters on Mt. Tiantai in present-day Zhejiang province on China's eastern seaboard. Although the school retrospectively traces its origins back to Huiwen (fl. 550–577) and NANYUE HUISI (515–577), whom the school honors as its first and second patriarchs, respectively, the de facto founder was TIANTAI ZHIYI (538–597), who created the comprehensive system of Buddhist teachings and practices that we now call Tiantai. Zhiyi advocated the three truths or judgments (SANDI): (1) the truth of emptiness (kongdi), viz., all things are devoid of inherent existence and are empty in their essential nature; (2) the truth of being provisionally real (jiadi), viz., all things are products of a causal process that gives them a derived reality; and (3) the truth of the mean (zhongdi), viz., all things, in their absolute reality, are neither real nor unreal, but simply thus. Zhiyi described reality in terms of YINIAN SANQIAN (a single thought contains the TRICHILIOCOSM [TRISĀHASRAMAHĀSĀHASRALOKADHĀTU]), which posits that any given thought-moment perfectly encompasses the entirety of reality; at the same time, every phenomenon includes all other phenomena (XINGJU SHUO), viz., both the good and evil aspects of the ten constituents (DHĀTU) or the five sense organs (INDRIYA) and their respective objects and the three realms of existence (TRAIDHĀTUKA) are all contained in the original nature of all sentient beings. Based on this perspective on reality, Zhiyi made unique claims about the buddha-nature (FOXING) and contemplation (GUAN): he argued that not only buddhas but even sentient beings in such baleful existences as animals, hungry ghosts, and hell denizens, possess the capacity to achieve buddhahood; by the same token, buddhas also inherently possess all aspects of the unenlightened three realms of existence. The objects of contemplation, therefore, should be the myriad of phenomena, which are the source of defilement, not an underlying pure mind. Zhiyi's grand synthesis of Buddhist thought and practice is built around a graduated system of calmness and insight (jianzi ZHIGUAN; cf. ŚAMATHA and VIPAŚYANĀ), which organized the plethora of Buddhist meditative techniques into a broad, overarching soteriological system. To Zhiyi is also attributed the Tiantai system of doctrinal classification (panjiao; see JIAOXIANG PANSHI) called WUSHI BAJIAO (five periods and eight teachings), which the Koryŏ Korean monk CH'EGWAN (d. 970) later elaborated in its definitive form in his CH'ŎNT'AE SAGYO ŬI (C. *Tiantai sijiao yi*). This system classifies all Buddhist teachings according to the five chronological periods, four types of content, and four modes of conversion. Zhiyi was succeeded by Guanding (561–632), who compiled his teacher's works, especially his three masterpieces, the FAHUA XUANYI, the FAHUA WENJU, and the MOHE ZHIGUAN. The Tiantai school declined during the Tang dynasty, overshadowed by the newer HUAYAN and CHAN schools. The ninth patriarch JINGXI ZHANRAN (711–782) was instrumental in rejuvenating the school; he asserted the superiority of the Tiantai school over the rival Huayan school by adapting Huayan concepts and terminologies into the tradition. Koryŏ monks such as Ch'egwan and Ŭit'ong (927–988) played major roles in the restoration of the school by helping to repatriate lost Tiantai texts back to China. During the Northern Song period, Wu'en (912–988), Yuanqing (d. 997), Zhiyuan (976–1022), and their disciples, who were later pejoratively called the SHANWAI (Off-Mountain) faction by their opponents, led the resurgence of the tradition by incorporating Huayan concepts in the school's thought and practice: they argued that since the true mind, which is pure in its essence, produces all phenomena in accord with conditions, practitioners should contemplate the true mind, rather than all phenomena. Believing this idea to be a threat to the tradition, SIMING ZHILI (960–1028) and his disciples, who called themselves SHANJIA (On-Mountain), criticized such a concept of pure mind as involving a principle of separateness, since it includes only the pure and excludes the impure, and led a campaign to expunge the Huayan elements that they felt were displacing authentic Tiantai doctrine. Although Renyue (992–1064) and Congyi (1042–1091), who were later branded as the "Later Off-Mountain Faction," criticized Zhili and accepted some of the Shanwai arguments, the Shanjia faction eventually prevailed and legitimized Zhili's positions. The orthodoxy of Zhili's position is demonstrated in the FOZU TONGJI ("Comprehensive History of the Buddhas and Patriarchs"), where the compiler Zhipan (1220–1275), himself a Tiantai monk, lists Zhili as the last patriarch in the dharma transmission going back to the Buddha. Tiantai theories and practices were extremely influential in the development of the thought and practice of the Chan and PURE LAND schools; this influence is especially noticeable in the white-lotus retreat societies (JIESHE; see also BAILIAN SHE) organized during the Song dynasty by such Tiantai monks as Zhili and Zunshi (964–1032) and in Koryŏ Korea (see infra). After the Song dynasty, the school declined again, and never recovered its previous popularity. ¶ Tiantai teachings and practices were transmitted to Korea during the Three Kingdoms period through such Korean monks as Hyŏn'gwang (fl. sixth century) and Yŏn'gwang (fl. sixth century), both of whom traveled to China and studied under Chinese Tiantai teachers. It was not until several centuries later, however, that a Korean analogue of the Chinese Tiantai school was established as an independent Buddhist school. The foundation of the Korean CH'ŎNT'AE

CHONG is traditionally assumed to have occurred in 1097 through the efforts of the Koryŏ monk ŬICH'ŎN (1055–1101). Ŭich'ŏn was originally a Hwaŏm monk, but he sought to use the Ch'ŏnt'ae tradition in order to reconcile the age-old tension in Korean Buddhism between KYO (Doctrine) and SŎN (Meditation). In the early thirteenth century, the Ch'ŏnt'ae monk WŎNMYO YOSE (1163–1245) organized the white lotus society (PAENGNYŎN KYŎLSA), which gained great popularity especially among the common people; following Yose, the school was led by Ch'ŏn'in (1205–1248) and CH'ŎNCH'AEK (b. 1206). Although the Ch'ŏnt'ae monk Chogu (d. 1395) was appointed as a state preceptor (K. kuksa; C. GUOSHI) in the early Chosŏn period, the Ch'ŏnt'ae school declined and eventually died out later in the Chosŏn dynasty. The contemporary Ch'ŏnt'ae chong is a modern Korean order established in 1966 that has no direct relationship to the school founded by Ŭich'ŏn. ¶ In Japan, SAICHŌ (767–822) is credited with founding the Japanese TENDAISHŪ, which blends Tiantai and tantric Buddhist elements. After Saichō, such Tendai monks as ENNIN (793–864), ENCHIN (814–891), and ANNEN (b. 841) systematized Tendai doctrines and developed its unique forms, which are often called TAIMITSU (Tendai esoteric teachings). Since the early ninth century, when the court granted the Tendai school official recognition as an independent sect, Tendai became one of the major Buddhist schools in Japan and enjoyed royal and aristocratic patronage for several centuries. The Tendai school's headquarters on HIEIZAN became an important Japanese center of Buddhist learning: the founders of the so-called new Buddhist schools of the Kamakura era, such as HŌNEN (1133–1212), SHINRAN (1173–1263), NICHIREN (1222–1282), and DŌGEN KIGEN (1200–1253), all first studied on Mt. Hiei as Tendai monks. Although the Tendai school has lost popularity and patrons to the ZENSHŪ, PURE LAND, and NICHIRENSHŪ schools, it remains still today an active force on the Japanese Buddhist landscape.

Tiantong Rujing. (J. Tendō Nyojō; K. Ch'ŏndong Yŏjŏng 天童如浄) (1162–1227). Chinese CHAN master in the CAODONG ZONG, also known as Jingchang (Pure Chang) and Changweng (Old Man Chang); he received his toponym Tiantong after the mountain where he once dwelled. Rujing was a native of Shaoxing in Yuezhou (present-day Zhejiang province) and was ordained at a local monastery named Tianyisi. Rujing later went to the monastery of Zishengsi on Mt. Xuedou to study under Zu'an Zhijian (1105–1192) and eventually became his dharma heir. Rujing spent the next few decades moving from one monastery to the next. In 1220, he found himself at Qingliangsi in Jiankang (Jiangsu province) and then at Rui'ansi in Taizhou and Jingcisi in Linan. In 1224, Rujing was appointed by imperial decree to the abbotship of the famous monastery of Jingdesi on Mt. Tiantong, where the Chan master HONGZHI ZHENGJUE had once resided. Rujing's teachings can be found in his recorded sayings (YULU), which were preserved in Japan. Although Rujing was a relatively minor figure in the history of Chinese Chan, he was profoundly influential in Japanese ZEN, due to the fact that the Japanese SŌTŌSHŪ founder DŌGEN KIGEN (1200–1253) considered himself to be Rujing's successor. Dōgen attributes many of the distinctive features of his own approach to practice, such as "just sitting" (SHIKAN TAZA) and "body and mind sloughed off" (SHINJIN DATSURAKU) to this man whom he regarded as the preeminent Chan master of his era. Little of this distinctively Sōtō terminology and approach actually appears in the records of Rujing's own lectures, however. Instead, he appears in his discourse record as a fairly typical Song-dynasty Chan master, whose only practical meditative instruction involves the contemplation of ZHAOZHOU's "no" (see WU GONG'AN). This difference may reflect the differing editorial priorities of Rujing's Chinese disciples. It might also derive from the fact that Dōgen misunderstood Rujing or received simplified private instructions from him because of Dōgen's difficulty in following Rujing's formal oral presentations in vernacular Chinese.

Tiantong Zhengjue. (C) (天童正覺). See HONGZHI ZHENGJUE.

Tianxizai. (J. Tensokusai; K. Ch'ŏnsikchae 天息災) (d. 1000). Kashmiri monk-translator, who arrived in China in 980. While residing at a cloister to the west of the imperial monastery of Taiping-Xingguosi in Yuanzhou (present-day Jiangxi province), he translated (sometimes working in collaboration with DĀNAPĀLA and Fatian) seventeen MAHĀYĀNA and prototantric scriptures into Chinese, including the BODHICARYĀVATĀRA, KĀRAṆḌAVYŪHA, *Alpākṣarāprajñāpāramitāsūtra*, *Āyusparyantasūtra*, (*Ārya*) *Tārābhaṭṭarikāyanāmāṣṭottaraśataka*, *Māricīdhāraṇī*, and the MAÑJUŚRĪMŪLAKALPA.

Tianzhu. (J. Tenjiku; K. Ch'ŏnch'uk 天竺). Early Chinese phonetic transcription of Sindhu, viz., India, which becomes the most common designation in Chinese sources for the Indian subcontinent. See also ZHU.

Tibetan Book of the Dead. See BAR DO THOS GROL CHEN MO.

tichang. (J. teishō; K. chech'ang 提唱). In Chinese, "lecture," a type of discourse associated especially with the CHAN ZONG and widely known in the West by its Japanese pronunciation teishō; also called tigang (J. teikō, K. chegang) or tiyao (J. teiyō, K. cheyo). Such lectures, which were often delivered in highly colloquial language, sought to point to the main purport of a Chan tradition, text, or "case" (GONG'AN) by drawing on the peculiar Chan argot and extensively citing Chan literature and Buddhist scriptures. Chan masters might also deliver a sequential series of lectures on each of the Chan cases in a larger gong'an collection, such as the BIYAN LU or the WUMEN GUAN. Such lectures were sometimes delivered in conjunction with the formal "ascending the hall" (SHANGTANG) procedure; the term

may also refer to the master's expository comments regarding questions that visitors might raise in the course of listening to a formal lecture. The tichang lecture is the Chan counterpart of expositions of Buddhist teachings given by lecturers in doctrinal schools, but making more use of Chan rather than commentarial and scriptural materials. The term was widely used in the Chan tradition especially from the Song dynasty onward. Although the term appears only rarely in such Chan codes as the BAIZHANG QINGGUI ("Baizhang's Pure Rules") and the CHANYUAN QINGGUI ("Pure Rules of the Chan Garden"), these sources do describe the general procedures to be followed in delivering such a lecture. The forty-two roll *Liezu tigang lu* ("Record of the Lectures of Successive Patriarchs," using the alternate term tigang), compiled by the Qing-dynasty Chan master Daiweng Xingyue (1619–1684), collects about four hundred Chinese masters' lectures delivered at various special occasions, such as the reigning emperor's birthday or funeral, and in conjunction with daily services.

tīkṣṇendriya. (P. tikkhindriya; T. dbang po rnon po; C. ligen; J. rikon; K. igŭn 利根). In Sanskrit, "sharp faculties," the highest of the "three capacities" (TRĪNDRIYA), used to describe those disciples of the Buddha whose intellectual and spiritual abilities are greater than that of those of average (MADHYENDRIYA) and dull capacities (MṚDVINDRIYA). The term appears particularly in discussions of UPĀYA, the Buddha's ability to adapt his teachings to the intellects, interests, and aspirations of his disciples, with his highest teachings said to be reserved for disciples of sharp faculties. Thus the term is also often used polemically to describe one's preferred teaching as intended only for those of sharp faculties, while dismissing other competing teachings as intended for those of dull or average faculties. See also MAHĀPURUṢA; INDRIYA.

Tilokaracha. [alt. Tilokarat] (P. Tilokarājā) (r. 1441–1487). Thai name of an important Lānnā king of Chiangmai in northern Thailand who expanded the boundaries of the Lānnā kingdom militarily while promoting the reform Sinhalese monastic order led by Medhaṅkara throughout the territories under his domain. Tilokaracha promoted himself as a wheel-turning monarch (P. cakkavattin; S. CAKRAVARTIN), acting in emulation of AŚOKA. He constructed hundreds of monasteries and ordination halls throughout the kingdom, and directed that BODHI TREE saplings be planted at the sites. In 1445, built a replica of the MAHĀBODHI temple named Wat Photharam Maha Wihan (P. Bodhi-Ārāma Mahāvihāra), known also as Wat Chet Yot (Temple of the Seven Spires). In 1477, he convened a saṅgha (S. SAṂGHA) council at Wat Photharam for the editing of the Buddhist canon (P. tipiṭaka; S. TRIPIṬAKA), possibly also for the purpose of reconciling the new Sinhalese order with the older Sumana order. This meeting came to be recognized as an eighth Buddhist council by the Thais. In 1481, he restored the Wat Chedi Luang located in Chiangmai and installed the Emerald Buddha (PHRA KAEW MORAKOT) in its pinnacle. The political unification and religious and cultural integration of northern Thailand achieved under Tilokaracha laid the foundation for an efflorescence of Lānnā civilization during the reign of Phra Muang Kaew (r. 1495–1528), considered to be the golden age of Lānnā Buddhist scholarship.

Tilopa. (T. Ti lo pa) (988–1069). An Indian tantric adept counted among the eighty-four MAHĀSIDDHAS and venerated in Tibet as an important source of tantric instruction and a founder of the BKA' BRGYUD sect. Little historical information exists regarding Tilopa's life. According to his traditional biographies, Tilopa was born a brāhmaṇa in northeast India. As a young man he took the vows of a Buddhist monk, but later was compelled by the prophecies of a ḌĀKINĪ messenger to study with a host of tantric masters. He lived as a wandering YOGIN, practicing TANTRA in secret while outwardly leading a life of transgressive behavior. For many years Tilopa acted as the servant for the prostitute Barima (in truth a wisdom ḍākinī in disguise) by night while grinding sesame seeds for oil by day. The name Tilopa, literally "Sesame Man," derives from the Sanskrit word for sesamum. Finally, Tilopa is said to have received instructions in the form of a direct transmission from the primordial buddha VAJRADHARA. Tilopa instructed numerous disciples, including the renowned Bengali master NĀROPA, who is said to have abandoned his prestigious monastic position to become Tilopa's disciple, undergoing many difficult trials before receiving his teachings. Those teachings were later received by MAR PA CHOS KYI BLO GROS, who brought Tilopa's teachings to Tibet. As with many Indian siddhas, Tilopa's main instructions are found in the form of DOHĀ, or songs of realization. Many of his songs, together with several tantric commentaries and liturgical texts, are included in the Tibetan canon. Among the teachings attributed to him are the BKA' 'BABS BZHI ("four transmissions"), the LUS MED MKHA' 'GRO SNYAN RGYUD CHOS SKOR DGU ("nine aural lineage cycles of the formless ḍākinīs"), and the MAHĀMUDROPADEŚA.

tingqian boshuzi. (J. teizen no hakujushi; K. chŏngjŏn paeksuja 庭前柏樹子). In Chinese, "cypress tree in front of the courtyard"; a CHAN expression that becomes a popular meditative topic (HUATOU) and is used in Chan questioning meditation (KANHUA CHAN). The phrase appears in a GONG'AN exchange attributed to the Tang-dynasty monk ZHAOZHOU CONGSHEN (778–897): Once when Zhaozhou was asked, "Why did Bodhidharma come from the West?" (XILAI YI), he replied, "Cypress tree in front of the courtyard," suggesting that enlightenment, the reason that Bodhidharma traveled to China, is to be found in everyday experience. This gong'an appears as case no. 37 in the WUMEN GUAN ("Gateless Checkpoint"). See also XILAI YI.

Ti phu pa. "Pigeon Man," the Tibetan name for a twelfth-century Indian MAHĀSIDDHA in the lineage of NĀROPA who transmitted the LUS MED MKHA' 'GRO SNYAN RGYUD CHOS SKOR

DGU ("nine aural lineage cycles of the formless ḌĀKINĪs") to MI LA RAS PA's disciple RAS CHUNG PA during the latter's sojourn in India. Ti phu pa was said to be DAR MA MDO SDE, the son of MAR PA the Translator, according to the following story. Dar ma mdo sde was fatally injured for an equestrian accident, but before his death his father gave him instructions for "entering a corpse" (grong 'jug) whereby one can force one's consciousness to enter another body. Dar ma mdo sde was able to cause his consciousness to enter the body of a dead pigeon, which came back to life and flew across the Himālayas to India. There it entered the corpse of a sixteen-year-old boy who was about to cremated. He came back to life and put into practice the teachings he had received from Mar pa as Dar ma mdo sde, while also studying with other masters, including Nāropa, from whom he received the full transmission of the lus med mkha' 'gro snyan rgyud chos skor dgu ("nine aural lineage cycles of the formless ḍākinīs"). Nāropa's disciples had only taught five of these nine cycles to Mar pa during his visit to India, and hence Mi la ras pa had only received partial instruction. Mi la ras pa thus sent Ras chung pa to India to receive the full transmission of the lus med mkha' 'gro snyan rgyud chos skor dgu. Ras chung pa received that transmission from Ti phu pa.

tiraścīna. (S). See TIRYAK.

tīrtha. (S). See PĪṬHA.

tīrthika. (P. titthiya; T. mu stegs pa; C. waidao; J. gedō; K. oedo 外道). In Sanskrit, lit. "ford-maker"; referring specifically in Buddhist materials to "adherent of a non-Buddhist religion" and often seen translated as "heretic." Tīrthika is typically used to refer to a follower of one of the non-Buddhist Indian schools, such as ŚRAMAṆA schools of the ĀJĪVAKA and JAINA, which were contemporaries of the Buddha or the later Sāṃkhya tradition. The term probably referred originally to priests of temples near river crossings where travelers propitiated a deity before crossing, suggesting metaphorically that those teachings offered a ford across the raging river of SAṂSĀRA. See also ŚRAMAṆA.

tiryak. [alt. tiryaścīna, tiryañc] (P. tiracchāna; T. dud 'gro; C. chusheng; J. chikushō; K. ch'uksaeng 畜生). In Sanskrit, lit. "going horizontally" (i.e., not erect), viz., an animal; one of five or six rebirth destinies (GATI) in SAṂSĀRA. Among these, animals are classified as the one of the three (or four) unfortunate rebirth destinies (APĀYA; DURGATI), along with denizens of hell (NĀRAKA), ghosts (PRETA), and in some lists demigods or titans (ASURA). The category of animals includes both land and sea creatures, as well as insects. The specific kinds of suffering that animals undergo are frequently mentioned in Buddhist texts; these include the constant need to search for their own food while always seeking to avoid becoming food for others. Unlike humans, animals are generally killed not for some deed they have done but for the taste of their flesh or the texture of their skin. The possibility of achieving rebirth out of the realm of animals is said to be particularly difficult because of either the inevitable killing in which predators engage or because of animals' constant fear of becoming prey; neither mental state is conducive to higher rebirth. Despite this difficulty, there are many stories in Buddhist literature of predators who have willed themselves to stop killing (the first of the lay precepts) in order to create a karmic propensity that will be more conducive to rebirth out of the animal destiny. See also DAOTU.

tiryañc. (S). See TIRYAK.

Tiwei [Boli] jing. (提謂[波利]經). In Chinese, "Book of Trapuṣa [and Bhallika]"; an indigenous Chinese SŪTRA (see APOCRYPHA), written c. 460–464 during the Northern Wei dynasty, which praises the value of lay practice. The scripture is a retelling of the story of the encounter between the merchants TRAPUṢA and (in some versions) his brother BHALLIKA, who offered the Buddha his first meal after his enlightenment. Following the meal, the Buddha is said to have taught the brothers and transmitted to them the first two of the three refuges (see TRIŚARAṆA) (the SAṂGHA not yet existing at the incipiency of the religion), rendering them the first lay disciples (UPĀSAKA) of the Buddha. The Chinese text offers an extended account of what the Buddha taught during that first informal discussion of his experience. The Buddha's account of the dharma discusses the Buddhist value of keeping the five precepts (PAÑCAŚĪLA) and the lay practice of giving (DĀNA), but all set within a philosophical framework that draws heavily on indigenous Chinese concepts of the five phases or elements, the five viscera, etc., as well as the importance of karmic cause and effect.

tōban. (東班). In Japanese, lit. "east rank"; the offices of the six administrators or stewards (C. ZHISHI) at a Zen monastery, which were typically located to the east side of the monastery, hence the name. On the west are the prefects (C. TOUSHOU), who are thus referred to as the west rank. Similarly, the CHANYUAN QINGGUI refers to the stewards as the east section (C. dongxu) and the prefects as the west section (C. xixu).

toch'am. (圖讖). In Korean, "geomancy and divination"; a new theory of geomancy promulgated by the monk MYOCH'ŎNG (d. 1135), which was ultimately used to justify a rebellion against the Koryŏ dynasty. See MYOCH'ŎNG.

Tocharian. Generic term for Tocharian A (East Tocharian, or Turfanian) and Tocharian B (West Tocharian, or Kuchean), two related, but probably mutually unintelligible, Indo-European languages in which many Central Asian Buddhist texts from the Tarim River Basin along the SILK ROAD were composed. The languages were written in a variant of the BRAHMĪ script, which was first deciphered in 1908 by the German Indologists Emil Sieg and Wilhelm Siegling. Virtually all the extant Tocharian Buddhist manuscripts are translations

of earlier Indian materials, many in bilingual editions that speeded the deciphering process. The languages were unknown until SIR MARC AUREL STEIN (1862–1943) discovered their manuscripts during his expeditions into the Tarim Basin. The name Tocharian derives from the Greek term for the people of this region. Texts in Tocharian A have been discovered in the oasis petty-kingdom of TURFAN and in the vicinity of Shorchuk/Yanqi. Tocharian B texts range much more widely across the Tarim Basin, but are especially prominent in the KUCHA region. Of the two languages, Tocharian B is the older of the two, with manuscripts ranging in age from the fifth through eighth centuries CE, and the most diverse linguistically. Tocharian A is more consistent linguistically and its manuscripts are later than those of its counterpart. The languages may have been spoken as late as the middle of the ninth century, when both became extinct; their peoples assimilated into the Uighurs who now populate the region in present-day Chinese Xinjiang.

Tōdaiji. (東大寺). In Japanese, "Great Monastery of the East"; a major monastery in the ancient Japanese capital of Nara affiliated with the Kegon (HUAYAN) school of Buddhism, listed as a UNESCO World Heritage site. The monastery was founded by the Hossōshū (FAXIANG ZONG) monk GYŌGI (668–749). The monastery is renowned for its colossal buddha image of VAIROCANA (J. Birushana nyorai), which is commonly known as the NARA DAIBUTSU; at forty-eight feet (fifteen meters) high, this image is the largest extant gilt-bronze image in the world and the Daibutsuden where the image is enshrined is the world's largest wooden building. The Indian monk BODHISENA (J. Bodaisenna) (704–760), who traveled to Japan in 736 at the invitation of Emperor Shōmu (r. 724–749), performed the "opening the eyes" (KAIYAN; NETRAPRATIṢṬHĀPANA) ceremony for the 752 dedication of the great buddha image. Tōdaiji was founded on the site of Konshūsenji by order of Emperor Shōmu and became the headquarters of a network of provincial monasteries and convents in the Yamato region. The first abbot, Ryōben (689–773), is commemorated in the kaisandō (founder's hall; see KAISHAN). Other halls include the inner sanctuary of the hokkedō (lotus hall), which was probably once Konshusenji's main hall. The hall enshrines the Fukūkensaku Kannon, a dry lacquer statue of the BODHISATTVA AVALOKITEŚVARA, which dates from 746. The monastery was renamed Konkōmyōji in 741 and, in 747 when major construction began on the large compound, it finally became known as Tōdaiji, the name it retains today. The Tōdaiji complex was completed in 798; monastery records state that 50,000 carpenters, 370,000 metal workers, and 2.18 million laborers worked on the compound, its buildings, and their furnishings, almost bankrupting the country. Entering the monastery through the Great Gate to the South (Nandaimon), itself a Japanese national treasure, a visitor would have passed through two seven-storied, 328-foot high pagodas to the east and west (both subsequently destroyed by earthquakes), before passing through the Inner Gate to the Daibutsuden. North of the Daibutsuden, which is flanked by a belfry and a SŪTRA repository, is the kōdō (lecture hall), which is surrounded on three sides by the monk's quarters. An ordination hall displays exceptional clay-modeled shitennō (four heavenly kings; see LOKAPĀLA) dating from the Tenpyō Era (729–749). Of the eighth-century buildings, only the tegaimon (the western gate) and the Hokkedō's inner sanctuary have survived. After a conflagration in 1180, then-abbot Chōgen (1121–1206) spearheaded a major reconstruction in a style he had seen in Southern Song-dynasty China. This style is exemplified by the south gate, which is protected by two humane-kings statues, both twenty-eight feet in height, carved in 1203. The Tokugawa Shogunate sponsored a second reconstruction after another fire in 1567 and the current Daibutsuden dates from about 1709. The Shōsōin repository at the monastery, itself a Japanese national treasure (kokuhō), contains over nine thousand precious ornamental and fine-art objects that date from the monastery's founding in the eighth century, including scores of objects imported into Japan via the SILK ROAD from all over Asia, including cut-glass bowls and silk brocade from Persia, Byzantine cups, Egyptians chests, and Indian harps, as well as Chinese Tang and Korean Silla musical instruments, etc. Every spring, the two-week long Omizutori (water-drawing) festival is conducted at Tōdaiji, which is thought to cure physical ailments and cleanse moral transgressions.

Tōji. (東寺). In Japanese, "Eastern Monastery," also known as Kyōō Gokokuji; a famous temple in Kyōto, Japan. Currently, Tōji is the headquarters (honzan) of the Tōji branch of the SHINGONSHŪ. Construction of Tōji and its sister temple Saiji (Western Monastery) began in 796, after the Japanese capital was moved from Nara to Kyōto and the capital divided into eastern and western precincts, following traditional Chinese city plans. The two monasteries seem to have been built for the purpose of protecting spiritually the southern borders of the new capital. In 812, construction of the golden hall (kondō) at the monastery was completed. In 823, the emperor bestowed the temple upon the eminent Japanese monk KŪKAI and the monastery was then named the Konkōmyō Shitennō Kyōō Gokokuji Himitsu Denbōin (Radiance of Golden Light, Four Heavenly Kings, King of Teachings, Protection of the State Temple, Esoteric Transmission of the Dharma Cloister). Sixteen years later, the central altar (SHUMIDAN) was completed and eyes of the central icons were opened (see KAIYAN). The famous five-story pagoda at Tōji, a national treasure (kokuhō), was completed in the second half of the ninth century. The pagoda was consumed in flames after it was struck by lightning in 1055, but with the support of the Edo bakufu, the pagoda was reconstructed to its current shape.

Tokushō. (J) (得勝) (1327–1387). See BASSUI TOKUSHŌ.

Tominaga Nakamoto. (富永仲基) (1715–1746). Important Japanese thinker during the Edo period. The third son of a soy sauce manufacturer in Ōsaka, Tominaga was raised in the

merchant community. Tominaga's social position and subsequent education resulted in an eclectic and fairly impartial understanding of the varying schools of Confucian thought, Buddhism, and Daoism. Tominaga received a classical Confucian education at Kaitokudō, a private academy funded by his father and a few other Ōsaka manufacturers. He began his education at age nine, and eventually studied Buddhist scripture in great breadth and depth, even though he was never ordained. Tominaga was forced to leave Kaitokudō after writing a critical piece on competing Confucian schools of thought. The work, which is no longer extant, was called *Setsuhei*, or "A Critical Examination of [Confucian] Doctrine." Tominaga did the majority of his study of sūtras and MAHĀYĀNA Buddhism between 1730 and 1738. He published two titles that are still extant, *Shutsujō kōgo* ("Emerging from Meditation") (1745), and *Okina no fumi* ("Writings of an Old Man"), which was published six months after he died of lung disease in 1746. In these works, he took a historical approach that critiqued all claims to authenticity by the existing schools of Japanese religion, suggesting that the different sects of Buddhism evolved by reformations of preceding schools, reformations that were then justified by appeals to the authority of the Buddha himself. He even made the radical claim that the Buddha could not have taught the Mahāyāna sūtras because their language and teachings differed so dramatically from other types of Buddhist sūtras. Although he was vigorously criticized by the Buddhist ecclesia, his historical approach to Buddhism helped to establish the foundation for the Japanese scholarly study of Buddhism in the nineteenth and early twentieth centuries.

tōmitsu. (J) (東密). See MIKKYŌ.

T'ongdosa. (通度寺). In Korean, "Breakthrough Monastery" (lit. "Penetrating Crossing-Over Monastery"); the fifteenth district monastery (PONSA) in the contemporary CHOGYE CHONG of Korean Buddhism, located at the base of Yŏngch'uksan (S. GṚDHRAKŪṬAPARVATA, or Vulture Peak) in Yangsan, South Kyŏngsang province. Along with HAEINSA and SONGGWANGSA, T'ongdosa is one of the "three-jewel monasteries" (SAMBO SACH'AL) that represent one of the three jewels (RATNATRAYA) of Buddhism; T'ONGDOSA is the buddha-jewel monastery (pulbo sach'al), because of its ordination platform and the relics (K. sari; S. ŚARĪRA) of the Buddha enshrined in back of its main shrine hall (TAEUNG CHŎN). The oldest of the three-jewel monasteries, T'ongdosa has long been regarded as the center of Buddhist disciplinary studies (VINAYA) in Korea, and has been one of the major sites of ordination ceremonies since the Unified Silla period (668–935). Relics, reputed to be those of the Buddha himself, are enshrined at the monastery, and its taeung chŏn is famous for being one of four in Korea that does not enshrine an image of the Buddha; instead, a window at the back of the main hall, where the image ordinarily would be placed, looks out on the Diamond Ordination Platform (Kŭmgang kyedan), which includes a reliquary (STŪPA) that enshrines the Buddha's relics. This focus on vinaya and the presence of these relics, both of which are reminders of the Buddha, have led the monastery to be designated the buddha-jewel monastery of Korea. T'ongdosa is said to have been established by the vinaya master CHAJANG (608–686) in 646 to enshrine a portion of the relics that he brought back with him from his sojourn into China. While on pilgrimage at WUTAISHAN, Chajang had an encounter with the bodhisattva MAÑJUŚRĪ, who entrusted Chajang with a gold studded monk's robe (K. kasa; S. KAṢĀYA) wrapped in purple silk gauze, one hundred pieces of relics of the Buddha's skull bone and his finger joint, beads, and sūtras. One portion of the relics was enshrined together with the Buddha's robe in a bell-shaped stone stūpa at the center of the Diamond Ordination Platform; another portion was enshrined in the nine-story pagoda at HWANGNYONGSA in the Silla capital of Kyŏngju. Under Chajang's leadership, the monastery grew into a major center of Silla Buddhism and the monastery continued to thrive throughout the Silla and Koryŏ dynasties, until the whole monastery except the taeung chŏn was destroyed by invading Japanese troops in the late sixteenth century. In 1641, the monk Uun (d.u.) rebuilt the monastery in its current configuration. The Diamond Ordination Platform was periodically damaged during the sporadic Japanese invasions that occurred during the Chosŏn dynasty. In the fourth month of 1377, Japanese pirates invaded, seeking to plunder the śarīra; to keep them from falling into Japanese hands, the abbot went into hiding with the relics. Two years later, on the fifteenth day of the fifth month of 1379, the pirates came again, and the monks quickly whisked away the relics and hid them deep in the forest behind the monastery. The Japanese went in pursuit of the relics, but the abbot Wŏlsong (d.u.) took them to Seoul to keep them safe, returning with them once the danger had passed. During the Hideyoshi Invasions in the late sixteenth century, the relics were also removed in order to keep them safe. SAMYŎNG YUJŎNG, who was leading a monk's militia fighting the Japanese invaders, sent the relics to the Diamond Mountains (KŬMGANGSAN) in the north, where his teacher and the supreme commander, CH'ŎNGHŎ HYUJŎNG, was staying. Hyujŏng decided that the relics were no safer there than back at their home monastery, so he returned them to T'ongdosa. Yujŏng covered the hiding place of the relics with weeds and thorn bushes and, once the Japanese threat was rebuffed, he restored the site to its former glory and the relics were reenshrined in 1603. The platform was repaired again in 1653 and on a grand scale in 1705. The Diamond Ordination Platform remains the site where BHIKṢU and BHIKṢUṆĪ ordinations are held in Korea. In 1972, T'ongdosa was elevated to the status of an ecumenical monastery (CH'ONGNIM), and is one of the five such centers in the contemporary Chogye order, which are all expected to provide training in the full range of practices that exemplify the major strands of the Korean Buddhist tradition; the monastery is thus also known as the Yŏngch'uk Ch'ongnim.

Tonghwasa. (桐華寺). In Korean, "Paulownia Flower Monastery"; the ninth district monastery (PONSA) of the contemporary

CHOGYE CHONG of Korean Buddhism, located on Mount P'algong near the city of Taegu. The monastery was founded by the monk Kŭktal (d.u.) in 493, during of the reign of the Silla king Soji (r. 479–500), and was originally called Yugasa (Yoga monastery). When the royal preceptor (wangsa) Simji (d.u.) reconstructed the monastery in 832, Paulownia trees miraculously bloomed in the middle of the winter, so it was renamed Paulownia Flower monastery (Tonghwasa). The monastery was reconstructed several times: in 934, by a late-Silla monk; in 1190, by the mid-Koryŏ reformer POJO CHINUL (1158–1210); and in 1298 by the state preceptor (K. kuksa; C. GUOSHI) Hongjin (1228–1294). In 1606, following the depradations of the Japanese Hideyoshi invasions, the Sŏn master SAMYŎNG YUJŎNG (1544–1610) again reconstructed the monastery. The monastery contains many hermitages, including Kŭmdangam, Piroam, Naewŏnam, Pudoam, Yangjinam, and Yŏmburam. During the Japanese colonial period (1910–1945), Tonghwasa was designated one of the thirty-one head monasteries (PONSA) and it managed fifty-five branch temples (malsa). The monastery contains many cultural treasures, including the three-story pagodas at Piroam, the seated image of MAHĀVAIROCANA, and the seated image of the buddha carved into the cliff face. A more recent addition to the monastery campus is a massive fifty-five foot (seventeen meter) standing image of the healing buddha BHAIṢAJYAGURU.

Tongrong. (C) (通容) (1593–1661). See FEIYIN TONGRONG.

tongxu. (C) (通序). See ER XU.

tonsure. A somewhat antiquated term occasionally still found in discussions of East Asian and especially Japanese Buddhism, referring to the shaving of the head that occurs in conjunction with entering a monastery and taking ordination as a monk or nun. See PRAVRAJITA; UPASAṂPADĀ.

tooth relic. (S./P. dantadhātu). A left cuspid tooth presumed to be that of the buddha Gotama (S. GAUTAMA), which is the most sacred relic in Sri Lanka and one of the most famous Buddhist relics in the world. It is said that after the Buddha's cremation, the tooth relic was retrieved from the ashes of the funeral pyre by the monk Khema. It was passed down among several royal dynasties until coming into the possession of king Guhasīva of Kaliṅga in the fourth century CE. Fearing that the tooth would be destroyed by Hindus, he entrusted it to his daughter, Hemamālā, who hid the tooth in her hair. Together with her husband, prince Dantakumāra, they traveled to Sri Lanka and presented the relic to the king, who enshrined it in ANURĀDHAPURA. In 1280 it was captured by invaders and taken back to India but was returned shortly thereafter. In 1560, the tooth relic (in Jaffna at the time) was captured by the Portuguese viceroy of Goa, Dom Constantino de Braganza, and taken to Goa. There, he received word that the King of Pegu in Burma (Myanmar) would offer a huge sum as ransom for the tooth. The viceroy was inclined to accept, but the agreement was vetoed by the Archbishop of Goa who, in a public ceremony, ground the tooth to dust with a mortar and pestle, burned the dust in a brazier, and then cast the ashes into the sea. The Sinhalese later explained that this had not been the real tooth relic but was instead a replica; the real tooth was safe in Kandy. The relic is housed in the Dalada Maligawa Temple in the city of Kandy. Construction of the temple began in 1592, with the temple complex being enlarged by several kings during the seventeenth and eighteenth centuries. Possession of the tooth relic is said to confer the right to rule the island, so much so that when the British captured the tooth in 1815, this was interpreted as a sign of the legitimacy of their sovereignty. The authenticity of the tooth relic has been called into question at certain points in its history; HENRY STEEL OLCOTT declared it to be an animal bone, leading to his estrangement from the monastic authorities. The tooth relic remains an object of veneration and Dalada Maligawa Temple is an important place of pilgrimage in the South and Southeast Asian Buddhist world. See also DĀṬHĀVAṂSA.

Tōshōdaiji. (唐招提寺). In Japanese, "Monastery for a Tang Wanderer"; located in the ancient Japanese capital of Nara and the head monastery of the VINAYA school (J. Risshū). Tōshōdaiji was originally a residence for Prince Niitabe, who donated it to the Tang-Chinese monk GANJIN (C. Jianzhen; 688–763), the founder of the vinaya school (RISSHŪ) in Japan. Ganjin came to Japan in 759 at the invitation of two Japanese monks who had studied with him in China at his home monastery of Damingsi (J. Daimyōji) in present-day Yangzhou. Ganjin tried to reach Japan five times before finally succeeding; then sixty-six and blind, he established an ordination platform at TŌDAIJI before moving to Tōshōdaiji, where he passed away in 763. The monastery's name thus refers to Ganjin, a "wandering monk from Tang." The kondō, the golden hall that is the monastery's main shrine, was erected after Ganjin's death and finished around 781, followed three decades later by the monastery's five-story pagoda, which was finished in 810. The kondō is one of the few Nara-period temple structures that has survived and is one of the reasons why the monastery is so prized. It was built in the Yosemune style, with a colonnade with eight pillars, and enshrines three main images: the cosmic buddha VAIROCANA at the center, flanked by BHAIṢAJYAGURU, and a thousand-armed AVALOKITEŚVARA (see SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA), only 953 of which remain today, with images of BRAHMĀ and INDRA at the sides and statues of the four heavenly king protectors of Buddhism standing in each corner. The kōdō, or lecture hall, was moved to the monastery from Heijō Palace and is the only extant structure that captures the style of a Tenpyō palace; it houses a statue of the bodhisattva MAITREYA. A kyōzō, or SŪTRA repository, holds the old library. The monastery also includes a treasure repository, a bell tower, and an ordination platform in the lotus pond. In 763, as Ganjin's death neared, he had a memorial statue of himself made and installed in his quarters at Tōshōdaiji. This dry-lacquer statue of a meditating Ganjin is enshrined today in the mieidō (image hall), but is brought out

for display only on his memorial days of June 5–7 each year; it is the oldest example in Japan of such a memorial statue. Tōshōdaiji was designated a UNESCO World Heritage Site in 1998.

Tosŏn. (道詵) (827–898). Korean SŎN master during the Later Silla and the early Koryŏ kingdoms, who is said to have been the first Korean to combine geomancy (K. p'ungsu; C. fengshui) and Buddhism in order to assess and correct adverse energy flows in the indigenous Korean landscape. Tosŏn was probably a relatively little-known figure during his own lifetime, but he became the stuff of legend for supposedly predicting the rise to prominence of the founder of the Koryŏ dynasty, Wang Kŏn (r. 918–943), and using his geomatic prowess to locate the most auspicious site for the founding of its new capital, Kaesŏng. Tosŏn developed a theory of deploying Buddhist architectural sites as a palliative to geographic anomalies. This theory, called "reinforcing [the land] through monasteries and STŪPAS" (K. PIBO SAT'AP SŌL), proposed that building monasteries and pagodas at geomantically fragile locations could alleviate or correct weaknesses in the native topology, in much the same way that acupuncture could correct feeble energy flows within the physical body. His geomantic theory is unusual, because Chinese geomancy of the time focused more on the discovery of hidden propitious sites within the landscape, not correcting geomantic weaknesses. This term pibo (lit. "assisting and supplementing," and thus "reinforcing," or "remediation") is also unattested as a technical term in Chinese geomancy. The term may derive from similar terms used in the geomantic theories of the Chinese CHAN school and thence the Korean Nine Mountains Sŏn school (KUSAN SŎNMUN), with which Tosŏn was affiliated. The geomancy of Yang Yunsong (834–900) was popular in the Jiangxi region of China; this type of geomancy sought to interpret the lay of the land as a way of locating the most auspicious sites for constructing buildings. This tradition seems to have entered into the Chan lineages in that region, whence it might have been introduced in turn into Korea by the several Sŏn masters in the Nine Mountains school who studied in Jiangxi. The frequency with which late Silla and early Koryŏ period Sŏn monks located their monasteries following geomantic principles may well derive from the fact that seven of these nine early lineages of Korean Sŏn were associated with the Hongzhou school and the Jiangxi region. Some scholars instead propose that the source of Tosŏn's geomancy is to be found in esoteric Buddhism: Tosŏn viewed the country as a MAṆḌALA and, in order to protect the nation, proposed to situate monasteries at locations chosen through the ritual of demarcating a sacred site (sīmābandha). Finally, Korean indigenous religion and Togyo (Daoism) are also sometimes presented as sources of Tosŏn's geomantic teachings. Tosŏn's theory of geomancy also played a role in resituating the religious center of Korean Buddhism, which had previously been focused on the Silla capital of KYŎNGJU or such indigenous sacred mountains as the five marchmounts (o'ak). The Silla royal and aristocratic families founded monasteries around the capital of Kyŏngju based on the belief that this region had previously been a Buddha land (Pulgukt'o). Tosŏn's theory resulted in an expansion of the concept of "Buddha land" to take in the entire Korean peninsula, instead. After the establishment of the new Koryŏ dynasty in 918, Tosŏn's theory was appropriated as a means of integrating into the dynastic political structure local power groups and monasteries. In the posthumous "Ten Injunctions" (hunyo sipcho) attributed to Wang Kŏn, the Koryŏ founder is reputed to have instructed that monasteries should only be constructed at sites that had been specifically designated as auspicious by Tosŏn. For this reason, the term pibo later comes to be used as an official ecclesiastical category in Korea to designate important monasteries that had figured in the founding of the Koryŏ dynasty. Tosŏn's thought also subsequently became associated with the theory of geomancy and divination (TOCH'AM) taught by the diviner–monk MYOCH'ŎNG (d. 1135), who eventually led an unsuccessful rebellion against the Koryŏ dynasty.

Toṭagamuwa, Śrī Rāhula. (1408–1491). A Sinhalese monk of the fifteenth century and one of the most celebrated poets of Sri Lanka. His most famous works include *Selalihini Sandesa* ("The Bird Sela's Message") and *Kaviyasekera* ("The Crown of Poetry"). Despite his status as a monk, his verse includes many secular themes, such as the power of kings and the beauty of women. His erudition also secured him a reputation as a great debater. TOṬAGAMUWA received much praise and support from the Sinhalese king PARĀKRAMABĀHU VI, who came to the throne in 1410.

touguang. (J. zōkō; K. tugwang 頭光). In Chinese, lit. "head light"; a "nimbus" encircling the head of holy figures in Buddhist painting and sculpture. See KĀYAPRABHĀ.

toushou. (J. chōshu; K. tusu 頭首). In Chinese, "prefect"; the prefects or chief officers at a CHAN monastery. Ideally, there are six prefects who govern different aspects of the daily activities of the monastic community. Because their offices were often located on the west side of the monastery, they were also often referred to as the west section or rank. The six prefects are the chief seat (C. SHOUZUO), scribe (C. SHUJI), library prefect (C. ZANGZHU), guest prefect (C. ZHIKE), bath prefect (C. ZHIYU), and hall prefect (C. ZHIDIAN). Cf. TŌBAN.

Touzi Yiqing. (J. Tōsu Gisei; K. T'uja Ŭich'ŏng 投子義靑) (1032–1083). Chinese CHAN master in the CAODONG ZONG. Touzi was a native of Qingzhou prefecture in present-day Shandong province. He entered the monastery of Miaoxiangsi at the age of seven and was ordained at age fifteen. During this period, Touzi is said to have studied Buddhist doctrine and the AVATAṂSAKASŪTRA. Later, Touzi became a disciple of the LINJI ZONG master Fushan Fayuan (991–1067), from whom he received the portrait (DINGXIANG), leather shoes, and patched robes of the deceased DAYANG JINGXUAN, a Caodong lineage

holder. Touzi thus became a holder not of his teacher Fushan's but of Dayang's Caodong lineage. In 1073, he began his residence at the Chan monastery of Haihui Chansi on Mt. Baiyun in Shuzhou prefecture, present-day Anhui province. Eight years later, he moved to the nearby Mt. Touzi, whence he acquired his toponym. His teachings are recorded in the *Shuzhou Touzi Qing heshang yulu* and *Touzi Qing heshang yuyao*.

tracing back the radiance. See FANZHAO.

traidhātuka. (P. tedhātuka; T. khams gsum; C. sanjie; J. sangai; K. samgye 三界). In Sanskrit, the "triple realm" or "three realms [of existence]"; the three realms of SAṂSĀRA, in which beings take rebirth: the sensuous, or desire, realm (KĀMADHĀTU); the subtle-materiality, or form, realm (RŪPADHĀTU); and the immaterial, or formless, realm (ĀRŪPYADHĀTU). See also AVACARA; LOKADHĀTU.

trailokya. (T. 'jig rten gsum; C. sanjie; J. sangai; K. samgye 三界). In Sanskrit, the "three realms." See TRILOKA[DHĀTU]; TRAIDHĀTUKA; AVACARA; LOKADHĀTU.

Trailokyavijaya. (T. Khams gsum rnam rgyal; C. Xiangsanshi mingwang; J. Gōzanze myōō; K. Hangsamse myŏngwang 降三世明王). In Sanskrit, "Victor of the Three Realms"; a wrathful deity, he is considered a wrathful form of VAJRAPĀṆI. He is depicted in Indian Buddhist iconography and plays an important role in the SARVATATHĀGATATATTVASAṂGRAHA. It is in the form of Trailokyavijaya that Vajrapāṇi conquers Maheśvara (the Hindu god Śiva). It was often the case that Buddhists gave Hindu deities Buddhist forms, especially in the tantras. In this case, Trailokyavijaya may have his antecedent in the Hindu god Tripurāntaka, "Destroyer of the Three [Demon] Cities," a form of Śiva whose worship was still current at the time the *Sarvatathāgatatattvasaṃgraha* was being formulated. Iconographic similarities as well as the Buddhist Trailokyavijaya's subjugation of the rival tradition's Maheśvara support the connection; a Hindu deity is appropriated by Buddhists, with the appropriated form then subduing the Hindu god. The cult of Trailokyavijaya entered China with the translations of the *Sarvatathāgatatattvasaṃgraha*, the MAHĀVAIROCANĀBHISAṂBODHISŪTRA, and several other texts translated by AMOGHAVAJRA in the second half of the eighth century, whence they quickly entered Japan. He is described as being terrible to behold, with four heads and eight arms, although in the GARBHADHĀTU MAṆḌALA, he has a single face with three eyes and two arms. He stands on prone figures of Śiva and Umā, whom he has thus subdued. His worship was largely replaced by that of HERUKA in the CAKRASAṂVARATANTRA cycles, who performs the same function in the taming of Maheśvara.

Traiphum Phra Ruang. In Thai, "The Three Worlds According to King Ruang"; the title of a Thai cosmological treatise written by Prince Lithai (d. 1374), before he became monarch of the central Thai kingdom of SUKHOTHAI. The treatise consists of descriptions of the three worlds or realms of existence (S. TRAIDHĀTUKA) into which beings are born, that is, the sensuous realm (KĀMADHĀTU), the realm of subtle materiality (RŪPADHĀTU), and the immaterial realm (ĀRŪPYADHĀTU). Each of the various places of rebirth within each of these realms is described, along with the deeds that lead to rebirth there. The treatise has played an important role in teaching Buddhist morals and values in Thai society and portions of it are often depicted in temple mural paintings.

traividya. (S). See TRIVIDYĀ.

Trần Nhân Tông. (陳仁宗) (1258–1308). The third king of the Vietnamese Trần dynasty (1225–1400) and the founding patriarch of the TRÚC LÂM (Bamboo Grove) school, the first authentic Vietnamese Thiền (CHAN) school. He was also the national hero who led Vietnam to victory over the Mongols in 1285 and 1288. In 1293, he abdicated, after being on the throne for fifteen years, to become thượng hoàng (retired emperor). When he was crown prince, he revered Buddhism and received instructions from eminent monks, including his uncle Huệ Trung Thượng Sĩ, an eminent Chan master of the time. In 1299 he went to Mount Yên Tử to become a monk and took the sobriquet Trúc Lâm Đại Sĩ. He was reverentially referred to as Trúc Lâm Điều Ngự or simply Điều Ngự. Even after taking residence in Yên Tử, he continued to travel to various temples to give instructions to monks, devoting himself to establishing a unified saṃgha. The *Tam Tổ Thực Lục* ("True Records on the Three Patriarchs") relates that he traveled extensively to shut down "depraved temples" and to encourage people to receive the ten precepts. Many eminent monks of the Trần were his disciples. According to historical records, Trần Nhân Tông left behind several treatises on Chan and a few collections of poems in both classical Chinese and Nôm (demotic script). Unfortunately, none of his writing are extant apart from a few poems collected in the *Việt Âm Thi Tập* in Chinese and two long poems in Nôm.

transmission. Many strands of Buddhism employ the concept of transmission to describe the dissemination of a particular doctrine or practice from teacher to student, with an unbroken dissemination line going back to the originator of the teaching (usually the Buddha) often considered essential for maintaining the authenticity and authority of the teaching and those who propound it. This line of transmission is often spoken of as the "lineage." Various forms of transmission are set forth in a

number of Buddhist traditions, including the famous seal of transmission (YINKE) and "mind-to-mind transmission" (YIXIN CHUANXIN) of the East Asian CHAN schools, which is considered to be a "special transmission outside the teachings" (JIAOWAI BIECHUAN). In Tibetan Buddhism, reference is often made to the "aural transmission" (NYAN BRGYUD), the teachings received orally from a master as opposed to those derived from a text. The aural transmission often refers to practical instructions for meditation practice that have not been recorded in a text. See also CHUANDENG LU; CHUANFA; FASI; PARAṂPARĀ.

transmission of the lamplight. See CHUANDENG LU; JINGDE CHUANDENG LU.

Trần Thái Tông. (陳太宗) (1218–1277). Buddhist leader and literary figure of medieval Vietnam, who was also the founder of the Trần dynasty (1225–1400), one of the most illustrious dynasties in Vietnamese history. He ascended the throne as a child of eight after his uncle, Trần Thủ Độ, overthrew the Lý dynasty (1010–1225). During his youth he attempted to escape from the capital city to Mount Yên Tử to become a monk but was forced to return to court by his uncle. Trần Thái Tông related this incident and many events of his life in one of his writings, the preface to "A Guide to the Chan School." He reported that, even when he was a king, whenever he had free time he would gather together learned and virtuous monks to practice Chan and discuss the path of Buddhism. He also related that he often read the VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA ("Diamond Sūtra") and that when he came across the phrase "one should not generate a mind based on any object," he gained realization. This and other incidents suggest that he interpreted his religious experience in accordance with that of HUINENG, the sixth patriarch (LIUZU) of Chinese Chan. In 1258, Trần Thái Tông abdicated and became thượng hoàng (retired emperor). From then until his death, he devoted himself to practicing Chan and studying Buddhist scriptures. It was during this period that he composed most of his works, including the KHÓA HƯ LỤC.

Trapuṣa. (P. Tapussa/Tapussu; T. Ga gon; C. Tiwei; J. Daii; K. Chewi 提謂). Sanskrit proper name of one of the two merchants (together with his brother BHALLIKA) who became the first lay Buddhists (UPĀSAKA). Following his enlightenment under the BODHI TREE, the Buddha remained in the vicinity for seven weeks, each week spent at a different site (see BODHGAYĀ). At the end of the seventh week (or in some versions the sixth), he sat under a Rājāyatana tree, where he continued his meditation. Two merchants, Trapuṣa and his younger brother Bhallika, who were leading a large trading caravan with some five hundred carts, saw him there. Realizing that he had not eaten for weeks (as many as seven weeks), upon the encouragement of a deity, the brothers offered the Buddha sweet rice cakes with butter and honey. The Buddha, however, did not have a bowl in which to receive the food and said it was inappropriate for him to receive the food directly into his hands. The divine kings of the four directions (LOKAPĀLA) then offered him bowls. (According to one account, he received four bowls and collapsed them into one, which is the origin of the "four-bowl" meals served in some East Asian monastic refectories.) In response to their act of charity (DĀNA), the Buddha spoke with them informally and they took refuge (ŚARAṆA) in the Buddha and the DHARMA (there being no third refuge, the SAṂGHA, at this early point in the dispensation), thus making them the first lay Buddhists. The Buddha is said to have given the two brothers eight strands of hair from his head, which they took back to their homeland and interred for worship as relics (ŚARĪRA) in a STŪPA. According to this account, it is interesting to note that the first thing the Buddha provided to another person after his enlightenment was not a teaching but a relic. In the account of the period of the Buddha's enlightenment in the NIDĀNAKATHĀ, this incident occurs immediately before the god BRAHMĀ descends from heaven and asks the Buddha to teach the dharma. According to Mon–Burmese legend, Trapuṣa and Bhallika were Mon natives, and their homeland of Ukkala was a place also called Dagon in the Mon homeland of Rāmañña in lower Burma. The stūpa they constructed at Ukkala/Dagon, which was the first shrine in the world to be erected over relics of the present Buddha, was to be enlarged and embellished over the centuries to become, eventually, the golden SHWEDAGON PAGODA of Rangoon. Because of the preeminence of this shrine, some Burmese chroniclers date the first introduction of Buddhism among the Mon in Rāmañña to Tapussa and Bhallika. Trapuṣa achieved the stage of "stream-enterer" (SROTAĀPANNA); Bhallika eventually ordained and became an ARHAT. The merchants were also the subject of a prototypical Chinese apocryphal text, the TIWEI [BOLI] JING, written c. 460–464, which praises the value of the lay practices of giving (dāna) and keeping the five precepts (PAÑCAŚĪLA).

trāyastriṃśa. (P. tāvatiṃsa; T. sum cu rtsa gsum pa; C. sanshisan tian/daoli tian; J. sanjūsanten/tōriten; K. samsipsam ch'ŏn/tori ch'ŏn 三十三天/忉利天). In Sanskrit, lit. "thirty-three"; the heaven of the thirty-three, the second lowest of the six heavens of the sensuous realm (KĀMADHĀTU), just above the heaven of the four heavenly kings (CĀTURMAHĀRĀJAKĀYIKA) and below the YĀMA heaven. Like all Buddhist heavens, it is a place of rebirth and not a permanent post-mortem abode. The heaven is situated on the flat summit of Mount SUMERU and is inhabited by thirty-three male divinities and their attendants, presided over by the divinity ŚAKRA, the king of the gods (ŚAKRO DEVĀNĀM INDRAḤ). The divinities live in palaces of gold among beautiful parks and have life spans of thirty million years. The heaven is commonly mentioned in Buddhist texts. In the seventh year after his enlightenment, after performing the ŚRĀVASTĪ MIRACLES, the Buddha magically traveled to the heaven of the thirty-three, where he spent the three months of the rains retreat (VARṢĀ) teaching the ABHIDHARMA to his mother MĀYĀ. (She had descended to meet him there from her abode in the TUṢITA

heaven, where she had been reborn as a male deity after her death as Queen Māyā.) At the conclusion of his teaching, the Buddha made his celebrated return to earth from the heaven on a bejeweled ladder provided by Śakra, descending at the city of SĀṂKĀŚYA. MAHĀMAUDGALYĀYANA also made numerous visits to the heaven to learn from its inhabitants about the virtuous deeds they performed in the past that resulted in their rebirth there. It was said that when a human performed a particularly virtuous deed, a mansion for that person would appear in trāyastriṃśa for that person to inhabit upon being reborn there. When Prince SIDDHĀRTHA renounced the world, he cut off his hair with his sword and cast it into the sky; the hair was caught by Śakra in trāyastriṃśa, who enshrined it in a CAITYA that is worshipped by the gods. Scholars have noted the correspondence between the number of divinities in this heaven and the traditional number of thirty-three gods of the *Ṛgveda*, suggesting that this heaven represents an attempt by Buddhists to absorb the pre-Buddhistic Indian pantheon.

trepiṭaka. (P. tipeṭaka/tepiṭaka; T. sde snod gsum pa; C. sanzang fashi; J. sanzō hosshi; K. samjang pŏpsa 三藏法師). In Sanskrit, "a master of the canon"; an honorific title attached to the name of a renowned Buddhist teacher who is well versed in the three divisions of the Buddhist canon (TRIPIṬAKA), viz., the collection of monastic rules and regulations (VINAYAPIṬAKA; C. lü), the discourses collection (SŪTRAPIṬAKA; C. jing), and the treatise collection (ABHIDHARMAPIṬAKA, or *ŚĀSTRAPIṬAKA; C. lun). The Pāli form of this term appears first in the MILINDAPAÑHA, which is presumed to have been compiled around the beginning of the Common Era. In the East Asian Buddhist traditions, this term has been used as an honorific title for monks who mastered the Buddhist canon and were involved in translating Indic Buddhist literature into Chinese. Thus, such monks are also called "trepiṭaka who translate the scriptures" (YIJING SANZANG), or simply sanzang. There are many great translator-monks who carried this title of sanzang or sanzang fashi, including KUMĀRAJĪVA (344–413), PARAMĀRTHA (499–569), XUANZANG (600/602–664), and AMOGHAVAJRA (705–774). Later, this term was often commonly used to refer specifically to Xuanzang, as in the "Biography of the Master of the Buddhist Canon at the Beneficence of Great Compassion Monastery" (DACI'ENSI *sanzang fashi zhuan*), which is a biography of Xuanzang written by Huili (615–?). The Sanskrit of trepiṭaka is sometimes (mistakenly) reconstructed from the Chinese as *tripiṭakācārya.

trichiliocosm. See TRISĀHASRAMAHĀSĀHASRALOKADHĀTU; YINIAN SANQIAN.

tricīvara. (P. ticīvara; T. chos gos gsum; C. sanyi; J. san'e/sanne; K. samŭi 三衣). In Sanskrit, the "three robes" or "triple robe" worn by a monk or nun: the larger outer robe (S. SAṂGHĀṬĪ; P. saṅghāṭī), the upper robe (S. UTTARĀSAṂGA; P. uttarāsaṅga), and a lower robe or waist cloth (S. ANTARVĀSAS; P. antaravāsaka). According to the VINAYA account, the Buddha was concerned that too many monks had begun to hoard robes, which might cause them to "revert to luxury"; and after sitting through the cold one evening, he decided that the triple robe was sufficient to stay warm. The antarvāsas is the smallest of the three robes: normally made of one layer of cloth, it is worn around the waist and is intended to cover the body from the navel to the middle of the calf. The uttarāsaṃga is large enough to cover the body from the neck to the middle of the calf; it is also normally made of one layer of cloth. The saṃghāṭī or outer robe is the same size as the uttarāsaṃga but is normally made of two layers of cloth rather than one; it is worn over one or both shoulders, depending on whether one is inside or outside the monastery grounds. The saṃghāṭī was required to be tailored of patches, ranging in number from nine up to twenty-five, depending on the VINAYA recension; this use of patches of cloth is said to have been modeled after plots of farmland in MAGADHA that the Buddha once surveyed. All three robes must be dyed a sullied color, interpreted as anything from a reddish- or brownish-yellow saffron color to an ochre tone. For this reason, robes as also known as the KĀṢĀYA, or "dyed" (lit. "turbid-colored") robes, which were traditionally required to be sewn from pieces of soiled cloth and "dyed." Robes were one of the four major requisites (S. NIŚRAYA; P. NISSAYA) allowed to monks and nuns, along with such basics as a begging bowl (PĀTRA) and lodging, and were the object of the KAṬHINA ceremony, in which the monastics were offered cloth for making new sets of robes at the end of each rains retreat (S. VARṢĀ; P. vassa).

tridhātu. (S). See TRAIDHĀTUKA; AVACARA.

tridvāra. (P. dvārattaya; T. sgo gsum; C. sanmen; J. sanmon, K. sammun 三門). In Sanskrit, lit. "three doors" or "three gates"; referring to the body (KĀYA), speech (VĀK; see VĀKKARMAN), and mind (CITTA) as means for the performance of physical, verbal, and mental deeds (KARMAN). It is also understood that these are the three doors through which one may enter into the physical, verbal, and mental practice of the dharma. Since it is through these three doors that beings accumulate the fruits (VIPĀKA) of either negative or positive karman, the adept is taught to guard sense faculties (INDRIYASAṂVARA) throughout the activities of everyday life, in order to control the inveterate tendency toward craving. In tantric Buddhism, these three doors are known as the three mysteries (T. gsang ba gsum; J. SANMITSU), which are transformed into the three bodies of a buddha (TRIKĀYA) through tantric practice. The body is transformed into the emanation body (NIRMĀṆAKĀYA), speech into the enjoyment body (SAṂBHOGAKĀYA), and mind into the truth body (DHARMAKĀYA). Body, speech, and mind are said to be purified by the mantra oṃ āḥ hūṃ.

trikāla. (P. tikāla; T. dus gsum; C. sanshi; J. sanze; K. samse 三世). In Sanskrit, the "three times," used to refer collectively to the three time periods of past, present, and future; often

mistakenly translated from the Chinese as "three worlds" (the Chinese term shi in this compound means an "age" or "generation"). The term often occurs in such phrases as trikāla-buddha, "the buddhas of the past, present, and future." Trikāla is also used to refer to the three periods of one day—dawn, daylight, and dusk. There are a range of views on the ontological status of the three temporal dimensions of the past, present, and future. One of the more common arguments is that, while the past no longer exists and the future does not yet exist, the present exists as an endless series of instances or moments in which a host of mental and physical constituents arise and cease instantaneously (see KṢAṆIKAVĀDA). On the other hand, the SARVĀSTIVĀDA school argued that dharmas exist, and can thus exert specific types of causal efficacy, in all three time periods, requiring a special set of "dissociated forces" (CITTAVIPRAYUKTASAṂSKĀRA) to account for the process of change (see CATURLAKṢAṆA; SAṂSKṚTALAKṢAṆA), essentially moving a dharma from past mode, to present and future modes.

trikāya. (T. sku gsum; C. sanshen; J. sanshin; K. samsin 三身). In Sanskrit, lit. "three bodies"; one of the central doctrines of MAHĀYĀNA buddhology. The three bodies refer specifically to three distinct bodies or aspects of a buddha: DHARMAKĀYA, the "dharma body" or "truth body"; SAṂBHOGAKĀYA, the "enjoyment body" or "reward body"; and NIRMĀṆAKĀYA, "emanation body" or "transformation body." The issue of what actually constituted the Buddha's body arose among the MAINSTREAM BUDDHIST SCHOOLS over such questions as the body he used on miraculous journeys, such as the one that he took to TRĀYASTRIṂŚA heaven to teach his mother MĀYĀ; the conclusion was that he had used a "mind-made body" (MANOMAYAKĀYA), also called a nirmāṇakāya, to make the trip. The notion of different buddha bodies was also deployed to respond to the question of the nature of the Buddha jewel (buddharatna), one of the three jewels (RATNATRAYA) or three refuges (TRIŚARAṆA) of Buddhism. Since the physical body of the Buddha was subject to decay and death, was it a suitable object of refuge? In response to this question, it was concluded that the Buddha jewel was in fact a body or group (kāya) of qualities (dharma), such as the eighteen unique qualities of a buddha (ĀVEṆIKA [BUDDHA]DHARMA). This "body of qualities," the original meaning of dharmakāya, was sometimes contrasted with the physical body of the Buddha, called the RŪPAKĀYA ("material body") or the vipākakāya, the "fruition body," which was the result of past action (KARMAN). With the development of Mahāyāna thought, the notion of dharmakāya evolved into a kind of transcendent principle in which all buddhas partook, and it is in this sense that the term is translated as "truth body." In the later Mahāyāna scholastic tradition, the dharmakāya was said to have two aspects. The first is the SVABHĀVIKAKĀYA, or "nature body," which is the ultimate nature of a buddha's mind that is free from all adventitious defilements (āgantukamala). The second is the jñānakāya, or "wisdom body," a buddha's omniscient consciousness. The dharmakāya was the source of the two other bodies, both varieties of the rūpakāya: the saṃbhogakāya and the nirmāṇakāya. The former, traditionally glossed as "the body for the enjoyment of others," is a resplendent form of the Buddha adorned with the thirty-two major and eighty minor marks (MAHĀPURUṢALAKṢAṆA), which appears only in buddha fields (BUDDHAKṢETRA) to teach the Mahāyāna to advanced bodhisattvas. Some śāstras, such as the BUDDHABHŪMIŚĀSTRA (*Fodijing lun*) and CHENG WEISHI LUN, distinguish between a "body intended for others' enjoyment" (PARASAṂBHOGAKĀYA) and a "body intended for personal enjoyment" (SVASAṂBHOGAKĀYA). In the trikāya system, the nirmāṇakāya is no longer a special body conjured up for magical travel, but the body of the Buddha that manifests itself variously in the world of sentient beings in order to teach the dharma to them. It also has different varieties: the form that manifests in the mundane world as the Buddha adorned with the major and minor marks is called the UTTAMANIRMĀṆAKĀYA, or "supreme emanation body"; the nonhuman or inanimate forms a buddha assumes in order to help others overcome their afflictions are called the JANMANIRMĀṆAKĀYA, or "created emanation body."

trilakṣaṇa. (P. tilakkhaṇa; T. mtshan nyid gsum/phyag rgya gsum; C. sanxiang; J. sansō; K. samsang 三相). In Sanskrit, the "three marks"; three characteristics of all conditioned phenomena in SAṂSĀRA: impermanence (ANITYA), suffering (DUḤKHA), and nonself (ANĀTMAN). According to the VISUDDHIMAGGA, realization of the truth and reality of the three marks constitutes enlightenment (BODHI), which eradicates belief in the existence of a perduring self (P. atta; S. ĀTMAN), otherwise called "personality belief" (P. sakkāyadiṭṭhi; S. SATKĀYADṚṢṬI), and delivers one to the noble path (P. ariyamagga; S. ĀRYAMĀRGA). Through this attainment, one becomes a stream-enterer (P. sotāpanna; S. SROTAĀPANNA) and is assured of becoming an ARHAT and entering NIRVĀṆA in at most seven lifetimes.

triloka[dhātu]. (P. tiloka; T. 'jig rten gsum; C. sanjie; J. sangai; K. samgye 三界). In Sanskrit, "three realms of existence"; a common Buddhist term for "everywhere" or "the whole world," glossed in one of two ways: (1) the three realms (TRAIDHĀTUKA), viz., the sensuous realm (KĀMADHĀTU), the realm of subtle materiality (RŪPADHĀTU), and the formless or immaterial realm (ĀRŪPYADHĀTU); (2) the three regions, viz., the region above the earth, the region on the surface of the earth, and the region below ground. See also TRISĀHASRAMAHĀSĀHASRALOKADHĀTU.

Triṃśikā. (T. Sum cu pa; C. Weishi sanshi lun song; J. Yuishiki sanjūronju; K. Yusik samsip non song 唯識三十論頌). In Sanskrit, lit., the "Thirty"; a work in thirty verses by the fourth or fifth century CE YOGĀCĀRA master VASUBANDHU; also known as the *Triṃśatikā* and the *Triṃśikāvijñaptimātratā*. Together with his VIṂŚATIKĀ (the "Twenty"), it is considered a classic synopsis of Yogācāra doctrine. In this work, which is extant in Sanskrit as well as in Chinese and Tibetan translations, Vasubandhu introduces the major categories of

Yogācāra thought, including the foundational consciousness or ĀLAYAVIJÑĀNA, and the mental concomitants (CAITTA) that accompany consciousness; the afflicted mental consciousness or KLIṢṬAMANAS (simply called MANAS in the text), which falsely perceives the ālayavijñāna as self; the three natures (TRISVABHĀVA); the three absences of intrinsic nature (NIḤSVABHĀVA); "consciousness-only" or "representation-only" (VIJÑAPTIMĀTRATĀ); and "revolution of the basis," or ĀŚRAYAPARĀVṚTTI. Among the commentaries on the text, the most influential is that by STHIRAMATI.

trīndriya. (T. dbang po gsum; C. sangen; J. sankon; K. samgŭn 三根). In Sanskrit, "three capacities," or "three faculties"; a division of disciples of the Buddha or of a particular teaching, based on relative levels of aptitude, understanding, or profundity. The three are as follows: those of dull faculties (MṚDVINDRIYA), those of intermediate faculties (MADHYENDRIYA), and those of sharp faculties (TĪKṢṆENDRIYA). The term is often used polemically to describe one's preferred teaching as intended only for those of sharp faculties, while dismissing other competing teachings as intended for those of dull or intermediate faculties. See also INDRIYA.

triniḥsvabhāva. (S.; T. ngo bo nyid med pa gsum). In Sanskrit, "three types of absence of intrinsic existence." See NIḤSVABHĀVA.

tripiṭaka. (P. tipiṭaka; T. sde snod gsum; C. sanzang; J. sanzō; K. samjang 三藏). In Sanskrit, "three baskets"; one of the most common and best known of the organizing schema of the Indian Buddhist canon. These three baskets were the SŪTRAPIṬAKA (basket of discourses), VINAYAPIṬAKA (basket of disciplinary texts) and ABHIDHARMAPIṬAKA [alt. *ŚĀSTRAPIṬAKA] (basket of "higher dharma" or "treatises"). The use of the term piṭaka for these categories is thought to come from the custom of storing the palm-leaf or wooden slips of written texts in baskets (S. piṭaka). (The Chinese translates piṭaka as a "repository," thus tripiṭaka is the "three repositories.") The various MAINSTREAM BUDDHIST SCHOOLS in India had their own distinctive version of each of the piṭakas; the Pāli version transmitted to Sri Lanka is the most complete to survive in an Indic language, although sections of those of other schools, such as the DHARMAGUPTAKA, SARVĀSTIVĀDA, and MŪLASARVĀSTIVĀDA, are preserved in Chinese, Tibetan, and in Sanskrit or Middle Indic fragments. Some schools used different organizing schema. The Dharmaguptaka school, for example, is said to have had five piṭakas; the usual three, plus a bodhisattvapiṭaka (on various doctrines and practices related to the BODHISATTVA) and a dhāraṇīpiṭaka (of DHĀRAṆĪ codes and spells). The MAHĀYĀNA sūtras were not organized under this rubric, although it is sometimes said that they can be when the three baskets are interpreted more figuratively, with the vinayapiṭaka including those teachings connected to the training in morality (ŚĪLA), the sūtrapiṭaka including those teachings connected to the training in meditation (SAMĀDHI), and the abhidharmapiṭaka including those teachings connected to the training in wisdom (PRAJÑĀ). The East Asian traditions arranged their own indigenous canons as a DAZANGJING (scriptures of the great repository), rather than a tripiṭaka; the two terms are not synonymous. See also BKA' 'GYUR; DAZANGJING; KORYŎ TAEJANGGYŎNG; TAISHŌ SHINSHŪ DAIZŌKYŌ.

***tripiṭakācārya**. (S). See TREPIṬAKA.

triratna. In Sanskrit, the "three jewels" of the BUDDHA, DHARMA, and SAṂGHA. See RATNATRAYA.

trisāhasramahāsāhasralokadhātu. (T. stong gsum gyi stong chen po'i 'jig rten gyi khams; C. sanqian daqian shijie; J. sanzendaisensekai; K. samch'ŏn taech'ŏn segye 三千大千世界). In Sanskrit, lit. "three-thousandfold great-thousandfold world system," but typically translated as "TRICHILIOCOSM"; the largest possible universe, composed of (according to some interpretations of the figure) one billion world systems, each of which have a similar geography, including a central axis at Mount SUMERU, four surrounding continents, etc. These worlds follow similar cosmic cycles of creation, abiding, disintegration, and annihilation. See YINIAN SANQIAN.

Triśākuni. (S). One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA.

trisaṃvara. (T. sdom gsum). In Sanskrit, "three vows" or "three restraints"; a collective term for three different sets of precepts. The *Trisaṃvaranirdeśaparivarta* of the RATNAKŪṬASŪTRA collection sets forth the three types of vows as the three types of bodhisattva morality found in the śīlaparivarta ("morality chapter") of the BODHISATTVABHŪMI. Usually, however, trisaṃvara refers to the three sets of precepts a practitioner of the VAJRAYĀNA may take: the prātimokṣasaṃvara or monastic precepts (see PRĀTIMOKṢA), the BODHISATTVASAṂVARA or bodhisattva precepts, and the guhyamantrasaṃvara ("secret mantra precepts") or tantric vows (SAṂVARA) or pledges (SAMAYA). The relations between and among these three types of precepts are the subject of an extensive, and often polemical, literature in Tibet, the most famous treatment being the SDOM GSUM RAB DBYE, or "Differentiation of the Three Vows," by SA SKYA PAṆḌITA. See also SAṂVARA; SDOM GSUM; PUSA JIE.

triśaraṇa. (P. tisaraṇa; T. skyabs gsum; C. sanguiyi; J. sankie; K. samgwiŭi 三歸依). In Sanskrit, the "three refuges" or the "triple refuge"; the three "safe havens" in which Buddhists seek refuge from the sufferings of SAṂSĀRA: the BUDDHA, the DHARMA, and the SAṂGHA. The recitation of the three refuges is one of the foundational Buddhist ritual practices: "I go for refuge to the Buddha (buddhaṃ śaraṇaṃ gacchāmi). I go for refuge to the dharma (dharmaṃ śaraṇaṃ gacchāmi). I go for refuge to the saṃgha (saṃghaṃ śaraṇaṃ gacchāmi)." Reciting these

refuges three times is attestation that one is a Buddhist adherent; thus, the formula figures in a wide range of ceremonies across the Buddhist world. These three refuges are identical to the "three jewels" (RATNATRAYA).

triśikṣā. (P. tisikkhā; T. bslab pa gsum; C. sanxue; J. sangaku; K. samhak 三學). In Sanskrit, the "three trainings"; three overarching categories of Buddhist practice. First is the training in higher morality (ADHIŚĪLAŚIKṢĀ), which encompasses all forms of restraint of body and speech, including lay and monastic precepts that serve as the foundation for the cultivation of the succeeding stages of concentration and wisdom. Second is the training in higher concentration (ADHISAMĀDHIŚIKṢĀ, also called adhicitta), which encompasses all forms of meditative practice directed toward the achievement of states of concentration. Third is the training in higher wisdom (ADHIPRAJÑĀŚIKṢĀ), which includes all forms study and reflection that are directed toward developing insight into the true nature of reality. These three trainings are said to subsume all of the constituents of the noble eightfold path (ĀRYĀṢṬĀṄGAMĀRGA): adhiprajñāśikṣā comprises the first two constituents, viz., right views (SAMYAGDṚṢṬI) and right intention (SAMYAKSAṂKALPA); adhiśīlaśikṣā, the middle three constituents, viz., right speech (SAMYAGVĀC), right action (SAMYAKKARMĀNTA), and right livelihood (SAMYAGĀJĪVA); and adhisamādhiśikṣā, the last three constituents, viz., right effort (SAMYAGVYĀYĀMA), right mindfulness (SAMYAKSMṚTI), and right concentration (SAMYAKSAMĀDHI).

triskandhaka. (T. phung po gsum pa; C. sanju; J. sanju; K. samch'wi 三 聚). In Sanskrit, lit. "three sections"; a three-part Mahāyāna liturgy that may have served as the foundation for more elaborate tantric liturgies (PŪJĀ), such as the sevenfold ritual (SAPTĀṄGAVIDHI). There are two versions of the three: (1) confession of transgressions (PĀPADEŚANĀ), (2) rejoicing in other's virtues (ANUMODANA), and (3) dedication of merit (PARIṆĀMANĀ). A second version is: (1) confession of transgressions, (2) appreciation of other's virtues, and (3) requesting the buddhas to turn the wheel of the dharma (dharmacakrapravartanacodana). See also PŪJĀ.

trisvabhāva. (T. mtshan nyid gsum/rang bzhin gsum; C. sanxing; J. sanshō; K. samsŏng 三性). In Sanskrit, "the three natures"; one of the central doctrines of the YOGĀCĀRA school. The three are PARIKALPITA, the "fabricated" or "imaginary" nature of things; PARATANTRA, literally "other-powered," their "dependent" nature; and PARINIṢPANNA, their "consummate" or "perfected" nature. The terms appear in several MAHĀYĀNA sūtras, most notably the sixth chapter of the SAṂDHINIRMOCANASŪTRA, and are explicated by both ASAṄGA and VASUBANDHU. Although the terms are discussed at length in Yogācāra literature, they can be described briefly as follows. The three natures are sometimes presented as three qualities that all phenomena possess. The parikalpita or imaginary nature is a false nature, commonly identified as the contrived appearance of an object as being a different entity from the perceiving consciousness. Since, in the Yogācāra analysis, objects do not exist independently from the perceiving subject, they come into existence in dependence upon consciousnesses, which in turn are produced from seeds that (according to some forms of Yogācāra) reside in the foundational consciousness, or ĀLAYAVIJÑĀNA. This quality of dependency on other causes and conditions for their existence, which is a characteristic of all objects and subjects, is the paratantra, or dependent nature. The nonduality between the consciousnesses and their objects is their consummate nature, the pariniṣpanna. Thus, it is said that the absence of the parikalpita in the paratantra is the pariniṣpanna.

Trisvabhāvanirdeśa. (T. Rang bzhin gsum nges par bstan pa). In Sanskrit, "Exposition of the Three Natures"; a work by the YOGĀCĀRA philosopher VASUBANDHU (fourth or fifth century CE). Possibly a late work of the author, it is less famous than several of his other works, in part because it lacks either an autocommentary or commentaries by subsequent figures in Indian Yogācāra. The work, extant in the original Sanskrit, consists of thirty-eight verses, dealing (as the title suggests) with the central Yogācāra doctrine of the three natures (TRISVABHĀVA): the PARIKALPITA or imaginary nature, the PARATANTRA or dependent nature, and the PARINIṢPANNA or consummate nature. According to this doctrine, briefly stated, objects do not exist apart from the perceiving consciousness. External objects are thus illusory and constitute the imaginary nature, the appearance of objects that arises in dependence on consciousness is the dependent nature, and the absence of duality between subject and object is the consummate nature. Among the most famous passages in the text is the metaphor of the magician's illusion, in which a magician recites a MANTRA over a piece of wood that causes the members of the audience to see an elephant in place of the wood. In explaining the metaphor, Vasubandhu says that the elephant seen by the audience is the imaginary nature, the appearance of the elephant through the conjuring trick is the dependent nature, and the actual nonexistence of the elephant is the consummate nature. He also likens the mantra to the foundational consciousness (MŪLAVIJÑĀNA, viz., ĀLAYAVIJÑĀNA) from which all appearances arise, and the wood to reality, or suchness (TATHATĀ).

trividyā. [alt. traividyā] (P. tevijjā; T. rig gsum; C. sanming; J. sanmyō; K. sammyŏng 三明). In Sanskrit, lit. "three knowledges"; three specific types of knowledge (VIDYĀ) that are the products of the enlightenment experience of an ARHAT or buddha, and a sequential set of insights achieved by the Buddha during the three watches of the night of his own enlightenment. They are: (1) the ability to remember one's own former lives (PŪRVANIVĀSĀNUSMṚTI; P. pubbenivāsānunssati) in all their detail, due to direct insight into the inexorable connection between action (KARMAN) and its fruition (VIPĀKA), viz., karmic cause and effect; (2) insight into the future rebirth destinies of

all other beings (S. CYUTYUPAPATTIJÑĀNA [alt. cyutyupapādānusmṛti]; P. cutūpapātañāna), a by-product of the "divine eye" (DIVYACAKṢUS); (3) knowledge of the extinction of the contaminants (ĀSRAVAKṢAYA; P. āsavakhaya), which ensures complete liberation from the cycle of rebirth (SAṂSĀRA). The first and third types are also included in the superknowledges (ABHIJÑĀ; P. abhiññā). At various points in the literature of the MAINSTREAM BUDDHIST SCHOOLS (e.g., the Pāli ITIVUTTAKA), the Buddha describes the above list as the three knowledges of a true brāhmaṇa; in such accounts, the Buddha is intentionally contrasting his three knowledges (vidyā) with that of brāhmaṇa priests who have merely memorized the traditional three Vedas of Brahmanical religion. See also TEVIJJASUTTA.

trivikalpa. (T. rnam par rtog pa gsum; C. san fenbie; J. sanfunbetsu; K. sam punbyŏl 三分別). In Sanskrit, "three types of discrimination"; three aspects of the discriminative activities of mind, generally portrayed in the negative sense of fantasy and imagination. Three types are typically described in the literature. (1) Intrinsic discrimination (SVABHĀVAVIKALPA) refers to the initial advertence of thought (VITARKA) and the subsequent sustained thought or reasoning (VICĀRA) regarding a perceived object of the six sensory consciousnesses (VIJÑĀNA), i.e., the discrimination of present objects, as when visual consciousness perceives a visual object, etc. (2) Conceptualizing discrimination (ABHINIRŪPAṆĀVIKALPA) refers to discursive thought on ideas that arise in the sixth mental consciousness when it adverts toward a mental object that is associated with any of the three time periods (TRIKĀLA) of the past, present, or future. (3) Discrimination involving reflection on past events (ANUSMARAṆAVIKALPA) refers to discriminative thought involving the memory of past objects. It is said that there is no svabhāvavikalpa from the second stage of meditative absorption (DHYĀNA) onward, since vitarka and vicāra, the first two of the five constituents of dhyāna (DHYĀNĀṄGA), are then no longer present. There is no abhinirūpaṇāvikalpa from the first stage of dhyāna onward, since the mind is then temporarily isolated from any awareness of the passage of time. Only anusmaraṇavikalpa is involved in all three realms of existence (TRILOKADHĀTU), including both the subtle-materiality realm (RŪPADHĀTU) and the immaterial realm (ĀRŪPYADHĀTU).

triviṣa. (P. tivisa; T. dug gsum; C. sandu; J. sandoku; K. samdok 三毒). In Sanskrit, "three poisons"; the three primary afflictions (MŪLAKLEŚA) of sensuality, desire, or greed (RĀGA or LOBHA), hatred or aversion (DVEṢA), and delusion or ignorance (MOHA), regarded as poisons because of the harm they cause to those who ingest them or the way they poison the mind. This same list of three is also known as the three "unwholesome faculties" (AKUŚALAMŪLA), which will fructify as unhappiness in the future and provide the foundation for unfavorable rebirths (APĀYA). In the "wheel of existence" (BHAVACAKRA) that the Buddha is said to have instructed to be painted at the entrances of monasteries, showing the six realms of rebirth (ṢAḌGATI) as well as the twelve links of dependent origination (PRATĪTYASAMUTPĀDA), the three poisons are often depicted at the center of painting, suggesting their role as root causes of cycle of rebirth, with greed represented by a rooster, hatred by a snake, and delusion by a pig in a circle, each biting the tail of the other.

triyāna. (T. theg pa gsum; C. sansheng; J. sanjō; K. samsŭng 三乘). In Sanskrit, "three vehicles," three different means taught in Buddhist soteriological literature of conveying sentient beings to liberation. There are two common lists of the three: (1) the vehicles of the ŚRĀVAKA, PRATYEKABUDDHA (both of which lead to the state of an ARHAT), and BODHISATTVA (which leads to buddhahood); (2) the HĪNAYĀNA, MAHĀYĀNA, and VAJRAYĀNA, although the vajrayāna is considered by its adherents to be a form of the Mahāyāna; the vajrayāna would speak instead of the HĪNAYĀNA, PĀRAMITĀYĀNA, and VAJRAYĀNA. According to some Mahāyāna sūtras, most famously the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), the three vehicles (in the first sense above) are an expedient device (UPĀYA) developed by the Buddha to entice beings of differing spiritual capacities toward enlightenment; in fact, however, there is really only one vehicle (EKAYĀNA) by which all beings proceed to buddhahood. Thus, in the Mahāyāna philosophical schools, the question arises of whether or not there are "three final vehicles," that is, whether the state of the arhat is a permanent dead end or whether arhats would also eventually continue on to buddhahood. For example, the position that there are three separate and final vehicles is associated with the YOGĀCĀRA school of ASAṄGA and the Chinese FAXIANG ZONG. The position that there are not three, but instead a single decisive vehicle, is associated with the MADHYAMAKA school of NĀGĀRJUNA and CANDRAKĪRTI and the Chinese TIANTAI ZONG.

tṛṣṇā. (P. taṇhā; T. sred pa; C. ai; J. ai; K. ae 愛). In Sanskrit, lit. "thirst," or "craving," viz., the desire not to be separated from feelings of pleasure, the desire to be separated from feelings of pain, and the desire that feelings of neutrality not diminish. Typically, three types of craving are listed in the literature, such as the DHARMACAKRAPRAVARTANASŪTRA: craving for sensuality (KĀMA), craving for continued existence (BHAVA), and craving for nonexistence (vibhava). Craving is thus the cause or "origination" (SAMUDAYA) of suffering (DUḤKHA), viz., the second of the FOUR NOBLE TRUTHS. Craving is also the eighth link in the twelvefold chain of dependent origination (PRATĪTYASAMUTPĀDA), where it is a product of the preceding link of sensation (VEDANĀ) and leads to even stronger clinging or attachment (UPĀDĀNA). Tṛṣṇā thus manifests itself as the thirst for sensory experience of visual, auditory, olfactory, gustatory, tactile, and mental objects.

Trúc Lâm. (竹林). In Vietnamese, "Bamboo Grove"; the first indigenous Vietnamese school of THIỀN (C. CHAN), founded by TRẦN NHÂN TÔNG (1258–1308), the third king of the Trần dynasty (1225–1400). During the Trần period, Chan learning

became established with the arrival of Chinese monks and Chan literature. Due to its literary bent (see WENZI CHAN), Chan was embraced by the Trần aristocratic circle, many of whom received instructions from Chan masters. Some Trần kings themselves would later in their lives be ordained and devote themselves to the practice of Chan. From the few extant writings of its three patriarchs, it is clear that Trúc Lâm Chan displays a conscious effort to emulate Chinese patriarchal Chan. There were also typical motifs that appear in Chinese Chan literature, including the use of dialogues (see WENDA) as an instructional tool, transmission directly from teacher to disciple, the construction of lineages, the teacher leaving behind instructional verses for his disciples, the teacher bequeathing his robe and begging bowl to his principal student as a mark of succession, the teacher publicly conferring precepts on both monks and laypeople, and so forth. The school died out after the death of its third patriarch Huyền Quang (1254–1334). Although the Trúc Lâm school was short-lived, it marked the first serious effort to establish a Buddhist community in medieval Vietnam, functioning essentially as a form of high-culture Buddhism for aristocrats. There were efforts among some Buddhist monks in the Later Lê (1428–1788) and Nguyễn (1802–1945) dynasties to connect themselves to Trúc Lâm Chan.

Trungpa, Chögyam. (Chos rgyam Drung pa) (1939–1987). One of the most influential Tibetan teachers of the twentieth century in introducing Tibetan Buddhism to the West. Chögyam Trungpa (his name, Chos rgyam Drung pa, is an abbreviation of chos kyi rgya mtsho drung pa) was born in Khams in eastern Tibet and identified while still an infant as the eleventh incarnation of the Drung pa lama, an important lineage of teachers in the BKA' BRGYUD sect, and was enthroned as the abbot of Zur mang monastery. He was ordained as a novice monk at the age of eight and received instruction from some of the leading scholars of the Bka' brgyud and RNYING MA sects. In 1958, he received the degrees of skyor dpon and mkhan po, as well as BHIKṢU ordination. After the Tibetan uprising against Chinese occupying forces in March 1959, he escaped across the Himalayas to India on horseback and on foot, accompanied by a group of monks. In 1963, he traveled to England to study at Oxford University. In 1967, he moved to Scotland, where he founded a Tibetan meditation center called Samye Ling. While there, he suffered permanent injury in a serious automobile accident and decided thereafter to give up his monastic vows and continue as a lay teacher of Buddhism. In 1969, he moved to the United States, where he established a meditation center in Vermont called Tail of the Tiger. Trungpa Rinpoche's extensive training in Tibetan Buddhism, his eclectic interests, and his facility in English combined to make him the first Tibetan lama (apart from the fourteenth DALAI LAMA) to reach a wide Western audience through his many books, including *Born in Tibet* (1966), *Meditation in Action* (1969), and *Cutting Through Spiritual Materialism* (1973). In 1974, he founded the Naropa Institute (now Naropa University) in Boulder, Colorado, a center devoted to the study of Buddhism, psychology, and the arts. He also developed a network of centers around the world called Dharmadhatus, as well as the Shambhala Training Program. He invited several important Tibetan lamas to the United States in the late 1970s and early 1980s, including DIL MGO MKHYEN BRTSE, BDUD 'JOMS RIN PO CHE, and the sixteenth KARMA PA. In 1986, he moved his headquarters to Halifax, Nova Scotia, and died there the following year.

truths, three. See SANDI.

truths, two. See SATYADVAYA.

Tsa ri. Also spelled Tsā ri; an important pilgrimage region in the sacred geography of Tibet, its central feature is the Pure Crystal Mountain (Dag pa shel ri). The BKA' BRGYUD sect, in particular, considers the site to be one of three quintessential pilgrimage destinations connected with the CAKRASAṂVARATANTRA (together with KAILĀSA and LA PHYI). According to the *Cakrasaṃvaratantra* tradition, two of the twenty-four sacred lands (PĪṬHA), viz., Cārita and Devīkoṭa, are believed to be located in the region. Hunting and even cultivation are banned in some parts of the valley. Situated on the remote border between Tibet and Assam, Tsa ri is also one of the Himalayan region's most difficult and dangerous locations to access. The circumambulation trails skirting the mountain traverse high passes, deep ravines, and dense jungle. They also pass through territory controlled by tribal groups who are often unfriendly to outside visitors. For this reason, the state-sponsored pilgrimage season was traditionally preceded by government negotiations (and payments) in order to guarantee safe passage for pilgrims. The area is said to have been sanctified by visits from PADMASAMBHAVA and VIMALAMITRA, who are thought to have deposited there numerous treasure texts (GTER MA). Tsa ri later became primarily associated with the 'BRUG PA BKA' BRGYUD through the activity of GTSANG PA RGYA RAS YE SHES RDO RJE, who is often said to have "opened" the site as a powerful place for spiritual practice.

Tshad ma rigs gter. (Tsema Rikter). In Tibetan, "Treasure of Valid Knowledge and Reasoning"; an influential Tibetan work on logic and epistemology (PRAMĀṆA) by the renowned scholar SA SKYA PAṆḌITA KUN DGA' RGYAL MTSHAN, composed circa 1219. The *Tshad ma rigs gter* inaugurated a new period of pramāṇa studies in Tibet by focusing particularly on DHARMAKĪRTI's most famous work, the PRAMĀṆAVĀRTTIKA; prior to this time in Tibet, pramāṇa had been approached through summaries (bsdus pa) of the seven works of Dharmakīrti (see TSHAD MA SDE BDUN). Written in verse, the *Tshad ma rigs gter* seeks accurately to represent the positions of the late Indian traditions of logic and epistemology and to identify the errors of earlier Tibetan scholars, notably the summaries associated with GSANG PHU NE'U THOG monastery, especially the works of RNGOG BLO LDAN SHES RAB, PHYWA PA CHOS KYI SENG GE, and their disciples.

The *Tshad ma rigs gter* is said to have been so highly regarded that it was translated from Tibetan into Sanskrit and circulated in northern India.

tshad ma sde bdun. (tsema dedün). In Tibetan, "group of seven on valid knowledge"; the name for a collection of seven Indian treatises on logic and epistemology (PRAMĀṆA) written by the Indian scholar DHARMAKĪRTI. They are the PRAMĀṆAVĀRTTIKA, the PRAMĀṆAVINIŚCAYA, the NYĀYABINDU, the *Hetubindu*, the *Sambandhaparīkṣā*, the *Saṃtānāntarasiddhi*, and the *Vādanyāya*. The collection is also known as *tshad ma'i bstan bcos sde bdun*, or the "seven treatises on valid knowledge."

Tshal pa bka' brgyud. (Tshalpa Kagyü). One of the four major and eight minor subsects of the BKA' BRGYUD sect of Tibetan Buddhism (BKA' BRGYUD CHE BZHI CHUNG BRGYAD), originating with Zhang tshal pa Brtson grus grags pa (Shangtsalpa Tsöndrü Drakpa, 1123–1193), better known as BLA MA ZHANG, a disciple of Dwags po Sgom tshul (Dakpo Gomtsül, 1116–1169). In about 1175, Bla ma Zhang established Tshal Gung thang monastery near LHA SA, which served as a seat of the Tshal pa bka' brgyud.

Tshangs dbyangs rgya mtsho. (Tsangyang Gyatso) (1683–1706). The sixth DALAI LAMA, and among the most famous and beloved of the Dalai Lamas, but not for the same qualities of sanctity and scholarship for which several other members of the lineage are known. He was born into a RNYING MA family near the border with Bhutan. The fifth Dalai Lama had died in 1682 but his death was concealed until 1697 by his minister, SDE SRID SANGS RGYAS RGYA MTSHO, so that the construction of the PO TA LA palace could continue unabated. The sixth Dalai Lama was identified at the age of two, but his identification was kept secret; he and his family lived in seclusion in Mtsho na (Tsona) for twelve years. The death of the fifth Dalai Lama and the identity of the sixth were finally disclosed in 1697. In that year, the sixth Dalai Lama was brought to LHA SA, where he received the vows of a novice from the PAṆ CHEN LAMA. He received instructions in Buddhist doctrine and practice from the Paṇ chen Lama and other scholars for the next four years. In 1701, he was urged to take the percepts of a fully ordained monk (BHIKṢU). However, he refused to do so and also asked to give up his novice vows (which included the vow of celibacy), threatening to commit suicide if he were not permitted to do so. He gave up his vows and lived as a layman, with long hair, although he still remained in the position of Dalai Lama. He had liaisons with women in Lha sa; the houses he visited were said to have been painted yellow in his honor. He is credited with a series of famous love songs, some of which contain Buddhist references. In 1705, the Qoshot Mongol leader Lha bzang Khan declared himself king of Tibet and executed Sde srid Sang rgyas rgya mtsho. In 1706, Lha bzang Khan declared, with the support of the Manchu Kangxi emperor, that Tshangs dbyangs rgya mtsho was not the true Dalai Lama and sent him into exile in Beijing. He died en route, although a legend developed that he escaped death and lived in disguise for another forty years.

Tshangs pa dkar po. (Tsangpa Karpo). A Tibetan wrathful deity who figures frequently in the retinues of major DHARMAPĀLA, such as MAHĀKĀLA and PE HAR RGYAL PO, of whom Tshangs pa dkar po is an emanation. Although the name "Tshangs pa" was given to the Indian god BRAHMĀ, Tshangs pa dkar po was in all probability a native Tibetan deity, who lost his individual identity through associations with Brahmā and Pe har.

Tshar chen Blo gsal rgya mtsho. (T). See TSHAR PA.

Tshar pa. An offshoot of the NGOR subsect of the SA SKYA sect, established by Tshar chen Blo gsal rgya mtsho (Tsarchen Losal Gyatso, 1502–1567), founder of 'Dar Grang mo che (Dar Drangmoche) monastery. It represents a distinctive tradition of the LAM 'BRAS (path and result) teaching, including the distinction between the "assembly exegesis" (tshogs bshad) and "student exegesis" (slob bshad). It is said that the Ngor tradition became influential in the dissemination of the Sa skya tantric teachings, and the Tshar tradition in the esoteric transmission known as the slob bshad. Bco brgyad khri chen rin po che (Chogye Trichen Rinpoche, 1920–2007), a recent influential scholar of the Sa skya tradition, was head of the Tshar pa sect until his death.

tshe lha rnam gsum. (tshe lha nam sum). In Tibetan, the "three deities of long life"; three deities who are propitiated in order to extend one's life, especially in order to practice the dharma. They are the buddha AMITĀYUS and the female bodhisattvas white TĀRĀ (SITATĀRĀ) and UṢṆĪṢAVIJAYĀ.

tshe ring mched lnga. (T). See BKRA SHIS TSHE RING MCHED LNGA.

tshogs zhing. (tsok shing). In Tibetan, "field of assembly" or "field of accumulation"; the assembly of buddhas, bodhisattvas, and other deities visualized in meditation practice (and represented in Tibetan scroll paintings, or THANG KA). The term is generally glossed to mean "the field for the collection of merit" because the assembly of deities are the objects of various virtuous practices through which the meditator accumulates merit. The most common practice performed in the presence of the field of assembly would be the sevenfold offering (SAPTĀṄGAVIDHI): obeisance (vandana), offering (pūjana), confession of transgressions (PĀPADEŚANĀ), rejoicing in others' virtues (ANUMODANA), requesting that the buddhas turn the wheel of the dharma (dharmacakrapravartanacodana), beseeching the buddhas not pass into NIRVĀṆA (aparinirvṛtādhyeṣaṇa), and the dedication (PARIṆĀMANĀ) of merit. In paintings of the field of assembly, the central figure is often depicted with previous

figures in the lineage in a vertical line above, with various disciples on either side and protector deities at the bottom.

Tsi'u dmar po. (Tsi'u Marpo). The DHARMAPĀLA of BSAM YAS monastery; he succeeded PE HAR when the later moved to GNAS CHUNG outside of LHA SA. Tsi'u dmar is the leader of the BSTAN class of Tibetan spirits. His medium traditionally resided in the Tsi'u dmar lcog dbug khang at BSAM YAS, where each year the Lha sa glud 'gong would arrive bearing all the negative fortune of the city. Inside, Tsi'u dmar was said to sit in judgment of the dead, chopping up their spirits with such frequency that each year the chopping block would need to be replaced. According to legend, the deity Dza sa dmar po, the spirit of a nobleman who died of an illness caused by the Bsam yas protector, once defeated Tsi'u dmar, forcing the god to abandon his seat at Bsam yas. Dza sa dmar po later voluntarily left when he discovered he was unable to shoulder the burden of Tsi'u dmar po's helmet, and hence the responsibility of guarding Bsam yas; having established peaceful relations with the dharmapāla, he was installed by the monks at Bsam yas in his own protector temple at the monastery. In memory of the conflict, the mediums of Tsi'u dmar po begin their trance by thrusting their swords in the direction of Dza sa dmar po's temple.

Tsong kha pa Blo bzang grags pa. (Tsong kha pa Losang Drakpa) (1357–1419). A Tibetan scholar and teacher venerated as the founder of the DGE LUGS sect of Tibetan Buddhism; typically known simply as Tsong kha pa. Born in the Tsong kha region of A mdo in northeastern Tibet, he received his initial lay vows under the fourth KARMA PA and began his religious education in the BKA' GDAMS tradition. In 1372, he traveled to central Tibet for further study. He became a disciple of the SA SKYA scholar Red mda' ba Gzhon nu blo gros (Rendawa Shönu Lodrö, 1349–1412) but went on to study under many of the leading scholars of the day, including masters of various schools and sectarian affiliations. Another influential teacher was the lama Dbu ma pa (Umapa), from whom he received instructions on the KĀLACAKRATANTRA. He distinguished himself as a brilliant scholar and exegete of both SŪTRA and TANTRA. According to his traditional biographies, Tsong kha pa experienced visions of Indian masters such as NĀGĀRJUNA and BUDDHAPĀLITA, who helped to clarify difficult points of doctrine. He is also said to have maintained a special relationship with MAÑJUŚRĪ, the bodhisattva of wisdom, who appeared in visions throughout Tsong kha pa's life offering instruction and advice; Tsong kha pa is sometimes called 'Jam mgon, or "protected by Mañjuśrī." Tsong kha pa's biographies speak of four major deeds undertaken during his lifetime. The first, in 1399, was his restoration of an image of the future buddha, MAITREYA. The second was a council to reform the code of VINAYA, convened in 1403 and attended by monks representing all sects of Tibetan Buddhism. The third was the Great Prayer Festival (SMON LAM CHEN MO) inaugurated in 1409 at the JO KHANG in LHA SA, in which he offered the ornaments of a SAṂBHOGAKĀYA to the famous statue of JO BO SHĀKYAMUNI, celebrating the Buddha's performance of the ŚRĀVASTĪ MIRACLES. The festival became an important annual event, drawing thousands of participants from all quarters of the Tibetan Buddhist world. The fourth was the founding in 1409 of DGA' LDAN monastery, which would become one of principal religious institutions in the Lha sa region and seat of the leader of the Dge lugs sect. Tsong kha pa was an original and penetrating philosopher, who saw reason and intellectual development as key aspects of the path to enlightenment. Born during a period when the Tibetan Buddhist canon had been newly formulated, he sought a comprehensive explanation of the Buddhist path, with the PRĀSAṄGIKA-MADHYAMAKA of BUDDHAPĀLITA and CANDRAKĪRTI as the highest philosophical view. His works are marked with a concern with systematic consistency, whether it be between sūtra and tantra or PRAMĀṆA and MADHYAMAKA. A prolific author, Tsong kha pa's works fill eighteen volumes. Among his best known writings are the LAM RIM CHEN MO ("Great Treatise on the Stages of the Path to Enlightenment"), composed in 1402 at RWA SGRENG monastery, the SNGAGS RIM CHEN MO ("Great Treatise on the Stages of Mantra"), and the *Drang nges* LEGS BSHAD SNYING PO ("Essence of Eloquence on the Definitive and Interpretable"). Tsong kha pa called his system of religious practice the Bka' gdams gsar ma, or "New Bka' gdams," after the sect founded by the Bengali master ATIŚA DĪPAṂKARAŚRĪJÑĀNA. His followers were later known as Dga' ldan pa (Gandenpa), "those of Dga' ldan," after the monastic seat established by Tsong kha pa. This was sometimes abbreviated as Dga' lugs pa, "those of the system of Dga' ldan," eventually evolving into the current name Dge lugs pa, "those of the system of virtue." Tsong kha pa's fame was greatly elevated through the political power of the Dge lugs sect after the establishment of the institution of the DALAI LAMA. His tomb at Dga' ldan became an important site of pilgrimage prior to its destruction during the Chinese Cultural Revolution. Tsong kha pa's fame in Tibet was sufficiently great that he is commonly known simply as Rje rin po che, the "precious leader."

Tucci, Giuseppe. (1894–1984). One of the leading European Tibetologists of the twentieth century. Born in Macerata, Italy, Guiseppe Tucci attended the University of Rome, where he later became professor of the religions and philosophies of India and the Far East. Between 1925 and 1930, he taught Italian, Chinese, and Tibetan in India at the University of Calcutta and the University of Santiniketan. During this time, he made numerous expeditions into Nepal and Tibet, gathering historical, religious, and artistic materials. In 1937, the Fascist government of Italy sent him to Japan in order to promote understanding between the two countries. In 1948, he was named president of the Italian Institute for the Middle and Far East. Over the next two decades, he led expeditions in Pakistan, Afghanistan, and Iran and remained an active scholar until shortly before his death. Tucci published

extensively in Italian and English on a wide range of topics using Sanskrit, Chinese, and Tibetan sources. His works include *Indo-Tibetica* (published in seven volumes 1932–1942), *To Lhasa and Beyond* (1946), *Minor Buddhist Texts* (1956), and what many consider his magnum opus, *Tibetan Painted Scrolls* (1949).

Tuệ Trung. (V) (1230–1291). See HUỆ TRUNG.

tulku. (T). See SPRUL SKU.

Turfan. Central Asian petty kingdom located along the northern track of the SILK ROAD through the Takla Makhan desert, in what is now the Chinese province of Xinjiang. This and other oasis kingdoms in Central Asia served as crucial stations in the transmission of Buddhism from India to China. Buddhism had a strong presence in Turfan from the seventh century through the fourteenth century, with important texts being translated, cave temples built, and works of art produced. The oldest physical manuscripts of the Indian Buddhist tradition are manuscripts in the KHAROṢṬHĪ script (see GĀNDHĀRĪ), dated to the fourth to fifth centuries CE, which were discovered at Turfan. These and other discoveries were made by a team of German researchers led by Albert Grünwedel and Albert von Le Coq in a series of expeditions between 1902 and 1914. Turfan was also the locus where TOCHARIAN A (East Tocharian, or Turfanian) was used; manuscripts in Tocharian A date primarily from the eighth century. Western expeditions into the area led to the discovery of tens of thousands of textual fragments, in a variety of languages and scripts, which came to be known collectively as the "Turfan Collection." These texts belong to a variety of genres and schools, but the SARVĀSTIVĀDA is prevalent, leading to the conclusion that the school was prominent in Turfan. As with other locations in this region, the dry desert air helped to preserve the various materials on which these texts were written. In Turfan were found translations of Sanskrit and Chinese Buddhist texts, as well as some original Buddhist poetry and lay literature. Also discovered in Turfan were the Bezaklik rock caves, dating from around the ninth century, which contain the painted images of thousands of buddhas. Albert von le Coq removed many of these and transported them to Berlin, where many were destroyed by Allied bombing during the Second World War. Although this area was a melting pot of Indian, Chinese, and Central Asian traditions, Buddhist activity in the Turfan region saw a sharp rise in the ninth century, when the Uighur people moved from Mongolia into the Turfan region and many Turfan texts are recorded in the Uighur script. Buddhism seems to have survived in this region until as late as the fifteenth century.

tuṣita. (P. tusita; T. dga' ldan; C. doushuai tian; J. tosotsuten; K. tosol ch'ŏn 兜率天). In Sanskrit, "contentment"; in Buddhist cosmology, the fourth highest of six heavens within the sensuous realm (KĀMADHĀTU). This heaven is of particular importance to the Buddhist tradition because it is understood that BODHISATTVAS are born here before taking their final birth in the human world and attaining buddhahood. It was from this heaven that the deity ŚVETAKETU (the future ŚĀKYAMUNI) departed to enter MĀYĀ's womb for his final rebirth, and it is understood that the bodhisattva MAITREYA currently resides in the tuṣita heaven awaiting his own final rebirth when he will in turn achieve buddhahood. Consequently, many Buddhists throughout history have aspired for rebirth in the tuṣita heaven so that they may learn from Maitreya and accompany him when he takes his final birth as a buddha. Beings reborn in tuṣita enjoy unimaginable pleasure and live for hundreds of thousands of years. One day in this heaven is equal to four hundred earth years. In some texts, this heaven is described as having an inner and outer courtyard, the former of which is said to be utterly indestructible.

twelve categories of scripture. See AṄGA; DVĀDAŚĀṄGA [PRAVACANA].

twelve deeds of a buddha. (S. buddhakārya; T. sangs rgyas kyi mdzad pa). A list of twelve acts said to be performed or "displayed" by the "transformation body" (NIRMĀṆAKĀYA) of each buddha. Although the specific deeds in the list of twelve vary, the notion of the twelve deeds seems to have become popular during the Pāla dynasty in India, where it is often depicted. The *Dvādaśakāranāmanayastotra* (*Mdzad pa bcu gnyis kyi tshul la bstod pa*), "Praise of the Twelve Deeds of a Buddha," is extremely popular in Tibet and is often a part of a monastery's daily liturgy. One version of the list of deeds is (1) descent from TUṢITA, (2) entry into the womb (viz., conception), (3) taking birth in the LUMBINĪ Garden, (4) proficiency in the arts, (5) enjoyment of consorts, (6) renouncing the world, (7) practicing asceticism on the banks of the NAIRAÑJANĀ River, (8) seeking enlightenment in BODHGAYĀ, (9) subjugating MĀRA, (10) attaining enlightenment, (11) turning the wheel of the dharma (DHARMACAKRAPRAVARTANA), and (12) passing into PARINIRVĀṆA in KUŚINAGARĪ. Although the notion of twelve deeds seems to have developed in the MAHĀYĀNA, the idea of a specific set of actions common to all the buddhas is also found in the MAINSTREAM BUDDHIST SCHOOLS; for example, the Pāli tradition notes that thirty facts are common to all buddhas. For a similar East Asian list of eight stereotypical episodes in a buddha's life, see BAXIANG.

ubhayatobhāgavimukta. (P. ubhatobhāgavimutta; T. gnyis ka'i cha las rnam par grol ba; C. ju jietuo; J. kugedatsu; K. ku haet'al 俱解脫). In Sanskrit, "liberated both ways." This is the type of liberation achieved by those noble persons (ĀRYA) who are liberated, first, by way of meditative absorption (DHYĀNA; P. JHĀNA), which is called "liberation of mind" (CETOVIMUKTI; P. cetovimutti), and second, "liberation through wisdom" (PRAJÑĀVIMUKTI; P. paññāvimutti), which involves insight by way of any of the four noble paths (ĀRYAMĀRGA), viz., the path of the stream-enterer (SROTAĀPANNA) to the path of the ARHAT. Liberation may be achieved via wisdom alone, but arhats enlightened in this manner, without any attainment of dhyāna, are in some materials pejoratively termed "dry insight workers" (P. SUKKHAVIPASSAKA); strands of contemporary Burmese VIPASSANĀ meditation theory, however, emphasize this focus on wisdom alone as a more subitist approach to enlightenment that does not require lengthy perfection of the dhyānas. Twofold liberation is thought to be a more complete experience, and all buddhas and their chief disciples are liberated in both these two ways. The ubhayatobhāgavimukta is also one of the VIṂŚATIPRABHEDASAṂGHA ("twenty varieties of the ĀRYASAṂGHA") based on the list given in the MAHĀVYUTPATTI.

ucchedadṛṣṭi. (P. ucchedadiṭṭhi; T. chad lta; C. duanjian; J. danken; K. tan'gyŏn 斷見). In Sanskrit, lit. the "[wrong] view of annihilationism"; one of the two "extreme views" (ANTAGRĀHADṚṢṬI) together with ŚĀŚVATADṚṢṬI, the "[wrong] view of eternalism." Ucchedadṛṣṭi is variously defined in the Buddhist philosophical schools but generally refers to the wrong view that causes do not have effects, thus denying the central tenets of KARMAN and rebirth (the denial of the possibility of rebirth was attributed to the Cārvāka school of ancient India). Among the divisions of the root affliction (MŪLAKLEŚA) of "wrong view" (DṚṢṬI), ucchedadṛṣṭi occurs in connection with SATKĀYADṚṢṬI, where it is defined as the mistaken belief or view that the self is the same as one or all of the five aggregates (SKANDHA) and that as such it ceases to exist at death. In this context, it is contrasted with ŚĀŚVATADṚṢṬI, the mistaken belief that the self is different from the aggregates and that it continues to exist eternally from one rebirth to the next. Annihilationism is thus a form of antagrāhadṛṣṭi, "[wrong] view of holding to an extreme," i.e., the view that the person ceases to exist at death and is not reborn (ucchedadṛṣṭi), in distinction to the view that there is a perduring soul that continues to be reborn unchanged from one lifetime to the next (śāśvatadṛṣṭi). The Buddhist middle way (MADHYAMAPRATIPAD) between these two extremes posits that there is no permanent, perduring soul (countering eternalism), and yet there is karmic continuity from one lifetime to the next (countering annihilationism). In the MADHYAMAKA school, ucchedadṛṣṭi is more broadly defined as the view that nothing exists, even at a conventional level. Thus, following statements in the PRAJÑĀPĀRAMITĀ SŪTRAS, the Madhyamaka school sets forth a middle way between the extremes of existence and nonexistence. In general, the middle way between extremes is able to acknowledge the insubstantiality of persons and phenomena (whether that insubstantiality is defined as impermanence, no-self, or emptiness) while upholding functionality, most importantly in the realm of cause and effect (and thus the conventional reality of karman and rebirth).

ucchedānta. (T. chad mtha'; C. duanbian; J. danhen; K. tanbyŏn 斷邊). In Sanskrit, "extreme of annihilation" or "extreme of nihilism"; along with the extreme of permanence (ŚĀSVATĀNTA), one of the two extremes to be avoided in pursuit of the middle way (MADHYAMAPRATIPAD). Precisely how these two extremes are defined varies among the schools of Indian Buddhist philosophy. All Buddhist schools would consign the various non-Buddhist schools of Indian philosophy to one of the two extremes, with the Sāṃkhya, Vaiśeṣika, JAINA, Vedānta, Mīmāṃsaka, and Nyāya falling into the extreme of permanence (ŚĀŚVATĀNTA) and the Cārvāka falling into the extreme of nihilism (ucchedānta). The Buddhist schools each claim to avoid these two extremes, avoiding the extreme of permanence by denying the existence of a perduring, indivisible, and independent self, and avoiding the extreme of annihilation by upholding the existence of moral cause and effect (KARMAN) and of rebirth. Beyond this basic analysis, the various Buddhist schools refine the two extremes according to their specific tenets and charge their rivals with falling into one or the other of the two extremes. For example, the YOGĀCĀRA school claims that the MADHYAMAKA doctrine that all phenomena are devoid of intrinsic nature (NIḤSVABHĀVA) flirts with the extreme of nihilism, and the Madhyamaka claims that the Yogācāra emphasis on the autonomy of consciousness (VIJÑĀNA; VIJÑAPTIMĀTRATĀ) tends toward the extreme of permanence.

ucchedavāda. (T. chad par smra ba; C. duanjian lun; J. dankenron; K. tan'gyŏn non 斷見論). In Sanskrit and Pāli, "teaching on annihilationism," a synonym of UCCHEDADṚṢṬI.

Udam Honggi. (優曇洪基) (1822–1881). Korean SŎN monk of the late Chosŏn dynasty; his original dharma name was Uhaeng, and his sobriquet was Udam. A native of Andong, he lost his parents at an early age and entered the SAṂGHA in 1837. Honggi studied under the monks Chasin (d.u.) at the monastery of Hŭibangsa and Yŏnwŏl (d.u.) at the major monastery of SONGGWANGSA. Honggi also studied under Ch'immyŏng Hansŏng (1801–1876) and received the full monastic precepts from the VINAYA master Inp'a (d.u.). Honggi is most famous for his treatise, the *Sŏnmun chŭngjŏng nok* ("Record of Attesting to Orthodoxy in the Sŏn School"), a criticism of PAEKP'A KŬNGSŎN's magnum opus, the *Sŏnmun sugyŏng* ("Hand Mirror of the Sŏn School"). Honggi criticized Paekp'a for mistakenly positing three types of Sŏn, drawing heavily on CH'OŬI ŬISUN's arguments in his *Sŏnmun sabyŏnmanŏ* ("Prolix Words on Four Distinctive Types in the Sŏn School") to posit that there are, in fact, only two. SŎLTU YUHYŎNG (1824–1889), a second-generation successor in Paekp'a's lineage, responded to Honggi's critique by writing his own treatise, the *Sŏnwŏn soryu* ("Tracing the Source of Sŏn"), where he also criticizes Ch'oŭi Ŭisun's treatise *Sŏnmun sabyŏnmanŏ*. Ch'ugwŏn Chinha (1861–1926) criticized Paekp'a and Sŏltu from Ch'oŭi's standpoint in his short treatise, *Sŏnmun chaejŏng nok* ("Reconsidering Orthodoxy in Sŏn Writings"), written in 1890, arguing for the ultimate unity of all types of Sŏn.

udāna. (T. ched du brjod pa; C. youtuona; J. udana; K. udana 優陀那). In Sanskrit and Pāli, lit. "utterance," or "meaningful expression," a term with three important denotations. ¶ The *Udāna* is the third book of the Pāli KHUDDAKANIKĀYA and comprises eighty stories containing eighty utterances of the Buddha. The utterances are mostly in verse and are accompanied by prose accounts of the circumstances that prompted the Buddha to speak on those occasions. ¶ The name udāna is also given to a broader classification of texts within the Pāli canon as a whole, and in this usage it refers to a set of eighty-two suttas containing verses uttered out of joy. ¶ Finally, udāna are one of the standard sections in the division of the word of the Buddha (BUDDHAVACANA) into nine NAVAṄGA (Pāli) or twelve (DVĀDAŚĀṄGA) categories based on genre. In that context, udāna are defined as solemn utterances intended to convey an understanding of the dharma. Many of the Buddha's statements in the DHAMMAPADA are said to fall into this category.

Udānavarga. (T. Ched du brjod pa'i tshoms; C. Chuyao jing; J. Shutchōgyō; K. Ch'uryo kyŏng 出曜經). In Sanskrit, "Groups of Utterances," a Sanskrit text associated with the SARVĀSTIVĀDA school that corresponds to the DHAMMAPADA (S. Dharmapada) in the Pāli scriptural tradition. The *Udānavarga* collects some 1,050 verses in thirty-three groups, or vargas, and is therefore more than twice as long as the Pāli *Dhammapada*, which includes 423 verses in twenty-six vaggas. Approximately 360 verses appear to be shared by the two texts. There are four translations of varying recensions of the *Udānavarga* cum *Dharmapada* made into Chinese, the earliest of which was produced by ZHU FONIAN in 374 CE. The Tibetan translation (c. 900) of the *Udānavarga* is of an anthology compiled by Dharmatrāta (Chos skyob); it is included in both the BKA' 'GYUR and the BSTAN 'GYUR. There is also a Tibetan translation of a commentary by Prajñāvarman. The *Udānavarga* was one of the six basic texts (gzhung drug) of the BKA' GDAMS pa school.

udayabbayānupassanāñāṇa. In Pāli, "knowledge arising from the contemplation of arising and passing away"; the first of nine knowledges (P. ñāṇa) cultivated as part of the "purity of knowledge and vision of progress along the path" (P. PAṬIPADĀÑĀṆADASSANAVISUDDHI), according to the account in the VISUDDHIMAGGA. This latter category, in turn, constitutes the sixth and penultimate purity (P. visuddhi; S. VIŚUDDHI) to be developed along the path to liberation. Knowledge arising from the contemplation of arising and passing away refers to the clear comprehension of the arising, presence, and dissolution of material and mental phenomena (NĀMARŪPA). Through contemplating this process, the three universal marks of existence (P. tilakkhaṇa; S. TRILAKṢAṆA) become apparent, viz., (1) impermanence (ANITYA), (2) suffering (DUḤKHA), and (3) no-self (ANĀTMAN). Full comprehension of the three universal marks of existence is not possible so long as the mind is disturbed by attachment to any of the ten "defilements of insight" (P. vipassanūpakkilesa), which arise as concomitants of insight meditation (P. vipassanābhāvanā); these are (1) a vision of radiant light (obhāsa), (2) knowledge (ñāṇa), (3) rapture (pīti), (4) tranquillity (passaddhi), (5) happiness (sukha), (6) determination (adhimokkha), (7) energy (paggaha), (8) heightened awareness (upaṭṭhāna), (9) equanimity (upekkhā), and (10) delight (nikanti). The ten defilements are overcome by understanding them for what they are, as mere by-products of meditation. This understanding is developed through perfecting the "purity of knowledge and vision of what is and is not the path" (P. MAGGĀMAGGAÑĀṆADASSANAVISUDDHI), which is the fifth of seven "purities" (visuddhi) to be developed along the path to liberation.

Udāyana Buddha. (C. Youtian wang Shijia xiang; J. Uten'ō Shakazō; K. Ujŏn wang Sŏkka sang 優塡王釋迦像). An Indian sandalwood image of ŚĀKYAMUNI Buddha that is purported to be the world's first Buddha image; supposedly commissioned by the VATSĀ king Udāyana (also called Rudrāyana in some versions) and hence named after him. While ancient Indian sources only mention a buddha image made for king PRASENAJIT, the story of this supposedly earlier image made for King Udāyana first appears in the 397 CE Chinese translation of the EKOTTARĀGAMA. XUANZANG later reports a

legend about the image's production. According to this legend, when ŚĀKYAMUNI Buddha ascended to the TRĀYASTRIṂŚA (heaven of the thirty-three) to preach the DHARMA to his mother MĀYĀ, King Udāyana so missed his teacher that he asked MAHĀMAUDGALYĀYANA to transport an artist to the heaven to observe the Buddha's thirty-two bodily marks (MAHĀPURUṢALAKṢAṆA) and carve a sandalwood image of the master. Subsequent Indian rulers were unable to dislodge the miraculously powerful statue from its spot and therefore made copies of it for their own realms. FAXIAN and Xuanzang remark in their travel records that they saw a sandalwood image at the JETAVANA VIHĀRA in ŚRĀVASTĪ, which had been commissioned by King Prasenajit on the model of the Udāyana image. In addition, Xuanzang saw a Udāyana Buddha image enshrined in a large vihāra at Kauśāmbī, and mentions a third one, which was reputedly the original statue, that had flown north over the mountains to the Central Asian oasis kingdom of KHOTAN. Both KUMĀRAJĪVA and Xuanzang are claimed to have brought the Udāyana Buddha image to the Chinese capital of Chang'an. The Japanese pilgrim Chōnen (938–1016), during his sojourn in China, saw a replica of the allegedly original Indian statue at Qishenyuan in Kaifeng. He hired the artisans Zhang Yanjiao and Zhang Yanxi to make an exact copy of this replica. According to the legend, the original statue spoke to Chōnen in a dream, expressing its wish to go to Japan. Chōnen thus darkened the copy with smoke and took the original to Japan in 986. The tenth-century Chinese wooden sculpture is commonly known as the Seiryōji Shaka, since it was enshrined in 1022 in the monastery of Seiryōji. In February 1954, a group of Japanese scholars, including the renowned Buddhologist and Seiryōji abbot, Tsukamoto Zenryū (1898–1980), opened the cavity in the back of the image and discovered that it contained silk and brocade textiles, coins, mirrors, glass fragments, a small brass bell, textile intestines, wood-block prints of texts such as the VAJRACCHEDIKĀPRAJÑĀPĀRAMITĀSŪTRA ("Diamond Sūtra"), a Japanese manuscript of the SUVARṆAPRABHĀSOTTAMASŪTRA ("Sūtra of Golden Light") dated 804, as well as other handwritten documents, such as a vow written by Chōnen and Gizō dated 972, which they witnessed with the imprint of their hands in their own blood. The veneration of the Udāyana Buddha image reached its peak in thirteenth-century Japan, when further copies of the Seiryōji Shaka were made, for example, at SAIDAIJI (dated 1249) and TŌSHŌDAIJI (dated 1258) in Nara and at Gokurakuji (second half of the thirteenth century) in Kamakura.

Udāyin. (P. Udāyī; T. 'Char ka; C. Youtuoyi; J. Udai; K. Ut'ai 優陀夷). Sanskrit proper name of an eminent ARHAT disciple of the Buddha. According to the Pāli accounts, where he is known as Udāyī, he was a brāhmaṇa from Kapilavatthu (S. KAPILAVASTU), who first encountered the Buddha when the Buddha visited his native Sākiya (S. ŚĀKYA) clan who resided in the city. Attracted by the Buddha's charisma, he entered the order and later became an arhat. Udāyī once uttered sixteen verses, which compared the Buddha to a majestic elephant. Udāyī was a gifted preacher who attracted large, enthusiastic audiences; once, while staying at Todeyya's mango grove in Kāmandā, he converted a pupil of a brāhmaṇa belonging to the clan of Lady Verahaccāni. Hearing of his triumph, Verahaccāni invited Udāyī to her home several times to preach and eventually became a convert to the Buddha's teachings. In several suttas, Udāyī is described discussing points of doctrine with his fellow monks. In the *Udāyīsutta*, he asks ĀNANDA whether consciousness can also be deemed as lacking selfhood, and elsewhere he explains the concept of sensation (VEDANĀ) to the carpenter Pañcakaṅga. Ānanda reports this conversation to the Buddha, who confirms the accuracy of Udāyī's understanding. Udāyī requested instruction in the limbs of enlightenment (P. bhojjaṅga; S. BODHYAṄGA) from the Buddha, and later reported to him how he won liberation through their cultivation. Although an arhat, Udāyī was not without fault. Once he ridiculed Ānanda for not taking advantage of his close association with the Buddha to attain arhatship. The Buddha chastised Udāyī for his remark, pointing out to him that Ānanda was destined to become an arhat in that very life.

Uḍḍandapura. See ODANTAPURĪ.

Uḍḍiyāna. One of the twenty-four sacred sites associated with the CAKRASAṂVARATANTRA. See PĪṬHA; OḌḌIYĀNA.

Udgata. (P. Uggata; T. 'Phags pa; C. Yujiatuo; J. Utsukada; K. Ulgat'a 欝伽陀). Lay disciple of the Buddha deemed to be foremost among laymen who served the order (SAṂGHA). According to the Pāli account, where he is known as Uggata, he was a wealthy householder living in the town of Hatthigāma. One day, while the Buddha was sojourning at the Nāgavanuyyāna garden in the town, Uggata visited the garden in a drunken state, accompanied by dancers, after a drinking binge that had lasted seven days. Seeing the Buddha, he was filled with shame and immediately sobered up. The Buddha preached to him, and he became a nonreturner (ANĀGĀMIN) on the spot. He dismissed the dancers and, from that time onward, devoted himself to serving the order. He used to receive visitations from the divinities, who told him of the attainments of various members of the order and suggested that he favor these above the rest. Uggata, however, treated all monks equally and showed no preference in his benefactions between those who had attained distinction as ĀRYAPUDGALA and those who were still unenlightened. When queried, Uggata said that there were eight wonderful things that happened to, and were done by, him in this life: he recovered his sobriety the very moment he saw the Buddha; he readily understood the Buddha's teaching of the FOUR NOBLE TRUTHS; when he took a vow of celibacy, he provided for his four wives even to the point of finding one of them a new husband of her choice; he shared his great wealth with persons of good conduct; he served monks wholeheartedly, listening to their sermons or preaching to them when they did not speak; he was equally generous to all monks without

making distinctions; he was not prideful of his conversations with the divinities; and he did not worry about death, for the Buddha had assured him that he would not return to this world.

Udraka Rāmaputra. (P. Uddaka Rāmaputta; T. Rangs byed kyi bu lhag spyod; C. Yutoulanfu; J. Utsuzuranhotsu; K. Ulturambul 鬱頭藍弗). One of two teachers (the other being ĀRĀḌA KĀLĀMA) from whom Prince SIDDHĀRTHA received instruction in meditation after he renounced the world and before he achieved enlightenment. Both teachers are mentioned in the ARIYAPARIYESANĀSUTTA, one of the sparest accounts of the Buddha's quest that is considered by some scholars to be among the earliest. After having studied with Ārāḍa Kālāma and determining that his teachings did not lead to liberation, the BODHISATTVA next studied with Udraka Rāmaputra, whose father, Rāma, taught a form of meditation resulting in the state of neither perception nor nonperception (identified by commentators as the fourth immaterial DHYĀNA; see NAIVASAṂJÑĀNĀSAṂJÑĀYATANA). When the bodhisattva attained this state, Udraka Rāmaputra offered him the position of teacher of his disciples. Realizing that this state was not in fact liberation from rebirth, the bodhisattva declined and left Udraka Rāmaputra to practice austerities in URUVILVĀ. After his achievement of enlightenment, the Buddha determined that Ārāḍa Kālāma and Udraka Rāmaputra would be the most suitable recipients of his teachings, but both had recently died, so he proceeded to ṚṢIPATANA to teach the "group of five" (PAÑCAVARGIKA).

udumbara. (T. u dum bā ra; C. youtan hua; J. udonge; K. udam hwa 優曇華). In Sanskrit and Pāli, name of a flowering tree (the *Ficus glomerata*) that is said to bloom only once every one thousand or three thousand years. Because it blossoms so infrequently, Buddhist texts often use the udumbara in similes to indicate something exceedingly rare, such as the appearance of a buddha in the world or the chance of encountering the BUDDHADHARMA during one's lifetime.

Udumbaragiri. A mountain in Sri Lanka and legendary abode of demons (P. yakkha; S. YAKṢA), site of a monastery of forest-dwelling monks noted (according to the *Mahāvaṃsaṭīkā*) for their scholarship and piety; also known as Udumbarapabbata, Dhūmarakkha, and Dimbulāgala. By the twelfth century CE, the Udumbaragiri monastery became the standard bearer of orthodoxy and played a central role in the monastic purifications of PARAKRĀMABĀHU I and his successors, Vijayabāhu III and Parakrāmabāhu II. The monastic reforms instituted by these three kings represented a watershed in Sinhalese Buddhist history, insofar as patterns of SAṂGHA organization and saṃgha–state relations were established that were to remain essentially unchanged from that period onward. These reforms were transmitted in stages to Burma (Myanmar) beginning in the twelfth century. In the fourteenth and fifteenth centuries, the Udumbaragiri monastery was again the fountainhead of a major THERAVĀDA revival that was propagated into the Thai kingdoms of AYUTHAYA, SUKHOTHAI, and Chiangmai and the Mon kingdom of PEGU.

Udumbarikasīhanādasutta. (C. Santuona jing; J. Sandanagyō; K. Sandana kyŏng 散陀那經). In Pāli, the "Discourse on the Lion's Roar at Udumbarika Park," the twenty-fifth sutta of the DĪGHANIKĀYA (a DHARMAGUPTAKA recension appears as the eighth SŪTRA in the Chinese translation of the DĪRGHĀGAMA), preached by the Buddha to the ascetic Nigrodha and his followers at the Udumbarikā hermitage near RĀJAGṚHA. The Buddha explains to Nigrodha the relative merits of ascetic practices and the superiority of his own path that can lead to liberation in seven days. Infatuated with MĀRA's deceits, Nigrodha and his followers remain skeptical and do not heed the Buddha's message.

uggahanimitta. In Pāli, "eidetic image" or "learning sign," the second of the three major visualization signs experienced in calmness or tranquillity (P. samatha; S. ŚAMATHA) exercises, along with the PARIKAMMANIMITTA (preparatory image) and the PAṬIBHĀGANIMITTA (counterpart, or representational, image). The signs are listed sequentially according to the degree of concentration necessary for them to appear. These three visualization signs and the meditative exercises employed to experience them are discussed in detail in BUDDHAGHOṢA's VISUDDHIMAGGA. These signs are particularly associated with the ten visualization devices (KASIṆA) that are used in the initial development of concentration. In these exercises, the meditator attempts to convert a visual object of meditation, such as earth, fire, or light, into a mental projection or conceptualization that is as clear as the visual image itself. When the image the practitioner sees with his eyes (the so-called parikammanimitta, or "preparatory image") is equally clear when visualized in the mind, the practitioner is said to have obtained the uggahanimitta. With the fire kasiṇa, for example, the eidetic image of the visualized flame appears like a detached flame, with any embers, ashes, or smoke that were present in the preparatory image still visible. This uggahanimitta, however, still represents a relatively weak degree of concentration, and it must be strengthened until the paṭibhāganimitta, or "counterpart/representational image," emerges, which marks the access to meditative absorption (P. JHĀNA; S. DHYĀNA).

Ugra. (P. Ugga; T. Drag shul can; C. Yuqie; J. Ikuga/Ikuka; K. Ukka 郁伽). An eminent lay disciple of the Buddha whom he declared to be foremost among laymen who give pleasant gifts. According to the Pāli accounts, where he is known as Ugga, he was a householder who lived in Vesāli (S. VAIŚĀLĪ). He became a stream-enterer (SROTAĀPANNA) when he saw the Buddha the first time and later became a nonreturner (ANĀGĀMIN). He vowed to give to the Buddha and his followers whatever they found most agreeable. The Buddha, reading his mind, appeared before him, whereupon he provided them with

a sumptuous meal and communicated his intentions to the Buddha. The list of favorite things included rice cakes in the shape of sāla flowers, pork, and Kāsī cloth. He was possessed of six special qualities: steadfast confidence in the Buddha, his teachings, and the order, noble conduct, insight, and liberation. Ugga declared that there were eight wonderful things that happened to him and that he did in this life. The list is similar to what is found in the story of UDGATA and concludes with the freedom he achieved from the five lower fetters (SAṂYOJANA) that bind living beings to the cycle of existence: belief in the existence of the body as a real person (P. sakkāyadiṭṭhi; S. SATKĀYADṚṢṬI), doubt about the efficacy of the path (P. vicikicchā; S. VICIKITSĀ), clinging to the rules and rituals (P. sīlabbataparāmāsa; S. ŚĪLAVRATAPARĀMARŚA), sensuous craving (KĀMARĀGA), and ill will (VYĀPĀDA). When Ugga died, he was reborn in the realm of subtle materiality (RŪPALOKA) among the divinities who project mind-made bodies (MANOMAYAKĀYA). He visited the Buddha and informed him that he had attained arhatship in that existence.

Ugraparipṛcchā. (T. Drag shul can gyis zhus pa; C. Yuqie zhangzhe hui; J. Ikuga chōjae; K. Ukka changja hoe 郁伽長者會). In Sanskrit, "The Inquiry of Ugra," an influential MAHĀYĀNA SŪTRA, dating perhaps from the first century BCE, making it one of the earliest Mahāyāna sūtras. The text has not survived in any Indic-language version, but has been preserved in five translated versions: three in Chinese, one in Tibetan, and one in Mongolian. The sūtra is structured as a dialogue, mainly between the Buddha and the lay BODHISATTVA UGRA, whose inquiry prompts the Buddha to launch into a protracted discourse on the bodhisattva path (MĀRGA). Ugra is labeled a GṚHAPATI, a term that literally means "lord of the house" but that comes to refer to men belonging to the upper stratum of what would later be labeled as the vaiśya (often rendered as "merchant") caste. The sūtra is divided into two parts, one directed toward the lay bodhisattva and the other toward renunciants. In the oldest version of the sūtra, Ugra and his friends, after hearing the Buddha's discourse, ask for and receive ordination as monks; in later translations, this event takes place in the middle of the sūtra. In all versions, however, the overall message is that, although a lay practitioner may be capable of performing at least preliminary parts of the bodhisattva path, to attain the final goal of buddhahood he must become a monk. The Buddha declares, "For no bodhisattva who lives at home has ever attained supreme perfect enlightenment." Accordingly, the sūtra urges the lay bodhisattva to break the ties of affection that bind him to his family and, above all, to his wife; the condemnation of marriage and family life is striking. Moreover, he is urged to emulate the conduct of the monks in his local monastery even while he still lives at home—involving, among other things, complete celibacy. This sort of practice is congruent with what was required of the UPĀSAKA, the lay adherent who has taken the three refuges and the five or eight precepts and dresses in white as a sign of his semirenunciant status. The lay bodhisattva described in the *Ugraparipṛcchā* is repeatedly urged to seek ordination as soon as he possibly can. If the lay bodhisattva is portrayed as the best of all possible laymen, the renunciant bodhisattva is portrayed as the best of all possible monks. Not only does he follow the standard requirements of the monastic life, but he goes beyond them, spending large periods of time (ideally, his whole lifetime) performing strict ascetic practices in the wilderness. This is a reenactment of the biography of ŚĀKYAMUNI Buddha; it appears that aspiring bodhisattvas, both lay and monastic, took the stories of the Buddha's life—including his previous lives, described in the JĀTAKA stories—as prescriptive for those who wished to become buddhas themselves. The *Ugraparipṛcchā* never portrays any actual female practitioner, whether lay or monastic, as a bodhisattva. Apart from a formulaic reference to "sons and daughters of good lineage," which appears at the beginning and the end of the sūtra (and may have been added long after its initial composition), there is no indication that the authors of the sūtra believed that women were capable of embarking upon the bodhisattva path. The *Ugraparipṛcchā* was a highly influential sūtra in both India and East Asia, where it was widely quoted and commented upon and is regarded by scholars as an important and influential work in the formative period of Mahāyāna Buddhism.

Uhaeng. (K) (禹行/幸). See UDAM HONGGI.

Ŭich'ŏn. (C. Yitian 義天) (1055–1101). Korean prince, monk, and bibliophile, and putative founder of the CH'ŎNT'AE CHONG (C. TIANTAI ZONG) in Korea. Ŭich'ŏn was born the fourth son of the Koryŏ king Munjong (r. 1047–1082). In 1065, Ŭich'ŏn was ordained by the royal preceptor (WANGSA) Kyŏngdŏk Nanwŏn (999–1066) at the royal monastery of Yŏngt'ongsa in the Koryŏ capital of Kaesŏng. Under Nanwŏn, Ŭich'ŏn studied the teachings of the AVATAṂSAKASŪTRA and its various commentaries. In 1067, at the age of twelve, Ŭich'ŏn was appointed "saṃgha overseer" (K. sŭngt'ong; C. SENGTONG). Ŭich'ŏn is known on several occasions to have requested permission from his royal father to travel abroad to China, but the king consistently denied his request. Finally, in 1085, Ŭich'ŏn secretly boarded a Chinese trading ship and traveled to the mainland against his father's wishes. Ŭich'ŏn is said to have spent about fourteen months abroad studying under various teachers. His father sent his friend and colleague NAKCHIN (1045–1114) after Ŭich'ŏn, but they ended up studying together with the Huayan teacher Jingyuan (1011–1088) of Huiyinsi in Hangzhou. Ŭich'ŏn and Nakchin returned to Korea in 1086 with numerous texts that Ŭich'ŏn acquired during his sojourn in China. While residing as the abbot of the new monastery of Hŭngwangsa in the capital, Ŭich'ŏn devoted his time to teaching his disciples and collecting works from across East Asia, including the Khitan Liao kingdom. He sent agents throughout the region to collect copies of the indigenous writings of East Asian Buddhists, which he considered to be the equal of works

by the bodhisattva exegetes of the imported Indian scholastic tradition. A large monastic library known as Kyojang Togam was established at Hŭngwangsa to house the texts that Ŭich'ŏn collected. In 1090, Ŭich'ŏn published a bibliographical catalogue of the texts housed at Hŭngwangsa, entitled *Sinp'yŏn chejong kyojang ch'ongnok* ("Comprehensive Catalogue of the Doctrinal Repository of All the Schools"), which lists some 1,010 titles in 4,740 rolls. The Hŭngwangsa collection of texts was carved on woodblocks and titled the *Koryŏ sokchanggyŏng* ("Koryŏ Supplement to the Canon"), which was especially important for its inclusion of a broad cross section of the writings of East Asian Buddhist teachers. (The one exception was works associated with the CHAN or SŎN tradition, which Ŭich'ŏn refused to collect because of their "many heresies.") Unfortunately, the xylographs of the supplementary canon were burned during the Mongol invasion of Koryŏ in 1231, and many of the works included in the collection are now lost and known only through their reference in Ŭich'ŏn's catalogue. In 1097, Ŭich'ŏn was appointed the founding abbot of the new monastery of Kukch'ŏngsa (named after the renowned Chinese monastery of Guoqingsi on Mt. Tiantai). There, he began to teach Ch'ŏnt'ae thought and practice and is said to have attracted more than a thousand students. Ŭich'ŏn seems to have seen the Tiantai/Ch'ŏnt'ae synthesis of meditation and doctrine as a possible means of reconciling the Sŏn and doctrinal (KYO) traditions in Korea. Ŭich'ŏn's efforts have subsequently been regarded as the official foundation of the Ch'ŏnt'ae school in Korea; however, it seems Ŭich'ŏn was not actually attempting to start a new school, but merely to reestablish the study of Ch'ŏnt'ae texts in Korea. He was awarded the posthumous title of state preceptor (K. kuksa; C. GUOSHI) Taegak (Great Enlightenment).

Ŭisang. (C. Yixiang; J. Gishō 義湘/相) (625–702). Influential Korean monk during the Silla dynasty, who was a leader in the Chinese HUAYAN ZONG and founder of the HWAŎM tradition in Korea. After ordaining at Hwangboksa in 644, Ŭisang left for China in 650 with his friend and colleague WŎNHYO (617–686) via the overland route, but was arrested by Koguryŏ border guards and forced to return to Silla. In 661, Ŭisang was able to reach China by sea and studied at Zhixiangsi on ZHONGNANSHAN under the guidance of ZHIYAN (602–668), the second patriarch in the Chinese Huayan school. In China, Ŭisang was a close colleague of FAZANG (643–712), a fellow student of Zhiyan's, who was eighteen years his junior; he is also said to have had associations with DAOXUAN (596–667), the founder of the NANSHAN LÜ ZONG, a major Chinese school of Buddhist discipline (VINAYA). According to some accounts, Ŭisang took over the leadership of Zhiyan's community after his master's death, but eventually returned to Korea in 671 to warn the Silla king Munmu (r. 661–681) of an impending Chinese invasion of Silla by the Tang emperor Gaozong (628–683). In gratitude, the Silla king provided munificent support for Ŭisang's Hwaŏm school and installed the master at the new monastery of PUSŌKSA near T'aebaeksan, where Ŭisang is said to have attracted more than three thousand students. Ŭisang is also presumed to have established a network of Hwaŏm monasteries around the peninsula, which included Mirisa, HWAŎMSA, and HAEINSA. Thanks to royal support, by the time of Ŭisang's death, the Hwaŏm school had emerged as the predominant scholastic tradition in Korean Buddhism. ¶ Even after his return to Korea, Ŭisang continued to exchange letters and to work with his Chinese colleague FAZANG. In 692, Fazang sent Ŭisang a copy of his HUAYAN JING TANXUAN JI, asking for his comments; this correspondence is still extant today. The most influential of Ŭisang's writings is the HWAŎM ILSŬNG PŎPKYE TO ("Diagram of the DHARMADHĀTU according to the One Vehicle of Hwaŏm"), which summarizes the gist of the Huayan school's interpretation of the AVATAṂSAKASŪTRA. His only other extant work is the *Paekhwa toryang parwŏn mun* ("Vow Made at the White Lotus Enlightenment Site"), a short paean to the bodhisattva AVALOKITEŚVARA (K. Kwanŭm); works attributed to Ŭisang that are no longer extant, most of which addressed aspects of Hwaŏm thought, include *Simmun kanpŏp kwan*, *Ip pŏpkye p'um ch'ogi*, and *Ilsŭng parwŏn mun*, as well as a commentary to the AMITĀBHASŪTRA (*So Amit'a ŭigi*).

Ŭisun. (K) (意恂). See CH'OŬI ŬISUN.

***ullambana**. (T. yongs su skyob pa'i snod; C. yulanben; J. urabon; K. uranbun 盂蘭盆). A hypothetical BUDDHIST HYBRID SANSKRIT, Middle Indic, or perhaps even Iranian reconstruction of the Chinese term yulanben and sometimes interpreted to correspond to the Sanskrit avalambana (lit. "hanging downward," "suspended"); the term would then refer to the "ghost festival," a ritual that sought the salvation of condemned beings who were "suspended" in hell. This interpretation of yulan is questionable, however, since this connotation of the Sanskrit term avalambana is unknown in Indian Buddhist contexts. The Tibetan translation of yulanben as yongs su skyob pa'i snod, or "vessel of complete protection," also does not correspond to any of the connotations of "hanging down"; the Tibetan rendering does, however, seem to better fit an alternate explanation of the derivation of yulan(ben) as the Buddhist Hybrid Sanskrit term ullumpana (sometimes wrongly transcribed as ullampana, ullambana, etc.), lit. "rescuing, extracting [from an unfortunate fate]." A more recent hypothesis concerning the transcription yulanben is that "yulan" is a transcription of the Sanskrit and Pāli term odana (cooked rice) and 'ben' a native word for bowl; the compound 'yulanben' is thus not a transcription of the hypothetical Sanskrit word *ullambana but actually means a "rice bowl," perhaps even a special kind of rice bowl for making offerings on the PRAVĀRAṆĀ day. The Japanese BON FESTIVAL (alt. Obon) derives from this term ullambana; it is celebrated in either mid-July or mid-August to honor the spirits of deceased ancestors. During this three-day period, family members return to their ancestral homes to make offerings to their ancestors (who are thought to return on those days) and to clean the family grave sites. On the last night, the celebrants light paper lanterns and float them

down the river (J. tōrō nagashi) to help light the spirits' way back. See also YULANBEN; YULANBEN JING.

Ulūka. (T. 'Ug pa; C. Youlouqu; J. Urukya; K. Uruga 優樓佉). One of the non-Buddhist philosophers of India mentioned in Buddhist texts; he is identified with Kaṇāda of the Vaiśeṣika school. He is often listed as one of a group of three, the other two being Kapila and Ṛṣabha.

U-min Ko-zei Pagoda. A multitowered pagoda (Burmese, JEDI) located in the Sagaing Hills in Upper Burma (Myanmar). Its name means "ninety caves," and it was given this epithet in imitation of another famous shrine found in the Sagaing Hills called U-min Thon-zei, or the "Thirty Caves Shrine." U-min Ko-zei Pagoda is in actuality not comprised of ninety caves but is a freestanding structure with more than thirty entrances leading to an interior artificial cave. U-min Ko-zei Pagoda is one of four related pagodas originally built during the AVA period that are collectively known as Hsin-bo-lei Hpaya ("the four pagodas equal in value to an elephant"). This unusual name is explained by the following story. On one occasion, King Min-hkaung-gyi of Ava (r. 1481–1502) went by elephant to pay his respects to the monk Ariyawuntha, a famous scholar whose monastery was located between four hillocks. As it happened, while the king was meeting with this monk, his elephant ate leaves from the monastery's BODHI TREE and promptly fell unconscious. Luckily, the elephant was revived with medicinal herbs gathered from the four surrounding hills. In memory of this event, the king built a pagoda on each of the four hilltops, the total cost of which equaled the value of his elephant.

U-min Thon-zei Zedi. An artificial cave shrine (Burmese, u-min) located in the Sagaing Hills in Upper Burma (Myanmar), on the same mountain ridge as the Swam-oo Ponnya Shin Pagoda. It was built in 1366 CE by Padu Thinga-yaza, a monk from Padu Village. He was the royal preceptor (SAṂGHARĀJAN) of the king of Sagaing, Tara-hpya Min-gyi, and was also venerated by Thato Min-hpaya, the king of AVA. Thinga-yaza built the cave with thirty entrances in memory of the Buddha's thirty moral perfections (P. pāramī; S. PĀRAMITĀ); hence, its name U-min Thon-zei, which means "thirty caves." This cave also contains forty-five statues of the Buddha in memory of the Buddha's forty-five-year teaching ministry.

undō. (J) (雲堂). In Japanese, "cloud hall." See SENGTANG.

Ŭnhaesa. (銀海寺). In Korean, "Silver Sea Monastery," the tenth district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located in Yŏngch'ŏn, near Taegu, on the slopes of P'algong Mountain. It was built by state preceptor (kuksa; C. GUOSHI) Hyech'ŏl (785–861) in 809 and was originally named Haeansa (Oceanic Eye Monastery), but was moved to the present site and received its new name in 1546. The monastery burned down in 1563 and was reconstructed in the following year. The monastery once again burned to the ground in 1861 and was substantially reconstructed under the supervision of the monks Palbong (d.u.) and Haewŏl (d.u.). Along with TONGHWASA, Ŭnhaesa is one of the representative monasteries on Mount P'algong and is known for the many hermitages that have been established in the surrounding mountains. The monastery's current site is near to Kŏjo Hermitage, which dates to approximately 738 and was once the main monastery in the area. The hermitage is noted for the Yŏngsan Chŏn (Vulture Peak Hall), built in 1375, which enshrines images of the Buddha and 526 stone ARHATS. Another hermitage, Unbuam, has a statue of a bodhisattva that is three-feet high, with a crown decorated with flames, flowers, and a bird of paradise. Paekhŭngam, a hermitage at Ŭnhaesa reserved for nuns, houses in its kŭngnak chŏn (hall of ultimate bliss) a pedestal called a sumidan (MT. SUMERU altar; J. SHUMIDAN) with a statue of the Buddha on top. The sumidan is also decorated with fine carvings of birds, animals, flowers, and demons. There are some ten buildings on the Ŭnhaesa grounds. The site is noted for its enshrined image of AMITĀBHA, and Ŭnhaesa is famous in Korea as a center of Amitābha worship. Ŭnhaesa is also home to one of the most recognized KWAEBUL, or giant hanging Korean religious art works (see also T'AENGHWA; T. THANG KA). Painted in 1750 on silk, it depicts the Buddha in a PURE LAND resplendent with birds and peonies.

Unmuk. (雲默) (d.u.; fl. late fourteenth century). Korean monk from the late Koryŏ dynasty, also known as Puam and Mugi. He entered the SAṂGHA and studied Ch'ŏntae (C. TIANTAI) philosophy under the state preceptor (KUKSA) Purin Chŏngjo (d.u.) at the White Lotus Society (see JIESHE) on Mandŏksan. After passing the monastic examinations (SŬNGKWA), he was appointed as the abbot of Kuramsa but soon left his post to travel throughout the country. He built a hermitage and settled down at Mt. Sihŭng, where he spent the next twenty years painting Buddhist images, copying scriptures, and chanting the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"). He is the author of the two-roll *Sŏkka yŏrae haengjŏk song*, a verse retelling of the life of the Buddha, and the single-roll *Ch'ŏnt'ae marhak Unmuk hwasang kyŏngch'aek*, a book of his teachings and admonitions, which is only partially extant.

unsui. (雲水). In Japanese, lit. "clouds and water," referring to itinerant Buddhist monks, and especially monks in training. See YUNSHUI.

upacārasamādhi. In Pāli, "access concentration," "neighborhood concentration," or "threshold concentration"; the more elementary of the two broad types of concentration (SAMĀDHI) described in Pāli commentarial literature. Both of these two types of samādhi are used with reference to meditators who are specializing in calmness (P. samatha; S. ŚAMATHA) techniques. Upacārasamādhi precedes full meditative absorption (P. JHĀNA; S. DHYĀNA) and is the highest level of concentration

that may be developed from the more discursive topics of meditation (KAMMAṬṬHĀNA), viz., the first eight of ten recollections (P. anussati; S. ANUSMṚTI), on the Buddha, dharma, SAṂGHA, morality, generosity, divinities, death, and peace, as well as the contemplation on the loathsomeness of food, and the analysis of the four material elements. Upacārasamādhi is characterized by the visualization in the mind of a luminous "counterpart" or "representational" "image" (PAṬIBHĀGANIMITTA) of the object of meditation. It is through further concentration on this stable representational image that the mind finally attains "full concentration" (APPANĀSAMĀDHI), which leads to jhāna. (See also KHANIKASAMĀDHI; SĀMANTAKA.) According to some THERAVĀDA accounts (e.g., in the modern VIPASSANĀ movement), concentration of at least the level of upacārasamādhi is said to be required for the achievement of the state of stream-enterer (P. sotāpanna; S. SROTAĀPANNA).

upādāna. (T. len pa; C. qu; J. shu; K. ch'wi 取). In Sanskrit and Pāli, "clinging," "grasping," or "attachment"; the ninth of the twelve links (NIDĀNA) of dependent origination (PRATĪTYASAMUTPĀDA), which is preceded by craving (TṚṢṆĀ) and followed by becoming (BHAVA). Clinging is regarded as a more intense form of craving, with craving defined as the desire not to separate from a feeling of pleasure, the desire to separate from a feeling of pain, or as a nondiminution of a neutral feeling. Upādāna is a stronger, and more sustained, type of attachment, which is is said to be of four types: (1) clinging to sensuality (RĀGA), which is strong attachment to pleasing sensory objects; (2) clinging to false views and speculative theories (DṚṢṬI); (3) clinging to faulty disciplinary codes and superstitious modes of conduct (ŚĪLAVRATAPARĀMARŚA); and (4) clinging to mistaken beliefs in a perduring self (ĀTMAVĀDA), viz., the attachment to the transitory mind and body as a real I and mine. In the context of dependent origination (PRATĪTYASAMUTPĀDA), craving (tṛṣṇā) leads to the clinging (upādāna) that nourishes the actions that will serve as the cause of "becoming" (bhava), viz., the next lifetime. Clinging that occurs near the moment of death is therefore particularly consequential.

upādānakāraṇa. (T. nyer len gyi rgyu; C. xianqu yin; J. genshuin; K. hyŏnch'wi in 現取因). In Sanskrit, "material cause" or "proximate cause"; the cause that produces an effect that is of the same substance (DRAVYA) as itself. For example, in the case of a sprout, the upādānakāraṇa is its seed; in the case of a pot, it is clay.

upādānaskandha. (P. upādānakandha; T. nyer len gyi phung po; C. quyun; J. shuun; K. ch'wion 取蘊). In Sanskrit, "aggregates that are the objects of clinging," "aggregates of attachment"; the five aggregates (SKANDHA), which are viewed as the foundational objects of clinging (UPĀDĀNA). In the FOUR NOBLE TRUTHS, the definition of the first noble truth, that of suffering (DUḤKHASATYA), specifies that "the five upādānaskandha themselves are suffering," which suggests that suffering is intrinsic to existence itself (see SAṂSKĀRADUḤKHATĀ), and that as long as one clings to continuing existence (BHAVA), the cycle of suffering within SAṂSĀRA will continue. The term upādānaskandha can also be translated as "appropriated aggregates," which suggests that the aggregates are caused, or appropriated, by KARMAN and KLEŚA and thus also serve in turn as the cause of future karman and kleśa. Again, the term may also be translated as "appropriating aggregates," which connotes that, although the skandhas are empty of a self or soul (ĀTMAN) that appropriates a new form of existence, they provide the locus for the karman and kleśa (viz., the clinging or grasping itself) that produce future forms of the aggregates and future suffering.

upadeśa. (P. upadesa; T. man ngag/gtan phab; C. youpotishe; J. upadaisha; K. ubajesa 優波提舍). In Sanskrit, "instruction," "teaching"; one of the nine (NAVAṄGA) (Pāli) or twelve (DVĀDAŚĀṄGA[PRAVACANA]) (Sanskrit) categories (AṄGA) of Buddhist scripture according to their structure or literary style, where it may refer to the subsequent elaboration by the great disciples of a sūtra that the Buddha had just spoken. In Mahāyāna treatises (ŚĀSTRA), upadeśa may suggest that the text is conveying something hidden or special in the Buddha's words (BUDDHAVACANA) that the student may not immediately realize is there. In Tibet, there was the question of whether a teacher's personal instructions (man ngag) to a student were superior to the explanation in a Buddhist text. The name BKA' GDAMS, literally, "those who take the words of the Buddha as instructions" (gdams ngag), may reflect a response to such a view. See also AṄGA.

upadeśasaṃpramoṣa. (T. gdams ngag brjed pa; C. wang shengyan; J. bōshōgon; K. mang sŏngŏn 忘聖言). In Sanskrit, lit. "loss of the instruction," a term that appears in instructions for developing SAMĀDHI, to describe the point in the early stages of developing concentration where the meditator loses focus upon the chosen object of concentration, thus allowing the mind to wander.

upadhi. (T. rdzas; C. yi; J. e; K. ŭi 依). In Sanskrit and Pāli, the "substratum" of rebirth or the "bonds" that bind one to continued existence in SAṂSĀRA. Upadhi is typically equated either with the five aggregates (SKANDHA) or with the afflictions (KLEŚA) of sensuality (RĀGA), ill will (DVEṢA), and delusion (MOHA). Less specifically, any of the ties that bind one to the world, whether family, possessions, or property are described as upadhi. In the NIDDESA of the Pāli KHUDDAKANIKĀYA, the upadhi were ultimately systematized into a list of ten bonds. ¶ In an Indian monastic context, upadhi also refers to the "material objects" held in common by the monastery, a meaning of the term unknown in Pāli. The "provost" or "guardian of the material objects" of a monastery was given the title upadhivārika.

upādhyāya. (P. upajjhāya; T. mkhan po; C. heshang; J. oshō/wajō/kashō; K. hwasang 和尚). In Sanskrit, a religious

instructor or "preceptor." The upādhyāya is first and foremost a monk who confers the lower ordination (see PRAVRAJITA) to new novices (ŚRĀMAṆERA) and higher ordination (UPASAṂPADĀ) to monks (BHIKṢU). To act as an upādhyāya, a monk must be qualified and competent and be of at least ten years standing in the order since his own higher ordination. The relationship of the preceptor to the disciple is described as being like that of father and son. The preceptor is enjoined to teach the DHARMA and VINAYA to his disciple and, as necessary, to supply him with requisites, such as robes and an alms bowl. He should tend to his disciple if he is ill and discipline him if he commits some wrongdoing. If the disciple should begin to entertain doubts about the religion, the preceptor should try to dispel them. If the disciple should commit a grave offense against the monastic rules and regulations, the preceptor is to prevail upon him to go before the SAṂGHA to seek expiation. If the disciple misbehaves or becomes disobedient, the preceptor is enjoined to expel him. But if the disciple shows remorse and asks forgiveness, the preceptor is to take him under guidance again. A monk ceases to be an upādhyāya when he goes away, dies, secedes from the order, changes religion, or expels his disciple. For the East Asian usage of the term, see also HESHANG.

upādhyāyā. (P. upajjhāyā; T. mkhan mo; C. heshangni; J. oshōni; K. hwasangni 和尚尼). In Sanskrit, a female religious instructor or "female preceptor." A qualified nun (BHIKṢUṆĪ) of at least twelve years standing may confirm the UPASAṂPADĀ ordination on a female probationer (ŚIKṢAMĀṆĀ). The ordination can be performed only after formal agreement has been received from the bhikṣuṇī SAṂGHA. The newly ordained nun must live under the tutelage of the upādhyāyā as a disciple for a minimum of two years. The duties of the upādhyāyā and her disciple are the same as those for a male preceptor (UPĀDHYĀYA) and his disciple.

Upagupta. (T. Nyer sbas; C. Youpojuduo; J. Ubakikuta; K. Ubagukta 優婆毱多). An Indian ARHAT, said to have lived in the MATHURĀ region of India. Upagupta is unknown in Pāli canonical sources but appears frequently in the Sanskrit AVADĀNA literature, especially the AŚOKĀVADĀNA and the DIVYĀVADĀNA. Upagupta is famed for having tamed (and in some versions, converted) MĀRA by placing a garland of corpses around his neck. Upagupta was later invited to PĀṬALIPUTRA by King AŚOKA, and then conducted the monarch on a tour of the sacred sites (MAHĀSTHĀNA) associated with the life of the Buddha. The cult of Upagupta became popular in Southeast Asian Buddhist countries from the twelfth century onward, thanks to his prominent appearance in Sanskrit materials, and he eventually comes to be featured in noncanonical Pāli materials as well. Upagupta occupies pride of place in Burmese (Myanmar) Buddhism, where he is presumed to reside in a pavilion in the southern ocean, whence he is invited to rituals to protect the Burmese from Māra's interference. At the conclusion of the ceremonies, an image of Upagupta is placed on a raft and floated downstream. Upagupta is listed in SARVĀSTIVĀDA sources as the fifth of the Indian patriarchs who are said to have succeeded the Buddha as head of the SAṂGHA, following MAHĀKĀŚYAPA, ĀNANDA, MADHYĀNTIKA, and ŚĀṆAKAVĀSIN; the East Asian CHAN tradition typically lists him instead as the fourth patriarch. According to a Chinese account of the origins of the VINAYA, Upagupta had five major disciples who were said to have established their own schools based on their differing views regarding doctrine; these five also redacted separate editions of the vinaya, which the Chinese refer to as the "five vinaya recensions" (wubu lü).

upakleśa. (P. upakkilesa; T. nye ba'i nyon mongs; C. sui fannao; J. zuibonnō; K. su pŏnnoe 隨煩惱). In Sanskrit, "secondary afflictions" (as opposed to the "root afflictions," or MŪLAKLEŚA), or "subsidiary defilements"; a group of ten (according to the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA), sixteen (according to Pāli materials), or twenty (according to the YOGĀCĀRA school) mental afflictions, including anger (KRODHA), envy (ĪRṢYĀ), deceit (MĀYĀ), selfishness (MĀTSARYA), and enmity (UPANĀHA).

upalabdhi. (T. dmigs pa; C. suode; J. shotoku; K. sodŭk 所得). In Sanskrit, "observation" or "perception," i.e., "getting at" something, a common term for the cognition of an object. Upalabdhi is sometimes used in a pejorative sense to refer to the cognition of, or getting at, factors that do not exist in an object, notably, a perduring self. To be preferred to upalabdhi is cognition that that is "unascertainable" (ANUPALABDHI), viz., without any bifurcation between subject and object and thus freed from any kind of false dichotomization; this is the type of perception that occurs in enlightenment.

Upāli. (T. Nye bar 'khor; C. Youboli; J. Upari; K. Ubari 優波離). Sanskrit and Pāli proper name of an ARHAT who was foremost among the Buddha's disciples in his knowledge of the monastic code of discipline (VINAYA). According to Pāli accounts, Upāli was a barber from the city of Kapilavatthu (S. KAPILAVASTU) and was in the service of the Sākiya (S. ŚĀKYA) princes who ruled there. Upāli accompanied Anuruddha (S. ANIRUDDHA) and his cousins when they decided to renounce the world and take ordination from the Buddha in Anupiyā grove. They handed him all their clothes and ornaments in preparation, but Upāli refused the gift, asking instead to be allowed to take ordination with them. Anuruddha and the others requested the Buddha to confer ordination on Upāli first so that their barber would always be senior to them and thus quell their pride in their noble birth. The Buddha refused Upāli's request to be allowed to retire to the forest to practice meditation in solitude, realizing that, while Upāli had the qualities to attain arhatship through that course, he would as a consequence neglect the study of dharma. Following the Buddha's advice, Upāli practiced insight (P. VIPASSANĀ; S. VIPAŚYANĀ) and became an arhat without retiring to the forest, thus

allowing the Buddha to teach him the entire VINAYAPIṬAKA. Upāli was frequently sought out to render decisions on matters of discipline, and he is frequently shown discussing with the Buddha the legal details of cases brought before him. Even during the Buddha's lifetime, monks frequently sought training in monastic discipline under Upāli; he was also regarded as a sympathetic guardian to monks facing difficulties. After the Buddha's demise, MAHĀKĀŚYAPA chose Upāli to recite the vinaya at the first Buddhist council (SAṂGĪTI; see COUNCIL, FIRST); ĀNANDA was chosen to recite the Buddha's sermons (SŪTRA). A succession of vinaya masters descended from Upāli, including MOGGALIPUTTATISSA, leader of the third Buddhist council (see COUNCIL, THIRD). Upāli's low status as a barber is often raised as evidence that the Buddha accepted disciples from all classes and castes in society and that all were capable of becoming arhats.

Upālisutta. (C. Youpoli jing; J. Ubarikyō; K. Ubari kyŏng 優婆離經). In Pāli, "Discourse to Upāli," the fifty-sixth sutta in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as the 133rd SŪTRA in the Chinese translation of the MADHYAMĀGAMA); preached to the householder (P. gahapati; S. GṚHAPATI) Upāli, a wealthy lay disciple of Nigaṇṭha Nātaputta (S. NIRGRANTHA JÑĀTĪPUTRA; a.k.a. MAHĀVĪRA; see also JAINA) at the Pāvārika's mango grove in NĀLANDĀ. Nigaṇṭha Nātaputta dispatched his lay disciple Upāli to engage the Buddha in a debate on the nature of action (P. kamma; S. KARMAN). The Jaina leader held that, of the three types of action, physical, verbal, and mental, it is bodily action that is the most productive of consequences for the actor. The Buddha maintained, in contrast, that it is mental action that is the most productive of consequences for the actor, since it is the mental intention (CETANĀ) that initiates the physical action. Convinced of the Buddha's explanations, Upāli dedicated himself as a lay disciple of the Buddha. When Nigaṇṭha Nātaputta heard of Upāli's conversion, he was filled with rage and vomited blood.

upanāha. (T. 'khon du 'dzin pa; C. hen; J. kon; K. han 恨). In Sanskrit and Pāli, "enmity," "resentment," "malice," or "animosity"; one of the ten (according to the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA), sixteen (according to Pāli materials), or twenty (according to the YOGĀCĀRA school) secondary afflictions or subsidiary defilements (UPAKLEŚA). Upanāha is described as a pent-up anger that takes the form of a wish to harm others. Upanāha refers to a long-held grievance or bitterness and is one possible manifestation of aversion (PRATIGHA; DVEṢA). Upanāha is distinguishable from "anger" (KRODHA) in that anger is a more powerful but more quickly dissipated kind of emotion, whereas "enmity" is a longer-term, simmering grudge.

Upananda. (T. Nye dga' po; C. Youbonantuo; J. Upananda; K. Ubanant'a 優波難陀). Sanskrit and Pāli proper name of a monk disciple of the Buddha, who was regularly chastised for his greed. There are numerous stories in the VINAYA of his attempts to procure the best and most of all offerings made to monks, and especially of robes and food. The Buddha typically rebukes Upananda for his misconduct, and then goes on to promulgate a new rule of conduct in order to deter monks from committing such transgressions in the future.

upapādukayoni. (P. opapātikayoni/upapātikayoni; T. rdzus te skye ba; C. hua sheng; J. keshō; K. hwa saeng 化生). In Buddhist Hybrid Sanskrit, "metamorphic" or "spontaneous birth"; one of the four modes of birth (see YONI) of living beings in the three realms of existence, along with oviparous birth or birth from an egg (aṇḍajayoni), viviparous birth or birth from a womb (jarāyujayoni), and birth from moisture (saṃsvedajayoni). Beings born via this fourth mode are spontaneously generated and include divinities (DEVA), hungry ghosts (PRETA), denizens of hell (NĀRAKA), and those residing in the intermediate state (ANTARĀBHAVA). In addition, even beings that are generally classified under another mode of birth may in certain circumstances be spontaneously generated, such as human beings who are the first to be born at the beginning of an eon (KALPA) and certain animals, such as NĀGAS and GARUḌAS. Unlike the other three modes of birth, beings born via metamorphosis appear spontaneously at their rebirth destiny, are fully mature at the time of their birth, and leave no physical corpse behind at death. A spontaneously born being recognizes his appropriate rebirth destination at the moment of his death and generates a desire to appear in that specific destiny, even if that desire be directed toward a baleful place like the hells. Beings born into SUKHĀVATĪ are said to be born either spontaneously into a lotus flower in the PURE LAND, or, if they are not yet advanced enough to be born directly into the pure land, viviparously to other beings at the outer perimeter of that land. Beings born metamorphically are the most numerous of all the four modes of birth and are regarded as superior.

upapadyaparinirvāyin. [alt. utpattiparinirvāyin] (T. skyes nas yongs su mya ngan las 'das pa; C. sheng ban/sheng banniepan; J. shōhatsu/shōhatsunehan; K. saeng pan/saeng panyŏlban 生般/生般涅槃). In Sanskrit, "one who achieves NIRVĀṆA at birth," a particular sort of nonreturner (ANĀGĀMIN), one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). According to the ABHIDHARMAKOŚABHĀṢYA, the utpattiparinirvāyin are nonreturners who, having linked up with any of the sixteen birth states of the subtle-materiality realm (RŪPADHĀTU), enter the "nirvāṇa with remainder" (SOPADHIŚEṢANIRVĀṆA) on that support. They are those who make an effort, unlike the ANABHISAṂSKĀRAPARINIRVĀYIN, but to whom effort comes naturally, unlike the SĀBHISAṂSKĀRAPARINIRVĀYIN.

upapadyavedanīyakarman. (P. upapajjavedanīyakamma; T. skyes nas myong 'gyur gyi las; C. shunci shengshou ye; J. junjishōjugō; K. sunch'a saengsu ŏp 順次生受業). In Sanskrit, "action experienced upon birth," a category of deed whose karmic effect is experienced in the immediately following

lifetime, as opposed to the present life or some other lifetime in the future.

upaputra. (T. nye sras). In Sanskrit, lit. "close sons," a group of eight BODHISATTVAS often depicted with the Buddha in MAHĀYĀNA iconography. They are MAÑJUŚRĪ, VAJRAPĀṆI, AVALOKITEŚVARA, KṢITIGARBHA, SARVANĪVARAṆAVIṢKAMBHIN, ĀKĀŚAGARBHA, MAITREYA, and SAMANTABHADRA.

upāsaka. (T. dge bsnyen; C. youposai; J. ubasoku; K. ubasae 優婆塞). In Sanskrit and Pāli, "[male] lay disciple," a lay Buddhist man who takes the three refuges (TRIŚARAṆA) and the five basic precepts (PAÑCAŚĪLA): (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are taken permanently, with three other precepts observed on full-moon and new-moon days (S. UPOṢADHA; P. uposatha), for a total of eight lay precepts (aṣṭāṅgaśīla; see AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ): (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn), (7) not to dance, sing, play music, attend performances, or adorn one's body with garlands, perfumes, or cosmetics, and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the vow not to engage in sexual misconduct is interpreted to mean complete celibacy. The term is often translated simply as "layman," but given the level of religious commitment, "[male] lay disciple" is a more accurate rendering. See also ŚIKṢĀPADA; ŚĪLA.

upāsakasaṃvara. (T. dge bsnyen gyi sdom pa; C. jinshi lüyi; J. gonjiritsugi; K. kŭnsa yurŭi 近事律儀). In Sanskrit and Pāli, "restraints of a [male] lay disciple," any or all the five precepts (PAÑCAŚĪLA) taken by a lay disciple for life: (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are meant to be observed every day, with three other precepts observed on full moon and new moon days (UPOṢADHA). The three additional precepts are (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn); (7) not to dance, sing, play music, attend performances, or adorn one's body with garlands, perfumes, or cosmetics; and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the vow not to engage in sexual misconduct is interpreted to mean complete celibacy. See also ŚIKṢĀPADA; ŚĪLA.

upasaṃpadā. (P. upasampadā; T. bsnyen par rdzogs pa; C. shoujie; J. jukai; K. sugye 受戒). In Sanskrit, "ordination" or "higher ordination," the ecclesiastical ceremony whereby a male novice (ŚRĀMAṆERA) becomes a fully ordained monk (BHIKṢU) and a female postulant (ŚIKṢAMĀṆĀ) becomes a fully ordained nun (BHIKṢUṆĪ). Although there are some variations in the procedure according to the different VINAYAS, the ordination ceremony is largely the same; that described in the Pāli vinaya is outlined here. In the case of a male novice, the ordinand, who must be at least twenty years of age, must first shave his hair, moustache, and beard and be provided with a monk's robe and bowl. He must have chosen a preceptor (P. upajjhāya; S. UPĀDHYĀYA) who will confer ordination upon him. The upajjhāya must be an elder (P. thera; S. STHAVIRA) of at least ten years standing, who is qualified morally and intellectually to act as preceptor. The candidate will then be brought before an assembly comprising at least ten monks, if the ceremony is held within the Buddhist heartland of India; if not, a minimum of five monks is necessary to conduct a valid ordination. The ordination ritual must be conducted within the confines of a SĪMĀ, or consecrated ordination boundary, and proceeds as follows. Seated in a squatting position, the candidate requests the assembly three times to confer ordination upon him. The assembly then asks him a set of stock questions concerning his age, his sex, his health, his legal liabilities, his preceptor, whether he has received permission from his parents, etc. If the candidate passes the inquiry, a formal petition is then put before the assembly three times that the candidate be admitted to the SAṂGHA. Silence from the assembly indicates approval, and the candidate is thereby ordained. Immediately upon receiving the higher ordination, the new monk is apprised of the four requisites (NIŚRAYA) of the monk, and of the four PĀRĀJIKAS or "defeats," these being grave misdeeds that would result in expulsion from the SAṂGHA. The following types of persons may not be ordained: branded thieves, fugitives from the law, convicted thieves; those punished by flogging or branding, patricides, matricides, murderers of arahants (S. ARHAT); those who have shed the blood of a buddha, eunuchs, false monks, seducers of nuns, hermaphrodites; those without an upajjhāya, persons who are maimed, disabled, or deformed in various ways; and those afflicted with various communicable diseases. In the case of a female postulant seeking higher ordination as a nun, the candidate is required to undergo a double ordination. First she is brought before the order of nuns (P. bhikkhuṇīsaṅgha, S. BHIKṢUṆĪSAṂGHA), where she is queried and, if found suitable, given the first upasaṃpadā. She is then brought before the order of monks, where she is given a second upasaṃpadā.

Upasena. (T. Nye sde; C. Youbosina; J. Upashina; K. Ubasana 優波斯那). Sanskrit and Pāli proper name of an eminent ARHAT declared by the Buddha to be foremost among his monk disciples in being altogether charming; also known in Pāli as Upasena Vaṅgantaputta. According to Pāli accounts, he was born into a brāhmaṇa family in Nālaka and was the younger brother of ŚĀRIPUTRA. His father was Vaṅganta, hence his name Vaṅgantaputta. Like his brother, Upasena was learned in the three Vedas. He was converted when he heard the Buddha preach and immediately entered the order. When he had been a monk for only one year, he ordained a new monk, for which offense he was severely rebuked by the Buddha. Chastened by the criticism, Upasena took up the practice of insight in earnest and attained arahantship. Upasena became a skilled and charismatic preacher who won many converts to the religion. He engaged in various ascetic practices (DHUTAṄGA) and convinced

many followers to do likewise. Each of his followers was charming in his own way, with Upasena the most charming of all. Upasena had resolved to attain such preeminence during the time of the previous buddha Padumuttara, when, as a householder of Haṃsavatī, he overheard a monk so praised and wished the same for himself in the future. Upasena's death was attended by a miracle. He was sitting at the mouth of a cave after his morning meal, mending his robe amid a pleasant breeze. At that time two snakes were in the vines above the cave door when one fell on his shoulder and bit him. As the venom coursed through his body, he requested Śāriputra and other monks near him to carry him outside so that he could die in the open. In a few moments he died, and his body immediately scattered in the breeze like chaff.

upāsikā. (T. dge bsnyen ma; C. youpoyi; J. ubai; K. ubai 優婆夷). In Sanskrit and Pāli, "[female] lay disciple," a lay Buddhist woman who takes the three refuges (TRIŚARAṆA) and the five basic precepts (PAÑCAŚĪLA): (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are meant to be observed every day, with three other precepts observed on full-moon and new-moon days (S. UPOṢADHA; P. uposatha). The three are (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn); (7) not to dance, sing, play music, attend performances, or adorn one's body with garlands, perfumes, or cosmetics; and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the vow not to engage in sexual misconduct is interpreted to mean complete celibacy. The term is often translated simply as "laywoman," but given the level of religious commitment, "[female] lay disciple" is a more accurate rendering. See also MAE CHI; ŚIKṢĀPADA.

upāsikāsaṃvara. (T. dge bsnyen ma'i sdom pa; C. youpoyi jie; J. ubaikai; K. ubai kye 優婆夷戒). In Sanskrit and Pāli, "restraints of a [female] lay disciple"; any or all the five restraints taken by a lay disciple for life: (1) not to kill, (2) not to steal, (3) not to engage in sexual misconduct, (4) not to lie, and (5) not to use intoxicants. These precepts are meant to be observed every day, with three other precepts observed on full-moon and new-moon days (S. UPOṢADHA; P. uposatha), making a total of eight precepts (aṣṭāṅgaśīla; see AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ). The three additional precepts are (6) not to eat at an inappropriate time (generally interpreted to mean between noon and the following dawn); (7) not to dance, sing, play music, attend performances, or adorn one's body with garlands, perfumes, or cosmetics; and (8) not to sleep on high beds. Also, during the full-moon and new-moon days, the precept not to engage in sexual misconduct is interpreted to mean complete celibacy. See ŚĪLA; ŚIKṢĀPADA.

upavāsa. (T. bsnyen gnas; C. jinzhu; J. gonjū; K. kŭnju 近住). In Sanskrit and Pāli, "fasting" or "abstinence," a term used to refer to the abstention practiced by lay disciples during the fortnightly UPOṢADHA observance. In this context, the term also refers to the eight precepts (AṢṬĀṄGAŚĪLA; see AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ), also referred to as the "one-day precepts" observed by lay disciples at this time. They are the eight precepts: not to kill, steal, engage in sexual activity, lie, use intoxicants, eat after noon, adorn their bodies, or sleep on high beds.

upavasatha. (S). See UPOṢADHA.

upāya. (T. thabs; C. fangbian; J. hōben; K. pangp'yŏn 方便). In Sanskrit and Pāli, "stratagem," "method"; term with at least four important denotations: (1) as a synonym for "skillful means" (UPĀYAKAUŚALYA); (2) as a general term for the activities necessary for the attainment of buddhahood; and (3) as one of the two essential components of the path, along with "wisdom" (PRAJÑĀ). In this latter sense, method refers to the actions a BODHISATTVA takes on behalf of all sentient beings. In this formulation, the various deeds that fall under the rubric of upāya are said to fructify as the RŪPAKĀYA of a buddha, while the bodhisattva's development of prajñā is said to fructify as his DHARMAKĀYA. (4) In Buddhist tantra, the superiority of the esoteric path of the VAJRAYĀNA over the exoteric path in bringing about buddhahood is often attributed to the superior stratagems or methods set forth in the TANTRAs, compared to those found in the sūtras. In tantra, upāya is associated with the male and prajñā with the female.

upāyakauśalya. (P. upāyakosalla; T. thabs mkhas; C. fangbian shanqiao; J. hōbenzengyō; K. pangpy'ŏn sŏn'gyo 方便善巧). In Sanskrit, "skillful means," "skill-in-means," or "expedient means," a term used to refer to the extraordinary pedagogical skills of the buddhas and advanced BODHISATTVAs; indeed, upāyakauśalya is listed as one of the ten perfections (PĀRAMITĀ) mastered on the bodhisattva path. (The rare Pāli form refers specifically to the Buddha's teaching proficiency.) The notion of skillful means is adumbrated in the famous "simile of the raft" from the ALAGADDŪPAMASUTTA, where the Buddha compares his teachings to a makeshift raft that will help one get across a raging river to the opposite shore: after one has made it across that river of birth and death to the "other shore" of NIRVĀṆA, the teachings have served their purpose and may be abandoned; in one sense, therefore, all his teachings are merely an expedient. The notion of skill-in-means also suggests that the Buddha intentionally fashions different versions of his teachings to fit the predelictions and aptitudes of his audience. Because of a buddha's direct understanding of his disciples' abilities, he is able to teach what is most appropriate for each of them, like a doctor prescribing a treatment for a specific malady. Skillful means may also be used to justify why certain acts perceived as immoral by beings of lesser capacity become virtues when performed by a bodhisattva, who has their best interests at heart (see UPĀYAKAUŚALYASŪTRA). ¶ The Buddha's skill-in-means

is often used to reconcile apparent contradictions in his teaching, since those teachings ultimately are provisional expressions of his realization. The notion of skillful means has also been put to polemical use, especially in the MAHĀYĀNA (and most famously in the SADDHARMAPUṆḌARĪKASŪTRA), when previous teachings of the Buddha, such as the three vehicles (TRIYĀNA), are declared by him to have been merely expedients that he employed to instruct disciples who were unable to comprehend the more profound teaching of the one vehicle (EKAYĀNA) of buddhahood. The concept of skillful means may thus also be deployed as a hermeneutical or polemical device to critique earlier, and implicitly inferior, formulations of Buddhist doctrine as expedient teachings given to those who are temporarily incapable of understanding and benefitting from the Buddha's more advanced teachings (as variously identified by different Buddhist schools).

Upāyakauśalyasūtra. (T. Thabs la mkhas pa'i mdo; C. Dasheng fangbian hui; J. Daijō hōben'e; K. Taesŭng pangp'yŏn hoe 大乘方便會). In Sanskrit, "Skillful Means Sūtra," an early MAHĀYĀNA sūtra included in the RATNAKŪṬASŪTRA collection, where it is also known as the *Jñānottarabodhisattvaparipṛcchā*. (In addition to the recension embedded in the 410 CE Chinese translation of the *Ratnakūṭa*, as transcribed above, there are also two other Chinese translations, one made in 285 CE, the other c. 980.) The first part of the sūtra extols the virtues of the practice of "skillful means" (UPĀYAKAUŚALYA), generally understood in this context to refer to the dedication of the merit from a virtuous deed, such as offerings made for the welfare and ultimate enlightenment of all beings. The sūtra goes on to explain how apparently nonvirtuous acts, such as sexual misconduct, become virtues when performed by a bodhisattva with skillful means, noting, "Something that sends other sentient beings to hell sends the bodhisattva who is skilled in means to rebirth in the world of BRAHMĀ." Also recounted is the famous story of the Buddha's previous life as a ship captain, when he kills a potential murderer in order to save others' lives. In the second part of the sūtra, the Buddha recounts the events of his life (see BAXIANG), from his entry into his mother's womb to his decision to teach the dharma as instances of his skillful means; none of these events are presented as the consequences of his own past nonvirtuous actions or indeed of any fault whatsoever on his part. For example, after his enlightenment, the Buddha has no hesitation to teach the dharma; nonetheless, he compels the god BRAHMĀ to descend from his heaven to implore the Buddha to teach. He forces this act so that beings who worship Brahmā will have faith in the Buddha and so that the myriad forms of the god Brahmā will generate BODHICITTA. The sūtra concludes with a discussion of ten cases in the life of the Buddha in which he apparently undergoes suffering (such as a headache, backache, and being pierced by a thorn) that had previously been ascribed to his nonvirtuous deeds in a past life; in each case, these are instead explained as being examples of the Buddha's skillful means.

upekṣā. (P. upekkhā; T. btang snyoms; C. she; J. sha; K. sa 捨). In Sanskrit, "equanimity," a term with at least four important denotations: (1) as a sensation of neutrality that is neither pleasurable nor painful; (2) as one of eleven virtuous mental concomitants (KUŚALA-CAITTA), referring to a state of evenness of mind, without overt disturbance by sensuality, hatred, or ignorance; (3) as a state of mental balance during the course of developing concentration, which is free from lethargy and excitement; and (4) one of the four "divine abidings" (BRAHMAVIHĀRA), along with loving-kindness (MAITRĪ), compassion (KARUṆĀ), and sympathetic joy (MUDITĀ). As a divine abiding, upekṣā indicates an even-mindedness toward all beings, regarding them with neither attachment nor aversion, as neither intimate nor remote; in some descriptions of the four "divine abidings," there is the additional wish that all beings attain such equanimity. In the VISUDDHIMAGGA, equanimity is listed as one of the meditative topics for the cultivation of tranquillity meditation (samathābhāvanā; see S. ŚAMATHA). Of the four divine abidings, equanimity is capable of producing all four levels of meditative absorption (P. JHĀNA; S. DHYĀNA), while the other divine abidings are capable of producing only the first three of four. The text indicates that, along with the other three divine abidings, equanimity is used only for the cultivation of tranquillity, not for insight training (P. vipassanābhāvanā; see S. VIPAŚYANĀ).

upekṣāpramāṇa. (P. upekkhāppamaññā; T. btang snyoms tshad med; C. she wuliangxin; J. shamuryōshin; K. sa muryangsim 捨無量心). In Sanskrit, "unlimited equanimity" or "boundless equanimity," a state of equanimity toward unlimited numbers of sentient beings, or the wish that unlimited sentient beings abide in a state of equanimity that is free from desire and hatred.

upoṣadha. [alt. poṣadha; upavasatha] (P. uposatha; T. gso sbyong; C. busa; J. fusatsu; K. p'osal 布薩). In Sanskrit, the fortnightly retreat (the term is generally left untranslated into English). It is the semimonthly ceremony (observed on the new moon and the full moon) in which monks and nuns are to assemble within a specified boundary (SĪMĀ) to recite the monastic rules of conduct set forth in the PRĀTIMOKṢA. The observance involves the confession of faults, following which the prātimokṣa is recited. The *bhikṣuprātimokṣa* is recited by fully ordained monks, the *bhikṣunīprātimokṣa* by fully ordained nuns; novices and laypeople are prohibited from participating in either observance. The purpose of the ceremony is for the SAṂGHA to purify itself of misdeeds through confession and to renew its commitment to moral conduct, thus helping to ensure harmony within the monastic community and between the clergy and the laity. Laypeople will often maintain eight precepts (AṢṬĀṄGASAMANVĀGATAṂ UPAVĀSAṂ) on this day, which essentially turn them into monks or nuns for a day: not to kill, steal, engage in sexual activity, lie, use intoxicants, eat after noon, adorn their bodies, or sleep on high beds. The term upoṣadha means to abide in a state of fasting or abstinence, a practice that was pre-Buddhist in origin; in Vedic times, it specifically

referred to the day prior to a soma sacrifice. The practice seems to have been adopted from other religious sects in India during the Buddha's lifetime. There are several types of upoṣadha ceremony, the most common and important of which is the saṃgha upoṣadha, which is attended by four or more monks who recite the prātimokṣa and is held on the new- and full-moon days of the month. When three or fewer monks are present, the ceremony is held but the prātimokṣa is not recited. According to the Pāli vinaya, there are twenty-one types of persons in whose presence a monk's upoṣadha ceremony may not be held, viz., nuns, women in training to become nuns, male and female novices, persons who have seceded from the order, persons guilty of a PĀRĀJIKA offense, monks who refuse to acknowledge their own wrongdoing (of three kinds), eunuchs, ersatz monks who wear monastic attire without having been ordained, monks who have joined other religions, nonhumans, patricides, matricides, murderers of ARHATs, seducers of nuns, schismatics, hermaphrodites, laypersons, and those who have shed the blood of a buddha.

ūrdhvasrotas. (T. gong du 'pho ba; C. shangliu ban/shangliu banniepan; J. jōruhatsu/jōruhatsunehan; K. sangnyu pan/sangnyu panyŏlban 上流般/上流般涅槃). In Sanskrit, "one who goes higher" or "upstreamer"; a specific type of nonreturner (ANĀGĀMIN), one of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). There are different accounts of the types of ūrdhvasrotas. According to Ārya VIMUKTISENA's explanation of the list of āryasaṃgha found in the ABHISAMAYĀLAṂKĀRAVṚTTI, based on the ABHIDHARMAKOŚABHĀṢYA, there are four: the pluta (those who leap over), ardhapluta (those who leap over half), sarvasthānacyuta (those who die in every place), and bhavāgraparama (those who journey to the summit of existence). All cultivate a meditation that enters and exits uncontaminated (ANĀSRAVA) states that cause them to take birth in the ŚUDDHĀVĀSA (pure abodes). This meditation allows them to jump at will from one meditative state (a DHYĀNA or SAMĀPATTI) to another without having to go through the intermediate stages. The pluta enters the first dhyāna, is reborn among the BRAHMAKĀYIKA divinities of the first meditative absorption and, through the force of earlier meditative development, emerges from that level of absorption, forsakes all levels in between, and is reborn in the pure abode region of the AKANIṢṬHA heaven of the highest divinities, where he enters NIRVĀṆA. The ardhapluta is similarly reborn among the brahmakāyika divinities of the first meditative absorption, also forsakes the levels in between the first and fourth absorption, and is reborn in the pure abodes, but not each in turn. Omitting some of them, he is then born in the AKANIṢṬHA heaven, where he enters nirvāṇa. The sarvasthānacyuta, as the name suggests, is born among the brahmakāyika divinities of the first meditative absorption and then goes through the process of taking birth in every other heaven in the subtle materiality and immaterial realms except the great Brahmā heaven until he enters nirvāṇa in the akaniṣṭha heaven. The bhavāgraparama are born as divinities in the heavens up to the level of the BṚHATPHALA (great fruition) heaven, forsake the pure abodes, and, having taken rebirths in stages in the immaterial realm (ĀRŪPYADHĀTU), enter nirvāṇa in the BHAVĀGRA (the summit of existence) heaven.

ūrṇā. (S). See ŪRṆĀKEŚA.

ūrṇākeśa. [alt. ūrṇākośa, ūrṇā] (P. uṇṇākesa; T. mdzod spu; C. baihao; J. byakugō; K. paekho 白毫). In Sanskrit, "hair treasure" or "tuft"; a spiral of hair said to be infinite in length located between the eyebrows of a buddha. It is frequently depicted as a gem inlaid between the eyebrows on buddha and BODHISATTVA images. In some lists, the ūrṇākeśa is the thirty-first of the thirty-two major marks of a superman (MAHĀPURUṢALAKṢAṆA) and is said to be endowed with a variety of magical powers. In many sūtras, the Buddha sometimes emits a ray of light from his ūrṇākeśa in order to illuminate distant worlds; see KĀYAPRABHĀ; TOUGUANG.

Uruvilvā. (P. Uruvelā; T. Lteng rgyas; C. Youloupinluo; J. Urubinra; K. Urubinna 優樓頻螺). In Sanskrit, said to mean "Great Bank of Sand," the name of an area, encompassing several villages, on the banks of the NAIRAÑJANĀ River in MAGADHA (today in the Indian state of Bihar), and the site of several important events in the life of the Buddha. It was in Uruvilvā that the BODHISATTVA practiced austerities for six years together with the group of five ascetics (PAÑCAVARGIKA). It was also there that he renounced the practice of asceticism, as a result of which he was repudiated by his five companions, who left him in Uruvilvā and departed for ṚṢIPATANA. The bodhisattva then proceeded to the BODHI TREE, where he achieved enlightenment. In the forty-nine days after his enlightenment, the Buddha sat under various trees in Uruvilvā, where shrines were eventually established. It was also at Uruvilvā that BRAHMĀ SAHAṂPATĪ appeared before the Buddha and implored him to teach the dharma. After turning the wheel of the dharma (DHARMACAKRAPRAVARTANA) for the group of five in Ṛṣipatana, the Buddha returned to Uruvilvā, where he converted thirty young men, as well as the "Kāśyapa brothers," led by URUVILVĀ-KĀŚYAPA and their followers.

Uruvilvā-Kāśyapa. (P. Uruvela-Kassapa; T. Lteng rgyas 'od srung; C. Youloupinluo Jiashe; J. Urubinra Kashō; K. Urubinna Kasŏp 優樓頻螺迦葉). The chief of the three "Kāśyapa brothers" (together with NADĪ-KĀŚYAPA and GAYĀ-KĀŚYAPA), also known in Pāli as the Tebhātika Jaṭila. Prior to their encounter with the Buddha, the three brothers were matted-hair ascetics engaged in fire worship, living with their followers on the banks of the NAIRAÑJANĀ River. Uruvilvā-Kāśyapa himself is said to have had five hundred followers. After his first teachings in the Deer Park (MṚGADĀVA; ṚṢIPATANA) at SĀRNĀTH, the Buddha returned to Uruvilvā, where he had practiced asceticism prior to this enlightenment. There he encountered Uruvilvā-Kāśyapa, who mistakenly believed that he was already an ARHAT and was liberated from the bonds of rebirth. Knowing that

Uruvilvā-Kāśyapa could be dissuaded from his false views by a display of yogic power, the Buddha spent the rains retreat with him, performing 3,500 magical feats to demonstrate his mastery of supernatural powers (S. RDDHI), including subduing a fire serpent (NĀGA) without being burned, a scene depicted in Indian rock carvings. Using his ability to read Kāśyapa's mind, the Buddha was able to convince the ascetic that he was not an arhat. When the Buddha told Uruvilvā-Kāśyapa that the fire worship that he taught did not lead to enlightenment, Uruvilvā-Kāśyapa requested ordination. Uruvilvā-Kāśyapa and his five hundred followers all cut off their long locks and threw them in the river. When the other two brothers and their followers saw the hair floating by, they came to investigate and in turn sought ordination. In one fell swoop, the Buddha's community of monks grew to over a thousand monks. The Buddha taught them the so-called "Fire Sermon" (ĀDITTAPARIYĀYA), at which point they all become arhats. They then traveled together to RĀJAGṚHA where, in the presence of King BIMBISĀRA, the new monks proclaimed their allegiance to the Buddha. The three brothers are often listed among the audience of MAHĀYĀNA sūtras.

ūṣman. [alt. ūṣmagata] (T. drod; C. nuan; J. nan; K. nan 煖). In Sanskrit, "heat"; the first of the "aids to penetration" (NIRVEDHABHĀGĪYA) that are developed during the "path of preparation" (PRAYOGAMĀRGA) and mark the transition from the mundane sphere of cultivation (LAUKIKA[BHĀVANĀ]MĀRGA) to the supramundane vision (viz., DARŚANAMĀRGA) of the FOUR NOBLE TRUTHS (CATVĀRY ĀRYASATYĀNI). This stage is called heat, the ABHIDHARMAMAHĀVIBHĀṢĀ says, because it "can burn all the fuel of the afflictions (KLEŚA)." Heat involves ardent faith (ŚRADDHĀ) regarding the DHARMAVINAYA: when that faith is conditioned by the noble truth of the path (MĀRGASATYA), it produces ardency regarding the right DHARMA; when it is faith conditioned by the noble truth of extinction (NIRODHASATYA), it produces ardency regarding the VINAYA. Ūṣman and summit (MŪRDHAN), the first two of the nirvedhabhāgīyas, are still subject to retrogression and thus belong to the worldly path of cultivation (laukikabhāvanāmārga).

uṣṇīṣa. (P. uṇhīsa; T. gtsug tor; C. foding/rouji; J. butchō/nikukei; K. pulchŏng/yukkye 佛頂/肉髻). In Sanskrit, lit. "turban," the protuberance appearing on the crown of a buddha's head, which is commonly depicted in buddha images. The MAHĀPADĀNASUTTANTA and LAKKHAṆASUTTANTA of the Pāli DĪGHANIKĀYA refer to the uṇhīsasīsa ("wearing a turban on the head") as one of the thirty-two major "marks of a superman" (P. mahāpurisalakkhaṇa; S. MAHĀPURUṢALAKṢAṆA). Many texts report that the uṣṇīṣa is endowed with a variety of magical powers. For example, it is said that, although the uṣṇīṣa is perfectly proportional to the Buddha's head, it cannot be measured. It is impossible to see the top of the uṣṇīṣa, and divinities (DEVA) are unable to fly above it. Many scriptures, including the *Uṣṇīṣavijayadhāraṇī*, also mention the Buddha radiating light from his uṣṇīṣa. Later Buddhist works in Sanskrit refer to this protuberance as the uṣṇīṣa-śiraskatā (lit. "head-bone"). The origin and precise interpretation of this unique feature of a Buddha remains in dispute. The Sanskrit term uṣṇīṣa is in fact a common word for turban. Some art historians have argued that the uṣṇīṣa originated as a topknot of hair, such as is found depicted in Graeco-Gandhāran Buddhist sculpture from northwestern India from around the first century CE; the interpretation of the uṣṇīṣa as a protuberance on the top of the skull subsequently evolved at MATHURĀ, where artists began to cover the uṣṇīṣa with little snail-curled hair, due to a misinterpretation of the wavy hairstyle of Gandhāran sculptures. The Chinese pilgrims FAXIAN and XUANZANG report seeing the "uṣṇīṣa bone" of the Buddha being worshipped at a monastery in Haḍḍa (in present-day Afghanistan).

Uṣṇīṣasitātapatrā. (S). See TATHĀGATOṢṆĪṢASITĀTAPATRĀ.

utpāda. (P. uppāda; T. skye ba; C. shengqi; J. shōki; K. saenggi 生起). In Sanskrit, "production," or "arising," the generation of a specific fruition or effect (PHALA) from a given cause (HETU). In generic Buddhist accounts of causality or etiology, hetu designates the main or primary cause of production, which operates in conjunction with various concomitant or subsidiary conditions (PRATYAYA); together, these two bring about the production (utpāda) of a specific "fruition" or result (phala). In the PRAJÑĀPĀRAMITĀ literature and the MADHYAMAKA school, the notion of production comes under specific criticism (see VAJRAKAṆĀ), with NĀGĀRJUNA famously asking, e.g., how an effect can be produced from a cause that is either the same as or different from itself. The prajñāpāramitā sūtras thus famously declare that all dharmas are actually ANUTPĀDA, or "unproduced."

Utpalavarṇā. (P. Uppalavaṇṇā; T. Ut pa la'i mdog; C. Lianhuase; J. Rengeshiki; K. Yŏnhwasaek 蓮華色). One of two chief nun disciples of the Buddha, the first being KṢEMĀ. According to Pāli accounts, where she is known as Uppalavaṇṇā, she was born into a banker's family in Sāvatthi (ŚRĀVASTĪ) and was renowned for her beauty. Her name, lit. "blue-lotus colored," refers to her skin complexion, which was dark like a blue lotus flower. Men of all ranks, royals and commoners, sought her hand in marriage. Her father, fearing to offend any of them, suggested to her that she renounce the world. Already inclined by nature to renunciation, Uppalavaṇṇā became a Buddhist nun. While sweeping an uposatha (S. UPOṢADHA) assembly hall, she attained meditative absorption (P. JHĀNA; DHYĀNA) by concentrating on the light of a candle, and soon became an ARHAT possessed of the analytical attainments (P. paṭisambhidā; S. PRATISAṂVID). Uppalavaṇṇā was renowned for her various supernatural powers born from her mastery of meditative absorption. The Buddha declared her to be chief among his nun disciples in supranormal powers (P. iddhi; S. ṚDDHI). After she had become a nun and an arhat, Uppalavaṇṇā was raped by

her cousin Ānanda (not the Ānanda who was the Buddha's attendant), who had been enamored of her when she was a laywoman. Although he was swallowed by the earth for his heinous crime, the case raised the question within the monastic community as to whether arhats are capable of experiencing sensual pleasure and thus had sexual desire. The Buddha asserted categorically that arhats are immune to sensuality. Several verses of the THERĪGĀTHĀ are attributed to Uppalavaṇṇā. She and ŚĀRIPUTRA are also said to have been the first to greet the Buddha at SĀṂKĀŚYA when he descended on ladders from the TRĀYASTRIṂŚA heaven, where he had been instructing his mother, MĀYĀ; in order to make her way through the large crowd that had gathered, she disguised herself as a CAKRAVARTIN. Among the many crimes of the Buddha's evil cousin DEVADATTA was beating her to death after she chastised him for attempting to assassinate the Buddha; he thus committed the deed of immediate retribution (ĀNANTARYAKARMAN) of killing an arhat. The commentary to the *Therīgāthā* and the Sanskrit VINAYAVIBHAṄGA provide differing accounts of how she became a nun. The first is briefer and has her come from Sāvatthi (S. ŚRĀVASTĪ); the latter is more extensive and has her come from TAKṢAŚILĀ (P. Taxila). In both accounts, she gives birth to two children by two different men and becomes separated from both children. Years later, she unknowingly marries her son, who then marries her daughter (whom Utpalavarṇā also does not recognize) as his second wife, making Utpalavarṇā husband to her son and co-wife to her daughter. In the Pāli account, her eventual recognition of this state of affairs is sufficient to cause her to renounce the world. In the Sanskrit account, she gives birth to a son by her first son and when she realizes this, she becomes a courtesan, who is hired to seduce MAHĀMAUDGALYĀYANA. She is unsuccessful, and his words convince her to renounce the world and become a nun.

utpattikrama. (T. bskyed rim; C. shengqi cidi; J. shōkishidai; K. saenggi ch'aje 生起次第). In Sanskrit, "stage of generation" or the "creation stage," one of the two major phases (along with the NIṢPANNAKRAMA or the "stage of completion") of ANUTTARAYOGATANTRA practice. The term encompasses a wide range of practices that commence after one has received initiation (ABHIṢEKA), generally involving the practice of the SĀDHANA of a particular deity with the aim of the "generation" or transformation of the body, environment, enjoyments, and activities of the practitioner into the body, environment, enjoyments, and activities of a buddha. This is done through the practice of deity yoga (DEVATĀYOGA), in which the meditator visualizes himself or herself as a buddha and the environment as a MAṆḌALA. In the RNYING MA sect of Tibetan Buddhism, MAHĀYOGA generally corresponds to the utpattikrama.

uttamanirmāṇakāya. (T. mchog gi sprul sku; C. shanghua shen; J. jōkeshin; K. sanghwa sin 上化身). In Sanskrit, "supreme emanation body," one of the forms of the emanation body (NIRMĀṆAKĀYA) of a buddha. A buddha may appear in any form in order to benefit sentient beings, including as an inanimate object. The form of a buddha that appears in the world and performs the twelve deeds or the eight episodes in the life of a buddha (BAXIANG), including achieving enlightenment, teaching the dharma, and passing into PARINIRVĀṆA, is called a "supreme emanation body." The "supreme emanation body" is a body adorned with the major and minor marks of a MAHĀPURUṢA and dressed in the robes of a monk, such as ŚĀKYAMUNI. This type of nirmāṇakāya is contrasted with the JANMANIRMĀṆAKĀYA, or "created emanation body," which are the nonhuman or inanimate forms a buddha assumes in order to help others overcome their afflictions. See also TRIKĀYA.

uttamasiddhi. (T. mchog gi dngos grub; C. zuishang daxidi; J. saijōdaishijji; K. ch'oesang taesilchi 最上大悉地). In Sanskrit, "supreme attainment"; a term used, especially in a tantric context, to refer to the attainment of buddhahood, in distinction to the common attainments (SĀDHĀRAṆASIDDHI), such as the ability to fly, walk through walls, and find buried treasure, which can be achieved through the recitation of MANTRA and the propitiation of deities.

uttarakuru. (T. sgra mi snyan; C. beijuluzhou; J. hokkurushū; K. pukkuro chu 北俱盧洲). Sanskrit and Pāli name of one of the four island continents located in the four cardinal directions surrounding Mount SUMERU, according to traditional Buddhist cosmology. Uttarakuru is the northern continent and is square in shape. Its inhabitants, classified as humans among the six types of beings who inhabit SAṂSĀRA, are said to be thirty-two cubits in height and to live for a thousand years. Their language is said to be very unpleasant to the ear.

Uttaramūlanikāya. A monastic fraternity in Sri Lanka, deriving from the ABHAYAGIRI sect. The main monastery of the group was the Uttarola VIHĀRA, built by King Mānavamma, and donated to the monks of the Abhayagiri Vihāra for having permitted his elder brother to be ordained, despite the fact that he had lost one eye and therefore would normally have been disqualified. The first head of the Uttarola monastery was the king's brother himself, whose duties included the supervision of the guardians of the TOOTH RELIC. The late-eleventh or early-twelfth century scholiast ANURUDDHA, author of the famous ABHIDHAMMA primer, ABHIDHAMMATTHASAṄGAHA, describes himself in a colophon as an elder of the Uttaramūlanikāya.

Uttarā-Nandamātā. An eminent laywoman declared by the Buddha to be foremost in the attainment of meditative power. According to Pāli accounts, she was the daughter of Puṇṇaka, a servant of the wealthy man Sumana of Rājagaha (S. RĀGAGṚHA). Uttarā's family was devoted to the Buddha and, on one occasion, while listening to a sermon he was preaching, Uttarā and her parents became stream-enterers (P. sotāpanna; S. SROTAĀPANNA). When Sumana requested that Uttarā be

betrothed to his son, he was at first refused on the grounds that his family was not Buddhist. Agreement was reached when Sumana promised that Uttarā would be supplied with sufficient requisites to continue her daily devotions to the Buddha. Her new husband, however, reneged on the agreement and refused to allow her to observe the uposatha (S. UPOṢADHA) retreat day because she would have to refrain from intercourse for the night. In order that she could observe the uposatha, Uttarā requested money from her father-in-law so she could hire a courtesan named Sirimā to service her husband. According to legend, there subsequently ensued an incident that led to the enlightenment of the courtesan, her husband, and her father-in-law. It so happened that one day while Uttarā busied herself preparing a magnificent offering for the Buddha and his disciples, her husband was strolling hand in hand with Sirimā. Seeing his wife toiling, he smiled at her foolishness for not using her riches for herself. Uttarā saw her husband and likewise smiled at his foolishness for wasting his life in self-indulgence. Sirimā, misunderstanding their smiles, flew into a jealous rage and threw boiling oil at Uttarā. But through the power of Uttarā's compassion for Sirimā, the oil did not burn her, and, witnessing this miracle, Sirimā understood her mistake and begged forgiveness. Uttarā brought Sirimā to the Buddha, who preached to her, whereupon she became a once-returner (P. sakadāgamī; S. SAKṚDĀGĀMIN). Uttarā's husband and father-in-law, who also heard the sermon, became stream-enterers.

uttarāsaṃga. (P. uttarāsaṅga; T. bla gos; C. zhongjiayi; J. chūgee; K. chunggaŭi 中價衣). In Sanskrit, the "upper robe" or "cassock"; one of the three robes (TRICĪVARA) permitted for a monk or nun, along with the ANTARVĀSAS, or lower robe, and the SAṂGHĀṬĪ, or outer robe or waistcloth. The uttarāsaṃga is large enough to cover the body from the neck to the middle of the calf; it is normally made of one layer of cloth. See also CĪVARA; KĀṢĀYA.

Uttaratantra. (T. Rgyud bla ma). See RATNAGOTRAVIBHĀGA.

V

Vāgīsa. (S). See VĀṄGĪŚA.

vāgviveka. (T. ngag dben). In Sanskrit, "isolation of speech"; one of the six stages of the completion state (NIṢPANNAKRAMA) in the ANUTTARAYOGATANTRA systems. In order to separate the mind from coarse conventional appearances and induce the dawning of the mind of clear light (PRABHĀSVARACITTA), the body, speech, and mind must be isolated from their ordinary forms. In the isolation of speech, the subtle wind (PRĀṆA) that is the root of speech is isolated from the ordinary movement of winds. That subtle wind is then combined with MANTRA.

Vaibhāṣika. (T. Bye brag smra ba; C. Piposha shi; J. Bibashashi; K. Pibasa sa 毘婆沙師). In Sanskrit, "Followers of the *Vibhāṣā*"; the ĀBHIDHARMIKAS associated with the SARVĀSTIVĀDA school of ABHIDHARMA, especially in KASHMIR-GANDHĀRA in northwestern India but even in BACTRIA. Because these masters considered their teachings to be elaborations of doctrines found in the Sarvāstivāda abhidharma treatise, the ABHIDHARMAMAHĀVIBHĀṢĀ, they typically referred to themselves as the Vaibhāṣika; hence, the Kashmiri strand of Sarvāstivāda may be called either Sarvāstivāda-Vaibhāṣika, or, simply, Vaibhāṣika. The root text of the Vaibhāṣika school is the *Abhidharmamahāvibhāṣā* (a.k.a. *Mahāvibhāṣā*), a massive encyclopedic compendium of Sarvāstivāda doctrine. The Vaibhāṣikas maintained that the *Mahāvibhāṣā* was originally spoken by the Buddha himself, and that the various interlocutors—including divinities, ŚĀRIPUTRA, and others—who facilitate the work's catechistic structure were summoned by the Buddha for the sake of the text's composition. The Gandhāran response to this and other claims made by the Vaibhāṣikas led to the formation of an offshoot that rejected the authority of this abhidharma literature. This offshoot called itself the SAUTRĀNTIKA, or "Those Who Adhere to the SŪTRAS." The Vaibhāṣika abhidharma system maintains the existence of seventy-five constituent factors (DHARMA). Seventy-two of these are conditioned (SAṂSKṚTA) and three are unconditioned (ASAṂSKṚTA). Like most other schools of Buddhism, the Vaibhāṣikas affirmed the selflessness (ANĀTMAN) of persons and the momentary (KṢAṆIKA) nature of conditioned dharmas. However, they maintained that these factors have their own real existence that endures in past, present, and future modes. They believed these factors to be both real and eternal—a view for which they generated many elaborate justifications. They also believed external objects to be composed of minute particles, like atoms (PARAMĀṆU). According to the Vaibhāṣikas, consciousness (VIJÑĀNA) or cognition has no form that is independent of its object; the Vaibhāṣika model of the relationship between consciousness and its objects is therefore sometimes referred to as "direct realism" (see ĀKĀRA). VASUBANDHU's ABHIDHARMAKOŚABHĀṢYA is mainly concerned with abhidharma theory as it was explicated in the Vaibhāṣika school; in comparison to the *Mahāvibhāṣā*, however, the *Abhidharmakośabhāṣya* presents a more systematic overview of Sarvāstivāda positions and, at various points in his expositions, Vasubandhu criticizes Sarvāstivāda doctrine from the standpoint of its more progressive Sautrāntika offshoot. This criticism elicited a spirited response from later Sarvāstivāda-Vaibhāṣika scholars, such as SAṂGHABHADRA in his *NYĀYĀNUSĀRA. The Vaibhāṣika disappeared as an independent school sometime around the seventh or eighth centuries CE.

vaidalya. (S) (P. vedalla). See VAIPULYA.

Vaidalyaprakaraṇa. (T. Zhib mo rnam par 'thag pa). In Sanskrit, "Extended" or "Woven" "Explanation"; a work now extant only in Tibetan, which is ascribed to NĀGĀRJUNA (although some modern scholarship has questioned the attribution). The treatise, also known as the *Vaidalyasūtra*, is listed in Tibet as one of Nāgārjuna's six works in his "logical corpus" (YUKTIKĀYA). The work is devoted to the refutation of sixteen principles (padārtha) set forth in the *Nyāyasūtra*, which is accomplished in seventy-three aphorisms, or sūtras. An autocommentary is also extant.

***Vaidalyasūtranāma**. (S) (T. Zhib mo rnam par 'thag pa zhes bya ba'i mdo). See VAIDALYAPRAKARAṆA.

Vaidehī. (P. Videhī; T. Lus 'phags ma; C. Weitixi; J. Idaike; K. Wijehŭi 韋提希). Sanskrit proper name of the queen of BIMBISĀRA, king of MAGADHA, and mother of AJĀTAŚATRU. According to some traditions, her name derives from the fact that she hailed from VIDEHA. When her son Ajātaśatru usurped the throne and imprisoned his father, no one was allowed to visit him except for Vaidehī. Although she was prohibited from bringing Bimbisāra food, she hid food in her clothes. When this

was discovered, she hid food in her hair and then in her shoes. When these were discovered, she smeared her body with the four sweet substances, which the king licked for his sustenance. When this was discovered, the king lived on the energy from walking meditation, until his son had his feet lacerated, after which he died. The incident of Vaidehī's visit to the cell of Bimbisāra provides the setting for one of the three major sūtras of the East Asian PURE LAND traditions, the GUAN WULIANGSHOU JING (sometimes known by the hypothetical reconstructed Sanskrit title **Amitāyurdhyānasūtra*, or simply as the "Meditation Sūtra"). According to this sūtra, when Ajātaśatru discovers that his mother has been secretly feeding the king, he incarcerates her as well. Despite her sorrow, Vaidehī does not give up her faith in the Buddha and invokes his aid. The Buddha then appears before her, and she asks that he teach her about a place where there is no sorrow. The Buddha then teaches her how to visualize the SUKHĀVATĪ pure land of the buddha named "Infinite Life" (AMITĀYUS/AMITĀBHA). He next explains to her how one may be reborn in this wonderful paradise, which is a land without suffering, a world of endless bliss. At the end of the sūtra, Vaidehī is mentioned as one of many who were inspired by the Buddha's preaching.

vaipulya. [alt. vaidalya] (cf. P. vedalla; T. shin tu rgyas pa; C. fangdeng; J. hōdō; K. pangdŭng 方等). In Sanskrit, lit. "vast" or "extended," viz., "works of great extent"; a term that appears in the title of a number of MAHĀYĀNA sūtras meant to indicate their profundity, comprehensiveness, and stereotypically great length. Such sūtras will typically offer a more comprehensive overview of Buddhist thought and practice than shorter sūtras that may have a single, or more circumscribed, message. The term is used to name one of the nine (NAVAṄGA) (Pāli) or twelve (DVĀDAŚĀṄGA[PRAVACANA]) (Sanskrit) categories (AṄGA) of Buddhist scripture according to their structure or literary style. As one of the nine categories of scriptures organized by type or style, vaipulya corresponds to the Pāli category of vedalla (S. vaidalya), which refers to such catechetical texts as the SAKKAPAÑHASUTTANTA or the SAMMĀDIṬṬHISUTTA. In the twelve types of scripture used in Mahāyāna classifications, the vaipulyasūtras are listed as the eleventh category and especially refer to scriptures of massive size. Mahāyāna sūtras included in the vaipulya category include many of the seminal works of the tradition, including the PRAJÑĀPĀRAMITĀ sūtras, the RATNAKŪṬASŪTRA collection, and the AVATAṂSAKASŪTRA.

vairāgya. (P. virāga; T. chags bral; C. liran/liyu/wuyu; J. rizen/riyoku/muyoku; K. iyŏm/iyok/muyok 離染/離欲/無欲). In Sanskrit, "dispassion [toward the world]"; an important step in the soteriological process leading to NIRVĀṆA. In the ABHIDHARMAMAHĀVIBHĀṢĀ, vairāgya is said to correspond to "lack of greed" (S. ALOBHA; C. wutan), one of the three wholesome faculties (trīṇi kuśalamūlāni, see KUŚALAMŪLA), along with "lack of anger" (S. apratigha; C. wuchen) and "nondelusion" (S. amoha; C. wuchi). Vairāgya is an essential factor in reaching the state that is uncontaminated (ANĀSRAVA) by the afflictions (KLEŚA), a characteristic of the ARHAT path. Vairāgya is the tenth of the twelve links (NIDĀNA) in what is known in Pāli Buddhist literature as "supramundane dependent origination" (P. lokuttara-paṭiccasamuppāda; S. LOKOTTARA-PRATĪTYASAMUTPĀDA). This supramundane chain leads to liberation (P. vimutti; S. VIMUKTI), rather than continued rebirth in SAṂSĀRA, which is the end result of the more common mundane chain. In this "supramundane" chain, the twelve links are (1) suffering (P. dukkha; S. DUḤKHA), (2) faith (P. saddhā; S. ŚRADDHĀ), (3) delight or satisfaction (P. pāmojja; S. prāmodya), (4) physical rapture or joy (P. pīti; S. PRĪTI), (5) tranquillity or repose (P. passaddhi; S. PRAŚRABDHI), (6) mental ease or bliss (SUKHA), (7) concentration (SAMĀDHI), (8) knowledge and vision that accords with reality (P. yathābhūtañāṇadassana; S. YATHĀBHŪTAJÑĀNADARŚANA), (9) disillusionment (P. nibbidā; S. NIRVEDA), (10) dispassion (P. virāga; S. vairāgya), (11) liberation (P. vimutti; S. VIMUKTI), and (12) knowledge of the destruction of the contaminants (P. āsavakkhāya; S. ĀSRAVAKṢAYA). The **Āryaśāsanaprakaraṇa* (C. *Xianyang shengjiao lun*), a summary exposition of the YOGĀCĀRABHŪMIŚĀSTRA, also mentions vairāgya in a similar list of twelve links, the difference being that the first two links are replaced by "observance of precepts" (P. kusalasīla; S. kuśalaśīla), and "freedom from remorse" (P. avippaṭisāra; S. avipratisāra).

Vairocana. (T. Rnam par snang mdzad; C. Dari rulai/Piluzhena; J. Dainichi nyorai/Birushana; K. Taeil yŏrae/Pirojana 大日如來/毗盧遮那). In Sanskrit, "Resplendent"; one of the five buddhas (PAÑCATATHĀGATA) and the chief buddha of the TATHĀGATAKULA; he is also one of the major buddhas of East Asian Buddhism, where he is often conflated with MAHĀVAIROCANA. The origin of Vairocana can be traced back to the Hindu tradition, where he appears as a relatively minor deity associated with the Sun. ¶ Although the name Vairocana appears in some mainstream Buddhist and PRAJÑĀPĀRAMITĀ materials, it is not until the emergence of the AVATAṂSAKASŪTRA that Vairocana comes to be widely regarded as the buddha who is the personification of the universal truth of the religion. In its "Chapter on Vairocana," Vairocana is considered to be the main buddha of the sūtra, who is omnipresent as the DHARMAKĀYA. Vairocana is, however, also described in the sūtra as a buddha who mastered the BODHISATTVA path by making vows to attain buddhahood, performing all types of virtuous deeds, hearing the dharma, cultivating meditative practices, and realizing the truth of the dependent origination of the dharma realm (C. FAJIE YUANQI) in which each and every thing in existence is in multivalent interaction with all other things in a state of complete and perfect interfusion. In this case, Vairocana as the reward body (SAṂBHOGAKĀYA) is called ROCANA (C. Lushena) in order to distinguish him from Vairocana (C. Piluzhena) as the dharmakāya buddha. With the growing popularity of the *Avataṃsakasūtra*, Vairocana becomes one of the principal buddhas of East Asian Buddhism. Many Vairocana images were constructed in China starting in the sixth century, and colossal

images of him were erected in the LONGMEN Grottoes near Luoyang in northern China and in TŌDAIJI in Nara, Japan. In Korea, Vairocana (as the dharmakāya buddha) often appeared at the center of a buddha triad, flanked by ŚĀKYAMUNI (as the NIRMĀṆAKĀYA) and ROCANA (as the saṃbhogakāya). Vairocana's popularity expanded with his appearance in the MAHĀVAIROCANASŪTRA, and, from this point on, Vairocana is generally regarded as the main buddha of the *Avataṃsakasūtra* and the HUAYAN ZONG, while Mahāvairocana is regarded as the main buddha of the MAHĀVAIROCANĀBHISAṂBODHISŪTRA and the ZHENYAN or SHINGON schools. ¶ Vairocana is also the central deity of the VAJRADHĀTU (J. KONGŌKAI) and the GARBHADHĀTU (J. TAIZŌKAI) MAṆḌALAS of YOGATANTRA associated with the SARVATATHĀGATATATTVASAṂGRAHA, a highly influential tantric text in India, Tibet, and East Asia. He appears in the central assembly of the vajradhātu maṇḍala, displaying the MUDRĀ of wisdom (dainichi ken-in), surrounded by the four directional buddhas (AKṢOBHYA, RATNASAMBHAVA, AMITĀBHA, and AMOGHASIDDHI), each of whom embodies four aspects of Vairocana's wisdom. In the garbhadhātu maṇḍala, Vairocana is located at the center of the eight-petaled lotus in the central cloister of the maṇḍala, along with the four buddhas and four bodhisattvas sitting on the eight petals. Vairocana is typically depicted as white in color, holding the wheel of dharma (DHARMACAKRA) in his hands, which are in the gesture of teaching (VITARKAMUDRĀ). Vairocana is closely associated with the bodhisattva SAMANTABHADRA, and his consort is Vajradhātvīśvarī. The commentaries on the *Sarvatathāgatatattvasaṃgraha* recount that Prince SIDDHĀRTHA was meditating on the banks of the NAIRAÑJANĀ River when he was roused by Vairocana and the buddhas of the ten directions, who informed him that such meditation would not result in the achievement of buddhahood. He thus left his physical body behind and traveled in a mind-made body (MANOMAYAKĀYA) to the AKANIṢṬHA heaven, where he received various consecrations and achieved buddhahood. He next descended to the summit of Mount SUMERU, where he taught the yogatantras. Finally, he returned to the world, inhabited his physical body, and then displayed to the world the well-known defeat of MĀRA and the achievement of buddhahood. ¶ Vairocana is also the name of one of the chief figures in the earlier dissemination (SNGA DAR) of Buddhism to Tibet, where he is known by his Tibetan pronunciation of Bai ro tsa na. He was one of the first seven Tibetans (SAD MI BDUN) to be ordained as Buddhist monks by the Indian master ŚĀNTARAKṢITA at the first Tibetan monastery, BSAM YAS. According to Tibetan accounts, he was sent by King KHRI SRONG LDE BTSAN to India to study Sanskrit and to gather texts and teachings. He is said to have received teachings of the "mind class" (SEMS SDE) and the "expanse class" (KLONG SDE) at BODHGAYĀ, before traveling to OḌḌIYĀNA, where he met the master ŚRĪSIṂHA, who gave him exoteric teachings during the day and instructed him secretly in the great completeness (RDZOGS CHEN) practices at night. Returning to Tibet, he followed the same program, instructing the king secretly in the "mind class" teachings at night. This raised suspicions, which led to his banishment to eastern Tibet. He was later allowed to return, at the request of VIMALAMITRA. He is renowned as one of the three major figures (along with PADMASAMBHAVA and Vimalamitra) in the dissemination of the rdzogs chen teachings in Tibet and translated many texts from Sanskrit into Tibetan; the manuscripts of some of his translations have been discovered at DUNHUANG. See also JÑĀNAMUṢṬI.

Vairocanābhisaṃbodhi. (S). See MAHĀVAIROCANĀBHISAṂBODHISŪTRA.

Vairocanābhisaṃbodhitantra. (S). See MAHĀVAIROCANĀBHISAṂBODHISŪTRA.

Vairocanadharma. (T. rnam snang gi chos). In Sanskrit, "features of VAIROCANA"; seven constituents that constitute the ideal posture for meditation: sitting in the adamantine position (VAJRAPARYAṄKA), casting the eyes down toward the tip of the nose, keeping the backbone straight, keeping the shoulders level, tucking in the chin, placing the tongue against the back of the upper teeth, placing the hands in the position of equipoise. The Tibetan translator (LO TSĀ BA) MAR PA, teacher of MI LA RAS PA, was a strong proponent of this meditation posture.

Vaiśālī. (P. Vesāli; T. Yangs pa can; C. Pisheli; J. Bishari; K. Pisari 毘舍離). A town approximately twenty-five miles (forty km.) to the northwest of modern-day Patna, in the state of Bihar, India. During the Buddha's lifetime, this was the capital of the Licchavis, which was part of the Vṛji republic. The Buddha first visited the city in the fifth year after his enlightenment and spent his last rains retreat (VARṢĀ) in the vicinity of Vaiśālī. The Buddha preached a number of important sūtras and established several rules of discipline in the city. The Buddha accepted the gift of a mango grove (the Āmrapālīvana) from the city's famous courtesan ĀMRAPĀLĪ. When the Buddha was en route from KAPILAVASTU to Vaiśālī, his stepmother MAHĀPRAJĀPATĪ and five hundred women shaved their heads and followed him. Upon arriving in the city, they requested and eventually received ordination as nuns (BHIKṢUṆĪ). Before departing on the journey that would end at KUŚINAGARĪ with his passage into PARINIRVĀṆA, the Buddha is said to have turned his body like an elephant for one final look at the city. ¶ Vaiśālī was also the location of the second Buddhist council (SAṂGĪTI; see COUNCIL, SECOND), held approximately one hundred years after the Buddha's PARINIRVĀṆA. Some seven hundred monks were said to have attended the council at Vālukārāma monastery, although the number is probably more of a representation of the council's significance rather than an exact number of monks in attendance. The importance of the second council lies in the sectarian division that occurred within the SAṂGHA either at the time of that council or directly thereafter. According to the traditional account, the monk YAŚAS entered Vaiśalī to visit the monks there and found that they were engaging in what he believed to be

ten violations of the VINAYA code of conduct. When Yaśas criticized the Vaiśalī monks for these violations, he was rebuked and expelled from the SAṂGHA. Yaśas later returned with the monk ŚĀṆAKAVĀSIN, at which point the monk REVATA called the council and presided over it. After the senior monks ruled in Yaśas's favor, the saṃgha split into the two groups, the STHAVIRANIKĀYA (the "Order of the Elders," which included Revata and Yaśas) and the MAHĀSĀṂGHIKA (the "Members of the Great Assembly," which included probably the majority of monks, who opposed the ruling). By the beginning of the Common Era, the saṃgha had split into what is commonly called the eighteen MAINSTREAM BUDDHIST SCHOOLS, in reference to the multiple traditions that developed following the second council at Vaiśālī.

vaiśāradya. (P. vesārajja; T. mi 'jigs pa; C. wusuowei; J. mushoi; K. musooe 無所畏). In Sanskrit, "self-confidence," or "fearlessness"; one of the qualities of all buddhas, generally enumerated (with some variants) as four: (1) the confidence that he is fully enlightened with regard to all phenomena, (2) the confidence that he has destroyed all contamination, (3) the confidence that he has correctly identified all obstacles to liberation, and (4) the confidence that all marvelous qualities are achieved through the path.

Vaiśravaṇa. (P. Vessavaṇa; T. Rnam sras/Rnam thos kyi bu; C. Duowen tian/Pishamen tian; J. Tamonten/Bishamonten; K. Tamun ch'ŏn/Pisamun ch'ŏn 多聞天/毘沙門天). One of the four LOKAPĀLA, the kings of the four directions who reside on the four faces of Mount SUMERU. He is king of the north, and the northern continent of UTTARAKURU, and resides on the northern face of the central mountain, where he commands armies of YAKṢAS. He is described in the Pāli canon as a stream-enterer (see SROTAĀPANNA), who was a devotee of the Buddha and a protector of his monks. Despite having a life span of ninety thousand years, Vaiśravaṇa, like all Buddhist divinities (DEVA), will eventually die and be reborn elsewhere, with another being reborn as his successor. Vaiśravaṇa is associated with the Indian gods of wealth KUBERA and Jambhala; the three were once individual deities who came to be identified with each other. Vaiśravaṇa may have originated as a Central Asian deity, perhaps in the kingdom of KHOTAN, where he was believed to have been the progenitor of the royal lineage. He is the main interlocutor in several chapters of the SUVARṆAPRABHĀSOTTAMASŪTRA, which sets forth the duties of the lokapāla to the virtuous king and his state. His cult does not seem to have taken hold in China until the ninth century, which is the date of the earliest Chinese images of the divinity. A legend relates that during an invasion of Tang China from ANXI (viz., PARTHIA), the Chinese emperor enlisted the aid of AMOGHAVAJRA, who called upon Vaiśravaṇa to guard the city wall. By the middle of the Tang, images of the god and the other lokapālas were commonly placed at city gates. The cult of Vaiśravaṇa entered Japan by the Heian period, where, despite his presence in the esoteric tradition there, he took on the appearance of local gods and is regarded as a form of HACHIMAN. In Tibet, the conflation of Vaiśravaṇa, Kubera, Jambhala, and Pañcika is more complete than in East Asia. As a lokapāla, Vaiśravaṇa wears armor, carries a banner of victory, and holds a mongoose that is vomiting jewels (hence his popularity as a god of wealth).

vaiyāpṛtya(kara). [alt. vaiyāpatya(kara)] (P. veyyāvaccakara; T. zhal ta pa; C. zhishi/zhongzhu; J. shitsuji/shushu; K. chipsa/chungju 執事/衆主). In Sanskrit, lit. "one who performs service," viz., an "agent"; an administrative or supervisory officer who serves as "agent" for the SAṂGHA in accepting donations from the laity and supervising the use of the financial items and valuables received by the monastery; this officer may also serve as a kind of personal assistant to the monks. The term vaiyāpṛtyakara appears in connection with the tenth rule of the "offenses involving forfeiture" (NIḤSARGIKA-PĀTAYANTIKA; P. nissaggiyapācittiya), where the "agent" is solicited to accept robe cloth on behalf of a monk; that agent may be either a Buddhist layman (UPĀSAKA) or an unordained monastic employee (ārāmika). In this role, the vaiyāpṛtyakara is closely related to the KALPIKĀRAKA, a lay "steward" or "surrogate," who receives donations on behalf of monks and converts them into appropriate requisites. There are also, however, references to ordained agents (vaiyāpṛtyakarabhikṣu), who supervise the storage of offerings as robes and other gifts on behalf of the monks until they are ready to use them. DRAVYA MALLAPUTRA was singled out by the Buddha as preeminent among his monk disciples in providing such service to the community of monks (saṅghasya veyyāvacca), specifically in apportioning lodging and distributing meals.

vaiyavadānika. (T. rnam par byang ba; C. qingjing; J. shōjō; K. ch'ŏngjŏng 清淨). In Sanskrit, an adjective formed from VYAVADĀNA, "purification" or "cleansing," contrasted with sāṃkleśika (from SAṂKLEŚA), meaning impurity, defilement, stain, or pollution. Dharmas are understood to operate from two distinct and opposite modes of causation that condition one's future—sāṃkleśika (or SAṂKLIṢṬA) dharmas leading to suffering and vaiyavadānika dharmas leading to the end of suffering. In the perfection of wisdom (PRAJÑĀPĀRAMITĀ) sūtras, 108 types of phenomena are declared to be empty (śūnya); they are divided into two broad categories, purification (vaiyavadānika) and defilement (saṃkliṣṭa), or the pure and the defiled. Fifty-five phenomena of the pure class are enumerated in the MAHĀYĀNA, including, for example, the six perfections (PĀRAMITĀ), the eighteen types of emptiness (ŚŪNYATĀ), the thirty-seven factors of enlightenment (BODHIPĀKṢIKADHARMA), and the eighteen unshared qualities of a buddha (ĀVEṆIKA[BUDDHA]DHARMA). The defiled class includes, for example, the five aggregates (SKANDHA), the six sense organs (INDRIYA), the six consciousnesses (VIJÑĀNA), and the twelve links of dependent origination (PRATĪTYASAMUTPĀDA). See also VYAVADĀNA.

Vajirañāṇavarorasa. (Thai. Wachirayanwarorot) (1860–1921). One of the most influential Thai monks of the late-nineteenth

and early-twentieth centuries; his name (given in its Pāli form here) is also rendered in the Thai vernacular as Wachirayanwarorot [alt. Wachirayan Warot]. The son of King Mongkut (RĀMA IV), after a youth spent in royal luxury, he was ordained as a monk in 1879. He distinguished himself as a scholar of the Buddhist scriptures and in 1892 became abbot of WAT BOWONNIWET [alt. Wat Bovoranives; P. Pavaranivesa], the leading monastery of the THAMMAYUT (P. Dhammayuttika) order. In 1893, he became patriarch of the order and served as supreme patriarch (saṅgharāja; S. SAṂGHARĀJAN) of the Thai saṅgha (S. SAṂGHA) from 1910 until his death. A distinguished scholar of Pāli, he was the author of many textbooks, including the definitive Thai primer on the Pāli VINAYA tradition, the *Vinayamukha* ("Gateway to the Discipline"), which he wrote in an (unsuccessful) attempt to bring together the two major sects of Thai Buddhism, the Thammuyut and the MAHANIKAI. Vajirañāṇavarorasa also designed the modern monastic curriculum and reorganized the Thai ecclesiastical hierarchy. As an advisor to King Chulalongkorn (RĀMA V), he also sought to extend modern education into the provinces. Vajirañāṇavarorasa's autobiography is considered the first work of the genre in Thai vernacular literature.

Vajirapāṇi. (P). In Pāli, the name of a yakkha (S. YAKṢA) who is also sometimes identified with INDRA. See VAJRAPĀṆI.

vajra. (T. rdo rje; C. jingang; J. kongō; K. kŭmgang 金剛). In Sanskrit, "adamant," "diamond," or "thunderbolt"; a magical weapon and common symbol of power, indestructibility, and immutability, especially in tantric Buddhism, which is known as the vajra vehicle (VAJRAYĀNA). The term is also employed to describe consummate meditative experiences, such as the VAJROPAMASAMĀDHI, the "SAMĀDHI that is like a vajra." ¶ Vajra is also the name of the ritual scepter commonly employed in tantric liturgies. When used in conjunction with a bell, the vajra symbolizes UPĀYA and the bell symbolizes PRAJÑĀ, with the vajra held in the right hand and the bell in the left hand. There are several types of vajras used in tantric rituals, varying in both size and the number of "points" or prongs, usually ranging from one to nine on each side. The elements that constitute the vajra are given rich symbolic value. For example, in the case of a five-pointed vajra, when held vertically, the five lower points are said to represent either the five aggregates (SKANDHA) of mind and body or the five afflictions of desire, anger, ignorance, pride, and jealousy. These five are transmuted through tantric practice into the five buddhas (PAÑCATATHĀGATA), represented by the five upper points. These are transmuted through the knowledge of emptiness, symbolized by the sphere that unites the upper and lower parts of the vajra. In some tantric texts, vajra is also a term for phallus.

Vajrabhairava. (T. Rdo rje 'jigs byed; C. Buwei Jingang; J. Fui Kongō; K. P'ooe Kŭmgang 怖畏金剛). In Sanskrit, "Indestructibly Frightening"; a tantric deity associated with YAMĀNTAKA; both deities are considered to be wrathful forms of the bodhisattva MAÑJUŚRĪ. Vajrabhairava likely derives from Śaiva sources; Śiva is also called Bhairava. Vajrabhairava is usually black or blue in color, and can be depicted with one or as many as nine faces, and thirty-two arms. The main Vajrabhairava root tantra, classified as a father tantra (PITṚTANTRA) of the ANUTTARAYOGATANTRA class, is the *Śrīmadmahāvajrabhairavatantra*, also known as the *Saptakalpa* ("Vajrabhairava Root Tantra in Seven Chapters"); it is three hundred stanzas long and explicitly sets forth legitimate transformations of violence for altruistic purposes. It is said to have been brought from UḌḌIYĀNA by one Lalitavajra. The Tibetan Skyo tradition also asserts that the *Gtam rgyud kyi rtog pa* ("Legend chapter") is a root tantra. Besides Lalitavajra, the adept Śrīdhara is closely associated with the practice and dissemination of the tantra. In Tibet there are six lineages originating from Cog gru Shes rab bla ma, RWA LO TSĀ BA RDO RJE GRAGS PA (the most widespread and influential tradition), Skyo ston 'Od 'byung (1126–1200), Gnyos lo tsā ba, Ba ri lo tsā ba, and Mal gyo lo tsā ba Blo gros grags. These are known as the Zhang, Rwa, Skyo, Gnyos, Ba ri, and Mal traditions. The cult of Vajrabhairava is common to the three new translation (GSAR MA) sects of Tibet. The SA SKYA sect considers Vajrabhairava to be one of the four principal tantric deities, alongside HEVAJRA, GUHYASAMĀJA, and CAKRASAṂVARA. He holds a similar position in the DGE LUGS sect, together with Guhyasamāja and Cakrvasaṃvara. The main lineages of his introduction to Tibet are traced to ATIŚA DĪPAṂKARAŚRĪJÑĀNA, Mal Lo tsā ba, and RWA LO TSĀ BA. See also YAMĀNTAKA.

Vajrabhairavatantra. (S). See VAJRABHAIRAVA.

Vajrabodhi. (C. Jingangzhi; J. Kongōchi; K. Kŭmgangji 金剛智) (671–741). Indian ĀCĀRYA who played a major role in the introduction and translation in China of seminal Buddhist texts belonging to the esoteric tradition or MIJIAO (see MIKKYŌ and TANTRA); also known as Vajramati. His birthplace and family background are uncertain, although one source says that he was a south Indian native whose brāhmaṇa father served as a teacher of an Indian king. At the age of nine, he is said to have gone to the renowned Indian monastic university of NĀLANDĀ, where he studied various texts of both the ABHIDHARMA and MAHĀYĀNA traditions. Vajrabodhi also learned the different VINAYA recensions of the eighteen MAINSTREAM BUDDHIST SCHOOLS. It is said that Vajrabodhi spent the years 701–708 in southern India, where he received tantric initiation at the age of thirty-one from NĀGABODHI (d.u.), a south Indian MAHĀSIDDHA of the VAJRAŚEKHARA (see SARVATATHĀGATATATTVASAṂGRAHA) line. He later traveled to Sri Lanka and then to ŚRĪVIJAYA before sailing to China, eventually arriving in the eastern Tang capital of Luoyang in 720. In 721, Vajrabodhi and his famed disciple AMOGHAVAJRA arrived in the western capital of Chang'an. Under the patronage of Emperor Xuanzong (r. 712–756), Vajrabodhi and Amoghavajra translated the VAJRAŚEKHARASŪTRA and

other related texts. Vajrabodhi devoted his energy and time to spreading tantric Buddhism by establishing the ABHIṢEKA or initiation platforms and performing esoteric rituals. In particular, Vajrabodhi was popular as a thaumaturge; his performance of the rituals for rainmaking and curing diseases gained him favor at the imperial court; he even gave tantric initiation to the Tang emperor Xuanzong. During his more than twenty years in China, Vajrabodhi introduced about twenty texts belonging to the Vajraśekhara textual line. Vajrabodhi attracted many disciples; the Silla monk HYECH'O (704–87), known for his travel record WANG O CH'ŎNCH'UK KUK CH'ŎN ("Record of a Journey to the Five Kingdoms of India"), also studied with him. The Japanese SHINGONSHŪ honors Vajrabodhi as the fifth of the eight patriarchs in its lineage, together with Nāgabodhi and Amoghavajra.

vajrācārya. (T. rdo rje slob dpon; C. jingang asheli/jingangshi; J. kongōajari/kongōshi; K. kŭmgang asari/kŭmgangsa 金剛阿闍梨/金剛師). In Sanskrit, "VAJRA master"; referring to a tantric GURU (BLA MA) who has mastered the tantric arts, received the appropriate initiations, and is qualified to confer initiations and dispense tantric teachings. He is traditionally listed as having ten qualities. ¶ The title vajrācārya is also awarded to a person who has received a specific set of initiations (ABHIṢEKA) in the ANUTTARAYOGATANTRA systems. Although numerous variations occur, the main sequence of initiations in KRIYĀTANTRA, CARYĀTANTRA, and YOGATANTRA are (1) the water initiation (udakābhiṣeka), (2) the crown initiation (mukuṭābhiṣeka), (3) the VAJRA initiation (vajrābhiṣeka), (4) the bell initiation (ghaṇṭābhiṣeka), and (5) the name initiation (nāmābhiṣeka). One who has received these initiations is regarded as a vajrācārya. In the yogatantras, an additional initiation, called the vajrācārya initiation (vajrācāryābhiṣeka), is bestowed. In the anuttarayoga systems, this set of five or six is often condensed into one, becoming the first of four initiations, called the vajrācārya initiation or the vase initiation (KALAŚĀBHIṢEKA). ¶ In the Newar Buddhism of Nepal, the name vajrācārya is also used by an endogamous caste of lay priests who perform a wide variety of rituals for the Buddhist community, including life-cycle rites, fire rituals, temple rituals, protective rites. They also perform tantric initiation for high-caste members of the Newar community. According to the anuttarayoga systems, one becomes a vajrācārya as a result of a series of initiations; in the Newar community, however, it is a hereditary category.

Vajracchedikāprajñāpāramitāsūtra. (T. Rdo rje gcod pa shes rab kyi pha rol tu phyin pa'i mdo; C. Jingang jing; J. Kongōkyō; K. Kŭmgang kyŏng 金剛經). In Sanskrit, the "Diamond-Cutter Perfection of Wisdom Sūtra"; known in English as the "Diamond Sūtra" (deriving from its popular abbreviated Chinese title *Jingang jing*, as above), one of the most famous, widely read, and commented upon of all MAHĀYĀNA sūtras, together with two others that are also known by their English titles, the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") and the PRAJÑĀPĀRAMITĀHṚDAYASŪTRA ("Heart Sūtra"). The "Diamond Sūtra" was composed in Sanskrit, probably sometime between the second and fourth centuries CE. Despite its fame, much of its meaning remains elusive, beginning with the title. In Sanskrit, it is *Vajracchedikāprajñāpāramitā*. The Sanskrit term VAJRA refers to a kind of magical weapon, sometimes described as a thunderbolt or a discus, and is said to be hard and unbreakable, like a diamond or adamant. Thus, the title might be rendered into English as "The Perfection of Wisdom That Cuts like a Diamond/Thunderbolt." The sūtra opens with the Buddha residing in the JETAVANA with 1,250 monks and a large number of bodhisattvas. After returning from his begging round (PIṆḌAPĀTA) and eating his meal, the Buddha is approached by the great ARHAT SUBHŪTI, who asks him about the practice of the BODHISATTVA. The Buddha says that a bodhisattva must vow to lead all beings in the universe into NIRVĀṆA, while fully recognizing that there are in fact no beings to be led into nirvāṇa. "If, Subhūti, a bodhisattva were to have the (mis)perception (SAṂJÑĀ) of a self (ĀTMAN), a being (SATTVA), a living entity (JĪVA), or a person (PUDGALA), he is not to be called 'a bodhisattva.'" This is one of many famous statements in the sūtra, regarded by commentators as setting forth the doctrine of emptiness (although the technical term ŚŪNYATĀ does not appear in the sūtra), i.e., that all phenomena are falsely imagined to have a self, a soul, and an "own-being," qualities that they, in fact, lack. Any meritorious deed, from the giving of a gift to the vow to free all beings, is not an authentic bodhisattva deed if it is tainted with the (mis)perception (saṃjñā) of a sign (NIMITTA) of selfhood: thus the perfection of the act of charity (DĀNAPĀRAMITĀ) means that true bodhisattva giving occurs when there is no conception of there being a donor, recipient, or gift—for that kind of giving would produce immeasurable merit. The Buddha asks Subhūti whether the Buddha is to be seen through the possession of the thirty-two physical marks of a superman (MAHĀPURUṢALAKṢAṆA) that adorn his body. Subhūti says that he is not, because what the Buddha has described as the possession of marks (LAKṢAṆA) is in fact the nonpossession of no-marks. This formula of question and response, with the correct answer being, "A is in fact not A, therefore it is called A" is repeated throughout the text. The sūtra is not simply a radical challenge to the ordinary conception of the world, of language, and of thought; it is also a polemical Mahāyāna sūtra, seeking, like other such sūtras, to declare its supremacy and to promise rewards to those who exalt it. It is noteworthy that here, as in many other perfection of wisdom (PRAJÑĀPĀRAMITĀ) sūtras, the Buddha's interlocutor is not a bodhisattva, but an arhat, the wise Subhūti, suggesting that even those who have completed the path to nirvāṇa still have more to learn. The Buddha predicts that this sūtra will be understood far into the future, even into the final five hundred years that the Buddha's teaching remains in the world. At that time, anyone who has even a moment of faith in this sūtra will be honored by millions of buddhas. Indeed, even now, long

before this point in the distant future, anyone who would teach just four lines of this sūtra to others would earn incalculable merit. In a statement that appears in other perfection of wisdom sūtras, the Buddha declares, "On whatever piece of ground one will proclaim this sūtra, that piece of ground will become an object of worship. That piece of ground will become for the world together with its gods, humans, and demigods a true shrine to be revered and circumambulated." Scholars have seen in this statement the possibility that the perfection of wisdom sūtras were something of a "cult of the book," in which the sūtra itself was worshipped, serving as a substitute for more traditional sites of worship, such as reliquaries (STŪPA). The sūtra suggests that such practices were not always condoned by others; the Buddha goes on to say that those who worship the sūtra will be ridiculed for doing so, but by suffering ridicule they will destroy the great stores of negative KARMAN accumulated over many lifetimes. The Buddha's exhortations seem to have been taken to heart. The recitation and copying of the sūtra was widely practiced across Asia; many copies of the sūtra were discovered at DUNHUANG, and the earliest printed book in the world is a xylographic print of the Chinese translation of the *Vajracchedikāprajñāpāramitā* dated May 11, 868, that was found in the Dunhuang cache. On a rock cliff on the Chinese sacred mountain of Taishan, there is a massive carving of the *Vajracchedikāprajñāpāramitā* covering some 2,100 Sinographs in 21,000 square feet (2,000 sq. m.). Miracle tales of the benefits of reciting and copying the sūtra were also told across Asia. The *Vajracchedikāprajñāpāramitā* also played an important role in the CHAN traditions of East Asia: e.g., it was the scripture that the fifth patriarch HONGREN expounded to HUINENG, bringing him to enlightenment and enabling Huineng to be his successor as the sixth patriarch (LIUZU) of Chan.

Vajraḍākatantra. (T. Rdo rje mkha' 'gro rgyud). A YOGINĪTANTRA of the ANUTTARAYOGATANTRA class, named after the deity Vajraḍāka ("Vajra Hero"), a form of VAJRASATTVA with four faces and four arms. It is counted as one of the five explanatory tantras (S. vyākhyātantra; T. bshad rgyud) of the CAKRASAṂVARATANTRA. The text is employed in Tibet especially for its instructions on the performance of fire (HOMA) rituals.

Vajradhara. [alt. Vajradhāra] (T. Rdo rje 'chang; C. Jingangchi; J. Kongōji; K. Kŭmgangji 金剛持). "Vajra Holder"; an important buddha of the tantric systems, where he appears in some texts as an ĀDIBUDDHA (primordial buddha). He is closely related to VAJRAPĀṆI; indeed, Vajrapāṇi and Vajradhara may have originally been two names for the same deity (the Chinese translations of the two deities' names are the same). Vajradhara is the principal deity in many father-class tantras and is the chief buddha for the MAHĀMUDRĀ traditions. Vajradhara is said to have revealed the MAHĀMUDRĀ teachings to TILOPA; they were then transmitted in succession to NĀROPA, then to MAR PA, and then to MI LA RAS PA. Vajradhara is sometimes referred to as the sixth buddha, representing the quintessence of the five buddhas (PAÑCATATHĀGATA) and the five buddha families. In Tibetan Buddhism, he is one of two buddhas considered as both a primordial buddha (ādibuddha) and as a DHARMAKĀYA; the other is the buddha SAMANTABHADRA, the primordial buddha of RNYING MA. Vajradhara is the primordial buddha of the three new, or GSAR MA, sects, SA SKYA, BKA' BRGYUD, and DGE LUGS. Vajradhara is typically depicted as dark blue, with one head and two arms, dressed as a SAṂBHOGAKĀYA, seated in VAJRAPARYAṄKA, holding a VAJRA in each hand (or a vajra in his right and a bell in his left), which are crossed at his chest in the VAJRAHŪṂKĀRA pose. He is sometimes depicted surrounded by the eighty-four MAHĀSIDDHAs. When he is depicted with a consort, she is usually VAJRAVĀRĀHĪ. See also FEILAIFENG.

vajradhātu. (S). See KONGŌKAI.

vajrahūṃkāra. (T. rdo rje hūṃ mdzad). Sanskrit term for a position found in tantric iconography, sometimes called the "posture of embracing," in which the hands of the deity (often holding a VAJRA and a bell) are crossed at the chest. If the deity is in sexual embrace with a consort, the hands are crossed behind the consort, embracing her. If there is no consort, the hands are crossed over the chest of the deity.

vajrakaṇā. (T. rdo rje gzegs ma). In Sanskrit, lit. "diamond slivers"; a term used to describe one of the chief reasonings used by NĀGĀRJUNA in the MŪLAMADHYAMAKAKĀRIKĀ. A critique of production (UTPĀDA), it argues that a given thing does not intrinsically exist because of not being produced (1) from itself, (2) from something that is intrinsically different from itself, (3) from something that is both itself and intrinsically different from itself, or (4) without cause.

Vajrakīlaya. (T. Rdo rje phur pa). In Sanskrit, "Vajra Dagger," a tantric buddha worshipped primarily by the RNYING MA and BKA' BRGYUD sects of Tibetan Buddhism. He is the deification of the KĪLA (see PHUR PA), the ritual dagger used in tantric ceremonies. In the rituals involving the use of the kīla, the tantric dagger is typically used to subdue a ritual site, to subjugate the local demon by pinning him or her to the ground; the MAṆḌALA is thus planted and established on top of the offending demon. The dagger may be stabbed into a three-sided box, the triangle representing the violent tantric activity of liberation, or into an effigy. As a deity, Vajrakīlaya originally held the same duties as the ritual dagger: to protect the borders of ritual space and to pin down and destroy enemies, human or otherwise. This tradition may derive in part from the ancient Indian myth of Indrakīla, in which the serpent Vṛtra is pinned and stabilized by a mythic "peg" (kīla). Vajrakīlaya is found in the major early tantra systems as well as the GUHYASAMĀJATANTRA and the SARVATATHĀGATATATTVASAṂGRAHA, which contains his mantra and places him in the center of a MAṆḌALA, although throughout his status is inferior to that of the buddhas and bodhisattvas. It is only in the Vajrakīlaya tantras that the deity attains the

status of a buddha. These texts are reputed to be eighth-century translations from Indic languages, transmitted in Tibet by PADMASAMBHAVA. The tantras form a substantial section of the RNYING MA'I RGYUD 'BUM, but BU STON rejected the Indian origin of the tantras and left them out of the BKA' 'GYUR. Defenders of the tradition cite the fact that 'BROG MI SHĀKYA YE SHES wrote that he saw the eight-syllable Vajrakīla MANTRA at the BODHGAYĀ STŪPA. In addition, SA SKYA PAṆḌITA discovered a Sanskrit fragment of the *Vajrakīlamūlatantrakhaṇḍa* at BSAM YAS, and ŚĀKYAŚRĪBHADRA confirmed that the cycle had existed in India. Although no East Asian tradition of Vajrakīlaya exists, some scholars have suggested an identification with Vajrakumāra; tantras concerning this deity were brought to China in the eighth century by AMOGHAVAJRA, but this identification is disputed. Vajrakīlaya is wrathful, with three faces with three eyes each, and six or more hands holding various instruments in addition to the kīla. He is said to dispel obstacles to progress on the path to enlightenment and to the swift attainment of both mundane and supramundane goals.

vajrakula. (T. rdo rje rigs; C. jingang bu; J. kongōbu; K. kŭmgang pu 金剛部). In Sanskrit, "VAJRA family" or "vajra lineage"; one of the three or five tantric lineages. In the three-lineage (TRIKULA) system, the lineages are the vajra lineage, the lotus lineage (PADMAKULA), and the buddha lineage (BUDDHAKULA). This system appears in such works as the MAHĀVAIROCANĀBHISAṂBODHISŪTRA and the SUSIDDHIKARASŪTRA. In the five-lineage (PAṄCAKULA) system, found in the GUHYASAMĀJA and other ANUTTARAYOGATANTRAS, the five are the vajra lineage, the lotus lineage, the jewel lineage (RATNAKULA), the action lineage (KARMAKULA), and the tathāgata lineage (TATHĀGATAKULA). The buddha associated with the vajra lineage is AKṢOBHYA or VAJRASATTVA. See also MAÑJUŚRĪKĪRTI; ŚAMBHALA. Each of the five families is associated with one of the five SKANDHAS, five wisdoms (JÑĀNA), five afflictions (KLEŚA), five elements, and five colors. For the vajra family, these are the consciousnss (VIJÑĀNA) skandha, the mirrorlike wisdom (ĀDARŚAJÑĀNA), the affliction of anger, the element water, and the color white.

Vajrapāṇi. (P. Vajirapāṇi; T. Phyag na rdo rje; C. Jingangshou pusa; J. Kongōshu bosatsu; K. Kŭmgangsu posal 金剛手菩薩). In Sanskrit, "Holder of the VAJRA"; an important bodhisattva in the MAHĀYĀNA and VAJRAYĀNA traditions, who appears in both peaceful and wrathful forms. In the Pāli suttas, he is a YAKṢA (P. yakkha) guardian of the Buddha. It is said that whoever refuses three times to respond to a reasonable question from the Buddha would have his head split into pieces on the spot; carrying out this punishment was Vajrapāṇi's duty. In such circumstances, Vajrapāṇi, holding his cudgel, would be visible only to the Buddha and to the person who was refusing to answer the question; given the frightening vision, the person would inevitably then respond. Vajrapāṇi is sometimes said to be the wrathful form of ŚAKRA, who promised to offer the Buddha protection if the Buddha would teach the dharma; he thus accompanies the Buddha as a kind of bodyguard on his journeys to distant lands. Vajrapāṇi is commonly depicted in GANDHĀRA sculpture, flanking the Buddha and holding a cudgel. In the early Mahāyāna sūtras, Vajrapāṇi is referred to as a yakṣa servant of the bodhisattvas, as in the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ. In the SUVARṆAPRABHĀSOTTAMASŪTRA, he is called the "general of the yakṣas" (yakṣasenādhipati), and is praised as a protector of followers of the Buddha. In the SADDHARMAPUṆḌARĪKASŪTRA, AVALOKITEŚVARA explains that one of the forms that he assumes to convert sentient beings is as Vajrapāṇi. In later Mahāyāna and early tantric Buddhism, Vajrapāṇi becomes a primary speaker in important sūtras and tantras, as well as a principal protagonist in them, and comes to be listed as one of the "eight close sons" (*UPAPUTRA), the principal bodhisattvas. In the MAÑJUŚRĪMŪLAKALPA, as leader of the vajra family (VAJRAKULA), he flanks ŚĀKYAMUNI in the MAṆḌALA. In the SARVATATHĀGATATATTVASAṂGRAHA, his transition from "general of the yakṣas" to "the supreme lord of all tathāgatas" is played out through his subjugation of Maheśvara (Śiva). At the command of the buddha VAIROCANA, Vajrapāṇi suppresses all of the worldly divinities of the universe and brings them to the summit of Mount SUMERU, where they seek refuge in the three jewels (RATNATRAYA). Only Maheśvara refuses to submit to the Buddha. Through Vajarpāṇi's recitation of a MANTRA, Maheśvara loses his life, only to be reincarnated in another world system, where he eventually achieves buddhahood. Vajrapāṇi's yakṣa origins continue in his wrathful aspects, most common in Tibet, such as the three-eyed Caṇḍa Vajrapāṇi. It is in this form that he is part of a popular triad with Avalokiteśvara and MAÑJUŚRĪ known as the "protectors of the three families" (T. RIGS GSUM MGON PO). These three bodhisattvas are said to be the physical manifestation of the wisdom (Mañjuśrī), compassion (Avalokiteśvara), and power (Vajrapāṇi) of all the buddhas. Vajrapāni is also said to be the bodhisattva emanation of the buddha AKṢOBHYA and the chief bodhisattva of the vajra family. He himself has numerous forms and emanations, including Mahābāla (who may have developed from his early attendant Vajrapuruṣa), Vajrasattva, Vajradhara, Vajrahūṃkāra, Ucchuṣma, Bhūtaḍāmara, and Trailokyavijaya. Vajrapāṇi is closely related especially to VAJRADHARA, and indeed Vajradhara and Vajrapāṇi may have originally been two names for the same deity (the Chinese translations of the two deities' names are the same). Vajrapāṇi's MANTRA is oṃ vajrapāṇi hūṃ phaṭ. He is also known as Guhyakādhipati, or "Lord of the Secret." The secret (guhyaka) originally referred to a class of yakṣas that he commanded, but expanded in meaning to include secret knowledge and mantras. Vajrapāṇi is the protector of mantras and those who recite them, and is sometimes identified as the bodhisattva responsible for the collection, recitation, and protection of the VIDYĀDHARAPIṬAKA.

vajraparyaṅka. (T. rdo rje skyil krung; C. jingang jiafuzuo; J. kongōkafuza; K. kŭmgang kabujwa 金剛跏趺坐). In

Sanskrit, "VAJRA posture"; a seated position, often known (mistakenly) as the "lotus posture" in English (see discussion below), in which the left foot rests on the right thigh and the right foot rests on top on the left thigh. The Sanskrit name is said to derive from the stability and indestructibility of the posture, which is like a vajra. ŚĀKYAMUNI is said to have adopted this posture prior to his enlightenment experience under the BODHI TREE, and images of the historical buddha, as well as other enlightened figures, are commonly depicted in this position. Widely adopted as a basis for the practice of seated meditation throughout the Buddhist world, the vajraparyaṅka is occasionally known simply as the "meditation posture." It is often confused with the PADMĀSANA (lotus posture), where the positions of the left and right feet are reversed; this position is predominantly used in Hindu forms of yoga. See also ĀSANA.

Vajraputra. [alt. Vajrīputra] (T. Rdo rje mo'i bu; C. Fasheluofuduoluo; J. Batsujarahotsutara; K. Pŏlsarabultara 伐闍羅弗多羅). The Sanskrit name of the eighth of the sixteen ARHAT elders (ṢOḌAŚASTHAVIRA), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, MAITREYA. He resides in Bolanu zhou (the Sanskrit transcription of a region said to translate into Chinese as "reverence"), with 1,100 disciples. In the Chinese tradition, Vajraputra is said to have been a hunter who kept the precept against killing after he was ordained. Once he attained arhatship, two lion cubs came to him in appreciation for his efforts to stop the killing of animals. Vajraputra constantly brought the two cubs with him wherever he went after that, thus earning the nickname "Laughing Lions Arhat." Not long after the Buddha's PARINIRVĀṆA, Vajraputra is said to have attended a sermon ĀNANDA was delivering to some local villagers. As he listened to Ānanda speak, Vajraputra realized that Ānanda was not yet enlightened, and encouraged him to continue with his meditation deep in the forest. This goad was said to have been vital to Ānanda's spiritual growth. In CHANYUE GUANXIU's standard Chinese depiction, Vajraputra is portrayed with aquiline nose and deep-set eyes, sitting on a rock, his upper body bare, with both arms crossing over his left knee, and palms hanging down. He sits leaning slightly to the right, as if reading a sūtra that sits next to him on the rock.

vajrasamādhi. (S). See VAJROPAMASAMĀDHI.

***Vajrasamādhisūtra**. (S). See KŪMGANG SAMMAE KYŎNG.

vajrāsana. (T. rdo rje gdan; C. jingang zuo; J. kongōza; K. kŭmgangjwa 金剛座). In Sanskrit, "diamond seat," or "vajra throne." The term vajrāsana has three main denotations: the seat under the BODHI TREE where ŚĀKYAMUNI achieved enlightenment; a synonym for the VAJRAPARYAṄKA posture; and, especially in Tibetan texts, the designation for the site of Śākyamuni's enlightenment and hence, more generally, BODHGAYĀ. See BODHIMAṆḌA.

Vajrasattva. (T. Rdo rje sems dpa'; C. Jingang saduo; J. Kongōsatta; K. Kŭmgang sal'ta 金剛薩埵). In Sanskrit, lit. "VAJRA Being"; a tantric deity widely worshipped as both an ĀDIBUDDHA and a buddha of purification. Vajrasattva is sometimes identified as a sixth buddha in the PAÑCATATHĀGATA system, such as in the SARVATATHĀGATATATTVASAṂGRAHA, where he is also identical to VAJRAPĀṆI. Vajrasattva also occasionally replaces AKṢOBHYA in the same system, and so has been considered an emanation of that buddha. As an ādibuddha, he is identical with VAJRADHARA. He is also one of the sixteen bodhisattvas of the vajradhātumaṇḍala. In the trikula system, an early tantric configuration, Vajrasattva is the buddha of the VAJRAKULA, with VAIROCANA the buddha of the TATHĀGATAKULA and Avalokiteśvara the head of the PADMAKULA. East Asian esoteric Buddhism considers Vajrasattva to be the second patriarch of the esoteric teachings; VAIROCANA taught them directly to Vajrasattva, who passed them to NĀGĀRJUNA, who passed them to VAJRABODHI/VAJRAMATI, who taught them to AMOGHAVAJRA, who brought them to China in the eighth century. In Tibet, worship of Vajrasattva is connected to YOGATANTRA and ANUTTARAYOGATANTRA, such as the twenty-fifth chapter of the *Abhidhanottaratantra*, in which he is known as the Heruka Vajrasattva. He is particularly famous in Tibet for his role in a practice of confession and purification in which one repeats a hundred thousand times the hundred-syllable MANTRA of Vajrasattva. These repetitions (with the attendant visualization) are a standard preliminary practice (T. SNGON 'GRO) required prior to receiving tantric instructions. The mantra is: oṃ vajrasattva samayam anupālaya vajrasattva tvenopatiṣṭha dṛḍho me bhava sutoṣyo me bhava supoṣyo me bhava anurakto me bhava sarvasiddhiṃ me prayaccha sarvakarmasu ca me cittaṃ śreyaḥ kuru hūṃ ha ha ha ha hoḥ bhagavan sarvatathāgatavajra mā me muñca vajrī bhava mahāsamayasattva āḥ hūṃ. Unlike many mantras that seem to have no semantic meaning, Vajrasattva's mantra may be translated as: "Oṃ Vajrasattva, keep your pledge. Vajrasattva, reside in me. Make me firm. Make me satisfied. Fulfill me. Make me compassionate. Grant me all powers. Make my mind virtuous in all deeds. hūṃ ha ha ha ha ho. All the blessed tathāgatas, do not abandon me, make me indivisible. Great pledge being. āḥ hūṃ."

***Vajraśekharasūtra**. (T. Rdo rje rtse mo; C. Jingangding jing; J. Kongōchōkyō; K. Kŭmgangjŏng kyŏng 金剛頂經). In Sanskrit, "Sūtra on Vajra Peak"; also called the *Vajraśekharatantra*, the reconstructed Sanskrit title derived from the Chinese translations of the first chapter of the SARVATATHĀGATATATTVASAṂGRAHA made by VAJRABODHI and AMOGHAVAJRA during the Tang dynasty. The full text of the *Sarvatathāgatatattvasamgraha* was not translated into Chinese until Dānapāla completed his version in 1015 CE. In addition to these translations, a number of associated ritual manuals and commentaries containing the title "Vajraśekhara" are included in the Chinese Buddhist canon. The *Vajraśekhara* refers to a composite text of eighteen individual scriptures in a hundred

thousand stanzas said to have been lost before it reached China. Based in part on a summary of the individual sūtras and tantras comprising the text that Amoghavajra composed, some scholars have speculated that the complete *Vajraśekhara*, in whatever form it originally took, represented the first esoteric Buddhist canon, beginning with the *Sarvatathāgatatattvasaṃgraha* and including the GUHYASAMĀJATANTRA, among other works. Other scholars have questioned the claim that the text ever existed at all. The *Vajraśekhara* is one of two (or three) central texts in the esoteric tradition (MIKKYŌ) of Japan. In Tibet, the title *Vajraśekaratantra* (*Rgyud rdo rje rtse mo*) is the name of an explanatory yoga tantra connected to the *Sarvatathāgatatattvasaṃgraha*, which is used as a major source in Tibetan delineations of the tantric vows.

Vajravārāhī. (T. Rdo rje phag mo). One of the most common forms of VAJRAYOGINĪ, an important female tantric deity associated especially with the CAKRASAṂVARATANTRA of the ANUTTARAYOGATANTRA class, popular in all sects of Tibetan Buddhism, where she is a consort of the central deity. Vārāhī means sow, referring to the goddess's characteristic porcine head protruding from the right side of her face. She likely derives from the Hindu goddess Vārāhī, depicted with a head of a boar; she is the counterpart of Vārāha, the incarnation of Viṣṇu who took the form of a boar. In the case of Vajravārāhī, she is typically (although not invariably) depicted with a human face but with a boar's head (sometimes quite small) visible on the right side of her face, contributing in part to her wrathful aspect. She is usually depicted as red in color, naked in a dancing pose, standing on the body of Bhairava. She holds a cleaver in her right hand and skull cup in her left, and is adorned with a garland of fifty severed heads. Beginning perhaps as one of a number of wrathful YOGINĪs situated as protectors on the outer circles of the MAṆḌALA, she moved toward the center as one of the consorts of the central deity in the HEVAJRATANTRA and became the main consort of HERUKA in the Cakrasaṃvara cycle, where she also appears without a consort as the "sole heroine" (ekavirā) in the center of the maṇḍala.

Vajravidāraṇadhāraṇī. (T. Rdo rje rnam par 'joms pa shes bya ba'i gzungs; C. Rangxiang jingang tuoluoni jing; J. Kongō saisai darani/Esō kongō daranikyō; K. Kŭmgang ch'oeswae tarani/Yangsang kŭmgang tarani kyŏng 金剛摧碎陀羅尼/壤相金剛陀羅尼經). Lit., "Dhāraṇī of the Adamantine Pulverizer"; a DHĀRAṆĪ scripture probably composed sometime between the late-seventh and early-eighth centuries, which enjoyed great popularity in India and Tibet. There are two late Chinese translations, one by Maitrībhadra (C. Cixian, fl. tenth century), the other by the central Asian monk Shaluoba (1259–1314). There are a few Tibetan commentaries on the text attributed to such Indian tantric Buddhist masters who went to Tibet as ŚĀNTARAKṢITA (725–788), Buddhaguhya (fl. eighth century), and PADMASAMBHAVA (fl. eighth century). The text states that VAJRAPĀṆI's wrathful form strikes fear into all sentient beings, which stops them from performing evil actions, destroys their ignorance and defilements, and protects them from any suffering. The text also lists various other practical benefits that accrue from reciting it, such as curing illness, longevity, and good fortune, and recommends reciting it between twenty-one and a hundred times. Due to its popularity, the *Vajravidāraṇadhāraṇī* itself became deified, and Vajravidāraṇa was worshipped as one of the manifestations of Vajrapāṇi.

vajrayāna. (T. rdo rje theg pa; C. jingang sheng; J. kongōjō; K. kŭmgang sŭng 金剛乘). In Sanskrit, "adamantine vehicle" or "thunderbolt vehicle"; a general term used to refer to tantric Buddhism, especially in distinction to HĪNAYĀNA and MAHĀYĀNA. The vajrayāna, however, is considered by its adherents to be not a separate vehicle but a form of the Mahāyāna; such adherents would speak instead of the three vehicles (TRIYĀNA) of hīnayāna, PĀRAMITĀYĀNA, and vajrayāna, with the latter two referring respectively to an exoteric and an esoteric path by which the bodhisattva achieves buddhahood, with the pāramitāyāna set forth in the Mahāyāna sūtras and the vajrayāna set forth in the tantras. Traditional etymologies of the term typically evoke the VAJRA to refer to the unbreakable and indivisible quality of two factors, typically method (UPĀYA) and wisdom (PRAJÑĀ). See TANTRA.

vajrayoga. (T. rdo rje rnal 'byor). In Sanskrit, "adamantine yoga"; a system of yogic practice associated with the KĀLACAKRATANTRA, as transmitted in Tibet by Gyi jo Lo tsā ba Zla ba'i 'od-zer, the tantra's earliest translator, during the eleventh century. It is counted as one of the "eight conveyances that are lineages of achievement" (sgrub brgyud shing rta chen po brgyad).

Vajrayoginī. (T. Rdo rje rnal 'byor ma). The most important of the ḌĀKINĪ in the VAJRAYĀNA, associated especially with the "mother tantras" (MĀTṚTANTRA) of the ANUTTARAYOGA class. She is also the most important of the female YI DAM. Her visualization is central to many tantric SĀDHANAs, especially in the practice of GURUYOGA, in which the meditator imagines himself or herself in the form of Vajrayoginī in order to receive the blessings of the GURU. She is also visualized in GCOD and GTUM MO practice. Her worship seems to originate with the CAKRASAṂVARATANTRA and is popular in all sects of Tibetan Buddhism. Vajrayoginī plays a special role in the "six yogas of NĀROPA" (NĀ RO CHOS DRUG), where she is known as Nā ro mkha' spyod ma (Kachöma). She is closely associated with VAJRAVĀRĀHĪ, the consort of CAKRASAṂVARA. In her most common form, she stands in the ĀLĪḌHA posture, holding a KAṬVĀṄGA and a skull cup.

vajropamasamādhi. (T. rdo rje lta bu'i ting nge 'dzin; C. jingang yu ding/jingang sanmei; J. kongōyujō/kongōzanmai/kongōsanmai; K. kŭmgang yu chŏng/kŭmgang sammae 金剛

喻定/金剛三昧). In Sanskrit, "adamantine-like concentration," sometimes called simply the "adamantine concentration" (VAJRASAMĀDHI); a crucial stage in both SARVĀSTIVĀDA ABHIDHARMA and MAHĀYĀNA presentations of the path (MĀRGA). The experience of vajropamasamādhi initiates the "path of completion" (NIṢṬHĀMĀRGA) or the "path where no further training is necessary" (AŚAIKṢAMĀRGA), the fifth and final stage of the five-path schema (PAÑCAMĀRGA). The arising of this concentration initiates a process of abandonment (PRAHĀṆA), which ultimately leads to the permanent destruction of even the subtlest and most persistent of the ten fetters (SAṂYOJANA), resulting in the "knowledge of cessation" (KṢAYAJÑĀNA) and, in some presentations, an accompanying "knowledge of nonproduction" (ANUTPĀDAJÑĀNA), viz., the knowledges that the fetters are destroyed and can never again recur. At that point, depending on the path that has been followed, the meditator becomes an ARHAT or a buddha. Because it is able to destroy the very worst of the fetters, this concentration is said to be "like adamant" (vajropama). The vajropamasamādhi thus involves both an "uninterrupted path" (ĀNANTARYAMĀRGA) and a path of liberation (VIMUKTIMĀRGA) and serves as the crucial transition point in completing the path and freeing oneself from SAṂSĀRA. In the MAHĀPARNIRVĀṆASŪTRA, this special type of concentration is closely associated with seeing the buddha-nature (BUDDHADHĀTU; FOXING) and achieving the complete, perfect enlightenment (ANUTTARASAMYAKSAṂBODHI) of the buddhas.

Vakkali. (S. *Vālkali?; C. Pojiali; J. Bakari; K. Pagari 婆迦梨). Pāli proper name of an eminent ARHAT declared by the Buddha to be foremost among his monk disciples who who aspire through faith (ŚRADDHĀDHIMUKTA, P. saddhādhimutta). According to the Pāli account, he was a learned brāhmaṇa from Sāvatthi (S. Śrāvastī) who became a devoted follower of the Buddha from the very moment he saw him. Because of his extraordinary faith-cum-affection, Vakkali was so enraptured by the Buddha that he used to follow him around. He took ordination so that he could always remain close to the Buddha; when he was not in the Buddha's presence, he spent his time thinking about him. The Buddha admonished him not to be infatuated with the corruptible body of the Buddha, stating that he who sees the dharma, sees the Buddha. Vakkali could not be dissuaded, however, and finally the Buddha ordered him out of his presence, in an attempt to shock (saṃvega) Vakkali into awakening. Accounts differ as to what happened next. According to one story, Vakkali was greatly saddened and resolved to hurl himself from the top of Vulture Peak (GṚDHRAKŪṬA). Knowing this, the Buddha appeared to him and recited a stanza. Filled with joy, Vakkali rose into the air and attained arhatship. In another account, Vakkali retired to Vulture Peak to practice meditation but fell ill from his arduous, but ultimately unsuccessful, efforts. The Buddha visited him to encourage him, and Vakkali finally attained arhatship. The best-known account states that Vakkali fell ill on his way to visit the Buddha. The Buddha told Vakkali that he was assured of liberation and that there was therefore nothing for him to regret. The Buddha departed and proceeded to Vulture Peak, while Vakkali made his way to Kālasīla. At Vulture Peak, the divinities informed the Buddha that Vakkali was about to pass away. The Buddha sent a message telling him not to fear. Vakkali responded that he had no desire for the body or the aggregates, and committed suicide with a knife. When the Buddha saw his body, he declared that Vakkali had attained NIRVĀṆA and had escaped MĀRA's grasp. The commentary to the last account remarks that, at the moment of his suicide, Vakkali was in fact deluded in thinking he was already an ARHAT, hence his evil intention of killing himself. Even so, the pain of the blade so shocked his mind that in the moments just before his death he put forth the effort necessary to attain arhatship. See also ŚRADDHĀ.

vākkarman. (P. vacīkamma; T. ngag gi las; C. yuye; J. gogō; K. ŏŏp 語業). In Sanskrit, lit. "verbal action"; verbal deeds that create wholesome or unwholesome effects in the future. Speech (vāk) is one of the three conduits or "doors" (TRIDVĀRA) through which action (KARMAN) occurs, along with the body (KĀYA) and the mind (CITTA). According to the ABHIDHARMA, physical actions, words, and thoughts are all capable of producing karman that is either virtuous (KUŚALA) or unvirtuous (AKUŚALA). Unvirtuous verbal deeds include lying, divisive speech, harsh speech, and senseless speech. Virtuous verbal deeds include speaking truthfully, speaking harmoniously, speaking kindly, and speaking sensibly.

Vakula. (S). See BAKKULA.

Valabhī. [alt. Vallabhī]. Sanskrit name of a city in western India (in the modern state of Gujarat) that flourished under the Maitraka kings (475–775) and was the site of an important Buddhist monastery. Said to rival NĀLANDĀ in fame, Valabhī was known especially as a center of ŚRĀVAKAYĀNA learning, with each of the MAINSTREAM BUDDHIST SCHOOLS represented. However, the MAHĀYĀNA was also taught there, as were Brahmanical and secular subjects. Two important figures of the YOGĀCĀRA school, GUṆAMATI and STHIRAMATI, were said to have held prominent positions at Valabhī before they proceeded to Nālandā. In the late seventh century, XUANZANG found approximately six thousand monks residing there in about a hundred monastic buildings.

vālavyajana. (P. vījanī; T. rlung yab; C. fuzi; J. hossu; K. pulcha 拂子). In Sanskrit, "fly whisk" or "chowrie"; a yak-tail fan that Buddhist monks used to keep flies and mosquitoes away, also called a cāmara. The chowrie is presumed to have originally been used among adherents of the JAINA tradition to shoo away flies without injuring them, and it came to be used widely throughout India. In the Chinese CHAN tradition, the fly whisk (which in East Asia is usually made from a horse tail) became a symbol of the office or privilege of a Chan master and is one of the accoutrements he traditionally holds in formal

portraits. "Taking up the fly whisk" (BINGFU) is, by metonymy, a term used to refer to a formal Chan sermon delivered by a master. See also FUZI.

Vallabhī. See VALABHĪ.

Vallée Poussin, Louis de la. See LA VALLÉE POUSSIN, LOUIS DE.

Vammikasutta. (C. Yiyu jing; J. Giyukyō; K. Ŭiyu kyŏng 蟻喻經). In Pāli, the "Anthill" or "Termite Mound Discourse," the twenty-third sutta (SŪTRA) contained in the MAJJHIMANIKĀYA (two separate SARVĀSTIVĀDA recensions appear in the Chinese translation of the SAṂYUKTĀGAMA, as well as an unidentified recension in the Chinese translation of the EKOTTARĀGAMA); preached by the Buddha at Sāvatthi (S. ŚRĀVASTĪ) in connection with a riddle presented to him by the monk Kumāra-Kassapa (S. KUMĀRA-KĀŚYAPA). Kumāra-Kassapa had been approached by a divinity (DEVA), who gave him a riddle comprising fifteen questions that he asked to be delivered to the Buddha for solution. The Buddha solved the riddle, identifying its cryptic elements as symbols and metaphors for points of Buddhist doctrine. The first riddle concerned an anthill that gave off fumes during the night and flames during the day. The anthill represents the body with its apertures. The flames it gives off during the day are bodily actions, while its fumes at night are the thoughts and worries about the day's activities that disturb one in the evening.

vaṃsa. In Pāli, lit. "lineage," but generally referring to a semi-historical "chronicle"; an important genre of Pāli literature that typically recounts the life of the Buddha, the establishment of the saṅgha (S. SAṂGHA), and the first Buddhist council (SAṂGĪTI; see COUNCIL, FIRST) after the Buddha's death. Depending upon the particular purpose of the chronicle, the work will then go on to describe such things as the transmission of the dharma to a particular place, the founding of a monastery, the tracing of a monastic lineage back to the first council, the enshrinement of a relic, and/or the patronage of the saṅgha by a pious king. The most famous Sinhalese chronicles include the MAHĀVAṂSA, or "Great Chronicle" (which has been periodically augmented since the fifth century); the DĪPAVAṂSA, or "Chronicle of the Island (of Sri Lanka)"; and the THŪPAVAṂSA, or "Chronicle of the STŪPA." Other important examples of the genre are the Thai JINAKĀLAMĀLĪ ("Garland of the Epochs of the Conqueror") and the Burmese SĀSANAVAṂSA ("Chronicle of the Dispensation").

Vaṃśa. (S). See VATSAGOTRA.

Vanapatthasutta. (C. Lin jing; J. Ringyō; K. Im kyŏng 林經). In Pāli, the "Discourse on Forest Dwelling"; the seventeenth sutta in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as SŪTRA nos. 107–108 in the Chinese translation of the MADHYAMĀGAMA); preached by the Buddha to a gathering of monks in the JETAVANA grove in the town of Sāvatthi (S. ŚRĀVASTĪ). The Buddha describes the suitable conditions for a monk to practice meditation. Should he find a place suitable for neither material support (e.g., alms food, robes, lodgings) nor meditation practice, he should abandon that place. Should he find a place suitable for material support but not practice, he should abandon that place also. Should he find a place suitable for meditation practice but not for support, he should remain there. Should he find a place suitable for material support and meditation practice, he should take up lifelong residence there.

Vanavāsi. One of nine adjacent lands (paccantadesa) converted to Buddhism by missionaries dispatched by the elder MOGGALIPUTTATISSA at the end of the third Buddhist council (SAṂGĪTI; see COUNCIL, THIRD) held in Pāṭaliputta (S. PĀṬALIPUTRA) during the reign of AŚOKA in the third century BCE. Vanavāsi is located in south India and was converted by the elder Rakkhita, who preached the *Anamatagga-Saṃyutta* while floating in the air. The third Buddhist council at Pāṭaliputta and the nine Buddhist missions are known only in Pāli sources and are first recorded in the c. fourth-century DĪPAVAṂSA.

Vanavāsin. (P. Vanavāsī; T. Nags na gnas; C. Fanaposi zunzhe; J. Batsunabashi sonja; K. Pŏllabasa chonja 伐那婆斯尊者). Sanskrit proper name of the fourteenth of the sixteen ARHAT elders (ṢOḌAŚASTHAVIRA), who were charged by the Buddha with protecting his dispensation until the advent of the next buddha, MAITREYA. He abides on Habitable Mountain (C. Kezhushan) with 1,400 disciples. In the Chinese tradition, he was said to have been born during a heavy downpour, which made a racket as the raindrops hit the plantain leaves. After ordaining, he also often diligently studied under the plantain trees, thus earning him the nickname "Plantain Arhat" (Bajiao Luohan). In CHANYUE GUANXIU's standard Chinese depiction, Vanavāsin sits in meditation in a cave, with his eyes closed, wearing a robe across his shoulders with both hands hidden in the sleeves. East Asian images also portray him seated next to a vase, his hands together in AÑJALIMUDRĀ. In Tibetan iconography, he holds a chowrie (VĀLAVYAJANA).

Vāṅgīśa. [alt. Vāgīsa] (P. Vaṅgīsa; T. Ngag dbang; C. Poqishe; J. Bagisha; K. Pagisa 婆耆舍). Sanskrit proper name of an eminent ARHAT declared by the Buddha to be foremost among his monk disciples in eloquent expression (PRATIBHĀNA). According to Pāli sources, he was a learned brāhmaṇa proficient in the Vedas who became renowned for his ability to determine the destiny of the deceased by tapping his fingers on their skulls. Vaṅgīsa was much sought after and earned a great deal of money for his prognostications. One day he encountered Sāriputta (S. ŚĀRIPUTRA), who spoke to him of the Buddha's qualities. Intrigued, Vaṅgīsa resolved to meet the Buddha, much to the consternation of his associates. Knowing of Vaṅgīsa's fame as a prognosticator, the Buddha gave him the

skull of an ARHAT and asked him to determine the dead saint's rebirth. Vaṅgīsa was unable to determine the deceased's whereabouts and, determined to discover the secret, joined the order as a monk. His preceptor was Nigrodhakappa. When his preceptor died, Vaṅgīsa asked the Buddha about his destiny, to which the Buddha replied that Nigrodhakappa had entirely passed away. Vaṅgīsa had been filled with doubt, for he knew that his preceptor had died with his hands curled up, which was not characteristic of an arhat; but in the case of Nigrodhakappa, this was due only to force of habit. Vaṅgīsa attained arhatship by contemplating the thirty-two impure parts of the body. Upon attaining his goal, he went to the Buddha and sang his praises in eloquent verse. From that time onward he became known as an exceptionally skilled poet, and for that won preeminence as foremost in eloquent expression (pratibhāna). There are several verses ascribed to him in the *Vaṅgīsa-Saṃyutta* of the SAṂYUTTANIKĀYA and in the THERAGĀTHĀ ("Verses of the Elders"): the verses describe his inner struggle against such obstacles as sensuality and conceit, as well as his praise of the Buddha and such eminent disciples as Śāriputra and MAHĀMUDGALYAYANA. According to the APADĀNA, a collection of biographical stories in the Pāli canon, he was given the name Vaṅgīsa because he was born in Vaṅga (modern Bengal) and also because he was a master (P. isi; S. ṛṣi) of the word (vacana).

Vạn Hạnh. (萬行) (d. 1025). An influential monk during the Vietnamese Lý dynasty (1010–1225); his family name was Nguyễn. Vạn Hạnh was a native of Cổ Pháp Village, Thiên Đức Prefecture, in northern Vietnam. The THIỀN UYỂN TẬP ANH reports that at the age of twenty-one, he left home to become a monk and served the monk Thiền Ông of Lục Tổ monastery. After Thiền Ông passed away, Vạn Hạnh devoted himself to the practice of DHĀRAṆĪ (spells or mnemonic codes) and SAMĀDHI. King Lê Đại Hành (r. 980–1005), founder of the Former Lê dynasty (980–1009), greatly revered him and relied on his prophecies in political and diplomatic matters. When Lê Ngọa Triều (r. 1005–1009), the last king of the Lê dynasty, appeared to be a cruel tyrant, Vạn Hạnh masterminded the overthrow of the latter and helped Lý Công Uẩn ascend the throne to establish the Lý dynasty (1010–1225). Vạn Hạnh remains the most beloved eminent monk among modern Vietnamese Buddhists. In his honor, in 1964, the first nonmonastic Buddhist university was established in Saigon and named after him. Vạn Hạnh University was the first Vietnamese university to be established following the model of an American liberal arts college.

varadamudrā. (T. mchog sbyin gyi phyag rgya; C. shiyuan yin; J. segan'in; K. siwŏn in 施願印). In Sanskrit, "gesture of generosity" or "gesture of granting boons"; a MUDRĀ usually formed with the right hand and commonly found in the iconography of peaceful deities. The varadamudrā is formed with the palm held outward with the fingers outstretched and pointing down. Occasionally, the thumb and index finger may touch lightly, forming a circle.

vargacārin. (T. tshogs spyod; C. buxing; J. bugyō; K. puhaeng 部行). In Sanskrit, lit. "congregator"; one of the two types of PRATYEKABUDDHAS, together with KHAḌGAVIṢĀṆAKALPA. Although pratyekabuddhas are renowned for living "solitary like a rhinoceros [horn]" (as indicated by the term khaḍgaviṣāṇakalpa), congregating pratyekabuddhas instead reside together with others in a community. Like all pratyekabuddhas, it is said that this type achieves enlightenment without relying on a teacher in their last lifetime, does not teach the dharma, and appears in the world only during a period when there is no buddha.

varṣā. [alt. varṣa, vārṣika] (P. vassa; T. dbyar gnas; C. anju; J. ango; K. an'gŏ 安居). In Sanskrit, "rains" and, by extension, "rains retreat"; a three-month period generally beginning the day after the full-moon day of the eighth lunar month (usually July) and concluding on the full moon of the eleventh lunar month (usually October), during which time monks are required to remain in residence in one place. According to tradition, the Buddha instructed monks to cease their peregrinations during the torrential monsoon period in order to prevent the killing of insects and worms while walking on muddy roads. However, the practice of observing a rains retreat was likely adopted from other mendicant ŚRAMAṆA sects in ancient India at the time of the Buddha. The residences established for use during the rains retreat are called varṣāvāsa or "rains abode," and the institution of the rains retreat (and the consequent need for more permanent shelter) probably led to the development of formal monasteries (VIHĀRA). During this three-month period, monks are expected to continue their studies and practice. They are not permitted to leave their monasteries except for essential tasks, and then for no more than seven nights. Occasions that permit the monk to be temporarily absent from his monastery include urgent personal matters, such as illness or death of one's parents; an invitation to preach the dharma; or the donation of a VIHĀRA or land or other property to the SAṂGHA or an individual monk. If for any reason the residence requirement is not kept, the monk is not eligible to receive a robe donation (KAṬHINA) at the end of the rains retreat. The varṣā is an important chronological marker, with monastic seniority measured by the number of rain retreats one has completed. In Thailand, where it is customary for all males to be ordained as novices for at least a brief period of their lives, the three months of the rains retreat is often chosen as a particularly auspicious time to undertake this commitment. The end of the retreat is marked by the kaṭhina, or "cloth" ceremony, in which laypeople present gifts to the monks, including cloth for new robes.

vāsanā. (T. bag chags; C. xunxi/xiqi; J. kunjū/jikke; K. hunsŭp/sŭpki 薰習/習氣). In Sanskrit, literally, "perfumings," hence "predispositions," "habituations," "latent tendencies," or "residual impressions" (and sometimes seen translated overliterally from the Chinese as "habit energies"); subtle tendencies created in the mind as a result of repeated exposure to

positive or negative objects. Vāsanā are described as subtle forms of the afflictions (KLEŚA), which hinder the attainment of buddhahood. According to the DAZHIDU LUN (**Mahāprajñāpāramitāśāstra*), ARHATs remain subject to the influence of the vāsanā—for example, ŚĀRIPUTRA's anger and NANDA's staring at beautiful women—just as the scent of incense remains behind in a censer even after all the incense has burned away. Thus, only the buddhas have removed all such latent tendencies. In the YOGĀCĀRA system, the vāsanā "perfume" the "seeds" (BĪJA) of wholesome and unwholesome actions that are implanted in the storehouse consciousness (ĀLAYAVIJÑĀNA). The CHENG WEISHI LUN (**Vijñaptimātratāsiddhi*) lists the following three types of vāsanā: (1) linguistic predispositions (C. mingyan xiqi), the impressions created by concepts and expressions through which one evaluates his experience; (2) grasping-at-self predispositions (C. wozhi xiqi), impressions fostered by grasping at false notions of a perduring self (ĀTMAGRĀHA), which create an attachment to I and mine; and (3) cause-of-existence predispositions (C. youzhi xiqi), impressions that engender wholesome and unwholesome karmic retributions, which lead to continued rebirth in SAṂSĀRA.

vaśīkaraṇa. (T. dbang du bya ba/dbang po'i las). In Sanskrit, "controlling"; also called bhāgyacāra, "activities of control"; one of the four types of activities (CATURKARMA) set forth in the Buddhist tantras. The other three are activities of increase (PAUṢṬIKA) to increase prosperity, lengthen life, etc.; pacifying activities (ŚĀNTIKA) that purify the negativity that appears in such forms as hindrances and illness; and violent or drastic measures (ABHICĀRA) such as killing and warfare. Vaśīkaraṇa may be through physical force, but is more often done through MANTRAs or ritual; it brings control and influence over persons and situations.

vaśitā. (T. dbang bo; C. zizai; J. jizai; K. chajae 自在). In Sanskrit, "mastery," or "autonomy"; a list of ten types of mastery or autonomy developed by a BODHISATTVA, viz., of one's life span, action (KARMAN), necessities of life, determination, aspiration, magical powers, birth, dharma, mind, and wisdom.

Vāṣpa. (P. Vappa; T. Rlangs pa; C. Pofu; J. Bafu; K. Pabu 婆敷). Sanskrit proper name of one of the monks who belonged to the so-called group of five (PAÑCAVARGIKA; BHADRAVARGĪYA)—viz., KAUṆḌINYA [alt. Ājñāta-Kauṇḍiya], AŚVAJIT, VĀṢPA, MAHĀNĀMAN, and BHADRIKA—who were converted by the Buddha at the Deer Park (MṚGADĀVA) in SĀRNĀTH. When the sage ASITA predicted that the infant bodhisattva, SIDDHĀRTHA GAUTAMA, would one day become a buddha, Vāṣpa and four other brāhmaṇas headed by Kauṇḍinya became ascetics in anticipation of Siddhārtha's own renunciation. They practiced austerities with him for six years until Siddhārtha renounced asceticism. Dismayed with what they regarded as his backsliding, the five ascetics left him and took up residence in the Deer Park at ṚṢIPATANA. After his enlightenment, the Buddha went there and preached to the five ascetics, and each of them attained enlightenment. The Pāli canon describes their enlightenment as proceeding in two stages: first, when the Buddha preached the DHAMMACAKKAPPAVATTANASUTTA (S. DHARMACAKRAPRAVARTANASŪTRA) ("Discourse Setting in Motion the Wheel of the Dharma"), Kauṇḍinya became a stream-enterer (SROTAĀPANNA) and in the subsequent days the other four did as well; and second, when the Buddha preached the (ANATTALAKKHAṆASUTTA; S. **Anātmalakṣaṇasūtra*) ("Discourse on the Mark of Nonself"), they all attained complete liberation as ARHATs.

vastujñāna. (T. gzhi shes; C. yiqiexiang zhi; J. issaisōchi; K. ilch'esang chi 一切相智). In Sanskrit, "knowledge of bases" (VASTU), in the PRAJÑĀPĀRAMITĀ literature, referring to knowledge that the bases (SKANDHA, ĀYATANA, DHĀTU, etc.) described in mainstream Buddhist sources lack any semblance of a personal self. It is one of the three knowledges (along with SARVĀKĀRAJÑATĀ and MĀRGAJÑATĀ) set forth in the ABHISAMAYĀLAṂKĀRA, a commentary on the PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA that describe the MAHĀYĀNA path and result. In the *Abhisamayālaṃkāra*, the vastujñāna is more commonly called just SARVAJÑATĀ ("all-knowledge"). When it is not informed by skillful means (UPĀYA), that is, great compassion (MAHĀKARUṆĀ), it is understood negatively as the practice of a ŚRĀVAKA or PRATYEKABUDDHA that leads to their inferior goal of NIRVĀṆA and must be forsaken. When it is informed by skillful means, it is an essential component both of the practice of a bodhisattva (mārgajñatā), and of a buddha's knowledge (sarvākārajñatā). As an authentic knowledge of nonself gained through a direct understanding of the four noble truths, it is possessed by those who have reached the path of vision (DARŚANAMĀRGA).

Vasubandhu. (T. Dbyig gnyen; C. Shiqin; J. Seshin; K. Sech'in 世親) (fl. c. fourth or fifth centuries CE). One of the most influential authors in the history of Buddhism, and the only major figure to make significant contributions to both the MAINSTREAM BUDDHIST SCHOOLS and MAHĀYĀNA. In Tibetan Buddhism, Vasubandhu is counted as one of the "six ornaments" (T. rgyan drug), along with NĀGĀRJUNA, ĀRYADEVA, ASAṄGA, DIGNĀGA, and DHARMAKĪRTI. There has been considerable speculation about his dates, so much so that ERICH FRAUWALLNER proposed that there were two different Vasubandhus. This theory has been rejected, but there is still no consensus on his dates, with most scholars placing him in the fourth or fifth century CE. Vasubandhu is said to have been born in Puruṣapura in GANDHĀRA (identified with Peshawar in modern Pakistan), as the brother or half brother (with the same mother) of Asaṅga. He was ordained as a monk in a SARVĀSTIVĀDA school and studied VAIBHĀṢIKA ABHIDHARMA philosophy in KASHMIR–GANDHĀRA, as well as the tenets of the rival SAUTRĀNTIKA school. At the conclusion of his studies, he composed his first and what would be his most famous work, the *Abhidharmakośa*, or "Treasury of the Abhidharma." In over six hundred stanzas in nine chapters, he set forth the major points of the Vaibhāṣika system. He then composed a prose

autocommentary, the ABHIDHARMAKOŚABHĀṢYA, in which he critiqued from a Sautrāntika perspective some of the Vaibhāṣika positions that he had outlined in the verses. These two texts would become two of the most influential texts on the abhidharma in the later history of Buddhism on the subcontinent and beyond, serving, for example, as the root texts for abhidharma studies in Tibet and as the foundational text for the Kusha (Kośa) school of early Japanese Buddhism. At some point after his composition of the *Kośa*, he encountered his half brother Asaṅga, author of at least some of the texts collected in the YOGĀCĀRABHŪMI, who "converted" him to the Mahāyāna. After his conversion, Vasubandhu became a prolific author on Mahāyāna materials, helping especially to frame the philosophy of the Yogācāra school. Major works attributed to him include the VIṂŚATIKĀ, or "Twenty [Stanzas]" and the TRIṂŚIKĀ, or "Thirty [Stanzas]," two works that set forth succinctly the basic philosophical positions of the Yogācāra. The *Triṃśikā* was, together with DHARMAPĀLA's commentary to the text, the basis of XUANZANG's massive commentary, the CHENG WEISHI LUN (**Vijñaptimātratāsiddhi*), which was the foundational text for the FAXIANG ZONG of East Asian Yogācāra. In his TRISVABHĀVANIRDEŚA, Vasubandhu also set forth the central doctrine of the Yogācāra, the "three natures" (TRISVABHĀVA), of imaginary (PARIKALPITA), dependent (PARATANTRA), and consummate (PARINIṢPANNA). His VYĀKHYĀYUKTI set forth principles for the exegesis of passages from the sūtras. He is also credited with commentaries on a number of Mahāyāna sūtras, including the AKṢAYAMATINIRDEŚA, the SADDHARMAPUṆḌARĪKASŪTRA, and the DAŚABHŪMIKASŪTRA (with his commentary serving as the basis of the DI LUN ZONG in China), as well as commentaries on three of the five treatises of MAITREYA, the MAHĀYĀNASŪTRĀLAṂKĀRA, the MADHYĀNTAVIBHĀGA, and the DHARMADHARMATĀVIBHĀGA. He also wrote a commentary on Asaṅga's MAHĀYĀNASAṂGRAHA. His KARMASIDDHIPRAKARAṆA, or "Investigation Establishing [the Correct Understanding] of KARMAN," examines the theory of action in light of the Yogācāra doctrine of the ĀLAYAVIJÑĀNA. The PAÑCASKANDHAPRAKARAṆA, or "Explanation of the Five Aggregates," presents a somewhat different view of the five aggregates (SKANDHA) than that found in his *Abhidharmakośabhāṣya* and thus probably dates from his Mahāyāna period; it is a reworking of the presentation of the five aggregates found in Asaṅga's ABHIDHARMASAMUCCAYA. In addition to the *Abhidharmakośabhāṣya* and the *Viṃśatikā*, a third text of his was highly influential in East Asia. It is a commentary on the larger SUKHĀVATĪVYŪHA, whose Sanskrit title might be reconstructed as the **Sukhāvatīvyūhopadeśa*. However, the work is known only in Chinese, as the JINGTU LUN, and its attribution to Vasubandhu has been called into question. Nonetheless, based on this traditional attribution, Vasubandhu is counted as an Indian patriarch of the PURE LAND schools of East Asia. ¶ In Tibet, a *bṛhaṭṭīkā* commentary on the ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀ and a *paddhati* on three PRAJÑĀPĀRAMITĀ sūtras (T. *Yum gsum gnod 'joms*) are attributed to Vasubandhu, although his authorship is disputed.

Vasumitra. (T. Dbyig bshes; C. Shiyou; J. Seu; K. Seu 世友) (d.u.). A prominent scholar of the SARVĀSTIVĀDA school in KASHMIR, possibly during the second century CE. His SAMAYABHEDOPARACANACAKRA is an important source of information on the various schools and subschools of mainstream Nikāya Buddhism in India. He is also credited with composing the PRAKARAṆAPĀDA, one of the "six feet" of the ABHIDHARMAPIṬAKA of the SARVĀSTIVĀDA, which first introduces the categorization of dharmas according to the more developed Sarvāstivāda lists of RŪPA, CITTA, CAITTA, CITTAVIPRAYUKTASAṂSKĀRA, and ASAṂSKṚTA dharmas; it also adds a new listing of KUŚALAMAHĀBHŪMIKA, or factors always associated with wholesome states of mind. Vasumitra is frequently cited in the ABHIDHARMAMAHĀVIBHĀṢĀ, the massive abhidharma exegesis of the VAIBHĀṢIKA school of the Sarvāstivāda, but it is unclear whether the scholar mentioned in the *Abhidharmamahāvibhāṣā* and the author of the texts mentioned earlier are the same figure. Vasumitra is also credited with composing a (now-lost) commentary to the ABHIDHARMAKOŚABHĀṢYA, which, if true, would move his dates forward into the fourth century.

Vatsā. [alt. Vaṃśā] (P. Vaṃsa; T. Gnas ma; C. Bacuo [guo]; J. Bassa[koku]; K. Palch'a [kuk] 跋蹉[國]). One of the sixteen great states (MAHĀJANAPADA) in ancient India, and one of three powerful kingdoms of the Gaṅgā (Ganges) river valley at the time of Buddha, together with MAGADHA and KOŚALA. Vatsā was located south of the Gaṅgā River, in what is today the Indian state of Uttar Pradesh, and had its capital at Kauśāmbī. During the time of the Buddha, Udayāna was king of Vatsā and a follower of the Buddha. See also UDĀYANA BUDDHA.

Vatsagotra. [alt. Vatsa, Vaṃśa] (P. Vacchagotta; C. Pocha; J. Basa; K. Pach'a 婆差). In Sanskrit, lit. "Calf Ancestry," an ARHAT and disciple of the Buddha. According to Pāli accounts, where he is known as Vacchagotta, he was a wandering mendicant of great learning who was converted and attained arhatship in a series of encounters with the Buddha. Numerous discourses in the Pāli SUTTAPIṬAKA concern metaphysical questions that Vacchagotta poses to the Buddha; an entire section of the SAṂYUTTANIKĀYA is devoted to these exchanges. In other suttas, he raises similar questions in conversations with such important disciples of the Buddha as Mahāmoggallāna (MAHĀMAUDGALYĀYANA) and ĀNANDA. Vacchagotta's gradual conversion is recorded in a series of discourses contained in the MAJJHIMANIKĀYA. In the *Tevijja-Vacchagottasutta*, he rejoices at the words of the Buddha. In the *Aggi-Vacchagottasutta*, Vacchagotta has a renowned exchange concerning ten "indeterminate questions" (AVYĀKṚTA)—is the world eternal or not eternal, infinite or finite, what is the state of the TATHĀGATA after death, etc. The Buddha refuses to respond to any of the questions, and instead offers the simile of extinguishing fire to describe the state of the tathāgata after death: just as after a fire has been extinguished, it would be inappropriate to say that it has gone anywhere, so too after the tathāgata has extinguished each of the

five aggregates (P. khandha; S. SKANDHA), he cannot be said to have gone anywhere. At the conclusion of the discourse, Vacchagotta accepts the Buddha as his teacher. In the *Mahāvacchagottasutta*, he is ordained by the Buddha and attains in sequence all the knowledges possible for one who is not yet an arhat. The Buddha instructs him in the practice of tranquility (P. samatha; S. ŚAMATHA) and insight (VIPASSANĀ; S. VIPAŚYANĀ) whereby he can cultivate the six superknowledges (P. abhiññā; S. ABHIJÑĀ); Vacchagotta then attains arhatship. ¶ The DAZHIDU LUN (**Mahāprajñāpāramitā-śāstra*) identifies the Vacchagotta of the Pāli suttas with Śreṇika Vatsagotra, the namesake of what in MAHĀYĀNA sources is called the ŚREṆIKA HERESY. The locus classicus for this heresy appears in the MAHĀPARINIRVĀṆASŪTRA. There, when Śreṇika raises the question about whether there is a self or not, the Buddha keeps silent, so Śreṇika himself offers the fire simile, but with a very different interpretation than the Buddha's. He compares the physical body and the eternal self to a house and its owner: even though the house may burn down in a fire, the owner is safe outside the house; thus, the body and its constituents (SKANDHA) may be impermanent and subject to dissolution, but not the self. In other Sanskrit sources, Vatsagotra also seems to refer to the figure most typically known as Vatsa (T. Be'u) or Vaṃśa, a student of the ascetic Kāśyapa.

Vātsīputrīya. (P. Vajjiputtakā/Vajjiputtiyā; T. Gnas ma'i bu pa; C. Duzi bu; J. Tokushibu; K. Tokcha pu 犢子部). One of the traditional eighteen schools of "mainstream" (i.e., non-MAHĀYĀNA) Indian Buddhism, which takes its name from its leader, Vātsīputra. An offshoot of the SARVĀSTIVĀDA school, it is remembered primarily as one of the schools labeled by others as PUDGALAVĀDA, or "proponents of the person," that is, the apparently heretical position that there is a "person" (PUDGALA) with qualities that are "inexpressible" (avācya), which transmigrates from lifetime to lifetime. This position was criticized by exegetes in virtually all rival Buddhist schools, and earned a long critique in the ninth chapter of VASUBANDHU's ABHIDHARMAKOŚABHĀṢYA, where it was denigrated as the assertion of a permanent self or soul (ĀTMAN). In their defense, the Vātsīputrīyas argued that the pudgala was neither the same as nor different from the five aggregates (SKANDHA)—viz., that the pudgala was in an "indeterminate" relationship vis-à-vis the skandhas—thus conforming to the Buddha's dictum that there was no self to be discovered among the aggregates. For the Vātsīputrīyas, it was argued that it was necessary to posit the existence of the pudgala in order to account for personal continuity over the course of a single lifetime, karmic continuity over the course of multiple lifetimes, and, ultimately, so that there would be something that would attain NIRVĀṆA upon the cessation of the aggregates. However, recognizing the special nature of their view of the person, the Vātsīputrīya posited it as a fifth category of dharmas in addition to the standard four of the Sarvāstivāda school, viz., (1)–(3) conditioned factors (SAṂSKṚTADHARMA) belonging to the three time periods of past, present, and future; (4) an unconditioned factor (ASAṂSKṚTADHARMA), which for the Vātsīputrīyas, like the STHAVIRANIKĀYA, included only nirvāṇa; and (5) "inexpressible dharmas" (S. *avācyadharma; C. bukeshuo fa), a category exclusive to the Vātsīputrīyas, which included the notion of a pudgala. Despite the apparent heresy of this position, Chinese pilgrims reported the prominence in India of schools that held this view. The Vātsīputrīya spawned four additional mainstream schools: the Dharmottarīya, Bhadrayānīya, SAṂMITĪYA, and Ṣaṇṇagarika.

Vaṭṭagāmaṇi Abhaya. A Sinhalese king (r. 43 and 29–17 BCE) whose reign witnessed, tradition claims, a number of major developments in Sri Lankan Buddhism, including the first attempt to compile the Pāli canon (P. tipiṭaka; S. TRIPIṬAKA), and its Sinhalese commentaries (AṬṬHAKATHĀ) in written form; this event, which is said to have occurred at a cave named Ālokalena, is considered to mark the first written transcription of a complete Buddhist canon. The DĪPAVAṂSA and MAHĀVAṂSA state that a gathering of ARHATs had decided to commit the body of texts to writing out of fear that they could no longer be reliably memorized and passed down from one generation to the next. In the first year of his reign, Vaṭṭagāmaṇi Abhaya was deposed by a coalition of the forces of seven Damiḷa (Tamil) warriors and forced into exile for fourteen years. During that time, he was aided by a monk named Mahātissa. In gratitude for the assistance, when he regained the throne, Vaṭṭagāmaṇi sponsored the construction of the ABHAYAGIRI monastery, which he donated to the monk. But Mahātissa had been expelled from the MAHĀVIHĀRA for misconduct, so the disciples of Mahātissa then dwelling at the Abhayagiri monastery seceded from the Mahāvihāra fraternity and established themselves as a separate fraternity. The Abhayagiri fraternity that arose during the reign of Vaṭṭagāmaṇi flourished as a separate monastic sect in Sri Lanka until the twelfth century CE.

Vatthūpamasutta. (C. Shuijing fanzhi jing; J. Suijōbonjikyō; K. Sujŏng pŏmji kyŏng 水淨梵志經). In Pāli, the "The Simile of the Cloth Discourse"; the seventh sutta in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as the ninety-third SŪTRA in the Chinese translation of the MADHYAMĀGAMA, as well as an unidentified recension in the Chinese translation of the EKOTTARĀGAMA); preached by the Buddha to a group of disciples in the JETAVANA grove in the town of Sāvatthi (S. ŚRĀVASTĪ). The Buddha describes the difference between a pure mind and a defiled mind by citing the example of cloth: just as only a clean cloth will absorb dye properly, so only a pure mind will be receptive to the dharma. The Buddha then lists a set of seventeen imperfections that defile the mind, which the monk must learn to abandon in order to gain confidence in the three jewels (RATNATRAYA) and ultimately liberation.

vāyu. [alt. vāyudhātu] (P. vāyu/vāyo; T. rlung; C. fengda; J. fūdai; K. p'ungdae 風大). In Sanskrit and Pāli, lit. "wind" or "air," viz., the property of "motion" or "movement"; one of the

four major elements (MAHĀBHŪTA) or "principal elementary qualities" of which the physical world of materiality (RŪPA) is composed, along with earth (viz., solidity, PṚTHIVĪ; P. paṭhavī), water (viz., cohesion, ĀPAS; P. āpo), and fire (viz., temperature, warmth, TEJAS; P. tejo). "Wind" is defined as "that which is light and moving" and thus can refer not only to the wind, air, and breath but also to the general property of motion. Because wind also has the ability to convey things (viz., earth), has relative temperature (viz., fire), and has a certain tangibility (viz., water), the existence of all the other three elements may also be inferred even in that single element. In the physical body, the wind element is associated with the lungs and the intestinal system.

vedalla. (S. vaidalya). In Pāli, "extended" scriptures. See VAIPULYA.

vedanā. (T. tshor ba; C. shou; J. ju; K. su 受). In Sanskrit and Pāli, "sensation" or "sensory feeling"; the physical or mental sensations that accompany all moments of sensory consciousness. Sensations are always understood as being one of three: pleasurable, painful, or neutral (lit. "neither pleasant nor unpleasant"). Sensation is listed as one of the ten "mental factors of wide extent" (MAHĀBHŪMIKA) in the SARVĀSTIVĀDA ABHIDHARMA, one of the five "omnipresent" (SARVATRAGA) "mental constituents" (CAITTA) in the YOGĀCĀRA system, and one of the seven universal mental factors (lit. mental factors common to all) (sabbacittasādhāraṇa cetasika) in the Pāli ABHIDHAMMA. It is said universally to accompany all moments of sensory consciousness. Sensation is also listed as the second of the five aggregates (SKANDHA) and the seventh constituent in the twelvefold chain of dependent origination (PRATĪTYASAMUTPĀDA). The "contemplation of sensations" (S. vedanānupaśyanā, P. vedanānupassanā) is the second of the four foundations of mindfulness (S. SMṚTYUPASTHĀNA, P. satipaṭṭhāna) and involves being mindful (see S. SMṚTI, P. sati) of physical and mental sensations that are pleasurable, painful, and neutral.

vehicle. See YĀNA.

Veṇugrāmaka. (P. Beluvagāmaka/Veḷugāma; T. 'Od ma can gyi grong; C. Zhulincong; J. Chikurinsō; K. Chungnimch'ong 竹林叢). In Sanskrit, "Bamboo Town," near the city of VAIŚĀLĪ; remembered as the town where the Buddha spent his last rains retreat (VARṢĀ) prior to his passage into PARINIRVĀṆA. Because there was a famine in the region, making it difficult for the local population to support a large group of monks, the Buddha went to Veṇugrāmaka accompanied only by ĀNANDA. During their sojourn there, the Buddha, already eighty, became seriously ill. However, he did not want to die without addressing the SAṂGHA one last time, and, by using his powers of concentration (SAMĀDHI) to reduce the physical discomfort, the disease abated. It was while staying at Veṇugrāmaka that the Buddha made two famous statements to Ānanda. According to the Pāli MAHĀPARINIBBĀNASUTTANTA, when the Buddha expressed his wish to address the saṃgha, Ānanda assumed that the Buddha had a teaching he had not yet delivered to the monks. The Buddha replied that he was not one who taught with a "teacher's fist" (P. ācariyamuṭṭhi) or "closed fist," holding back some secret teaching, but that he had in fact revealed everything. The Buddha also said that he was not the head of saṃgha and that after his death each monk should "be an island unto himself," with the DHARMA as his island and his refuge.

Veṇuvanavihāra. (P. Veḷuvanavihāra; T. 'Od ma'i tshal; C. Zhulin jingshe; J. Chikurin shōja; K. Chungnim chŏngsa 竹林精舍). In Sanskrit, "Bamboo Grove Monastery"; the name of a monastery in a grove of the kingdom of MAGADHA, to the north of the capital, RĀJAGṚHA, that King BIMBISĀRA offered to the Buddha as a residence for himself and his monks. The Veṇuvana was the first ĀRĀMA or park offered to the Buddha after his enlightenment, and the Buddha subsequently allowed monks to accept an ārāma offered by a layperson. It was during the Buddha's residence at Veṇuvana that ŚĀRIPUTRA and MAHĀMAUDGALYĀYANA entered the order. The Buddha is said to have passed his second, third, and fourth rains retreat there, in a VIHĀRA built by Kalandaka and offered to the Buddha. Veṇuvana is often mentioned in the scriptures as the location where the Buddha taught many sūtras, prescribed many rules of the VINAYA, and recounted many JĀTAKA tales. ĀNANDA is said to have lived at the Bamboo Grove after the Buddha's death.

Verañjakasutta. In Pāli, the "Discourse to the Verañjakas," the forty-second sutta in the Pāli MAJJHIMANIKĀYA (there is an untitled SARVĀSTIVĀDA recension included in the Chinese translation of the SAṂYUKTĀGAMA); preached by the Buddha to a group of brāhmaṇa householders from Verañja while he dwelt in the JETAVANA grove in the town of Sāvatthi (S. ŚRĀVASTĪ). The Buddha describes for them the ten demeritorious actions that lead to unhappiness and unfortunate rebirths and the ten virtuous actions that lead to happiness and fortunate rebirths. The ten unvirtuous actions are analyzed into three kinds of bodily misdeed: (1) killing and violence, (2) stealing, and (3) sexual misconduct; four kinds of verbal misdeed: (4) falsehood, (5) malicious gossip, (6) harsh speech, and (7) meaningless prattle; and three kinds of mental misdeed: (8) covetousness, (9) ill will, and (10) wrong views. The ten meritorious actions are explained as abstaining from the ten demeritorious actions. The Buddha then describes the fortunate rebirths among humans and the divinities that may be expected by those who live righteously and perform meritorious actions. The sutta is parallel in content to the SĀLEYYAKASUTTA, the forty-first sutta in the *Majjhimanikāya.*

Vesākha. (P). See WESAK.

Vessantara. (S. Viśvantara/Viśvaṃtara; T. Thams cad sgrol; C. Xudana; J. Shudainu/Shudaina; K. Sudaena 須大拏). Pāli name of a prince who is the subject of the most famous of all

JĀTAKA tales; he was the BODHISATTVA's final existence before he took rebirth in TUṢITA heaven, where he awaited the moment when he would descend into Queen MĀYĀ's womb to be born as Prince SIDDHĀRTHA and eventually become GAUTAMA Buddha. During his lifetime as Prince Vessantara, the bodhisattva (P. bodhisatta) fulfilled the perfection (P. pāramī; S. PĀRAMITĀ) of generosity (DĀNA; see also DĀNAPĀRAMITĀ). The story is found in Sanskrit in Āryaśura's Jātakamālā and Kṣemendra's *Avadānakalpalatā*, with the same main features as in the Pāli version. The story enjoys its greatest popularity in Southeast Asia, so the Pāli version is described here. ¶ The bodhisattva was born as the crown prince of Siviraṭṭha, the son of King Sañjaya and Queen Phusatī of the kingdom of Jetuttara. On the day of his birth, a white elephant named Paccaya was also born, who had the power to make rain. When Vessantara was sixteen, he married a maiden named Maddī, with whom he had a son and a daughter, Jāli and Kanhajinā. Once, when Kaliṅga was suffering a severe drought, brāhmaṇas from that kingdom requested that Vessantara give them his white elephant to alleviate their plight. Vessantara complied, handing over to them his elephant along with its accessories. The citizens of Jetuttara were outraged that he should deprive his own kingdom of such a treasure and demanded his banishment to the distant mountain of Vaṅkagiri. His father, King Sañjaya, consented and ordered Vessantara to leave via the road frequented by highwaymen. Before his departure, Vessantara held a great almsgiving, in which he distributed seven hundred of every type of thing. Maddī insisted that she and her children accompany the prince, and they were transported out of the city on a grand carriage pulled by four horses. Four brāhmaṇas begged for his horses, which he gave. Gods then pulled his carriage until a brāhmaṇa begged for his carriage. Thereafter, they traveled on foot. Along the way crowds gathered, some even offering their kingdoms for him to rule, so famous was he for his generosity. At Vaṅkagiri, they lived in two hermitages, one for Vessantara and the other for his wife and children. These had been constructed for them by Vissakamma, architect of the gods. There, they passed four months until one day an old brāhmaṇa named Jūjaka arrived and asked for Jāli and Kanhajinā as slaves. Vessantara expected this to occur, so he sent his wife on an errand so that she would not be distressed at the sight of him giving their children away. Jūjaka was cruel, and the children ran away to their father, only to be returned so that Vessantara's generosity could be perfected. When Maddī returned, she fainted at the news. Then, Sakka (ŚAKRA), king of the gods, assumed the form of a brāhmaṇa and asked for Maddī; Vessantara gave his wife to the brāhmaṇa. The earth quaked at the gift. Sakka immediately revealed his identity and returned Maddī, granting Vessantara eight boons. In the meantime, Jūjaka, the cruel brāhmaṇa, traveled to Jetuttara, where King Sañjaya bought the children for a great amount of treasure, including a seven-storied palace. Jūjaka, however, died of overeating and left no heirs, so the treasure was returned to the king. Meanwhile, the white elephant was returned because the kingdom of Kaliṅga could not maintain him. A grand entourage was sent to Vaṅkagiri to fetch Vessantara and Maddī, and when they returned amid great celebration they were crowned king and queen of Sivirattha. In order that Vessantara would be able to satisfy all who came for gifts, Sakka rained down jewels waist deep on the palace. When Vessantara died, he was born as a god in tuṣita heaven, where he awaited his last rebirth as Siddhattha Gotama, when he would become a buddha. ¶ As a depiction of the virtue of dāna, the story of Vessantara is one of the most important Buddhist tales in Thailand and throughout Southeast Asia and is depicted on murals throughout the region. Thai retellings of the *Vessantara-Jātaka*, known also as the *Mahāchat*, or "Great Jātaka," are found in the many Thai dialects and consist of thirteen chapters. The story is popular in Thailand's north and especially in the northeast, where virtually every monastery (excluding forest monasteries) holds a festival known as the Bun Phra Wet, usually in February or March, at which the entire story is recited in one day and one night. Laypeople assist in decorating their local monastery with trunks and branches of banana trees to represent the forest to which Vessantara was banished after giving away his kingdom's auspicious elephant. They also present offerings of flowers, hanging decorations, balls of glutinous rice, and money. The festival includes, among other things, a procession to the monastery that includes local women carrying long horizontal cloth banners on which the Vessantara story is painted. The merit earned by participating in the festival is linked to two beliefs: (1) that the participant will be reborn at the time of the future buddha, MAITREYA, known in Thai as Phra Si Ariya Mettrai (P. Ariya Metteyya), and (2) that the community, which remains primarily agricultural, will be blessed with sufficient rainfall.

Vessantara-Jātaka. See VESSANTARA.

Vibhajyavāda. (P. Vibhajjavāda; T. Rnam par phye ste smra ba; C. Fenbieshuo bu; J. Funbetsusetsubu; K. Punbyŏlsŏl pu 分別說部). In Sanskrit, "Distinctionist"; one of the "mainstream" (i.e., non-Mahāyāna) schools of Indian Buddhism. The Vibhajyavāda was one of the branches of the STHAVIRANIKĀYA, which, according to BUDDHAGHOSA, emerged at the time of the third Buddhist council (see COUNCIL, THIRD), around 240 BCE; the Sthaviranikāya also comprises a number of other schools, including the DHARMAGUPTAKA, whose VINAYA was predominant in East Asia; the THERAVĀDA of Sri Lanka and Southeast Asia traces itself to the Sthaviranikāya. Inscriptional evidence indicates that the Vibhajyavāda thrived in KASHMIR, GANDHĀRA, and BACTRIA, where the name may have been used to describe several of the branches of the Sthaviranikāya, including the Dharmaguptaka, MAHĪŚĀSAKA, and KĀŚYAPĪYA. Doctrinally speaking, the Vibhajyavāda's name derives from the distinction made between phenomena or factors (DHARMA) that exist and do not exist. The Sarvāstivāda ("those who hold that everything exists") asserted that dharmas exist in all three temporal modes of past, present, and future. In contrast, the Vibhajyavāda (and

many other mainstream schools) made a distinction among past, present, and future dharmas, asserting that, while present dharmas obviously exist, no future dharmas exist, and the only past dharmas that exist are past actions that have yet to produce their karmic effects. Thus, the term vibhajyavāda is sometimes used in a more generic sense, referring not to a specific school, but to all mainstream schools that made a distinction among dharmas of the past, present, and future. In addition, the Vibhajyavāda is said to have held that thought is pure in its nature; that form (RŪPA) still occurs in the immaterial realm (ĀRŪPYADHĀTU); that there is no intermediate state (ANTARĀBHAVA) between death and rebirth; that PRATĪTYASAMUTPĀDA and the path (MĀRGA) are unconditioned (ASAṂSKṚTA); and that an ARHAT cannot retrogress on the path. The Pāli term Vibhajjavāda is sometimes used as a synonym for Theravāda, in the more general sense of those who hold that reality should be understood by discriminating between positive and negative positions. In the KATHĀVATTHU of the Pāli ABHIDHAMMAPIṬAKA, the venerable MOGGALIPUTTATISSA declared that the Buddha was a vibhajjavādī, or "teacher of analysis," since it is only through critical investigation and reasoning that an adept can begin to develop true insight, discriminating among positions rather than taking a one-sided position.

Vibhaṅga. [alt. Vibhaṅgappakaraṇa]. In Pāli, "Analysis"; the second of the seven books that together constitute the ABHIDHAMMAPIṬAKA of the Pāli canon. Since most of this book concerns subject matter introduced in the abhidhammapiṭaka's first book, the DHAMMASAṄGAṆĪ, the *Vibhaṅga* is often spoken of as a supplement to, or a commentary on, the *Dhammasaṅgaṇī*. The *Vibhaṅga*, however, applies different methods of analysis and includes a number of additional definitions and terms. The text is comprised of eighteen chapters (vibhaṅga), each of which presents a self-contained discourse on the following topics, in this order: the aggregates (P. khandha; S. SKANDHA), sense bases (ĀYATANA), elements (DHĀTU), truths (P. sacca; S. SATYA), faculties (INDRIYA), conditioned origination (P. paṭiccasamuppāda; S. PRATĪTYASAMUTPĀDA), foundations of mindfulness (P. SATIPAṬṬHĀNA; S. SMṚTYUPASTHĀNA), right effort (P. sammappadhāna; S. SAMYAKPRAHĀṆA), bases of psychic or supernatural powers (P. iddhipāda; S. ṚDDHIPĀDA), factors of enlightenment (P. bojjhaṅga; S. BODHYAṄGA), the eightfold path (P. magga; S. MĀRGA), mental absorption (P. JHĀNA; S. DHYĀNA), the boundless states (P. appammaññā; S. APRAMĀṆA), training rules (P. sikkhāpada; S. ŚIKṢĀPADA), analytical knowledges (P. paṭisambhidā; S. PRATISAṂVID), various types of knowledge (P. ñāṇa; JÑĀNA), minor topics (P. khuddhakavatthu), including an inventory of afflictions, and "the heart of the teaching" (P. dhammahadaya). Most, but not all, of these chapters are divided into three parts. First, they analyze the subject using the same method as the SUTTAs, often by simply quoting material directly from the suttas. Next, they analyze the subject using a typical ABHIDHARMA methodology—offering synonyms and numerical lists of categories, classes, and types of the phenomena. Finally, most treatments culminate in a catechistic series of inquiries (pañhāpucchaka). In this series of questions, the subject is analyzed by way of a set of "matrices" or "categories" (P. mātikā; S. MĀṬṚKĀ) established in the *Dhammasaṅgaṇī*. Many commentaries have been written on the Pāli *Vibhaṅga*, the most popular of which is BUDDHAGHOSA's SAMMOHAVINODANĪ, which was written in the fifth century.

vicāra. (T. dpyod pa; C. si; J. shi; K. sa 伺). In Sanskrit and Pāli, "sustained thought," "sustained attention," "imagination," or "analysis"; one of the forty-six mental factors (CAITTA) according to the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA, one of the fifty-one according to the YOGĀCĀRA school, and one of the fifty-two in the Pāli ABHIDHAMMA. Although etymologically the term contains the connotation of "analysis," vicāra is polysemous in the Buddhist lexicon and refers to a mental activity that can be present both in ordinary states of consciousness and in meditative absorption (DHYĀNA). In ordinary consciousness, vicāra is "sustained thought," viz., the continued pondering of things. It is listed as an indeterminate mental factor (ANIYATA-CAITTA) because it can be employed toward either virtuous or nonvirtuous ends, depending on one's intention and the object of one's attention. Vicāra as a mental activity typically follows VITARKA, wherein vitarka is the "initial application of thought" and vicāra the "sustained thought" that ensues after one's attention has already adverted toward an object. In the context of meditative absorption, vicāra may be rendered as "sustained attention" or "sustained application of attention." With vitarka the practitioner directs his focus toward a chosen meditative object. When the attention is properly directed, the practitioner follows by applying and continuously fixing his attention on the same thing, deeply experiencing (or examining) the object. In meditative absorption, vicāra is one of the five factors that make up the first dhyāna (see DHYĀNĀṄGA). According to the VISUDDHIMAGGA, "applied thought" (P. vitakka; S. vitarka) is like a bee flying toward a flower, having oriented itself toward its chosen target, whereas "sustained attention" (vicāra) is like a bee hovering over that flower, fixating on the flower.

***vicārabhāvanā**. (T. dpyad sgom). In Sanskrit, "analytical meditation"; a general term for those forms of meditation that involve discursive reflection on points of Buddhist doctrine, as opposed to the focus of the mind upon a single object. An example of such analytical meditation would be the investigation of the constituents of mind and body in search of the self or systematic reflection on the certainty of death and the uncertainty of the time of death. The term is often paired with *STHĀPYABHĀVANĀ, "stabilizing meditation" (T. 'jog sgom), the one-pointed concentration on a single object without discursive reflection. In instructions on meditation practice, there is often advice to alternate these two forms of meditation, first arriving at a conclusion or conviction through analytical meditation and then focusing on that conclusion through stabilizing meditation, resulting eventually in VIPAŚYANĀ.

vicikitsā. (P. vicikicchā; T. the tshom; C. yi; J. gi; K. ŭi 疑). In Sanskrit, "doubt" or "skepticism"; classified as one of the six root afflictions (MŪLAKLEŚA) in the SARVĀSTIVĀDA school of ABHIDHARMA and the YOGĀCĀRA school, and one of the fourteen unwholesome mental factors (akusala-cetasika) in the Pāli abhidhamma, where it takes the form of doubt about such matters as the FOUR NOBLE TRUTHS, the effects of actions (KARMAN), or the efficacy of the path (MĀRGA). Doubt is also classified as the second of ten "fetters" (SAṂYOJANA) that keep beings bound in SAṂSĀRA. It is also classified as one of five "hindrances" (NĪVARAṆA) that prevent the mind from attaining meditative absorption (DHYĀNA); skeptical doubt is the factor that hinders sustained thought (VICĀRA) among the five constituents of meditative absorption (DHYĀNĀṄGA). Doubt is a two-pointedness of mind that renders the mind unable to engage in virtuous action, just as one is unable to sew with a pronged needle. It is characterized by wavering and manifests itself as indecision. The counteragent (PRATIPAKṢA) to vicikitsā is wisdom (PRAJÑĀ), assisted by such specific practices as studying the scriptures. This state of doubt is temporarily allayed with the attainment of the first meditative absorption (dhyāna) and is permanently eliminated upon attaining the stage of stream-enterer (SROTAĀPANNA). Cf. YIJING.

videha. (T. lus 'phags po; C. pitihe; J. bidaika; K. pijeha 毘提訶). The Sanskrit and Pāli proper name of one of the four island continents arrayed according to traditional Buddhist cosmology in the four cardinal directions around Mount SUMERU; also referred to as pūrvavideha. Videha is the eastern continent and is semicircular in shape. Its inhabitants, classified as humans (MANUṢYA) among the six types of beings who inhabit SAṂSĀRA, are said to be twice as tall as the inhabitants of our southern continent of JAMBUDVĪPA and to have a life span of up to 250 years.

vidhi. (T. cho ga; C. yigui; J. giki; K. ŭigwe 儀軌). In Sanskrit, "rite"; a term that is used for Vedic and other rituals. In Buddhism, and in particular tantric Buddhism, vidhi is sometimes used interchangeably with PŪJĀ but can also refer to those elements of a SĀDHANA that are more overtly ceremonial, such as the making of offerings, the drawing of MAṆḌALA, the performance of MUDRĀ or of sacred dances, and the playing of music, as opposed to the more introspective elements of a sādhana, such as the practice of visualization, meditation, or the silent repetition of MANTRA.

vidyā. (P vijjā; T. rig pa/rig ma; C. ming; J. myō; K. myŏng 明). In Sanskrit, lit. "knowledge," a polysemous term with a wide range of denotations in Buddhist literature. Vidyā appears frequently in the sūtra literature of the MAINSTREAM BUDDHIST SCHOOLS (as in the title of the Pāli TEVIJJĀSUTTA), where it encompasses what might be called conventional knowledge of the world gained through investigation and analysis, as well as the salvific knowledge of the nature of reality gained through the practice of meditation (see TRIVIDYĀ). In Pāli commentarial literature, vidyā carries connotations of investigation, observation, and correct theories; thus, in some contexts, it is translated as "science" and appears in a number of important lists, such as the PAÑCAVIDYĀ. In tantric literature, it takes on a further meaning of esoteric and occult knowledge (and hence is sometimes translated as "spell"), as in the term VIDYĀDHARA. Vidyā is also used in tantric literature to refer to a sexual consort. Its negation, AVIDYĀ, lit., "non-knowledge," is the most common term for the fundamental ignorance that is the root cause of suffering.

vidyādhara. (P. vijjādhara; T. rig pa 'dzin pa; C. chiming; J. jimyō; K. chimyŏng 持明). In Sanskrit, lit. "keeper of knowledge." Knowledge (VIDYĀ) in this context has the denotation of knowledge of sacred lore and magic, such that a vidyādhara functions as a kind of sorcerer or thaumaturge. The term is used to refer to tantric deities as well as to human tantric masters, such as the MAHĀSIDDHAs, whose great powers derived from their knowledge of MANTRAs. As the repository of tantric knowledge, the tantric corpus was sometimes called the VIDYĀDHARAPIṬAKA. See also WEIKZA.

vidyādharapiṭaka. (T. rig 'dzin sde snod; C. chiming zang; J. jimyōzō; K. chimyŏng chang 持明藏). In Sanskrit, the "collection of the keepers of knowledge"; a term used to refer collectively to the Buddhist TANTRAs, which were said to have been collected by the tantric thaumaturges (VIDYĀDHARA). The tantras are said to constitute a fourth PIṬAKA—in addition to the SŪTRA, VINAYA, and ABHIDHARMA piṭakas—called the vidyādharapiṭaka.

vidyāsthāna. (P. vijjāṭṭhāna; T. rigs pa'i gnas; C. ming chu; J. myōsho; K. myŏng ch'ŏ 明處). In Sanskrit, lit. "abode of knowledge," but often translated as "science," especially in the context of the five traditional sciences of ancient India, which a BODHISATTVA is also expected to master. These five sciences (PAÑCAVIDYĀ) are śabda, which includes grammar and composition; hetu [alt. PRAMĀṆA], or logic; cikitsā, or medicine; śilpakarma, which includes the arts and mathematics; and adhyātmavidyā, the "inner science," which in the case of Buddhism was said to be knowledge of the TRIPIṬAKA and the twelve categories of scriptures (DVĀDAŚĀṄGA[PRAVACANA]).

Vigrahavyāvartanī. (T. Rtsod pa bzlog pa; C. Huizheng lun; J. Ejōron; K. Hoejaeng non 廻諍論). In Sanskrit, "Refutation of Objections"; one of the major works of NĀGĀRJUNA and considered as part of his philosophical corpus (YUKTIKĀYA). The work, which is preserved in Sanskrit, Tibetan, and Chinese, has seventy stanzas; there is also an autocommentary by the author. The work appears to have been composed after the MŪLAMADHYAMAKAKĀRIKĀ, responding to objections that might be raised to arguments in that text; hence, the title "Refutation of Objections." As in the case of the *Mūlamadhyamakakārikā*, the opponent is presumably an adherent of the ABHIDHARMA,

although it is directed specifically to Naiyāyika-type arguments. Perhaps the most famous objection and response comes at the beginning of the text. In the first stanza of the work, the opponent states that, if it is true, as Nāgārjuna claims, that all things lack intrinsic nature (SVABHĀVA), then Nāgārjuna's own statement must also lack intrinsic nature, in which case the statement cannot deny the intrinsic nature of things. In the famous twenty-ninth stanza, Nāgārjuna responds, "If I had some thesis (PRATIJÑĀ), I would incur that fault; because I have no thesis, I am faultless." The autocommentary explains that there can be no thesis when all things are empty, utterly quiescent, and naturally pristine. Therefore, because he has no thesis, no mark of a thesis is entailed by his previous statement that all things lack intrinsic nature. The text is widely quoted by later commentators, both in India and in Tibet.

vihāra. (T. gtsug lag khang/dgon pa; C. zhu/jingshe; J. jū/shōja; K. chu/chŏngsa 住/精舍). In Sanskrit and Pāli, lit. "abode"; the term commonly used for a dwelling place for monks and nuns, and thus typically translated as "monastery." In the story of the life of the Buddha, in the early days of the saṃgha the monks had no fixed abode but wandered throughout the year. Eventually, the Buddha instructed monks to cease their peregrinations during the torrential monsoon period in order to prevent the killing of insects and worms while walking on muddy roads. The residences established for use during the rains retreat (VARṢĀ) are called varṣāvāsa or "rains abode," and the institution of the rains retreat (and the consequent need for more permanent shelter) probably led to the development of formal monasteries. According to the VINAYA, a vihāra must be donated to the SAṂGHA and, once accepted, it may never be given back, but remains in perpetuity the property of the order. There are various rules and recommendations concerning the layout of a vihāra. According to the Pāli VINAYA, a vihāra may be plastered and decorated, but never using figures of human beings. It may have three kinds of rooms, upper, large, and small. These rooms are typically arrayed around a central courtyard that often enshrined a sapling of a BODHI TREE or a STŪPA. The vihāra should have a refectory and a place for storing water, and it may be surrounded by a wall. It should be neither too near nor too far from a town or village and be suitable for gathering alms but secluded enough to be conducive to study and contemplation. A vihāra may be constructed for the use of the entire congregation of monks or nuns or for personal use. If a proposed vihāra for an individual monk is large or grand, permission for its construction must first be granted by the saṃgha. The Indian state of Bihar takes its name from the many Buddhist vihāras that were once scattered throughout the region. See also entries on specific monasteries.

vihiṃsā. (T. rnam par 'tshe ba; C. hai; J. gai; K. hae 害). In Sanskrit, lit. "harmfulness," sometimes translated as "injury," "cruelty," or "harmful intention"; one of the forty-six mental concomitants (CAITTA) according to the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA and one of the fifty-one according to the YOGĀCĀRA school. As the opposite of "harmlessness" or "nonviolence" (AHIṂSĀ), vihiṃsā is the ill will that wishes for, or causes, suffering to come to others. Vihiṃsā is listed among the fifth of the six categories of caitta, the secondary afflictions (UPAKLEŚA), which are not compatible with spiritual progress. Vihiṃsā is also considered to be one of the possible derivative emotions of "aversion" (DVEṢA) and cannot exist independently of that latter mental state. The antidote to this volition to bring harm to others is the development of loving-kindness (MAITRĪ).

Vijaya. The first Āryan king of Sri Lanka. According to the MAHĀVAṂSA, Vijaya led a band of seven hundred followers exiled from north India to Sri Lanka in the sixth century BCE. The capital he founded was named Tambapaṇṇi, whence one of the names for the island, Tambapaṇṇi Dīpa. Vijaya and his followers were known as Sīhaḷa, after an epithet of his father, Sīhabāhu or "lion-armed," who was the offspring of a lion and a human princess. For this reason, the island also came to be known as Sīhaḷa Dīpa or "Lion Island."

vijñāna. (P. viññāṇa; T. rnam par shes pa; C. shi; J. shiki; K. sik 識). In Sanskrit, "consciousness"; a term that technically refers to the six types of sensory consciousness (VIJÑĀNA): eye, or visual, consciousness (CAKṢURVIJÑĀNA); ear, or auditory, consciousness (ŚROTRAVIJÑĀNA); nose, or olfactory, consciousness (GHRĀṆAVIJÑĀNA); tongue, or gustatory, consciousness (JIHVĀVIJÑĀNA); body, or tactile, consciousness (KĀYAVIJÑĀNA); and mental consciousness (MANOVIJÑĀNA). These are the six major sources of awareness of the phenomena (DHARMA) of our observable universe. Each of these forms of consciousness is produced in dependence upon three conditions (PRATYAYA): the "objective-support condition" (ĀLAMBANAPRATYAYA), the "predominant condition" (ADHIPATIPRATYAYA), and the "immediately preceding condition" (SAMANANTARAPRATYAYA). When used with reference to the six forms of consciousness, the term vijñāna refers only to CITTA, or general mentality, and not to the mental concomitants (CAITTA) that accompany mentality. It is also in this sense that vijñāna constitutes the fifth of the five SKANDHAS, while the mental concomitants are instead placed in the fourth aggregate of conditioning factors (SAṂSKĀRA). The six forms of consciousness figure in two important lists in Buddhist epistemology, the twelve sense fields (ĀYATANA) and the eighteen elements (DHĀTU). With the exception of some strands of the YOGĀCĀRA school, six and only six forms of vijñāna are accepted. The Yogācāra school of ASAṄGA posits instead eight forms of vijñāna, adding to the six sensory consciousnesses a seventh afflicted mentality (KLIṢṬAMANAS), which creates the mistaken conception of a self, and an eighth foundational or storehouse consciousness (ĀLAYAVIJÑĀNA).

Vijñānakāya[pādaśāstra]. (T. Rnam shes kyi tshogs; C. Shishen zu lun; J. Shikishinsokuron; K. Siksin chok non 識身足論). In Sanskrit, "Collection on Consciousness"; a book from

the middle stratum of the SARVĀSTIVĀDA ABHIDHARMAPIṬAKA, which is traditionally listed as the second of the six ancillary texts, or "feet" (pāda), of the JÑĀNAPRASTHĀNA, the central treatise or body (śarīra) of the Sarvāstivāda abhidharmapiṭaka. Authorship of the text is attributed to Devaśarman, and it is presumed to have been composed during the latter half of the first century CE. It is extant only in a complete translation into Chinese made by XUANZANG and his translation team at DACI'ENSI in 649. The *Vijñānakāya* is the only one of the six pādaśāstras that provides an elaborate proof of the veracity of the eponymous Sarvāstivāda position that dharmas exist in the past, present, and future, and its treatments are the foundation for the refinements of this position in later VAIBHĀṢIKA materials. The *Vijñānakāya* is also the only canonical Sarvāstivāda treatise that critiques the mistaken belief in a person (PUDGALA). The extensive refutation of the PUDGALAVĀDA position found in the appendix (chapter nine) to VASUBANDHU's ABHIDHARMAKOŚABHĀṢYA relies heavily on the *Vijñānakāya*'s content and approach. The *Vijñānakāya* also offers an elaborate analysis of fourteen types of causes (HETU); in addition, it provides the first listing of the four types of conditions (PRATYAYA), especially in connection with the arising of sensory consciousness. By bringing causation theory to the forefront of abhidharma philosophy, the *Vijñānakāya* occupies a crucial place in the evolution of the Sarvāstivāda abhidharma. The *Vijñānakāya*'s closest analogue in the Pāli ABHIDHAMMA literature is the DHĀTUKATHĀ.

vijñānānantyāyatana. (P. viññāṇañcāyatana; T. rnam shes mtha' yas skye mched; C. shi wubian chu; J. shikimuhenjo; K. sik mubyŏn ch'ŏ 識無邊處). In Sanskrit, "sphere of infinite consciousness"; the second (in ascending order) of the four levels of the immaterial realm (ĀRŪPYADHĀTU) and the second of the four immaterial absorptions (ĀRŪPYĀVACARADHYĀNA). It is "above" the first level of the immaterial realm, called infinites space (AKĀŚĀNANTYĀYATANA), and "below" the third and fourth levels, "nothingness" (ĀKIṂCANYĀYATANA) and "neither perception nor nonperception" (NAIVASAṂJÑĀNĀSAṂJÑĀYATANA). It is a realm of rebirth as well as a meditative state that is entirely immaterial (viz., there is no physical, or form [RŪPA], component to existence), in which the mind seems to expand to the point that it is essentially infinite. Beings reborn in this realm are thought to live as long as forty thousand eons (KALPA). However, as a state of being that is still subject to rebirth, even the realm of infinite consciousness remains part of SAṂSĀRA. Like the other levels of the realm of subtle materiality (RŪPADHĀTU) and the immaterial realm, one is reborn in this state by achieving the specific level of meditative absorption of that state in the previous lifetime. One of the most famous and influential expositions on the subject of these immaterial states comes from the VISUDDHIMAGGA of BUDDHAGHOSA, written in the fifth century. Although there are numerous accounts of Buddhist meditators achieving immaterial states of SAMĀDHI, they are also used polemically in Buddhist literature to describe the attainments of non-Buddhist YOGINs, who mistakenly identify these exalted states within saṃsāra as states of permanent liberation from rebirth. See also DHYĀNASAMĀPATTI; DHYĀNOPAPATTI.

vijñānaskandha. (P. viññāṇakhandha; T. rnam shes kyi phung po; C. shiyun/shiyin; J. shikiun/shikion; K. sigon/sigŭm 識蘊/識陰). In Sanskrit, the "consciousness aggregate"; the fifth of the five aggregates of being (SKANDHA). The vijñānaskandha refers to the six types of consciousness (VIJÑĀNA, viz., the visual, auditory, olfactory, gustatory, tactile, and mental consciousnesses) but not to the various mental concomitants (CAITTA) that accompany them, which are placed in the fourth aggregate, SAṂSKĀRA. See VIJÑĀNA.

Vijñānavāda. [alt. Vijñānavādin] (T. Rnam par shes pa smra ba; C. Weishi zong; J. Yuishikishū; K. Yusik chong 唯識宗). In Sanskrit, "Proponent of Consciousness"; an alternative designation for the YOGĀCĀRA school, emphasizing the central role of the exposition of consciousness (VIJÑĀNA) in the tenets of the school. The school's cardinal doctrine is that the objects of experience are of the nature of representation-alone (VIJÑAPTIMĀTRATĀ), also referred to as "mind only" (CITTAMĀTRA). See YOGĀCĀRA; FAXIANG ZONG.

vijñapti. (T. rnam par rig byed; C. shi; J. shiki; K. sik 識). In Sanskrit, "representation," "designation," or "imputation"; a term especially important in the YOGĀCĀRA school, where it indicates the subjective nature of the objects of experience, emphasizing the role of consciousness (VIJÑĀNA) in the identification, naming, and ontological status of the constituents of the external world. The term appears in the title of perhaps the most influential Indian Yogācāra treatise for East Asian Buddhism, the CHENG WEISHI LUN (*VIJÑAPTIMĀTRATĀSIDDHI; "Demonstration of Representation-Only"), which presents the philosophical positions of the sixth-century Yogācāra master DHARMAPĀLA (530–561).

vijñaptimātratā. (T. rnam par rig pa tsam nyid; C. weishi; J. yuishiki; K. yusik 唯識). In Sanskrit, "mere-representation" or "mere-designation"; the cardinal doctrine of the YOGĀCĀRA school, viz., that the objects of experience are mere projections of consciousness (VIJÑĀNA). Thus, all objects are mere representations and all categories are mere designations. No object is the natural basis of its name; rather, the mind itself instead designates the object. The term Vijñaptimātra is used as an alternative designation of the Yogācāra school, especially as represented in the works of VASUBANDHU, STHIRAMATI, and DHARMAPĀLA, with particular emphasis on the doctrine of the three natures (TRISVABHĀVA). Indeed, the term appears in the title of perhaps the most influential Indian Yogācāra treatise for East Asian Buddhism, the CHENG WEISHI LUN (S. **Vijñaptimātratāsiddhi*; "Demonstration of Representation-Only") by the sixth-century Yogācāra master DHARMAPĀLA (530–561). It is the Chinese translation of vijñaptimātratā (weishi) thought that became the primary source of Yogācāra philosophy in East Asia.

***Vijñaptimātratāsiddhi**. (S). See CHENG WEISHI LUN.

vikalpa. (P. vikappa; T. rnam par rtog pa; C. fenbie; J. funbetsu; K. punbyŏl 分別). In Sanskrit, "[false] discrimination," "imagining," or "conception"; the discriminative activities of mind, generally portrayed in the negative sense of fantasy and imagination, and often equivalent to "conceptual proliferation" (PRAPAÑCA). Vikalpa refers to the conceptual activities of the mental consciousness (MANOVIJÑĀNA), a mediated mental activity that operates through the medium of generic images (SĀMĀNYALAKṢAṆA). Vikalpa is often opposed to the immediate knowledge provided by direct perception (PRATYAKṢA). The direct perception of reality is therefore commonly described as NIRVIKALPA, or "free from thought." ¶ Three types of conceptual discrimination (TRIVIKALPA) are typically described in the literature. (1) Intrinsic discrimination (SVABHĀVAVIKALPA), which refers to the initial advertence of thought (VITARKA) and the subsequent sustained attention (VICĀRA) to a perceived object of the six sensory consciousnesses (VIJÑĀNA), that is, the discrimination of present objects, as when visual consciousness perceives a visual object. (2) Conceptualizing discrimination (ABHINIRŪPAṆĀVIKALPA), which refers to discursive thought on ideas that arise in the sixth mental consciousness when it adverts toward a mental object that is associated with any of the three time periods of past, present, or future. (3) Discrimination involving reflection on past events (ANUSMARAṆAVIKALPA), which refers to discriminative thought involving the memory of past objects. ¶ There is a wide range of opinion as to the value of vikalpa (in the sense of "thought" or "conception") in the soteriological progress. Some traditions would hold that the structured use of conceptual and logical analysis (and especially the use of inference, or ANUMĀNA) is a necessary prerequisite to reaching a state beyond all thought. Such a position is advocated in the Indian philosophical schools and in those that favor the so-called gradual path to enlightenment. In the stages of the path to enlightenment, all forms of meditation prior to the attainment of the path of vision (DARŚANAMĀRGA) are "conceptual" and thus entail vikalpa. Other schools radically devalue all thought as an obstacle to the understanding of the ultimate and would claim that the nonconceptual, described in some cases as "no-thought" (C. WUNIAN), is accessible at all times. Such an approach, most famously expounded in the CHAN traditions of Asia, is associated with the so-called sudden path to enlightenment (see DUNWU). ¶ In the YOGĀCĀRA school, vikalpa is described specifically as the "discriminative conception of apprehended and apprehender" (GRĀHYAGRĀHAKAVIKALPA), referring to the misconception that there is an inherent bifurcation between a perceiving subject (grāhaka) and its perceived objects (grāhya). This bifurcation occurs because of false imagining (ABHŪTAPARIKALPA), the tendency of the relative phenomena (PARATANTRA) to be misperceived as divided into a perceiving self and a perceived object that is external to it. By relying on these false imaginings to construct our sense of what is real, we inevitably subject ourselves to continued suffering (DUḤKHA) within the cycle of birth-and-death (SAṂSĀRA). Overcoming this bifurcation leads to the nondiscriminative wisdom (NIRVIKALPAJÑĀNA), which, in the five-stage path (PAÑCAMĀRGA) system, marks the inception of the path of vision (darśanamārga), where the adept sees reality directly, without the intercession of concepts. The elimination of grāhyagrāhakavikalpa proceeds from the less to the more subtle. It is easier to realize that a projected object is a projection than to realize that a projecting subject is as well; among projected objects, it is easier to realize that afflicted (SAṂKLIṢṬA) dharmas (the SKANDHAS and so on) are projections than to realize that purified (VYAVADĀNA) dharmas (the five paths and so on) are as well; and among subjects it is easier to realize that a material subject (a mental substratum and so on) is a projection than to realize that a nominally existing subject (a nominally existing self and so on) is. This explanation of vikalpa, common in the PRAJÑĀPĀRAMITĀ commentarial tradition, influenced the theory of the SAṂPANNAKRAMA (completion stage) in ANUTTARAYOGA (highest yoga) TANTRA, where prior to reaching enlightenment the four sets of vikalpas are dissolved with their associated PRĀṆAS in the central channel (AVADHŪTI).

Vikramaśīla. (T. Rnam gnon ngang tshul). A monastery and monastic university in the northern region of ancient MAGADHA, in the modern Bihar state of India, located along the Ganges River in the Bhagalpur District of Bihar, about 150 miles east of NĀLANDĀ. King Dharmapāla of the Pāla dynasty founded Vikramaśīla between the late eighth and early ninth centuries and appointed his teacher, Buddhajñānapāda, to be abbot of the monastic university. Throughout its existence, leaders of the Pāla dynasty supported the teachers, students, and maintenance of the institution. There were six areas of religious study, supplemented by such secular subjects as grammar, metaphysics, and logic. The two monastic universities of Vikramaśīla and Nālandā had a great deal of scholarly interaction, and, like Nālandā, Vikramaśīla served as a model for Tibetan monasteries. There were more foreign students at Vikramaśīla than at Nālandā, and the monastery is said to have been large enough to accommodate around ten thousand resident students, including specific dormitories for visiting Tibetan students. Vikramaśīla also housed a substantial library, where texts were both stored and recopied by students and teachers. By the tenth century CE, Vikramaśīla had outgrown even Nālandā, reaching its peak in the eleventh century, and offered a famous PRAJÑĀPĀRAMITĀ curriculum. The monastery became the focus of tantric scholarship during this period, and pilgrims came to study from many regions of Asia. During the reign of King Nayapāla, in the eleventh century, ATIŚA DĪPAṂKARAŚRĪJÑĀNA was considered the greatest scholar at the monastery. Other famous scholars also taught there, including JITĀRI, JÑĀNAŚRĪMITRA, NĀROPA (briefly), and RATNĀKARAŚĀNTI. Vikramaśīla was attacked by Muslim armies between 1199 and 1203 CE. During the same period, ODANTAPURĪ was also attacked, and the surviving

scholars and students were forced to flee. Many scholars escaped to Nepal and Tibet, saving many texts from their libraries. ŚĀKYAŚRĪBHADRA was the last abbot of Vikramaśīla, and also the last to flee to Tibet from the monastery, arriving in 1204.

vikṣepa. (P. vikkhepa; T. rnam par g.yeng ba; C. sanluan; J. sanran; K. sallan 散亂). In Sanskrit, "distraction"; the movement of the mind away from the object of observation or a lack of mental balance that disturbs concentration. It is one of the forty-six mental concomitants (CAITTA) according to the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA and one of the fifty-one according to the YOGĀCĀRA school, which lists it as one of the twenty secondary afflictions (UPAKLEŚA).

vimalā. (T. dri ma med pa; C. ligou di; J. rikuji; K. igu chi 離垢地). In Sanskrit, "immaculate" or "stainless"; the name of the second of the ten bodhisattva stages, or BHŪMI. On this bhūmi, the bodhisattva engages in the perfection of morality (ŚĪLAPĀRAMITĀ) and is unstained by even subtle types of unwholesome actions performed by body, speech, or mind. It is said that from this bhūmi onward, the bodhisattva is untainted by killing, stealing, sexual misconduct, lying, divisive speech, harsh speech, senseless prattle, covetousness, harmful intent, or wrong views, even during dreams. He performs the ten virtues of protecting life, giving gifts, maintaining sexual ethics, speaking truthfully, speaking harmoniously, speaking kindly, speaking sensibly, nonattachment, helpful intent, and right views without the slightest taint of a conception of self (ĀTMAGRAHA). The bodhisattva remains on this stage until he is able to enter into all worldly forms of SAMĀDHI.

Vimalakīrti. (T. Dri med grags pa; C. Weimojie; J. Yuimakitsu; K. Yumahil 維摩詰). Sanskrit proper name of a mythical Indian Buddhist layman. He is the subject of an eponymous sūtra that describes his victories in debates with elite MAHĀYĀNA BODHISATTVAS. See VIMALAKĪRTINIRDEŚA.

Vimalakīrtinirdeśa. (T. Dri med grags pas bstan pa'i mdo; C. Weimo jing; J. Yuimagyō; K. Yuma kyŏng 維摩經). In Sanskrit, "Vimalakīrti's Instructions"; one of the most beloved Indian Mahāyāna sūtras, renowned especially for having a layman, the eponymous VIMALAKĪRTI, as its protagonist. The text probably dates from around the second century CE. Among the seven translations of the sūtra into Chinese, the most famous is that made by KUMĀRAJĪVA in 406. His translation seems to have been adapted to appeal to Chinese mores, emphasizing the worldly elements of Vimalakīrti's teachings and introducing the term "filial piety" into the text. The sūtra was also translated by XUANZANG in 650. The sūtra was translated into Tibetan twice, the more famous being that of Chos nyid tshul khrims in the ninth century. It has also been rendered into Sogdian, Khotanese, and Uighur. The original Sanskrit of the text was lost for over a millennia until a Sanskrit manuscript was discovered in the PO TA LA palace in Tibet in 2001. The narrative of the sūtra begins with the Buddha requesting that his leading ŚRĀVAKA disciples visit his lay disciple Vimalakīrti, who is ill. Each demurs, recounting a previous meeting with Vimalakīrti in which the layman had chastised the monk for his limited understanding of the dharma. The Buddha then instructs his leading bodhisattva disciples to visit Vimalakīrti. Each again demurs until MAÑJUŚRĪ reluctantly agrees. Vimalakīrti explains that his sickness is the sickness of all sentient beings, and goes on to describe how a sick bodhisattva should understand his sickness, emphasizing the necessity of both wisdom (PRAJÑĀ) and method (UPĀYA). A large audience of monks and bodhisattvas then comes to Vimalakīrti's house, where he delivers a sermon on "inconceivable liberation" (acintyavimokṣa). Among the audience is ŚĀRIPUTRA, the wisest of the Buddha's śrāvaka disciples. As in other Mahāyāna sūtras, the eminent śrāvaka is made to play the fool, repeatedly failing to understand how all dichotomies are overcome in emptiness (ŚŪNYATĀ), most famously when a goddess momentarily transforms him into a female. Later, a series of bodhisattvas take turns describing various forms of duality and how they are overcome in nonduality. Vimalakīrti is the last to be invited to speak. He remains silent and is praised for this teaching of the entrance into nonduality. The sūtra is widely quoted in later literature, especially on the topics of emptiness, method, and nonduality. It became particularly famous in East Asia because the protagonist is a layman, who repeatedly demonstrates that his wisdom is superior to that of monks. Scenes from the sūtra are often depicted in East Asian Buddhist art.

Vimalamitra. (T. Dri med bshes gnyen). An Indian master revered in Tibet as one of the chief figures in the transmission of the RDZOGS CHEN teachings of the RNYING MA sect, especially of the "heart drop" (SNYING THIG) tradition. He is said to have received rdzogs chen teachings from both Jñānasūra and ŚRĪSIṂHA. According to legend, Vimalamitra transmitted these teachings to Tibet when he was invited (when he was supposedly already two hundred years old) to come to Tibet by King KHRI SRONG LDE BTSAN, arriving either before or after the king's death in 799. He remained in Tibet for thirteen years, before leaving for China. While in Tibet, he collaborated in the translation of a number of texts from Sanskrit into Tibetan, including the GUHYASAMĀJATANTRA, the GUHYAGARBHATANTRA, and the PRAJÑĀPĀRAMITĀHṚDAYASŪTRA ("Heart Sūtra"). Vimalamitra is especially renowned for his transmission of the teachings of the "instruction class" (MANG NGAG SDE), which were gathered in a collection named after him, the BI MA SNYING THIG. He is also said to have concealed treasure texts (gter ma) at a hermitage above BSAM YAS monastery. The works attributed to him preserved in the Tibetan canons are all tantric in subject matter, with two exceptions, a commentary on the SAPTASĀHASRIKĀPRAJÑĀPĀRAMITĀSŪTRA ("Perfection of Wisdom in Seven Hundred Lines") and a commentary on the *Prajñāpāramitāhṛdayasūtra*. Both are straightforward exegetical works, which prompted the

Tibetan historian 'Gos lo tsā ba to report in his DEB THER SNGON PO ("Blue Annals") that these commentaries were not the product of the tantric master revered in Rnying ma, and that in fact there must have been two Vimalamitras.

Vimalaprabhā. (T. Dri med 'od). In Sanskrit, "Stainless Light," the most important commentary on the KĀLACAKRA-TANTRA. It is traditionally attributed to Puṇḍarīka, one of the kings of ŚAMBHALA.

Vīmaṃsakasutta. (C. Qiujie jing; J. Gugekyō; K. Kuhae kyŏng 求解經). In Pāli, "Discourse on Investigation"; the forty-seventh sutta in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as the 186th SŪTRA in the Chinese translation of the MADHYAMĀGAMA); delivered by the Buddha to a gathering of monks in the JETAVANA grove at the town of Sāvatthi (ŚRĀVASTĪ). In this sutta, the Buddha describes specific means by which it may be determined whether or not the TATHĀGATA has in fact attained buddhahood. He directs the inquirer to rely on what he has seen and heard to determine whether the tathāgata possesses any defiled states, mixed states, or impure states; whether he possesses wholesome states; and whether he is free from the dangers of renown and fame, free from fear and sexual passion, and free from contempt for others due to their failings. Finally the Buddha states that the monk gains true confidence in the three jewels (RATNATRAYA) by learning the Buddha's teachings and confirming their truth through direct experience born of practice.

Vimānavatthu. In Pāli, "Accounts of the Celestial Abodes," the sixth book of the Pāli KHUDDAKANIKĀYA. The text contains accounts of the heavenly abodes (P. vimāna, lit. "mansion, palace") of various divinities (DEVA), which they acquired as rewards for meritorious deeds performed in previous lives. Its eighty-three stories were told to Moggallāna (MAHĀMAUDGALYĀYANA) and other saints during their sojourns in celestial realms, who in turn related them to the Buddha. The Vimānavatthu appears in the Pali Text Society's English translation series as *Stories of the Mansions*.

vimokṣa. (P. vimokkha; T. rnam par thar pa; C. jietuo; J. gedatsu; K. haet'al 解脫). In Sanskrit, "liberation" or "deliverance"; the state of freedom from rebirth, achieved by the ŚRĀVAKA, PRATYEKABUDDHA, or BODHISATTVA paths (MĀRGA). In mainstream Buddhist literature, this liberation is said to be of three types, corresponding to the three "doors to deliverance" (VIMOKṢAMUKHA): (1) emptiness (ŚUNYATĀ), (2) signlessness (ĀNIMITTA), and (3) wishlessness (APRAṆIHITA). Another set of eight grades of liberation (vimokṣa) is associated with the attainment of meditative absorption (DHYĀNA). In Pāli sources, these grades refer to eight levels in the extension of consciousness that accompany the cultivation of increasingly more advanced states of dhyāna (P. JHĀNA). The eight grades are (1) the perception of material form (RŪPA) while remaining in the subtle-materiality realm; (2) the perception of external material forms while not perceiving one's own form; (3) the development of confidence through contemplating the beautiful; (4) passing beyond the material plane with the idea of "limitless space," one attains the plane of limitless space (ĀKĀŚĀNANTYĀYATANA), the first level of the immaterial realm; (5) passing beyond the plane of limitless space with the idea of "limitless consciousness," one attains the plane of limitless consciousness (VIJÑĀNĀNANTYĀYATANA); (6) passing beyond the plane of limitless consciousness with the idea "there is nothing," one attains the plane of nothingness (ĀKIÑCANYĀYATANA); (7) passing beyond the plane of nothingness one attains the plane of neither perception nor nonperception (NAIVASAṂJÑĀNĀSAṂJÑĀYATANA); and (8) passing beyond the plane of neither perception nor nonperception one attains the cessation of consciousness (viz., NIRODHASAMĀPATTI). In the Mahāyāna ABHIDHARMA, it is said that the first two grades enable bodhisattvas to manifest different forms for the sake of others, the third controls their attitude toward those forms (by seeing that beauty and ugliness are relative), and the remaining five enable them to live at ease in order to help others.

vimokṣamārga. (S). See VIMUKTIMĀRGA.

vimokṣamukha. (P. vimokkhamukha; T. rnam par thar pa'i sgo; C. jietuo men; J. gedatsumon; K. haet'al mun 解脫門). In Sanskrit, "gates to deliverance," or "doors of liberation"; three points of transition between the compounded (SAṂSKṚTA) and uncompounded (ASAṂSKṚTA) realms, which, when contemplated, lead to liberation (VIMOKṢA) and NIRVĀṆA: (1) emptiness (ŚUNYATĀ), (2) signlessness (ĀNIMITTA), and (3) wishlessness (APRAṆIHITA). The three are widely interpreted. In mainstream Buddhist materials, emptiness (śunyatā) entails the recognition that all compounded (SAṂSKṚTA) things of this world are devoid of any perduring self (ĀTMAN) and are thus unworthy objects of clinging. By acknowledging emptiness, the meditator is thus able to turn away from this world and instead advert toward nirvāṇa, which is uncompounded (ASAṂSKṚTA). Signlessness (ānimitta) is a crucial stage in the process of sensory restraint (INDRIYASAṂVARA): as the frequent refrain in the SŪTRAS states, "In the seen, there is only the seen," and not the superimpositions created by the intrusion of ego (ĀTMAN) into the perceptual process. Signlessness is produced through insight into impermanence (ANITYA) and serves as the counteragent (PRATIPAKṢA) to attachments to anything experienced through the senses; once the meditator has abandoned all such attachments to the senses, he is then able to advert toward nirvāṇa, which ipso facto has no sensory signs of its own by which it can be recognized. Wishlessness is produced through insight into suffering (DUḤKHA) and serves as the counteragent (PRATIPAKṢA) to all the intentions (āśaya) and aspirations (PRAṆIDHĀNA) one has toward any compounded dharma. As the Buddha's famous simile of the raft also suggests, the adept must finally abandon even the

attachment to the compounded religious system that is Buddhism in order to experience nirvāṇa, the summum bonum of the religion. Once the meditator has abandoned all such aspirations, he will then be able to advert toward nirvāṇa, which ipso facto has nothing to do with anything that can be desired (VAIRĀGYA). ¶ In the ABHIDHARMAKOŚABHĀṢYA, the three are explained in terms of three types of concentration (SAMĀDHI) on the sixteen aspects of the FOUR NOBLE TRUTHS. The four aspects of the first truth, of suffering (DUḤKHASATYA), are impermanence, misery, emptiness, and selflessness. The four aspects of the second truth, origination (SAMUDAYASATYA), are cause, origination, strong production, and condition. The four aspects of the third truth, cessation (NIRODHASATYA), are cessation, pacification, exaltedness, and emergence. The four aspects of the fourth truth, path (MĀRGASATYA), are path, suitability, achievement, and deliverance. According to the *Abhidharmakośabhāṣya*, the samādhi associated with signlessness observes the four aspects of cessation; the samādhi of emptiness observes emptiness and selflessness, two of the four aspects of suffering; and the samādhi of wishlessness observes the remaining ten aspects. ¶ In YOGĀCĀRA texts, such as the MAHĀYĀNASAṂGRAHA, emptiness, wishlessness, and signlessness are related to the three natures (TRISVABHĀVA) of the imaginary (PARIKALPITA), the dependent (PARATANTRA), and the consummate (PARINIṢPANNA), respectively. In the MAHĀYĀNASŪTRĀLAṂKĀRA, it is said that the samādhi of emptiness understands the selflessness of persons and phenomenal factors (DHARMA), the samādhi of wishlessness views the five aggregates (SKANDHA) as faulty, and the samādhi of signlessness views nirvāṇa as the pacification of the aggregates. Elsewhere in that text, the three are connected to the four seals (CATURMUDRĀ) that certify a doctrine as Buddhist. The statements "all compounded factors are impermanent" and "all contaminated things are suffering" are the cause of the samādhi of wishlessness. "All phenomena are devoid of a perduring self" is the cause of the samādhi of emptiness. "Nirvāṇa is peace" is the cause of the sāmadhi of signlessness. According to another interpretation, emptiness refers to the lack of a truly existent entity in phenomena, signlessness refers to the lack of a truly existent cause, and wishlessness refers to the lack of a truly existent effect.

Viṃśatikā. (T. Nyi shu pa; C. Weishi ershi lun; J. Yuishiki nijūron; K. Yusik isip non 唯識二十論). The "Twenty," also known as *Viṃśatikāvijñaptimātratāsiddhikārikā*, the "Twenty Stanzas Proving Representation-Only," one of the most influential independent (i.e., noncommentarial) works of the fourth- or fifth-century Indian master VASUBANDHU. A short work in twenty verses, it outlines the basic position of the YOGĀCĀRA regarding the status of external objects, arguing that such objects do not exist apart from the consciousness that perceives them. He argues, for example, that the fact that objects appear to exist in an external world is not proof of that existence, since an external world also appears to exist in dreams. Therefore, all external phenomena are merely projections of consciousness (VIJÑĀNA) and thus are representation-only (VIJÑAPTIMĀTRATĀ).

viṃśatiprabhedasaṃgha. (T. dge 'dun nyi shu; C. ershi sengqie/shengwen cidi; J. nijūsōgya/shōmonshidai; K. isip sŭngga/sŏngmun ch'aje 二十僧伽/聲聞次第). In Sanskrit, "the twenty varieties of the SAṂGHA" or "twenty members of the community"; a subdivision of the eight noble persons (AṢṬĀRYAPUDGALA) into twenty based on different faculties (INDRIYA) and the ways in which they reach NIRVĀṆA; a subdivision used in Mahāyāna works, particularly in the PRAJÑĀPĀRAMITĀ literature, as a template to further identify as many as forty-eight ĀRYA BODHISATTVAS. Only those who have reached the noble path (ĀRYAMĀRGA) or the religious life (śrāmaṇya) that begins with the path of vision (DARŚANAMĀRGA) are included in this idealized saṃgha. The twenty varieties are based on the eight noble persons, two for each of the four fruits of the noble path or religious life (ĀRYAMĀRGAPHALA; ŚRĀMAṆYAPHALA). The four fruits, from lowest to highest, are stream-enterer (SROTAĀPANNA), once-returner (SAKṚDĀGĀMIN), nonreturner (ANĀGĀMIN), and worthy one (ARHAT). For each there is one who enters (SROTAĀPANNAPRATIPANNAKA, etc.) and one who abides (SROTAĀPANNAPHALASTHA, etc.) in a particular fruition. This list also includes the seven noble persons (P. ariyapuggala; S. ĀRYAPUDGALA) as found in the MAJJHIMANIKĀYA. They are (1) the follower of faith (P. saddhānusāri; S. ŚRADDHĀNUSĀRIN); (2) the one liberated through faith (P. saddhāvimutta; S. ŚRADDHĀVIMUKTA); (3) the bodily witness (P. kāyasakkhi; S. KĀYASĀKṢIN); (4) the one liberated both ways (P. ubhatobhāgavimutta; S. UBHAYATOBHĀGAVIMUKTA); (5) the follower of the dharma (P. dhammānusāri; S. DHARMĀNUSĀRIN); (6) the one who has attained understanding (P. diṭṭhippatta; S. DṚṢṬIPRĀPTA); and (7) the one liberated through wisdom (P. paññāvimutta; S. PRAJÑĀVIMUKTA).

The list of the twenty according to the MAHĀVYUTPATTI is:

1. Stream-enterer (SROTAĀPANNA)
2. One who takes up to seven existences (SAPTAKṚDBHAVAPARAMA)
3. One who goes from family to family (KULAṂKULA)
4. Once-returner (SAKṚDĀGĀMIN)
5. One who has a single obstacle (EKAVICITA)
6. Nonreturner (ANĀGĀMIN)
7. One who achieves nirvāṇa in the intermediate state (ANTARĀPARINIRVĀYIN)
8. One who achieves nirvāṇa at birth (UPAPADYAPARINIRVĀYIN)
9. One who achieves nirvāṇa through effort (SĀBHISAṂSKĀRAPARINIRVĀYIN)
10. One who achieves nirvāṇa without effort (ANABHISAṂSKĀRAPARINIRVĀYIN)
11. One who goes higher (ŪRDHVASROTAS)
12. Bodily witness (KĀYASĀKṢIN)
13. Follower through faith (ŚRADDHĀNUSĀRIN)
14. Follower through doctrine (DHARMĀNUSĀRIN)

15. One who has aspired through faith (ŚRADDHĀDHIMUKTA)
16. One who attains through seeing (DṚṢṬIPRĀPTA)
17. One who is liberated dependent upon particular occasions (SAMAYAVIMUKTA).
18. One who is liberated regardless of occasion (ASAMAYAVIMUKTA)
19. One who is liberated through wisdom (PRAJÑĀVIMUKTA)
20. One who is liberated through both ways (UBHAYATOBHĀGAVIMUKTA)

Of these twenty, the first three are subdivisions of the first fruit, the next two of the second fruit, the sixth to twelfth of the third fruit, and the last two subdivisions of the fourth fruit of the ARHAT. The remaining are more general categories. For detailed explanations, see each individual entry.

vimukti. (P. vimutti; T. rnam par grol ba; C. jietuo; J. gedatsu; K. haet'al 解脫). In Sanskrit, "liberation." See VIMOKṢA.

vimuktimārga. (T. rnam par grol ba'i lam; C. jietuodao; J. gedatsudō; K. haet'alto 解脫道). In Sanskrit, "path of liberation"; a technical term that refers to the second of a two-stage process of abandoning the afflictions (KLEŚA). As one proceeds from the path of vision (DARŚANAMĀRGA) to the adept path where there is nothing more to learn (AŚAIKṢAMĀRGA), the kleśas are abandoned in sequence through repeated occasions of yogic direct perception (YOGIPRATYAKṢA), consisting of two moments. The first is called the ĀNANTARYAMĀRGA (uninterrupted path), in which the specific kleśa or set of kleśas is actively abandoned; this is followed immediately by the vimuktimārga [alt. vimokṣamārga], which is the state of having abandoned, and thus being liberated from, the kleśa.

Vimuktisena. [alt. Ārya Vimuktisena] (T. Grol sde). An Indian scholar-monk (likely from the sixth century CE) who is the author of the first extant commentary (vṛtti) on the ABHISAMAYĀLAṂKĀRA, a work associated with the name of MAITREYA or MAITREYANĀTHA, the most influential PRAJÑĀPĀRAMITĀ commentary for Indian and Tibetan Buddhism. Vimuktisena connects the *Abhisamayālaṃkāra* to the PAÑCAVIṂŚATISĀHASRIKĀPRAJÑĀPĀRAMITĀ ("Perfection of Wisdom in Twenty-five Thousand Lines"), making the otherwise cryptic *Abhisamayālaṃkāra* comprehensible. In scholastic Tibetan Buddhism his name is linked with the Yogācāra-Madhyamaka synthesis, but Vimuktisena's view is more closely aligned to MADHYAMAKA, without the distinctive terminology associated with the PRAMĀṆA school of DIGNĀGA and DHARMAKĪRTI.

***Vimuttimagga**. (T. Rnam grol gyi bstan bcos; C. Jietuodao lun; J. Gedatsudōron; K. Haet'alto non 解脫道論). In Pāli, "Treatise on the Path to Liberation"; an Indian ABHIDHARMA treatise attributed to Upatissa (S. *Upatiṣya). The *Vimuttimagga* was composed sometime prior to the fifth century, perhaps in northern India. It is no longer extant in its Indian recension, but was translated into Chinese in its entirety in 505; portions were also translated into Tibetan. The original language of the text is uncertain, and is usually known by its putative Pāli title (its Sanskrit reconstruction would be **Vimuktimārga*). It is clear that the work was known to the Pāli exegete BUDDHAGHOSA, who made use of it in composing his VISUDDHIMAGGA, although he does not cite it by name. Like the *Visuddhimagga*, the **Vimuttimagga* sets forth the path in terms of the three trainings in morality (P. sīla; S. ŚĪLA), meditation (SAMĀDHI), and wisdom (P. paññā; S. PRAJÑĀ). The **Vimuttimagga* is, however, a much shorter text, omitting the illustrative stories Buddhaghosa offers and including a more succinct section on prajñā. While the *Visuddhimagga* is regarded as a text delivering the doctrine of the conservative MAHĀVIHĀRA branch of the Sri Lankan Pāli tradition, the **Vimuttimagga* is thought to represent instead the views of the ABHAYAGIRI sect, a school that was influenced by MAHĀYĀNA thought.

vinaya. (T. 'dul ba; C. lü; J. ritsu; K. yul 律). In Sanskrit and Pāli, "discipline"; the corpus of monastic regulations, especially that directed at fully ordained monks (BHIKṢU) and nuns (BHIKṢUṆĪ). The term is used by extension for those texts in which these codes are set forth, which form the "basket of the discipline" (VINAYAPIṬAKA) in the Buddhist canon (TRIPIṬAKA). According to an account in the *Sifen lü kaizong ji*, by the Chinese vinaya master DAOXUAN (596–667), UPAGUPTA, the fifth successor in the Buddha's lineage about a century following his death, had five major disciples, who were said to have established their own schools based on their differing views regarding doctrine; these five also redacted separate recensions of the VINAYA, which the Chinese refer to as "five recensions of the vinaya" (Wubu lü). These five vinayas are (1) the "Four-Part Vinaya" (C. SIFEN LÜ; S. **Cāturvargīyavinaya*) of the DHARMAGUPTAKA school; (2) the "Ten-Recitations Vinaya" (C. *Shisong lü*; S. **Daśādhyāyavinaya*; [alt. **Daśabhāṇavāravinaya*]) of the SARVĀSTIVĀDA school; (3) the "Five-Part Vinaya" (C. *Wufen lü*; S. **Pañcavargikavinaya*) of the MAHĪŚĀSAKA school and the **Prātimokṣavinaya* of the KĀŚYAPĪYA school; (4) the *MAHĀSĀṂGHIKA VINAYA of the MAHĀSĀṂGHIKA school; and (5) the MŪLASARVĀSTIVĀDA VINAYA. All five of these recensions are extant in Chinese translation, but the *Sifen lü* ("Four-Part Vinaya") of the Dharmaguptakas came to dominate the conduct of ecclesiastical affairs in East Asian Buddhism. The only vinaya to survive intact in an Indian language is the Pāli vinaya used in the STHAVIRANIKĀYA tradition; this vinaya compilation was unknown to the Chinese Tradition. The largest vinaya of them all, the Mūlasarvāstivāda vinaya, is a massive collection that is some four times longer than any of the other recensions. The entire collection is available in its Tibetan translation; portions of this vinaya were also translated in Chinese, and substantial fragments of its original Sanskrit version have survived. ¶ The vinayas are a rich source of Buddhist history because they describe the occasion surrounding the formulation of each of the myriads of rules of conduct and deportment promulgated by the Buddha. It is said that the Buddha made a new rule only

after the commission of an infraction that would need to be prevented in the future, so the vinayas are careful to recount, in sometimes embarrassing detail, the specific events leading up to the Buddha's formulation of the rule. These accounts therefore provide important insights into issues facing the monastic institutions of India. The principal rules of monastic life are contained in the PRĀTIMOKṢA, which presents rosters of offenses of varying gravity, with penalties ranging from expulsion from the order for the most serious to mere confession for the more minor ones. The most serious offenses, called PĀRĀJIKA, or "defeat," and requiring expulsion according to some vinaya traditions, were four for monks: sexual misconduct (defined in the case of a monk as the penetration of an orifice to the depth of a mustard seed), theft, the killing of a living being, and lying about spiritual attainments. (Even for such serious misdeeds, however, some vinayas prescribe procedures for possible reinstatement; see ŚIKṢĀDATTAKA.) In the Mūlasarvāstivāda vinaya, there were 253 total rules to be followed by monks, 364 for nuns. The majority of these rules were matters of etiquette and decorum meant to ensure harmonious relations within the monastic institution and with lay patrons. The prātimokṣa was recited fortnightly in the UPOṢADHA ceremony. A second major part of the vinaya is the VIBHAṄGA, or explanation of each rule, explaining the circumstances of its formulation and the conditions under which a violation does and does occur. A third part was called the VINAYAVASTU or KHANDAKA, separate sections (ranging between seventeen and twenty in number) on various topics such as ordination, the rains retreats, bedding, robes, and the use of medicine. Although sometimes regarded simply as a collection of regulations, the various vinaya texts are an essential part of Buddhist literature. Many of the vinayas, but especially the Mūlasarvāstivāda vinaya, also include enormous numbers of narrative tales and ancillary materials, including texts that in other traditions would have been collected in the SŪTRAPIṬAKA.

Vinayamūlasūtra. Another name for GUṆAPRABHA's VINAYASŪTRA. See VINAYASŪTRA.

vinayapiṭaka. (T. 'dul ba'i sde snod; C. lüzang; J. ritsuzō; K. yulchang 律藏). In Sanskrit and Pāli, "basket of discipline" or the "collection of discipline"; one of the three "baskets" (TRIPIṬAKA), or divisions of Buddhist scripture, together with the SŪTRAPIṬAKA and the ABHIDHARMAPIṬAKA. Although typically presumed to include just the rules and regulations of monastic conduct, the vinayapiṭaka is actually one of the richest sources for understanding Buddhist practice and institutions in India. It is said that the Buddha instituted a new rule only after the commission of some form of misconduct that he sought to prevent in the future, so the vinayas are careful to recount in great detail the circumstances leading up to the Buddha's promulgation of the rule. The vinayapiṭaka is therefore composed largely of narratives, some of considerable length; one of the earliest biographies of the Buddha appears in the vinaya of the MŪLASARVĀSTIVĀDA school (see MŪLASARVĀSTIVĀDA VINAYA). According to tradition, the redaction of the vinayapiṭaka occurred at the first Buddhist council (SAṂGĪTI; see COUNCIL, FIRST), shortly after the Buddha's death, when a group of ARHATs assembled to recite the Buddha's teachings. There, the monk UPĀLI, considered an expert in the monastic code, was called upon to recite the vinaya. However, assuming that such a recitation occurred, disputes soon arose over what was allowable conduct according to the rules and regulations included in the vinayapiṭaka. At the time of his death, the Buddha told ĀNANDA that, after his death, the minor rules could be disregarded. At the first council, he was asked what those minor rules were, and Ānanda admitted that he had failed to ask. All rules were therefore retained, and his failure to ask was one of his errors requiring a confession of wrongdoing. The eventual division into the traditional eighteen MAINSTREAM BUDDHIST SCHOOLS often centered on questions of vinaya practice and conduct. There is, therefore, no single vinayapiṭaka, but a number of vinayapiṭakas, with the precise content determined by the specific Indian school. To give one example, the Pāli vinayapiṭaka, which was perhaps redacted around the first century CE, is composed of the following three major divisions: (1) SUTTAVIBHAṄGA (S. sūtravibhaṅga; cf. VINAYAVIBHAṄGA), which includes the pāṭimokkha (S. PRĀTIMOKṢA) code with explanations and commentary, including the mahāvibhaṅga with the rules for monks and the bhikkhuṇīvibhaṅga with the rules for nuns; (2) KHANDHAKA (S. skandhaka; cf. VINAYAVASTU), which is subdivided between the MAHĀVAGGA, which includes chapters on such topics as the procedure for the ordination of monks, the fortnightly observances (P. uposatha; S. UPOṢADHA), the rains retreat, the use of clothing, food, medicine, and so forth, and the CŪḶAVAGGA, which includes a variety of judicial rules, procedures for the ordination of nuns, and accounts of the first and second Buddhist councils; and (3) PARIVĀRA, an appendix that provides a summary and classification of the rules of monastic conduct. ¶ Numerous vinaya texts were translated into Chinese, including complete (or near-complete) vinayapiṭakas associated with five of the mainstream schools of Indian Buddhism. In the order of their translation dates, these five are (1) "Ten-Recitations Vinaya" (C. *Shisong lü*; C. **Daśabhāṇavāravinaya*; **Daśādhyāyavinaya*) of the SARVĀSTIVĀDA school, perhaps composed sometime between the first and third centuries CE and translated into Chinese between 404 and 409 CE; (2) DHARMAGUPTAKA vinaya, the renowned "Four-Part Vinaya" (SIFEN LÜ), translated between 410 and 412 CE, which becomes the definitive recension of the vinaya in the East Asian traditions and the focus of scholarship in the different East Asian vinaya schools (see NANSHAN LÜ ZONG, DONGTA LÜ ZONG, RISSHŪ); (3) MAHĀSĀṂGHIKA vinaya (*Mohesengji lü*), composed between 100 and 200 CE and translated between 416 and 418; (4) MAHĪṂŚĀSAKA vinaya, or the "Five-Part Vinaya" (*Wufen lü*), perhaps composed in the first century BCE and translated between 422 and 423; and (5) the MŪLASARVĀSTIVĀDA vinaya, perhaps composed in the fourth or fifth century CE and

translated into Chinese between 703 and 713. (The complete Tibetan translation of this vinaya becomes definitive for Tibetan Buddhism). ¶ It is important to note that the texts contained in the vinayapiṭaka of any school have served as just one source of the monastic code. In China, no complete recension of any Indian vinaya was translated until the beginning of the fifth century. (Indeed, none of the surviving recensions of the vinayas of any Buddhist school can be dated prior to the fifth century CE.) When the Indian vinayas were translated into Chinese, for example, their regulations were viewed as being so closely tied to the customs and climate of India that they were sometimes found either incomprehensible or irrelevant to the Chinese. This led to the composition of indigenous Chinese monastic codes, called guishi ("regulations") or QINGGUI ("rules of purity"), which promulgated rules of conduct for monks and nuns that accorded more closely with the realities of life in East Asian monasteries. In Tibet, the VINAYASŪTRA by GUṆAPRABHA, a medieval Indian summary of the much larger Mūlasarvāstivāda vinaya, was the primary source for the monastic code, but each monastery also had its own regulations (BCA' YIG) that governed life there. See also PRĀTIMOKṢASŪTRA.

Vinayasūtra. (T. 'Dul ba'i mdo). In Sanskrit, "Discourse on Discipline"; a work on the monastic code by the Indian master GUṆAPRABHA, who is dated between the fifth and seventh century CE. Despite its title, the work is not a SŪTRA (in the sense of a discourse ascribed to the Buddha), but instead is an authored work composed of individual aphoristic statements (sūtras). The text offers a summary or condensation of the massive MŪLASARVĀSTIVĀDA VINAYA. At approximately one quarter the length of this massive vinaya collection, Guṇaprabha's abridgment seems to have functioned as a kind of primer on the monastic code, omitting lengthy passages of scripture and providing the code of conduct to which monks were expected to subscribe. In this sense, the text is an important work for determining what monastic practice may actually have been like in medieval India. The *Vinayasūtra* became the most important vinaya text for Tibetan Buddhism, being studied in all of the major sects. In the DGE LUGS, it is one of the five books (GZHUNG LNGA) that served as the basis of the monastic curriculum. The detailed commentaries on the *Vinayasūtra* by the Pāla dynasty writer Dharmamitra (early ninth century) and the BKA' GDAM PA master Tsho sna ba Shes rab bzang po's (b. thirteenth century) were widely studied.

vinayavastu. (T. 'dul ba'i gzhi; C. pinaiye shi; J. binayaji; K. pinaya sa 毘奈耶事). In Sanskrit, "foundation of the vinaya"; that section of the Sanskrit vinayas that corresponds to the KHANDHAKA (S. skandhaka) in the Pāli vinaya. This section consists of separate chapters (ranging in number from seventeen to twenty) on individual topics related to monastic life, including the procedures for ordination, the proper performance of the rains retreat, the KAṬHINA ceremony, and rules concerning the acquisition, use, and disposal of monastic robes (CĪVARA), foodstuffs, and medicines.

vinayavibhaṅga. (T. 'dul ba rnam par 'byed pa; C. Genben Shuoyiqieyoubu pinaiye; J. Konpon Setsuissaiubu binaya; K. Kŭnbon Sŏrilch'eyubu pinaya 根本說一切有部毘奈耶). In Sanskrit, lit. "Differentiation of the Discipline"; a major division of Sanskrit VINAYA literature, corresponding to the SUTTAVIBHAṄGA in the Pāli VINAYAPIṬAKA. The primary foci of such sections are the disciplinary rules for monks (PRĀTIMOKṢA), the exact number of which varies according to the tradition. The vinayavibhaṅga of the MŪLASARVĀSTIVĀDA vinaya (to which the Sinographs above correspond), for example, lists 253 such rules. Each rule is accompanied by a description of the appropriate response to its violation. These sanctions may range from possible expulsion from the order, as with the rules of "defeat" (PĀRĀJIKA), to simple confession of the misdeed during the fortnightly recitation of the rules (UPOṢADHA). The narrative form used to convey these rules follows that of most other vinaya literature, describing the circumstances that led to the Buddha's declaration of a particular rule. Just as the Pāli vinaya begins with a section of this type, the vinayas of the SARVĀSTIVĀDA and Mūlasarvāstivāda schools also begin with sections entitled vinayavibhaṅga. In both of these vinayas, a formal listing of the rules is followed by commentary and narratives that explain each rule more fully. These accounts provide important and often surprising insights into the concerns of Indian Buddhist monastic life.

Vinītaruci. (V. Tỳ Ni Đa Lưu Chi 毗尼多流支) (d. 594). The Sanskrit name of an Indian monk who is traditionally regarded as the founder of the first school of THIỀN (CHAN) in Vietnam. The Vietnamese genealogical history THIỀN UYỂN TẬP ANH records that Vinītaruci was a brāhmaṇa from south India who wandered throughout India as a young man searching for the essence of the Buddhist teaching. He is reputed to have arrived in China in 574, where he went to see the third Chan patriarch SENGCAN, who offered him instruction before advising him to go south. Vinītaruci then traveled to Zhizhi monastery in Guangzhou, where he remained for six years and translated many Buddhist texts. In 580, he arrived in Vietnam and settled at Pháp Vân monastery, where he subsequently transmitted the mind-seal (XINYIN) to Pháp Hiền (died 626), who carried on this Chan lineage associated with the third patriarch. He passed away sometime in 595. The Vinītaruci mentioned in the *Thiền Uyển Tập Anh* is undoubtedly the same Indian monk whose name is mentioned in Chinese Buddhist literature as a translator; however, it remains unclear whether Vinītaruci ever really came to Vietnam, as the Vietnamese Buddhist tradition reports. In any case, there are no historical grounds for the claim that he was the founding patriarch of a Chan lineage in Vietnam or to attribute to him the teaching style emblematic of the Southern school of Chan (NAN ZONG), which did not appear until centuries after his death.

viniyata. (T. yul nges; C. biejing [xinsuo]; J. betsukyō [no shinjo]; K. pyŏlgyŏng [simso] 別境[心所]). In Sanskrit, "determinative," or

"object-specific"; the second of the six categories of mental concomitants (CAITTA) according to the hundred dharmas (BAIFA) schema of the YOGĀCĀRA school, along with the omnipresent (SARVATRAGA), the wholesome (KUŚALA), the root afflictions (MŪLAKLEŚA), the secondary afflictions (UPAKLEŚA), and the indeterminate (ANIYATA). There are five mental factors in the category of determinative mental concomitants; their function is to aid the mind in ascertaining or determining its object. The five are aspiration or desire-to-act (CHANDA), determination or resolve (ADHIMOKṢA), mindfulness (SMṚTI), concentration (SAMĀDHI), and wisdom (PRAJÑĀ). According to ASAṄGA, these five determinative factors accompany wholesome (kuśala) states of mind, so that if one is present, all are present.

vipāka. (T. rnam par smin pa; C. guobao/yishu; J. kahō/ijuku; K. kwabo/isuk 果報/異熟). In Sanskrit and Pāli, lit. "ripening," thus "maturation," "fruition," or "result"; referring specifically to the "maturation" of past deeds (KARMAN). Vipāka refers to any mental phenomenon that occurs as a result of a morally wholesome or unwholesome volitional action performed by body, speech, or mind, either in this or previous lives. Fruitions can be divided between those that occur during the lifetime in which the deed is performed, those that occur in the lifetime immediately following the lifetime in which the deed is performed, and those that occur two or more lifetimes later. Although the fruition is the result of a wholesome or unwholesome act, the vipāka itself is always morally neutral and manifests itself as something pleasant or painful that is either physical or mental. Vipāka is a subset of the related term "fruition" (PHALA); in the context of moral cause and effect, the ripening of moral causes is called the VIPĀKAPHALA, which is one of the five types of effects or fruitions (phala) described in the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA; in that context vipākaphala is limited to effects, such as the body and so on, that last from the first moment to the last moment of a life. In the MAHĀYĀNA in general, the term also appears (with other forms of the verbal root √pac, "to cook") in the sense of "maturation," to refer to the power of buddhas and BODHISATTVAS to "ripen" beings in their progress along the path (MĀRGA).

vipākahetu. (T. rnam smin gyi rgyu; C. yishu yin; J. ijukuin; K. isuk in 異熟因). In Sanskrit and Pāli, lit. "ripening cause"; the "retributive cause" that leads to either wholesome or unwholesome karmic retribution (VIPĀKAPHALA); one of the six types of causes (HETU) described in the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA and by VASUBANDHU in the ABHIDHARMAKOŚABHĀṢYA. The vipākahetu refers to the karmic seeds of either wholesome (KUŚALA) deeds (KARMAN) that are tainted by ignorance (AVIDYĀ), or of unwholesome (AKUŚALA) deeds; neutral actions cannot serve as retributive causes. These deeds have the potency to ripen, even at some point in the distant future, as vipākaphala, specifically as the aggregates (SKANDHA) of a future lifetime, producing the physical body (RŪPA), the six types of consciousness (VIJÑĀNA), and sensations (VEDANĀ). According to some schools, the retributive cause is essentially identical to volition (CETANĀ), since it is the force that initiates action. The goal of the eightfold path (ĀRYĀṢṬĀṄGAMĀRGA) is to end the generation of such causes and thereby exhaust the karmic forces that bind one to SAṂSĀRA.

vipākaphala. (T. rnam smin gyi 'bras bu; C. yishu guo; J. ijukuka; K. isuk kwa 異熟果). In Sanskrit, lit. "ripened fruit," viz., "retributive effect"; one of the five types of effects or fruitions (PHALA) described in the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA, as well as by VASUBANDHU in the ABHIDHARMAKOŚABHĀṢYA. These are karmic effects of either wholesome (KUŚALA) deeds (KARMAN) that are tainted by ignorance (AVIDYĀ), or of unwholesome (AKUŚALA) deeds; neutral actions do not produce ripened effects. These effects, the results of the VIPĀKAHETU, ripen, even at some point long after the performance of the specific deed, as the aggregates (SKANDHA) of a future lifetime, producing the physical body (RŪPA), the six types of consciousness (VIJÑĀNA), and sensations (VEDANĀ). The vipākaphala is the ultimate and inevitable effect of the "retributive cause" (vipākahetu): in a metaphor used in the tradition, the retributive cause is the seed that grows into the fruit-bearing tree that is the retributive effect.

vipakṣa. [alt. vipakṣabhūta] (T. mi mthun phyogs; C. yipin/suoduizhi; J. ihon/shotaiji; K. ip'um/sodaech'i 異品/所對治). In Sanskrit, "opposite class"; referring to a category that is the opposite of another category, such that one must be absent for the other to be present. The term appears especially in two contexts in Buddhist literature. First, in Buddhist logic (HETUVIDYĀ), vipakṣa is one of three terms: PAKṢA (logical subject), SAPAKṢA (similar instance), and vipakṣa (dissimilar instance). For example, in the syllogism (PRAYOGA) "sound is impermanent because it is produced," sound is the pakṣa. A pot would be an example or sapakṣa (a "similar instance" or "in the similar class;" knowledge that a pot breaks because it is produced can be extended to sound). Space would be a counterexample or vipakṣa (a dissimilar instance or in the dissimilar class; knowledge that it is not produced because it is permanent can be extended to exclude a sound from the dissimilar class because it is articulated and produced). Second, in Buddhist literature on the practice of the path (MĀRGA), vipakṣa is contrasted with PRATIPAKṢA ("counteracting force" or "antidote") to the afflictions (KLEŚA). For example, the opposing class of hatred (DVEṢA) is counteracted by loving-kindness (MAITRĪ), such that meditation on loving-kindness temporarily displaces hatred from the mind but does not permanently remove it, as does a pratipakṣa.

vipariṇāmaduḥkhatā. (P. vipariṇāmadukkha; T. 'gyur ba'i sdug bsngal; C. huaiku; J. eku; K. koego 壞苦). In Sanskrit, "suffering associated with change"; the second of the three types of suffering, along with DUḤKHADUḤKHATĀ ("physical and

mental suffering") and SAṂSKĀRADUḤKHATĀ ("suffering intrinsic to conditioned existence itself"). This type of suffering is defined as feelings of mental and physical pleasure that inevitably turn into pain if the activity that produces them is continued indefinitely, such as overindulging in delicious food, staying out in the sun too long, or sitting in the same posture for hours on end. The Buddhist claim is that pain and pleasure are qualitatively different: painful feelings will continue to be painful unless some further action is taken to assuage the pain, whereas pleasurable feelings will become painful if one persists in engaging in the activity that produces the pleasure. For example, after walking for a long distance, walking becomes painful, at which point it is pleasurable to sit down. After sitting for a long period of time, sitting becomes painful, and it is pleasurable to stand up and walk. Feelings of pleasure are thus a type of suffering, because they will inevitably revert to pain. An example is pouring cold water on a burn; after a moment of relief, the burning sensation will return. In the same way, feelings of pleasure are merely a brief lessening of pain.

viparyāsa. (P. vipallāsa; T. phyin ci log; C. diandao; J. tendō; K. chŏndo 顚倒). In Sanskrit, lit. "inversion," but referring to "perverted," "corrupted," or "inverted" views (the Chinese translation diandao literally means "upside down") or simply "error." There is a standard list of four "inverted views" that cause sentient beings to remain subject to the cycle of rebirth (SAṂSĀRA). The four are (1) to view as pleasurable what is in fact painful or suffering (DUḤKHA), (2) to see as permanent what is in fact impermanent (ANITYA), (3) to see as pure what is in fact impure (AŚUBHA), and (4) to see as having self what is in fact devoid of self (ANĀTMAN). These four inversions are corrected through insight into the true nature of reality, which prompts the realization that the aggregates (SKANDHA) are in fact suffering, impermanent, impure, and devoid of self. In the TATHĀGATAGARBHA literature, these four putatively correct views are in turn said also to be inversions from the standpoint of the tathāgatagarbha, which is said to possess four perfect qualities (GUṆAPĀRAMITĀ): bliss, permanence, purity, and selfhood.

vipassanā. In Pāli, "insight" (see also S. VIPAŚYANĀ). Insight is defined as the direct intuition of the three marks (P. tilakkhaṇa; S. TRILAKṢAṆA) of existence that characterize all phenomena: P. aniccā (S. ANITYATĀ) or impermanence, dukkha (S. DUḤKHA) or suffering, and anatta (S. ANĀTMAN) or nonself. Insight associated with the attainment of any of the eight noble paths and fruits (P. ariyamaggaphala; S. ĀRYAMĀRGAPHALA) or associated with the attainment of cessation (NIRODHASAMĀPATTI) is classified as supramundane (P. lokuttara; S. LOKOTTARA); that which is not associated with the noble paths and fruits is classified as mundane (P. lokiya; S. LAUKIKA). The classical commentarial paradigm pairs vipassanā with samatha (S. ŚAMATHA), or tranquillity, these two together being described as the two wings of Buddhist meditative cultivation (BHĀVANĀ). Vipassanā, when fully developed, leads to enlightenment (BODHI) and nibbāna (S. NIRVĀṆA); samatha when fully developed leads to the attainment of JHĀNA (S. DHYĀNA), or meditative absorption, and the attainment of certain supranormal powers (P. abhiññā; S. ABHIJÑĀ). While the formal training in vipassanā meditation does not require the prior attainment of either jhāna or abhiññā, the mind must nevertheless have achieved a modicum of pacification through "threshold concentration" (UPACĀRASAMĀDHI) as a prerequisite for successful vipassanā practice. The VISUDDHIMAGGA lists eighteen main types of vipassanāñāṇa (S. vipaśyanājñāna), or insight knowledge, of (1) impermanence (aniccānupassanā), (2) suffering (dukkhānupassanā), (3) nonself (anattānupnupassanā), (4) aversion (nibbidānupassanā), (5) dispassion (virāgānupassanā), (6) extinction (nirodhānupassanā), (7) abandoning (paṭinissaggānupassanāā), (8) waning (khayānupassanā), (9) disappearing (vayānupassanā), (10) change (vipariṇāmānupassanā), (11) signlessness (animittānupassanā), (12) wishlessness (apaṇihitānupassanā), (13) emptiness (suññatānupassanā), (14) higher wisdom regarding phenomena (adhipaññādhammavipassanā), (15) knowledge and vision that accords with reality (YATHĀBHŪTAJÑĀNADARŚANA), (16) contemplation of danger (ādīnavānupassanā), (17) contemplation involving reflection (paṭisaṅkhānupassanā), and (18) turning away (vivaṭṭanānupassanā). While the terms samatha and vipassanā do appear in sutta discussions of meditative training—although far more often in the later KHUDDAKANIKĀYA sections of the canon—they figure most prominently in the ABHIDHAMMA and the later commentarial literature. The systems of vipassanā training taught today are modern constructs that do not antedate late-nineteenth century Burma (see LEDI SAYADAW; MAHASI SAYADAW); they are, however, derived from, or at least inspired by, commentarial or scriptural precedents. Two of the most successful vipassanā organizations outside Asia are the Insight Meditation Society and the loosely knit group of centers teaching S. N. Goenka's vipassana meditation; the former originates with AJAHN CHAH BODHIÑĀṆA (1917–1992) of the Thai forest tradition and the latter with the Burmese teacher U BA KHIN (1899–1971). See also YATHĀBHŪTAJÑĀNADARŚANA.

vipassanādhura. In Pāli, lit., "the burden of insight," in the sense of the obligation to develop insight through formal meditation training. The term is often contrasted with GANTHADHURA, "the burden of book," in the sense of the obligation to study. In the later THERAVĀDA tradition, these two duties have been seen as two vocations open to monks, viz., contemplative practice and doctrinal study. See also PAṬIPATTI.

vipassanāñāṇa. In Pāli, "insight knowledge"; see VIPASSANĀ.

vipassanāñāṇikasamādhi. In Pāli, "concentration of insight knowledge"; a commentarial term used to refer to a form of concentration that is developed through attending to the arising and passing away of the present thought-moment or object, when such concentration has successfully removed all distractions. It is equal in intensity to the "threshold

concentration" (UPACĀRASAMĀDHI) that is cultivated in the course of practicing tranquillity meditation (P. samathabhāvanā; see ŚAMATHA). Vipassanāñāṇikasamādhi, when fully developed, leads to the attainment of the paths (P. magga; S. MĀRGA) and fruits (PHALA) of liberation, whereas upacārasamādhi, when fully developed, leads only to the attainment of "absorptive concentration" (APPANĀSAMĀDHI), which is synonymous with "meditative absorption" (P. JHĀNA; S. DHYĀNA).

vipassanūpakkilesa. In Pāli, "defilement of insight"; according to the VISUDDHIMAGGA, ten experiences that occur to the diligent practitioner of meditation as natural concomitants of insight training (VIPASSANĀ-BHĀVANĀ). If the practitioner should become attached to any of these experiences, they become a hindrance to further progress along the path to liberation and thus would be deemed defilements of insight. The ten experiences are (1) a vision of radiant light (P. obhāsa; S. avabhāsa), (2) knowledge (P. ñāṇa; S. JÑĀNA), (3) physical rapture (P. pīti; S. PRĪTI), (4) tranquillity (P. passaddhi; S. PRAŚRABDHI), (5) mental ease or bliss (SUKHA), (6) determination (P. adhimokkha; S. ADHIMOKṢA), (7) energy (P. paggaha; S. pragraha), (8) heightened awareness (P. upaṭṭhāna; S. upasthāna), (9) equanimity (P. upekkhā; S. UPEKṢĀ), and (10) delight (P. nikanti; S. nikānti). As long as the mind is disturbed through attachment to the ten defilements of insight, it will be unable to comprehend the three marks of existence (P. tilakkhaṇa; S. TRILAKṢAṆA) of impermanence P. (anicca; S. ANITYA), suffering (P. dukkha; S. DUḤKHA), and nonself (P. anatta; S. ANĀTMAN), the knowledge of which is the content of enlightenment (BODHI). These ten defilements may cause the practitioner to believe that he has already attained enlightenment as a stream-enterer (SROTAĀPANNA), a once-returner (SAKṚDĀGĀMIN), a nonreturner (ANĀGĀMIN), or a worthy one (ARHAT), when in fact he has not. Infatuation with the defilements is overcome by understanding them for what they are, as mere impermanent by-products of meditation. This understanding is developed through perfecting the "purity of knowledge and vision of what is and is not the path" (MAGGĀMAGGAÑĀṆADASSANAVISUDDHI), which is the fifth of seven "purities" (VISUDDHI) to be developed along the path to liberation.

vipaśyanā. (P. vipassanā; T. lhag mthong; C. guan; J. kan; K. kwan 觀). In Sanskrit, "insight"; a technical term for an understanding of reality (either conceptual or nonconceptual) at a level of mental concentration equal to or exceeding that of ŚAMATHA. The presence of vipaśyanā is the distinguishing feature of the wisdom that derives from meditation (BHĀVANĀMAYĪPRAJÑĀ). Such insight is required to destroy the various levels of afflictions (KLEŚA) and to proceed on the path to liberation (VIMOKṢA) from REBIRTH. See also VIPASSANĀ; MOHE ZHIGUAN; XIUXI ZHIGUAN ZUOCHAN FAYAO.

Vipaśyin. (P. Vipassī; T. Rnam gzigs; C. Piposhi fo; J. Bibashi-butsu; K. Pibasi pul 毘婆尸佛). Sanskrit proper name of the sixth of the seven buddhas of antiquity (SAPTATATHĀGATA), who directly precede ŚĀKYAMUNI; Vipaśyin is also listed as the nineteenth of twenty-five buddhas mentioned in the BUDDHAVAṂSA. In the Pāli tradition, his story is first recounted in the MAHĀPADĀNASUTTA in the DĪGHANIKĀYA. There, it is said that Vipassī's father was Bandhumā and his mother was Bandhumatī. He was born in the Khema park and belonged to the Kondañña clan. During his time, the human life span was eighty thousand years. He dwelt as a householder for eight thousand years and possessed three palaces named Nanda, Sunanda, and Sirmā, one for each of the three seasons. His wife's name was Sutanā, and he had a son named Samavattakkhandha. When he renounced the world, he left his house in a chariot, after which he practiced austerities for eight months. As with all BODHISATTVAS, Vipassī abandoned austerities as unprofitable when he realized that they did not lead to enlightenment. He attained buddhahood under a pāṭali (S. pātali) tree. In the description of his enlightenment, he is shown contemplating dependent origination (PRATĪTYASAMUTPĀDA), but in a chain of ten rather than the standard twelve links. He preached his first sermon in the Khema Deer Park to his brother Khandha and to Tissa, the son of his family's priest. These two became his chief monk disciples. His chief nun disciples were Candā and Candamittā, and his attendant was named Asoka. His chief lay disciples were the laymen Punnabbasummitta and Nāga, and the laywomen Sirimā and Uttarā. He died at the age of eighty thousand in the Sumittārāma, and over his relics was erected a reliquary (STŪPA) seven leagues high. The bodhisattva who was to become GAUTAMA Buddha was at that time a NĀGA king named Atula.

viprayuktasaṃskāra. (S). See CITTAVIPRAYUKTASAṂSKĀRA.

vīra. (T. dpa' bo; C. yongmeng; J. yūmyō; K. yongmaeng 勇猛). In Sanskrit and Pāli, "hero"; a common epithet of the Buddha. The word is also used for a bodhisattva skilled in tantric practices who accompanies a ḌĀKINĪ during the GAṆACAKRA (tantric feast) ritual. Ekavīra (T. Dpa' bo gcig pa), "Solitary Hero," is a form of YAMĀNTAKA widely practiced in Tibet and is used in general to describe the depiction of a male tantric deity without a consort.

virati. (T. spong ba; C. li; J. ri; K. i 離). In Sanskrit and Pāli, lit. "abstinence," "seclusion"; a polysemous term in both Sanskrit and Buddhist literature. In its Buddhist usages, virati generally refers to the separation or detachment from mental afflictions (KLEŚA) and false conceptualizations (VIKALPA); it may also indicate a desire to leave behind such afflictions. In Pāli literature, virati indicates three specific types of abstention, viz., from wrong speech, wrong action, and wrong livelihood. In SARVĀSTIVĀDA thought, virati results from a positive sense of perplexity about one's state in the world, and from it arises the soteriologically indispensable NIRVEDA, "disgust with the world" or "disillusionment." Two kinds of seclusion

(C. ERZHONG YUANLI) are also discussed in the Chinese tradition: physical seclusion (shen yuanli) and the seclusion of the mind (xin yuanli). Removing oneself from a distracting, unwholesome, and disquieting environment by leaving it behind constitutes physical seclusion. Seclusion of the mind usually refers to "guarding one's senses" (INDRIYASAṂVARA) with mindfulness so that the mind will neither cling to, not be repulsed by, sensory stimuli; it also refers to the "withdrawal" from sensory stimulations and the consolidation of attention during meditative states (see DHYĀNA).

Virūḍhaka. (P. Virūḷhaka [alt. Viḍūḍabha]; T. 'Phags skyes po; C. Zengzhang tian; J. Zōjōten; K. Chŭngjang ch'ŏn 增長天). Sanskrit proper name of one of the four LOKAPĀLA, the kings of the four directions who reside on the four sides of Mount SUMERU. He is king of the south and resides on the southern face of the central mountain, where he is lord of the kumbhaṇḍas. ¶ Virūḍhaka (corresponding to the Pāli transcription Viḍūḍabha) is also the proper name of a king of KOŚALA at the time of the Buddha; he was the son of the Buddha's patron, PRASENAJIT, and usurped his father's throne. When Prasenajit ascended the throne, he requested a wife from the ŚĀKYA tribe. The Śākyas instead sent a maidservant, claiming that she was from a noble family, and she eventually gave birth to Virūḍhaka. As a boy, he visited KAPILAVASTU and learned of his low birth. Realizing that his father had been deceived, he vowed to take revenge upon the Śākyas. After his father's death, he led an army against Kapilavastu, destroying the Śākya kingdom and slaughtering its inhabitants. A violent storm caused a flood during the night, and Virūḍhaka and his warriors, who were sleeping in the riverbed, were swept away. See also CĀTURMAHĀRĀJAKĀYIKA.

Virūpa. (Bi rū pa). Sanskrit proper name of one of the eighty-four MAHĀSIDDHAS, particularly revered in the SA SKYA sect of Tibetan Buddhism. Very little can be said with certainty about his life (whether he was a historical figure is open to question), but he may have lived at the end of the tenth century CE. He is said to have been a monk and a distinguished scholar of NĀLANDĀ monastery (in some sources, SOMAPURA), who was originally named Dharmapāla, devoting himself to scholastic study during the day and tantric practice at night. He recited the MANTRA of CAKRASAṂVARA for years, but, unable to make any progress in his practice, he threw his rosary into the latrine. That night, the goddess NAIRĀTMYĀ, appeared to him in a dream, instructing him to retrieve his rosary. Over the course of six nights, she conferred initiations and instructions that allowed him to attain the sixth bodhisattva BHŪMI. She also gave him a text, which is otherwise unknown in Sanskrit, whose Sanskrit title might be reconstructed as **Mārgaphalamūlaśāstra*, the "Root Treatise on the Path and Its Fruition." Dharmapāla subsequently began to engage openly in tantric practices and was expelled from the monastery and branded "deformed" or "ugly" (virūpa), whence he derived his name. Among the many stories told about him, perhaps the most famous tells of his stopping in a tavern to drink. When the tavern keeper demanded payment, he offered her the sun instead, using his ritual dagger to stop the sun in its course. The sun did not move for three days, during which time Virūpa consumed huge amounts of drink. In order to set the sun on its course, the king agreed to pay his bill. Virūpa eventually encountered two YOGINS who became his disciples: Ḍombiheruka and Kṛṣṇacārin. In the eleventh century, the Tibetan scholar SA CHEN KUN DGA' SNYING PO of the 'Khon clan is said to have had a vision of Virūpa in which he received transmission of the **Mārgaphalamūlaśāstra*. This became the foundation for the LAM 'BRAS teachings of the Sa skya sect, where Virūpa is regarded as a buddha, equal in importance to Nāropa for the BKA' RGYUD sect. His most famous work is his RDO RJE TSHIG RKANG ("Vajra Verses").

Virūpākṣa. (P. Virupakkha; T. Mig mi bzang; C. Guangmu tian; J. Kōmokuten; K. Kwangmok ch'ŏn 廣目天). One of the four LOKAPĀLA, the kings of the four directions who reside on the four sides of Mount SUMERU. He is king of the west and resides on the western face of the central mountain, where he is lord of the NĀGAS.

vīrya. (P. viriya; T. brtson 'grus; C. jingjin; J. shōjin; K. chŏngjin 精進). In Sanskrit, "energy," "effort"; an enthusiasm to perform virtuous acts, which serves as the antidote to laziness. Since, by definition, the term refers to a delight in virtue, striving for nonvirtuous ends would not be considered "energy." The connotations of the term include the willingness to undertake virtuous deeds, the delight in the performance of virtuous deeds, a lack of discouragement, a commitment to success, and a dissatisfaction with minimal virtues. Deemed essential to progress on the path, vīrya is a constituent of many numerical lists. Vīrya is the second of the five spiritual faculties (INDRIYA) and counters the hindrance (NĪVARAṆA) of sloth and torpor (STYĀNA-MIDDHA). It is counted as one of the eleven wholesome mental concomitants (KUŚALA-CAITTA) and constitutes the fourth of the six perfections (PĀRAMITĀ).

vīryapāramitā. (P. viriyapāramī; T. brtson 'grus kyi pha rol tu phyin pa; C. jingjin boluomiduo; J. shōjinharamita; K. chŏngjin paramilta 精進波羅蜜多). In Sanskrit, "the perfection of energy [alt. effort, vigor]"; the fourth of the six [alt. ten] perfections (PĀRAMITĀ) cultivated on the BODHISATTVA path. It is perfected on the fourth of the ten stages (DAŚABHŪMI) of the bodhisattva path, ARCIṢMATĪ (radiant), where the flaming radiance of the thirty-seven factors pertaining to enlightenment (BODHIPĀKṢIKADHARMA) becomes so intense that it incinerates all the obstructions and afflictions, giving the bodhisattva inexhaustible energy in his quest for enlightenment. When the six perfections are divided based on whether they are associated with the accumulation of merit (PUṆYASAṂBHĀRA) or of wisdom (JÑĀNASAṂBHĀRA), the perfection of energy is associated with both.

Viśākha. (P. Visākha; T. Sa ga; C. Pishequ; J. Bishakya; K. Pisagŏ 毗舍佉). A wealthy merchant of RĀJAGṚHA and husband of the female ARHAT DHAMMADINNĀ; he should be distinguished from VIŚĀKHĀ (s.v.), the foremost donor among laywomen. According to the Pāli account, Viśākha accompanied King BIMBISĀRA on a visit to the Buddha during the latter's first sojourn at Rājagaha (RĀJAGṚHA) after his enlightenment. Upon hearing the Buddha preach, Visākha became a stream-enterer (SROTAĀPANNA) and, subsequently, a once-returner (SAKṚDĀGĀMIN) and a nonreturner (ANĀGĀMIN). Once he became a nonreturner, his behavior toward his wife Dhammadinnā changed, and once she learned the reason, Dhammadinnā requested permission to renounce the world and enter the order as a nun. Impressed by his wife's piety, he informed Bimbisāra, who arranged for her to be carried to the nunnery on a golden palanquin. After Dhammadinnā attained arhatship, Visākha asked her questions pertaining to dharma, all of which she expertly answered. He reported this to the Buddha, who praised her for her skill in teaching. Visākha and Dhammadinnā were husband and wife during the time of Phussa (S. Puṣya) Buddha (the twenty-first of the thousand buddhas) when, as a treasurer, he had arranged an offering of alms for Phussa Buddha and his disciples. Visākha was a renowned teacher in his own right and is mentioned as one of seven lay disciples who each had five hundred followers.

Viśākhā. (P. Visākhā; T. Sa ga ma; C. Pishequmu/Luzimu; J. Bishakyamo/Rokushimo; K. Pisagŏmo/Nokchamo 毗舍佉母/鹿子母). Prominent female lay disciple of the Buddha (and to be distinguished from the Buddhist layman VIŚĀKHA); in the AṄGUTTARANIKĀYA, the Buddha declares her to be foremost among laywomen who minister to the order. According to the Pāli account, Visākhā was born into a wealthy family and was converted by the Buddha at the age of seven, when he visited her native city of Bhaddiya. Visākhā had been dispatched by her grandfather, Meṇḍaka, with five hundred chariots, five hundred companions, and five hundred slaves to approach the Buddha and listen to him preach. Upon hearing his sermon, Visākhā became a stream-enterer (SROTAĀPANNA). Later, Visākhā was married to the son of a wealthy merchant named Migāra, who dwelt in the city of Sāvatthi (ŚRĀVASTĪ) and was a follower of the Nigaṇṭhas (S. NIRGRANTHA; see JAINA). Although she was a dutiful wife and daughter-in-law, Visākhā was offended by the nakedness of the Nigaṇṭha ascetics and refused to show them respect. When criticized for her attitude, she threatened to return to her parents' house. Although sorely distressed by his daughter-in-law's behavior, Migāra consented to listen to a sermon by the Buddha if she would consent to remain in his family. Upon hearing the Buddha preach, Migāra became a stream-enterer (SROTAĀPANNA), and remained forever grateful to Visākhā, even giving her the sobriquet Migāramātā, "Migāra's Mother." Visākhā fed five hundred monks in her home daily, and was constant in her attentions to the monastic community in Sāvatthi. She fulfilled a long-held wish when she had a grand monastery built to the east of the city named Migāramātupāsāda (S. MṚGĀRAMṚTUPRĀSĀDA), which she visited with her children, grandchildren, and great grandchildren. The Buddha related how, in previous lives, Visākhā had ministered to the needs of the Buddhas Padumuttara (S. Padmottara) and Kassapa (S. KĀŚYAPA). Visākhā was said to have died at the age of 120, although she always looked to be a maiden of sixteen. She was endowed with phenomenal strength, and the people of Sāvatthi believed that she brought good fortune to their city. Visākhā is upheld by the tradition as the ideal laywoman.

visaṃyogaphala. (T. bral ba'i 'bras bu; C. liji guo; J. rikeka; K. igye kwa 離繫果). In Sanskrit, "separation effect"; a term used to describe liberation from rebirth and the reality of NIRVĀṆA. This is one of the five effects (PHALA) enumerated in the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA and the YOGĀCĀRA system. Liberation (VIMOKṢA) and nirvāṇa are forms of cessation (NIRODHA) and as such are unconditioned phenomena (ASAṂSKṚTADHARMA) and permanent (NITYA) because they do not change moment by moment. Specifically, they are classified as "analytical cessations" (PRATISAṂKHYĀNIRODHA), that is, states of cessation that arise through the process of insight. In the Buddha's delineation of the FOUR NOBLE TRUTHS (catvāry āryasatyāni), the third truth of cessation (NIRODHASATYA) is followed by the fourth truth of the path (MĀRGASATYA). Later commentators would explain that cessation and path stand in a relationship of effect and cause, respectively. However, this is not possible in the literal sense, because an impermanent and conditioned phenomenon such as the path cannot serve as the cause for a permanent and unconditioned phenomenon such as cessation. In order to preserve this distinction but nonetheless acknowledge the role of religious practice in bringing about the state of nirvāṇa, the Vaibhāṣika school proposed the category of visaṃyogaphala, which is essentially an effect that has no cause. Thus, the practice of the path leads to a permanent separation from the KLEŚAS, and because that state of separation is permanent, it not formally the effect of a cause.

viṣaya. (P. visaya; T. yul; C. jing; J. kyō; K. kyŏng 境). In Sanskrit, lit. "sphere" or "object"; in epistemology, a general term for the object of a sensory consciousness (VIJÑĀNA). Various types of such objects are described in works on logic and epistemology, with distinctions made between the objects perceived by the five sensory consciousnesses and the objects perceived by the mental consciousness (MANOVIJÑĀNA).

Viśiṣṭacāritra. (C. Shangxing; J. Jōgyō; K. Sanghaeng 上行). In Sanskrit, "Exemplary Practices"; the leader of the four BODHISATTVAS of the earth to whom ŚĀKYAMUNI Buddha transfers the quintessence of the SŪTRA in the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"). Viśiṣṭacāritra is said to represent the "true self" aspect of the buddha-nature (FOXING). Viśiṣṭacāritra has special significance for the Japanese NICHIRENSHŪ schools, because NICHIREN himself believed that his proselytization work had

fulfilled the charge that Śākyamuni had given the bodhisattva. Thus, some Nichiren schools assume that their founder is the reincarnation of Viśiṣṭacāritra.

viśuddhabuddhakṣetra. (T. dag pa'i zhing khams; C. qingjing foguotu; J. shōjōbukkokudo; K. ch'ŏngjŏng pulguk'o 清淨佛國土). In Sanskrit, lit. "purified buddha-field"; an important concept in Mahāyāna Buddhology and closely synonymous with some denotations of the East Asian term JINGTU ("PURE LAND"). According to certain MAHĀYĀNA texts, when a bodhisattva achieved buddhahood, the merit that he accumulated over the course of the path fructifies not only as the body, speech, mind, and activities of a buddha but also as the physical environment of that buddha as well. That physical environment is called a "buddha-field." These lands may be either "impure" or "pure," depending upon a number of factors, the most common of which is whether the land does or does not include three baleful destinies (DURGATI) of animals (TIRYAK), ghosts (PRETA), and hell denizens (NĀRAKA). The most famous of these pure buddha-fields is SUKHĀVATĪ, the land of the buddha AMITĀBHA. See also BUDDHAKṢETRA.

viśuddhi. [alt. viśuddha] (P. visuddhi; T. rnam par dag pa; C. qingjing; J. shōjō; K. ch'ŏngjŏng 清淨). In Sanskrit, "purity"; of which two types are enumerated: innate purity (prakṛti or svabhāvaviśuddhi) and purity free of temporary or adventitious stains (āgantukamalaviśuddhi). The former is the natural state of the mind (see PRABHĀSVARA) as in the Pāli AṄGUTTARANIKĀYA: "The mind, O monks, is luminous (P. pabhassara), but is defiled by adventitious defilements" (pabhassaraṃ idaṃ bhikkhave cittaṃ, tañ ca kho āgantukehi upakkilesehi upakkiliṭṭhaṃ). The latter is the mind when the path (MĀRGA) has cleansed it of hindrances (see NĪVARAṆA; ĀVARAṆA). In Pāli, there are seven purities (visuddhi) that must be developed along the path leading to liberation. The list of seven purities is first enumerated in the MAJJHIMANIKĀYA and forms the outline for both BUDDHAGHOSA's VISUDDHIMAGGA and Upatissa's earlier *VIMUTTIMAGGA. The seven purities are likened to seven carriages that one takes in sequence to reach seven progressive goals. Thus, (1) the purity of morality (P. sīlavisuddhi; see S. ŚĪLAVIŚUDDHI) leads to its goal of (2) the purity of mind (CITTAVISUDDHI), and the purity of mind leads to its goal of (3) purity of understanding or views (DIṬṬHIVISUDDHI). The purity of understanding leads to its goal of (4) purity of overcoming doubt (KAṄKHĀVITARAṆAVISUDDHI), and the purity of overcoming doubt leads to its goal of (5) the purity of knowledge and vision of what is and is not the path (MAGGĀMAGGAÑĀṆADASSANAVISUDDHI). The purity of knowledge and vision of what is and is not the path leads to its goal of (6) knowledge and vision of progress along the path (PAṬIPADĀÑĀṆADASSANAVISUDDHI), and knowledge and vision of progress along the path leads to its goal of (7) the purity of knowledge and vision (ÑĀṆADASSANAVISUDDHI). The goal of this last purity is liberation through the attainment of any of the four supramundane paths (P. ariyamagga; S. ĀRYAMĀRGA).

Visuddhimagga. In Pāli, "Path of Purity"; the definitive Pāli compedium of Buddhist doctrine and practice, written by the exegete BUDDHAGHOSA at the MAHĀVIHĀRA in ANURĀDHAPURA, Sri Lanka, in the fifth century CE. The work serves as a prolegomenon to the soteriological content of the entire Pāli canon in terms of the three trainings in morality (P. sīla; S. ŚĪLA), concentration (SAMĀDHI), and wisdom (P. paññā; S. PRAJÑĀ). These are the "three trainings" (P. tisikkhā; S. TRIŚIKṢĀ) or "higher trainings" (P. adhisikkhā; S. adhiśikṣā). In his use of this organizing principle for his material, Buddhaghosa is clearly following Upatissa's earlier *VIMUTTIMAGGA, which is now extant only in a Chinese translation. Buddhaghosa had originally come to Sri Lanka from India in order to translate the Sinhalese commentaries (AṬṬHAKATHĀ) to the Pāli canon back into the Pāli language. It is said that, in order to test his knowledge, the Mahāvihāra monks first gave him two verses and ordered him to write a commentary on them; the *Visuddhimagga* was the result. Legend has it that, after completing the treatise, the divinities hid the text so that he would be forced to rewrite it. After a third time, the divinities finally relented, and when all three copies were compared, they were found to be identical, testifying to the impeccability of Buddhaghosa's understanding of the doctrine. The commentaries that Buddhaghosa was then allowed to edit and translate make numerous references to the *Visuddhimagga*. The text contains a total of twenty-three chapters: two chapters on precepts, eleven on meditation, and ten on wisdom. In its encyclopedic breadth, it is the closest equivalent in Pāli to the ABHIDHARMAMAHĀVIBHĀṢĀ of the SARVĀSTIVĀDA school of ABHIDHARMA. The post-fifth century CE exegete DHAMMAPĀLA wrote a Pāli commentary to the *Visuddhimagga* titled the PARAMATTHAMAÑJŪSĀ ("Container of Ultimate Truth"), which is also often referred to in the literature as the "Great Subcommentary" (*Mahāṭīkā*).

Viśvaṃtara. (S). See VESSANTARA.

Vitakkasaṇṭhānasutta. (C. Zengshangxin jing; J. Zōjōshingyō; K. Chŭngsangsim kyŏng 增上心經). In Pāli, "Discourse on Removing Distracting Thoughts," the twentieth sutta in the MAJJHIMANIKĀYA (a separate SARVĀSTIVĀDA recension appears as the 101st SŪTRA in the Chinese translation of the MADHYAMĀGAMA); preached by the Buddha to an assembly of monks at the JETAVANA grove in the town of Sāvatthi (S. ŚRĀVASTĪ). The Buddha teaches five methods that can be used to overcome unwholesome, distracting thoughts (P. vitakka; S. VITARKA) that may arise during the course of meditation. These methods include replacing the unwholesome thought with a wholesome thought, contemplating the danger of the unwholesome thought, ignoring the unwholesome thought, progressively stilling the process of thought formation, and forcibly suppressing the unwholesome thought through the application of concentration. An analogous treatment of five methods of controlling thoughts also appears in the YOGĀCĀRABHŪMIŚĀSTRA.

vītarāgapūrvin. (T. chags bral sngon song; C. xian liyu ren; J. senriyokunin; K. sŏn iyok in 先離欲人). In Sanskrit, "one already free from attachment," that is, one who has eliminated the afflictions (KLEŚA) that cause rebirth in the sensual realm (KĀMADHĀTU) prior to reaching the path of vision (DARŚANAMĀRGA); a general designation used in ABHIDHARMA to describe a set of the twenty members of the ĀRYASAṂGHA (see VIṂŚATIPRABHEDASAṂGHA). The vītarāgapūrvin are said to be those who do not gain each of the four fruits of the noble path (ĀRYAMĀRGAPHALA) in a series, but leap over one or more before reaching NIRVĀṆA. See SROTAĀPANNAPHALAPRATIPANNAKA; SAKṚDĀGĀMIPHALASTHA.

vitarka. (P. vitakka; T. rtog pa; C. xun; J. jin; K. sim 尋). In Sanskrit, "thoughts," "applied thought," or "applied attention"; one of the forty-six mental concomitants (CAITTA) according to the VAIBHĀṢIKA school of SARVĀSTIVĀDA ABHIDHARMA, one of the fifty-one according to the YOGĀCĀRA school, and one of the fifty-two in the Pāli ABHIDHAMMA. Although etymologically the term contains the connotation of "investigation," vitarka is polysemous in the Buddhist lexicon and refers to a mental activity that could be present both in ordinary states of consciousness as well as during meditative absorption (DHYĀNA). Generically, vitarka can simply denote thoughts, and specifically "distracted thoughts," as in the VITAKKASAṆṬHĀNASUTTA. In ordinary consciousness, it is perhaps best translated as "applied thought" or "initial application of thought" and refers to the momentary advertence toward the chosen object of attention. Vitarka is listed in the ABHIDHARMA as an indeterminate mental factor (ANIYATACAITTA), because it can be employed toward either virtuous or nonvirtuous ends, depending on one's intentions and the object of one's attention. In meditative absorption, vitarka is one of the five constituents (DHYĀNĀṄGA) that make up the first DHYĀNA, and is perhaps best translated in that context as "applied attention" or "initial application of attention." In dhyāna, vitarka involves directing one's focus onto the single chosen meditative object. According to the Pāli VISUDDHIMAGGA, "applied attention" is like a bee flying toward a flower, having oriented itself toward its chosen target, whereas "sustained attention" (VICĀRA) is like a bee hovering over that flower, having closer contact with and fixing itself upon the flower.

vitarkamudrā. (C. anwei yin; J. anniin; K. anwi in 安慰印). In Sanskrit, "gesture of instruction" or "gesture of discussion." Vitarkamudrā is formed with a combination of gestures: the right palm faces outward, fingers up near the shoulder in the ABHAYAMUDRĀ, and the left palm faces out, fingers down by the knee in the VARADAMUDRĀ. Typically, the thumb and index finger of each hand also touch lightly, forming circles, while the rest of the fingers are splayed outward. This is a common gesture in Buddhist iconography, and the pose is often seen used with images of BHAIṢAJYAGURU, VAIROCANA, AMITĀBHA, MAÑJUŚRĪ, and even AVALOKITEŚVARA. This gesture is also sometimes called the vyākhyānamudrā, "the gesture of explanation."

vivartakalpa. (P. vivaṭṭakappa; T. chags pa'i bskal pa; C. chengjie; J. jōkō; K. sŏnggŏp 成劫). In Sanskrit, "eon of formation" or "eon of creation"; one of the four periods in the cycle of the creation and destruction of a world system, according to Buddhist cosmology. These are the eon of formation (vivartakalpa), the eon of abiding (VIVARTASTHĀYIKALPA), the eon of dissolution (SAṂVARTAKALPA), and the eon of nothingness (SAṂVARTASTHĀYIKALPA), According to the ABHIDHARMAKOŚABHĀṢYA, each of the four eons lasts for twenty intermediate eons. The eon of formation begins when a wind begins to blow in space, impelled by the KARMAN of sentient beings. A circle of wind forms, followed by a circle of water, followed by a circle of golden earth. The entire world system of the sensuous realm (KĀMADHĀTU) then forms, including Mount SUMERU, the four continents and their subcontinents, the heavens, and the hells (see BHĀJANALOKA). These are then populated by beings (see SATTVALOKA), reborn in the various realms as a result of their previous karman. When all realms of the world system have been populated, the eon of formation ends and the eon of abiding begins.

vivartasthāyikalpa. (P. vivaṭṭaṭṭhāyikappa; T. gnas pa'i bskal pa; C. zhujie; J. jūkō; K. chugŏp 住劫). In Sanskrit, "eon of abiding," or "eon of duration"; one of the four periods in the cycle of the creation and destruction of a world system, according to Buddhist cosmology. The others are: the eon of formation (VIVARTAKALPA), the eon of abiding (vivartasthāyikalpa), the eon of dissolution (SAṂVARTAKALPA), and the eon of nothingness (SAṂVARTASTHĀYIKALPA). According to the ABHIDHARMAKOŚABHĀṢYA, each of the four eons lasts twenty intermediate eons. The eon of formation begins when a wind begins to blow in space, impelled by the karman of sentient beings. A circle of wind forms, followed by a circle of water, followed by a circle of golden earth. The entire world system of the sensuous realm (KĀMADHĀTU) and the first DHYĀNA of the realm of subtle materiality (RŪPADHĀTU) then forms (see BHĀJANALOKA), which is then populated by beings (see SATTVALOKA) who are reborn there as a result of their previous KARMAN. When all realms of the world system have been populated, the eon of formation ends and the eon of abiding begins. At the beginning of the eon of abiding, the human life span is said to be "infinite" and decreases until it eventually reaches ten years of age. It then increases to eighty thousand years, before decreasing again to ten years. It takes one intermediate eon for the life span to go from ten years to eighty thousand years to ten years again. The eon of abiding is composed of twenty eons, beginning with the intermediate eon of decrease (in which the life span decreases from "infinite" to ten years), followed by eighteen intermediate eons of increase and decrease, and ending with an intermediate eon of increase, when the life span increases from ten years to eighty thousand years, at which point the next eon, the eon of dissolution, begins. ŚĀKYAMUNI Buddha appeared when the life span was one hundred years. It is said that MAITREYA will come when the human life span next reaches eighty thousand years.

viveka. (T. dben pa; C. yuanli; J. onri; K. wŏlli 遠離). In Sanskrit and Pāli, "seclusion," "aloofness," "solitude." In Buddhist meditative literature, viveka refers to the "aloofness" that occurs as a result of becoming increasingly focused on a meditative object and thus more "secluded" from the things of the sensual world. In the NIDDESA of the Pāli KHUDDAKANIKĀYA, three kinds of viveka are described: kāyaviveka, or "physical seclusion"; cittaviveka, or "mental seclusion;" and upadhiviveka, or "seclusion from the substrata of rebirth (UPADHI)," viz., the five aggregates (SKANDHA) and/or the afflictions (KLEŚA). Kāyaviveka is actual physical separation from family, friends, and distracting sense objects; cittaviveka is when meditative practitioners remain "aloof" or "secluded" from greed (RĀGA), hatred (DVEṢA), and delusion (MOHA). In some MAHĀYĀNA texts, the slavish pursuit of viveka is explained as a violation of the bodhisattva ideal, because the devotion to solitude impedes the bodhisattva's vow to save others from their suffering. In Buddhist tantras, such as the GUHYASAMĀJATANTRA, the practice of the three isolations of body (kāyaviveka), speech (VĀGVIVEKA), and mind (cittaviveka) precedes the practice of illusory body (MĀYĀKĀYA), clear light (PRABHĀSVARA), and union (YUGANADDHA).

Vô Ngôn Thông. (無言通) (d. 826). Vietnamese monk regarded by tradition as the founder of the second principal school of THIỀN (CHAN) in Vietnam. According to the Vietnamese genealogical history, THIỀN UYỂN TẬP ANH, Vô Ngôn Thông originally came from Guangzhou (China) and entered the Buddhist order at Shuanglinsi in Wuzhou. Because he was known for his ability to silently comprehend and realize the nature of things, his contemporaries called him "Wordless Realization" (V. Vô Ngôn Thông; C. Wuyantong). He is reputed to have studied under BAIZHANG HUAIHAI. In 820, Vô Ngôn Thông came to Kiền Sơ Monastery in northern Vietnam and took up residence there to practice Chan. He generally sat facing the wall (see BIGUAN), without uttering a word. A disciple, Cảm Thành, served him for many years and received the transmission of his full teaching.

Vṛjiputraka. (P. Vajjiputtakā; C. Baqizi; J. Batsugishi; K. Palgija 跋耆子). In Sanskrit, "Sons of Vṛji"; a group of monks condemned at the second Buddhist council (SAṂGĪTI; see COUNCIL, SECOND), the council at VAIŚĀLĪ, for what were judged to be ten violations of the VINAYA, the most serious of which was accepting gold and silver from the laity. Other violations included carrying a provision of salt, using a fringed sitting mat, eating after noon, eating meals from two different villages on the same day, and performing an ecclesiastical act (SAṂGHAKARMAN) without a sufficient number of monks being present. According to Pāli sources, after their condemnation, these monks seceded to form the MAHĀSĀṂGHIKA school. See also VĀTSĪPUTRĪYA; YAŚAS.

Vulture Peak. See GṚDHRAKŪṬAPARVATA.

vyākaraṇa. (P. veyyākaraṇa; T. lung bstan pa; C. shouji/piqieluo; J. juki/bigara; K. sugi/pigara 授記/毘伽羅). In Sanskrit, "prediction" or "prophecy"; a statement made by a buddha indicating the course of future events, especially regarding when, where, and with what name a BODHISATTVA will become a buddha. The most famous instance of such prophecy in the MAHĀYĀNA sūtras appears in the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), where the Buddha makes predictions that the great ARHATs, beginning with ŚĀRIPUTRA, will all eventually achieve buddhahood. ¶ Vyākaraṇa is also used to refer to one of the nine (NAVAṄGA) (Pāli) or twelve (DVĀDAŚAṄGA [PRAVACANA]) (Sanskrit) categories (AṄGA) of Buddhist scripture according to their structure or literary style, where it refers to prophetic teachings or expositions. In the ninefold Pāli division, BUDDHAGHOSA defines veyyākaraṇa as something of a default category, which comprises the entire ABHIDHAMMAPIṬAKA, all suttas that do not contain verses, and any teaching of the Buddha that does not fall into any of the other eight categories.

Vyākhyāyukti. (T. Rnam par bshad pa'i rigs pa). In Sanskrit, "Principles of Exegesis," a treatise by VASUBANDHU preserved only in Tibetan translation. In the broadest sense, the text deals with scriptural interpretation, touching on a wide range of related issues, including the authenticity of the MAHĀYĀNA sūtras as the word of the Buddha (BUDDHAVACANA), which Vasubandhu upholds. The work is a companion to another work by Vasubandhu, the *Vyākhyāyuktisūtrakhaṇḍaśata* ("One Hundred Extracts from the Sūtras for the Principles of Exegesis"), a collection of 109 passages presented without identification and without comment, all of which derive from "mainstream" (that is, non-Mahāyāna) sources, in most cases from the canon of the MŪLASARVĀSTIVĀDA. These passages serve as the basis for the discussion in the *Vyākhyāyukti*, which states that sūtras are to be explained according to (1) their purpose, (2) their summarized meaning, (3) their sense, (4) their sequence, and (5) objections and responses. In discussing the sense or meaning of a sūtra passage, he considers thirteen terms that have multiple meanings, including DHARMA, RŪPA, and SKANDHA. In his explication of technical terminology, Vasubandhu explains four distinct aspects of "the meaning of the words" (padārtha): synonyms (paryāya), definition (lakṣaṇa), etymology (nirukti), and their subdivisions (prabheda; perhaps implying subsidiary meanings, or "connotations," in this context). In the course of the discussion, several Mahāyāna sūtras are quoted. The work was influential in late Indian scholastic circles, eliciting a commentary by Guṇamati; it was also cited by such scholars as HARIBHADRA. It was highly praised by such luminaries as SA SKYA PAṆḌITA and BU STON in Tibet, where it was used to establish principles for the translation of Buddhist texts from Sanskrit into Tibetan. See also NETTIPPAKARAṆA; PEṬAKOPADESA; SANFEN KEJING.

vyāpāda. (T. gnod sems; C. chen; J. shin; K. chin 瞋). In Sanskrit and Pāli, "malice" or "ill will"; the ninth of ten

unwholesome courses of action (AKUŚALA-KARMAPATHA), referring to the hateful wish that harm will befall another. The ten courses of action are divided into three groups according to whether they are performed by the body, speech, or mind. Malice is classified as an unwholesome mental action (AKUŚALA-KARMAN), and forms a triad along with covetousness (ABHIDHYĀ) and wrong views (MITHYĀDṚṢṬI). Only extreme forms of defiled thinking are deemed an unwholesome course of mental action, such as the covetous wish to misappropriate someone else's property, the harmful intent to hurt someone, or the adherence to pernicious doctrines. Lesser forms of defiled thinking are still unwholesome (akuśala), but do not constitute a course of action. ¶ "Malice" is also listed as one of the five hindrances (NĪVARAṆA) to DHYĀNA, obstructing the dhyāna factor of rapture (PRĪTI). Malice is fostered by unwise attention (AYONIŚOMANASKĀRA) to objects causing aversion and is removed through frequent wise attention to loving-kindness (MAITRĪ), developing the meditation on loving-kindness, and recognizing the fact that every person's actions are his or her own and acknowledging the futility of anger. Malice is countered by faith (ŚRADDHĀ), the first of the five spiritual faculties (INDIYA), and by the enlightenment factors (BODHYAṄGA) of physical rapture (prīti) and equanimity (UPEKṢĀ). "Malice" is also included among the ten fetters (SAṂYOJANA) and is completely overcome only upon becoming an ARHAT.

vyāpti. (T. khyab pa; C. bian/bianzhi; J. hen/henshi; K. p'yŏn/p'yŏnji 遍/遍至). In Sanskrit, "pervasion" or "concomitance"; a term used in logic to indicate the relation that obtains between the reason and the predicate in a correct syllogism (PRAYOGA). There is positive concomitance (anvaya) and negative concomitance (VYATIREKA). For example, in order for the syllogism (PRAYOGA) "Sound is impermanent because of being produced" to be correct, it must be true that whatever is impermanent must necessarily be produced. That is, the category of the reason must either be coextensive with or subsume the category of the predicate. In Tibetan monastic debate, the term figures in one of three answers that the defender of a position may give. When presented with a syllogism or consequence (PRASAṄGA) by the challenger, the defender may (1) accept the thesis ('dod), (2) state that the reason is not a quality of the subject (rtags ma grub), or (3) state that there is no pervasion between the reason and the predicate (ma khyab).

vyatireka. (T. ldog pa; C. lizuofa; J. risahō; K. ijakpŏp 離作法). In Sanskrit, in Buddhist logic, "exclusion" or negative concomitance, as compared with positive concomitance (anvaya); in the syllogism (PRAYOGA) "Sound is impermanent because of being produced," the negative concomitance is whatever is permanent is not produced; the positive concomitance is whatever is produced is impermanent. The term also is used in the discussion of "reverse" (vyāvṛtta; T. ldog pa), a term that occurs in epistemology and logic treatises to describe how thought (as opposed to direct perception, viz., PRATYAKṢA) apprehends its object via a negative route, whereby, for example, the idea of "chair" is arrived at through the exclusion of everything that is "nonchair." This "non-nonchair" would be called the "reverse" (vyāvṛtta) of chair and the object of the concept of "chair." See also APOHA.

vyavadāna. (P. vodāna; T. rnam byang; C. jing; J. jō; K. chŏng 淨). In Sanskrit, "purification" or "cleansing"; often contrasted with SAṂKLEŚA, meaning impurity, defilement, stain, or pollution. This vyavadāna/saṃkleśa dichotomy is used in a variety of ways. These are understood to be two distinct and opposite modes of causation that condition one's future—one leading to suffering and other to the end of suffering. A being's consciousness (VIJÑĀNA) is constantly entering into either the process of purification (vyavadāna) or defilement (saṃkleśa), depending upon actions and thoughts at any given moment. The process of purification may be undertaken by way of morality (ŚĪLA), concentration (SAMĀDHI), or wisdom (PRAJÑĀ). Purification is evidenced by the resultant presence of tranquillity (PRAŚRABDHI). In some MAHĀYĀNA texts, it is emphasized that the ultimate result of the process of purification is the realization that all phenomena (DHARMA) are ultimately devoid of any distinction between pure and impure. The term vyavadāna may also be used independently of saṃkleśa, as, for example, where a BODHISATTVA's understanding of the DHARMA is said to be vyavadāna—pure and without blemish.

vyavahāra. (T. tha snyad; C. sudi/yanyu; J. zokutai/gongo; K. sokche/ŏnŏ 俗諦/言語). In Sanskrit, "convention" or "designation"; often with the connotation of something superficial. Generally, this term refers to matters involved with the mundane or worldly realm, as opposed to those of the sacred or supramundane realm. Vyavahāra has two general applications in a Buddhist context. First, it is used to indicate the established social conventions, experiences, and practices of the quotidian world. In Buddhism, these conventions are contrasted with the strict moral practices that conform to the ultimate truth (PARAMĀRTHASATYA) perceived by noble beings (ĀRYA). In this sense of a "conventional truth," vyavahārasatya is synonymous with SAṂVṚTISATYA. Second, and rather more commonly, this term is used in the context of language and discourse to indicate those conventional words used by ordinary, unenlightened beings to designate reality as they (mis)understand it. Here, again, the terms and the objects that they designate are merely conventional truths (saṃvṛtisatya); the term vyavahārasatya sometimes is used as a synonym. Since, according to the doctrine of emptiness (ŚŪNYATĀ), all phenomena are devoid of any inherent, unchanging nature, the linguistic expressions used to designate the things of this world are purely conventional designations and cannot contain or communicate the true nature of those phenomena. Through the power of their practice, buddhas and BODHISATTVAS have an inherent understanding of all such linguistic expressions (see NIRUKTI; PRATIBHĀNA)

and use that knowledge to communicate the DHARMA to unenlightened beings. Buddhas and bodhisattvas, however, understand both the true and ineffable nature of the language they use, as well as the phenomena that language is meant to describe.

Vyavahārasiddhi. (T. Tha snyad grub pa). In Sanskrit, "Proof of Convention"; a work attributed to NĀGĀRJUNA; it is no longer extant, but six stanzas are cited by ŚĀNTARAKṢITA in his MADHYAMAKĀLAṂKĀRAVṚTTI. The verses state that a MANTRA is composed of letters just as a medicine is composed of ingredients, but the mantra and the medicine are neither the same as nor different from the elements of which they are comprised. Because they are dependently arisen, they cannot be said to be either existent or nonexistent; instead, they exist conventionally. This fact is true of all phenomena, including cessation (NIRODHA), which were set forth by the Buddha for specific purposes.

vyaya. (T. 'jig pa; C. mie; J. metsu; K. myŏl 滅). In Sanskrit and Pāli, "disintegration" or "destruction"; a close synonym of ANITYA, viz., "desinence" or "impermanence." In the SARVĀSTIVĀDA ABHIDHARMA, "disintegration" or "desinence" constitutes the final of the four characteristics (CATURLAKṢAṆA) of compounded phenomena (SAṂSKṚTADHARMA), along with production or origination (JĀTI), continuance or maturation (STHITI), and "senescence" or decay (JARĀ). Vyaya refers to the inevitable tendency of all compounded things to disintegrate, once the cause and conditions that sustain them vanish. The various abhidharma systems disagree as to whether these four conditioned characteristics are natural qualities inherent in all compounded things; or whether they are external factors that act upon those things, such as through "forces dissociated from thought" (CITTAVIPRAYUKTASAṂSKĀRA). They also disagree as to whether the four occur successively over a period of time or whether they are four perspectives on a single instant (KṢAṆA).

W

Wachirayanwarorot. [alt. Wachirayan Warot] (Thai) (1860–1921). See VAJIRAÑĀṆAVARORASA.

wajō. (和上). An alternate Japanese transcription of the Sanskrit term UPĀDHYĀYA, or "preceptor," which is also pronounced kashō in the TENDAISHŪ. This term is often interchangeable with OSHŌ. See HESHANG.

wall contemplation. See BIGUAN.

Wanfosi. (J. Manbutsuji; K. Manbulsa 萬佛寺). In Chinese, "Monastery of Myriad Buddhas"; located outside the western gate of the old city wall of Chengdu in Sichuan province; currently only an archeological site. The monastery was founded during the Eastern Han period (25–220 CE) and survived through the end of the Ming dynasty (1368–1644), changing its name several times in the course of its history. It was known as Anpusi during the Liang dynasty (502–556), JINGZHONGSI during the Tang dynasty (618–907), Jingyinsi during the Song dynasty (960–1279), and Zhulinsi, Wanfusi, and, finally, Wanfosi, during the Ming dynasty (1368–1644), after which it fell into disrepair. Since the rediscovery of the site in 1882, some two hundred sculptures and other sacred objects have been uncovered during successive excavations, most of which are currently kept in the Sichuan Provincial Museum. The sculptures date mainly from the North–south Dynasties through the Tang periods. During the Tang, when the monastery was known as Jingzhongsi, it was the residence of the early CHAN monk CHŎNGJUNG MUSANG (680–756, alt. 684–762), a Korean monk from the Unified Silla dynasty (668–935), whose prosperous Sichuan Chan lineage came to be known as the JINGZHONG ZONG line. His toponym Chŏngjung (Jingzhong) comes from this monastery of Jingzhongsi.

Wangnyunsa. (王輪寺). In Korean, "Royal Wheel Monastery"; a major doctrinal (KYO) monastery located on Mt. Songak in the Koryŏ capital of Kaesŏng. It was one of the ten monasteries built in the capital in 919 by Wang Kŏn (T'aejo, r. 918–943), the first king of the Koryŏ dynasty, in conjunction with his policy to establish his new state on the foundations of the religious power of Buddhism. This monastery was the site for the ecclesiastical examinations (SŬNGKWA) for monks in the Doctrinal (Kyo) school, which were established during the reign of King Kwangjong (r. 949–975). Such important Koryŏ Kyo monks as the state preceptor (KUKSA) Chigwang Haerin (984–1067) and the royal preceptor (WANGSA) Hyedŏk Sohyŏn (1038–1096) were appointed to their positions after taking the examinations at Wangnyunsa. Although Wangnyunsa seems not to have been as heavily patronized by the royal family as some of the other monasteries in Kaesŏng, the *Koryŏsa* ("History of Koryŏ") notes a number of religious ceremonies that were held there during the dynasty. The monastery burned to the ground in 1236 during the Mongol invasion of the Korean peninsula and was subsequently rebuilt in 1275 by King Ch'ungnyŏl (r. 1274–1308). Wangnyunsa seems to have received special patronage during the reign of King Kongmin (r. 1351–1374). After his queen Noguk's (d. 1365) death, Kongmin sited her memorial hall of Inhŭi chŏn at Wangnyunsa; his own memorial hall, Hyemyŏng chŏn, was built in 1376 at the west of the campus, the last reference to the monastery to appear in Korean historical materials. See also KWANGMYŎNGSA.

Wang o Ch'ŏnch'ukkuk chŏn. (C. Wang wu Tianzhuguo zhuan 往五天竺國傳). In Korean, "Memoir of the Pilgrimage to the Five Regions of India"; composed by the Korean monk-pilgrim HYECH'O (d.u.; c. 704–780). After being ordained in Korea, Hyech'o left for China sometime around 721 and spent perhaps three years on the mainland before departing for India (the Ch'ŏnch'ukkuk of the title) via the southern sea route in 724. After landing on the eastern coast of the subcontinent, Hyech'o subsequently spent about three years on pilgrimage to many of the Buddhist sacred sites, including BODHGAYĀ, KUŚINAGARĪ, and SĀRNĀTH, and on visits to several of the major cities in north central India. He then traveled in both southern and western India before making his way toward the northwest, whence he journeyed on into KASHMIR, GANDHĀRA, and Central Asia. Making his way overland across the Central Asian SILK ROAD, Hyech'o arrived back in Chinese territory in December of 727, where he spent the rest of his life. Like other pilgrims before him, Hyech'o kept detailed notes of his pilgrimage, and his travelogue does not differ significantly in terms of style and content from the earlier and more famous records left by FAXIAN and XUANZANG; unfortunately, unlike their works, only fragments of his account survive. His text is largely organized according to the kingdoms, regions, and pilgrimage sites that Hyech'o visited. Hyech'o offers a general description of the

geography, climate, economy, customs, and religious practices of each place he visited, and, when necessary, he clarifies whether MAHĀYĀNA, HĪNAYĀNA, or some combination of the two traditions was practiced at a specific site. Although Hyech'o is known to have been the disciple of VAJRABODHI and AMOGHAVAJRA, considered by some as patriarchs of esoteric Buddhism, he makes no mention in his travelogue of tantric texts or practices. Hyech'o does note the dilapidated state of some major STŪPAS and monasteries, the advance of the Turkic tribes into Buddhist areas, and the absence of any Buddhist practice in Tibet at that early date. In these and other respects, Hyech'o's memoir serves as a valuable resource for the study of Buddhism and regional history along the Silk Road.

Wang Rixiu. (王日休) (d. 1173). Chinese lay Buddhist during the Song dynasty (960–1279), who played an important role in revitalizing the PURE LAND (JINGTU) tradition, also known by his Buddhist name of Longshu. Although Wang was an accomplished Confucian scholar, he renounced all aspiration for civil office and instead devoted himself to pure land devotions, charitable activities, and a daily regimen of one thousand prostrations. Wang is best known as the author of *Longshu zhengguan jingtu wen* ("Longshu's Extended Writings on the Pure Land"), written in 1160, an extensive compendium of materials on the SUKHĀVATĪ pure land of AMITĀBHA, drawn from sūtras, commentarial writings, and biographical materials, with Wang's own exegeses. The collection offers practical instructions on how to have faith, and achieve rebirth, in the pure land, as well as a series of edifying tales about the successful rebirths and miracles that others generated through their own devotions.

wangshen. (J. bōshin; K. mangsin 亡身). In Chinese, lit., "loss of body," viz., "self-immolation." See SHESHEN.

wangsheng. (J. ōjō; K. wangsaeng 往生). In Chinese, "going to rebirth"; referring especially to rebirth in AMITĀBHA's PURE LAND of SUKHĀVATĪ. In its broadest sense, the term is sometimes used to refer to rebirth in either the three realms of existence (LOKADHĀTU) or other buddhas' or BODHISATTVAS' pure lands, such as the ABHIRATI pure land of the buddha AKṢOBHYA or the TUṢITA heaven of the bodhisattva MAITREYA. The term has a distinctive usage in the East Asian PURE LAND traditions, however, where it refers specifically to rebirth in sukhāvatī. The seminal pure land sūtra, the SUKHĀVATĪVYŪHASŪTRA, regards this kind of rebirth as the achievement of the stage of nonretrogression (S. AVAIVARTIKA), one of the stages of the BODHISATTVA path. The *Wangshenglun zhu*, a commentary by TANLUAN on VASUBANDHU's WULIANGSHOU JING YOUPOTISHE YUANSHENG JI (**Aparimitāyuḥsūtropadeśa*), says that rebirth in sukhāvatī is to be distinguished from the cycle of rebirth in the three realms of existence, because birth in the pure land frees one from any prospect of subsequent rebirths in SAṂSĀRA. In order to go to rebirth in sukhāvatī, the pure land tradition offered the simple practice of chanting the buddha Amitābha's name (C. NIAN FO; K. yŏmbul; J. NENBUTSU; see also NAMU AMIDABUTSU). Ritual practices associated with taking rebirth in the pure land also include the deathbed recitation of the name of Amitābha, which is introduced in the *Sukhāvatīvyūhasūtra* as the eighteenth of the forty-eight vows that DHARMĀKĀRA made before he attained enlightenment. According to this vow, a person may be reborn in sukhāvatī by sincerely calling out Amitābha's name a mere ten times. The quality of rebirth in the pure land will be dependent on the practitioner's level of achievement, viz., as superior, average, or inferior. Superior disciples are those who arouse the thought of enlightenment (BODHICITTA) and maintain mindfulness of Amitābha, while cultivating meritorious qualities. Average disciples are those who arouse the thought of enlightenment and maintain mindfulness of Amitābha, but who do not cultivate meritorious qualities to the same extent as do superior disciples. Inferior disciples are those who arouse the thought of enlightenment and maintain mindfulness of Amitābha, but who have not yet consistently begun to cultivate meritorious qualities. Several collections of testimonials regarding the efficacy of wangsheng practice exist in China, including the seventh-century *Wangsheng zhuan* by Jiacai (fl. c. 627) and the FAYUAN ZHULIN by Daoshi (d. 683).

Wangsheng Jingtu zhuan. (往生淨土傳). In Chinese, "Biographies of Those Who Have Gone to Rebirth in the Pure Land." See JINGTU ZHUAN.

Wang Wei. (J. Ō I; K. Wang Yu 王維) (701–761). Chinese poet, painter, and musician during the Tang dynasty and close associate of masters in the early CHAN school; his cognomen was Mojie. In 721, Wang Wei passed the imperial civil service examination and was appointed as assistant director of the Imperial Music Office. By 759, shortly after the An Lushan rebellion, he had risen to the high bureaucratic rank of right assistant director of the Department of State Affairs. Wang Wei is known to have maintained close relationships with several major figures in the thriving Chan tradition and wrote the funerary inscriptions for such monks as JINGJUE (683–c. 760), author of the LENGQIE SHIZI JI, and the sixth patriarch (LIUZU) HUINENG. Although there is no direct evidence of Buddhist influences in his writing, it is commonly asserted that his close relations with these Chan figures contributed to Wang Wei's subtle and reflective descriptions of nature in his landscape poetry.

wangxiang. (J. mōzō; K. mangsang 妄想). In Chinese, "deluded thoughts," "fantasies," viz., thoughts that arise from ignorance (AVIDYĀ), craving (TṚṢṆĀ), conceptualization (VIKALPA), or inverted views (VIPARYĀSA), which must be eliminated in order to achieve enlightenment. The Chinese term corresponds variously to such Sanskrit terms as PARIKALPITA (imaginary), VIKALPA (thought or conception), and KALPANĀ (conceptual construction). In Korean SŎN Buddhism, distracting thoughts or fantasies

that arise during meditation practice, no matter how salutary, are denigrated as mangsang. The term has also entered vernacular Korean to mean "daydreaming," "flights of fancy," or even "paranoia."

Wangyal, Geshe. (1901–1983). Tibetan monk-scholar of the DGE LUGS sect who played an important role in the transmission of Tibetan Buddhism to the United States. He was born in the region of Kalmykia of Czarist Russia, whose Mongol population practiced Tibetan Buddhism, and became a novice monk at the age of six. He was selected by AGVAN DORZHIEV to continue his studies in LHA SA, enrolling at the Sgo mang college of 'BRAS SPUNGS monastery in 1922. After nine years of study, he traveled to Beijing and then to Calcutta, where he was hired to serve as translator for Sir Charles Bell (1870–1945), British political officer for Sikkim, Bhutan, and Tibet, during his travels in China and Manchuria. In India, he met the British mountaineer Marco Pallis, with whom he spent four months in England in 1937. With the Chinese invasion of Tibet, he left Tibet for India, coming to the United States in 1955 at the invitation of the Kalmyk community of New Jersey. In 1958, he founded the Lamaist Buddhist Monastery of America, known in Tibetan as the Bslab gsum bshad grub gling (Labsum Shedrup Ling), in Freewood Acres, New Jersey, the first Tibetan Buddhist monastery in the United States. At the monastery and subsequently at Retreat House (later named Tibetan Buddhist Learning Center) in Howell, New Jersey, he brought a number of monks to the United States and gave teachings to a large number of students, several of whom went on to become scholars of Buddhism. His full name was Dge bshes Ngag dbang dbang rgyal.

Wanshan tonggui ji. (J. Manzen dōkishū; K. Mansŏn tonggwi chip 萬善同歸集). In Chinese, "The Common End of Myriad Good Practices," in three rolls; a primer of Buddhist thought and practice composed by the Song-dynasty CHAN master YONGMING YANSHOU (904–975). Written largely in catechistic style, the *Wanshan tonggui ji* relies heavily upon scriptural quotations to answer questions raised concerning everything from meditation and making offerings of flowers to reciting the name of the buddha AMITĀBHA (see NIANFO). The overall message of the text is that all practices done properly return to the "true mark" of reality (shixiang), and this message is often interpreted as supporting the notion of "the unity of Chan and the teachings" (Chan jiao yizhi) and that of "sudden awakening (followed by) gradual cultivation" (DUNWU JIANXIU).

Wanshousi. (萬壽寺). In Chinese, "Long Life Monastery"; located on Mt. Jing, Hangzhou prefecture, in present-day Zhejiang province of China; the first of the so-called "five mountain" (wushan, cf. GOZAN) monasteries of the CHAN tradition in China. Wanshousi, also known as Jingshansi, was established by the Chan master FAQIN during the Tianbao reign (742–756) of the Tang dynasty. During the Song dynasty, the monastery was designated as a public monastery, or "monastery of the ten directions" (SHIFANG CHA), and was renamed on several occasions as Chengtian Chanyuan (Upholding Heaven Chan Cloister), Nengren Chansi (Śākyamuni Chan Monastery), and Xingsheng Wanshou Chansi (Flourishing of Holiness, Long Life Chan Monastery). Wanshousi attracted many eminent abbots, such as DAHUI ZONGGAO and WUZHUN SHIFAN, and flourished under their supervision. The famous Japanese pilgrims DŌGEN KIGEN and ENNI BEN'EN also studied at Wanshousi. The monastery was destroyed in a conflagration at the end of the Yuan dynasty but was reconstructed during the Hongwu era (1368–1398) of the Ming dynasty. Largely through the efforts of the abbot Nanshi Wenxiu and others, Wanshousi regained some of its past glory.

Wanthadipani. (P. Vaṃsadīpanī). In Burmese, "Lamp on the History [of the Religion]"; the first of four Burmese thathanawin, or Buddhist chronicles, that were composed in Burma (Myanmar) during the Konbaung dynasty (1752–1885). Written c. 1799 in the Burmese language by the monk Mehti SAYADAW, the text records the history of the THERAVĀDA saṅgha (S. SAṂGHA) from its inception during the lifetime of the Buddha, through cycles of decline and restoration in ancient India, Sri Lanka, and Burma, up through a reformation of the Burmese saṅgha begun at the capital AMARAPURA in 1784, of which Mehti Sayadaw himself was a leader. The text relies heavily on the Pāli chronicles SAMANTAPĀSĀDIKĀ and MAHĀVAṂSA for its account of the ancient tradition in India and Sri Lanka. It takes its material for the history of Buddhism in Burma among the Pyu, Myamma (ethnic Burmans), and Mon peoples from a variety of indigenous sources, including the KALYĀṆĪ INSCRIPTIONS (1479), the YAZAWIN-KYAW (1502), and U Kala's MAHAYAZAWIN-GYI (c. 1730). The text concludes with an account of Mehti Sayadaw's missionary activities in the city of Taungoo, where he was dispatched to propagate the new monastic reforms among the local saṅgha.

Warren, Henry Clarke. (1854–1899). One of the first American scholars of Buddhism, known for his translations from the Pāli; born in Boston, Massachusetts, in 1854. Warren suffered a crippling injury as a result of a childhood fall that left him with permanent spinal damage and excruciating physical pain throughout his life. After graduating from Harvard University in 1879, Warren studied with the eminent Sanskrit scholar Charles Lanman at Johns Hopkins University and, together with Lanman, founded the Harvard Oriental Series. Warren visited Oxford in 1884, where he met T. W. RHYS-DAVIDS and joined the PĀLI TEXT SOCIETY around the time of its foundation; he also made a substantial financial donation to the organization. Warren's best known work is an extensive anthology of Pāli materials, *Buddhism in Translations*, published in 1896 as the third volume in the Harvard Oriental Series. He also published an edition of BUDDHAGHOSA's VISUDDHIMAGGA as volume 41 in that series. Warren died in Cambridge,

Massachusetts, at the age of forty-five as a result of his debilitating spinal injury.

wat. In Thai, Khmer, and Lao, the most common term for a VIHĀRA or monastic complex. Wat is derived from the Pāli term vatta, meaning "practice, function, observance," which by extension comes to be interpreted as a "place where practice is performed," and thus a "monastery" (wat). Although Pāli regulations technically require a complex to have at least three monks in residence to be classified as a vihāra, the term wat is used in Thailand to refer to the deserted ruins of monasteries as well as to Hindu temples and Christian churches.

Wat Arun. In Thai, "Monastery of the Dawn," deriving from the Sanskrit and Pāli Aruṇa, the personification of dawn; located in Bangkok on the west bank of the Chao Phraya River. After defeating the Burmese in 1767, King Taksin (Boromrāja IV) is said to have arrived at the Wat Makok ("Olive Monastery") at dawn and renamed it Wat Jaeng ("Bright Monastery"). King RĀMA IV bestowed on the monastery its present name. The monastery is best known today for its tall prang, or Khmer-style tower, which was constructed during the reigns of kings Rāma II and Rāma III. The central tower is 250 feet tall and symbolizes Mount SUMERU. The temple was briefly the seat of the Emerald Buddha (see PHRA KAEW MORAKOT) before the image was moved to WAT PHRA KAEW in 1784.

Wat Benchamabophit. In Thai, "Monastery of the Fifth King," deriving from the Sanskrit Pañcamapavitra, with pañcama (Thai, benchama) meaning fifth, and pavitra (Thai, bophit/bophitra) meaning holy or benificent one, a synonym for "king"; the monastery is commonly known in English as the "Marble Temple." Located in Bangkok, it is one of the most renowned modern monasteries in Thailand. Construction began in 1900 at the request of the eponymous RĀMA V (Chulalongkorn), and the complex is built from Italian marble. It houses a large bronze statue of the Buddha called Phra Phuttha Chinnarat (Buddhajinarāja), which is a replica of the original. The ashes of Rāma V are enshrined under the image.

Wat Bowonniwet. [alt. Wat Bovoranives]. In Thai, "Monastery of Excellent Abode" (P. Pavaranivesa); the royal monastery that is the Bangkok headquarters of the THAMMAYUT sect of Thai Buddhism. Built in 1829, it is most famous as the monastery where Prince Mongkut, the future king RĀMA IV and leader of the Thammayut reform movement, served as abbot, beginning in 1836, before he ascended the throne in 1851. The future king lived as a monk (his ordination name was Vajirañāṇa) for twenty-seven years, fourteen of which he spent as abbot of this monastery, before he returned to lay life in order to assume the throne of the Chakri dynasty. Subsequent members of the royal family have served the traditional period of temporary ordination as monks of this monastery; his son, the eminent scholar-monk VAJIRAÑĀṆAVARORASA (1860–1921), was the long-time abbot of the monastery. The main temple enshrines the buddha image called Phra Phuttha Chinnasi (Buddhajinaśrī), said to date from 1357. Wat Bowonniwet is also the home of Mahamakut Buddhist University, one of Thailand's two public Buddhist universities.

Water and Land Ceremony. See SHUILU HUI.

Wat Mahathat. In Thai, "Monastery of the Great Relic" (P. Mahādhātu); the abbreviated name of several important Thai monasteries. ¶ Wat Mahathat in the ancient Thai capital of AYUTHAYA was constructed in 1374 and served as the seat of the SAṄGHARĀJA of the Kamavasi (P. Gāmavāsi, lit. "city-dweller") sect. The temple complex was expanded and restored several times before the city was sacked by the Burmese in 1767; it remains in ruins. Excavations in 1956 unearthed relics. ¶ Wat Phra Mahathat Woromaha Vihan (P. Mahādhātuvaramahāvihāra), located in Nakhon Si Thammarat and thus also known as WAT PHRA THAT NAKHON SI THAMMARAT, was founded c. 757 CE and was originally a ŚRĪVIJAYA MAHĀYĀNA Buddhist monastery. Its famous STŪPA, modeled on the MAHĀTHŪPA in Sri Lanka, was built in the early thirteenth century to house a tooth relic of the Buddha brought back from the island. ¶ The best-known of the contemporary wats with this name, Wat Mahathat Yuwaraja Rangsarit Raja Woramaha Wihan (P. Mahādhātuyuvarāja [Thai, Rangsarit] Rājavaramāhavihāra), dates from the Ayuthaya period (when it was called Wat Salak), and was named the relic temple for Bangkok in 1803. Because of its location near the palaces, it has often been used for royal ceremonies. Mahachulalongkornrajavidyalaya, Thailand's largest Buddhist university, was located on its grounds until 2008, when the main campus was moved to Wangnoi, Ayuthaya.

Wat Pho. In Thai, "Monastery of Awakening" (P. BODHI); also known as Wat Phra Chetuphon (P. JETAVANA); the oldest and largest monastery in Bangkok, constructed in the sixteenth century and occupying twenty acres of land. It was extensively rebuilt in 1781 by King Rāma I and renovated in the first half of the nineteenth century by King Rāma III. The site also houses Thailand's largest reclining buddha image and the largest number of buddha images in the country. The reclining buddha image, constructed in the reign of King Rāma III, is 153 feet (forty-six meters) long and fifty feet (fifteen meters) high. Modeled out of plaster around a brick core, the image is finished in gold leaf, with mother-of-pearl inlay in the eyes. The feet display the 108 different auspicious characteristics of a buddha. In all, the monastery contains over a thousand buddha images, many from the ruins of the former capitals of AYUTHAYA and SUKHOTHAI, and a total of ninety-five STŪPAS of various sizes. Other features are a series of 152 marble slabs depicting the second half of the epic Rāmakian story (the Thai version of the Hindu epic the *Rāmāyaṇa*), as well as numerous chapels, rock gardens, statues, and bell towers. Sometimes referred to as Thailand's first university, Wat Pho also contains an

encyclopedic collection of engravings and paintings dealing with astrology, botany, herbal medicine, massage, and yoga. The wat is still a center for teaching traditional Thai massage.

Wat Phra Kaew. [alt. Wat Phra Kaeo]. In Thai, "Temple of the Emerald Buddha," perhaps the most famous Buddhist temple in Thailand, located on the grounds of the royal palace in Bangkok. Much of the construction had been completed when Rāma I moved the Thai capital to Bangkok in 1785. It is a large-walled complex, containing dozens of golden pagodas, many shrines, and two libraries. Unlike most other Buddhist temples in Thailand, the complex does not include monastic quarters because of its location inside the palace grounds. The temple is best known as the site of the Emerald Buddha, or PHRA KAEW MORAKOT, the most sacred buddha image in Thailand; Kaew is an indigenous Thai word for "glass" or "translucent"; morakot derives from the Sanskrit word for emerald (S. marakata).

Wat Phra Pathom Chedi. (P. Paṭhamacetī). In Thai, "Temple of the First Reliquary"; the monastery built at the site of what is said to be the tallest Buddhist CAITYA (P. cetī) in the world at over 394 feet (120 meters); located in the Thai town of Nakhon Pathom. See PHRA PATHOM CHEDI.

Wat Phra Phutthabat. In Thai, "Monastery of the Buddha's Footprint" (P. BUDDHAPĀDA); a Thai monastery located in Saraburi province. In the seventeenth century, a hunter encountered a large puddle of water that appeared to be a footprint of the Buddha (buddhapāda). Once this identification was verified, a monastery was built to enshrine the footprint. Visiting this monastery is considered a source of great merit, and it is traditional for the Thai king to make an annual pilgrimage to the site to pay homage to the relic.

Wat Phra Thammakai. (Thai). See DHAMMAKĀYA.

Wat Phra That Doi Suthep. In Thai, "Monastery of the Relic at Mt. Sudeva" ('That' is the Thai word for relic [P. dhātu], Suthep is the Thai pronunciation of the Pāli proper name Sudeva, and Doi is a non-Thai northern word for mountain). A famous mountain monastery in northern Thailand, built on a site that has long been considered sacred and the home of guardian spirits. According to legend, the site was chosen in 1371 CE by a white elephant that was sent out by local monks to find an auspicious location for enshrining a relic (DHĀTU; ŚARĪRA). The site has been expanded several times with the addition of buildings, murals, bells, and parasols. See also KHRUBA SI WICHAI.

Wat Phra That Nakhon Si Thammarat. In Thai, "Monastery of the Relic (P. Dhātu) in Nakhon Si Thammarat" (P. *Nagara-Sīri-Dhammarāja), also known as Wat Phra Mahathat Woramaha Wihan (Mahādhātuvaramahāvihāra); the oldest and most revered Buddhist site in southern Thailand. The monastery dates to 757 CE and was originally a ŚRĪVIJAYA MAHĀYĀNA Buddhist monastery. Its famous STŪPA, modeled on the MAHĀTHŪPA in Sri Lanka, was built in the early thirteenth century to house a tooth relic brought back from the island. See also WAT MAHATHAT.

Wat Phra That Phanom. In Thai, "Monastery of the Relic (P. DHĀTU) in the city of Phanom" (Phanom is the Lao and Khmer term for mountain); the most revered Buddhist shrine in northeast Thailand, located in the town of Nakhon Phanom. The STŪPA on the site has a history dating back some fifteen hundred years, according to some local traditions, while other legends claim that it was originally built in 535 BCE, eight years after the death of the Buddha, as a reliquary for his breastbone. The structure is Lao in style, with a square base surmounted by slender tapering vertical columns in the shape of an elongated lotus bud. Its present appearance dates from 1977, after its predecessor collapsed under heavy rains in 1975, and is modeled after WAT THAT LUANG in Vientiane, Laos.

Wat Phu. [alt. Wat Phou; Vat Phu]. In Lao, "Mountain Monastery"; an important Khmer monastery complex located in Champassak province on the Mekong River in southern Laos. The first monastery was probably constructed in the fifth century CE, although the surviving structures (now largely in ruins) date from the eleventh through the thirteenth centuries. Originally a Śaiva temple, the ruins contain a shrine to Śiva's bull Nandin, as well as pediments depicting INDRA, KṚṢṆĀ, and Viṣṇu. The temple complex was converted to Buddhist use in the thirteenth century, with Buddhist images added to many of the shrines. In 2001, the site was designated a UNESCO World Heritage Site.

Wat Suthat Thepwararam. [alt. Wat Suthat]. In Thai, "Beautiful Noble Garden of the Devas" (P. Sudassanadevavarārāma); an important Thai monastery in Bangkok, founded by King Rāma I in 1807. It houses an image of the Buddha seated in the "earth-touching" (BHŪMISPARŚAMUDRĀ) pose. The image, known as Phra Sisakayamuni (derived from Śrī-Śākyamuni), is considered the largest (over twenty-five feet tall) and oldest bronze buddha image in Thailand; it was brought from SUKHOTHAI by boat. The monastery is also known for its intricately carved wooden doors, created during the reign of Rāma II (r. 1809–1824) and now housed in the National Museum, and its murals of the Buddha's previous lives, from the reign of Rāma III (r. 1824–1851). The large ordination hall of the monastery is considered one of the most beautiful in Thailand. The temple grounds also contain twenty-eight pagodas, representing the twenty-eight buddhas of the auspicious eon. The temple is the traditional seat of the brāhmaṇa priest who oversees important Thai royal ceremonies, such as the annual plowing ceremony. In front of the monastery is a

giant swing, once used in an annual festival in which young men tried to swing high enough to retrieve a sack of gold suspended at a height of seventy-five feet. The festival was banned in the 1930s because of the number of deaths that resulted from the competition.

Wat That Luang. In Lao, "Monastery of the Royal STŪPA"; located in the Laotian capital of Vientiane, it is one of the most important Buddhist sites in Laos. According to legend, the original monastery was founded by monks sent by AŚOKA in the third century BCE. Relics from the early twelfth century have been uncovered, although these may derive instead from a site in modern-day northern Thailand. The prestige of That Luang may have been enhanced due to its proximity to earlier Buddhist sites. The present monastery was constructed on a small hill south of the city in 1818 during the reign of King Manthaturat (r. 1817–1836). It is said to have been built partially from branches of a BODHI TREE located near Wat Keo Fa. The large bronze and gilded buddha in the nave was transferred from the now defunct Wat Aham Mungkhun, located a short distance from That Luang. That Luang has long been one of the important ritual sites in Laos for Buddhist, folk, and royal ceremonials. There are two large STŪPAS on the grounds. The golden funerary stūpa in front of the main hall contains the ashes of the popular and last crowned Laotian king, Sisavang Vong (r. 1904–1959). The grand stūpa, which towers over the rear of the main hall, dates from 1818 and is said to contain relics (DHĀTU; ŚARĪRA) of the Buddha. The wat also contains a number of smaller stūpas that contain ashes of kings, other members of the royal family, and a variety of other dignitaries. The wat has one of Vientiane's larger communities of monks and novices.

Wat Traimit. In Thai, "Monastery of the Three Friends" (S. Traimitra), so named because it was founded by three friends who emigrated from southern China; its full name is Wat Traimit Wittayaram Wora Wihan (S. Traimitravidyārāmavaravihāra). This monastery is located in the Thai capital of Bangkok and is commonly known in English as "The Temple of the Golden Buddha." It contains what is said to be the world's largest gold buddha image, named Phra Phuttha Maha Suwan Patimakon (P. Buddhamahāsuvaṇṇapaṭimā), seated in the "earth-touching" (BHŪMISPARŚAMUDRĀ) pose. The image itself is almost ten feet tall and is claimed to be composed of over five tons of solid gold. The statue, in the SUKHOTHAI style, is believed to have been originally installed in the ancient Thai capital of Sukhothai, perhaps in the thirteenth century. In order to protect it from being plundered by Burmese invaders, it was covered with a layer of plaster. The plastered statue was eventually installed in Wat Phraya Krai during the reign of King Rāma III (r. 1824–1851). When that monastery fell into disrepair around 1931, the image was placed in storage. When it was being moved to its present location in the mid-1950s, the plaster cracked, revealing the golden buddha image inside.

Watts, Alan. (1915–1973). A widely read British Buddhist writer. Born in Kent, Watts was inspired to study Buddhism after reading such works as W. E. Holmes' *The Creed of the Buddha*. At the age of fifteen, he declared himself a Buddhist and wrote to the Buddhist Lodge of the Theosophical Society in London, becoming a student and protégé of the head of the Lodge (later the Buddhist Society), CHRISTMAS HUMPHREYS. At the age of nineteen, Watts wrote his first book, *The Spirit of Zen*, largely a summary of the writings of DAISETZ TEITARO SUZUKI. Shortly thereafter, he assumed the editorship of the journal *Buddhism in England* (later to become *The Middle Way*). In 1938, he married the American Eleanor Everett, the daughter of Ruth Fuller Everett (later, RUTH FULLER SASAKI). They immigrated to the United States during World War II (Watts, a pacifist, did not serve) and lived in New York, where Watts studied briefly with Shigetsu Sasaki, a Japanese artist and Zen practitioner known as Sokei-an. Watts gave seminars in New York and published a book entitled *The Meaning of Happiness*. Shortly after his wife had a vision of Christ, Watts decided to become a priest and entered Seabury-Western Theological Seminary near Chicago. He became an Episcopal priest and served for five years as chaplain at Northwestern University, ultimately resigning from the priesthood shortly after his wife had their marriage annulled. He later worked for six years at the newly founded American Academy of Asian Studies in San Francisco. He published *The Way of Zen* in 1957, followed by *Nature, Man, and Woman* in 1958, and *Psychotherapy East and West* in 1961. He supported himself as a popular author and speaker and played a leading role in popularizing Buddhism and Zen until his death in 1973.

weikza. [alt. weikza-do]. In Burmese, a "wizard," deriving from the Pāli vijjādhara (S. VIDYĀDHARA). In Burmese popular religion, the weikza is portrayed as a powerful thaumaturge possessed of extraordinarily long life, whose abilities derive from a mastery of tranquillity meditation (P. samatha; S. ŚAMATHA) and a variety of occult sciences such as alchemy (B. ekiya), incantations (P. manta; S. MANTRA), and runes (B. ing, aing). Collectively, these disciplines are called weikza-lam or "the path of the wizard." Training in this path is esoteric, requiring initiation by a master (B. saya), and votaries typically are organized into semisecret societies called weikza-gaing (P. vijjāgaṇa). Although concerned with the acquisition of supernatural powers and an invulnerable body, these attributes are ultimately dedicated to the altruistic purpose of assisting good people in times of need and protecting the Buddha's religion from evil forces. In this regard, weikza practitioners often act as healers and exorcists, and in the modern era weikza-sayas with large followings are among the country's notables, who have built monumental pagodas and restored national shrines. The perfected weikza has the ability to live until the advent of the future buddha Metteya (S. MAITREYA), at which time he can choose to pass into nibbāna (S. NIRVĀṆA) as an enlightened disciple (P. sāvaka arahant; S. ŚRĀVAKA ARHAT), vow to

become himself a solitary buddha (P. paccekabuddha; S. PRATYEKABUDDHA) or a perfect buddha (P. sammāsambuddha; S. SAMYAKSAṂBUDDHA), or simply continue living as a weikza. Weikza practitioners typically eschew the practice of insight meditation (P. VIPASSANĀ; S. VIPAŚYANĀ) on the grounds that this might cause them to attain nibbāna too quickly. Although largely domesticated to the prevailing worldview of Burmese THERAVĀDA orthodoxy, weikza practice and orientation ultimately derive from outside the Pāli textual tradition and show striking similarities to the Buddhist MAHĀSIDDHA tradition of medieval Bengal.

Weimojie suoshuo jing zhu. (J. Yuimakitsu shosetsukyōchū; K. Yumahil sosŏl kyŏng chu 維摩詰所說經註). An influential commentary on the VIMALAKĪRTINIRDEŚA. The commentary is attributed to KUMĀRAJĪVA, but it was actually written by his disciple SENG ZHAO, who recorded the interpretations of his teacher and combined them with those offered by other of Kumārajīva's disciples, such as DAOSHENG and Daorong. The commentary offers a paragraph-by-paragraph analysis of the sūtra and follows the order of Kumārajīva's Chinese translation of the sūtra. It is the first of the many commentaries on this famed rendering of the *Vimalakīrtinirdeśa* and is still the most frequently cited.

weinuo. [alt. weina] (S. *karmadāna/*karmādāna; T. las su bsko ba; J. ina/ino; K. yuna 維那/唯那). In Chinese, "rector"; a term designating either the process of overseeing, or the specific supervisor of, such crucial monastic activities as apportioning dwellings, managing the refectory, arranging sleeping quarters, cleaning the monastery grounds, etc. According to various VINAYA codes and Chinese pilgrimage accounts such as YIJING'S NANHAI JIGUI NEIFA ZHUAN, it was the rector's duty to strike instruments, such as gongs or chimes (GHAṆṬA), to remind others of the monastic schedule. Assemblies, meals, and services were conducted with the help of the rector's announcements. Because of his formal role in maintaining the monastic schedule, the rector may have thus come to serve as the principal supervisor or manager of daily activities in the monastery. The Sanskrit term *karmadāna does not appear in the extant corpus of Indian Buddhist literature, although it is attested in the MAHĀVYUTPATTI Sanskrit-Tibetan lexicon, and the reconstruction is confirmed in Chinese transcriptions. In India, however, karmadāna may not necessarily have referred to a specific monastic office, but rather to the general act of "assigning" (lit. giving, DĀNA) "duties" (lit. action, viz., KARMAN) within the monastery. The Chinese term weinuo, however, clearly refers to a monastic office. The term is typically parsed as a combination of a lexical translation and phonetic transcription, and means something like "regulating (wei) the [dā]na," an interpretation related to the literal sense of the Sanskrit term as "assigning duties," and becomes used in East Asian Buddhism as the specific title of a monastic administrator who delegates responsibilities within the monastery—and thus a "rector." According to the Chinese monastic codes (QINGGUI), the rector was responsible for all matters regarding the SAṂGHA and especially the saṃgha hall (SENGTANG). The rector not only was in charge of the physical maintenance of the hall itself, but he also was called upon to settle issues, such as the determination of relative seniority or the appropriate punishment for transgressions committed by residents of the saṃgha hall. The rector had the responsibility for appointing various low-ranking positions within the monastery, such as attendants, and conducted the tea ceremony. The weinuo also was in charge of leading the formal chanting at daily services, which involved much use of gongs and percussion instruments; weinuo is thus sometimes translated as functionally equivalent to the Western monastic office of "precentor," the leader of the monastic choir. In Korean monasteries, the yuna serves as a "rector" in that he has formal responsibility for enforcing discipline, making work assignments, and arranging the time for group work; in addition, however, he also serves as nominal head of the meditation compound in the monastery and spiritual advisor to the meditation monks.

Weishan jingce. (J. Isan Kyōsaku [alt. Keisaku]; K. Wisan Kyŏngch'aek 潙山警策). See GUISHAN JINGCE.

Weishan Lingyou. (J. Isan Reiyū; K. Wisan Yŏngu 潙山靈祐) (771–853). Alternate Chinese pronunciation of GUISHAN LINGYOU, cofounder of the GUIYANG ZONG [alt. Weiyang zong] of the mature CHAN tradition. See GUISHAN LINGYOU.

Weituo tian. (J. Idaten; K. Wit'a ch'ŏn 韋馱天). A Buddhist guardian deity, who is especially popular in East Asia, where he is often designated as a BODHISATTVA (pusa) or divinity (DEVA; C. tian). Weituo is connected to the god Kārtikeya, also known as Skanda, whom the Buddhist tradition appropriated from the Hindu pantheon. Kārtikeya, the six-headed son of Śiva, is a Hindu god of war who helps defend the gods; in Buddhism, he became one of the many guardian deities who protect the dispensation, its sacred objects, and its sacred spaces. Weituo is the spirit commander of the thirty-two divine generals subordinate to the four heavenly kings (CATURMAHĀRĀJA; see LOKAPĀLA), as well as one of the eight generals under VIRŪḌHAKA, the heavenly king of the southern quarter of the world. He is also identified with KUMĀRABHŪTA (C. Dongzhen). His East Asian name "Weituo" is apparently a mistaken Sinographic transcription from "Sijiantuo" or "Jiantuo tian," both Chinese transcriptions of Skanda. Weituo's role as a dharma protector (DHARMAPĀLA) is reflected in a story from the *Daoxuan lüshi gantong lu* ("Preceptor Daoxuan's Record of Miraculous Stories," c. seventh century), written by the Chinese VINAYA master DAOXUAN (596–667), which relates that Weituo was instructed by the dying Buddha to protect the dharma whenever it was disturbed by demonic forces (MĀRA). From the Tang dynasty onward in China, Weituo was considered the guardian of monasteries and Buddhist practitioners, as well as a symbol of fierce

determination in spiritual training. One of Weituo's specific roles was to protect the STŪPAS that enshrine the Buddha's relics (ŚARĪRA). In a popular story involving Weituo, a group of malevolent demons steals one of the Buddha's tooth relics immediately following his death and cremation. Weituo battles the demons, saves the relic, and thereby earns a reputation as a fierce protector of the dharma. Weituo is typically depicted as a young man in full armor, with the headgear of a Chinese general. He is also often shown leaning on his weapon, sometimes a sword, but usually a VAJRA. In many East Asian monasteries, Weituo's image is found to one side of, and facing, the Buddha image in the main shrine hall (TAEŬNG CHŎN). Weituo is also seen in the company of, and sometimes back to back with, AVALOKITEŚVARA and MAITREYA. His visage also frequently appears at the end of Chinese editions of the SŪTRAS, as a reminder of his role in protecting the dharma.

Weixin jue. (J. Yuishinketsu; K. Yusim kyŏl 唯心訣). In Chinese, "Essentials of Mind Only"; an exposition on CITTAMĀTRA by the CHAN master YONGMING YANSHOU. In this short treatise, Yongming launched a critique of more than 120 differing Buddhist positions, and argued instead that these variant views are but manifestations of a single, true mind. By cutting through to this mind, Yongming argued that all conceptual dichotomies (e.g., gain and loss, right and wrong, sudden and gradual) would be brought to an end and an inconceivable awakening would be attained.

weixin jingtu. (J. yuishin no jōdo; K. yusim chŏngt'o 唯心淨土). In Chinese, "the mind-only PURE LAND"; an interpretation of the pure land influential in the PURE LAND, CHAN, HUAYAN, TIANTAI, and esoteric schools; synonymous with the phrase "AMITĀBHA Buddha of one's own nature/mind" (zixing Mituo/weixin Mituo/jixin Mituo). Rather than seeing Amitābha's pure land of SUKHĀVATĪ as a physical land located to the west of our world system, this interpretation suggests that the pure land is actually identical to, or coextensive with, the mind itself. One understanding of this interpretation is that the concept of "pure land" is simply a metaphor for the innate brilliance and eternality of one's own mind. In this case, "the mind-only pure land" stands in distinction to the idea of the pure land as an objective reality, and many pure land exegetes rejected this interpretation for implying that the pure land existed only metaphorically. In other interpretations, a pure land is understood to manifest itself differently to beings of different spiritual "grades." In this case, "mind-only pure land" is the highest level, which is accessible or visible only to those enlightened to the true nature of the mind; by contrast, the objectively real pure land is an emanation of the true pure land that manifests itself to unenlightened practitioners, but nonetheless is still a literal realm into which one could be reborn. In this case, "the mind-only pure land" is one level of the pure land, which does not, however, negate the reality of an external pure land. Such an interpretation was more amenable to pure land devotees and was sometimes incorporated into their exegetical writings.

Weiyang zong. (J. Igyōshū; K. Wiang chong 潙仰宗). Alternate Chinese pronunciation of the GUIYANG ZONG, one of the so-called "five houses" (wu jia; see WU JIA QI ZONG), or distinct lineages, that developed within the mature CHAN tradition during the late-Tang dynasty. See GUIYANG ZONG.

Wencheng. (T. Rgya mo bza' kong jo, C. Wencheng gongzhu 文成公主) (d. 680). The Tang-dynasty Chinese princess who married the Tibetan king SRONG BTSAN SGAM PO. Although she was in fact a person of little historical significance, she figures prominently in competing Tibetan and Chinese versions of the introduction of Buddhism into Tibet and of Sino-Tibetan relations. According to Tibetan sources, she was given in marriage to the Tibetan king under threat of invasion and became one of the king's five wives: three Tibetans, one Nepalese, and one Chinese. The Nepalese and Chinese brides were Buddhists and converted their husband to the faith. Each also brought a buddha image as part of their dowry. Princess Wencheng brought the JO BO SHĀKYAMUNI, eventually housed in the JO KHANG in LHA SA, and considered the most sacred buddha image in Tibet. The Nepalese princess BHṚKUTĪ brought the JO BO MI BSKYOD RDO RJE, housed at RA MO CHE. The journey of the Chinese princess and her statue was fraught with difficulties, as the giant demoness (srin mo), whose supine body is the landscape of Tibet, tried to impede their progress. As a result, the king built a series of temples to pin down her body (MTHA' 'DUL GTSUG LAG KHANG). Later sources would identify the Chinese princess as an incarnation of the bodhisattva TĀRĀ. Chinese sources depict the princess as a kind of cultural ambassador, helping to introduce Han culture into the wilds of Tibet and convincing her husband to abandon a variety of barbaric customs. This view of Princess Wencheng has been promoted in various Chinese media (including martial arts films) since the Chinese invasion of Tibet in 1950. Contrary to both versions, it appears that Princess Wencheng arrived at the Tibetan court as a twelve-year-old girl, intended as the bride of Srong btsan sgam po's son, who had died by the time that she arrived. Srong btsan sgam po, by then an old man, made her one of his wives, dying himself a few years later. She did not produce a royal heir and does not seem to have played a significant role at court.

wenda. (J. mondō; K. mundap 問答). In Chinese, lit. "question and answer"; pedagogical technique used in the CHAN (J. ZEN; K. SŎN) school that involves an "exchange" or "dialogue" between a Chan master and a disciple regarding the Buddhist teachings. The exchange often consists of questions from the disciple and the master's response, but sometimes the master would also question the disciple to check his or her level of understanding and attainment. The master's answers are typically not a theoretical or discursive response to the question, but instead will employ logical contradiction,

contextual inappropriateness, and illocutionary uses of language in order to challenge the understanding of the student. The master's answer might not even be a verbal response at all but might instead employ "the stick and the shout" (BANGHE) as a way of goading the student out of his conventional ways of comprehension. The ultimate goal is to prompt not mere intellectual understanding but an experience of awakening (C. WU; J. SATORI). The recorded sayings (YULU) of eminent Chan masters often include a section on their wenda. These wenda constitute a major part of the GONG'AN literature of the Chan tradition, and the practice of wenda is itself performed using phrases drawn from the gong'an texts. During the Song dynasty in China, Chan monks were appointed to monastic positions, such as "interrogating monk" (wenseng) or "Chan receptionist" (chanke), whose responsibility was to ask questions of the master on behalf of the congregation, transforming wenda into a formal, ritualized occasion.

Wenyan. (C) (文偃). See YUNMEN WENYAN.

Wenyi. (C) (文益). See FAYAN WENYI.

wenzi Chan. (J. monjizen; K. muncha Sŏn 文字禪). In Chinese, "lettered Chan"; a designation coined by JUEFAN HUIHONG (1071–1128) during the Northern Song dynasty (960–1127) to refer to a literati style of Chan exegesis that valorized belle lettres, and especially poetry, in the practice of CHAN. Huihong himself traces the origins of "lettered Chan" to the "five ranks" (WUWEI) of CAOSHAN BENJI (840–901), although Caoshan himself attributes the five ranks to his teacher DONGSHAN LIANGJIE (807–869); in these ranks, Huihong finds the first evidence within the Chan tradition that the manipulation of language in the analysis of the sayings attributed to the ancient Chan masters can bring about awakening. This style of Chan is especially emblematic of monks in the HUANGLONG PAI collateral lineage of the LINJI ZONG.

Wesak. (S. Vaiśākha; P. Vesākha; T. Sa ga zla ba). A modern rendering of Vesākha, the Pāli name for the fourth lunar month of the traditional Indian calendar (thus corresponding to April–May in the solar calendar); by extension, the term refers to the important event(s) in the life of the Buddha that occurred during that month and to their annual commemoration. According to the THERAVĀDA and Tibetan traditions, it was on the full moon of the fourth lunar month that the Buddha was born, was enlightened, and passed into PARINIRVĀṆA. This date is therefore the most important in the Buddhist calendar of many traditions. Wesak is widely celebrated across much of the Buddhist world, but especially in Southeast Asia, where it is considered an especially important time to perform meritorious deeds. According to many East Asian traditions, the full moon of the fourth lunar month marks only the date of the Buddha's birth, with his enlightenment and passage into PARINIRVĀṆA occurring in the twelfth and eleventh lunar months, respectively; Wesak is therefore not nearly as important in the East Asian calendar as it is in Southeast Asia and Tibet.

Wŏlchŏngsa. (月精寺). In Korean, "Lunar Essence Monastery"; the fourth district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located on Odaesan (see WUTAISHAN) in Kangwŏn province. The monastery's history is closely linked to the VINAYA master CHAJANG (fl. c. 590–658). While Chajang was on pilgrimage at Wutaishan in China, he came across a mysterious old monk who interpreted a prophetic dream he had had and gave him relics (K. sari; S. ŚARĪRA) of the buddha to take back to Korea with him. Seven days later, a dragon told him to return to Odaesan in Korea to build a monastery; in 643, Chajang arrived at Odaesan, where he eventually constructed Wŏlchŏngsa. Wŏlchŏngsa's main shrine hall, Chŏkkwang chŏn (Calm Radiance Hall), enshrines an image of ŚĀKYAMUNI as well as a mysterious statue that was found in the diamond pond south of the monastery. This statue, delicately carved in a style common to the eleventh century, is believed to be of BHAIṢAJYAGURU. In front of the main hall is a nine-story octagonal pagoda, fifty feet (15.2 meters) high, that was constructed in the tenth century. Skillfully carved and multiangled, it is representative of Koryŏ-era STŪPAS. In front of the stūpa is a seated BODHISATTVA, perhaps MAÑJUŚRĪ, making an offering. The statue has been carved with detailed attention to ornamental accessories and clothing. The Chŏngmyŏl pogung (Precious Basilica of Calm Extinction) houses the relics of the Buddha that Chajang brought back to Korea and is one of four major shrine halls in Korea that does not enshrine a buddha image (the relics take the place of an image). One of Wŏlchŏngsa's most famous residents during the twentieth century was the monk HANAM CHUNGWŎN (1876–1951), who helped save some of its buildings from soldiers who had been ordered to burn them down during the Korean War (seventeen buildings were unfortunately burned

and had to be reconstructed). Sangwŏnsa, one of Wŏlchŏngsa's branch monasteries (MALSA), is famous among Korean monasteries for its spectacular scenery and is a popular tourist stop.

womb maṇḍala. See TAIZŌKAI.

Wŏnbulgyo. (圓佛教). In Korean, "Wŏn Buddhism" or "Consummate Buddhism"; a modern Korean new religion, founded in 1916 by PAK CHUNGBIN (1891–1943), later known by his sobriquet SOT'AESAN. Based on his enlightenment to the universal order of the "one-circle image" (IRWŎNSANG), Sot'aesan sought to establish an ideal world where this universal order could be accomplished in and through ordinary human life, rather than the specialized institution of the monastery. After perusing the scriptures of various religions, Sot'aesan came to regard the teachings of Buddhism as the ultimate source of his enlightenment and in 1924 named his new religion the Pulpŏp Yŏn'gu hoe (Society for the Study of the Buddhadharma); this organization was later renamed Wŏnbulgyo in 1947 by Sot'aesan's successor and the second prime Dharma master of the religion, Chŏngsan, a.k.a. Song Kyu (1900–1962). Since the tenets and institutions of Wŏnbulgyo are distinct from those of mainstream Buddhism in Korea, the religion is usually considered an indigenous Korean religion that is nevertheless closely aligned with the broader Buddhist tradition. Sot'aesan used the "one-circle image" as a way of representing his vision of the Buddhist notion of the "DHARMAKĀYA buddha" (pŏpsinbul), which was reality itself; since this reality transcended all possible forms of conceptualization, he represented it with a simple circle, an image that is now displayed on the altar at all Wŏnbulgyo temples. Sot'aesan's religious activities were also directed at improving the daily lot of his adherents, and to this end he and his followers established thrift and savings institutions and led land reclamation projects. Wŏnbulgyo has focused its activities on the three pillars of religious propagation (kyohwa), education (kyoyuk), and public service (chasŏn): for example, the second prime master Chŏngsan established temples for propagation, schools such as Wŏn'gwang University for education, and social-welfare facilities such as hospitals and orphanages. These activities, along with international proselytization, were continued by his successors Taesan, Kim Taegŏ (1914–1988), who became the third prime master in 1962, Chwasan, Yi Kwangjŏng (b. 1936), who became the fourth prime master in 1994, and Kyŏngsan, Chang Ŭngch'ŏl (b. 1940), who became the fifth prime master in 2006. The two representative scriptures of Wŏnbulgyo are the *Wŏnbulgyo chŏngjŏn* ("Principal Book of Wŏn Buddhism"), a primer of the basic tenets of Wŏnbulgyo, which was published by Sot'aesan in 1943, and the *Taejonggyŏng* ("Scripture of the Founding Master"), the dialogues and teachings of Sot'aesan, published in 1962 by his successor Chŏngsan. Wŏnbulgyo remains an influential religious tradition in Korea, especially in the Chŏlla region in the southwest of the peninsula; in addition, there currently are over fifty Wŏnbulgyo temples active in over fourteen countries.

Wŏnch'ŭk. (T. Wen tsheg; C. Yuance; J. Enjiki 圓測) (613–695). In Korean, "Consummate Keenness"; Silla-dynasty monk renowned for his expertise in Sanskrit and YOGĀCĀRA doctrine, who was influential in Chinese and in later Tibetan Buddhism. Wŏnch'ŭk is said to have left for Tang-dynasty China at the age of fifteen, where he studied the writings of PARAMĀRTHA and the *She lun*, or MAHĀYĀNASAṂGRAHA, under Fachang (567–645). Wŏnch'ŭk later became the disciple of the Chinese pilgrim-translator XUANZANG who, in accordance with the new Yogācāra teachings of DHARMAPĀLA that he had brought back from India (see FAXIANG ZONG), denounced the existence of the ninth "immaculate consciousness" (AMALAVIJÑĀNA), which Paramārtha had advocated, and taught instead the innate impurity of the eighth "storehouse consciousness" (ĀLAYAVIJÑĀNA). These crucial doctrinal issues are said to have caused a split between the major disciples of Xuanzang: Wŏnch'ŭk and his followers came to be known as the Ximing tradition in honor of Wŏnch'ŭk's residence, XIMINGSI, and was said to have been more open to positions associated with the earlier SHE LUN ZONG; and the lineage of his fellow student and major rival KUIJI (632–682), which came to be known as the Ci'en tradition after Kuiji's monastery, Da Ci'ensi, and honed more rigidly to Xuanzang and Dharmapāla's positions. Wŏnch'ŭk's famed *Haesimmilgyŏng so* (C. *Jieshenmi jing shu*), his commentary on Xuanzang's translation of the SAṂDHINIRMOCANASŪTRA, includes traces of Wŏnchŭk's earlier training in She lun zong thought and Paramārtha's expositions on the controversial notion of amalavijñāna. Wŏnchŭk regarded the amalavijñāna as simply another name for the inherent purity of the ālayavijñāna, but, unlike Xuanzang, he considered the ālayavijñāna to be essentially pure in nature. He also disagreed with Xuanzang's contention that the ICCHANTIKA could not attain buddhahood. Hence, his work seems to be an attempt to reconcile the divergences between the old Yogācāra of Paramārtha and the new Yogācāra of Xuanzang. Wŏnch'ŭk's commentary to the *Saṃdhinirmocanasūtra* was extremely popular in the Chinese outpost of DUNHUANG, where CHOS GRUB (Ch. Facheng; c. 755–849) translated it into Tibetan during the reign of King RAL PA CAN (r. 815–838). Only nine of the ten rolls of the commentary are still extant in Chinese; the full text is available only in its Tibetan translation, which the Tibetans know as the "Great Chinese Commentary" (Rgya nag gi 'grel chen) even though it was written by a Korean. Five centuries later, the renowned Tibetan scholar TSONG KHA PA drew liberally on Wŏnch'ŭk's text in his major work on scriptural interpretation, LEGS BSHAD SNYING PO. Wŏnch'ŭk's views were decisive in Tibetan formulations of such issues as the hermeneutical stratagem of the three turnings of the wheel of the dharma (DHARMACAKRAPRAVARTANA), the nine types of consciousness (VIJÑĀNA), and the quality and nature of the ninth "immaculate"

consciousness (amalavijñāna). Exegetical styles subsequently used in all the major sects of Tibetan Buddhism, with their use of elaborate sections and subsections, may also derive from Wŏnch'ŭk's commentary. Consequently, Wŏnch'ŭk remains better known and more influential in Tibet than in either China or Korea. Wŏnch'ŭk also wrote a eulogy to the PRAJÑĀPĀRAMITĀHṚDAYASŪTRA, and commentaries to the RENWANG JING and Dharmapāla's *VIJÑAPTIMĀTRATĀSIDDHI, the latter of which is no longer extant.

Wŏndon sŏngbul non. (圓頓成佛論). In Korean, "The Perfect and Sudden Attainment of Buddhahood"; posthumous publication on the convergence of HWAŎM (C. HUAYAN) and SŎN (C. CHAN) thought and practice by the mid-Koryŏ reformer POJO CHINUL (1158–1210). The *Wŏndon sŏngbul non* is said to have been found in a wooden box belonging to Chinul after his death and published posthumously by his disciple CHIN'GAK HYESIM. The text provides Chinul's most sustained presentation of his views on Hwaŏm thought and practice, which were profoundly influenced by LI TONGXUAN's (635–730) idiosyncratic commentary on the AVATAṂSAKASŪTRA, the HUAYAN JING HELUN. Chinul seeks to demonstrate that the sudden understanding-awakening (K. haeo; C. JIEWU; viz., knowing that one is a buddha) is attained at the first level of the ten stages of faith (sipsin), which were usually thought to be a preliminary stage of training, rather than at the first arousing of the thought of enlightenment (BODHICITTOTPĀDA), which occurred at the first of the ten stages of abiding (sipchu). Chinul supports this argument by drawing on the Hwaŏm concept of "nature origination" (XINGQI), which he finds superior to the alternative Hwaŏm theory of the conditioned origination of the dharmadhātu (FAJIE YUANQI). This Hwaŏm understanding at the very inception of practice that one is endowed with the fundamental nature of buddhahood is compared to the CHAN and SŎN notion of "seeing one's nature and attaining buddhahood" (JIANXING CHENGFO). But because Chan/Sŏn does not sanction the prolix conceptual descriptions of this experience that are found in the Hwaŏm school, it is the true "perfect and sudden" school. See also YUANDUN JIAO.

Wŏn'gam Kuksa. (K) (圓鑑國師). See MIRAM CH'UNGJI.

Wŏn'gwang. (C. Yuanguang 圓光) (542–640). In Korean, "Consummate Brilliance"; Silla-dynasty monk known as an early exponent of the VINAYA tradition in Korea. Wŏn'gwang went to the Chinese kingdom of Chen and studied various texts such as the *TATTVASIDDHI and the MAHĀPARINIRVĀṆASŪTRA. After the fall of the Chen dynasty, Wŏn'gwang traveled to Chang'an, where he attended lectures on ASAṄGA'S MAHĀYĀNASAṂGRAHA delivered by the monk Tanqian (542–607). Wŏn'gwang returned to Korea in 600 and devised a set of lay precepts known as the "five secular injunctions" (Sesok ogye) at the request of two "flower youths" (hwarang) named Kwisan (d. u.) and Ch'uhang (d.u.). These injunctions adapted Confucian and Buddhist moral codes to the needs of a militant society involved in the ongoing peninsular reunification wars. The five are (1) loyalty, (2) filial piety, (3) trust, (4) not killing wantonly, and (5) not retreating in battle. According to his biography in the HAEDONG KOSŬNG CHŎN, Wŏn'gwang was also a renowned thaumaturge and tamer of autochthonous spirits. He passed away at the royal monastery of HWANGNYONGSA. Two commentaries on the TATHĀGATAGARBHASŪTRA, the *Taebangdŭng yŏraejanggyŏng so* and *Yŏraejanggyŏng sagi*, are attributed to Wŏn'gwang, but neither is extant.

Wŏnhyo. (C. Yuanxiao; J. Gangyō 元曉) (617–686). In Korean, "Break of Dawn"; famous monk of the Silla dynasty and probably one of the two most important monks in all of Korean Buddhist history, who was renowned for both his scholastic achievements and his efforts to propagate Buddhism among the common people. He is reputed to have written over one hundred commentaries, of which some twenty are extant. According to the hagiographical accounts of Wŏnhyo in the SONG GAOSENG ZHUAN and the SAMGUK YUSA, Wŏnhyo tried, but failed, to travel to China with his friend ŬISANG in order to study with the Chinese translator and YOGĀCĀRA exegete XUANZANG. While on the road, Wŏnhyo is said to have attained enlightenment after a traumatic experience in which he discovered that the earthen sanctuary in which the two travelers had taken refuge one stormy night was in fact a tomb. This experience prompted his awakening that all things are created by mind, which led Wŏnhyo to realize that he did not need to continue on to China in order to understand Buddhism. (Ŭisang did travel to the mainland, where he studied with the early HUAYAN exegete ZHIYAN.) As the legends about Wŏnhyo's enlightenment experience evolve, this story becomes even more horrific: Wŏnhyo is said to have discovered that the sweet water he drank in the tomb to slake his thirst was actually offal rotting in a skull, a traumatic experience that immediately prompted his realization that the mind creates all things. Wŏnhyo spent much of his life writing commentaries to the many new translations of Buddhist scriptures then being introduced into the Korean peninsula. A brief affair with the widowed princess of Yosŏk palace led to the birth of a son, who would grow up to become the famous literatus, Sŏl Ch'ong (c. 660–730), the creator of Idu ("clerical writing"), the earliest Korean vernacular writing system. After the affair, Wŏnhyo changed into lay clothes and traveled among the peasantry, singing and dancing with a gourd he named Unhindered (Muae) and practicing "unconstrained conduct" (K. muae haeng; C. WU'AI XING). ¶ In Wŏnhyo's many treatises, he pioneered a hermeneutical technique he called "reconciling doctrinal controversies" (HWAJAENG), which seeks to demonstrate that various Buddhist doctrines, despite their apparent differences and inconsistencies, could be integrated into a single coherent whole. This "ecumenical" approach is pervasive throughout Wŏnhyo's works, although its basic principle is explained chiefly in his *Simmun hwajaeng non* ("Ten Approaches to the Reconciliation of

Doctrinal Controversy," only fragments are extant), TAESŬNG KISILLON SO ("Commentary to the 'Awakening of Faith According to the Mahāyāna'"), and KŬMGANG SAMMAEGYŎNG NON ("Exposition of the VAJRASAMĀDHISŪTRA"). Wŏnhyo was versed in the full range of Buddhist philosophical doctrines then accessible to him in Korea, including MADHYAMAKA, YOGĀCĀRA, Hwaŏm, and TATHĀGATAGARBHA thought, and hwajaeng was his attempt to demonstrate how all of these various teachings of the Buddha were part of a coherent heuristic plan within the religion. Since at least the twelfth century, Wŏnhyo's hwajaeng exegesis has come to be portrayed as characteristic of a distinctively Korean approach to Buddhist thought.

wŏnju. (C. yuanzhu; J. inju 院主). In Korean, lit. "chief of the campus"; the preferred term in Korean monasteries for the "prior." See JIANYUAN.

Wŏnmyo Yose. (圓妙了世) (1163–1240). In Korean, "Consummate Sublimity, Knower of the World"; monk during the mid-Koryŏ dynasty, who is considered an influential figure in the revitalization of the Korean CH'ŎNT'AE (C. TIANTAI) tradition. Yose also played a major role in the popularization of a movement known as the PAENGNYŎN KYŎLSA, or White Lotus retreat society (see also JIESHE; BAILIAN SHE). Yose was ordained by the monk Kyunjŏng (d.u.) at the monastery of Ch'ŏllaksa in present-day Hapch'ŏn. In 1185, he passed the clerical examinations (SŬNGKWA) and led a retreat at a monastery known as Changyŏnsa on Mt. Yŏngdong. The eminent SŎN monk POJO CHINUL is known to have sent Yose a letter with a poem at that time, inviting Yose to his "Samādhi and Prajñā retreat society" (CHŎNGHYE KYŎLSA) at Kŏjosa. Yose subsequently joined the society and practiced Sŏn meditation with Chinul, but left the society when Chinul moved the society to the monastery of Kilsangsa (present-day SONGGWANGSA). With the support of some prominent lay followers, Yose restored a group of dilapidated buildings on Mt. Mandŏk and established a White Lotus Society there in 1211. Yose continued to reside at the site after the restoration was completed five years later in 1216. He was posthumously awarded the title of state preceptor (K. kuksa; C. GUOSHI) and given the funerary name Wŏnmyo. He is the reputed author of the *Samdaebu chŏryo*, which is no longer extant.

Wŏnyung chong. (圓融宗). In Korean, "Consummate Interfusion school"; an alternate name for the Hwaŏm (C. HUAYAN) school in Korea. See KYO.

World Fellowship of Buddhists. The first international Buddhist organization, founded in Colombo, Sri Lanka, in 1950, by representatives from twenty-seven countries, and headed by GUNAPALA PIYASENA MALALASEKERA (1899–1973). Although most Buddhist traditions around the world are actively involved in the organization, THERAVĀDA Buddhists of Southeast Asia have traditionally played a central role: all its previous and current headquarters have been located in countries where the Theravāda tradition predominates (e.g., Sri Lanka, Myanmar, and Thailand) and all its presidents have also come from those countries. The WFB has more than 130 regional centers in over thirty countries, including India, Australia, the United States, Korea, Japan, and some African and European countries. The organization aims to promote the teachings of the Buddha, strengthen collegiality among Buddhists of different national traditions, and contribute to world peace by participating in social, educational, and humanitarian activities. The current headquarters is located in Bangkok, Thailand.

wu. (J. satori; K. o 悟) In Chinese, "awakening," "enlightenment"; one of the common Chinese translations for the Sanskrit term BODHI (awakening); often seen in English through its indigenous Japanese pronunciation of SATORI. The precise content of this awakening differs according to the various schools of Buddhism. In the East Asian tradition, wu could typically involve a gradual awakening (JIANWU), but it is more commonly associated with "sudden awakening" (DUNWU), especially in the CHAN ZONG (J. ZEN; K. SŎN). Sudden awakening refers to the view that the mind is inherently enlightened (cf. "buddha-nature," or FOXING) and thus does not need to be purified of its afflictions (KLEŚA) in order for that buddha-nature to be realized. Gradual awakening, by contrast, refers to the view that enlightenment is the result of a process of purifying the mind of its afflictions over a series of stages, which may take several lifetimes to complete. The Chan scholiasts GUIFENG ZONGMI and POJO CHINUL, following earlier taxonomies of awakening in the HUAYAN ZONG, distinguish between two kinds of awakening: an initial sudden understanding-awakening (JIEWU), i.e., the instant when one first comes to know that one is innately a buddha; and, following a lengthy period of gradual cultivation (jianxiu), a final realization-awakening (ZHENGWU), when one is able fully to act on the potential inherent in one's initial awakening and not only *be* a buddha but also *act* like one. This description of the soteriological process is called sudden awakening followed by gradual cultivation (see DUNWU JIANXIU). Chan authors discuss many other possible permutations in this awakening and cultivation binary, including gradual cultivation/gradual enlightenment, sudden awakening/sudden cultivation, etc. Although the SUDDEN-GRADUAL ISSUE is most commonly associated with the CHAN school, there are precedents in Indian Buddhism. The so-called BSAM YAS DEBATE, or Council of Lha sa, that took place in Tibet at the end of the eighth century is said to have pitted the Indian monk KAMALAŚĪLA against the Chan monk Heshang MOHEYAN in a debate over the issue of whether enlightenment occurs gradually or suddenly.

wu. (J. mu; K. mu 無). In Chinese, a Sinograph meaning "not have," "without," "no," and, as a philosophical term, "nonbeing," "nothingness." Exegetes in the Dark Learning (XUANXUE) school of Chinese philosophy, which was influential in early Chinese Buddhist thought, first explored the

philosophical implications of the term wu. Based on their reading of the *Daode jing* ("The Way and Its Power"), a seminal Daoist classic traditionally attributed to the legendary Laozi, they interpreted wu as meaning either (1) "nonexistence" or "nonbeing," in distinction to the Sinograph you, viz., "existence," or "being"; or (2) the metaphysical substratum of the universe, viz., "nothingness," which transcended the dichotomy of you and wu. Wu in this second denotation did not indicate simply voidness or negation; it rather referred to the source of the DAO itself or the principle underlying all existence. In this sense, wu was inseparable from you, the phenomenal expressions of the dao. This wu was termed "original nothingness" (benwu), because it served as the ultimate foundation of the myriad of existing things in the universe, and thus represented a preconceptual reality that transcended dichotomous existence (you). Wang Bi (226–249), traditionally regarded as the founder of Xuanxue, defined a person who attained wu as a sage (shengren). ¶ Early Chinese Buddhist thinkers, such as DAO'AN (312–385) and Zhu Fatai (320–387), drew on this Xuanxue concept of benwu to render the Buddhist concept of emptiness (ŚŪNYATĀ); SENGZHAO (374–414) in his ZHAO LUN also equates the original nothingness (benwu) with the dharma-nature (DHARMATĀ). As Chinese Buddhists gradually refined their understanding of the Buddhist notion of emptiness, prompted especially by the influence of KUMĀRAJĪVA's translations of the PRAJÑĀPĀRAMITĀ texts, this rendering of śūnyatā as wu was ultimately replaced by the new term kong (emptiness). ¶ In the context of the CHAN ZONG, wu was often used to emphasize the mental state of nonattachment. However, ever since the character wu (pronounced mu in Japanese and Korean) was singled out by Chan master DAHUI ZONGGAO as a meditative topic (HUATOU) in Chan practice, Chan adepts began to use "wu" as an aid in their "questioning meditation" (KANHUA CHAN). This meditative topic was derived from a popular GONG'AN (KŌAN) attributed to ZHAOZHOU CONGSHEN: "Does a dog have buddha nature, or not?" Zhaozhou answered, "wu" ("no," lit. "it does not have it"). The Sinograph wu was also a frequent subject of monochrome brushstroke calligraphy, which was and is still often hung on the walls of the abbot's quarters (FANGZHANG) in Chan monasteries. See WU GONG'AN; GOUZI WU FOXING.

wu'ai xing. (J. mugegyō; K. muae haeng 無礙行). In Chinese, "unhindered action" or "unconstrained conduct"; one of the types of practice of a BODHISATTVA-MAHĀSATTVA, as expounded especially in the AVATAṂSAKASŪTRA, referring to a conduct that is not constrained by the restrictions of customary morality or mundane societal expectations. Other related terms that are described as unhindered include "unhindered physicality" (wu'ai shen), "unhindered SAMĀDHI" (wu'ai sanmei), "unhindered wisdom" (wu'ai zhi), "unhindered dharma" (wu'ai fa), "unhindered path" (wu'ai dao), etc. The actions of a bodhisattva-mahāsattva conform to those of the buddhas themselves and any merit forthcoming from them are freely transferred (huixiang) to other sentient beings to help them with their salvation; for this reason, their actions are free from any kinds of hindrances. The MAHĀYĀNASAṂGRAHA (*She Dasheng lun*) also explains "unhindered action" as the merit of a buddha, which is obtained through the purest of wisdom. Unhindered action sometimes refers to a particular stage or practice of a bodhisattva-mahāsattva: the BODHISATTVABHŪMI (*Pusa shanjie jing*) presents it as the tenth of the twelve conducts of a bodhisattva-mahāsattva, along with such advanced practices as the signless practice, untainted practice, practice-less practice, and contented practice. In this context, unhindered action refers to the stage where a bodhisattva cultivates the realm of reality (DHARMADHĀTU) that transcends all discrimination and teaches the true dharma (SADDHARMA) for the sake of innumerable sentient beings. This status is said to correspond specifically to the ninth of the ten bodhisattva stages (DAŚABHŪMI), and the bodhisattva on this stage is described as being endowed with four types of analytical knowledges (PRATISAṂVID), which in Chinese were known as the four "unhindered knowledges" (C. si wu'ai jie): i.e., unhindered knowledge of (1) phenomena (DHARMA), viz., one makes no mistakes in one's teachings; (2) meaning (ARTHA), viz., to be unhindered with regard to the content and meaning of one's teachings; (3) etymology or language (NIRUKTI), viz., the ability to comprehend all languages; and (4) eloquence (PRATIBHĀNA), viz., ease in offering explanations. CHENGGUAN (738–839) states in his massive HUAYAN JING SHU ("Commentary to the AVATAṂSAKASŪTRA") that the bodhisattva is able to abide in unhindered action (lit. "unhindered abiding") because he no longer has any cognitive obstructions (JÑEYĀVARAṆA). The practice of unconstrained conduct has been a prominent, if controversial, feature of Korean Buddhism throughout its history. Several eminent Korean monks were known as practitioners of unconstrained conduct, including WŎNHYO (617–686), Chinmuk (1562–1633), and KYŎNGHŎ SŎNGU (1849–1912), and they followed ways of life that disregarded the standards of conduct typically incumbent upon ordained monks.

Wubai wenlun shiyi. (C) (五百問論釋疑). See FAHUA WUBAI WENLUN.

wuchong xuanyi. (J. gojūgengi; K. ojung hyŏnŭi 五重玄義). In Chinese, "five layers of profound meaning" according to the TIANTAI school. See FAHUA WUCHONG XUANYI.

wudao song. (J. godōju; K. odo song 悟道頌). In Chinese, lit. "hymn on awakening to the way (DAO)"; an "enlightenment hymn." See YIJI.

wufa. (J. gohō; K. obŏp 五法). In Chinese, "the five [aspects of] dharmas." According to various Chinese scholastic traditions, deriving from translations of the LAṄKĀVATĀRASŪTRA and YOGĀCĀRA materials, these five delineate the full ontological and epistemological range of all dharmas: phenomena (SHI), characteristics (xiang), conceptual discrimination (fenbie),

correct knowledge of the way things are (zhengzhi), and suchness (ZHENRU). The first three aspects are called "factors associated with delusion/unenlightenment" (mifa) because the multiplicity, duality, and reality of "phenomena" and "characteristics" are merely "imagined" and "superimposed" by the discriminatory property of the unenlightened mind (which is covered by the third aspect, fenbie, viz., PARIKALPITA). In contrast, the last two aspects are called "factors associated with enlightenment" (wufa), with "knowledge" being the ability to discern the true "suchness" of things without conceptual superimpositions.

wu gong'an. (J. mukōan; K. mu kongan 無公案). In Chinese, "the case 'no'"; an influential CHAN case or precedent (GONG'AN) associated with the Tang-dynasty Chan master ZHAOZHOU CONGSHEN (778–897). In this exchange, once a student came to Zhaozhou and asked, "Does a dog have the buddha-nature (FOXING), or not?" Zhaozhou answered, "No" (lit., "It does not have it"). The complete exchange from which this gong'an is drawn continues: "Everything has buddha-nature, from the buddhas above, to the ants below. Why wouldn't a dog have it?" Zhaozhou replied: "Because he has the nature of karmically conditioned consciousness." This response seems to be associated with Chan debates concerning the Sinitic Buddhist doctrine of the "buddha-nature of the insentient" (wuqing foxing), which presumed that all insentient things, including rocks and tiles, trees, and grass, were also endowed with the buddha-nature; thus, if even rocks have the buddha-nature, why not dogs? Since the answer to the student's question should unequivocally be "Yes, a dog does have the buddha-nature," Zhaozhou's enigmatic response, which Wumen calls a "checkpoint of the patriarchs," seems to challenge one of the foundational beliefs of East Asian Buddhism; in so doing, it engenders a question in the student's mind, which will help to foster inquiry and ultimately a sense of doubt (YIQING). This answer "WU" ("no") became a popular meditative topic (HUATOU) in the Chan meditation practice of "questioning meditation" (KANHUA CHAN) and is one of the most important gong'ans used in kanhua Chan training, especially in the Chinese LINJI ZONG and Japanese RINZAISHŪ lineages, as well as in the Korean CHOGYE CHONG. The wu gong'an is the first case collected in the gong'an anthology WUMEN GUAN ("Gateless Checkpoint"), and its use in kanhua practice was popularized by the Chinese Linji teacher DAHUI ZONGGAO (1089–1163). See also GOUZI WU FOXING.

wuhui nianfo. (J. goe nenbutsu; K. ohoe yŏmbul 五會念佛). In Chinese, "five-tempo intonation of [the name of] the buddha" (see NIANFO). A method of intoning the name of the buddha AMITĀBHA devised by the Tang-dynasty monk FAZHAO (d.u.). While in SAMĀDHI, Fazhao is said to have received instructions for the wuhui nianfo technique directly from Amitābha himself. The practice seems to be based on the larger SUKHĀVATĪVYŪHASŪTRA, which speaks of the bejeweled trees that produce music in five tempos when swayed by the wind. The first tempo is a leisurely chant performed in a high tone (ping). The second tempo is a high and rising tone (pingshang). The third tempo is neither leisurely nor rapid, and the fourth gradually becomes rapid. The fifth tempo is a rapid and repetitious recitation of the four characters "A-mi-tuo-fo," the Chinese pronunciation of Amitābha. According to Fazhao, the practical aim of this practice is to focus on the three jewels (RATNATRAYA) until one attains "no-thought" (WUNIAN) and nonduality (ADVAYA). Fazhao recommends wuhui nianfo for both clergy and lay who wish to rid themselves of the five types of suffering and the five hindrances, or to purify the five sense organs (INDRIYA) and attain the five powers (BALA). The ultimate purpose of the practice is to attain rebirth in the PURE LAND of SUKHĀVATĪ. Two manuals by Fazhao detailing the practice of wuhui nianfo, the *Jingtu wuhui nianfo lüefa shiyi canben* ("Praise for the Abbreviated Ritual Manual of the Pure Land Five-Tempo Intonation of [the Name of] the Buddha") and the *Jingtu wuhui nianfo songjing guanxing yi* ("Rite for Intoning the Buddha's Name, Reciting Scripture, and Performing Meditation According to the Five Tempos of the Pure Land"), were recovered in the DUNHUANG manuscript cache.

wujiao. (C) (五教). In Chinese, the "fivefold taxonomy of the teachings" according to the Huayan school. See HUAYAN WUJIAO.

Wujiao zhang. (C) (五教章). See HUAYAN WUJIAO ZHANG.

wu jia qi zong. (J. goke shichishū; K. oga ch'ilchong 五家七宗). In Chinese, "five houses and seven schools." According to the traditional historical narratives of the CHAN tradition, the lineages of the sixth patriarch (LIUZU) HUINENG's two major disciples NANYUE HUAIRANG and QINGYUAN XINGSI grew into five houses and eventually seven schools. The five houses refer to the lineages of the GUIYANG [alt. Weiyang] ZONG, LINJI ZONG, CAODONG ZONG, YUNMEN ZONG, and FAYAN ZONG of the Tang dynasty. Each of these "houses" (jia) is said to have had its own unique teaching style (jiafeng) and was respectively named after its purported founder or "patriarch": the Guiyang was named after GUISHAN LINGYOU and his disciple YANGSHAN HUIJI, the Linji after LINJI YIXUAN, the Caodong after DONGSHAN LIANGJIE and his disciple CAOSHAN BENJI, the Yunmen after YUNMEN WENYAN, and the Fayan after FAYAN WENYI. Among these houses, the Linji became predominant during the Song dynasty, when it further split into two separate lineages known as the HUANGLONG PAI (named after HUANGLONG HUINAN) and the YANGQI PAI (named after YANGQI FANGHUI). These two Song-dynasty lineages, together with the original listing of five houses, constitute the so-called seven schools. According to the Chan historian GUIFENG ZONGMI, the early Chan lineages known as the NIUTOU ZONG, Heze zong (see HEZE SHENHUI), JINGZHONG ZONG, BAOTANG ZONG, BEI ZONG, and NAN ZONG were eventually supplanted by the flourishing lineages of Nanyue's disciple

MAZU DAOYI (i.e., the Guiyang and Linji) and Qingyuan's disciples SHITOU XIQIAN (i.e., the Caodong and Yunmen) and XUEFENG YICUN (i.e., the Fayan).

wujinzang yuan. (J. mujinzōin; K. mujinjang wŏn 無盡藏院). In Chinese, "inexhaustible storehouse cloister"; the emblematic institution of the Third Stage Sect (SANJIE JIAO), a major school of Buddhism during the Tang dynasty. The wujinzang yuan was established at Huadusi (Propagation and Salvation Monastery) in the capital Chang'an early in the Tang dynasty, probably between 618 and 627. The institution was based on the concept of "merit-sharing," i.e., that one could enter into the universal inexhaustible storehouse of the dharma realm, as articulated by the sect's founder XINXING (540–594), by offering alms to the wujinzang yuan on behalf of all sentient beings. By 713, when the Tang emperor Xuanzong (r. 712–756) issued an edict closing it due to charges of embezzlement, the wujinzang yuan had served as a major agency for promoting the sect for almost a century. Drawing on the AVATAṂSAKASŪTRA and the VIMALAKĪRTINIRDEŚA, the sect interpreted the Sinographs wujin (inexhaustible) to mean that both the field of reverence—viz., the three jewels (RATNATRAYA)—and the field of compassion—viz., sentient beings—were inexhaustible. The wujinzang yuan, therefore, was the place where the sect's sixteen kinds of almsgiving (DĀNA) were to be practiced, through offerings made to (1) the buddha, (2) the dharma, (3) the saṃgha, and (4) all sentient beings; (5) works that serve to ward off evil; (6) works that serve to do good; and offerings of (7) incense, (8) lamps, (9) the monks' baths, (10) bells and chants, (11) clothing, (12) dwellings, (13) beds and seats, (14) receptacles for food, (15) coal and fire, and (16) food and drink. There were two kinds of offerings made to the wujinzang yuan: (1) regular offerings collected in the form of a daily levy and (2) offerings received at particular times of the year. A Sanjie jiao text discovered at DUNHUANG says that a person is expected to offer one fen (a hundredth of a tael) of cash or one ge (a tenth of a pint) of grain per day, or thirty-six qian (a tenth of a Chinese ounce) or 3.6 dou (pecks) of grain per annum. However, the offerings were mostly made at specific times of the year, such as on the fourth day of the first lunar month, the day commemorating Xinxing's death, and the ULLAMBANA festival on the fifteenth day of the seventh lunar month. For those adherents who could not make offerings directly at Huadu monastery, the sect would temporarily open local branches, called "merit offices" (gongde chu), especially at the time of the Ullambana festival. The assets of the wujinzang yuan consisted for the most part of such tangible assets as money, cloth, gold and silver, and jade. The offerings were used, for example, to fund the restoration of monasteries and the performance of religious services (i.e., the reverence field of merit, jingtian), and to provide alms to the poor (i.e., the compassion field of merit, beitian; see PUṆYAKṢETRA). People could also receive loans from the wujinzang, a function comparable to today's microloans made to help raise people out of poverty. During the reign of Empress Wu, Fuxiansi in Luoyang was for a brief time also the site of a wujinzang yuan. See also XIANGFA JUEYI JING.

Wuliangshou jing. (J. Muryōjukyō; K. Muryangsu kyŏng 無量壽經). In Chinese, "Sūtra of Infinite Life." See SUKHĀVATĪVYŪHASŪTRA.

Wuliangshou jing lun. (C) (無量壽經論). See WULIANGSHOU JING YOUPOTISHE YUANSHENG JI.

Wuliangshou jing youpotishe yuansheng ji. (J. Muryōjukyō upadaisha ganshōge; K. Muryangsugyŏng ubajesa wŏnsaeng ke 無量壽經優婆提舍願生偈). In Chinese, "Verses on the Wish for Rebirth and the Exposition of the Limitless Life Scripture"; also known as the *Wuliangshou jing lun* ("Commentary on the Limitless Life Scripture"), *Jingtu lun* ("Treatise on the Pure Land"), *Wangsheng lun* ("Treatise on Rebirth"), and *Yuansheng ji* ("Verses on the Wish for Rebirth"). The *Wuliangshou jing youpotishe yuansheng ji* is attributed to VASUBANDHU and was translated into Chinese by BODHIRUCI at the monastery of YONGNINGSI in 529. The text is largely a commentary on the larger SUKHĀVATĪVYŪHASŪTRA and is comprised of a twenty-four-line verse and prose commentary. The verse section begins with an exhortation to be reborn in the country of peace and happiness (ANLEGUO) or PURE LAND (JINGTU) of the buddha AMITĀBHA, which it subsequently describes in detail, and ends with the dedication of merit (PARIṆĀMANĀ). The prose commentary explains the ritual means of rebirth in terms of "five gates of recollection" (wu nianmen). These five gates are veneration (libai), praise (cantan), vow (zuoyuan), discernment (guancha), and dedication (huixiang). The text came to be held in high regard in China and Japan after the eminent Chinese monk TANLUAN composed an influential commentary on the text. Along with the shorter and longer *Sukhāvatīvyūhasūtras* and the GUAN WULIANGSHOU JING, the Japanese monk HŌNEN recognized the *Wuliangshou jing youpotishe yuansheng ji* as a central scripture of the school now known as the JŌDOSHŪ. See also JINGTU LUN.

Wuliang yi jing. (J. Muryōgikyō; K. Muryang ŭi kyŏng 無量義經). In Chinese, "Sūtra of Immeasurable Meanings," one of the "Three [Sister] Sūtras of the 'Lotus'" (FAHUA SANBU [JING]), along with the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") itself and the GUAN PUXIAN PUSA XINGFA JING ("Sūtra on the Procedures for Contemplating the Practices of the Bodhisattva SAMANTABHADRA"). The *Wuliang yi jing*, is presumed to be the prequel to the influential *Saddharmapuṇḍarīkasūtra*, while the *Guan Puxian pusa xingfa jing* is usually considered its sequel. The extant version of the scripture, in one roll, is attributed to the Indian translator *Dharmāgatayaśas of the Southern Qi dynasty (479–502), and is claimed to have been translated in 481; the LIDAI SANBAO JI scriptural catalogue also refers to a second, nonextant translation. There is, however, no evidence

that a scripture with this title ever circulated in India, and no such text is ever cited in Indian sources. In addition, there are issues with the biography of the alleged translator (*Dharmāgatayaśas is otherwise unknown and this is his only attributed translation), and peculiar events in the transmission of the scripture, which suggest that attempts were made to obscure its questionable provenance. The scripture also includes unusual transcriptions and translations of Buddhist technical terminology, and peculiar taxonomies of Indian doctrinal concepts. Because of these problematic issues of provenance and content, the sūtra is now suspected of being an indigenous Chinese composition (see APOCRYPHA). Such Chinese exegetes as Huiji (412–496) and TIANTAI ZHIYI (538–597) presumed that this scripture was the otherwise-unknown MAHĀYĀNA sūtra titled "Immeasurable Meanings" that is mentioned in the prologue to the *Saddharmapuṇḍarīkasūtra*, which the Buddha is said to have preached just prior to beginning the "Lotus Sūtra" proper. The *Wuliang yi jing* is in three chapters (pin). The first chapter is the prologue, where the bodhisattva "Great Adornment" (Dazhuangyan pusa) offers a long verse paean describing the Buddha's many virtues. The second chapter is the sermon itself, where the Buddha explains the doctrine of immeasurable meanings as being the one teaching that will enable bodhisattvas to quickly attain complete, perfect enlightenment (ANUTTARASAMYAKSAṂBODHI). This doctrine reveals that all phenomena (DHARMA) are void and calm in both their natures and their characteristics and thus are empty and nondual (ADVAYA). Hence, the immeasurable meanings of all descriptions of dharmas derive from the one dharma that is free from characteristics. The final chapter is the epilogue, which describes the ten kinds of merit that accrue from hearing the sūtra.

Wumen guan. (J. Mumonkan; K. Mumun kwan 無門關). In Chinese, lit., "Gateless Checkpoint," or "Wumen's Checkpoint"; compiled by the CHAN master WUMEN HUIKAI, after whom the collection is named, also known as the *Chanzong Wumen guan* ("Gateless Checkpoint of the Chan Tradition"). Along with the BIYAN LU ("Blue Cliff Record"), the *Wumen guan* is considered one of the two most important GONG'AN (J. kōan; K. kongan) collections of the Chan tradition. In the summer of 1228, at the request of the resident monks at the monastery of Longxiangsi, Wumen lectured on a series of forty-eight cases (gong'an) that he culled from various "transmission of the lamplight" (CHUANDENG LU) histories and the recorded sayings (YULU) of previous Chan masters. His lectures were recorded and compiled that same year and published with a preface by Wumen in the following year (1229). Another case (case 49), composed by the layman Zheng Qingzhi, was added to the *Wumen guan* in 1246. The *Wumen guan* begins with a popular case attributed to ZHAOZHOU CONGSHEN, in which Zhaozhou replies "WU" (no) to the question, "Does a dog have buddha nature, or not?" (see WU GONG'AN). Wumen himself is known to have struggled with this case, which was given to him by his teacher Yuelin Shiguan (1143–1217). The Japanese monk SHINICHI KAKUSHIN, who briefly studied under Wumen in China, brought the *Wumen guan* to Japan. Although the collection was once declared to be heretical by the SŌTŌSHŪ in the mid-seventeenth century, many Japanese commentaries on the *Wumen guan* were composed at the time, testifying to its growing influence during the Edo period.

Wumen Huikai. (J. Mumon Ekai; K. Mumun Hyegae 無門慧開) (1183–1260). In Chinese, "Gateless, Opening of Wisdom"; CHAN master in the LINJI ZONG; author of the eponymous WUMEN GUAN ("Gateless Checkpoint"), one of the two most important collections of Chan GONG'AN (J. kōan; K. kongan). A native of Hangzhou prefecture in present-day Zhejiang province, Huikai was ordained by the monk "One Finger" Tianlong (d.u.), who also hailed from Hangzhou (see also YIZHI CHAN). Wumen later went to the monastery of Wanshousi in Jiangsu province to study with Yuelin Shiguan (1143–1217), from whom Huikai received the WU GONG'AN of ZHAOZHOU CONGSHEN; Huikai is said to have struggled with this gong'an for six years. In 1218, Huikai traveled to Baoyinsi on Mt. Anji, where he succeeded Yuelin as abbot. He subsequently served as abbot at such monasteries as TIANNINGSI, Pujisi, Kaiyuansi, and Baoningsi. In 1246, Huikai was appointed as abbot of Huguo Renwangsi in Hangzhou prefecture, and it is here that the Japanese ZEN monk SHINICHI KAKUSHIN studied under him. Emperor Lizong (r. 1224–1264) invited Huikai to provide a sermon at the Pavilion of Mysterious Virtue in the imperial palace and also to pray for rain. In honor of his achievements, the emperor bestowed upon him a golden robe and the title Chan master Foyan (Dharma Eye).

wunian. (T. bsam pa med pa; J. munen; K. munyŏm 無念). In Chinese, "no-thought"; a Chinese meditative term that appears in the sixth-century DASHENG QIXIN LUN but finds its locus classicus in the eighth-century CHAN classic, the LIUZU TAN JING. The putative author of the *Liuzu tan jing*, the sixth patriarch (LIUZU) HUINENG, defines "no-thought" as "not to think even when involved in thought." Thought, therefore, is not the issue, but rather the attachment to thought, which would encourage the proliferation of conceptualization throughout all of one's sensory experience and thus render one a hapless victim of the conceptualizing tendency (cf. PRAPAÑCA). The *Liuzu tan jing* also explains no-thought in terms of "non-form" (wuxian) and "non-abiding" (wuzhu) and parses the term as follows: wu ("no") refers to the absence of duality and nian ("thought") to thinking about thusness (TATHATĀ). HEZE SHENHUI used the term "no-thought" to criticize the teaching of the "transcendence of thoughts" (linian) espoused by SHENXIU and his followers in the so-called Northern school (BEI ZONG). According to Shenhui, whereas the "transcendence of thoughts" (linian) emphasized the progressive wiping away of afflictions (KLEŚA) and conceptual thinking, "no-thought" (wunian) by contrast implied that there was no need for such

effort since one had only to "see one's nature" (JIANXING) in order to attain enlightenment. Thus, wunian became a central feature of those who espoused a "sudden" theory of enlightenment (see DUNWU). In some radical cases, the notion of wunian was used as theoretical justification for the abandonment of all ritual and practice, including meditation and the conferral of monastic precepts. This extreme form of "no-thought" doctrine played an important role in the LIDAI FABAO JI and the antinomian teachings of the Sichuan early-Chan lineages of the JINGZHONG ZONG and BAOTANG ZONG, the latter of which may have had some influence in the development of RDZOGS CHEN thought in Tibet.

Wunian dahui. (C) (五年大會). See WUZHE HUI.

wushi. (J. goji; K. osi 五時). In Chinese, "the five periods [of the Buddha's teaching]"; the TIANTAI school's temporal taxonomy of Buddhist doctrines (JIAOXIANG PANSHI), according to which the Buddha's teachings differ because he preached them at different points during his pedagogical career. The initial account of his awakening that the Buddha taught immediately after his enlightenment was described in the AVATAṂSAKASŪTRA; this stage is thus termed the HUAYAN period (huayan shiqi). This account of the experience of buddhahood was, however, so unadulterated and sublime that many ŚRĀVAKA disciples were utterly unable to comprehend its message. The Buddha therefore began his teaching anew in a second period that was termed Luyuan shiqi (after the Deer Park, MṚGADĀVA, where many of the ĀGAMA scriptures were taught) or ahan shiqi (after the āgamas, which were the compilation of the Buddha's words from this period). This period was said to be an explicit attempt on the part of the Buddha to accommodate those disciples who were confounded during the first period, by teaching his insights in their most elementary form. The third period is called fangdeng (VAIPULYA) shiqi, where the "HĪNAYĀNA" teachings of the second period were superseded by teaching the aspiration for the MAHĀYĀNA. Various sūtras that explicitly compare Mahāyāna favorably to "hīnayāna"—such as the ŚRĪMĀLĀDEVĪSIṂHANĀDASŪTRA and the VIMALAKĪRTINIRDEŚA—were supposedly products of this period. The fourth period is termed the bore shiqi, after its eponymous sūtras, the PRAJÑĀPĀRAMITĀ. This was the stage of the Buddha's teaching career where he began to remove the boundaries separating Mahāyāna and "hīnayāna" by leading his audience from the presumption that there were two separate vehicles to instead a common realization of emptiness (ŚŪNYATĀ). The final period is called Fahua Niepan shiqi, after its two representative sūtras, the SADDHARMAPUṆḌARĪKASŪTRA and the MAHĀPARINIRVĀṆASŪTRA. The teachings associated with this period are described as the "consummate" or "perfect" teachings (YUANJIAO) because they espouse the idea of one vehicle (or the one buddha vehicle; C. YISHENG; S. EKAYĀNA), which Tiantai claimed was the truest form of the Buddha's original intention (benyuan; see PŪRVAPRAṆIDHĀNA). The Tiantai school also compares these five stages of the teachings to the five stages in the clarification of milk (see WUWEI, "five tastes"). See also TIANTAI BAJIAO.

wushi bajiao. (J. goji hakkyō; K. osi p'algyo 五時八教). In Chinese, "five periods and eight teachings"; a classification of teachings (PANJIAO) attributed to the TIANTAI systematizer TIANTAI ZHIYI. A detailed explanation of the wushi bajiao is found in the text by the Korean exegete CH'EGWAN, the CH'ŎNT'AE SAGYO ŬI (C. *Tiantai sijiao yi*). The five periods correspond to what is believed to be the five major chronological periods (WUSHI) of the Buddha's teaching career (represented by the name of a SŪTRA or group of sūtras preached during each period), namely, (1) Huayan (AVATAṂSAKASŪTRA), (2) ĀGAMA, (3) VAIPULYA, (4) PRAJÑĀPĀRAMITĀ, and (5) Lotus (SADDHARMAPUṆḌARĪKASŪTRA) and Nirvāṇa (MAHĀPARINIRVĀṆASŪTRA). According to Zhiyi, the Buddha also employed different techniques of conversion or pedagogical modes (huayi) for audiences of varying capacities, which are broadly divided into four: the sudden, gradual, indeterminate, and secret. The sudden and gradual teachings are distinguished by their variant uses of skillful means (UPĀYA), and indeterminate refers to the differing levels of the understanding of individuals. Zhiyi's contribution to these well-established categories was his further division of the indeterminate teachings into "secret" and "manifest" based on the awareness of the presence of others in the assembly. The content of the Buddha's teachings (huafa) is further described in terms of the four categories of TRIPIṬAKA, common, distinct, and consummate. This division is based on whether the teachings are that of TRIPIṬAKA (viz. HĪNAYĀNA), MAHĀYĀNA (distinct), both (joint), or neither (consummate). Zhiyi referred to the central sūtra of his own Tiantai school, the *Saddharmapuṇḍarīkasūtra*, as consummate. Zhiyi's own classification system is based on those of earlier exegetical traditions of the north (wujiao shizong) and south (sanjiao), which he sought to unite and ultimately transcend. See TIANTAI BAJIAO.

wushi jiao. (C) (五時教). See WUSHI.

Wutaishan. (五臺山). In Chinese, "Five-Terraces Mountain"; a sacred mountain located in northern Shanxi province, which, together with EMEISHAN, PUTUOSHAN, and JIUHUASHAN, is one of the "four great mountains" (sidamingshan) of Buddhism in China. The name Wutai is derived from its five treeless, barren peaks (one in each cardinal direction and the center) that resemble terraces or platforms. During the Northern Wei dynasty (424–532), Wutaishan came to be identified with the mythic Mt. Qingliang (Clear and Cool) of the AVATAṂSAKASŪTRA, which speaks of a mountain to the northeast where the bodhisattva MAÑJUŚRĪ is said to be constantly preaching the DHARMA. From the time of the identification of Mount Wutai as Mt. Qingliang, numerous testimonies to the manifestation of Mañjuśrī on the mountain have been reported. Mt. Wutai thus came to be known as the primary abode and

place of worship for Mañjuśrī and for this reason drew pilgrims from across the continent, including South Asia and, later, Tibet. Numerous monasteries and hermitages of both Buddhists and Daoists occupy its peaks. The first Buddhist monastery on Wutaishan, Da Futu Lingjiusi (Great Buddha Vulture Monastery), is claimed to have been built by KĀŚYAPA MĀTAṄGA (d.u.) and Dharmaratna (d.u.) sometime during the first century (see also BAIMASI and SISHI'ER ZHANG JING). The name of the monastery was changed to Xuantongsi and then to (Da) Huayansi during the Tang dynasty to reflect its role as the center of HUAYAN studies. The Huayan patriarch CHENGGUAN (738–839) composed his great HUAYANJING SHU at this monastery. The esoteric monk AMOGHAVAJRA also assisted in the establishment of another monastery on Mt. Wutai, which was given the name Jingesi (Gold Pavilion Monastery) in 770 after its gilded tiles. Emperor Daizong (r. 762–779) declared Jingesi as an important center for the new esoteric teachings (MIJIAO) brought to China by Amoghavajra. The monk FAZHAO also established the monastery of Zhulinsi (Bamboo Grove Monastery) on the model of a majestic monastery that Mañjuśrī had revealed to him in a vision. The monasteries Qingliangsi, Beishansi, Manghaisi, and Da Wenshusi are also located on the mountain. During a pilgrimage to Wutaishan by the Korean monk CHAJANG (d.u., c. mid-seventh century), he had a vision in which Mañjuśrī guided him to a Korean analogue of the mountain; that mountain is now known as Odaesan (the Korean pronunciation of Wutaishan) and is itself a major pilgrimage center of Korean Buddhism. During the Qing dynasty, Wutaishan was also the major center for the study of Tibetan Buddhism in China.

wuwei. (J. mui; K. muwi 無爲). In Chinese, lit., "nonaction," "effortless action," in later contexts "uncompounded"; a key term that appears in early Chinese classics such as the *Lunyu* ("Analects of Confucius"), the *Daode jing* ("The Way and Its Power"), and the *Zhuangzi*. "Nonaction" suggests action that takes place naturally or without artifice; thus variously interpreted as "effortless action," "unattached action," etc. Nonaction thus refers to the ideal mode of behavior for a sage, in which the sage "does nothing and yet there is nothing not done" (wuwei er wu buwei). Rather than acting by fiat, the sage acts by establishing a "sympathetic resonance" (GANYING) with the natural movements of heaven, which brings everything naturally to perfection, just as a tree grows naturally without making any effort to grow. The term is frequently used in indigenous Chinese texts in the context of good governance, where wuwei thus refers to the ultimate type of "soft power": by "practicing nonaction," a ruler creates an appropriate environment in which "the people are able to look after themselves" (*Daode jing*, chapter 49); he does not impose his point of view but instead allows common cause with his constituency to develop naturally. In certain Chinese contexts, wuwei could also connote something that was "unproduced," and the early Chinese Buddhists drew on this connotation to translate the seminal Sanskrit term NIRVĀṆA and nirvāṇa's putative "inactivity"; this misleading translation was eventually abandoned in favor of the phonetic transcription niepan. The Buddhists did however retain the term wuwei in this denotation to translate the concept of "uncompounded" or "unconditioned" factors (ASAṂSKṚTADHARMA), such as nirvāṇa and in some schools space (ĀKĀŚA), which are not conditioned (SAṂSKṚTA) and are thus not subject to the inevitable impermanence (ANITYA) to which all conditioned dharmas are subject.

wuwei. (J. goi; K. owi 五位). In Chinese, lit., "five ranks"; a doctrinal formula generally attributed to the CHAN master DONGSHAN LIANGJIE (807–869), the putative cofounder of the CAODONG ZONG of the mature Chan tradition. The antecedents of these five ranks are traced to SHITOU XIQIAN's CANTONG QI, which discusses the mutual "turning back on one other" (huihu) of the terms brightness and darkness. This dichotomy is eventually generalized as "relative" (pian), lit., "askew" or "partial," referring to that which is bright, conceivable, effable, and phenomena (SHI); and absolute (zheng), lit., "upright," correlating with what is dark, inconceivable, ineffable, and principle (LI). Although these two valences of relative and absolute may be discrete, they are interconnected, interdependent, and mutually defining, thus constantly "turning back on one other." The five ranks are systematized by Dongshan in his "Verses on the Five Ranks" (*Wuwei song*) as follows. (1) The relative within the absolute (zhengzhong pian): this valence suggests that the ordinary person constantly abides in original enlightenment (BENJUE), but is unaware of it. (2) The absolute within the relative (pianzhong zheng): the practitioner may have become aware of the reality of original enlightenment, but still treats it as an object to be understood conceptually, rather than directly experienced. (3) [The relative] emerging from the absolute (zhengzhong lai): as the Chan practitioner experiences the pervasiveness of emptiness, that emptiness turns back on itself and transforms into a more dynamic and luxuriant way of experience of reality. (4) [The relative and the absolute] jointly accessible (jianzhong zhi): as the reality of each and every independent phenomenon (shi) is experienced, the reality of principle (li) is simultaneously accessed. (5) Integration of the absolute and the relative, or lit. "arriving within together" (jianzhong dao): the bifurcations between relative and absolute, the experiencing subject and the object experienced, the realizer and the realized, etc., all drop away, so that the practitioner continues to practice but now without practicing anything, and seeks buddhahood while understanding that there is no buddhahood to be sought. In some interpretations, the first two ranks evoke the famous passage in the PRAJÑĀPĀRAMITĀHṚDAYASŪTRA: "form is emptiness, emptiness is form" (see RŪPAṂ ŚŪNYATĀ ŚUNYATAIVA RŪPAM). The third rank implies the bodhisattva practice of returning to the world after his or her attainment of enlightenment (BODHI). Similarly, the fourth and fifth ranks imply the bodhisattva vow to save all living beings so that they may all access NIRVĀṆA together.

Despite the use of the term "rank," a systematic progression is not necessarily implied, and some commentators suggest that all five ranks may be experienced simultaneously in a moment of sudden awakening (DUNWU); thus, the five ranks may be an attempt to demonstrate how gradual and sequential outlines of Buddhist soteriology can be integrated with the more subitist soteriologies that become emblematic of the mature Chan tradition. The five ranks are also sometimes correlated with the five wisdoms (PAÑCAJÑĀNA) of a buddha in the MAHĀYĀNA, and specifically in the YOGĀCĀRA school. Dongshan's "five ranks" were frequently used in East Asian GONG'AN collections as a means of checking a student's level of understanding. In one of the modern Japanese RINZAISHŪ systematizations of kōan training, the final stage in the practice that follows initial sudden awakening (J. SATORI, C. dunwu) also involves mastery of the five ranks (J. goi).

wuwei. (J. gomi; K. omi 五味). In Chinese, lit. "five tastes"; an originally Indian list of the five stages in the clarification of milk that is derived from the MAHĀPARINIRVĀṆASŪTRA: milk, cream, curds, butter, and ghee. This list was used in the TIANTAI ZONG as a simile for the five chronological periods (WUSHI) in the Buddha's preaching of the dharma. According to this school's taxonomy of the teachings (JIAOXIANG PANSHI), the various teachings of Buddhism may be categorized according to these five "tastes": milk symbolizes the AVATAṂSAKASŪTRA period; cream, the ĀGAMA period; curds, the VAIPULYA period; and butter, the PRAJÑĀPĀRAMITĀ period; the subtlest and more clarified form of milk, the flavor of ghee (tihuwei; see MAṆḌA), is finally compared to the "consummate" period of the SADDHARMAPUṆḌARĪKASŪTRA and the MAHĀPARINIRVĀṆASŪTRA.

Wuwei sanzang chanyao. (J. Mui sanzō zen'yō; K. Muoe samjang sŏnyo 無畏三藏禪要). In Chinese, "Essentials of Meditation by the TREPIṬAKA ŚUBHAKARASIṂHA"; a relatively short treatise that purportedly records a sermon that the esoteric master Śubhākarasiṃha prepared for a debate he had with CHAN master SHENXIU's disciple Jingxuan (660–723) sometime after 716. The sermon is largely concerned with the conferral of the BODHISATTVA precepts, repentance, the threefold pure precepts (SANJU JINGJIE; see ŚĪLATRAYA), and what Śubhākarasiṃha calls the secret essentials of meditation. Śubhākarasiṃha critiques Jingxuan and other fellow practitioners of meditation for their adherence to the doctrine of "no-thought" (WUNIAN) and offers instead a meditation technique that involves uttering a series of DHĀRAṆĪS, gesturing in a series of MUDRĀS, mindful breathing, and visualizing a lunar disk.

wuwei zhenren. (J. mui no shinnin; K. muwi chinin 無位眞人). In Chinese, "true man of no rank"; a CHAN expression attributed to LINJI YIXUAN (d. 867), which is used to refer to the sentience, or "numinous awareness" (LINGZHI), of the mind, that constantly moves through the sense faculties, thus enabling sensory experience; equivalent to the buddha-nature (FOXING). Linji contrasts this true man of no rank with the "lump of red flesh" (CHIROUTUAN), the physical body that is constantly buffeted by sensory experience. The term zhenren is also used within the Daoist tradition to refer to a Daoist "perfected," who has realized perfect freedom both mentally and physically by achieving immortality and transcending all dichotomies. See also GANSHIJUE.

Wuxiang. (C) (無相). See CHŎNGJUNG MUSANG.

wuxiang jie. (J. musōkai; K. musang kye 無相戒). In Chinese, "formless precepts"; a type of precept mentioned in the LIUZU TAN JING, where they are said to help constrain practitioners so that they are able to gain enlightenment. The formless precepts reflect the early CHAN community's effort to offer its own understanding of the MAHĀYĀNA precepts. Although no clear explanation of exactly what these precepts are is provided in the text, the wuxiang jie are said to be the premier type of precepts, which are superior to the usual types of constraints taught in earlier types of Buddhism, which sought to develop wholesome ways of action and deter unwholesome actions. The conferral of these precepts appears to have occurred at the start of a kind of initiation ceremony, which subsequently followed with acceptance of the four great vows (SI HONGSHIYUAN), repentance (chan), the three refuges (TRIŚARAṆA), and PRAJÑĀPĀRAMITĀ.

wuxin. (J. mushin; K. musim 無心). In Chinese, lit. "no-mind." The term wuxin appears in the Chinese classic the *Zhuangzi* and was adapted by the early Chinese Buddhists exegetes of PRAJÑĀPĀRAMITĀ literature as a gloss on the Madhyamaka notion of ŚŪNYATĀ or "emptiness." These exegetes were collectively known as the "school of the nonexistence of mind" (xinwu zong) and belonged to the larger tradition known as "Dark Learning" (XUANXUE). In later Buddhist treatises, most notably those belonging to the CHAN tradition, "no-mind" came to refer ambiguously either to a state in which all mental activity had ceased or one in which the mind was free of all discrimination, making it effectively equivalent to nonconceptualization (see NIṢPRAPAÑCA). In this latter sense, the term is closely synonymous with "no-thought" (WUNIAN). See also WUXIN LUN.

Wuxin lun. (J. Mushinron; K. Musim non 無心論). In Chinese, "Treatise on No-Mind"; an early CHAN treatise attributed by tradition to the legendary monk BODHIDHARMA, which, in both content and style, resembles NIUTOU FARONG'S JUEGUAN LUN. As the title indicates, the treatise is concerned with the notion of WUXIN, or "no-mind," which the text attempts to elucidate by enumerating a long list of dichotomies, such as visible and invisible, bright and dark, and differentiated and undifferentiated. The treatise argues largely in catechistic format that the attainment of no-mind engenders a state that is unmarred by the myriad afflictions (KLEŚA), birth and death, and even NIRVĀṆA. The treatise was largely unknown until its

rediscovery in the manuscript cache at the DUNHUANG caves at the end of the nineteenth century.

Wuxue Zuyuan. (J. Mugaku Sogen; K. Muhak Chowŏn 無學祖元) (1226–1286). Chinese CHAN master in the LINJI ZONG, who was the founder of the influential monastery of ENGAKUJI in Kamakura, Japan; also known as Ziyuan. On the advice of his brother, Wuxue entered the Chinese monastery of Jingcisi, where he was ordained by Beijian Jujian (1164–1246). Wuxue later became the student of the Linji Chan master WUZHUN SHIFAN (1178–1249) and received his seal of transmission (YINKE). Wuxue also studied under XUTANG ZHIYU (1185–1269) and Wuchu Daguan (1201–1268) and spent the next few decades residing at various monasteries in Zhejiang prefecture. In 1275, Wuxue left for Nengrensi to avoid the invading Mongol troops of the Yuan dynasty. In 1279, at the invitation of Hōjō Tokimune (1251–1284), the eighth regent of the Kamakura shogunate, Wuxue reluctantly left China for Japan. Upon his arrival in Kamakura, Wuxue was appointed abbot of KENCHŌJI, succeeding the third abbot LANXI DAOLONG. In 1282, Tokimune established Engakuji to commemorate the defeat of the invading Mongol troops and installed Wuxue as its founding abbot (J. kaisan; C. KAISHAN). Serving as administrator of the two most powerful Buddhist institutions in Japan at the time, Wuxue established a firm foundation for the success of the RINZAISHŪ in Japan. Wuxue was given the posthumous title state preceptor (J. kokushi, C. GUOSHI) Bukkō (Buddha Radiance). His students included Japan's first female Zen master, MUGAI NYODAI (1223–1298), and KŌHŌ KENNICHI (1241–1316), the son of Emperor Gosaga (r. 1242–1246) and the teacher of MUSŌ SOSEKI. Wuxue's teachings appear in his *Bukkō kokushi goroku*.

wuyun shijian. (J. goun seken; K. oon segan 五蘊世間). In Chinese, "the world of the five aggregates." See SATTVALOKA.

Wu Zetian. (J. Bu Sokuten; K. Mu Ch'ŭkch'ŏn 武則天) (624–705). Chinese concubine and empress who was an important patron of Buddhism during the Tang dynasty and the short-lived Zhou-dynasty interregnum (684–704). Wu Zetian entered the palace as a concubine of Emperor Taizong (r. 626–649) while she was still in her teens. After the emperor's death, she became a Buddhist nun, but was summoned again to the palace as a concubine of Taizong's successor and son, the Gaozong emperor (r. 649–683). She bore Gaozong a son in 652 and began to exert much influence in court. Despite fierce opposition from court officials, Gaozong enthroned Wu Zetian as the new empress in 655. Wu Zetian quickly exiled all her foes in court and had the former empress Wang killed. In 657, she reinstated Luoyang as the cocapital of the empire and permanently moved the entire court there after Gaozong's death in 683. She subsequently exiled the Zhongzong emperor (r. 683–684, 705–710) and established her own dynasty named Zhou (684–704). Wu Zetian was an ardent supporter of Buddhism. She associated with such eminent monks as XUANZANG, SHENXIU, FAZANG, and YIJING. In an attempt to legitimize her reign, Wu Zetian also ordered the circulation of the MAHĀMEGHASŪTRA ("Great Cloud Sūtra"), which described a female reincarnation of MAITREYA and her rule over the whole world. She also arranged for the construction in every prefecture of the empire of monasteries all known as DAYUNSI (Great Cloud Monastery). In 705, she abdicated the throne to the restored Emperor Zhongzong.

wuzhe hui. (J. mushae; K. much'a hoe 無遮會). In Chinese, "unrestricted assembly"; an assembly hosted by the reigning monarch to make offerings to clergy and laity regardless of their status or station in life. The assembly was typically held every five years and is therefore also known as the "five-year great assembly" (C. wunian dahui; S. pañcavārṣikapariṣad). The first such assembly is attributed to King AŚOKA. Emperor Wu of the Liang dynasty (LIANG WUDI) is known to have held a wuzhe dahui in 529 for an assembly said to have numbered fifty thousand. The famous pilgrim XUANZANG also witnessed an unrestricted assembly during his travels along the SILK ROAD. In 596, Empress Suiko (554–628) held the first reported unrestricted assembly in Japan. In 732, HEZE SHENHUI organized an unrestricted great assembly (wuzhe dahui) at the monastery of DAYUNSI in Henan prefecture, where he attacked SHENXIU and his followers.

Wuzhensi. (悟眞寺). In Chinese, "Awakening to Truth Monastery"; located in the Wuzhen Valley of ZHONGNANSHAN near the capital of Chang'an (present-day Xi'an). The monastery is comprised of two compounds, known as the upper and lower monasteries. The upper monastery is also named Zhulinsi, or Bamboo Grove Monastery, because of the bamboo forest surrounding it. Wuzhen Monastery was founded by the Sui-dynasty Buddhist monk Jingye (564–616), who stayed there from 595 to 608. He was accompanied by other eminent monks including Huichao (546–622), a disciple of the TIANTAI master HUISI (515–568), and Facheng (563–640). The latter was instrumental in expanding the monastery by building the Huayan Hall and another hall to enshrine images of a hundred buddhas. He also inscribed Buddhist verses on cliffs surrounding the monastery and along its roads. Due to his efforts, Wuzhen monastery became renowned during the Tang dynasty for its majesty and became a favorite haunt of literati. Eminent SAN LUN ZONG monks such as HUIYUAN (523–592), Baogong (542–621), and Huiyin (539–629) also either resided here or were affiliated with the monastery. It was either at Wuzhensi or LONGCHISI that the HUAYAN master FAZANG (643–712), at the behest of the Ruizong emperor of Tang (r. 684–690, 710–712), is said to have famously performed a ritual to pray for snow in order to stave off a severe drought the region was experiencing. During the Song dynasty, the monastery was renamed CHONGFASI, or Monastery of the Esteemed Dharma.

wuzhong xuanyi. (J. goshu no gengi; K. ojong hyŏnŭi 五種玄義). In Chinese, "five categories of profound meaning"; a list of five general hermeneutical issues that should be addressed prior to undertaking an in-depth exegesis of any SŪTRA, attributed to TIANTAI ZHIYI (538–597) and emblematic of scriptural exegesis in the TIANTAI SCHOOL. These five are (1) explicating the meaning of the text's title (shiming), (2) analyzing the fundamental intent of the sūtra (bianben), (3) clarifying its principal themes or doctrines (mingzong), (4) expounding the sūtra's "function" or impact on its audience (lunyong), and (5) classifying the sūtra (PANJIAO), viz., delineating its place within the entire corpus of sūtras expounded by the Buddha. These five issues typically would be addressed by the commentator prior to beginning the exegesis of the sūtra proper. See also SANFEN KEJING; JIAOXIANG PANSHI.

Wuzhu. (C) (無住) (714–774). See BAOTANG WUZHU.

Wuzhun Shifan. (J. Bujun Shihan/Bushun Shiban/Mujun Shihan; K. Mujun Sabŏm 無準師範) (1178–1249). Chinese CHAN master in the LINJI ZONG. After his ordination in the winter of 1194, Wuzhun studied under a series of famed Chan masters, including FOZHAO DEGUANG and Po'an Zuxian. Wuzhun eventually attained awakening under Po'an and succeeded his lineage. During his illustrious career at such important monasteries as WANSHOUSI on Mt. Jing, Wuzhun also taught the Japanese pilgrims Hōshin (d.u.), Dōyū (1201–1258), and the famed ENNI BEN'EN, who is now regarded as the first exponent of ZEN in Japan. Wuzhun was later summoned by Emperor Lizong (r. 1224–1264) to provide a public lecture at the Pavilion of Benevolent Illumination in the imperial palace. The emperor later bestowed upon him the title Chan master Fojian (Buddha Mirror). Wuzhun left many famous disciples such as WUXUE ZUYUAN and Mu'an Puning, both of whom went to Kamakura in Japan and served as abbots of the powerful monastery of KENCHŌJI.

Wuzu Fayan. (J. Goso Hōen; K. Ojo Pŏbyŏn 五祖法演) (d. 1104). Chinese CHAN master in the LINJI ZONG. Wuzu was a native of Mianzhou prefecture in present-day Sichuan province. After being ordained at the age of thirty-four, Fayan studied YOGĀCĀRA doctrine in his home province, but later went south where he studied under Huilin Zongben (1020–1099), Fushan Fayuan (991–1067), and BAIYUN SHOUDUAN. Fayan eventually became Baiyun's disciple and inherited his Linji lineage. After staying at various monasteries in Anhui province, Fayan moved to Mt. Wuzu (also known as East Mountain) in Hubei province, where he acquired his toponym. The mountain itself received its name, Wuzu (fifth patriarch), from its most famous past resident, the fifth patriarch of Chan, HONGREN. Mt. Wuzu thus became an important center for the Linji lineage, and it was there that Fayan taught his famous disciples YUANWU KEQIN, Taiping Huiqin (1059–1117), and Foyan Qingyuan (1067–1120), known collectively as the "three Buddhas of East Mountain." Wuzu's teachings are recorded in the *Wuzu Fayan chanshi yulu*.

X

xiala. (C) (夏臘). See JIELA.

xiangdai miao. (C) (相待妙). See DAIJUE ERMIAO.

xiangfa. (J. zōhō; K. sangpŏp 像法). In Chinese, "semblance dharma" or "counterfeit dharma"; a term related to the Sanskrit SADDHARMAPRATIRŪPAKA. The Sanskrit term has a range of uses, including as a designation for the BUDDHADHARMA after the buddha has passed into PARINIRVĀṆA. In the East Asian context, xiangfa came to designate the second and middle period of a buddha's teaching. The first period, that of the SADDHARMA (C. zhengfa), is the period of the true dharma after a buddha's passage into parinirvāṇa, during which time it is still possible to achieve enlightenment by following his teachings. The second period, of xiangfa, is a time during which the achievement of enlightenment is still possible, but the practice of the dharma has generally been reduced to rote repetition of the teachings and practices; there are also signs of laxity in both monastic and lay practice developing during this period. The third period, that of MOFA (cf. SADDHARMAVIPRALOPA), or the final dharma, is a time of degeneration and decline, during which the practice of the dharma is no longer efficacious, due largely to the diminished capacities of humans. This division into three periods of the dharma seems to have originated in China and was widely influential in East Asian Buddhism.

Xiangfa jueyi jing. (J. Zōbō ketsugikyō; K. Sangpŏp kyŏrŭi kyŏng 像法決疑經). In Chinese, the "Scripture on Resolving Doubts Concerning the Semblance Dharma"; an indigenous Chinese Buddhist scripture (see APOCRYPHA), dating from the mid-sixth century. The *Xiangfa jueyi jing* is set against the background of the Buddha's PARINIRVĀṆA. At the request of a BODHISATTVA named Changshi (Constant Giving), the Buddha offers instructions on the practice of giving (DĀNA), in which he declares charity to be the most appropriate practice during the age of the semblance dharma (XIANGFA; SADDHARMAPRATIRŪPAKA). The semblance-dharma period is characterized as an age of degeneration, during which both clergy and laity begin to transgress the precepts and slander the Buddha's teaching. The *Xiangfa jueyi jing* emphasizes the importance of collective rather than individual giving during this age, and especially giving to the impoverished and underprivileged, rather than just to the three jewels (RATNATRAYA) of Buddhism. These and other ideas from the *Xiangfa jueyi jing* were especially influential in the teachings of the Third-Stage school (SANJIE JIAO) and that school's emblematic institution, the WUJINZANG YUAN (inexhaustible storehouse cloister). Such eminent monks as TIANTAI ZHIYI, JIZANG, and HŌNEN also held the *Xiangfa jueyi jing* in high regard.

Xiangguosi. (相國寺). In Chinese, "Minister of the State Monastery"; located in eastern Henan in the city of Kaifeng. Originally built in 555 CE and named Jianguosi, it was subsequently destroyed during a battle. It then became a private residence and garden; but later, when a monk named Huiyun saw a reflection of a monastery in its garden pool, he collected enough subscriptions to buy the residence and turn it back into a monastery in 711. It was renamed Xiangguosi by the Ruizong emperor of the Tang (r. 684–690, 710–712). The monastery was well supported by Tang and Song emperors, as evidenced by the campus's extensive grounds and the lavish materials used in its accoutrements, such as using gold dust to decorate images, icons, and paintings. It is well known for its layout, including its use of twin pagodas (STŪPA). Xiangguosi also became famous for its frescoes, painted by famous contemporary artists from the neighboring region. Artists at the Song Painting Academy painted much of the Buddhist imagery at this monastery. Xiangguosi reached the zenith of its influence during the Song dynasty, when it became an outpost for foreign monks visiting China.

xiangjiao. (J. zōkyō; K. sanggyo 像教). In Chinese, "teaching [viz., religion] of images"; a pejorative term coined by Confucians to refer to Buddhism, derived from the emphasis in Buddhism on bowing before images during rituals and ceremonies. Confucianism, in turn, was called the "teaching [viz., religion] of names" (mingjiao), to demonstrate by contrast that it was based on intellectual inquiry and the "rectification of names" (zhengming) rather than on worship of images of Confucius and the teachers within the tradition.

Xiangmo Zang. (T. Bdud 'dul snying po; J. Gōma Zō; K. Hangma Chang 降魔藏) (d.u.). In Chinese, "Demon-Subduer Zang." Chinese monk and leading disciple of the CHAN master SHENXIU, in the Northern school (BEI ZONG). At an early age, Xiangmo Zang acquired the nickname "demon-subduer"

(xiangmo) by dwelling in deserted houses and open fields. Later, he learned to recite the SADDHARMAPUṆḌARĪKASŪTRA and studied the VINAYA after he became a monk. He is said to have had an awakening experience after listening to a lecture on the "theories of the Southern school" (NAN ZONG lun) and, abandoning his scriptural studies, became a student of Shenxiu. As Shenxiu's disciple, Xiangmo Zang became the target of HEZE SHENHUI'S polemical attack on the Northern school of Chan. Xiangmo Zang also appears in the BSAM GTAN MIG SGRON by GNUBS CHEN SANGS RGYAS YE SHES along with a certain Wolun (d.u.) and MOHEYAN and others of the Northern school, whose teachings may have exerted some influence on MAHĀYOGA in Tibet.

Xiangshansi. (香山寺). In Chinese, "Fragrant Mountain Monastery"; located on SONGSHAN in Ruzhou, Henan province. It is not known when the monastery was first established, but it is thought to have been built c. 516 CE during the Northern Wei dynasty (386–584). One source credits the founding of a Xiangshan monastery in Xiangzhou to a certain general named Liu Qingzhi, but no further mention is made of either the general or the monastery. The current Xiangshansi underwent a major renovation around 1068 during the Northern Song dynasty, and special attention was paid to restoring its Dabei ta (Great Compassion pagoda), which still stands today; housed in the pagoda is a thousand-armed and thousand-eyed form of GUANYIN (SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA). Xiangshansi, like SHANG TIANZHUSI, is known for being a major pilgrimage site for Guanyin (AVALOKITEŚVARA) worship. It became associated with the Princess MIAOSHAN incarnation of Guanyin, whose legend is inscribed on a stele at the monastery. The stele was commissioned in 1100 by a minor civil servant, Jiang Zhiqi (1031–1104), who was the prefect of Ruzhou. Jiang had the legend reinscribed on another stele at the Shang Tianzhusi when he moved to Hangzhou four years later.

xiangxu wuchang. (C) (相續無常). See ER WUCHANG.

Xiangyan Zhixian. (J. Kyōgen Chikan; K. Hyangŏm Chihan 香嚴智閑) (d. 898). Chinese CHAN master in the GUIYANG ZONG of the Chan tradition. Zhixian entered the monastery under BAIZHANG HUAIHAI and later became a student of YANGSHAN HUIJI. Zhixian dwelled for a long time at Mt. Xiangyan, whence his toponym. One day while he was sweeping the garden, Zhixian is said to have attained awakening when he heard the bamboo brush against the roof tiles. He is best known for the GONG'AN case "Xiangyan Hanging from a Tree": A man is dangling by his mouth from the branch of a tall tree, his hands tied behind his back and nothing beneath his feet. Someone comes under the tree branch and asks, "Why did BODHIDHARMA come from the West?" If he keeps his mouth clenched and refuses to answer, he is rude to the questioner; but if he opens his mouth to answer, he will fall to his death. How does he answer? Upon Zhixian's death, he was given the posthumous title Chan master Xideng (Inheritor of the Lamplight).

xiang zong. (J. sōshū; K. sang chong 相宗). In Chinese, "characteristics school"; also known as the FAXIANG ZONG or "Dharma Characteristics" school. Both these names were used polemically by rival scholiasts to polarize certain trends in Buddhist thought. In distinction to the XING ZONG, or "nature" school, FAZANG in the HUAYAN ZONG uses the term xiang zong to refer to those monk-scholars whose scholarship focused on the changing form of phenomena and reality. Monks of the Faxiang or YOGĀCĀRA tradition tended to be categorized as this characteristics school. Maintaining a strict distinction between the xing and the xiang trends was called xingxiang juepan (differentiation of nature and characteristics), while a scholastic approach that attempted to harmonize the two trends was characterized as xingxiang ronghui (harmonizing nature and characteristics).

Xianzong ji. (J. Kenshūki; K. Hyŏnjong ki 顯宗記). In Chinese, "Notes on Revealing the Cardinal Principle," attributed to HEZE SHENHUI; also known as the *Heze dashi xianzong ji* ("Notes on Revealing the Cardinal Principle of Great Master Heze") and *Xianzong lun* ("Treatise on Revealing the Cardinal Principle"). A simpler version of the *Xianzong ji*, entitled *Dunwu wusheng bore song* ("Verses on Sudden Enlightenment, the Unborn, and Prajñā"), was also discovered at DUNHUANG. As the title of the Dunhuang version makes clear, in this treatise Shenhui expounds on the notions of no-thought (WUNIAN), the unborn, or nonarising (ANUTPĀDA), and wisdom (prajñā), which all seem to function as synonyms for emptiness (ŚŪNYATĀ). Shenhui also mentions the Indian patriarch BODHIDHARMA's transmission of this "secret teaching" to China and his conferral of the patriarchal robe as a mark of transmission. The *Xianzong ji* was later included in the genealogical history of the Chan tradition, the JINGDE CHUANDENG LU.

Xiaodao lun. (J. Shōdōron; K. Sodo non 笑道論). In Chinese, "Laughing at the Dao Treatise"; an anti-Daoist polemical treatise composed by Zhen Luan (d.u.) and presented to Emperor Wu (r. 560–578) of the Northern Zhou dynasty in 570. In response to the Daoist contentions in the LAOZI HUAHU JING that the Chinese sage Laozi went to India and became ŚĀKYAMUNI Buddha in order to convert the Western barbarians, the *Xiaodao lun* attempts to expose the inconsistencies in Daoist thought, cosmological perspectives, practice, and ritual, and to demonstrate that the Daoists actually borrowed heavily from Buddhism. The treatise so displeased the emperor that he is said to have immediately ordered the text burned.

xiaoguo. (C) (小過). In Chinese, "minor misdeed." See DUṢKṚTA.

xiaomiao. (小廟). In Chinese, lit. "small temple"; a Song-dynasty term for private monasteries whose control was passed within a single monastic lineage. The term is used in distinction to the large public monasteries, or "monasteries of the ten directions" (SHIFANG CHA).

xiaosheng jiao. (C) (小乘教). See HUAYAN WUJIAO.

xiayu. (C) 下語. See AGYO.

Xiao zhiguan. (C) (小止觀). See XIUXI ZHIGUAN ZUOCHAN FAYAO.

xilai yi. (J. seiraii; K. sŏrae ŭi 西來意). In Chinese, lit. "the meaning of coming from the west"; in CHAN literature, a common allusion to the question "What was the meaning of [Bodhidharma's] coming from the west?" (xilai yi ruohe), i.e., "Why did BODHIDHARMA, the founding patriarch of Chan, come from India to propagate Chan?" This question was commonly asked in Chan GONG'AN exchanges to test the spiritual depth of a teacher or disciple and as a meditative topic in "questioning meditation" (KANHUA CHAN). The phrase is found in HUANGBO XIYUN's (d. c. 850) CHUANXIN FAYAO, and the use of the question is well displayed in a famous exchange involving MAZU DAOYI (709–788) and his disciple Hongzhou Shuiliao (d.u.): when Shuiliao asks Mazu this question, Mazu encourages him to come closer, whereupon he kicks him to the ground, and Shuiliao immediately jumps up, enlightened. ZHAOZHOU CONGSHEN'S (778–897) answer to this question is the famous gong'an: "Cypress tree in front of the courtyard" (TINGQIAN BOSHUZI). Some of the other answers that appear in Chan literature include "sitting for a long time is a bother" (BIYAN LU, case no. 17), "there is no meaning in Bodhidharma's coming from the west" (*Biyan lu*, case no. 20), and "Zang's head is white, Hai's head is black" (*Biyan lu*, case no. 73).

xilai yi ruohe. (C) (西來意若何). See XILAI YI.

Ximingsi. (西明寺). In Chinese, "Luminosity of the West Monastery," located in the Tang capital of Chang'an (present-day Xi'an). There are two founding narratives. The first credits the Gaozong emperor (r. 649–683) with establishing the monastery at his old residence in 658 and installing DAOXUAN (596–667), founder of the Nanshan VINAYA school (NANSHAN LÜ ZONG), as its abbot. It is there that Daoxuan is said to have compiled the DA TANG NEIDIAN ("Great Tang Catalogue of Inner [viz., Buddhist] Classics") as an inventory of scriptures for the newly established library at the monastery. Daoxuan also assisted XUANZANG (600/602–664) in translating preceptive texts, collaborated with his brother Daoshi (d. c. 683) in publishing VINAYA texts, and wrote his collection of essays in defense of Buddhism entitled the GUANG HONGMING JI. A second narrative instead credits Xuanzang with founding the monastery. According to this story, the grounds were originally the residence of an imperial prince, and at first it was proposed to build both a Buddhist and a Daoist monastery there. After Xuanzang surveyed the site, he pronounced the site too small for two establishments, and thus only a Buddhist monastery was built. When Xuanzang settled there, the Gaozong emperor (r. 649–683) is said to have donated land, silk, and cotton to sustain it. ¶ Regardless of which account is correct, Ximingsi quickly became a major center of Buddhist scholarship and housed the most comprehensive library of Buddhist texts in the country. The monastery is said to have been built to match the dimensions of JETAVANA in India and, at one point, housed sixty-four cloisters. Because of its location in the Tang capital, several eminent monks resided and worked there. For example, the Tang emperor Xuanzong (r. 713–756) is said to have invited ŚUBHAKARASIṂHA to stay at Ximingsi, where YIXING (683–727) assisted him in his translation work. YIJING (635–713) also translated there the Sanskrit manuscripts he brought back with him from his pilgrimage to India. The Korean monk WŎNCH'ŬK (613–695) worked with Xuanzang at Ximingsi (to the point that his lineage of scholastic interpretation is sometimes called the Ximing lineage, see XIMING XUEPAI), and the Japanese monk KŪKAI (774–835) is also known to have studied at the monastery.

Ximing xuepai. (C) (西明學派). In Chinese, "the Ximing scholastic lineage" of the FAXIANG ZONG, associated with WŎNCH'ŬK. See FAXIANG ZONG.

xindi. (S. cintābhūmikā; J. shinji; K. simji 心地). In Chinese, lit. "mind-ground" or "mind as ground"; a common metaphor used in MAHĀYĀNA literature to suggest that mind or thought is the source, or "ground," of all phenomena. The *Dasheng bensheng xindi guan jing* ("Sūtra on the Great-Vehicle Contemplation of the Innate Mind Ground"), for example, metaphorically refers to the minds of the sentient beings of the three realms of existence as a "mind-ground," since all phenomena—whether mundane (LAUKIKA) or supramundane (LOKOTTARA), and including all virtuous and nonvirtuous dharmas, as well as the five rebirth destinies (GATI) and the states of a PRATYEKABUDDHA, BODHISATTVA, or even a buddha—are generated from the mind of sentient beings, just as all grains and fruits are generated from soil. A commentary to the MAHĀVAIROCANĀBHISAṂBODHISŪTRA (*Dari jing shu*) says that the mind is also metaphorically referred to as a "ground," since the practice of bodhisattvas relies on the mind, just as activities of ordinary people rely on the ground. In the FANWANG JING ("Brahmā's Net Sūtra"), the mind-ground refers to the bodhisattva precepts (PUSA JIE), which help to restrain the activities of body, speech, and mind; the precepts are the mind-ground because the activities of mind, or thought, are the basis for actions performed via body and speech. The buddha Vairocana says in the sūtra that he achieved complete, perfect enlightenment (SAMYAKSAṂBODHI) only after cultivating the mind-ground over a hundred incalculable eons (ASAṂKHYEYAKALPA). The Korean monk WŎNHYO (617–686), in his *Pŏmmanggyŏng Posal kyebon sagi* ("Personal Exposition on the Bodhisattva Precepts Text of the 'Brahmā's Net Sūtra'"), described three different denotations of mind-ground in terms of the abider and the ground on which that abider resides. These are (1) the fifty stages of the bodhisattva path (the ten BODHISATTVABHŪMI, plus the forty stages preliminary to the bhūmis), which is the ground

on which the thought of enlightenment (BODHICITTA) of the bodhisattva abides; (2) the three categories of precepts (ŚĪLATRAYA), which is the ground on which the enlightened mind abides; and (3) the realm of reality (DHARMADHĀTU), which is the ground on which the practitioner abides. In the CHAN ZONG, the mind that was transmitted by BODHIDHARMA, the putative founder of Chan, is termed the mind-ground, and his teaching of the one (enlightened) mind is called the dharma teaching of the mind-ground (xindi famen). HUANGBO XIYUN (d. 850) says in his CHUANXIN FAYAO that the "dharma teaching of the mind-ground means that all dharmas are constructed depending upon this mind." Finally, GUIFENG ZONGMI in his CHANYUAN CHUCHUANJI TUXU ("Prolegomenon to the Comprehensive References to the Fountainhead of Chan Collection") equates mind-ground with the buddha-nature (FOXING): "the originally enlightened true nature of sentient beings is called both buddha-nature and mind-ground."

xingjiao. (J. angya; K. haenggak 行脚). In Chinese, lit., "wandering on foot," i.e., "pilgrimage"; a term used especially in the CHAN tradition to refer to a pilgrimage, often performed by a young monk who is in search of a teacher. Traditionally, this pilgrimage is made to numerous monasteries, most often located deep in the mountains, in hopes of having an interview with the resident master. In Japan, angya nowadays refers to the trip that young monks (known as unsui; see YUNSHUI) who have just completed their initial training at a provincial temple make to a major Zen training monastery, where they can continue their studies with a senior teacher (RŌSHI).

xingju shuo. (J. shōgusetsu; K. sŏnggu sŏl 性具說). In Chinese, the "nature-replete theory"; also known as liju sanqian, or "principle is replete with the trichiliocosm (TRISĀHASRAMAHĀSĀHASRALOKADHĀTU)." According to TIANTAI doctrine, everything within the three realms of existence (TRAIDHĀTUKA) is all contained within the original nature of all sentient beings. This theory is said to be based on TIANTAI ZHIYI'S notion of YINIAN SANQIAN, or "the trichiliocosm in a single thought." During the SHANJIA SHANWAI debate of the eleventh-century Tiantai community, the xingju theory came to connote the trichiliocosm that was replete within myriad phenomena and was distinguished from the HUAYAN doctrine of XINGQI.

xingli. (J. anri; K. haengni 行履). In Chinese, lit., "practice hidden"; a contraction of qiongxing lijian, which literally means "assiduous practice and hidden conduct." In the CHAN traditions, xingli generally refers to the daily conduct of a monk, which includes a whole gamut of activities from walking, sitting, and keeping silence to drinking tea and eating food. As such, the term can also refer to the progress of a monk's training or to the history of his activities.

xingqi. (J. shōki; K. sŏnggi 性起). In Chinese, "nature origination"; an important HUAYAN soteriological and ontological theory, which emphasizes the common ground of all phenomenal appearances in the true nature of the mind. The term xingqi probably derives from the "Baowang rulai xingqi pin" ("Chapter on the 'Nature Origination' of the Tathāgata Jeweled King"), the thirty-second chapter of BUDDHABHADRA'S (359–429) sixty-roll translation of the AVATAṂSAKASŪTRA, which seems to translate the Sanskrit term tathāgatagotrasaṃbhava (the arising of the lineage of the tathāgata). Its philosophical origins lie in the TATHĀGATAGARBHA corpus of literature, which maintains that all sentient beings are fundamentally identical to the buddhas, since they share the same buddha-nature (FOXING), and the term finds its antecedents in such earlier theories as the "conditioned origination of the true nature" (zhenxing yuanqi) proposed by the Southern DI LUN ZONG master JINGYING HUIYUAN (523–592). ¶ The term "nature origination" was coined by the second Huayan patriarch ZHIYAN (602–668), and its implications were elaborated by the "third patriarch" FAZANG (643–712) in his HUAYANJING TANXUAN JI and especially the "fifth patriarch" GUIFENG ZONGMI (780–841). In Zhiyan's soteriological interpretation of the xingqi, as elucidated in his influential treatise, HUAYAN JING NAIZHANGMEN DENG ZA KONGMU ZHANG, "nature" (xing) refers to the "essence" (TI) and "origination" (qi) to the appearance of that essence in the "mind-ground" (XINDI). Zhiyan explicitly contrasts nature origination with the soteriological formulations of dependent origination (C. yuanqi; S. PRATĪTYASAMUTPĀDA): unlike dependent origination, which explains the specific conditions through which the experience of enlightenment occurs—and thus inevitably distinguishes the ordinary realm of SAṂSĀRA from the enlightened realm of NIRVĀṆA—nature origination operates entirely on the level of fruition to explain how enlightenment can "originate" only from within the very "nature" of this world itself. Enlightenment is therefore not something that needs to be produced, for it is the inherent nature of the mind itself. Zongmi subsequently provides a more ontological explanation of the xingqi, by explaining that "nature" refers to the one mind (YIXIN) as discussed in the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna") and "origination" refers to the process by which that nature is made manifest in the world at large. Thus, in distinction to the "conditioned origination of the DHARMADHĀTU" (FAJIE YUANQI), which explains how all phenomena in the universe are mutual conditioning, and conditioned by, all other phenomena, "nature origination" instead clarifies that all those phenomena simultaneously derive from the common ground that is the nature. Nature origination thus provides a description of causality from the standpoint of the "dharmadhātu of the unimpeded interpenetration of principle and phenomena" (LISHI WU'AI FAJIE).

Xingsi. (C) (行思). See QINGYUAN XINGSI.

Xingtao. (C) (性瑫). See MU'AN XINGTAO.

xingzhe. (J. anja; K. haengja 行者). In Chinese, "postulant." According to the *Shishi yaolan*, a postulant refers to an

unordained lay practitioner, a minimum of sixteen years of age, who works in a monastery until he or she is formally ordained. Within the CHAN traditions of East Asia, the sixth patriarch (LIUZU) HUINENG (638–713) is usually presumed to have been a postulant at the time he achieved enlightenment and received transmission from the fifth patriarch HONGREN. In premodern China, a postulant referred to a layperson who lived and worked in the monastic compounds before ordination; the postulant was still permitted to grow his or her hair and might in some cases even have a spouse. Postulants were expected to observe the five lay precepts (C. wujie; S. PAÑCAŚĪLA), but with the third precept against improper sexual conduct strengthened to require celibacy. In Korea, postulants (haengja) work in the monastery for at least six months before being allowed to ordain as novices. In Japan, a postulant (anja) may or may not be expected to ordain and works under the guidance of the administrative monks (yakusō) at the monastery or temple. ¶ The term xingzhe may also be used generically to refer to anyone who studies or practices Buddhism.

xing zong. (J. shōshū; K. sŏng chong 性宗). In Chinese, the "school of the nature"; also known as the FAXING ZONG, or "Dharma Nature" school. In distinction to the XIANG ZONG, or "characteristics school," which mainly involved the analysis of phenomena, the xing school refers to those Buddhist intellectual traditions that studied the underlying essence or "nature" of reality. While the xiang school, i.e., the FAXIANG or "Dharma Characteristics" school, was a pejorative term referring to the Chinese YOGĀCĀRA school established on the basis of the new Yogācāra texts introduced from India by XUANZANG (600/602–664) and elaborated by his lineage, the name "xing zong" was used polemically to refer to the MADHYAMAKA teachings of the SAN LUN ZONG, the TATHĀGATAGARBHA teachings, or the last three of the five teachings in the HUAYAN school's hermeneutical taxonomy (see JIAOXIANG PANSHI): the advanced teachings of Mahāyāna (Dasheng zhongjiao), i.e., the sudden teachings (DUNJIAO) and the perfect teachings (YUANJIAO). Maintaining a strict differentiation between the xing and xiang tendencies was called xingxiang juepan (differentiation between nature and characteristics); a scholastic approach that sought to harmonize the two trends was characterized as xingxiang ronghui (harmonizing nature and characteristics).

Xin Huayan jing lun. (C) (新華嚴經論). See HUAYAN JING HELUN.

xinman chengfo. (C) (信滿成佛). See YUANRONG.

xinxin. (J. shinjin; K. sinsim 信心). In Chinese, "mind of faith" or "faith in mind"; the compound is typically interpreted to mean either faith in the purity of one's own mind or else a mind that has faith in the three jewels (RATNATRAYA) and the principle of causality. The "mind of faith" is generally considered to constitute the inception of the Buddhist path (MĀRGA). In the elaborate fifty-two stage path schema outlined in such scriptures as the AVATAṂSAKASŪTRA, the RENWANG JING, and the PUSA YINGLUO BENYE JING, "mind of faith" (xinxin) constitutes the first of the ten stages of faith (shixin), a preliminary level of the BODHISATTVA path generally placed prior to the generation of the thought of enlightenment (BODHICITTOTPĀDA) that occurs on the first of the ten abiding stages (shizhu). The MAHĀPARINIRVĀṆASŪTRA also says that the buddha-nature (FOXING) can be called the "great mind of faith" (da xinxin) because a bodhisattva-mahāsattva, through this mind of faith, comes to be endowed with the six perfections (PĀRAMITĀ). ¶ In the PURE LAND traditions, the mind of faith typically refers to faith in the vows of the buddha AMITĀBHA, which ensures that those who have sincere devotion and faith in that buddha will be reborn in his pure land of SUKHĀVATĪ. SHANDAO (613–681) divided the mind of faith into two types: (1) faith in one's lesser spiritual capacity (xinji), which involves acceptance of the fact that one has fallen in a state of delusion during myriads of rebirths, and (2) faith in dharma (xinfa), which is faith in the fact that one can be saved from this delusion through the vows of Amitābha. SHINRAN (1173–1262) glosses the mind of faith as the buddha-mind realized by entrusting oneself to Amitābha's name and vow. ¶ The term xinxin is also used as a translation of the Sanskrit ŚRADDHĀ (faith), which is one of the five spiritual faculties (INDRIYA), and of ADHYĀŚAYA (lit. "determination," "resolution"), which is used to describe the intention of the bodhisattva to liberate all beings from suffering. See also XINXIN MING.

Xinxing. (J Shingyō; K. Sinhaeng 信行) (540–594). In Chinese, "Practice of Faith"; founder of the "Third-Stage Sect" (SANJIE JIAO), a school of popular Buddhism that flourished during the Tang dynasty. Born in Ye in present-day Henan province, Xinxing ordained as a novice monk by the age of seventeen, after which he wandered the country, studying Buddhism and reading such Buddhist scriptures as the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), VIMALAKĪRTINIRDEŚA, and MAHĀPARINIRVĀṆASŪTRA. Feeling guilty for accepting from the laity offerings that he did not believe he deserved, Xinxing eventually abandoned monastic life, participating in various state labor projects and cultivating ascetic practices. He is also known to have bowed to all he met on the street, following the teachings of the SADĀPARIBHŪTA chapter of the *Saddharmapuṇḍarīkasūtra*. It is uncertain exactly when Xinxing established the Third-Stage Sect, but it was probably sometime around 587. In 589, at the behest of Emperor Wendi, he entered Chang'an, the capital city of the Sui dynasty, and stayed at Zhenjisi (Authentic Quiescence Monastery, later renamed Huadu monastery), where he promoted actively the teachings of the school until his death in 594. Xinxing had about three hundred followers, including Sengyong (543–631) and Huiru (d. c. 618). Due to the proscription of the sect during the Tang dynasty, only a few fragments of Xinxing's writings are extant. These include the *Sanjie fofa* ("Buddhadharma during the Third Stage"), in four rolls, and

sections of the *Duigen qixing fa* ("Principles on Practicing in Response to the Sense-Bases") and the *Ming Dasheng wujinzang fa* ("Clarifying the Teaching of the Mahāyāna's Inexhaustible Storehouse"). ¶ Xinxing's teachings derive from the doctrines of the degenerate dharma (MOFA) and the buddha-nature (FOXING); they emphasize almsgiving (S. DĀNA) as an efficient salvific method, which contributed to the development of the school's distinctive institution, the WUJINZANG YUAN (inexhaustible storehouse cloister). Because people during the degenerate age (mofa) were inevitably mistaken in their perceptions of reality, it was impossible for them to make any meaningful distinctions, whether between right and wrong, good and evil, or ordained and lay. Instead, adherents were taught to treat all things as manifestations of the buddha-nature, leading to a "universalist" perspective on Buddhism that was presumed to have supplanted all the previous teachings of the religion. Xinxing asserted that almsgiving was the epitome of Buddhist practice during the degenerate age of the dharma and that the true perfection of giving (DĀNAPĀRAMITĀ) meant that all people, monks and laypeople alike, should be making offerings to relieve the suffering of those most in need, including the poor, the orphaned, and the sick. In its radical reinterpretation of the practice of giving in Buddhism, even animals were considered to be a more appropriate object of charity than were buddhas, bodhisattvas, monks, or the three jewels (RATNATRAYA). Particularly significant were offerings made to the inexhaustible storehouse cloister (Wujinzang yuan), which served the needs of the impoverished and suffering in society—especially offerings made on the anniversary of Xinxing's death. See also XIANGFA JUEYI JING.

Xinxin ming. (J. Shinjinmei; K. Sinsim myŏng 信心銘). In Chinese, "Inscription on the Mind of Faith" (or "Faith in Mind"); attributed to the dubious third patriarch of the CHAN tradition, the otherwise-unknown SENGCAN. The *Xinxin ming* is a relatively short poem that praises nonduality and the method for attaining that experience. The last stanza, for instance, states that "faith and mind" (xinxin) are not two, and nonduality (lit. "not two") is the "perfected mind" (xinxin). According to the *Xinxin ming*, the method of attaining nonduality largely involves the cultivation of detachment, especially from words and thoughts. Along with the ZHENGDAO GE, CANTONG QI, and BAOJING SANMEI, the *Xinxin ming* has been regarded as one of the seminal statements of the Chan understanding of the dharma. Numerous commentaries on the poem were composed in East Asia. The *Xinxin ming* is still recited aloud in some Chan and ZEN monasteries.

xinxun zhongzi. (C) (新薰種子). In Chinese, "newly acquired seeds." See BĪJA.

Xiqian. (C) (希遷). See SHITOU XIQIAN.

Xitan ziji. (J. Shittan jiki; K. Siltam chagi 悉曇字記). In Chinese, "Notes on the SIDDHAM Syllabary," by the Chinese monk Zhikuang (d.u.); an influential primer of the Indian Siddham writing system. The *Xitan ziji* is said to be based on the teachings of a certain South Indian monk named Prajñābodhi. The main purpose of the *Xitan ziji* is to explain briefly the morphological operation of combining vowels and consonants. Zhikuang begins by discussing short and long syllables (e.g., a and ā). He then provides a detailed explanation of each vowel, their pronunciations, their various inflections, and their names. His coverage then extends to the syllables formed from the combination of consonants and vowels.

Xiuxin yao lun. (J. Shushin yōron; K. Susim yo non 修心要論). In Chinese, "Treatise on the Essentials of Cultivating the Mind," attributed to the fifth patriarch of the CHAN school, HONGREN; an important text on meditative practice in the early Chan tradition. The edition of the *Xiuxin yao lun* used within the Chan school was published at the Korean monastery of Ansimsa in 1570 during the Chosŏn dynasty under the title CH'OESANGSŬNG NON ("Treatise on the Supreme Vehicle") and again in 1907 as part of an edited volume of SŎN materials known as the SŎNMUN CH'WARYO. With the recent discovery of some earlier versions of the text at DUNHUANG, a more nuanced history of the *Xiuxin yao lun* has emerged. Overall, the different recensions all seem to share the common goal of establishing "guarding the mind" (shouxin) as an authentic and effective practice in Chan. Largely written in dialogic format, the *Xiuxin yao lun* emphasizes the inherent purity of the mind, which the author likens to suchness (TATHATĀ). The practice of "guarding the mind" seems to be related to or even derived from the fourth patriarch DAOXIN'S "guarding the one" (shouyi), a practice that Daoxin probably borrowed from indigenous Chinese materials. The *Xiuxin yao lun* also emphatically notes the superiority of shouxin over the popular practice of reciting the buddha's name (NIANFO) and a (misguided) experience of SAMĀDHI, suggesting a polemical context for its composition.

Xiuxi zhiguan zuochan fayao. (J. Shujū shikan zazen-hōyō; K. Susŭp chigwan chwasŏn pŏbyo 修習止觀坐禪法要). In Chinese, "Essentials for Sitting in Meditation and Cultivating Calmness and Contemplation"; also known as the *Tongmeng zhiguan* ("Calming and Contemplation for Neophytes") and the (*Tiantai*) *Xiao zhiguan* ("Shorter Calming and Contemplation of [Tiantai]"). The monk TIANTAI ZHIYI, the systematizer of the TIANTAI ZONG, is known to have composed this treatise as a guide for training his brother Zhen Zhen. The treatise was composed sometime after his *Shi chan boluomi cidi chanmen* (571) and MOHE ZHIGUAN (594). Despite its popular designation as the *Xiao zhiguan*, the relatively short *Xiuxi zhiguan zuochan fayao* borrows heavily from the *Shi chan boluomi cidi chanmen* and seems to have no direct relation to Zhiyi's massive *Mohe zhiguan*. A preface to the *Xiuxi zhiguan zuochan fayao* was prepared by the monk Yuanzhao (1048–1116) and was published together with the treatise in 1095. The treatise is divided into ten chapters: (1) necessary

conditions, (2) rebuking desires, (3) discarding obstructions, (4) regulation, (5) expedient methods (UPĀYA), (6) proper cultivation, (7) manifestation of the (roots of) virtue (KUŚALAMŪLA), (8) recognizing MĀRA, (9) healing ailments, and (10) attainment of fruits. The practice of meditation outlined in the treatise is based on the twenty-five preparatory expedient methods of the DAZHIDU LUN and the *Shi chan boluomi cidi chanmen*. As the title makes clear, the general purpose of the treatise is to provide the essentials for the concurrent practice of calming (ŚAMATHA) and insight (VIPAŚYANĀ). The treatise is still widely used in various Buddhist traditions as a practical manual for beginning meditators.

Xiyu ji. (C) (西域記). See DA TANG XIYU JI.

xuanmen. (C) (玄門). See SHI XUANMEN.

Xuansha sanbing. (J. Gensha sanbyō; K. Hyŏnsa sambyŏng 玄沙三病). In Chinese, "Xuansha's Three Infirmities"; a famous sermon attributed to the CHAN master XUANSHA SHIBEI. Different versions of the sermon are found in the BIYAN LU (case 88), JINGDE CHUANDENG LU (roll 18), KAIAN KOKUGO (roll 6), etc. One day, Xuansha asked the assembly what they would do should a blind, mute, and deaf person come to them for teaching, since the blind cannot see them raise their whisk, the mute cannot reply, and the deaf cannot hear. On a different occasion, the Chan master YUNMEN WENYAN demonstrated how this could be done. When a monk stepped back as Yunmen was about to hit him, the master whimsically noted that the monk was not blind. When the monk approached at his bidding, Yunmen then noted that the monk was not deaf. Finally, Yunmen asked the monk if he understood, and when the monk gave him a negative reply, Yunmen declared that he was not mute.

Xuansha Shibei. (J. Gensha Shibi; K. Hyŏnsa Sabi 玄沙師備) (835–908). Chinese CHAN master in the lineage of QINGYUAN XINGSI (d. 740) and a predecessor in the FAYAN ZONG of the classical Chan school; he was a native of Min (present-day Fujian province). Xuansha left home to study with the Chan master Lingxun (d.u.) on Mt. Furong and later received the monastic precepts in 864 from the VINAYA master Daoxuan (d.u.) at the monastery KAIYUANSI in Jiangxi province. Two years later, he visited the Chan master XUEFENG YICUN and became his disciple. Xuansha's adherence to the precepts is said to have been so strict that he was given the nickname Bei Doutuo, or "DHUTAṄGA Bei." He subsequently left Xuefeng's side and established a cloister on Mt. Sheng (also known as Mt. Xuansha) in Fujian province, named Xuansha (Sublime Sand). In 898, he was summoned to live in the cloister of Anguoyin in Fujian by the king of Min. Emperor Zhaozong (r. 888–904) gave Xuansha the title of Great Master Zongyi (Tradition's Best). Luohan Kuichen (867–928) was one of his disciples. His sayings were published in the *Xuansha guanglu* and *Xuansha Shibei chanshi yulu*, and sporadic references to some of his more popular sayings (e.g., XUANSHA SANBING) can also be found in the BIYAN LU.

Xuansu. (C) (玄素). See HELIN XUANSU.

Xuanxue. (J. Gengaku; K. Hyŏnhak 玄學). In Chinese, "Dark Learning," or "Profound Learning"; a Chinese philosophical movement of the third through sixth centuries CE, which provided a fertile intellectual ground for the emergence of early Chinese forms of Buddhism. It is sometimes known as "Neo-Daoism," although the target audience of Xuanxue literati was fellow elite rather than adherents of the new schools of religious Daoism that were then developing in China. The social and political upheaval that accompanied the fall of the Han dynasty (206 BCE–220 CE) prompted many Chinese intellectuals to question the traditional foundations of Chinese thought and society and opened them to alternative worldviews. Buddhism, which was just then beginning to filter into Chinese territories, found a receptive audience among these groups of thinkers. Xuanxue scholars critiqued and reinterpreted the normative Chinese teachings of Confucianism by drawing on the so-called "three dark [treatises]" (sanxuan), i.e., the *Yijing* ("Book of Changes"), *Daode jing* ("The Way and Its Power"), and the *Zhuangzi*. Xuanxue designates a broad intellectual trend that sought a new way of understanding the "way" (DAO). Xuanxue philosophers explored the ontological grounding of the changing and diverse world of "being" (C. you) on a permanent and indivisible substratum called "nothingness" or "nonbeing" (C. WU). Xuanxue thinkers such as Wang Bi (226–249), who is regarded as the founder of the movement, and Guo Xiang (d. 312), who is often considered to represent its apex, explored how this ontological stratum of nothingness still was able to produce the world of being in all its diversity. This process was clarified by adopting the mainstream Chinese philosophical bifurcations between (1) the ineffable "substance" or "essence" (TI) of things and the ways in which that substance "functions" (YONG) in the phenomenal world; and (2) the "patterns" or "principles" (LI) that underlie all things and their phenomenal manifestations (SHI). These distinctions between ti/yong and li/shi proved to be extremely influential in subsequent Chinese Buddhist exegesis. Also according to Xuanxue interpretation, the sage (shengren) is one who understands this association between being and nothingness but realizes that their relationship is fundamentally inexpressible; nevertheless,

in order to make it intelligible to others, he feels "compelled" to describe it verbally. This emphasis on the inadequacy of language resonated with Buddhist treatments of the ineffability of spiritual experience and the necessity to deploy verbal stratagems (UPĀYA) in order to make that experience intelligible to others. The sage was able to manifest his understanding in the phenomenal world not by conscious intent but as an automatic "response" (ying) to "stimuli" (gan); early Chinese Buddhist thinkers deploy the compound "stimulus and response" (GANYING) to explain the Buddhist concepts of action (KARMAN) and of grace (i.e., the "response" of a buddha or BODHISATTVA to a supplicant's invocation, or "stimulus"). Xuanxue thinkers also began to explore parallels between their ideas of "nonbeing" (wu) and the notion of emptiness (ŚŪNYATĀ) in the PRAJÑĀPĀRAMITĀ corpus, which was just then being translated into Chinese. Xuanxue exegesis has often been described in the scholarly literature as a "matching concepts" (GEYI) style of interpretation, where Buddhist concepts were elucidated by drawing on indigenous Chinese philosophical terminology, though this interpretation of geyi has recently been called into question. Although Xuanxue vanished as a philosophical movement by the early sixth century, its influence was profound on several pioneering Chinese Buddhist thinkers, including ZHI DUN (314–366) and SENGZHAO (374–414), and on such early philosophical schools of Chinese Buddhism as the SAN LUN ZONG and DI LUN ZONG, and eventually on the TIANTAI ZONG and HUAYAN ZONG of the mature Chinese tradition.

Xuanzang. (J. Genjō; K. Hyŏnjang 玄奘) (600/602–664). Chinese monk, pilgrim, and patriarch of the Chinese YOGĀCĀRA tradition (FAXIANG ZONG) and one of the two most influential and prolific translators of Indian Buddhist texts into Chinese, along with KUMĀRAJĪVA (344–413); in English sources, his name is seen transcribed in a variety of ways (now all outmoded), including Hsüan-tsang, Hiuen Tsiang, Yuan Chwang, etc. Xuanzang was born into a literati family in Henan province in either 600 or 602 (although a consensus is building around the latter date). In 612, during a state-supported ordination ceremony, Xuanzang entered the monastery of Jingtusi in Luoyang where his older brother was residing as a monk. There, Xuanzang and his brother studied the MAHĀPARINIRVĀṆASŪTRA and various MAHĀYĀNA texts. When the Sui dynasty collapsed in 618, they both fled the capital for the safety of the countryside. In 622, Xuanzang was given the complete monastic precepts and was fully ordained as a monk (BHIKṢU). By this time Xuanzang had also studied earlier translations of the MAHĀYĀNASAṂGRAHA, JÑĀNAPRASTHĀNA, and *TATTVASIDDHI under various teachers but came to doubt the accuracy of those translations and the veracity of their teachings. In order to resolve his doubts, Xuanzang embarked on an epic journey to India in 627, in flagrant disregard of the Taizong emperor's (r. 626–629) edict against traveling abroad. His trek across the SILK ROAD and India is well known, thanks to his travel record, the DA TANG XIYU JI, his official biography, and the famous Ming-dynasty comic novel based on Xuangzang's travels, XIYU JI ("Journey to the West"). (See "Routes of Chinese Pilgrims" map.) According to these sources, Xuanzang visited the various Buddhist pilgrimage sites of the subcontinent (see MAHĀSTHĀNA) and spent years at NĀLANDĀ monastery mastering Sanskrit, including fifteen months studying the texts of the Indian Yogācāra tradition under the tutelage of the 106-year-old ŚĪLABHADRA. In 645, Xuanzang returned to the Tang capital of Chang'an with over six hundred Sanskrit manuscripts that he had acquired in India, along with images, relics, and other artifacts. (These materials were stored in a five-story stone pagoda, named the DAYAN TA, or Great Wild Goose Pagoda, that Xuanzang later built on the grounds of the monastery of DA CI'ENSI; the pagoda is still a major tourist attraction in Xi'an.) The Taizong and Gaozong emperors (r. 649–683) honored Xuanzang with the title TREPIṬAKA (C. sanzang fashi; "master of the Buddhist canon") and established a translation bureau (yijing yuan) in the capital for the master, where Xuanzang supervised a legion of monks in charge of transcribing the texts, "rectifying" (viz., clarifying) their meaning, compiling the translations, polishing the renderings, and certifying both their meaning and syntax. Xuanzang and his team developed an etymologically precise set of Chinese equivalencies for Buddhist technical terminology, and his translations are known for their rigorous philological accuracy (although sometimes at the expense of their readability). While residing at such sites as HONGFUSI, Da ci'ensi, and the palace over an eighteen-year period, Xuanzang oversaw the translation of seventy-six sūtras and śāstras in a total of 1,347 rolls, nearly four times the number of texts translated by Kumārajīva, probably the most influential of translators into Chinese. (Scholars have estimated that Xuanzang and his team completed one roll of translation every five days over those eighteen years of work.) Xuanzang's influence was so immense that he is often recognized as initiating the "new translation" period in the history of the Chinese translation of Buddhist texts, in distinction to the "old translation" period where Kumārajīva's renderings hold pride of place. Among the more important translations made by Xuanzang and his translation team are the foundational texts of the Yogācāra school, such as the CHENG WEISHI LUN (*_Vijñaptimātratāsiddhi_), ASAṄGA's MAHĀYĀNASAṂGRAHA, and the YOGĀCĀRABHŪMIŚĀSTRA, and many of the major works associated with the SARVĀSTIVĀDA school of ABHIDHARMA, including definitive translations of the _Jñānaprasthāna_ and the encyclopedic ABHIDHARMAMAHĀVIBHĀṢĀ, as well as complete translations of VASUBANDHU's ABHIDHARMAKOŚABHĀṢYA and SAṂGHABHADRA's *NYĀYĀNUSĀRA. He translated (and retranslated) many major Mahāyāna sūtras and śāstras, including the massive MAHĀPRAJÑĀPĀRAMITĀSŪTRA, in six hundred rolls; this translation is given a place of honor as the first scripture in the East Asian Buddhist canons (see DAZANGJING; KORYŎ TAEJANGGYŎNG). Also attributed to Xuanzang is the Chinese translation of the famed PRAJÑĀPĀRAMITĀHṚDAYASŪTRA, or "Heart Sūtra," probably the most widely read and recited text in East Asian Buddhism. Because Xuanzang himself

experienced a palpable sense of the Buddha's absence while he was sojourning in India, he also translated the *Nandimitrāvadāna* (*Da aluohan Nantimiduo luo suoshuo fazhu ji*, abbr. *Fazhu ji*, "Record of the Duration of the Dharma Spoken by the Great Arhat NANDIMITRA"), the definitive text on the sixteen ARHAT protectors (see ṢOḌAŚASTHAVIRA) of Buddhism, which became the basis for the LOUHAN cult in East Asia.

Xuanzhong ming. (J. Genchūmei; K. Hyŏnjung myŏng 玄中銘). In Chinese, "Inscription on the Center of Mystery," by the Chinese CHAN master DONGSHAN LIANGJIE. In this poem, Dongshan sings of the "mystery" of subtle reciprocation (huihu wanzhuan), simultaneous illumination of phenomena and principle (SHI LI shuangming), and the unimpededness of essence and function (TI YONG wuzhi), which he likens to the activities of a sage. The *Xuanzhong ming* is found in Dongshan's recorded sayings, the *Dongshan yulu*.

Xuedou Chongxian. (J. Setchō Jūken; K. Sŏltu Chunghyŏn 雪竇重顯) (980–1052). Chinese CHAN master in the YUNMEN ZONG of the mature Chan tradition; also known as Yinzhi. Xuedou was a native of Sichuan province. After his ordination under Renxian (d.u.) of the cloister of Pu'anyuan, Xuedou received doctrinal training from Yuanying (d.u.) of Dacisi and Guyin Yuncong (965–1032) of Shimen. During his travels in the south, Xuedou visited the Yunmen master Zhimen Guangzuo (d.u.) in Hubei province and became his leading disciple. Xuedou later resided on Cuiwei peak near Tongting Lake and the monastery of Zishengsi on Mt. Xuedou in Zhejiang province, whence he acquired his toponym. During his residence in Zishengsi, Xuedou acquired more than seventy students and composed his famed collection of one hundred old cases (guce, viz., GONG'AN) known as the *Xuedou songgu*, which in turn formed the basis of Chan master YUANWU KEQIN's influential BIYAN LU. Xuedou also composed the *Tongting yulu*, *Xuedou kaitang lu*, *Puquan ji*, *Zuying ji*, and various other texts. Xuedou's successful career as a teacher is often considered a period of revitalization of the Yunmen tradition.

Xuefeng Yicun. (J. Seppō Gison; K. Sŏlbong Ŭijon 雪峰義存) (822–908). Chinese CHAN master in the lineage of QINGYUAN XINGSI (d. 740); a native of Min (present-day Fujian province). He was ordained at the age of seventeen and given the dharma name Yicun, but temporarily returned to lay clothing during the severe persecution of the HUICHANG FANAN and studied under Furong Lingxun (d.u.). After a brief stay with DONGSHAN LIANGJIE, Xuefeng left at Dongshan's direction to study with DESHAN XUANJIAN (780/2–865). Xuefeng then embarked on a journey with his colleagues Yantou Quanhuo (828–887) and Qinshan Wensui (d.u.). With the help of Yantou, Xuefeng is said to have had his first awakening experience during a snowfall on Mt. Ao in Hunan. Xuefeng and Yantou became Deshan's leading disciples. Xuefeng later established a monastery with the support of the king of Min on what came to be known as Mt. Xuefeng in Fujian province. The mountain was originally known as Mt. Xianggu (Elephant Bone) but acquired its new name after a famous exchange at the mountain between the king of Min and the monk Xuefeng. Xuefeng's monastery was given the name Chongshengsi and Yingtian Xuefeng Chanyuan. In 882, Emperor Xizong (r. 873–888) bestowed upon him the title Great Master Zhenjue (Authentic Enlightenment) and the purple robe. His disciples include YUNMEN WENYAN (the founder of the YUNMEN ZONG of the classical Chan school), XUANSHA SHIBEI (whose students eventually would go on to establish the FAYAN ZONG), Changjing Huileng (854–932), Baofu Congzhan (d. 928), and Gushan Shenyan (d. 943). His teachings are recorded in his *Xuefeng Zhenjue chanshi yulu*.

Xuemo lun. [alt. Xuemai lun] (J. Kechimyakuron; K. Hyŏlmaek non 血脈論). In Chinese, "Treatise on the Blood-Vessel." This short treatise has been traditionally attributed to the legendary Indian monk BODHIDHARMA and is also referred to as the *Damo dashi xuemo lun* ("Great Master [Bodhi]dharma's Treatise on the Blood-Vessel"). Judging from its style of argumentation and doctrinal content, the treatise was most probably composed by a CHAN adept of the HONGZHOU ZONG or NIUTOU ZONG sometime during the ninth century, long after Bodhidharma's death. The treatise begins with the claim that the three realms of existence (TRAIDHĀTUKA) return to the "one mind" (YIXIN), which was transmitted from one buddha to another without recourse to words or letters (BULI WENZI). From beginning to end, the treatise consistently underscores the importance of the inherent purity of the mind (xin) and claims that the mind is none other than the buddha, DHARMAKĀYA, BODHI, and NIRVĀṆA. The treatise also polemically contends that the practice of chanting and being mindful of the buddha AMITĀBHA'S name (NIANFO), reading scriptures, and upholding the precepts may guarantee a better rebirth and intelligence but do not ensure the achievement of buddhahood. According to the treatise, only the practice of seeing one's own nature (JIANXING) can lead to buddhahood (see JIANXING CHENGFO). The first known edition of the *Xuemo lun* was first published in Korea in 1473 and was republished on several subsequent occasions. It is often anthologized in larger compilations such as the SŎNMUN CH'WARYO and SHŌSHITSU ROKUMON.

Xu gaoseng zhuan. (J. Zoku kōsōden; K. Sok kosŭng chŏn 續高僧傳). In Chinese, "Supplement to the Biographies of Eminent Monks," compiled by the VINAYA master DAOXUAN; also known as the *Tang gaoseng zhuan*. As the title suggests, the *Xu gaoseng zhuan* "supplements" or "continues" the work of HUIJIAO's earlier GAOSENG ZHUAN and records the lives of monks who were active in the period between Huijiao's composition during the Liang dynasty and Daoxuan's own time. The *Xu gaoseng zhuan* contains 485 major and 219 appended biographies, neatly categorized under translators (yijing), exegetes (yijie), practitioners of meditation (xichan), specialists of VINAYA

(minglü), protectors of the DHARMA (hufa), sympathetic resonance (GANTONG), sacrifice of the body (YISHEN), chanters (dusong), benefactors (xingfu), and miscellaneous (zake). Although Daoxuan generally followed Huijiao's earlier categorizations, he made several changes. In lieu of Huijiao's divine wonders (shenyi), viz., thaumaturgists, Daoxuan opted to use the term sympathetic resonance, instead; he also subsumed Huijiao's hymnodists (jingshi) and propagators (changdao) under the "miscellaneous" category. Daoxuan also introduced the new category of protectors of the dharma order to leave a record of disputes that occurred at court with Daoists. These adjustments seem to reflect ongoing developments within Chinese Buddhism in how to conceive of, and write, history. Other related biographical collections include ZANNING's SONG GAOSENG ZHUAN, Shi Baochang's BIQIUNI ZHUAN, the Korean HAEDONG KOSŬNG CHŎN, and the Japanese HONCHŌ KŌSŌDEN.

Xutang Zhiyu. (J. Kidō Chigu; K. Hŏdang Chiu 虛堂智愚) (1185–1269). Chinese CHAN master in the LINJI ZONG; also known as Xijingsou. Xutang was ordained at age sixteen by Shiyun (d.u.) of Pumingsi and later became the disciple of YUN'AN PUYAN (1156–1226). He continued to visit various teachers throughout the country until he became the abbot of the monastery of Xingshengsi in 1229. Xutang also served as abbot of many other important Chan monasteries throughout his illustrious career, including BAOLINSI and WANSHOUSI. The emperors Lizong (r. 1224–1264) and Duzong (r. 1264–1274) honored Xutang as their teacher. Among his disciples is the Japanese monk NANPO JŌMYŌ (1235–1308), to whom the abbots of DAITOKUJI and MYŌSHINJI trace their lineage. The eminent Japanese monk and abbot of Daitokuji, IKKYŪ SŌJUN, even went so far as to consider himself to be a reincarnation of Xutang and had numerous portraits of himself drawn in the likeness of Xutang.

Xuyun. (虛雲) (1840–1959). In Chinese, "Empty Cloud"; CHAN monk of the modern period, renowned as one of the major reformers of modern Chinese Buddhism, especially of the Chan school; also known as Deqing. Xuyun was a native of Xiangxiang in Hunan province. He entered the monastery at the age of nineteen and received the precepts a year later from the monk Miaolian (d.u.). He then embarked on a long pilgrimage to famous mountains in China and to such distant sites as Tibet, India, and Sri Lanka, where he studied with teachers in a variety of Buddhist traditions. At the age of forty-three, Xuyun climbed WUTAISHAN, where he is said to have had a vision of the resident bodhisattva MAÑJUŚRĪ. His awakening experience came at the drop of a teacup at the age of fifty-six. Xuyun was particularly renowned for his austerities and longevity. He became an important exponent of the convergence of "questioning meditation" (KANHUA CHAN) and recitation of the Buddha's name (NIANFO), who was noted for using the meditative topic (HUATOU) "Who is reciting the Buddha's name?" Xuyun spent the rest of his career propagating Buddhism throughout China until his death on Mt. Yunju in Jiangxi province at the advanced age of 120. See also TAIXU; YINGUANG.

Y

yab yum. A Tibetan term, literally meaning "father-mother," referring to the theme common in VAJRAYĀNA iconography, especially that of ANUTTARAYOGATANTRA, viz., male and female deities in sexual union. The deities are depicted either standing face-to-face or sitting, with the male deity in the VAJRĀSANA and the female deity seated on the male deity's lap, with her legs wrapped around his back, their arms embracing each other. Although interpreted in numerous ways, the male figure is generally understood to represent compassion (KARUṆĀ) and method (UPĀYA) and the female figure wisdom (PRAJÑĀ). Their union represents the indivisibility of these two qualities in the state of buddhahood. Although often described in such symbolic terms, numerous SĀDHANAs associated with the anuttarayogatantras include the practice of sexual union.

yakṣa. (P. yakkha; T. gnod sbyin; C. yecha; J. yasha; K. yach'a 夜叉). In Indian mythology, a class of nature spirit, commonly serving as local guardians of the earth and of trees and the treasures hidden there. They possess supernatural powers—including the ability to fly, to change their appearance, and to disappear—which they can employ for good or for evil. They appear often in Buddhist texts, sometimes serving as benevolent protectors of and messengers for the Buddha and his disciples. The most famous of them is VAJRAPĀṆI, who accompanies the Buddha as his bodyguard. They are commonly listed among the audience of the Buddha's sermons, with some attaining the rank of stream-enterer. There are also demonic yakṣas, especially the female yakṣas or yakṣiṇī, who devour infants and corpses and must be subdued by the Buddha, an ARHAT, or a BODHISATTVA. The continent of UTTARAKURU and the island of Sri Lanka were considered to be abodes of the yakṣas.

Yakushiji. (藥師寺). In Japanese, "Medicine Buddha Monastery." One of the seven great monasteries of Nara, Japan. Yakushiji is currently the headquarters (daihonzan) of the Hossō (C. FAXIANG ZONG) tradition. In 680, Emperor Tenmu (r. 673–686) ordered the construction of a statue of the Medicine Buddha (BHAIṢAJYAGURU) and a new monastery to pray for the recovery of his ill consort, who later succeeded him as Empress Jitō (r. 687–697). Due to the emperor's death and the lack of sufficient funds, construction began under Empress Jitō's reign in the old capital of Fujiwarakyō in present-day Kashihara city. Construction was completed in 697, but the monastery was physically relocated to the new capital Heijōkyō in 718 after the transfer of the capital in 710. The monastery originally consisted of two pagodas to the east and the west flanking a central golden hall (kondō) and a lecture hall (kōdō) behind it. After a great fire in 973, only the pagodas and the golden hall remained. The hall collapsed during a typhoon in 1445 and the west pagoda was lost to fire during a war in 1528. Reconstruction of the monastery took place during most of the late twentieth and early twenty-first centuries. The golden hall houses the famed Medicine Buddha triad from the Hakuhō period (645–710), now designated a national treasure.

Yama. (T. Gshin rje; C. Yanmo wang; J. Enma ō; K. Yŏmma wang 閻魔王). In the Buddhist pantheon, the lord of death and the king of hell. Among the six rebirth destinies (ṢAḌGATI), Yama is considered a divinity (DEVA), even though his abode is variously placed in heaven (SVARGA), in the realm of the ghosts (PRETA), and in the hells (see NĀRAKA). Birth, old age, sickness, and punishment are said to be his messengers, sent among humans to remind them to avoid evil deeds and to live virtuously. Since KARMAN functions as a natural law, with suffering resulting from unvirtuous actions and happiness from virtuous actions, the process of moral cause and effect should proceed without the need for a judge to mete out rewards and punishments. However, in Indian sources, Yama is sometimes described as the judge of the dead, who interrogates them about their deeds and assigns the wicked to the appropriate hell. This role of Yama was expanded in China, where he oversaw a quintessentially Chinese infernal bureaucracy: Yama is said to have organized the complex array of indigenous "subterranean prisons" (C. diyu) into a streamlined system of ten infernal courts, each presided over by a different king who would judge the incoming denizens. These judges were known collectively as the ten kings of hell (C. SHIWANG) and are the subject of the eponymous *Shiwang jing*, a Chinese indigenous scripture (see APOCRYPHA). See also KṢITIGARBHA.

yāma. (T. 'thab bral; C. yemo tian; J. yamaten; K. yama ch'ŏn 夜摩天). In Sanskrit and Pāli, proper name of a heaven in the sensuous realm (KĀMADHĀTU); also known as suyāma ("where the seasons are always good"). The yāma heaven is the third from the bottom of the six heavens located in the sensuous realm above Mount SUMERU, between TRĀYASTRIṂŚA below and

TUṢITA above. Like all Buddhist heavens, it is a place of rebirth and not a permanent post-mortem abode. Because this heaven is located in the sky, the divinities who inhabit it do not need to engage in combat with the ASURAS who dwell on the slopes of Mount Sumeru, hence the Tibetan interpretation of the name as "free from conflict." (The Chinese is a Sinographic transcription of the Sanskrit.) The life span in this heaven is said to be two thousand years, with each day lasting two hundred human years.

yamabushi. (山伏). In Japanese, lit. "those who lie down [or sleep] in the mountains"; itinerant mountain ascetics associated with the SHUGENDŌ (way of cultivating supernatural power) tradition; also known as shugenja, or "those who cultivate supernatural powers." Records reveal that as early as the Nara period (although possibly before), yamabushi practiced a variety of severe austerities in the mountains, which were thought to be numinous places that housed the spirits of the dead. Thanks to the special powers accumulated through this training, such adepts were able to mediate with the realm of the dead, convert baleful spirits, and provide healing services. During this early period, the yamabushi were not formally ordained but instead operated independently, drawing freely from Buddhism, Daoism, and indigenous religious beliefs. In the mid to late Heian period (794–1185), such Shugendō sites as the mountains of Yoshino and KUMANO became affiliated with Japanese Tendaishū (TIANTAI) and SHINGONSHŪ institutions, and yamabushi increasingly incorporated esoteric Buddhism into their training, whereby they strove to attain buddhahood (SOKUSHIN JŌBUTSU) through severe asceticism, such as immersion under waterfalls, solitary confinement in caves, fasting, meditating, and the recitation of spells (MANTRA). In addition, yamabushi guided people on pilgrimages through their mountain redoubts and performed powerful rites for the aristocratic nobility and royal court. During the Tokugawa period (1600–1868), they were forced because of temple regulations (J. jin hatto) to adopt permanent residences. While higher-ranking practitioners stayed at the mountain centers, many others settled down in villages, where they performed shamanic rituals and offered healing and prayers. Later in the Tokugawa period, many of these practices would provide the foundation for Japan's so-called new religions. When Shugendō was proscribed in 1872, yamabushi were forced to join either Buddhist or Shintō institutions and to forgo many of their former practices. When this ban was lifted in the late 1940s following World War II, yamabushi at some centers, including Mt. Haguro and Kumano, resumed their former practice, which continues to the present.

Yamaka. In Pāli, "Pairs"; one of the principal books of the Pāli abhidhammapiṭaka (see ABHIDHARMAPIṬAKA), which has no precise analogue in the abhidharmas of other MAINSTREAM BUDDHIST SCHOOLS. The text belongs to the second stratum of Pāli abhidhamma works and is traditionally dated to the time of the third Buddhist council (see COUNCIL, THIRD) (c. third–second century BCE). The *Yamaka* is divided into ten chapters: (1) nine kinds of faculties or roots (mūla), for example, the three wholesome faculties (see KUŚALAMŪLA), the three unwholesome faculties (see AKUŚALAMŪLA), and the three neutral faculties; (2) five aggregates (see SKANDHA); (3) six sensory bases (ĀYATANA); (4) eighteen elements (DHĀTU); (5) the FOUR NOBLE TRUTHS; (6) conditioning factors (see SAṂSKĀRA) created via body, speech, and mind; (7) the proclivities (see ANUŚAYA); (8) mind (CITTA); (9) factors (see DHARMA); and (10) faculties (INDRIYA). Each of these chapters is organized into three sections: (1) delimitation of terminology, viz., the precise denotation of the terms covered in a chapter; (2) process, viz., discussions of how the terms are deployed in the course of abhidhamma analysis; and (3) penetration, viz., what understandings are generated through this analysis. The coverage proceeds through series of paired exchanges. An example is the opening discussion of the truth of suffering (P. dukkhasacca; S. DUḤKHASATYA). Exchange A asks: "Are painful sensations (P. dukkha; S. DUḤKHA) always included in the truth of suffering? Yes." Exchange B asks: "Does the truth of suffering always refer to painful sensations? No, the truth of suffering involves other types of suffering apart from physical and psychological suffering." Through this exchange, the text clarifies that the term dukkha cannot be limited solely to physical or psychological pain (see DUḤKHADUḤKHATĀ), but suggests that it may also involve the suffering caused by change (see VIPARIṆĀMADUḤKHATĀ) and in fact lies at the very root of conditioning itself (see SAṂSKĀRADUḤKHATĀ). Perhaps because its format of paired exchanges does not readily lend itself to systematic analysis, the *Yamaka* has the dubious distinction of being probably the least read of all the works in the Pāli abhidhammapiṭaka.

yamakaprātihārya. (P. yamakapāṭihāriya; T. cho 'phrul ya ma zung; C. shuangshenbian; J. sōjinpen; K. ssangsinbyŏn 雙神變). In Sanskrit, "paired miracle" or "twin miracle"; this and the MAHĀPRĀTIHĀRYA are the two most famous of the miracles performed by the Buddha during his career, which are frequently narrated in both canonical and commentarial literature and widely depicted in Buddhist art. Both types are generally understood to have taken place in the city of ŚRĀVASTĪ and thus are often referred to collectively in the literature as the ŚRĀVASTĪ MIRACLES. The yamakaprātihārya involved the manifestation of the contrasting physical elements (MAHĀBHŪTA) of fire and water. After the Buddha established a rule preventing monks from displaying miraculous powers, he was challenged by a group of non-Buddhist yogins to a display of his own supranormal powers. As a buddha, he was exempt from this prohibition, so he accepted their challenge and stated that he would perform a miracle at the foot of a mango tree. To keep him from proceeding, his opponents uprooted all the mango trees in the vicinity, leading the Buddha to cause a great tree to grow spontaneously from a mango seed. At the appointed time, the Buddha created a bejeweled walkway in the sky and then proceeded back and forth on it, causing flames to emerge from

the upper part of his body and streams of water from the lower part, then water from the upper part and flames from the lower part, then flames from the right side and water from the left side, then from his front and back, right eye and left eye, right ear and left ear, etc. He then created a double of himself (see MANOMAYAKĀYA), with whom he conversed. It is because of the simultaneous presence of fire and water (and perhaps because of his creation of his doppelgänger) that the event is called the "paired miracle." After performing the miracle and preaching for sixteen days, the Buddha departed for the heaven of the thirty-three (TRĀYASTRIṂŚA), where he spent the rains retreat (VARṢĀ) teaching the ABHIDHARMA to his mother MĀYĀ (who had been reborn as a divinity in the TUṢITA heaven). This miracle is said to be performed by all buddhas (and only by a buddha) and always in Śrāvastī.

Yamāntaka. (T. Gshin rje gshed; C. Yanmandejia/Daweide mingwang; J. Enmantokuka/Daiitoku myōō; K. Yŏmmandŏkka/Taewidŏk myŏngwang 焰曼德迦/大威德明王). In Sanskrit, "Destroyer of Death" (lit. "he who brings an end (antaka) to death (yama)"), closely associated with BHAIRAVA ("The Frightening One") and VAJRABHAIRAVA; one of the most important tantric deities. In Tibetan Buddhism, he was one of the three primary YI DAM of the DGE LUGS sect (together with GUHYASAMĀJA and CAKRASAṂVARA). Yamāntaka is considered to be a fully enlightened buddha, who appears always in a wrathful form. He is depicted both with and without a consort; the solitary depiction, called "sole hero" (ekavīra), is particularly popular. Bhairava also appears in the Hindu tantric pantheon as a wrathful manifestation of the god Śiva. According to Buddhist mythology, MAÑJUŚRĪ, the bodhisattva of wisdom, took the form of the terrifying bull-headed deity in order to destroy the Lord of Death (YAMA) who was ravaging the country; hence the epithet Yamāntaka (Destroyer of Death). Yamāntaka has nine heads, thirty-four arms, and sixteen legs, each arm holding a different weapon or frightening object, and each foot trampling a different being. Each of these receives detailed symbolic interpretation in ritual and meditation texts associated with Yamāntaka. Thus, his two horns are said to represent the two truths (SATYADVAYA) of MADHYAMAKA philosophy: ultimate truth (PARAMĀRTHASATYA) and conventional truth (SAṂVṚTISATYA). His nine heads represent the nine categories (NAVAṄGA[PĀVACANA]) of Buddhist scriptures. His thirty-four arms, together with his body, speech, and mind, symbolize the thirty-seven "factors pertaining to awakening" (BODHIPĀKṢIKADHARMA). His sixteen legs symbolize the sixteen emptinesses (ŚŪNYATĀ). The humans and animals that he tramples with his right foot represent the attainment of the eight accomplishments, viz., supernatural abilities acquired through tantric practice, including the ability to fly, to become invisible, and travel underground. The birds that he tramples with his left foot represent the attainment of the eight powers, another set of magical abilities, including the ability to travel anywhere in an instant and the power to create emanations. His erect phallus represents great bliss, his nakedness means that he is not covered up with obstacles, and his hair standing on end symbolizes his passage beyond all sorrow (DUḤKHA). The Yamāntaka root tantras are the *Sarvatathāgatakāyavāgcittakṛṣṇayamāritantra* ("Body, Speech, and Mind of All Tathāgatas: Black Enemy of Death Tantra") in eighteen chapters; *Sarvatathāgatakāyavāgcittaraktayamāritantra* ("Red Enemy of Death Tantra," in large part, a different version of the same tantra in nineteen chapters); and the important *Kṛṣṇayamārimukhatantra*, also called the "Three Summaries Tantra" (T. *Rgyud sdom gsum*) because it has no chapters. Also included in the cycle is the *Yamāntakakrodhavijayatantra* ("Victorious Wrathful Yamāntaka Tantra"), a CARYĀTANTRA. Based on these three works, in Tibet, the three varieties of Yamāntaka are called the "red, black, and the frightening" (T. dmar nag 'jigs gsum) derived from Raktayamāri (Red Enemy of Death), Kṛṣṇayamāri (Black Enemy of Death), and Vajrabhairava.

yāna. (T. theg pa; C. sheng; J. jō; K. sŭng 乘). In Sanskrit, "vehicle," "conveyance"; a common Sanskrit term for any means of transportation (in Pāli materials and in many of the MAINSTREAM BUDDHIST SCHOOLS, the term is generally used in this literal sense). In MAHĀYĀNA literature, the term takes on great significance in the metaphorical sense of a mode of transportation along the path to enlightenment, becoming a constituent of the term Mahāyāna ("Great Vehicle") itself. In Mahāyāna SŪTRAS and ŚĀSTRAS, this rhetorical sense of the term is often put to polemical use, with the followers of the Buddha being placed into three or two vehicles. The three vehicles are the BODHISATTVAYĀNA or Mahāyāna, the PRATYEKABUDDHAYĀNA, and the ŚRĀVAKAYĀNA. The two vehicles are the Mahāyāna and the HĪNAYĀNA (the "lesser vehicle," or even more disparagingly, "base vehicle" or "vile vehicle"), which subsumes the pratyekabuddhayāna and the śrāvakayāna. Other uses of the term yāna include the BUDDHAYĀNA and the EKAYĀNA ("one vehicle"), whose precise relationship to the bodhisattvayāna and the Mahāyāna is discussed in the scholastic literature. Among the Mahāyāna sūtras, the most celebrated expression of the rhetoric of the yānas occurs in the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra") where, in the parable of the burning house, a father promises to reward his children with three different carriages (yāna) when in fact there is only a single magnificent carriage. With the rise of tantric Buddhism, the Mahāyāna itself is divided into two, the PĀRAMITĀYĀNA or "perfection vehicle," referring to the path to buddhahood involving successive mastery of the perfections (PĀRAMITĀ) as set forth in the sūtras, and the MANTRAYĀNA or "mantra vehicle," referring to the path to buddhahood as set forth in the TANTRAS (although some scholars have argued that the proper term here is not yāna, but naya, meaning "mode" or "principle"). The tantric teachings are also variously referred to as the GUHYAMANTRAYĀNA ("secret mantra vehicle"), the PHALAYĀNA ("fruition vehicle"), and, most famously, as the VAJRAYĀNA ("diamond vehicle" or "thunderbolt vehicle").

yang 'dul gtsug lag khang. (yangdul tsuklakang). In Tibetan, the four "extra-taming temples" or "extra-pinning temples" of

Bu chu, Mkho mthing, Dge gyes, and Pra dum rtse said to have been constructed during the time of the Tibetan king Srong btsan sgam po to pin down the limbs of the demoness (T. srin mo) who was impeding the introduction of Buddhism into Tibet. The Lha sa temple (gtsug lag khang) pins down her heart and the four extra taming temples pin down her right and left elbows and right and left knees.

Yang le shod. (Yangleshö). An important pilgrimage site south of the Kathmandu Valley in Nepal, sacred to Tibetan and Newar Buddhists as well as to Hindus, although the source and meaning of the name are unclear. According to traditional Buddhist accounts, Padmasambhava practiced meditation in a cave here, subdued nāga demons through the practice of Vajrakīlaya, and attained realization of mahāmudrā. Hindus relate the site to the avatāra of Viṣṇu called Śeṣa Nārāyaṇa.

Yangqi Fanghui. (J. Yōgi Hōe; K. Yanggi Panghoe 楊岐方會) (992–1049). Chinese Chan master and patriarch of the Yangqi pai collateral line of the Linji zong; one of the two major Linji sublineages, along with the Huanglong pai. Yangqi was a native of Yuanzhou prefecture in present-day Jiangxi province. After studying under various teachers, he visited the Chan master Shishuang Chuyuan (986–1039), himself a successor of Fenyang Shanzhao (947–1024), and became one of Shishuang's leading disciples. Yangqi was later invited to serve as abbot of the monastery Putong Chanyuan on Mt. Yangqi in his hometown of Yuanzhou, whence he acquired his toponym. In 1046, he moved his residence to the monastery of Haihuisi on Mt. Yung'ai. Among his many talented disciples, the most famous is Baiyun Shouduan (1025–1072). His teachings are recorded in the *Yangqi Fanghui chanshi yulu*, *Yangqi Fanghui chanshi houlu*, and *Yangqi Hui chanshi yuyao*. See also wu jia qi zong.

Yangqi pai. (J. Yōgiha; K. Yanggi p'a 楊岐派). One of the two major branches of the Linji zong of the Chan school, which is listed among the five houses and seven schools (wu jia qi zong) of the mature Chinese Chan tradition. The school is named after its founder, Yangqi Fanghui (995–1049), who taught at Mt. Yangqi in what is now Yuanzhou province. Yangqi was a disciple of Shishuang Chuyuan (986–1039), a sixth-generation successor in the Linji school, who also taught Huanglong Huinan (1002–1069), the founder of the Huanglong pai sublineage of the Linji school. The Yangqi lineage flourished under its third-generation successors, Fojian Huiqin (1059–1117), Foyan Qingyuan (1067–1120), and Yuanwu Keqin (1063–1135), who promoted it among the literati, and it became one of the dominant schools of Song-dynasty Buddhism thanks to the decisive role played by Yuanwu's disciple Dahui Zonggao (1089–1163). It was especially within this lineage that the meditative technique of the Chan of investigating the meditative topic or questioning meditation (kanhua Chan) flourished. The Yangqi masters took a different approach to gong'an (public case) training, criticizing "lettered Chan" (wenzi Chan), a style of Chan developed by Yunmen and Huanglong masters, which gained popularity among the literati officials in the Northern Song period with its polished language and elegant verse explanations of the meaning of the gong'an. Dahui in particular presented the gong'an as a meditative tool for realizing one's innate enlightenment, not to demonstrate one's talent in clever repartee or one's literary prowess; at the same time, he critiqued the approaches of rival Chan schools, criticizing such Huanglong masters as Juefan Huihong (1071–1128) for clinging to intellectual and literary endeavors and such Caodong zong masters as Hongzhi Zhengjue (1091–1157) for clinging to tranquillity and simply waiting for one's innate enlightenment to manifest itself. The school also produced many gong'an collections, including the Biyanlu ("Blue Cliff Record"), complied by Yuanwu Keqin, and the Wumen guan ("Gateless Checkpoint"), compiled by the seventh-generation successor Wumen Huikai (1183–1260). The Yangqi lineage was formally introduced to Korea by T'aego Pou (1301–1382), who studied with the eleventh-generation Yangqi teacher Shiwu Qinggong (1272–1352); some modern Korean monks and scholars argue that the contemporary Korean Sŏn tradition should be traced back to T'aego and his Yangqi lineage, rather than to Pojo Chinul (1158–1210). The Yangqi school reached Japan in the thirteenth century through pilgrim monks, including Shunjō (1166–1227), who studied with the Yangqi teacher Meng'an Yuancong (1126–1209), and Nanpo Jōmyō (1235–1309), better known by his imperially bestowed title Entsū Daiō Kokushi ("state preceptor," see guoshi), who studied with the ninth-generation teacher Xutang Zhiyu (1185–1269). All Linji lineages in contemporary Japan are affiliated with the Yangqi pai.

Yangshan Huiji. (J. Gyōzan/Kyōzan Ejaku; K. Angsan Hyejŏk 仰山慧寂) (807–883). Chinese Chan master and patriarch of the Guiyang zong [alt. Weiyang zong]. Yangshan was a native of Shaozhou prefecture in present-day Guangdong province. According to his biography, Yangshan's first attempt to enter the monastery at age fifteen failed because his parents refused to give their required permission. Two years later he cut off two of his fingers as a sign of his resolve to become a monk and became a śrāmaṇera under the guidance of Chan master Tong (d.u.) of Nanhuasi. After he received his monastic precepts, Yangshan studied the vinayapiṭaka. Yangshan is said to have received the teachings of the circle diagrams from Danyuan Yingzhen (d.u.), and he later became a disciple of Chan master Guishan Lingyou after serving him for fifteen years. He later moved to Mt. Yang in Yuanzhou prefecture (present-day Jiangxi province), whence he acquired his toponym, and established a name for himself as a Chan master. Yangshan later moved to Mt. Dongping in his hometown of Shaozhou, where he passed away in the year 883 (alternative dates for his death are 916 and

891). He was posthumously honored with the title Dengxu dashi (Great Master Clear Vacuity) and a purple robe. He was also named Great Master Zhitong (Penetration of Wisdom). His teachings are recorded in the *Yuanzhou Yangshan Huiji chanshi yulu*. The names of the mountains on which Yangshan and his teacher Guishan resided were used in compound to designate their lineage, the Guiyang.

Yangs pa can. (Yangpachen). The monastic residence of the ZHWA DMAR incarnations in Tibet, founded under the direction of the fourth Zhwa dmar Chos kyi grags pa (Chökyi Drakpa, 1453–1524) and located near MTSHUR PHU monastery west of LHA SA; it was also known as Thub bstan Yangs pa can (Tupten Yangpachen). After the tenth Zhwa dmar was found guilty of treason, the monastery was converted to DGE LUGS and renamed Kun bde gling.

Yang Wenhui. (J. Yō Bunkai; K. Yang Munhoe 楊文會) (1837–1911). Chinese Buddhist layman at the end of the Qing dynasty, renowned for his efforts to revitalize modern Chinese Buddhism. A native of Anhui province, Yang fled from the Taiping Rebellion to Hangzhou prefecture. In 1862, he serendipitously acquired a copy of the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna") and became interested in Buddhism. In 1878, he traveled to England, where he served at the Chinese Embassy in London, befriending the Japanese Buddhist scholar NANJŌ BUN'YŪ (1849–1927), who helped him to acquire Chinese Buddhist texts that had been preserved in Japan. After his return to China, Yang established a publishing press called the Jingling Kejing Chu and published more than three thousand Buddhist scriptures. In 1893, ANAGĀRIKA DHARMAPĀLA visited Yang in Shanghai. In 1894, Yang and the British missionary Timothy Richard translated the DASHENG QIXIN LUN into English. In 1907, the Jingling Kejing Chu began to publish primers of Buddhism in various languages. In 1910, Yang also founded the Fojiao Yanjiu Hui (Buddhist Research Society), where he regularly lectured until his death in 1911.

Yanshou. (C) (延壽). See YONGMING YANSHOU.

yantra. (T. 'khrul 'khor; C. tuxiang; J. zuzō; K. tosang 圖像). In Sanskrit, "diagram" or "instrument." Although the term can have many meanings in Sanskrit, within the Buddhist tradition it is most commonly used to refer to a picture made of images and/or geometric shapes, usually triangles, which are repeated in such a way that they form a pattern. Such magical diagrams are used in tantric rituals and meditations to depict in visual form the power of the invoked deities, representing the universe, or certain spiritual or cosmological powers in the universe. A yantra is commonly understood as rendering through lines and colors the sacred sound of a MANTRA. Yantras are used for such purposes as gaining magical protection, worshipping tantric deities, or facilitating meditation. The term is in some cases interchangeable with a MAṆḌALA, although there are some differences: a yantra is typically small in size while a maṇḍala is variously sized and may even be large enough for a practitioner to enter during the rituals; a yantra, except for those under temple statues, is often portable, while a maṇḍala is not; and deity figures rarely appear on a yantra, while they are common on a maṇḍala. A yantra can be two- or three-dimensional and may range from such simple geometric designs as dots or triangles to more elaborate temple structures. Some texts suggest that merely seeing a maṇḍala or drawing or imagining a yantra also brings benefits. Yantra tattooing (Thai, yak sant) is a common practice in Southeast Asia among both monks and laity. It is generally performed by specialist monks using traditional needles.

yaoshi. (J. yakuseki; K. yaksŏk 藥石). In Chinese, lit. "herbal medicine (yao) and stone probes" (shi); "medicine stone," the Chinese Buddhist euphemism for "supper." The VINAYA restricts monks and nuns from eating after noon; anytime afterwards is an "improper time." There are waivers allowed for certain types of "medicine," however, which may legally be consumed. To circumvent this prohibition against eating after noon, the Chinese referred to food consumed after noon as "medicine," and an evening meal therefore euphemistically came to be referred to as a "medicine stone."

Yaśas. (P. Yasa; T. Grags pa; C. Yeshe; J. Yasha; K. Yasa 耶舍). An early ARHAT disciple of the Buddha. The son of a wealthy merchant of Vārāṇasī, Yaśas was brought up in luxury. He had three mansions, one for the winter, one for the rainy season, and one for the summer, and was attended by a troupe of female musicians. Once, he happened to awake in the middle of the night and witnessed his attendants sleeping in an indecorous manner. Greatly disturbed, he put on a pair of golden sandals and wandered in the direction of the Deer Park (MṚGADĀVA) where the Buddha was dwelling, exclaiming, "Alas, what distress, what danger." The Buddha saw him approach and, knowing what he was experiencing, called out to him, "Yaśas, come. Here there is neither distress nor danger." Yaśas approached the Buddha, took off his golden sandals, and sat down beside him. The Buddha preached a graduated discourse (ANUPUBBIKATHĀ) to him, at the conclusion of which Yaśas became a stream-enterer (SROTAĀPANNA). He thus became the Buddha's sixth disciple and the first who had not known him prior to his achievement of enlightenment (as had his first five disciples, the bhadravargīya or PAÑCAVARGIKA). Yaśas was also the first person to become an enlightened lay disciple (UPĀSAKA), although he ordained a few minutes later. Later, Yaśas's father, who had come searching for his son, arrived at the Buddha's residence. The Buddha used his magical powers to make Yaśas invisible and, inviting his father to sit, preached a discourse to him. Yaśas's father also became a stream-enterer, while Yaśas, who overheard the sermon from his invisible state, became an arhat. When the Buddha made Yaśas visible to his father, he informed him that, since his son

was now an arhat, it would be impossible for him to return home to a householder's life and he would have to become a monk. Yaśas thus became the sixth member of the Buddha's monastic order. Yaśas accompanied the Buddha to his father's house the next day to receive the morning meal. After the meal, the Buddha preached a sermon. Yaśas's mother, SUJĀTĀ, and other members of the household became stream-enterers, his mother thus becoming the first female disciple (UPĀSIKĀ) of the Buddha and the first woman to become a stream-enterer. At that time, fifty-four of Yaśas's friends also were converted and entered the order of monks, swelling its ranks to sixty members. It was at this time that the Buddha directed his disciples to go forth separately and preach the dharma they had realized for the welfare and benefit of the world. ¶ There was a later monk, also named Yaśas, whose protest led to the second Buddhist council (COUNCIL, SECOND), held at VAIŚĀLĪ. Some one hundred years after the Buddha's death, Yaśas was traveling in Vaiśālī when he observed the monks there receiving gold and silver as alms directly from the laity, in violation of the VINAYA prohibition against monks touching gold and silver. He also found that the monks had identified ten points in the vinaya that were identified as violations but that they felt were sufficiently minor to be ignored. The ten violations in question were: (1) carrying salt in an animal horn; (2) eating when the shadow of the sundial was two fingerbreadths past noon; (3) after eating, traveling to another village to eat another meal on the same day; (4) holding several assemblies within the same boundary (SĪMĀ) during the same fortnight; (5) making a monastic decision with an incomplete assembly and subsequently receiving the approval of the absent monks; (6) citing precedent as a justification to violate monastic procedures; (7) drinking milk whey after mealtime; (8) drinking unfermented wine; (9) using mats with a fringe; and (10) accepting gold and silver. Yaśas told the monks that these were indeed violations, at which point the monks are said to have offered him a share of the gold and silver they had collected. When he refused the bribe, they expelled him from the order. Yaśas sought the support of several respected monks in the west, including Sambhūta, ŚĀṆAKAVĀSIN, and REVATA. Together with other monks, they went to Vaiśālī, where they convened a council (SAṂGĪTI) at which Revata submitted questions about each of the disputed points to Sarvagāmin, the eldest monk of the day, who is said to have been a disciple of ĀNANDA. In each case, he said that the practice in question was a violation of the vinaya. Seven hundred monks then gathered to recite the vinaya. Those who did not accept the decision of the council held their own convocation, which they called the MAHĀSĀṂGHIKA or "Great Assembly," the rival group coming to be called the STHAVIRANIKĀYA, or "School of the Elders." This event is sometimes referred to as "the great schism," since it marks the first permanent schism in the order (SAṂGHABHEDA).

Yasenkanna. [alt. Yasenkanwa] (夜船閑話). In Japanese, "Idle Talk on a Night Boat"; a short meditative text composed by the ZEN master HAKUIN EKAKU in the RINZAISHŪ, and his most popular piece. The *Yasenkanna* was first published in 1757 and has remained in print ever since. The title seems to be an allusion to the popular saying, "night boat on the Shirakawa River" (Shirakawa yasen), which refers to the story of a man from the countryside and the lies he tells about his trip to Kyōto. Hakuin wrote the *Yasenkanna* to offer beginners of meditation an expedient technique for overcoming "Zen illness" (zenbyō) and fatigue. The *Yasenkanna* details Hakuin's own bout with this illness and his miraculous recovery with the help of a secret technique known as inner discernment or visualization (naikan), which he purports to have learned from the obscure hermit Hakuyū. Different versions of this story also appear in Hakuin's other writings, such as the *Kanzanshi sendai kimon*, *Orategama*, and *Itsumadegusa*.

Yaśodharā. (P. Yasodharā; T. Grags 'dzin ma; C. Yeshutuoluo; J. Yashudara; K. Yasudara 耶輸陀羅). The Sanskrit proper name of wife of the prince and BODHISATTVA, SIDDHĀRTHA GAUTAMA, and mother of his son, RĀHULA (she is often known in Pāli sources as Rāhulamātā, Rāhula's Mother); she eventually became an ARHAT, who was declared by the Buddha to be foremost among nuns possessing the six superknowledges (ABHIJÑĀ; P. abhiññā). According to Pāli accounts, she was born on the same day as Prince Gautama and had skin the color of gold, hence another of her epithets, Bhaddā Kaccānā. She is also referred to in Pāli commentaries as Bimbā. Yaśodharā married the prince when she was sixteen, after he had proved his superior skill in archery and other manly arts. She was chief consort in a harem of forty thousand women. On the day her son, Rāhula, was born, the prince renounced the world and abandoned his wife, child, and palace to become a mendicant. According to another version of the story, Rāhula was conceived on the night of the prince's departure and was not born until the night of the prince's enlightenment, six years later. Yaśodharā was so heartbroken at her husband's departure that she took up his ascetic lifestyle, eating only one meal per day and wearing the yellow robes of a mendicant. When the Buddha returned to his former palace in KAPILAVASTU after his enlightenment, Yaśodharā was allowed the honor of worshipping him in the manner she saw fit. After seven days, as the Buddha was about to depart, Yaśodharā instructed her son Rāhula to ask for his inheritance. In response, the Buddha instructed ŚĀRIPUTRA to ordain his son. As Rāhula was the first child to be admitted to the order, he became the first Buddhist novice (ŚRĀMAṆERA). Yaśodharā and Rāhula's grandfather ŚUDDHODANA were greatly saddened at losing the child and heir to the order; hence, at Śuddhodana's request, the Buddha passed a rule that, thenceforth, no child should be ordained without the consent of its parents. When later the Buddha allowed women to enter the order, Yaśodharā became a nun (BHIKṢUṆĪ) under MAHĀPRAJĀPATĪ, who was chief of the nuns' order and the Buddha's stepmother. Yaśodharā cultivated insight and became an arhat with extraordinary supranormal

powers. She could recall her past lives stretching back an immeasurable age and one hundred thousand eons without effort. The JĀTAKA records numerous occasions when Yaśodharā had been the wife of the bodhisattva in earlier existences. Also mentioned as the wife of the Buddha is Gopā, although it is unclear whether this refers to another wife or is another name for Yaśodharā.

Yaśomitra. (T. Grags pa bshes gnyen) (fl. c. late sixth century). Indian ĀBHIDHARMIKA scholastic, probably affiliated with the SAUTRĀNTIKA school, and author of the SPHUṬĀRTHĀ-ABHIDHARMAKOŚAVYĀKHYĀ, an important commentary on VASUBANDHU'S ABHIDHARMAKOŚABHĀṢYA. His commentary is noted for its detail and clarity, and for its attempt to identify the adherents of the various doctrinal positions mentioned by Vasubandhu. The text is preserved in both Sanskrit and Tibetan. Yaśomitra's text was among the first ABHIDHARMA works to be studied in Europe; it was one of the Sanskrit manuscripts send by BRIAN HOUGHTON HODGSON from Kathmandu to Paris, where it was read by EUGÈNE BURNOUF, who discusses it in his *Introduction à l'histoire du Buddhisme indien* (1844).

Yasutani Hakuun. (安谷白雲) (1885–1973). Japanese ZEN teacher in the SŌTŌSHŪ, who was influential in the West. Born in Japan, Yasutani attended public school until he entered a Sōtō Zen seminary at the age of thirteen. Yasutani was trained as a teacher and taught elementary school. He was married at the age of thirty and raised five children before turning to a life dedicated to the work of a Sōtō priest. He met Sogaku Harada in 1924 while lecturing in Tōkyō. Yasutani began intensive study with Harada roshi and dedicated his life to teaching the dharma to laypeople. Yasutani organized a group called the Sanbō Kyodan (Fellowship of the Three Jewels), which became independent of the Sōtō school in 1954. Yasutani was the teacher of PHILIP KAPLEAU, who studied with him for eight years, and maintained a close relationship with him until 1967. Kapleau's *The Three Pillars of Zen* was based heavily on Yasutani's teachings. Yasutani traveled to the United States for the first time at the age of seventy-seven, three years after SHUNRYŪ SUZUKI arrived. For seven years, Yasutani taught Zen to many laypeople in the USA and, although he had prepared to live somewhat permanently in the country, a tuberculosis test prevented him from receiving a permanent visa. In his later years, Yasutani continued to travel in the United States as well as in India. He preferred to teach Zen in a nonmonastic environment. He died in Kamakura in 1973.

Yatana Htut-hkaung zedi. The Yatana Htut-hkaung Pagoda (Burmese, JEDI; P. cetī; S. CAITYA) is located on Min-wun Hill in the northern part of the Sagaing Hills in Upper Burma (Myanmar). It was built in 1315 CE by Princess Soe Min-gyi, the daughter of Sagaing's founder, King Athinkaya Saw-yun. Over the course of time, the neighboring village, along with its monastery and line of SAYADAWS (abbots), came to be known as Htut-hkaung. One such abbot was Htut-hkaung Sayadaw, who flourished in the nineteenth century, was greatly respected by King MINDON (r. 1853–1878) for his learning and piety. The king built for the sayadaw a famous monastery named Mahādhammika Kyaung where he taught scripture and meditation to many hundreds of monks and nuns. This sayadaw was a prolific writer, and his catechisms are famous in Burmese literature. He received many titles from the King Mindon and was believed by some to have been an arahant (S. ARHAT).

yathābhūtajñānadarśana. (P. yathābhūtañāṇadassana; C. rushi zhijian; J. nyojitsu chiken; K. yŏsil chigyŏn 如實知見). In Sanskrit, "knowledge and vision that accord with reality"; a crucial insight leading to deliverance (VIMUKTI), which results in dispassion toward the things of this world because of seeing things as they actually are: i.e., as impermanence (ANITYA), suffering (DUḤKHA), and nonself (ANĀTMAN). "Knowledge and vision (jñānadarśana)" is usually interpreted to suggest the direct insight into things "as they are" (yathābhūta), meaning these three marks of existence (TRILAKṢAṆA), or sometimes the FOUR NOBLE TRUTHS. Yathābhūtajñānadarśana is presumed to be closely related to wisdom (PRAJÑĀ), but with one significant difference: yathābhūtajñānadarśana is the first true insight, but it is intermittent and weak, while prajñā is continuous and strong. Seeing things as they are, however, is intense enough that the insight so gleaned is sufficient to transform an ordinary person (PṚTHAGJANA) into an ĀRYA. ¶ In the *Upanisāsutta* of the SAṂYUTTANIKĀYA, the standard twelvefold chain of dependent origination (PRATĪTYASAMUTPĀDA) is connected to an alternate chain that is designated the "supramundane dependent origination" (P. lokuttara-paṭiccasamuppāda; S. lokottara-pratītyasamutpāda), which outlines the process leading to liberation and prominently includes the knowledge and vision that accord with reality. Here, the last factor in the standard chain, that of old age and death (JARĀMARAṆA), is substituted with suffering (P. dukkha; S. DUḤKHA), which in turn becomes the first factor in this alternate series. According to the *Nettipakaraṇa*, a Pāli exegetical treatise, this chain of supramundane dependent origination consists of: (1) suffering (P. dukkha; S. duḥkha), (2) faith (P. saddhā; S. ŚRADDHĀ), (3) delight or satisfaction (P. pāmojja; S. prāmodya), (4) rapture or joy (P. pīti; S. PRĪTI), (5) tranquility or repose (P. passaddhi; S. PRAŚRABDHI), (6) mental ease or bliss (SUKHA), (7) concentration (SAMĀDHI), (8) knowledge and vision that accord with reality (P. yathābhūtañāṇadassana; S. yathābhūtajñānadarśana), (9) disgust (P. nibbidā; S. NIRVEDA), (10) dispassion (P. virāga; S. VAIRĀGYA), (11) liberation (P. vimutti; S. VIMUKTI), and (12) knowledge of the destruction of the contaminants (P. āsavakkhayañāṇa; S. āsravakṣayajñāna; see ĀSRAVAKṢAYA). The *Kimatthiyasutta* of the AṄGUTTARANIKĀYA gives a slightly different version of the first links, replacing suffering and faith with (1) observance of precepts (P. kusalasīla; S. kuśalaśīla) and (2) freedom from remorse (P. avippaṭisāra; S. avipratisāra). In both formulations, yathābhūtajñānadarśana

arises as a result of the preceding factor of meditative concentration (samādhi); it is regarded as the specific awareness (JÑĀNA) of the nature of reality, which is seen (DARŚANA) vividly and directly. In this context, yathābhūtajñānadarśana is essentially synonymous with insight (VIPAŚYANĀ). As this chain of transcendental dependent origination is sometimes interpreted, the stage of faith (P. saddhā; S. śraddhā) is made manifest through generosity (DĀNA) and observing precepts (ŚĪLA), which frees the mind from feelings of remorse and guilt (avipratisāra). The stage of delight or satisfaction (prāmodya) refers to a satisfied or relaxed state of mind, which is freed from any mental disturbances that might prevent concentration. The stages of rapture (prīti), bliss (sukha), and concentration (samādhi) are factors associated with the four levels of meditative absorption (DHYĀNA). The knowledge and vision that accord with reality arise in dependence on the preceding samādhi; it is able to destroy the afflictions (KLEŚA), rather than simply suppress them, as occurs in the state of concentration, and thus leads to liberation from SAṂSĀRA. The fact that samādhi provides a basis for seeing things "as they are," which generates an insight that can bring about liberation, demonstrates the explicitly soteriological dimensions of concentration in a Buddhist meditative context. ¶ In Pāli sources, such as the VISUDDHIMAGGA, yathābhūtajñānadarśana is the fifteenth of eighteen principal types of superior insight (P. mahāvipassanā), which liberate the mind from delusions regarding the world and the self. The eighteen insights are contemplations of: (1) impermanence (aniccānupassanā); (2) suffering (dukkhānupassanā); (3) nonself (anattānupassanā); (4) aversion (nibbidānupassanā); (5) dispassion (virāgānupassanā); (6) extinction (nirodhānupassanā); (7) abandoning (paṭinissaggānupassanā); (8) waning (khayānupassanā); (9) disappearing (vayānupassanā); (10) change (vipariṇāmānupassanā); (11) signlessness (animittānupassanā); (12) wishlessness (appaṇihitānupassanā); (13) emptiness (suññatānupassanā); (14) advanced understanding into phenomena (adhipaññādhammavipassanā); (15) knowledge and vision that accord with reality (yathābhūtañāṇadassana); (16) contemplation of danger (ādīnavānupassanā); (17) contemplation involving reflection (paṭisaṅkhānupassanā); and (18) contemplation of turning away (vivaṭṭanānupassanā). The counterparts which are overcome through these eighteen insights are: (1) the idea of permanence, (2) the idea of pleasure, (3) the idea of self, (4) delighting, (5) greed, (6) origination, (7) grasping, (8) the idea of compactness, (9) the accumulation of action (kamma), (10) the idea of lastingness, (11) signs, (12) desire, (13) misinterpretation, (14) misinterpretation due to grasping, (15) misinterpretation due to confusion, (16) misinterpretation due to reliance, (17) nonreflection or thoughtlessness, (18) misinterpretation due to entanglement.

yathābhūtaparijñāna. (T. ji lta ba mkhyen pa'i ye shes). An alternate term for YATHĀVADBHĀVIKAJÑĀNA (knowledge of the mode).

yathāvadbhāvikajñāna. (T. ji lta ba mkhyen pa'i ye shes; C. ruli zhi; J. nyorichi; K. yŏri chi 如理智). In Sanskrit, lit. "knowledge of the mode"; a buddha's knowledge of the single mode of being of the universe. This type of knowledge is typically mentioned in conjunction with the "knowledge of the multiplicities" (YĀVADBHĀVIKAJÑĀNA), a buddha's knowledge of each of the phenomena of the universe in its specificity. Only a buddha possesses these two knowledges and possesses them simultaneously; thus, only he is able to perceive all of the various phenomena of the universe as well as their ultimate nature. This joint awareness is referred to as the simultaneous knowledge of the two truths (SATYADVAYA).

yāvadbhāvikajñāna. (T. ji snyed pa mkhyen pa'i ye shes; C. ruliang zhi; J. nyoryōchi; K. yŏryang chi 如量智). In Sanskrit, lit., "knowledge of the multiplicities" or "knowledge of the varieties"; a buddha's knowledge of each of the phenomena of the universe in its specificity. This type of knowledge is typically mentioned in conjunction with a buddha's "knowledge of the mode" (YATHĀVADBHĀVIKAJÑĀNA), which understands the single mode of being of the universe. Only a buddha possesses these two knowledges and possesses them simultaneously; thus, only he is able to perceive all of the various phenomena of the universe as well as their ultimate nature. This joint awareness is referred to as the simultaneous knowledge of the two truths (SATYADVAYA).

yavana. (T. yol ba; C. biandi; J. henji; K. pyŏnji 邊地). In Sanskrit (from Greek Ionian), "peripheral" or "outlying regions"; referring to the regions beyond the civilizing influences of Buddhism and higher spiritual culture. The term was used to designate Greeks (Ionians) and later even Arab Muslims. In Buddhist cosmology, the term was used to designate regions north and west of India proper, which are inhabited by illiterate, barbaric peoples hostile to Buddhism. The birth into a "peripheral region" is considered to be one of the "insuperable difficulties" (see AKṢAṆA) to the attainment of enlightenment in the present lifetime. See also BIANDI.

Yazawin-kyaw. In Burmese, "Celebrated Chronicle"; the traditional title given to the MAHĀSAMMATAVAṂSA, the oldest extant yazawin, or Burmese (Myanmar) royal chronicle. It was completed in two installments by the monk MAHĀSĪLAVAṂSA of AVA, the first completed in 1502, the second in 1520. The chronicle is written in mixed Burmese and Pāli and contains the earliest surviving examples of the Burmese nissaya (Pāli to Burmese word-by-word translation) style of writing. The text follows roughly the outline of the MAHĀVAṂSA and devotes most of its coverage to the history of Buddhist dynasties in India and Sri Lanka. Only the last seventh of the work concerns the history of Burma from the time of the Buddha through the PAGAN (Bagan) and Ava periods. The text contains the assertion that the Buddhism of Burma was established by the elder Mahāpuṇṇa during the lifetime of the Buddha and hence is older and longer-lived than that of Sri Lanka. The Yazawin-kyaw concludes with an account of the meritorious deeds of Shwe-

nan-kyaw-shin (r. 1502–1527), the king of Ava at the time the work was composed.

ye dharmā. In Sanskrit, lit. "those phenomena…"; the opening words of perhaps the most famous synopsis of the teachings of Buddhism; the full declaration in Sanskrit is "ye dharmā hetuprabhavā hetuṃ teṣāṃ tathāgato hy avadat teṣāṃ ca yo nirodha, evaṃ vādī mahāśramaṇaḥ": "Of those phenomena produced through causes, the TATHĀGATA has proclaimed their causes (HETU) and also their cessation (NIRODHA). Thus has spoken the great renunciant (ŚRAMAṆA)." This statement plays a central role in the story of ŚĀRIPUTRA'S conversion. Śāriputra, who was a disciple of the agnostic teacher SAÑJAYA VAIRĀṬĪPUTRA, encountered one of the Buddha's five original disciples (PAÑCAVARGIKA), AŚVAJIT. Noticing Aśvajit's serene countenance, Śāriputra asked him who his teacher might be, to which Aśvajit replied that his teacher was the Buddha. When Śāriputra asked what it was that the Buddha taught, Aśvajit demurred, explaining that he had only recently renounced the life of a householder and was unable to present the teaching in full. Śāriputra asked Aśvajit to give him the gist of the Buddha's teaching. Aśvajit replied with this famous ye dharmā line. Immediately upon hearing these words, Śāriputra is said to have gained the rank of stream-enterer (SROTAĀPANNA), the first stage of sanctity (ĀRYAMĀRGA). He then asked the whereabouts of the Buddha and was ordained, going on to become the disciple most renowned for his wisdom. Aśvajit's précis points to the central importance of causality in the Buddha's teachings and provides a kind of summary of the FOUR NOBLE TRUTHS. The Buddha has identified the causes (such as KARMAN and KLEŚA) of those things that have causes (such as suffering, S. DUḤKHA), and he has also identified their cessation in the experience of NIRVĀṆA. What may therefore have begun as a simple statement to mollify an eager questioner eventually became a slogan and ultimately a MANTRA, the very recitation of which was said to produce apotropaic powers. Like a mantra, the words of the ye dharmā slogan were often transcribed phonetically, rather than translated, into various languages across Asia. These words were also often written on strips of paper and enshrined in STŪPAS; they thus became a dharma-verse relic (ŚARĪRA), serving as a substitute for a bodily relic of the Buddha.

Yellow Hats. (C. huangmao 黃帽). A popular designation in both European languages and Chinese for the DGE LUGS sect of Tibetan Buddhism, whose monks do indeed wear yellow hats. Although the term zhwa gser, or "yellow hat," does occur occasionally in Tibetan as a term of self-appellation for the Dge lugs, the Western and Chinese division of major Tibetan sects into Yellow Hats, RED HATS, and BLACK HATS has no corollary in Tibetan Buddhism and should be avoided.

Yel pa bka' brgyud. (Yelpa Kagyü). One of the four major and eight minor subsects of the BKA' BRGYUD sect of Tibetan Buddhism (BKA' BRGYUD CHE BZHI CHUNG BRGYAD), originating with Ye shes brtsegs pa (b. 1134), a student of Bka' brgyud hierarch PHAG MO GRU PA RDO RJE RGYAL PO. After a period of decline, it was revived by CHOS KYI 'BYUNG GNAS but was latter absorbed into KARMA BKA' BRGYUD.

ye shes. (yeshe). In Tibetan, lit. "primordial knowledge," with ye meaning "original" or "primordial." The term renders the Sanskrit JÑĀNA; in the RNYING MA sect of Tibetan Buddhism, it refers to the originally pure mind. See RIG PA; JÑĀNA.

Ye shes mtsho rgyal. (Yeshe Tsogyal) (c. 757–817). A renowned female Tibetan Buddhist master, generally regarded as a wisdom ḌĀKINĪ and venerated especially as consort and disciple of the Indian adept PADMASAMBHAVA. Ye shes mtsho rgyal was born into an aristocratic family in central Tibet, south of LHA SA. According to traditional biographical accounts, a nearby lake miraculously swelled at the time of her birth and she was thus given the name "victor of the lake" (mtsho rgyal). This lake, near the cave complex of SGRAG YANG RDZONG, is believed to still hold Ye shes mtsho rgyal's life essence (bla). Her remarkable beauty even at a young age drew numerous suitors, but rather than submit to a marriage arranged by her father, she fled in order to undertake religious practice. She spent a brief period of time in the court of the Tibetan ruler KHRI SRONG LDE BTSAN (perhaps as one of his wives), after which she met Padmasambhava and was accepted as one of his chief disciples. In addition to receiving and practicing numerous tantric instructions, Ye shes mtsho rgyal helped to conceal many of Padmasambhava's treasure teachings (GTER MA), many of which are said to be her transcriptions of Padmasambhava's teachings. She is regarded as the first Tibetan to achieve buddhahood in a single lifetime. As a wisdom ḍākinī, she is also known as Bde chen rgyal mo ("Great Bliss Queen").

Ye shes 'od. (Yeshe Ö) (947–1024). A Tibetan king of the western region of GU GE credited with inspiring a revival of Buddhism that initiated the latter dissemination (PHYI DAR) of Buddhism in Tibet. He decried the state of Tibetan Buddhist practice, especially the practice of TANTRA, in a famous ordinance (bka' shog), complaining that people were engaging in murder and illicit sex under the guise of the tantric practices of "liberation" (grol) and "union" (sbyor). According to a famous story, Ye shes 'od was captured by a Gar log Turk chieftain while seeking to raise the capital necessary to invite ATIŚA DĪPAṂKARAŚRĪJÑĀNA to Tibet. He then sacrificed his own life by commanding his grandnephew BYANG CHUB 'OD to use whatever gold had been accumulated not as a ransom for his own release, but rather as an offering to the Indian scholar. Atiśa was so moved by the king's act of selflessness that, despite his previous declinations, he agreed to make the journey north. Traditional accounts also suggest that Ye shes 'od sponsored a group of twenty-two young scholars to study Indian languages and tantric literature in Kashmir (see KASHMIR-GANDHĀRA), of

whom only two survived: the translators RIN CHEN BZANG PO and RNGOG LEGS PA'I SHES RAB. Both the story of his noble death for the sake of Atiśa's invitation and the story of his sponsorship of Rin chen bzang po present difficulties in chronology, suggesting that they are embellishments. He is also credited with inspiring the establishment of numerous religious institutions, including THO LING, NYAR MA, and TA PHO. He is also known as Lha bla ma (Lha Lama).

Ye shes sde. (Yeshe De) (fl. late eighth/early ninth century). A Tibetan translator (LO TSĀ BA) during the early dissemination (SNGA DAR) of Buddhism in Tibet; a native of Ngam shod of the Sna nam clan, also referred to by the clan name Zhang. He is said to have been a disciple of both PADMASAMBHAVA and ŚRĪSIṂHA, from whom he received tantric instructions, especially in the SEMS SDE (mind class) of RDZOGS CHEN. He collaborated with some fifteen Indian scholars, among them Jinamitra, Śīlendrabodhi, and Dānaśīla, on the translation of as many as 347 different works, if the later canonical records are correct. His translations includes upwards of 163 Mahāyāna sūtras, among them the PRAJÑĀPĀRAMITĀ, AVATAṂSAKASŪTRA, and RATNAKŪṬASŪTRA collections, translations of the YOGĀCĀRABHŪMI and other basic MADHYAMAKA and YOGĀCĀRA treatises, as well as a number of works by his contemporaries ŚĀNTARAKṢITA and KAMALAŚĪLA. He is also credited with the translation of tantric works that would come to be known as the "old translations" used by the RNYING MA sect. He is said to have been a practitioner of the VAJRAKĪLAYA tantras. He is also author of a number of original compositions, among them the *Lta ba'i khyad par* ("Differences in Views"), preserved in both a BSTAN 'GYUR and DUNHUANG version, which divides the Madhyamaka school into Sautrāntika-Madhyamaka and Yogācāra-Madhyamaka. See also DPAL BRTSEGS; KLU'I RGYAL MTSHAN.

yi bao. (C) (依報). See ER BAO.

yi dam. In Tibetan, a term often translated as "meditational deity" or "tutelary deity." In the practice of Buddhist tantra, it is the enlightened being, whether male or female, peaceful or wrathful, who serves as the focus of one's SĀDHANA practice. One is also to visualize one's tantric teacher (VAJRĀCĀRYA) as this deity. The term is of uncertain origin and does not seem to be a direct translation of a Sanskrit term, although iṣṭadevatā is sometimes identified with the term. The etymology that is often given sees the term as an abbreviation of yid kyi dam tshig, meaning "commitment of the mind." Traditionally, the yi dam is selected by throwing a flower onto a MAṆḌALA, with the deity upon whom the flower lands becoming the "chosen deity." However, when one receives a tantric initiation, the central deity of that tantra typically becomes the yi dam, with daily practices of offering and meditation often required. Through the propitiation of the deity and recitation of MANTRA, it is said that the deity will bestow accomplishments (SIDDHI). In the practice of DEVATĀYOGA, one meditates upon oneself as that deity in order to achieve buddhahood in the form of that deity. The yi dam is considered one of the three roots (rtsa gsum) of tantric practice, together with the GURU and the ḌĀKINĪ: the guru is considered to be the source of blessings; the yi dam, the source of accomplishments; and the ḍākinī, the source of activities. These three roots are considered the inner refuge, with the Buddha, DHARMA, and SAṂGHA being the outer refuge, and the channels (NĀḌĪ), winds (PRĀṆA), and drops (BINDU) being the secret refuge.

yidashi. (一大事). In Chinese, the "one great matter." See DASHI.

Yifu. (J. Gifuku, K. Ŭibok 義福) (661–736). Chinese CHAN master associated with the Northern school (BEI ZONG) of the early Chan tradition. Yifu was a native of Luzhou prefecture in present-day Shanxi province, who became a student of the lay master DU FEI (d.u.), the author of the CHUAN FABAO JI, at Fuxiansi in Luoyang. After Yifu received the full monastic precepts in 690, he went to the monastery of YUQUANSI in Jingzhou prefecture to study with the eminent Chan master SHENXIU. Yifu became Shenxiu's close disciple and continued to study under him probably until his master's death. Later, Yifu moved to the monastery of Huagansi on ZHONGNANSHAN, where he lived for about twenty years. During his stay at Huagansi, Yifu attracted a large following. In 722, he moved again to the grand monastery of DACI'ENSI in Chang'an, where he was patronized by the upper echelons of Tang Chinese society. At the request of Emperor Xuanzong (r. 712–756), Yifu returned once again to Luoyang and resided at the monasteries of Fuxiansi and Nanlongxingsi. He received the posthumous title Chan Master Dazhi (Great Wisdom).

yi ge brgya pa. (yi ge gyapa). In Tibetan, "hundred-syllable MANTRA"; term used to describe a number of lengthy MANTRAS, most commonly that of VAJRASATTVA, recited as part of a Tibetan tantric confession and purification practice. This is one of the preliminary practices (SNGON 'GRO) of the RNYING MA sect of Tibetan Buddhism, involving one hundred thousand repetitions of the Vajrasattva mantra.

yiji. (J. yuige; K. yuge 遺偈). In Chinese, "bequeathed verse" or "death verse"; a verse (C. ji; lit. S. GĀTHĀ) left by eminent monks and nuns, especially in the CHAN school, just before the moment of death, as a final expression of their enlightenment experience; also called a "taking leave of the world hymn" (cishi song) or, especially in the Korean tradition, a "moment of death gāthā" (imjongge). The verse may be either recited or written and is left as the master's last bequeathed teaching immediately before he passes away, often delivered as part of a final sermon. The final instructions of a buddha or a monk for the edification of his disciples are referred to as a "bequeathed teaching" (yijiao; see also YIJIAO JING), and the tradition of specifically

bequeathing a verse as part of this final instruction is thought to have originated in the Tang-dynasty Chan tradition. Such bequeathed verses usually consisted of four lines of four, five, or seven Sinographs per line and thus are similar in format to other types of verses found within the Chan tradition, such as an "enlightenment hymn" (C. wudao song), the verse recited by a student upon achieving enlightenment, and "dharma-transmission gāthā" (C. chuanfa ji), the verse bestowed on a dharma successor as an authorization to teach. As an example of such a bequeathed verse, HONGZHI ZHENGJUE (1091–1157), a well-known teacher in the CAODONG ZONG, is said to have written the following gāthā just before his death: "An illusory fantasy and a flower in the sky (KHAPUṢPA),/ Are these sixty-seven years,/ A white bird fades into the mist,/ The autumnal waters merge with the sky." Not all renowned Chan masters left yiji and others derided the practice. The yiji of DAHUI ZONGGAO (1089–1163), the influential LINJI ZONG master and a contemporary of Hongzhi, expressed ironically his indifference to yiji: "Birth is thus,/ Death is thus,/ Verse or no verse,/ What's the fuss?" In Japan, handwritten death verses were treasured as precious calligraphic art and a virtual relic of the deceased master. They were thus often hung in the abbot's quarters (J. hōjō, C. FANGZHANG) or in the retirement cloisters.

Yijiao jing. (J. Yuikyōgyō; K. Yugyo kyŏng 遺教經). In Chinese, "Scripture on the Bequeathed Teachings"; also known as *Foshuo banniepan jiaojie jing* ("Scripture on the Admonishments Taught by the Buddha [before] his PARINIRVĀṆA") and *Fo yijiao jing* ("Scripture on the Teachings Bequeathed by the Buddha"). Sanskrit and Tibetan versions of this text are not known to have existed. The Chinese translation of this text is attributed to KUMĀRAJĪVA, but the text is now widely assumed to be an indigenous Chinese Buddhist scripture (see APOCRYPHA). The sūtra is set against the backdrop of the Buddha's parinirvāṇa, when he imparts his final instructions to the gathered disciples. The Buddha instructs his disciples to uphold the precepts and regard them as their teacher after his entry into parinirvāṇa. He then instructs them to control sensuality (KĀMA) and cultivate serenity and DHYĀNA. Finally, the Buddha asks the assembly if they have any questions regarding the FOUR NOBLE TRUTHS. When no one replies, the Buddha succinctly expounds upon impermanence and the need to seek liberation (VIMOKṢA). This sūtra bears striking resemblances in style and content to the MAHĀPARINIBBĀNASUTTA and AŚVAGHOṢA's BUDDHACARITA. Along with the SISHI'ER ZHANG JING and GUISHAN JINGCE, the *Yijiao jing* has been cherished by the CHAN tradition for its simple and clear exposition. Sometime during the late Tang and early Song dynasties, the three texts were edited together as the *Fozu sanjing* ("The Three Scriptures of the Buddhas and Patriarchs") and recommended to Chan neophytes.

yijing. (C) (疑經). In Chinese, lit. "suspicious scriptures" or "scriptures of doubtful [provenance]." See APOCRYPHA.

Yijing. (J. Gijō; K. Ŭijŏng 義淨) (635–713). Chinese Buddhist monk and pilgrim. Ordained at the age of twenty, Yijing dreamed of following in the footsteps of the renowned pilgrims FAXIAN and XUANZANG. He eventually set out for India in 671 via the southern maritime route. After visiting the major Indian pilgrimage sites (see MAHĀSTHĀNA), Yijing traveled to the monastic university at NĀLANDĀ, where he remained for the next ten years. On his return trip to China, Yijing stopped at ŚRĪVIJAYA (Palembang in Sumatra) to continue his studies. He praised the monks there for their high level of learning, describing them as primarily HĪNAYĀNA in affiliation. It was in Śrīvijaya that he began to compose his record of his travels, the NANHAI JIGUI NEIFA ZHUAN, which remains an important source on the practice of Buddhism in the many regions where he traveled and for understanding the various NIKĀYA affiliations of the period. It was also during his time in Śrīvijaya that Yijing began his translation of the massive MŪLASARVĀSTIVĀDA VINAYA. When he ran out of paper and ink, he made a brief trip back to China in 689 to retrieve more writing supplies and then returned to Śrīvijaya. After a thirty-year sojourn overseas, Yijing finally returned to China in 695 with some four hundred Sanskrit texts and three hundred grains of the Buddha's relics (ŚARĪRA). Yijing was warmly welcomed in the capital of Luoyang by Empress WU ZETIAN, who appointed him to the monastery of Foshoujisi. Later, from 695 to 699, Yijing participated in ŚIKṢĀNANDA's new translation of the AVATAṂSAKASŪTRA and devoted the next decade or so to the translation of the scriptures that he had brought back with him from India. In addition to the Mūlasarvāstivāda vinaya, his translations also include several important YOGĀCĀRA treatises and TANTRAS. His writings also include a collection of the biographies of renowned East Asian Buddhist pilgrims to India, the DA TANG XIYU QIUFA GAOSENG ZHUAN.

yijing sanzang. (J. yakukyō sanzō; K. yŏkkyŏng samjang 譯經三藏). In Chinese, lit. "master of the three repositories, translator of scriptures." See TREPIṬAKA.

Yingluo jing. (C) (瓔珞經). See PUSA YINGLUO BENYE JING.

Yinguang. (J. Inkō; K. In'gwang 印光) (1862–1940). Chinese monk renowned for his efforts to revitalize modern Chinese Buddhism, especially of the PURE LAND tradition; also sometimes referred to as the thirteenth patriarch of the Chinese JINGTU school and as Chang Cankui Seng (Forever Ashamed Monk). Yinguang was a native of Geyang in Shaanxi province. At a young age, Yinguang suffered from an eye ailment, probably conjunctivitis, which he is said to have cured by studying the Buddhist scriptures. He was formally ordained later at the monastery of Xing'an Shuangqisi in his home province. Yinguang's interest in pure land thought and practice is said to have been catalyzed by his encounter with the writings of the CHAN master Jixing Chewu (1741–1810), who came to be known as the twelfth patriarch of the pure land tradition in

China. For more than twenty years, he resided in isolation at the monastery of Fayusi on the sacred mountain of PUTUOSHAN, where he studied the scriptures and practiced the recitation of the name of the buddha AMITĀBHA (NIANFO; cf. NAMU AMIDABUTSU). Yinguang's reputation grew with the publication of his private correspondences and his collected essays known as *Jingtu jueyi lun* ("Treatise on Resolving Doubts about the Pure Land"). His writings were often critical of Chan and emphasized the efficacy of pure land practice instead. Yinguang also worked to restore monasteries and to republish important pure land writings until his death in 1940. See also TAIXU; XUYUN.

yingwu Chan. (J. ōmuzen; K. aengmu Sŏn 鸚鵡禪). In Chinese, lit. "parrot Chan"; a CHAN Buddhist expression referring to the way some practitioners merely parrot with their mouths the pithy sayings and GONG'AN dialogues of the patriarchs and masters (ZUSHI), but fail to realize their true message and attain enlightenment for themselves. This pejorative description is also applied to pundits of the traditional Buddhist scholastic schools (C. jiao, see K. KYO), whose intellectual erudition and doctrinal prowess were caricatured as "parrot Chan," in contrast to the Chan school's supposed subitist spiritual approach that did not rely on mere intellectual understanding (see BULI WENZI). These pundits are likened to parrots in that they also mimic other people's understanding through their doctrinal exegeses, but without comprehending it themselves. Cf. KOUTOU CHAN.

yingyan. (應驗). In Chinese, "responsive attestation." See GANYING.

yinian sanqian. (J. ichinen sanzen; K. illyŏm samch'ŏn 一念三千). In Chinese, lit. "the TRICHILIOCOSM in a single instant of thought"; a TIANTAI teaching that posits that any given thought-moment perfectly encompasses the entirety of reality both spatially and temporally. An instant (KṢAṆA) of thought refers to the shortest period of time and the trichiliocosm (TRISĀHASRAMAHĀSĀHASRALOKADHĀTU) to the largest possible universe; hence, according to this teaching, the microcosm contains the macrocosm and temporality encompasses spatiality. Thus, whenever a single thought arises, there also arise the myriad dharmas; these two events occur simultaneously, not sequentially. Any given thought can be categorized as belonging to one of the ten realms of reality (DHARMADHĀTU). For example, a thought of charity metaphorically promotes a person to the realm of the heavens at that instant, whereas a subsequent thought of consuming hatred metaphorically casts the same person into the realm of the hells. Tiantai exegetes also understood each of the ten dharmadhātus as containing and pervading all the other nine dharmadhātus, making one hundred dharmadhātus in total (ten times ten). In turn, each of the one hundred dharmadhātus contains "ten aspects of reality" (or the "ten suchnesses"; see SHI RUSHI) that pervade all realms of existence, which makes one thousand "suchnesses" (qianru, viz., one hundred dharmadhātus times ten "suchnesses"). Finally the one thousand "suchnesses" are said to be found in the categories of the "five aggregates" (SKANDHA), "sentient beings" (SATTVA), and the physical environment (guotu). These three latter categories times the one thousand "suchnesses" thus gives the "three thousand realms," which are said to be present in either potential or activated form in any single moment of thought. This famous dictum is attributed to the eminent Chinese monk TIANTAI ZHIYI, who spoke of the "trichiliocosm contained in the mind during an instant of thought" (sanqian zai yinian xin) in the first part of the fifth roll of his magnum opus, MOHE ZHIGUAN. Zhiyi's discussion of this dictum appears in a passage on the "inconceivable realm" (ACINTYA) from the chapter on the proper practice of ŚAMATHA and VIPAŚYANĀ. Emphatically noting the "inconceivable" ability of the mind to contain the trichiliocosm, Zhiyi sought through this teaching to emphasize the importance and mystery of the mind during the practice of meditation. Within the context of the practice of contemplation of mind (GUANXIN), this dictum also anticipates a "sudden" theory of awakening (see DUNWU). TIANTAI exegetes during the Song dynasty expanded upon the dictum and applied it to practically every aspect of daily activity, such as eating, reciting scriptures, and ritual prostration. See also SHANJIA SHANWAI.

yinke. (J. inka; K. in'ga 印可). In Chinese, lit. "seal of/in approval," "certification" and often seen in Western sources in its Japanese pronunciation inka; a seal of approval, certification, or transmission, which is given by masters in the various CHAN traditions across East Asia to practitioners who, in their estimation, have attained a satisfactory level of awakening or maturity of understanding to serve as public exponents of their lineage. Because these lineages are presumed to trace back to BODHIDHARMA, the founder of the Chan school, and ultimately to the person of the Buddha himself, the person who receives such certification is considered to be qualified to speak for the current generation of Chan adepts on behalf of the Chan patriarchs, masters, and even the Buddha, to accept and train students, and to give them certification in turn once their training is complete. The manner of certification differs within traditions. Certification often entails admission into the master's lineage; the conferral of such symbols of religious authority and memorial worship as robes, bowls, chowries (BINGFU), or portraits; and the right to serve in high ecclesiastical office in a sectarian monastery. In the modern ZEN traditions of Japan, certification is offered by a RŌSHI, a teacher who has himself been previously certified. Especially in the Japanese traditions, receiving inka need not necessarily be testimony to the profundity of a person's enlightenment experience, but may simply be public recognition that a student has sufficient maturity and ability to serve as abbot or hold other high ecclesiastical office in the monasteries and temples of a specific sectarian lineage. In some cases, yinke is an abbreviation for yinke zhengming, or "certification via seal of approval." Certification is also known as yinding (seal of meditation), renke (acceptance and approval), and yinzheng (seal and certify). See also CHUANFA; FASI.

yinke zhengming. (J. inka shōmyō; K. in'ga chŭngmyŏng 印可證明). In Chinese, "certification via a seal of approval." See YINKE.

yinsheng nianfo. (J. inshō nenbutsu/inzei nenbutsu; K. insŏng yŏmbul 引聲念佛). In Chinese, "intoning [the name of] the Buddha by drawing out the sound" (see NIANFO); one of the "five-tempo intonations of [the name of] the Buddha" (WUHUI NIANFO) devised by FAZHAO. Yinsheng nianfo involves the long, drawn-out intonation of the name of the buddha AMITĀBHA. Even before Fazhao, the practice of yinsheng nianfo is known to have been practiced by the CHAN master CHŎNGJUNG MUSANG (680–756 [alt. 684–762]), who recommended this practice for those who wished to attain "no recollection" (wuyi), "no thought" (WUNIAN), and "no forgetting" (mowang).

Yinyuan Longxi. (J. Ingen Ryūki 隱元隆琦) (1592–1673). Chinese CHAN master and founding patriarch of the Japanese ŌBAKUSHŪ. Yinyuan was a native of Fuzhou, in present-day Fujian province. He began his training as a monk in his early twenties on PUTUOSHAN and was formally ordained several years later at Wanfusi on Mt. Huangbo. Yinyuan continued his training under the Chan master MIYUN YUANWU and, while serving under the Chan master FEIYIN TONGRONG at Wanfusi Yinyuan, was formally recognized as an heir to Feiyin's lineage in 1633. Seven years later, in 1640, Yinyuan found himself at the monastery of Fuyansi in Zhejiang province and at Longquansi in Fujian province in 1645. The next year, in 1646, he returned to Mt. Huangbo and revitalized the community at Wanfusi. In 1654, at the invitation of Yiran Xingrong (1601–1668), the abbot of the Chinese temple of Kōfukuji in Nagasaki, Yinyuan decided to leave China to escape the succession wars and political turmoil that had accompanied the fall of the Chinese Ming dynasty. He was to be accompanied by some thirty monks and artisans. Due to political issues, however, Yinyuan was only allowed to enter Japan a year later in 1655. That same year, largely through the efforts of the Japanese monk Ryōkei Shōsen (1602–1670), the abbot of MYŌSHINJI, Yinyuan was allowed to stay at Ryōkei's home temple of Fumonji under virtual house arrest. The next year when Yinyuan expressed his wishes to return to China, Ryōkei arranged a visit to Edo and an audience with the young shōgun. At the end of 1658, Yinyuan made the trip to Edo and won the patronage of the shōgun and his ministers. With their support, Yinyuan began the construction of MANPUKUJI in Uji in 1661. The site came to be known as Mt. Ōbaku, the Japanese pronunciation of his mountain home of Huangbo, and served as the center for the introduction of Ming-dynasty Chan into Japan. Yinyuan's teachings, especially those concerning monastic rules, catalyzed institutional and doctrinal reform among the entrenched Japanese ZEN communities. In 1664, Yinyuan left his head disciple MU'AN XINGTAO in charge of all administrative matters involving the monastery and retired to his hermitage on the compounds of Manpukuji. Nine years later Emperor Gomizunoo (r. 1611–1629) bestowed upon him the title state preceptor (J. kokushi, C. GUOSHI) Daikō Fushō (Great Radiance, Universal Illumination). He died shortly thereafter. Yinyuan brought many texts and precious art objects with him from China, and composed numerous texts himself such as the *Huangbo yulu*, *Hongjie fayi*, *Fushō kokushi kōroku*, *Ōbaku oshō fusō goroku*, *Ingen hōgo*, and *Ōbaku shingi*.

Yiqiejing yinyi. (J. Issaikyō ongi; K. Ilch'egyŏng ŭmŭi 一切經音義). In Chinese, "Pronunciation and Meaning of All the Scriptures"; a specialized Chinese glossary of Buddhist technical terminology. As more and more Indian and Central Asian texts were being translated into Chinese, the use of Sanskrit and Middle Indic transcriptions and technical vocabulary increased, leading to the need for comprehensive glossaries of these abstruse terms. Because of the polysemous and sacred character of such Buddhist doctrinal concepts as BODHI, NIRVĀṆA, and PRAJÑĀ, many Chinese translators also preferred to transcribe rather than translate such crucial terms, so as not to limit their semantic range to a single Chinese meaning. The Indian pronunciations of proper names were also commonly retained by Chinese translators. Finally, the spiritual efficacy thought to be inherent in the spoken sounds of Buddhist spells (MANTRA) and codes (DHĀRAṆĪ) compelled the translators to preserve as closely as possible in Chinese the pronunciation of the Sanskrit or Middle Indic original. By the sixth century, the plethora of different transcriptions used for the same Sanskrit Buddhist terms led to attempts to standardize the Chinese transcriptions of Sanskrit words, and to clarify the obscure Sinographs and compounds used in Chinese translations of Buddhist texts. This material was compiled in various Buddhist "pronunciation and meaning" (yinyi) lexicons, the earliest of which was the twenty-five-roll *Yiqiejing yinyi* compiled by the monk Xuanying (fl. c. 645–656). Xuanying, a member of the translation bureau organized in the Chinese capital of Chang'an by the renowned Chinese pilgrim, translator, and Sanskritist XUANZANG (600/602–664), compiled his anthology in 649 from 454 of the most important MAHĀYĀNA, ŚRĀVAKAYĀNA, VINAYA, and ŚĀSTRA materials, probably as a primer for members of Xuanzang's translation team. His work is arranged by individual scripture, and includes a roll-by-roll listing and discussion of the problematic terms encountered in each section of the text. For the more obscure Sinographs, the entry provides the fanqie (a Chinese phonetic analysis that uses paired Sinographs to indicate the initial and final sounds of the target character), the Chinese translation, and the corrected transcription of the Sanskrit, according to the phonologically sophisticated transcription system developed by Xuanzang. Xuanying's compendium is similar in approach to its predecessor in the secular field, the *Jingdian shiwen*, compiled during the Tang dynasty in thirty rolls by Lu Deming (c. 550–630). The monk Huilin (783–807) subsequently incorporated all of Xuanying's terms and commentary into an expanded glossary that included difficult terms from more than 1,300 scriptures; Huilin's expansion

becomes the definitive glossary used within the tradition. Still another yinyi was compiled later during the Liao dynasty by the monk Xilin (d.u.). In addition to their value in establishing the Chinese interpretation of Buddhist technical terms, these "pronunciation and meaning" glossaries also serve as important sources for studying the Chinese phonology of their times.

yiqing. (J. gijō; K. ŭijŏng 疑情). In Chinese, lit. the "sensation of doubt," or simply "doubt"; a feeling of puzzlement and sense of questioning that is a crucial factor in the meditation technique of "questioning meditation" (KANHUA CHAN) as systematized by DAHUI ZONGGAO (1089–1163). In the kanhua technique, doubt refers to the puzzlement and perplexity that the meditator feels when trying to understand the conundrum that is the GONG'AN (public case) or HUATOU (meditative topic). This doubt arises from the inability to understand the significance of the huatou through rational thought. This loss of confidence in one's conceptual and intellectual faculties releases the mind from the false sense of security engendered through habitual ways of thinking, creating a feeling of frustration that is often compared to "a mosquito trying to bite an iron ox." The meditator's sense of self ultimately becomes so identified with the huatou that the intense pressure created by the doubt "explodes" (C. po), freeing the mind from the personal point of view that is the self. Hence, by cutting off conceptualization and producing a state of intense concentration, the sensation of doubt helps to impel meditation forward toward the experience of awakening (WU). The term "sensation of doubt" was not coined by Dahui. One of its earliest usages is in the enlightenment poem of Luohan Guichen (867–928), the teacher of FAYAN WENYI (885–958), which describes enlightenment as shattering the "ball of doubt" (YITUAN). Dahui's grandteacher, WUZU FAYAN (d. 1104), also taught his students to keep the great ball of doubt. But it was Dahui who put doubt at the core of his interpretation of kanhua Chan meditation; for him, the sensation of doubt becomes an effective antidote to conceptual thinking as well as the force that drives the student forward toward enlightenment. The Chinese term yi is also used as the translation for the Sanskrit term VICIKITSĀ, or skeptical doubt, which was one of the five hindrances (NĪVARAṆA) to meditative absorption (DHYĀNA). But rather than being viewed as it had been in India as a hindrance, in Dahui's interpretation doubt instead plays a crucial role in the meditative process.

Yishan Yining. (J. Issan Ichinei; K. Ilsan Illyŏng 一山一寧) (1247–1317). Chinese CHAN master in the LINJI ZONG; a native of Taizhou prefecture in present-day Zhejiang province. At a young age, Yishan became a student of a certain Wudeng Rong (d.u.) at the monastery of Hongfusi on Mt. Fu near his hometown in Taizhou. He was later ordained at the monastery of Puguangsi in Siming in Zhejiang province and continued to study VINAYA at Yingzhensi and TIANTAI thought and practice at Yanqingsi. Yishan then began his training in Chan under several teachers. He eventually became a disciple of Wanji Xingmi (d.u.), a disciple of the Chan master CAOYUAN DAOSHENG. In 1299, the Yuan emperor Chengzong (r. 1294–1307) bestowed upon him the title Great Master Miaoci Hongji (Subtle Compassion, Universal Salvation) and an official post as the overseer of Buddhist matters in Zhejiang. That same year, he was sent to Japan as an envoy of the court, but was detained temporarily at the temple of Shūzenji in Izu by the Kamakura shogunate. When the Hōjō rulers learned of Yishan's renown in China, Yishan was invited to reside as abbot of the powerful monasteries of KENCHŌJI, ENGAKUJI, and Jōchiji in Kamakura. In 1313, Yishan was invited by the retired Emperor Gouda (r. 1274–1287) to reside as the third abbot of the monastery NANZENJI in Kyōto. Yishan had many students in Japan including the eminent Japanese monk MUSŌ SOSEKI. Yishan became ill and passed away in the abbot's quarters (J. hōjō; C. FANGZHANG) of Nanzenji in 1317. The emperor bestowed upon him the title state preceptor (J. kokushi; C. GUOSHI) Issan (One Mountain). Yishan is also remembered for his calligraphy and for introducing to Japan the new commentaries written by the great Neo-Confucian scholar Zhu Xi (1130–1200) to Japan. He and his disciples, such as Shiliang Rengong (1266–1334), Mujaku Ryōen (d.u.), Monkei Ryōsō (d. 1372), and Tōrin Yūkyū (d. 1369), contributed much to the development of GOZAN culture in Japan.

yishen. (J. yuishin; K. yusin 遺身). In Chinese, lit., "to let go of the body," viz., "self-immolation." See SHESHEN.

Yisheng xianxing jiao. (C) (一乘顯性教). See HUAYAN WUJIAO.

yituan. (J. gidan; K. ŭidan 疑團). In Chinese, "ball of doubt"; also referred to as dayituan, or "great ball of doubt." Although the term appears in a verse recorded in the JINGDE CHUANDENG LU that is attributed to Luohan Guichen (867–928), the teacher of FAYAN WENYI, it was the CHAN master DAHUI ZONGGAO who systematized and popularized its use. Dahui probably inherited the notion of a ball of doubt from his teacher YUANWU KEQIN, whose teacher WUZU FAYAN also mentions a ball of doubt in his teachings. Dahui described the arousal of the sensation of doubt (YIQING) or the ball of doubt as an important tool in his meditative approach called KANHUA CHAN, or investigation of the meditative "topic" (HUATOU).

yixin. (S. ekacitta; J. isshin; K. ilsim 一心). In Chinese, "one mind"; the ground of being and the principle (LI) foundational to all phenomena (SHI). The LAṄKĀVATĀRASŪTRA and the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna"), both central texts in the TATHĀGATAGARBHA corpus of literature, treat the "one mind" as a central doctrine. The *Laṅkāvatārasūtra* states that the "calm extinction [of NIRVĀṆA] is called the one mind, and this one mind is called the tathāgatagarbha." The *Dasheng qixin lun* presents all of Buddhism in terms of the one mind and its two aspects: the mind's true-thusness aspect (xin zhenru men) and production-and-

cessation aspect (xin shengmie men). The *Dasheng qixin lun*, arguably the most influential tathāgatagarbha text within the East Asian Buddhist tradition, has long been considered the principal treatise outlining the doctrine of the one mind and its associations with the YOGĀCĀRA theory of consciousness and tathāgatagarbha thought. ¶ The exegeses to the *Dasheng qixin lun* by JINGYING HUIYUAN (523–592), WŎNHYO (617–686), and FAZANG (643–712), which the tradition has regarded as its three major commentaries (san dashu), have each elucidated in considerable detail the foundational role that the notion of the one mind plays in that text. Fazang, for example, glossed the one mind of the *Dasheng qixin lun* as the "one tathāgatagarbha mind" and thus identified the one mind with the tathāgatagarbha; the two aspects of the one mind, true thusness and production-and-cessation, were correlated, respectively, with either MADHYAMAKA and YOGĀCĀRA or principle (li) and phenomena (shi). Fazang thus places tathāgatagarbha thought above both the SAN LUN ZONG (the Chinese analogue of the Madhyamaka school) and the FAXIANG ZONG (Yogācāra) teachings in his doctrinal taxonomy (panjiao; see JIAOXIANG PANSHI). By contrast, Huiyuan's commentary treats the one mind within the context of the nine-consciousnesses theory of the SHE LUN ZONG, an early Yogācāra-oriented strand of Chinese Buddhist thought. In his analysis of the two aspects of the one mind, Huiyuan correlates the true-thusness aspect of the one mind with the ninth "immaculate consciousness" (AMALAVIJÑĀNA); he correlates the production-and-cessation aspect of the one mind with the eighth "storehouse consciousness" (ĀLAYAVIJÑĀNA). Unlike Fazang's interpretation, tathāgatagarbha is here not identified with the one mind but is instead viewed as the production-and-cessation aspect of the mind. In Wŏnhyo's case, rather than seeking as Fazang did to distinguish the Faxiang teachings of Yogācāra from tathāgatagarbha thought, he sought instead to reconcile the Faxiang perspective on consciousness with the *Dasheng qixin lun*'s analysis of mind. Like Huiyuan, Wŏnhyo identified the tathāgatagarbha with the production-and-cessation aspect of the one mind. ¶ The one mind is also a central theme of the ZONGJING LU, an encyclopedic CHAN anthology compiled by YONGMING YANSHOU (904–976) in the FAYAN ZONG, which seeks to unify the various Chinese schools of Buddhism, including HUAYAN, Yogācāra, and TIANTAI, and to demonstrate the compatibility of doctrinal teachings and meditative practice. Yanshou draws on the doctrinal classification schema of GUIFENG ZONGMI (780–841), the Chan scholiast who was also the fifth patriarch of the Huayan school, in positing three broad strands of Buddhist teaching: dharma characteristics (Faxiang zong), destruction of characteristics (Poxiang), dharma nature (FAXING ZONG). Yanshou states that the Faxing (dharma nature) teachings, which include both the Huayan and Chan schools and which are based on tathāgatagarbha thought, treat both aspects of true thusness or the one mind, that is, the aspect of "immutability" (bubian) and "adaptability" (lit., "according to conditions," suiyuan); the Faxiang (dharma characteristics) teachings, by contrast, only treat the aspect of "adaptability." ¶ In the TIANTAI school, one mind or sometimes one thought (yinian) is said to be the ground of all things in existence in both their tainted and pure manifestations, a notion expressed in the aphorism "one thought [contains] the TRICHILIOCOSM" (YINIAN SANQIAN), one of the main doctrines of the school. The Tiantai teaching that "one mind," viz., a single instance of thought, contains all three "viewpoints" (yixin sanguan) also expresses how the three inseparable aspects of phenomena (SANDI)—viz., the truth of emptiness (kongdi), the truth of being only provisionally real (jiadi), and the truth of the mean (zhongdi)—are each contained in one thought moment. In the PURE LAND tradition, one mind generally refers to single-minded recollection (NIANFO) of, especially, the buddha AMITĀBHA, and is a synonym of one-pointedness of mind.

yixin chuanxin. (J. ishin denshin; K. isim chŏnsim 以心傳心). In Chinese, "mind-to-mind transmission." An oft-repeated phrase used mainly by the East Asian CHAN traditions to refer to a special transmission of the "mind" of the Buddha from master to disciple in a "telepathic" way that does not rely on words or letters (see JIAOWAI BIECHUAN and BULI WENZI). In an attempt to distinguish itself from the other Buddhist traditions that sought the teachings of the Buddha in sūtras and commentaries, the burgeoning Chan tradition of the eighth and ninth centuries emphasized the nonverbal transmission of the Buddha's teachings. The notion of mind-to-mind transmission has thus served as an important trope in the self-fashioning of the Chan tradition. Mind-to-mind transmission is often explained by reference to a famous Chan legend that first appears in the *Tiansheng guangdeng lu*. While at Vulture Peak (GṚDHRAKŪṬAPARVATA), the Buddha is said to have raised a flower in front of a large assembly, whereupon the elder MAHĀKĀŚYAPA smiled in response. The Buddha then announced that he had thereby entrusted his "treasury of the true dharma eye" (ZHENGFAYANZANG) to Mahākāśyapa, thus recognizing him as the Buddha's successor and first patriarch (ZUSHI). For this legend, see NIANHUA WEIXIAO.

Yixing. (J. Ichigyō; K. Irhaeng 一行) (683–727). In Chinese, "Single Practice"; a famous student of CHAN and master of esoteric Buddhism (MIJIAO), translator, and distinguished astronomer. Yixing was a native of Julu prefecture in present-day Hebei province. He became a monk under the eminent Chan master PUJI (651–739) in the Northern school (BEI ZONG) of the early Chan tradition and also studied the VINAYA under a monk by the name of Huizhen (d.u.). Having made a name for himself at the monastery of Guoqingsi on Mt. Tiantai, in 717, Yixing was invited by Emperor Xuanzong (r. 712–756) to the palace in Luoyang. While residing at the palace, Yixing became a disciple of the TREPIṬAKA ŚUBHAKARASIṂHA and, together, they translated the MAHĀVAIROCANĀBHISAṂBODHISŪTRA. Based on Śubhakarasiṃha's oral interpretations provided in the course of preparing their translation, Yixing also composed an important

commentary on the sūtra, the *Darijing shu*. In 727, Yixing's reputation in astronomy and calendrics prompted the emperor to have him devise a new calendar, which is known as the Dayan li. Yixing also devised an elaborate celestial globe, which used hydraulic power to portray the precise movements of the sun, moon, and constellations across the firmament. After his death, he was bestowed the posthumous title Chan master Dahui (Great Wisdom).

yixing sanmei. (S. ekavyūhasamādhi; J. ichigyō zanmai; K. irhaeng sammae 一行三昧). In Chinese, "single-practice SAMĀDHI." The term yixing sanmei seems to first appear in a passage in the Chinese translation of the SAPTAŚATIKĀPRAJÑĀPĀRAMITĀSŪTRA: "The DHARMADHĀTU has only a single mark; to take the dharmadhātu as an object is called one-practice samādhi." Two practices are then recommended by the text for cultivating yixing sanmei, viz, the perfection of wisdom (PRAJÑĀPĀRAMITĀ) and recollection of the Buddha's name (S. BUDDHĀNUSMṚTI; C. NIANFO). The concept of yixing sanmei was later incorporated into the apocryphal Chinese treatise DASHENG QIXIN LUN and the influential meditation manual MOHE ZHIGUAN. TIANTAI ZHIYI, the author of the *Mohe Zhiguan*, identified the practice of constant sitting, the first of the so-called four kinds of samādhi (sizhong sanmei), with yixing sanmei. Famous teachers of the early CHAN community, such as DAOXIN, HUINENG, and HEZE SHENHUI, also emphasized the importance of yixing sanmei, which they identified with seated meditation (ZUOCHAN) and the cultivation of prajñāpāramitā. According to the LIUZU TANJING ("Platform Sūtra of the Sixth Patriarch"), Huineng interpreted yixing sanmei as the maintenance of a straightforward mind (yizhi xin) while walking, standing, sitting, and lying. Shenhui identified yixing sanmei with "no mind" (WUXIN; see also WUNIAN).

Yixuan. (C) (義玄). See LINJI YIXUAN.

yizhi Chan. (J. isshi no zen; K. ilchi sŏn 一指禪). In Chinese, "one-finger Chan"; the famous pedagogical technique used by the CHAN master Juzhi Yizhi (c. ninth century) and his teacher Hangzhou Tianlong (d.u.) in the lineage of MAZU DAOYI. "One-finger Chan" refers to Juzhi's propensity to answer any question he was asked by simply raising one finger, so as not to allow any conceptual understanding of Buddhism to arise in the student's mind. The phrase appears in Case 19 of the BIYAN LU and Case 3 of the WUMEN GUAN, and is frequently cited in Chan sources. In one well-known Chan case (GONG'AN), Juzhi is said to have cut off the finger of a boy who mimicked him without understanding the meaning of the gesture.

yizi guan. (J. ichijikan; K. ilcha kwan 一字關). In Chinese, "one-word checkpoint" or "one-word barrier"; a pedagogical device developed by YUNMEN WENYAN (864–949), the founder of the YUNMEN ZONG of the classical CHAN tradition, which used only a single utterance to respond to a student's question. For example, once a monk asked him, "When you kill your parents, you repent before the Buddha. But when you kill the buddhas and patriarchs, to whom do you repent?" Yunmen answered, "Lu" ("exposed"). Another time a monk asked him, "What is the treasury of the true dharma eye (ZHENGFAYANZANG)?" Yunmen answered, "Pu" ("universal"). Such terse answers offered no basis for conceptual understanding, instead demanding that students have a direct realization of truth. These one-word checkpoints were highly praised by DAHUI ZONGGAO for fostering especially close concentration during KANHUA CHAN meditation: "Once you enter into the gate of the one-word GONG'AN, even nine oxen wouldn't be able to pull you out."

yoga. (T. sbyor ba/rnal 'byor; C. xiu/xiuxing/xiuxi/yuqie; J. shu/shugyō/shujū/yuga; K. su/suhaeng/susŭp/yuga 修/修行/修習/瑜伽). In Sanskrit, "bond," "restraint," and by extension "spiritual discipline"; in Buddhism, a generic term for soteriological training or contemplative practice, including tantric practice.

Yogabhāvanāmārga. [alt. Bhāvanāyogamārga; Yogabhāvanāpatha] (T. Rnal 'byor bsgom pa'i lam). In Sanskrit, "Path of Yogic Cultivation"; a work on the BODHISATTVA path usually attributed to the eighth-century Indian master Jñānagarbha, who is known as the teacher of ŚĀNTARAKṢITA (c. 725–788) and a disciple of Śrīgupta. It is presumed that the *Yogabhāvanāmārga* is an example of the later MADHYAMAKA school's attention to the theme of the stages of meditative cultivation (BHĀVANĀ), as best exemplified by KAMALAŚĪLA's three BHĀVANĀKRAMAS. There are two Jñānagarbhas known to the tradition, one from the early ninth century and the other from the eleventh century. Some scholars suggest that the commentary to the Maitreya chapter of the SAṂDHINIRMOCANASŪTRA should be attributed to the first Jñānagarbha, while authorship of the *Yogabhāvanāmārga* should be ascribed to the second. The *Yogabhāvanāmārga*, along with Jñānagarbha's two other works, the *Satyadvayavibhaṅga* ("Analysis of the Two Truths") and its autocommentary *Satyadvayavibhaṅgavṛtti* ("Commentary on Analysis of the Two Truths"), are only extant in Tibetan translation.

Yogācāra. (T. Rnal 'byor spyod pa; C. Yuqiexing pai; J. Yugagyōha; K. Yugahaeng p'a 瑜伽行派). In Sanskrit, "Practice of YOGA"; one of the two major MAHĀYĀNA philosophical schools (along with MADHYAMAKA) in India, known especially for its doctrines of "mind-only" (CITTAMĀTRA) or "representation-only" (VIJÑAPTIMĀTRATĀ), the TRISVABHĀVA, and the ĀLAYAVIJÑĀNA. In addition, much of the exposition of the structure of the Mahāyāna path (MĀRGA) and of the Mahāyāna ABHIDHARMA derives from this school. The texts of the school were widely influential in Tibet and East Asia. Although several of the terms associated with the school occur in such important Mahāyāna sūtras as the DAŚABHŪMIKASŪTRA, the LAṄKĀVATĀRASŪTRA, and especially the SAṂDHINIRMOCANASŪTRA, the exposition of the key doctrines was largely the work of two

Indian scholastics of the fourth to fifth centuries CE, the half brothers ASAṄGA and VASUBANDHU and their commentators, especially STHIRAMATI and DHARMAPĀLA. Asaṅga's major works include the central parts of the YOGĀCĀRABHŪMI, the MAHĀYĀNASAṂGRAHA, and the ABHIDHARMASAMUCCAYA. Vasubandhu's most famous Yogācāra works are the VIṂŚATIKĀ and the TRIṂŚIKĀ (his most famous work of all, the ABHIDHARMAKOŚABHĀṢYA, is said to have been composed prior to his conversion to the Mahāyāna). Among the "five books of MAITREYA" (see BYAMS CHOS SDE LNGA), three are particularly significant in Yogācāra: the MADHYĀNTAVIBHĀGA, the DHARMADHARMATĀVIBHĀGA, and the MAHĀYĀNASŪTRĀLAṂKĀRA. Important contributions to Yogācāra thought were also made by the logicians DIGNĀGA and DHARMAKĪRTI. Although Yogācāra and Madhyamaka engaged in polemics, in the latter phases of Buddhism in India, a synthesis of Yogācāra and Madhyamaka took place in the works of such authors as ŚĀNTARAKṢITA and KAMALAŚĪLA; Tibetan doxographers dubbed this synthesis YOGĀCĀRA-SVĀTANTRIKA-MADHYAMAKA. ¶ Yogācāra authors offered detailed presentations and analyses of virtually all of the important topics in Buddhist thought and practice, built upon an edifice deriving from meditative experience. The school is perhaps most famous for the doctrines of "mind-only" (cittamātra) and "representation-only" (vijñaptimātra), according to which the conception of the objects of experience as existing external to and independent of the consciousness perceiving them was regarded as the fundamental ignorance and the cause of suffering. Instead of the standard six consciousnesses (VIJÑĀNA) posited by other Buddhist schools (the five sensory consciousnesses and the mental consciousness), some Yogācāra texts described eight forms of consciousness: these six, plus the seventh "afflicted mind" (KLIṢṬAMANAS), which mistakenly generates the false notion of a perduing self (ĀTMAN), and the eighth foundational, or "storehouse," consciousness (ālayavijñāna). This foundational consciousness is the repository of seeds (BĪJA) or imprints (VĀSANĀ) produced by past actions (KARMAN) that fructify as experience, producing simultaneously consciousness and the objects of consciousness. The afflicted mind mistakenly regards the foundational consciousness as a permanent and independent self. The doctrine of the three natures (trisvabhāva), although variously interpreted, is also often explained in light of the doctrine of representation-only. The imaginary nature (PARIKALPITA) refers to misconceptions, such as the belief in self and in the existence of objects that exist apart from consciousness. The dependent nature (PARATANTRA) encompasses impermanent phenomena, which are products of causes and conditions. The consummate nature (PARINIṢPANNA) is reality, classically defined as the absence of the imaginary nature in the dependent nature. By removing these latent predispositions from the ālayavijñāna and overcoming the mistaken bifurcation of experience between a perceiving subject and perceived objects (GRĀHYAGRĀHAKAVIKALPA), a transformation of consciousness (ĀŚRAYAPARĀVṚTTI) occurs which turns the deluded mind of the sentient being into the enlightenment cognition of the buddhas (BUDDHAJÑĀNA), with the ālayavijñāna being transformed into the mirrorlike wisdom (ĀDARŚAJÑĀNA). In the realm of soteriology, much of what would become the standard Mahāyāna elaboration of the five paths (PAÑCAMĀRGA) and the bodies (KĀYA, e.g., TRIKĀYA) of a buddha is found in works by Yogācāra authors, although there are important differences between Yogācāra and Madhyamaka on a number of key soteriological questions, including whether there is one vehicle (EKAYĀNA) or three final vehicles (TRIYĀNA), that is, whether all beings are destined for buddhahood, or whether some, such as the ARHATs of the mainstream Buddhist schools, are stuck in a soteriological dead end. ¶ Not all the scholastics regarded as Yogācāra exegetes adhered to all of the most famous doctrines of the school. The most common division of the school is into those who do and do not assert the existence of eight consciousnesses (and hence the ālayavijñāna). The former, who include Asaṅga and Vasubandhu, are called "followers of scripture" (āgamānusārin), and the latter, who include the famous logicians DIGNĀGA and DHARMAKĪRTI, are called "followers of reasoning" (nyāyānusārin). Yogācāra strands of Buddhism were extremely influential in the development of indigenous East Asian schools of Buddhism, including the mature schools of HUAYAN and even CHAN. For specifically East Asian analogues of Yogācāra, see FAXIANG ZONG, XIANG ZONG, DI LUN ZONG, and SHE LUN ZONG.

Yogācārabhūmiśāstra. [alt. Yogācārabhūmi] (T. Rnal 'byor spyod pa'i sa'i bstan bcos; C. Yuqieshidi lun; J. Yugashijiron; K. Yugasaji non 瑜伽師地論). In Sanskrit, "Treatise on the Stages of Yogic Practice"; an encyclopedic work that is the major treatise (ŚĀSTRA) of the YOGĀCĀRA school of Indian Buddhism. It was widely influential in East Asia and Tibet, being translated into Chinese by XUANZANG between 646 and 648 and into Tibetan circa 800. Authorship is traditionally ascribed to ASAṄGA (or, in China, to MAITREYA), but the size and scope of the text suggest that it is the compilation of the work of a number of scholars (possibly including Asaṅga) during the fourth century CE. The work is divided into five major sections. The first and longest, comprising approximately half the text, is called the "Multiple Stages" (Bahubhūmika or Bhūmivastu) and sets forth the stages of the path to buddhahood in seventeen sections. The two most famous of these sections (both of which are preserved in Sanskrit and which circulated as independent works) are the ŚRĀVAKABHŪMI and the BODHISATTVABHŪMI, the latter providing one of the most detailed discussions of the bodhisattva path (MĀRGA) in Indian literature. In this section, many of the central doctrines of the Yogācāra school are discussed, including the eight consciousnesses, the ĀLAYAVIJÑĀNA, and the three natures (TRISVABHĀVA). The structures and practices of the paths of the ŚRĀVAKA, PRATYEKABUDDHA, and BODHISATTVA are presented here in the form that would eventually become normative among MAHĀYĀNA scholasts in general (not just adherents of Yogācāra). The second section, "Compendium of Resolving [Questions]" (Viniścayasaṃgrahaṇī), considers controversial points that arise

in the previous section. The third section, "Compendium of Interpretation" (Vyākhyānasaṃgrahaṇī), examines these points in light of relevant passages from the sūtras; it is interesting to note that the majority of the texts cited in this section are Sanskrit ĀGAMAs rather than Mahāyāna sūtras. The fourth, called "Compendium of Synonyms" (Paryāyasaṃgraha) considers the terms mentioned in the sūtras. The fifth and final section, "Compendium of Topics" (Vastusaṃgraha), considers central points of Buddhist doctrine, including PRATĪTYASAMUTPĀDA and BODHI. This section also contains a discussion of VINAYA and (in the Chinese version) ABHIDHARMA.

Yogācāra-Svātantrika-Madhyamaka. (T. Rnal 'byor spyod pa'i dbu ma rang rgyud pa). According to Tibetan exegetes, who coined the term, one of the two branches of the SVĀTANTRIKA school of MADHYAMAKA, together with the SAUTRĀNTIKA-SVĀTANTRIKA-MADHYAMAKA. Its main proponents include ŚĀNTARAKṢITA and KAMALAŚĪLA. Like YOGĀCĀRA, the school holds that external objects do not exist and that objects are of the nature of consciousness. Like MADHYAMAKA, the school holds that consciousness is empty of true existence. In its presentation of the three vehicles (TRIYĀNA), it correlates each vehicle with a different wisdom, thus bringing together the views of the HĪNAYĀNA, Yogācāra, and Madhyamaka. In order to achieve liberation from rebirth as an ARHAT, the ŚRĀVAKA must understand that a perduring self (ATMAN) does not exist. A PRATYEKABUDDHA must understand that objects, and hence the external world, do not exist separately from the consciousnesses that perceive them, thereby abandoning the GRĀHYAGRĀHAKAVIKALPA, the misconception of there being a bifurcation between subject and object. In order to achieve buddhahood, the BODHISATTVA must understand the emptiness (ŚŪNYATĀ) of all phenomena.

yogatantra. (T. rnal 'byor rgyud). One of the four traditional Indian categories of tantric texts. In a late Indian categorization of Buddhist TANTRA, a hierarchy was established that placed texts into one of four categories, in descending order: ANUTTARAYOGATANTRA, yogatantra, CARYĀTANTRA, and KRIYĀTANTRA. The precise meaning of these categories, their parameters, and their contents were widely discussed, especially in Tibet. In one influential description, yogatantra was said to emphasize internal yoga over external ritual practice and therefore did not employ the practice of sexual union. An examination of texts included in this category shows, however, that this description is somewhat arbitrary. Important texts classed as yogatantras include the SARVATATHĀGATATATTVASAṂGRAHA, the MAÑJUŚRĪMŪLAKALPA, the SARVADURGATIPARIŚODHANATANTRA, and the VAJRAŚEKHARA. MAṆḌALAs with the buddha VAIROCANA as the central deity occur often in the yogatantras.

yogin. (T. rnal 'byor pa; C. xiuxing ren; J. shugyōnin; K. suhaeng in 修行人). A male practitioner of YOGA (generally in the generic sense of meditative practice) who has gained some level of attainment in his practice. The term can be used to refer to any advanced Buddhist practitioner, although it refers especially to advanced practitioners of Buddhist TANTRA.

yoginī. (T. rnal 'byor ma). A female practitioner of YOGA, or contemplative practice, but used especially to refer to female adepts of Buddhist TANTRA, particularly those who engage in tantric rituals (including sexual rituals) with tantric YOGINs. The term is sometimes synonymous with ḌĀKINĪ.

yoginītantra. (T. rnal 'byor ma'i rgyud). Also known as "mother tantras" (MĀTṚTANTRA) and "wisdom tantras" (T. shes rab kyi rgyud), one of the two categories into which the ANUTTARAYOGATANTRAs are divided, the other being "father tantras" (PITṚTANTRA). Developing in India from the SIDDHA tradition, the yoginītantras apparently receive this name because the majority (and in some cases all) of the deities in the tantra's MAṆḌALA are female. According to a traditional explanation, these tantras emphasize wisdom (PRAJÑĀ), especially the mind of clear light (PRABHĀSVARACITTA), while father tantras emphasize method (UPĀYA), especially the illusory body (MĀYĀDEHA). See CAKRASAṂVARATANTRA.

yogipratyakṣa. (T. rnal 'byor mngon sum; C. dingguan zhi; J. jōkanchi; K. chŏnggwan chi 定觀知). In Sanskrit, "yogic direct perception"; a specific variety of direct perception (PRATYAKṢA) that is typically presumed to derive from meditative practice (BHĀVANĀ; YOGA). A direct intuition of the real obtained through meditative practice, this type of understanding was accepted as a valid means of knowledge by most of the traditional Indian religious schools. In Buddhism, the psychological analysis of the notion of yogipratyakṣa and the related yogijñāna (yogic knowledge or cognition) was undertaken by DHARMAKĪRTI (c. 600–670) in his PRAMĀṆAVĀRTTIKA and NYĀYABINDU, as well as by his commentators. Dharmakīrti's predecessor DIGNĀGA (c. 480–540) had posited that there were only two reliable sources of knowledge (PRAMĀṆA): direct perception (PRATYAKṢA) and logical inference (ANUMĀNA). Dharmakīrti, however, subdivided direct perception (pratyakṣa) into four subtypes, viz., sensory cognition (indriyajñāna), mental discrimination (MANOVIJÑĀNA), self-awareness (SVASAṂVEDANA), and yogic cognition (yogijñāna). In Dharmakīrti's analysis, yogic cognition (yogijñāna) is a form of yogic perception (yogipratyakṣa), because it fulfills the two conditions of perception (pratyakṣa): (1) it is devoid of conceptual construction (KALPANĀ); and (2) it is a cognition that is "nonerroneous" (abhrānta), viz., real. The treatment of yogipratyakṣa in the literature thus focuses on how yogipratyakṣa fulfills these two conditions of perception. Yogic knowledge is devoid of conceptual construction (kalpanā), Dharmakīrti maintains, because it is nonconceptual (akalpa; NIRVIKALPA) and thus "vivid" or "distinct" (spaṣṭa). This type of perception is therefore able to perceive reality directly, without the intercession of mental images or concepts. Since yogic cognition is said to be devoid of conceptual construction, this raises the issue of its second condition, its lack of error. Why is meditatively induced perception true and

reliable? How does a meditator's yogic perception differ from the hallucinations of the deranged, since both of them presume they have a vivid cognition of an object? The reason, Dharmakīrti maintains, is that the objects of yogic knowledge are "true" or "real" (bhūta; sadbhūta), whereas hallucinations are "false" or "unreal" objects (abhūta; asadbhūta). The only true objects of yogic knowledge offered by Dharmakīrti are the FOUR NOBLE TRUTHS: that is, the perception of these truths is true and reliable because they enable one to reach the goal of enlightenment, not because they involve a perception of an ultimate substance. In this sense, Dharmakīrti's understanding of yogijñāna is more focused on the direct realization of the soteriological import of the four noble truths than on extraordinary sensory ability. Therefore, yogic direct perception is qualitatively different from the various forms of clairvoyance that are the byproducts of deep states of concentration that may be achieved by both Buddhist and non-Buddhist practitioners. Yogipratyakṣa is a form of insight (VIPAŚYANĀ) posssessed only by noble persons (ĀRYAPUDGALA); and among the five paths it occurs only on the path of vision (DARŚANAMĀRGA) and above. See also DARŚANA.

yojana. (T. dpag tshad; C. youxun; J. yujun; K. yusun 由旬). In Sanskrit, a "league"; a standard measure of distance in ancient India, and often used in Buddhist texts; it is said to be the distance a yoked team of oxen could travel in one day. Modern estimates of this distance vary widely, with the figure of eight miles often provided as an approximation, although estimates of from four to ten miles (six to sixteen kilometers) are also found.

Yōkan. (永觀) (1032–1111). Japanese VINAYA master of the Sanronshū (C. SAN LUN ZONG); also known as Eikan. Yōkan wrote two important works on PURE LAND doctrine known as the *Ōjōjūin* and the *Ōjōkōshiki*. In contrast to the TENDAISHŪ and SHINGONSHŪ interpretation of the practice of NENBUTSU (C. NIANFO) as the contemplation of the buddha AMITĀBHA, Yōkan emphasized instead the efficacy of the vocal recitation of name of Amitābha (NAMU AMIDABUTSU). Doctrinally, Yōkan supported the view that enlightenment and afflictions, like buddhas and human beings, are not two but of a single essence. Yōkan or Eikan is also well known for the monastery in Kyōto that took his name, Eikandō, which is also called Zenrinji.

Yokawa. (横川). The northern of the three main subcomplexes of the TENDAISHŪ (C. TIANTAI ZONG) monastery ENRYAKUJI on HIEIZAN in Japan. In 848, the Japanese pilgrim-monk ENNIN established the Shūryōgon'in complex in Yokawa; subsequent expansion projects were undertaken by the monks RYŌGEN and GENSHIN. The Yokawa complex is famous for its central hall, now known as the Yokawa chūdō, also founded in 848, and the Eshin'in (or Eshindō) established by Genshin, which came to function as a special hall for practicing nenbutsu (C. NIANFO).

Yona. One of nine adjacent lands (P. paccantadesa) converted to Buddhism by missionaries dispatched by the elder MOGGALIPUTTATISSA at the end of the third Buddhist council (see COUNCIL, THIRD), which was held in PĀṬALIPUTRA during the reign of AŚOKA in the third century BCE. The region is generally identified as located in northwest India, homeland of the Bactrian Greeks, and is also known as Yonakā or YAVANA. Yona was converted by the elder Mahārakkhita, who preached the *Aggikkhandhopamasutta*. The third Buddhist council at Pāṭaliputra, and the nine Buddhist missions are known only in STHAVIRANIKĀYA sources and are first recorded in the fifth-century DĪPAVAṂSA.

Yŏndam Yuil. (蓮潭有一) (1720–1799). Korean SŎN master and exegete during the Chosŏn dynasty; also known as Mui. Shortly after his parents' death in 1737, Yŏndam became a student of the monk Sŏngch'ŏl (d.u.) at the monastery of Pŏpch'ŏnsa on Mt. Sŭngdal and received the monastic precepts the next year from the VINAYA master Anbin (d.u.). In 1739, he began scriptural studies under the Sŏn master Pyŏkha Taeu (1676–1763), which he continued under Yongam Ch'ejo (1714–1779) and Sŏlp'a Sangŏn (1707–1791). In 1741, Yŏndam began training in Sŏn meditation under Hoam Ch'ejŏng (1687–1748) and eventually became his disciple. Yŏndam established himself as a talented exegete of Sŏn materials and was installed as the abbot of the monastery of Sŏbongsa in 1779. He left many writings, including the *Imha nok*, *Chabo haengŏp*, *Tosŏ kwamok pyŏngip sagi*, *Sŏnyo sagi*, *Sŏjang sagi*, *Wŏn'gak sagi*, *Simsŏng non*, and others. In his influential *Imha nok*, Yŏndam addressed the anti-Buddhist polemics of the Confucian scholars. His "personal notes" (sagi) on the CHANYUAN ZHUQUANJI DUXU, DAHUI SHUZHUANG, CHANYAO, and YUANJUE JING are still widely used in Korean monastic seminaries, or kangwŏn.

yŏndŭng hoe. (燃燈會). In Korean, "lantern-lighting ceremony"; a Korean Buddhist celebration that originated sometime during the Koryŏ dynasty. To celebrate the lunar New Year, lanterns were lit on the fifteenth day of the first lunar month and kept lit for two nights. Although King Sŏngjong (r. 982–997) banned the ceremony, the ban was lifted in the first year of King Hyŏnjong's (r. 1010–1031) reign and the ceremony was held again on the fifteenth day of the second lunar month and continued to be held on the second month from that point onward. In 1352, the celebration of the yŏndŭng hoe took place in the palace on the traditional East Asian date of the Buddha's birthday (the eighth day of the fourth lunar month) with one hundred monks in attendance, and the event was subsequently held on the Buddha's birthday throughout the remainder of the Chosŏn dynasty. This custom of lighting lanterns to celebrate the Buddha's birthday continues today in Korea.

yong. (J. yū; K. yong 用). In Chinese, "function," or "application"; a term often deployed in the East Asian religious traditions, including Buddhism, as a philosophical pair with "essence" (TI). Chinese Daoist and "Dark Learning" (XUANXUE)

texts first imbued the term with philosophical implications: the *Daode jing* refers to yong as the "attributes" of the way, and the *Daodejing zhu*, Wang Bi's (226–249) commentary to the text, employs the term to indicate the functions or attributes of "nonbeing" (WU) or "voidness" (xu). However, yong, along with its companion ti, was not widely used until the Buddhists adopted both terms to provide a basic conceptual frame for reality or truth. For example, the SAN LUN ZONG master JIZANG (549–623) used ti and yong to explicate his theory of the middle way (MADHYAMAPRATIPAD). He connected the middle (zhong) to ti, which he described as "neither ultimate nor conventional" (feizhen feisu), and the provisional (jia) to yong, which he described as "ultimate and conventional" (zhensu). The ti and yong pair was often used in the HUAYAN, TIANTAI, and CHAN traditions. GUIFENG ZONGMI (780–841), a Tang-dynasty master of both the HUAYAN ZONG and Heze Chan traditions, provided a systematic explanation for yong and ti, based on the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna"). In particular, he distinguished between two different types of function in his theory of mind: the "inherent function of the self-nature" (zixing benyong), which he called "numinous awareness" (LINGZHI), and the responsive functions that accord with conditions (suiyuan yingyong), which he described as the various mental functions that derive from the inherent function of the mind. Many Chinese and Korean Neo-Confucian thinkers, such as Cheng Yi (1033–1107), Zhu Xi (1130–1200), and Yi Hwang (1501–1570), applied Zongmi's interpretation of this pair to their own philosophical systems.

Yongjia Xuanjue. (J. Yōka Genkaku; K. Yŏngga Hyŏn'gak 永嘉玄覺) (675–713). Chinese CHAN monk renowned for his writings on meditation, also known as Mingdao, Yishujue, and Great Master Zhenjue (True Awakening); Yongjia is his toponym, the name of his hometown in Zhejiang province. Yongjia made a name for himself at a young age as an expert on meditation and the TIANTAI practices of calmness and insight (see ŚAMATHA and VIPAŚYANĀ). He is said to have later received a seal of approval (YINKE) from the sixth patriarch (LIUZU) of Chan, HUINENG, after studying under the master for only one day and a night; hence, his cognomen Yishujue (Single-Night Enlightened, or Overnight Guest). His teachings are primarily known through the influential works attributed to him, such as the ZHENGDAO GE and *Yongjia ji*. Yongjia was given the posthumous title Great Master Wuxiang (No Marks).

Yongjusa. (龍珠寺). In Korean, "Dragon Pearl Monastery"; the second district monastery (PONSA) of the contemporary CHOGYE CHONG of Korean Buddhism, located on Mt. Hwa in Kyŏnggi province. The temple was constructed in 854 and originally named Karyangsa. It was rebuilt in 1790 to serve as the royal tomb of Prince Sado (1735–1762), the father of King Chŏngjo (r. 1776–1800). During the Japanese colonial period (1910–1945), Yongjusa became one of thirty-one head monasteries (PONSA) and it managed forty-nine branch temples (malsa) in several regions. A monks' training school was established in 1955, followed by a meditation hall in 1969. Yongjusa's main shrine hall (TAEUNG CHŎN) was constructed in 1790 and enshrines images of the buddhas ŚĀKYAMUNI, BHAIṢAJYAGURU, and AMITĀBHA. Other cultural properties at the site include the main temple bell, bronze censers, and a hanging painting of the Buddha (KWAEBUL).

yongmaeng chŏngjin. (S. ārabdhavīrya; T. brtson 'grus rtsom pa, C. yongmeng jingjin; J. yūmyōshōjin 勇猛精進). In Korean, "ferocious effort"; an especially rigorous period of practice performed during a SŎN (C. CHAN) meditative retreat (K. kyŏlche; C. JIEZHI) in Korea. The term most commonly refers to a one-week period during the winter retreat and leading up to the enlightenment day of the Buddha (Puch'ŏnim sŏngdo il) on the eighth day of the twelfth lunar month (usually in early January), during which all the monks (or nuns) in the meditation hall will undertake the ascetic practice (see DHUTAṄGA) of constantly sitting and never lying down to sleep (K. CHANGJWA PURWA) for the entire seven days. This practice is a ritual reenactment of the Buddha's own final fervent effort to awaken. The phrase has also come to refer more generally to an intense session of meditation carried out by a small group of elite monks during a three-year retreat (samnyŏn kyŏlsa). See also SESSHIN; RŌHATSU SESSHIN.

Yongming Yanshou. (J. Yōmei Enju; K. Yŏngmyŏng Yŏnsu 永明延壽) (904–975). Chinese CHAN master in the FAYAN ZONG during the Five Dynasties and Song dynasty periods; also known as Chongxuan and Baoyizi. Yongming was a native of Lin'an prefecture in Zhejiang province. At the age of twenty-seven, Yongming left his post as a minor official to become a monk under Cuiyan Lingcan (d.u.), a disciple of the Chan master XUEFENG YICUN (822–908); he subsequently studied under TIANTAI DESHAO (891–972) and inherited his Fayan lineage. Beginning in 952, Yongming served as abbot of a series of different monasteries, including Zishengsi on Mt. Xuedou, Lingyinsi (at the request of the king of Wuyue), and Yongmingsi, whence he acquired his toponym. Yongming was renowned for his advocacy of the simultaneous cultivation of Chan meditation and NIANFO (recitation of the Buddha's name) and for his magnum opus ZONGJING LU, a massive Chan genealogical history, in one hundred rolls. His writings also include the famous WANSHAN TONGGUI JI and the WEIXIN JUE. Although Yongming's Fayan lineage declined in China during the Song dynasty, thirty-six envoys sent by the Koryŏ king to study under Yongming returned with his teachings to Korea, where the line continued to flourish. Yongming was posthumously given the title Chan master Zhijue (Wise Awakening).

Yongningsi. (J. Eineiji; K. Yŏngnyŏngsa 永寧寺). In Chinese, "Eternal Peace monastery"; one of the most important monasteries in the Northern Wei capital of Luoyang. After the Wei rulers moved the Chinese capital to Luoyang, Empress

Dowager Ling, the birth mother of Emperor Xiao Mingdi (r. 515–528), began construction of Yongningsi in 516. According to the LUOYANG QIELAN JI, Yongningsi was a grand complex that could house more than a thousand monks and was located to the west of the imperial highway and south of the Changhe gate. In the northern precinct of the monastery was a buddha hall, which housed various golden images, and to the south, a triple-gated tower more than two hundred feet in height. A nine-story pagoda that rose a thousand feet supported a tall golden pole with golden disks to collect the dew. Golden bells were also hung from the pagoda. Since it overlooked the palace, only Emperor Xiao Mingdi and the Empress Dowager were allowed to climb the pagoda to gaze at the entire capital. All the scriptures and paintings from foreign countries available at the time are said to have been stored at the monastery. The eminent translator BODHIRUCI also translated many scriptures while in residence at Yongningsi. The monastery was devastated by a fire and was left in ruins after the capital was moved again to Ye. Several restorations were made during the Sui and Tang dynasties, but the monastery remains in ruins today.

Yŏngsanjae. (靈山齋). In Korean, "Vulture Peak Ceremony"; a Korean Buddhist rite associated with the SADDHARMAPUṆḌARĪKASŪTRA ("Lotus Sūtra"), which has been performed in Korea since the mid to late Koryŏ dynasty (918–1392). This elaborate ritual is a loose reenactment of the *Saddharmapuṇḍarīkasūtra* and is intended to depict the process by which all beings, both the living and the dead, are led to enlightenment. Its performance often occurs in conjunction with the forty-ninth day ceremony (K. sasipku [il] chae; C. SISHIJIU [RI] ZHAI), which sends a deceased being in the intermediate transitional state (ANTARĀBHAVA) on to the next rebirth. The Yŏngsanjae is renowned for including the most complete repertoire of Buddhist chant and dance preserved in the Korean tradition. The rite may last for between one day and a week, although it is rare nowadays to see it extend beyond a single day; briefer productions lasting a couple of hours are sometimes staged for tourists. The Yŏngsanjae is protected through the Korean Cultural Property Protection Law as an intangible cultural asset (Muhyŏng Munhwajae, no. 50), and the group responsible for protecting and preserving the rite for the future consists of monks at the monastery of PONGWŎNSA in Seoul, the headquarters of the T'AEGO CHONG. The monks at the monastery also train monks and nuns from other orders of Buddhism, as well as laypeople, in different components of the rite. In recent years, the dominant CHOGYE CHONG of Korean Buddhism has also begun to perform the Yŏngsanjae again, thanks to training from the Pongwŏnsa specialists in the tradition. ¶ The Yŏngsanjae is held in front of a large KWAEBUL (hanging painting) scroll depicting ŚĀKYAMUNI teaching at Vulture Peak (GṚDHRAKŪṬAPARVATA), delivering the *Saddharmapuṇḍarīkasūtra* to his followers. A day-long version of the ceremony starts with bell ringing and a procession escorting the attending spirits in a palanquin, which then proceeds to a ceremonial raising of the kwaebul. The rest of the day is made up of the following sequence of events: chanting spells (DHĀRAṆĪ) to the bodhisattva AVALOKITEŚVARA (K. Kwanseŭm posal); the cymbal dance, or PARACH'UM, as monks chant the *Ch'ŏnsu kyŏng* (C. QIANSHOU JING) dedicated to the thousand-handed incarnation of Avalokiteśvara (see SĀHASRABHUJASĀHASRANETRĀVALOKITEŚVARA); PŎMP'AE; purification of the ritual site (toryanggye), during which the butterfly dance, or NABICH'UM, is performed to entice the dead to attend the ceremony while the pŏmp'ae chants entreat the three jewels (RATNATRAYA) and dragons (NĀGA) to be present; the dharma drum dance, or PŎPKOCH'UM, during which a large drum is beaten to awaken all sentient beings; a group prayer to the Buddha and bodhisattvas, where everyone in attendance has the chance to take refuge in the three jewels (ratnatraya); an offering of flowers and incense (hyanghwagye) to the Buddha and bodhisattvas is made by the nabich'um dancers, followed by offering chants; a chant hoping that the food offerings on the altar will be sufficient as the parach'um is performed again together with four dhāraṇī chants; placing the offerings on the altar while chanting continues; culminating in a transfer of merit (kongdŏkkye) to all the people in attendance, including sending off the spiritual guests of the ceremony. The siktang chakpŏp, an elaborate ceremonial meal, is then consumed. A recitation on behalf of the lay donors who funded the ceremony (hoehyang ŭisik) concludes the rite.

Yongsŏng Chinjong. (龍城震鐘) (1864–1940). Korean monk during the Japanese colonial period (1910–1945), also known as Paek Yongsŏng; leader of a conservative group of monastic reformers, and one of the thirty-three signatories to the Korean Declaration of Independence in 1919. Ordained at the monastery of HAEINSA in 1879, he received full monastic precepts five years later and became a disciple of Taeŭn Nango (1780–1841) at the hermitage of Ch'ilburam. Later, he had a great awakening while he was studying the JINGDE CHUANDENGLU at the monastery of SONGGWANGSA, where he became a disciple of the SŎN master HWANSŎNG CHIAN. One year after Korea was annexed by Japan, he established the monastery of Taegaksa and a Sŏn center (Sŏnhagwŏn) in Seoul in an attempt to propagate Buddhism among a wider public. On March 1, 1919, he signed the Korean Declaration of Independence as a representative of the Buddhist community and was consequently incarcerated by the Japanese colonial government for eighteen months. During his year and a half in prison, he translated many sūtras (such as the voluminous AVATAṂSAKASŪTRA, or *Hwaŏmgyŏng*) from literary Chinese into han'gŭl, the Korean vernacular script, in order to make more Buddhist texts accessible to ordinary Koreans. After his release from prison in March 1921, he established a community known as the Taegakkyo (Teaching of Great Awakening) and a translation center called Samjang Yŏkhoe (Society for Translating the TRIPIṬAKA), and devoted most of his time to the translation of Buddhist scriptures. In 1928 he published the journal *Mua* ("No Self") and with HANYŎNG CHŎNGHO also published

the journal *Puril* ("Buddha Sun"). In May 1929, he and 127 other monks submitted a petition to the Japanese colonial government asking for the restoration of the tradition of celibacy in the Buddhist monasteries. Because of his interest in ensuring the continuance of the BHIKṢU and BHIKṢUṆĪ traditions, Yongsŏng personally established many ordination platforms and transmitted the complete monastic precepts (kujokkye) several times during his career. He also stressed the need for monasteries to be self-sustaining economically. In accordance with his plan for self-sustenance, he participated in the management of a mine in Hamgyŏng province, and in 1922, he bought some land in Manchuria and ran a farm on the compounds of a branch of the Taegakkyo. He also started a Ch'amsŏn Manil Kyŏlsahoe (Ten-Thousand Day Meditation Retreat Society) at the monastery of Ch'ilbulsa and attracted many followers from other monasteries. Yongsŏng was a prolific writer who left behind many works, including his famous *Kwiwŏn chŏngjong* ("The Orthodox Teaching that Returns to the Source"), a tract that compared Buddhism to Confucianism, Daoism, and Christianity, a modern twist on the old "three teachings" syncretism of medieval East Asian philosophy. This work was one of the first attempts by Buddhists to respond to the inroads made by Christianity in modern Korea. In his treatment, he suggests that Confucianism presented a complete moral doctrine but was deficient in transcendental teachings; Daoism was deficient in moral teachings but half-understood transcendental teaching; Christianity was fairly close to the Buddhist ch'ŏn'gyo ("teachings of [humans] and divinities"), which taught the kinds of meritorious actions that would lead to rebirth in heavenly realms but was completely ignorant of the transcendental teaching. Only Buddhism, Yongsŏng concluded, presented all facets of both moral and transcendental teachings. Yongsŏng's other works include his *Kakhae illyun*, *Susim non*, and *Ch'ŏnggong wŏnil*. See also IMWŎTKO.

Yongzhong. (C) (J. Eichū; K. Yŏngchung 永中) (d.u.). Yuan-dynasty CHAN master in the LINJI ZONG, also known as Jueji Yongzhong, and author of the ZIMEN JINGXUN.

yoni. (T. skye gnas; C. sheng; J. shō; K. saeng 生). In Sanskrit and Pāli, "modes of birth"; four modes by which sentient beings are born into the three realms of existence (TRAIDHĀTUKA): (1) oviparous birth (aṇḍajayoni), viz., beings born from eggs, such as birds, reptiles, fish, and insects; (2) viviparous birth (jarāyujayoni), viz., beings born from a womb, such as mammals and human beings; (3) moisture-born (saṃsvedajayoni), viz., beings such as maggots generated by rotten meat or mosquitoes born from swamp water, which are understood to be born as the result of the combination of heat and moisture; (4) metamorphic birth (UPAPĀDUKAYONI), viz., spontaneously generated beings, such an divinities (DEVA), hungry ghosts (PRETA), denizens of hell (NĀRAKA), and those residing in the intermediate state (ANTARĀBHAVA). In some interpretations, even beings generally classified in one category may in certain circumstances be born through other modes. For example, although human beings are viviparously born, the five hundred sons of the king of Pañcāla, one of the sixteen ancient kingdoms of India, are said to have been born from eggs, King Māndhātṛ was born from moisture, and the first humans to appear at the beginning of the KALPA are born by metamorphosis. Among animals, although the first three modes of birth are most common, there are also some animals born by metamorphosis, such as NĀGAS and GARUḌAS. Finally, among beings that are born through metamorphosis, there are certain types of preta who are said to be born viviparously.

yoniśomanaskāra. [alt. yoniśomanasikāra] (P. yonisomanasikāra; T. tshul bzhin yid la byed pa; C. ruli zuoyi/zheng siwei; J. nyorisai/shōshiyui; K. yŏri chagŭi/chŏng sayu 如理作意/正思惟). In Sanskrit, "systematic attention"; attention directed to an object or a phenomenon purposely and thoroughly, without becoming entranced by its external marks (LAKṢAṆA) and secondary characteristics (ANUVYAÑJANA). The term is used in the context of meditation to refer to the thoroughgoing reflection in which one traces an object or a phenomenon back to its cause or origin, so that one perceives how it arises and perishes in accordance with conditions. Thus, yoniśomanaskāra ultimately refers to attention directed to the FOUR NOBLE TRUTHS, which reveals that the things of this compounded world are fundamentally impermanent (ANITYA), suffering (DUḤKHA), and nonself (ANĀTMAN). While unsystematic attention (AYONIŚOMANASKĀRA) to the characteristics of sensory objects creates false views, craving, and eventually subjection to the objective order of SAṂSĀRA, systematic attention instead brings this unsystematic attention to an end so that the practitioner perceives the true nature of things. Thus, because of systematic attention, as yet unarisen erroneous views (MITHYĀDṚṢṬI) do not arise, already arisen ones cease, unarisen right views arise (SAMYAGDṚṢṬI), and already arisen ones increase. Systematic attention is thus foundational to the path that leads to liberation from saṃsāra. See also YUKTI.

yŏnji. (C. ranzhi; J. nenshi 燃指). In Korean, "finger burning." Although not officially sanctioned by the Korean Buddhist SAṂGHA, the ascetic practice of finger burning is sometimes performed by a handful of devoted Korean monks and nuns. Unlike a similar Chinese practice, the practice of finger burning is not performed in the context of ordination, and is held in high regard. The rationale for such a practice is often traced to the self-immolation of the bodhisattva BHAIṢAJYARĀJA in the SADDHARMAPUṆḌARĪKASŪTRA and the bodhisattva SADĀPRARUDITA's self-mutilation in the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ. See also DEHADĀNA; SHESHEN.

yon mchod. [alt. mchod yon] (yön chö). In Tibetan, "priest-patron," a term used to describe the relationship between various Tibetan Buddhist hierarchs and Mongol, Manchu, and Chinese rulers. The compound is composed of abbreviations of two terms. The first, "yon bdag," connotes a powerful

benefactor or patron, often a political or military leader. The second "mchod gnas" connotes a religious official, such as a court chaplain. The relationship between Tibetan hierarchs and Mongol rulers is traced to the meeting of SA SKYA PAṆḌITA and Godan Khan (1206–1251, the grandson of Genghis Khan). When Mongol troops invaded Tibet, Sa skya Paṇḍita led a delegation to the Mongol court in 1247, during which he cured Godan Khan of an illness and offered him religious instruction. Subsequently, Godan Khan became his disciple, sparing Tibet from further invasion and granting control of central Tibet to Sa skya Paṇḍita. The classic example of the "priest-patron" relationship occurred when Sa skya Paṇḍita's nephew 'PHAGS PA BLO GROS RGYAL MTSHAN served as religious preceptor and close advisor to Qubilai Khan. Other Tibetan Buddhist hierarchs would serve in similar roles during the Ming and Qing dynasties. As often invoked in Tibetan sources, in the "priest-patron" relationship, the Tibetan Buddhist lama provides religious instruction and spiritual protection (through the performance of tantric rituals) to the Mongol, Manchu, or Chinese chieftain and in return the Mongol, Manchu, or Chinese ruler provides material support and military protection, while allowing Tibet to remain independent.

Yon tan rgya mtsho. (Yöntan Gyatso) (1589–1616). In Tibetan, "Ocean of Good Qualities"; the fourth DALAI LAMA. The DGE LUGS monk BSOD NAMS RGYA MTSHO, later recognized as the third Dalai Lama, visited the court of the Mongol ruler, the Altan Khan, in 1578. It was the Altan Khan who first used the term "Dalai Lama" to refer to this leader of the Dge lugs sect. The third Dalai Lama soon returned to Tibet but came back to Mongolia after the death of the Altan Khan, spending the next five years giving Buddhist teachings and founding monasteries before dying in 1588. His incarnation was identified by the Mongols among their own people, as the grandson of Altan Khan's successor. He was given the name Yon tan rgya mtsho. He was thus the only Dalai Lama who was not ethnically Tibetan. The Dge lugs hierarchy in Tibet did not immediately recognize the Mongol as the incarnation of Bsod nams rgya mtsho. To assuage their concerns, a Mongolian delegation was sent to Tibet in 1600 to invite a group of Dge lugs dignitaries to come to Mongolia and administer the traditional tests to determine the boy's identity. After the tests convinced the Tibetan delegation that he was indeed the fourth Dalai Lama, they took the boy back to LHA SA in 1602, where he was ordained as a novice at the JO KHANG. He received BHIKṢU ordination in 1614 from his tutor BLO BZANG CHOS KYI RGYAL MTSHAN, who would later become the first (or according to a different reckoning, the fourth) PAṆ CHEN LAMA. Tibet was on the brink of civil war, with the king of Gtsang, a patron of the KARMA BKA' RGYUD, seeking to control central Tibet, where the Dge lugs were in power with the support of the Mongols. Although the young fourth Dalai Lama appears not to have been involved in politics, the fact that he was a foreigner seems to have been resented in some quarters. He died of uncertain causes in 1616 at the age of twenty-seven. The close relations that developed between the Mongols and the Dge lugs sect as a result of his selection as Dalai Lama would be an important factor in the eventual political ascendancy of his successor, the fifth Dalai Lama, NGAG DBANG BLO BZANG RGYA MSHO, in 1642.

Yōsai. (J) (榮西). See MYŌAN EISAI.

Yose. (K) (了世). See WŌNMYO YOSE.

Yu. (J. U; K. U 于). Ethnikon used in China for monks who hailed from KHOTAN (transcribed as Yutian in Chinese), an Indo-European oasis kingdom at the southern edge of the Takla Makhan desert in Inner Asia, along the northern slope of the Kunlun mountains. Khotan was a major center of Buddhism in Central Asia and an important conduit for the transmission of Buddhism from India to China along the SILK ROAD.

Yuandeng. (C) (圓澄). See ZHANRAN YUANDENG.

yuandun jiao. (J. endongyō; K. wŏndon kyo 圓頓教). In Chinese, "perfect and sudden teaching"; one of the highest levels of the various doctrinal taxonomies (panjiao; see JIAOXIANG PANSHI) deployed in the TIANTAI ZONG, HUAYAN ZONG, and sometimes the CHAN ZONG. The Tiantai school first introduced the term to refer to the highest form of the teachings. In the Tiantai analysis, "perfect" refers to "perfect teaching" or "consummate teaching" (YUANJIAO), the last of the four types of teachings according to content (huafa sijiao), while "sudden" refers to the "sudden teaching" (DUNJIAO), the first of the four modes of exposition (huayi sijiao) (see TIANTAI BAJIAO). The compound "perfect and sudden teaching" thus refers to the consummate vision of the ultimate truth of Buddhism that is expounded all at once without any provisional or gradual expedients. In the Tiantai zong, this "perfect and sudden teaching" may refer either to (1) the teachings of the Tiantai school itself, which provide an approach to Buddhist soteriology in which every stage, condition, and thought, whether defiled or pure, becomes the basis of enlightenment since it represents the perfect median truth (see SANDI); or (2) the teachings of the AVATAṂSAKASŪTRA, in which the Buddha expounded his consummate and unadulterated vision of reality immediately after his enlightenment without any consideration of the ability of his audience to understand that vision. The Huayan school follows closely the Tiantai concept of yuandun jiao. The Huayan and CHAN teacher GUIFENG ZONGMI (780–841), for example, refers to the perfect and sudden teaching as the "huayi dun" (sudden teaching according to the method of exposition), correlating it with the teaching of the dharma-realm of the mutual and unobstructed interpenetration between phenomenon and phenomena (SHISHI WU'AI FAJIE). The Korean SŎN (Chan) master POJO CHINUL (1158–1210), based on the works of LI TONGXUAN (635–730), interpreted the term as referring to the perfect and sudden enlightenment to the truth of nature origination

(XINGQI), which occurs through understanding Huayan doctrine from a Sŏn perspective. In the Chan tradition, therefore, the "perfect and sudden teaching" may refer to the highest form of the Buddhist teachings rather than to the teachings of any specific scholastic school (KYO). See also WŎNDON SŎNGBUL NON.

yuanjiao. (圓教). In Chinese, "perfect/consummate teaching." See HUAYAN WUJIAO.

Yuanjue jing. (J. Engakukyō; K. Wŏn'gak kyŏng 圓覺經). In Chinese, "Scripture of Perfect Enlightenment"; also known as *Dafangguang yuanjue xiuduoluo liaoyi jing*; an influential indigenous Chinese sūtra (see APOCRYPHA). The *Yuanjue jing* was purportedly translated by a certain Buddhatrāta (d.u.) at the monastery of BAIMASI in 693, but no Sanskrit or Tibetan equivalent is known to have existed and the scripture is now recognized as being an apocryphon. While in a special SAMĀDHI named "great illuminating repository of spiritual penetration" (shentong daguang mingzang), the Buddha is requested by twelve bodhisattvas including MAÑJUŚRĪ, SAMANTABHADRA, and MAITREYA to explain perfect enlightenment (yuanjue), the originally pure mind as its cause, and the different ways to cultivate it. The scripture focuses on ŚAMATHA, SAMĀPATTI, and DHYĀNA as the primary means of cultivation, and divides the spiritual capacity of sentient beings into three levels. The TATHĀGATAGARBHA and original-enlightenment (BENJUE) theories of the apocryphal DASHENG QIXIN LUN seem to have influenced the composition of the *Yuanjue jing*. The scripture was especially influential in the writings of the CHAN historian GUIFENG ZONGMI, who wrote several commentaries and subcommentaries on the text, including his *Yuanjue jing lueshu*, *Yuanjue jing lüeshu chao*, *Yuanjue jing daochang xiuzheng yi*, *Yuanjue jing dashu*, and *Yuanjue jing dashu chao*. Zongmi also wrote manuals, no longer extant, on the use of the *Yuanjue jing* in repentance rituals. The *Yuanjue jing* is one of a number of Chan-related texts that were translated into Uighur Turkish in the TURFAN region.

Yuanmiao. (原妙). See GAOFENG YUANMIAO.

Yuanming lun. (J. Enmyōron; K. Wŏnmyŏng non 圓明論). In Chinese, "Treatise on Perfect Illumination"; attributed to AŚVAGHOṢA, but almost certainly a transcription of a lecture by a teacher associated with the Northern school (BEI ZONG) in the nascent Chinese CHAN tradition. Several copies of this text have been discovered at DUNHUANG, and a private copy is extant in Japan. The treatise consists of nine chapters written largely in catechistic format. The treatise elucidates the causes and results of the path, the nature of the DHARMADHĀTU as the manifestation of one's own mind, false and correct views, the importance of UPĀYA, and the practice of meditation. The *Yuanming lun* serves as an important source on the teachings of the early Chan tradition before its coalescence around the mythology of the "sixth patriarch" (LIUZU) HUINENG and the so-called Southern school (NAN ZONG).

Yuanren lun. (J. Genninron; K. Wŏnin non 原人論). In Chinese, "Treatise on the Origin of Humanity"; by the eminent HUAYAN and CHAN scholiast GUIFENG ZONGMI. A preface to this relatively short treatise was prepared by Zongmi, as was another by his lay disciple Pei Xiu (787?–860). The treatise largely consists of four chapters: exposing deluded attachments, exposing the partial and superficial, directly revealing the true source, and reconciling root and branches. In his critique of deluded attachments, Zongmi offers a response to the different Confucian and Daoist theories of the way (DAO), spontaneity (ziran), primal pneuma (yuanqi), and the mandate of heaven (tianming). Zongmi then briefly summarizes the teachings of the different vehicles of Buddhism, such as HĪNAYĀNA and MAHĀYĀNA, and expounds their different approaches to reality. Relying on the teachings of the AVATAṂSAKASŪTRA, Zongmi finally offers a Buddhist alternative to the theories of the Confucian and Daoist critics: the TATHĀGATAGARBHA as the origin of humanity.

yuanrong. (J. ennyū; K. wŏnyung 圓融). In Chinese, "consummate interfusion," "perfectly interfused"; a term used in the HUAYAN and TIANTAI traditions to refer to the ultimate state of reality wherein each individual phenomenon is perceived to be perfectly interfused and completely harmonized with every other phenomena. Yuanrong is contrasted with "separation" (GELI), the understanding of reality in terms of the discriminative phenomena of the conventional realm. ¶ The concept of yuanrong is deployed soteriologically as one of the two modes of describing the bodhisattva path in the Huayan tradition, viz., the "approach of consummate interfusion" (yuanrong men), also known as the "approach of consummate interfusion and mutual conflation" (YUANRONG XIANGSHE MEN); this mode is contrasted with the "approach of sequential practices" (CIDI XINGBU MEN). The approach of sequential practices refers to the different stages in the process of religious training, which progress through the fifty-two stages of the bodhisattva path (MĀRGA). By contrast, the yuanrong men focuses instead on the principle of equivalency (pingdeng) and indicates the way in which any one stage of training subsumes all stages of the path, or how the inception of the path is in fact identical to its consummation. According to this mode of description, then, the completion of the ten stages of faith (shixin), a preliminary stage of the mārga in the Huayan tradition, is often stated to be identical to the achievement of buddhahood (XINMAN CHENGFO). In the Huayan school's fivefold taxonomy of the teachings (HUAYAN WUJIAO) as systematized by FAZANG (643–712), the three vehicles are considered to represent the xingbu men, while the "consummate teaching" (YUANJIAO), the final and highest level of teaching in this schema, corresponds to the yuanrong men. ¶ Yuanrong is also used in accounts of contemplation practice in the Huayan school, as, for example, in the "contemplation on the consummate interfusion of the three sages" (sansheng yuanrong guan), which was treated by both CHENGGUAN (738–839) and LI TONGXUAN (635–730). In this Huayan meditation, the bodhisattvas MAÑJUŚRĪ and

SAMANTABHADRA represent the causal aspects of practice (yinfen), and the buddha VAIROCANA, the fruition aspect (guofen); the consummate interfusion of the causal and effect aspects of practice thus indicates enlightenment. Samantabhadra and Mañjuśrī are juxtaposed as, respectively, the DHARMADHĀTU as the object of faith (suoxin) and the mind as the subject of faith (nengxin), as practice (xing) and understanding (jie), and as principle (LI) and wisdom (zhi). When these juxtaposed aspects are perfectly interfused with each other, the causal aspect is consummated and becomes perfectly interfused with the effect aspect. Thus Samantabhadra as the "empty TATHĀGATAGARBHA" (kong rulaizang) and Mañjuśrī as the "nonempty tathāgatagarbha" (bukong rulaizang) are interfused with Vairocana Buddha's "comprehensive tathāgatagarbha" (zong rulaizang). ¶ In the Tiantai tradition, the "consummate interfusion of the three truths" (yuanrong sandi) is one of the two ways of interpreting the three truths (SANDI), viz., of emptiness (kongdi), provisionally real (jiadi), and the mean (zhongdi). The yuanrong sandi, also termed the "nonsequential three truths" (BU CIDI SANDI), refers to the notion that each truth (di) is endowed with all three of these truths together, and thus the particular and the universal are not separate from one another. This mode is distinguished from the "differentiated three truths" (GELI SANDI), also known as the "sequential three truths" (cidi sandi), where each truth is treated independently; in this mode, the first two truths represent the aspect of phenomena, while the last truth, of the mean, refers to the aspect of principle. In the Tiantai doctrinal taxonomy (see TIANTAI BAJIAO; WUSHI BAJIAO), geli sandi and yuanrong sandi are said to correspond, respectively, to the "distinct teaching" (biejiao) and the "consummate teaching" (yuanjiao), the third and fourth of the "four types of teaching according to their content" (huafa sijiao) in the Tiantai doctrinal classification. ¶ In both the Huayan and Tiantai traditions, yuanrong is also employed as a defining characteristic of the "dharma realm" (fajie; S. dharmadhātu). The term "consummate interfusion of the dharma realm" (fajie yuanrong) describes both the infinitely interdependent state of the Huayan "dharmadhātu of the unimpeded interpenetration of phenomenon with phenomena" (SHISHI WU'AI FAJIE), as well as the Tiantai doctrine of "intrinsic inclusiveness" (xingju), in which each individual phenomenon is said to be endowed with the TRICHILIOCOSM (SANQIAN DAQIAN SHIJIE; see TRISĀHASRAMAHĀSĀHASRALOKADHĀTU), which represents the entirety of existence in the Tiantai cosmology. The Huayan "dharmadhātu of the unimpeded interpenetration of phenomenon with phenomena" is systematized in the doctrine of the Huayan version of causality, the "conditioned origination of the dharmadhātu" (FAJIE YUANQI), and this Huayan causality of the dharmadhātu is also explained as the "consummate interfusion of the six aspects" (LIUXIANG yuanrong).

yuanrong sanguan. (圓融三觀). In Chinese, "three contemplations of consummate interfusion." See SANGUAN.

yuanrong xiangshe men. (圓融相攝門). In Chinese, "approach of consummate interfusion and mutual conflation." See YUANRONG.

Yuanwu Keqin. (J. Engo Kokugon; K. Wŏno Kŭkkŭn 圜悟克勤) (1062–1135). Chinese CHAN master in the LINJI ZONG; also known as Wuzhuo and Foguo. Yuanwu was a native of Chongning, Pengzhou prefecture, in present-day Sichuan province (northwest of the city of Chengdu). Little is known about his early career, but Yuanwu eventually became a disciple of the Chan master WUZU FAYAN. According to legend, Yuanwu became ill after leaving Wuzu's side, and returned as Wuzu had predicted. Yuanwu then inherited Wuzu's Linji lineage. While traveling in the south, Yuanwu befriended the statesman ZHANG SHANGYING (1043–1122) and also won the support of other powerful local figures, such as the governor of Chengdu. At their request, Yuanwu served as abbot of several monasteries, including Jiashansi and Daolinsi, where he lectured on the *Xuedou gonggu* by XUEDOU CHONGXUAN. These lectures were later edited together as the BIYAN LU ("Blue Cliff Record"), an influential collection of Chan cases (GONG'AN). Yuanwu was honored with several titles: Emperor Huizong (r. 1100–1125) gave him the title Chan master Foguo (Buddha Fruition) and Gaozong the title Chan master Yuanwu (Consummate Awakening). The title Chan master Zhenjue (True Enlightenment) was also bestowed upon him. Among his hundred or so disciples, DAHUI ZONGGAO, the systematizer of the KANHUA CHAN method of meditation, is most famous. Yuanwu's teachings are recorded in the *Yuanwu Foguo chanshi yulu* and *Yuanwu chanshi xinyao*.

yuganaddha. (T. zung 'jug; C. shuangru/shuangyun; J. sōnyū/sōun; K. ssangip/ssangun 雙入/雙運). In Sanskrit and Pāli, lit., "yoked together," sometimes translated as "union" or "joining." The term is especially important in tantric literature, where it often refers to the union of two things, resulting in a state of nonduality (ADVAYA). However, the term appears in a variety of contexts where two elements are conjoined, including serenity (ŚAMATHA) and insight (VIPAŚYANĀ), wisdom (PRAJÑĀ) and method (UPĀYA), SAṂSĀRA and NIRVĀṆA, male and female, and subject and object. In Pāli literature, the term appears especially in the context of treatments of samatha and vipassanā, both in practices in which the meditator alternates between the two and practices in which the two are unified.

Yuimae. (C. Weimo hui; K. Yuma hoe 維摩會). In Japanese, "VIMALAKĪRTI ceremony." One of the three great ceremonies (Nankyō san[n]e) held in the ancient Japanese capital of Nara. In 656, when the senior courtier Nakatomi no Kamatari (an ancestor of the Fujiwara clan) became seriously ill, the Paekche nun Pŏmmyŏng (J. Hōmyō) advised Empress Saimei to sponsor a reading of the "Inquiry about Illness" chapter of the VIMALAKĪRTINIRDEŚA in order to speed his recovery. The reading was successful and, out of gratitude, Kamatari and his family

subsequently sponsored a lecture on the sūtra in 658 to commemorate the construction of the new monastery of Sankaiji. This ceremony was transferred to the Hossōshū (C. FAXIANG ZONG) monastery of KŌFUKUJI in Nara in 712, where it was held periodically every two to five years; it is now observed annually on the tenth day of the tenth lunar month. For seven days, a lecture on the *Vimalakīrtinirdeśa* is offered to the public and offerings are made to the SAṂGHA.

Yujŏmsa. (楡岾寺). In Korean, "Elm Hillock Monastery"; one of the four major monasteries located in the Diamond Mountains (KŬMGANGSAN) in present-day North Korea, and best known traditionally for its fifty-three buddha images. Yujŏmsa claims to be one of the oldest monasteries on the Korean peninsula. According to its historical record, *Kŭmgangsan Yujŏmsa sajŏkki*, written in 1297 by the Koryŏ official and diplomat Min Chi (1248–1326), icons of fifty-three buddhas drifted to the Silla seashore in the year 4 CE through the intercession of an Indo-Scythian [alt. Yuezhi, Rouzhi] king from the northwestern region of India. These images were originally cast by MAÑJUŚRĪ in the Indian city of ŚRĀVASTĪ and enshrined inside a large bell. After landing in Korea, the bell containing these fifty-three icons magically traveled inland and was eventually discovered in a branch of an elm tree by a Korean local official. To house these icons, the Silla king Namhae Ch'ach'aung (r. 4–24 CE) ordered the construction of this monastery, which he named after the elm tree in which the bell was discovered. Despite this legend of the monastery's origins, however, the main construction work at Yujŏmsa could not have begun before 1168. In the thirteenth century, during the late Koryŏ period, the monastery enjoyed the patronage of the Mongol–Korean court, which raised its political status and importance. The fifty-three buddhas of Yujŏmsa remained a popular destination for both literati tourists and Buddhist pilgrims to the Diamond Mountains throughout the Chosŏn dynasty. When the site was surveyed in 1912 by the Japanese scholar Sekino Tadashi (1867–1935), only fifty small gilt bronze icons were displayed in the Nŭngin pojŏn on a unique screen altar that was ornamented with meandering tree branches. In contrast to Min Chi's description of the iconography, various other images, including bodhisattvas and monastic figures, were included along with the buddha icons. Stylistically, forty-three individual figures could be dated to the Unified Silla period, and the remaining seven were determined to be post-Koryŏ products. This incongruent mixture of styles is due to continuous devastations of the images by fire and theft and their subsequent restorations. Yujŏmsa burned to the ground during the Korean War (1950–1953) and the current whereabouts of the fifty-three icons are unknown.

Yujŏng. (K) (惟政). See SAMYŎNG YUJŎNG.

yukti. (P. yutti; T. rigs pa; C. daoli; J. dōri; K. tori 道理). In Sanskrit, "reasoning" or "argumentation"; the process of analytical reflection that results in correct understanding. The term often appears in conjunction with ĀGAMA (scripture), as criteria or tools deployed to verify a particular point of doctrinal correctness. Yukti is usually presumed to have two denotations in the literature, viz., "reasoning" and "rational principles," although sometimes it is difficult to differentiate between these two senses in a particular text. ¶ The MAHĀYĀNASŪTRĀLAṂKĀRA, for instance, refers to yukti as one of the four types of provisional establishment (prajñaptivyavasthāna), that is, provisional establishment of dharma (dharmaprajñaptivyavasthāna), truth (satyaprajñaptivyavasthāna), reasoning (yuktiprajñaptivyavasthāna), and vehicle (yānaprajñaptivyavasthāna). Yukti is itself subdivided into four types, that is, the yukti of reference (apekṣāyukti), defined as systematic attention (YONIŚOMANASKĀRA); efficacy (kāryakāraṇayukti), defined as right view together with its fruits (samyagdṛṣṭiḥ phalānvitā); valid proof (upapattisādhanayukti), defined as analysis by means of correct cognition (pramāṇavicaya); and reality (DHARMATĀ-yukti), defined as the inconceivable (ACINTYA). ¶ In such texts as the YOGĀCĀRABHŪMI, the SAṂDHINIRMOCANASŪTRA, and the ABHIDHARMASAMUCCAYA, the four types of yukti are described as tools or means for investigating Buddhist teachings and yukti thus carries the denotation of "rational principles" (see VYĀKHYĀYUKTI). In these scriptures, the principle of dependence (apekṣāyukti) is defined as the principle of dependent origination (PRATĪTYASAMUTPĀDA); thus, in dependence on the seed, the shoot emerges. The principle of efficacy (kāryakāraṇayukti) is defined as the way in which particular causes are associated with specific effects; thus, visual consciousness affects vision but not hearing. The principle of valid proof (upapattisādhanayukti) is defined as the three types of valid knowledge (PRAMĀṆA), that is, direct perception (PRATYAKṢA), logical inference (ANUMĀNA), and scripture (āgama). The principle of reality (dharmatā-yukti) is defined as the generic properties and natures of dharmas, such as the property of water falling downward, or the sun rising in the east. The *Saṃdhinirmocanasūtra*'s emphasis on the third yukti of valid proof ultimately led to a narrowing of the term to refer to the three types of valid knowledge (pramāṇa). After DIGNĀGA (c. 480–540), who accepted only two pramāṇas—that is, direct perception (pratyakṣa) and logical inference (anumāna), but not scripture (āgama)—yukti is subsequently confined to only these two types of pramāṇas. In the ABHIDHARMAKOŚABHĀṢYA, Vasubandhu advocates that the wisdom obtained through reflection (CINTĀMAYĪPRAJÑĀ), the second of the three modes of wisdom (prajñā) (along with the wisdom obtained through listening/learning [ŚRUTAMAYĪPRAJÑĀ] and the wisdom obtained through meditative practice [BHĀVANĀMAYĪPRAJÑĀ]) is produced from investigation by means of yukti (yuktinidhyānajā). Since Vasubandhu presents all three modes of wisdom as arising from meditative concentration (SAMĀDHI), yukti in this context seems to have been understood in relation to meditative practice, not purely intellectual reasoning. ¶ The Pāli equivalent yutti, which appears in the NETTIPPAKARAṆA, is presented as one of the sixteen categories

(hārā) of scriptural exposition, referring to (logical) fitness, right construction, or correctness of meaning.

yuktikāya. (T. rigs tshogs). In Sanskrit, literally "corpus of reasoning," or "collection of reasoning"; a term used in the Indian and Tibetan traditions to refer collectively to six works that traditionally constitute NĀGĀRJUNA's philosophical oeuvre. The six works are the MŪLAMADHYAMAKAKĀRIKĀ, YUKTIṢAṢṬIKĀ, ŚŪNYATĀSAPTATI, VIGRAHAVYĀVARTANĪ, VAIDALYAPRAKARAṆA, and RATNĀVALĪ. (Some versions list only five works in the corpus, eliminating the *Ratnāvalī*; others substitute the AKUTOBHAYĀ in place of the *Ratnāvalī* as the sixth work). This group of texts is often referred to in connection with the STAVAKĀYA, or "corpus of hymns," the devotional works attributed to Nāgārjuna. There are traditionally four works in this group of hymns, known collectively as the CATUḤSTAVA: the LOKĀTĪTASTAVA, NIRAUPAMYASTAVA, ACINTYASTAVA, and PARAMĀRTHASTAVA, although a number of other important hymns are also ascribed to Nāgārjuna. These two collections of Nāgārjuna's works figure prominently in the "self-emptiness, other emptiness" (RANG STONG GZHAN STONG) debate in Tibetan Buddhism, where the parties disagree on the question of which corpus represents Nāgārjuna's final view.

Yuktiṣaṣṭikā. (T. Rigs pa drug cu pa; C. Liushisong ruli lun; J. Rokujūju nyoriron; K. Yuksipsong yŏri non 六十頌如理論). In Sanskrit, "Sixty Stanzas of Reasoning"; one of the most famous and widely cited works attributed to NĀGĀRJUNA, traditionally counted as one of the texts in his "corpus of reasoning" (YUKTIKĀYA). Although lost in the original Sanskrit, the work is preserved in both Tibetan and Chinese; a number of the Sanskrit stanzas have however been recovered as citations in other works. Sixty-one stanzas in length, the work is a collection of aphorisms generally organized around the topic of PRATĪTYASAMUTPĀDA. It begins with the famous homage to the Buddha, "Obeisance to the King of Sages who proclaimed dependent origination, this mode by which production and disintegration are abandoned." The work argues throughout that the world that is subject to production and disintegration is an illusion created by ignorance and that the path taught by the Buddha is the means to destroy this illusion and the suffering it creates. Individual stanzas are quoted by such commentators as BHĀVAVIVEKA, CANDRAKĪRTI, and ŚĀNTARAKṢITA in support of some of the central debates in MADHYAMAKA, such as whether ARHATs must understand the Madhyamaka conception of emptiness (ŚŪNYATĀ) in order to be liberated from rebirth and whether Nāgārjuna held that external objects do not exist (the thirty-fourth stanza can be read to suggest that he held this view).

Yuktiṣaṣṭikāvṛtti. (T. Rigs pa drug cu pa'i 'grel pa). "Commentary on [NĀGĀRJUNA's] Sixty Stanzas of Reasoning," by CANDRAKĪRTI. See YUKTIṢAṢṬIKĀ.

Yulan Guanyin. (C) (魚藍觀音). See MALANG FU.

yulanben. (T. yongs su skyob pa'i snod; J. urabon; K. uranbun 盂蘭盆). In Chinese, lit. "yulan vessel," referring to the "ghost festival." The Sinographs "yulan" have typically been interpreted by scholars to be a transcription of a hypothetical BUDDHIST HYBRID SANSKRIT, Middle Indic, or perhaps even Iranian form *ULLAMBANA, which is presumed to correspond to the Sanskrit avalambana (lit. "hanging downward," "suspended"); the term refers to the "Ghost Festival," a ritual that sought the salvation of beings condemned to the unfortunate fate of being "suspended" in hell. This explanation of yulan is questionable, however, since this connotation of the Sanskrit term avalambana is unknown in Indian Buddhist contexts. The Tibetan translation of yulanben as yongs su skyob pa'i snod, or "vessel of complete protection," also does not fit any connotations of "hanging down"; the Tibetan rendering does, however, seem to fit better an alternate explanation of the derivation of yulan(ben) as the Buddhist Hybrid Sanskrit term ullumpana (sometimes mistakenly transcribed as ullumpana, ullumbana, etc.), lit. "rescuing, extracting [from an unfortunate fate]." The Sinograph "ben" ("bowl") is less problematic: it refers to the bowl in which offerings are placed during the PRAVĀRAṆĀ festival in order to rescue one's ancestors from their unfortunate destinies. A more recent hypothesis is that "yulan" is a transcription of the Sanskrit and Pāli term odana (cooked rice) and "ben" a native word for bowl; the compound "yulanben" is thus not a transcription of the hypothetical Sanskrit word ullambana but actually means a "rice bowl," perhaps even a special kind of rice bowl for making offerings on the pravāraṇā day. The term yulanben is now used to refer to the "ghost festival," a popular ceremony in medieval China, Korea, and Japan, when offerings were made to the SAṂGHA of the ten directions (DAŚADIŚ) on behalf of one's ancestors. A bowl was filled with all kinds of flavorful foods and fruits and offered on behalf of seven generations of one's deceased parents and ancestors. The festival was held on the full moon of the seventh lunar month, when the saṃgha performed the pravāraṇā ceremony, ending the summer rains retreat (VARṢĀ). The origin myth and practices associated with the ghost festival are found in various sources, including popular stories known as BIANWEN and such Buddhist apocryphal scriptures as the YULANBEN JING and BAO'EN FENGBEN JING ("Sūtra for Offering Bowls to Repay Kindness"). The Japanese BON FESTIVAL (alt. Obon) derives from this term; it is celebrated in either mid-July or mid-August in order to honor the spirits of one's deceased ancestors.

Yulanben jing. (T. 'Phags pa yongs su skyobs pa'i snod ces bya ba'i mdo; J. Urabongyō; K. Uranbun kyŏng 盂蘭盆經). In Chinese, "Book of the Yulan Vessel"; an influential indigenous Chinese Buddhist scripture (see APOCRYPHA), often known in English as the *Ullambana Sūtra* or simply the *Yulanben Sūtra*. Along with the BAO'EN FENGBEN JING ("Scripture for Offering Bowls to Repay Kindness"), the *Yulanben jing* details the practice of the ghost festival (YULANBEN) and its origin myth. Little is known about the provenance of either text. Both are now

generally presumed to be indigenous Chinese works, although some scholars continue to maintain that they are of Indian or Central Asian origin. They are thought to have been composed sometime between the fourth and fifth centuries and were included in the Chinese Buddhist canon as early as the sixth century. The origin myth recounted in the scripture describes the pious efforts of Mulian (S. MAHĀMAUDGALYĀYANA), one of the two main disciples of the Buddha, to save his mother from the tortures of her rebirth as a hungry ghost (PRETA). The Buddha explains to Mulian that it is impossible for an individual on his own to save his ancestors from their suffering; instead, one should place offerings in a bowl for the entire SAṂGHA of the ten directions, and these offerings will be sufficient to liberate up to seven generations of one's parents and ancestors from their unfortunate rebirths. At least six commentaries were written on the *Yulanben jing*, although only two survive, including an influential exegesis by GUIFENG ZONGMI. The Tibetan translation of the scripture, made in the Chinese outpost of DUNHUANG sometime in the early ninth century by 'GOS CHOS GRUB (C. Facheng; c. 755–849), is rendered directly from the Chinese recension and is extant in only three manuscript editions of the Tibetan canon (BKA' 'GYUR). See also YULANBEN.

yulu. (J. goroku; K. ŏrok 語録). In Chinese, "discourse records" or "recorded sayings," also known as yuben (lit. "edition of discourses") or guanglu ("extensive records"); compilations of the sayings of CHAN, SŎN, and ZEN masters. This genre of Chan literature typically involved collections of the formal sermons (SHANGTANG), exchanges (WENDA), and utterances of Chan masters, which were edited together by their disciples soon after their deaths. The yulu genre sought to capture the vernacular flavor of the master's speech, thus giving it a personal and intimate quality, as if the master himself were in some sense still accessible. Often the recorded sayings of a master would also include his biography, poetry, death verse (YIJI), inscriptions, letters (SHUZHUANG), and other writings, in addition to the transcription of his lectures and sayings. For this reason, Chan discourse records are the Buddhist equivalent of the literary collections (wenji) of secular literati. The term first appears in the SONG GAOSENG ZHUAN, and the genre is often associated particularly with the Chan master MAZU DAOYI (709–788) and his HONGZHOU line of Chan. Among the more famous recorded sayings are the *Mazu yulu (*a.k.a. *Mazu Daoyi chanshi guanglu)*, LINJI YIXUAN's LINJI LU, and HUANGBO XIYUN's CHUANXIN FAYAO. Recorded sayings written in Japanese vernacular are also often called a hōgo (dharma discourse).

Yum bu bla sgang. (Yumbu Lagang). A palace and adjacent tower purported to be Tibet's oldest building, established according to legend by the first Tibetan king Gnya' khri btsan po (Nyatri Tsenpo) in central Tibet's Yar klungs (Yarlung) Valley. It may have served as the residence for the earliest Tibetan rulers and was likely renovated by the twenty-eighth king, Lha Tho tho ri gnyan btsan (Lha Tothori Nyentsen, b. 433) during the mid-fifth century. Legends state that this king received the first Buddhist scriptures while residing at the Yum bu bla sgang as they miraculously descended from the sky, heralding the eventual religious conversion of the country. According to one early Tibetan historian, however, the texts were actually transported by the Indian cleric Buddharakṣita; the king, unable to read the Indic script, declared their miraculous descent in order to keep secret their foreign origins. The texts were therefore called the gnyan po gsang ba, "the sacred secret," and indeed remained a secret until the advent of king SRONG BTSAN SGAM PO in the seventh century.

Yum chen mo. In Tibetan, lit., "great mother"; a Tibetan epithet for a goddess who is the deified embodiment of the PRAJÑĀPĀRAMITĀ, or perfection of wisdom. The term is also used to refer to the ŚATASĀHASRIKĀPRAJÑĀPĀRAMITĀ ("Perfection of Wisdom in One Hundred Thousand Lines"), or to any other prajñāpāramitā sūtra. Finally, Yum chen mo is also an honorific term used to refer to the mother of the DALAI LAMA.

Yun'an Puyan. (J. Unnan Fugan; K. Unam Poam 運庵普巖) (1156–1226). Chinese CHAN master in the LINJI ZONG; a native of Siming in present-day Sichuan province. After studying under Shigu Xiyi (d.u.) and Wuyong Jingquan (1137–1207) following his ordination, Yun'an traveled to the monastery of Zhengzhao Chanyuan on Mt. Yang in 1184 and continued his training under the Chan master Songyuan Chongyue (1132–1202), who early in his vocation had been a student of DAHUI ZONGGAO. When Songyuan was moved to Guangxiao Chansi in Jiangsu province and again to Shiji Chanyuan in Anhui province, Yun'an followed and continued to serve the master for eighteen years. Yun'an eventually became Songyuan's successor. In 1202, after Songyuan's death, Yun'an was invited to reside in a new hermitage established by the master's brother in Yun'an's hometown in Siming. This hermitage was named Yun'an, whence he acquired his toponym. In 1206, Yun'an moved to Dasheng Puzhao Chansi in Jiangsu province, where he trained many eminent disciples, such as XUTANG ZHIYU. His disciples edited his sayings together in the *Yun'an Puyan chanshi yulu.*

Yungang. (J. Unkō; K. Un'gang 雲崗). A complex of some fifty-three carved Buddhist caves located at the southern foot of Mt. Wuzhou some ten miles west of the city of Datong, in the Chinese province of Shaanxi. The Yungang grottoes extend roughly half a mile from east to west and were carved over a fifty-year period between the fifth and sixth centuries CE under the patronage of the Northern Wei dynasty (386–534) court. The caves themselves contain roughly fifty thousand Buddhist sculptures, which are noted for their rich variety. The grottoes at Yungang are divided into eastern, western, and central zones. Most of the best-preserved grottoes are found in the western zone, although Grotto No. 1 in the eastern section still contains numerous sculptures in relief. Grotto No. 5, located inside the entrance to the site, contains a giant buddha statue. Grottoes

16–20 are especially renowned for their five colossal buddha images. The iconographical features of the sculptures preserved at the Yungang caves are similar to those found in the contemporaneous cave complex at DUNHUANG; unlike Dunhuang, however, the Yungang caves contain no paintings. Since their completion, the Yungang grottoes have fallen victim to both war and natural disasters. After the People's Republic of China was founded in 1949, the Chinese government took an interest in the site, officially placing it under state protection in 1961. In December 2001, the Yungang grottoes were listed as a UNESCO World Heritage site.

Yunjusi. (雲居寺). In Chinese, "Cloud Dwelling Monastery"; monastery that is the home of the FANGSHAN SHIJING (stone scriptures). The monk Jingwan (?–639) allegedly founded this monastery in 631, but a stone inscription dated to 669 is the earliest written record of its existence. The monastery was also known as Xiyusi (Western Valley or Western Region Monastery), and in the seventh-century *Mingbaoji* ("Records of Miraculous Retribution") it is called Zhichuansi (Fount of Wisdom Monastery). On the nearby hill of Shijingshan (Stone Scriptures Hill) just to the east of Yunjusi, nine cave libraries stored the Fangshan lithic canon: its total of 14,278 lithic blocks of 1,122 Buddhist scriptures represent textual lineages that derive from recensions that circulated during the Tang and Khitan Liao dynasties. The carving of the lithic scriptures started during the Sui dynasty under the monk Jingwan with the support of Empress Xiao (r. 604–617), and continued through the late Ming dynasty. The monastery itself is famous for its pagodas, which were closely associated with the engraving of the lithographs. Seven stone pagodas date from the Tang, of which the single-story one at the top of Stone Scriptures Hill, with an inscription dated to 898, is noted for both its architecture and carved decorations. Two of the five pagodas from the Liao are especially significant. Built in 1117, the octagonal Southern Pagoda has eleven stories and pointed eaves and includes a depository of Buddhist scriptures beneath it. The Northern Pagoda is uniquely shaped: the bottom half is octagonal with bracketed eaves and carved niches, while the upper half is cone-shaped and decorated with nine circular bands. Its surface is decorated with more than thirty groups of brick reliefs depicting scenes of dancing and singing, the most interesting example of which is a goddess strumming a three-stringed instrument, one of the rare extant examples for the study of Liao musical culture. The Northern Pagoda is surrounded by smaller stone pagodas dating from the Tang dynasty, several of which resemble the Xiaoyanta (Small Wild Goose Pagoda; see DACI'ENSI) in the ancient Chinese capital of Chang'an (modern Xi'an).

Yunmen Wenyan. (J. Unmon Bun'en; K. Unmun Munŏn 雲門文偃) (864–949). Chinese CHAN monk and founder of the YUNMEN ZONG, one of the so-called five houses and seven schools (WU JIA QI ZONG) of the classical Chinese Chan tradition. Yunmen was a native of Jiaxing in present-day Zhejiang province. He was ordained at the age of sixteen by the VINAYA master Zhideng (d.u.) of the monastery Kongwangsi and two years later received the full monastic precepts at the precept platform in Piling (present-day Jiangsu province). After his full ordination, Yunmen returned to Kongwangsi and studied the DHARMAGUPTAKA vinaya (SIFEN LÜ) under Zhideng. Later, Yunmen visited Muzhou Daoming (d.u.), a prominent disciple of the eminent Chan master HUANGBO XIYUN, and continued his studies of Chan under XUEFENG YICUN. Yunmen eventually became Xuefeng's disciple and inherited his lineage. Taking his leave of Xuefeng, Yunmen continued to visit other Chan masters throughout the country, and in 911 he visited the funerary STŪPA of the sixth patriarch (LIUZU) HUINENG on CAOXISHAN. Yunmen then visited Lingshu Rumin (d. 918), a famed disciple of the Chan master Fuzhou Da'an (793–883), at his monastery of Lingshu Chanyuan in Shaozhou (present-day Guangdong province) and continued to study under Lingshu until his death in 918. Yunmen was then asked by the ruler of the newly established Nan Han state (917–971), Liu Yan (r. 917–942), to succeed Lingshu's place at Lingshu Chanyuan. In 923, he established a monastery on Mt. Yunmen in the region, whence he acquired his toponym. He continued to reside on Mt. Yunmen for thirty years and frequently visited the palace of the Nan Han state to preach. In 938, Liu Cheng (943–958), monarch of the Nan Han, bestowed on him the title Great Master Kuangzhen (Genuine Truth). According to his wishes, no funerary stūpa was prepared for Yunmen and his body was left in his abbot's quarters (FANGZHANG). Yunmen was especially famous for his so-called one-word barriers (YIZI GUAN), in which he used a single utterance to respond to a student's question. For example, once a monk asked him, "When you kill your parents, you repent before the Buddha. But when you kill the buddhas and patriarchs, to whom do you repent?" Yunmen answered, "Lu" ("exposed"). Eighteen of Yunmen's most famous Chan cases (GONG'AN) are collected in the BIYAN LU ("Blue Cliff Record"); his extended teachings are recorded in the *Yunmen Kuangzhen chanshi guanglu*.

Yunmen zong. (J. Unmonshū; K. Unmun chong 雲門宗). In Chinese, "Cloud Gate school"; one of the so-called five houses and seven schools (WU JIA QI ZONG) of the mature Chinese CHAN tradition. It is named after the mountain, located in Shaozhou (present-day Guangdong province), where its founder YUNMEN WENYAN (864–949) taught. Yunmen Wenyan was famous for his "one-word barriers" or "one-word checkpoints" (YIZI GUAN), in which he responded to his students' questions by using only a single word. The school became one of the dominant Chan traditions in the Five Dynasties (Wudai) and early Song dynasty, producing such prominent masters as DONGSHAN SHOUCHU (910–990), Dongshan Xiaocong (d. 1030), XUEDOU ZHONGXIAN (980–1052), and Tianyi Yihuai (992–1064). Yunmen masters played a major role in the development of classical Chan literature. Xuedou Zhongxian's earlier collection of one hundred old cases (guce, viz., GONG'AN), known as the

Xuedou songgu, served as the basis for the famous BIYAN LU ("Blue Cliff Record"), which added the extensive commentaries and annotations of the Linji master YUANWU KEQIN (1063–1135) to Zhongxian's original compilation. Several Yunmen masters were closely associated with the Song-dynasty intelligentsia. Dajue Huailian (1009–1090), for example, was as personal friend of the Song literocrat (shidafu) and poet Su Shi (1036–1101). Fori Qichong (1007–1072) asserted the fundamental harmony of Confucianism and Buddhism, explaining Confucian philosophical concepts using Buddhist terminology. CHANGLU ZONGZE (fl. c. late eleventh to early twelfth century) institutionalized the practice of reciting the name of the Buddha (NIANFO) into the routine of Chan monastic life and wrote an influential text on Chan monastic regulations or "rules of purity" (QINGGUI), the CHANYUAN QINGGUI ("Pure Rules for the Chan Grove"). The Yunmen school survived for about two centuries before it was eventually absorbed into the LINJI ZONG.

Yunqi fahui. (雲棲法彙). In Chinese, "Anthology of the Teachings of Yunqi." See YUNQI ZHUHONG.

Yunqi Zhuhong. (J. Unsei Shukō; K. Unsŏ Chugoeng 雲棲袾宏) (1535–1615). Chinese CHAN master of the LINJI ZONG and one of the so-called four great monks of the Ming dynasty, along with HANSHAN DEQING (1546–1623), DAGUAN ZHENKE (1543–1603), and OUYI ZHIXU (1599–1655); also known as Fohui and Lianchi. Yunqi was a native of Renhe, Hangzhou prefecture (present-day Zhejiang province). In 1566, Yunqi abandoned his family and his life as a Confucian literatus and was ordained by Xingtianli (d.u.) of West Mountain. Yunqi wandered throughout the country in search of prominent teachers and attained his first awakening at Dongchang in present-day Shandong province. In 1571, he arrived at Mt. Yunqi in Hangzhou, whence he acquired his toponym. There, he was able to restore Yunqi monastery with the help of local followers. His reputation grew after he successfully brought rain and drove tigers from the area. Yunqi remained on the mountain and composed over thirty major works. With the help of his Confucian background, Yunqi was able to draw a large public to his Chan teachings, and he also promoted the practice known as NIANFO Chan in what was at the time the largest lay society in China. His influential works, such as the CHANGUAN CEJIN, *Zizhi lu* ("Record of Self-Knowledge"), *Sengxun riji*, and *Zimen chongxing lu*, were edited together as the *Yunqi fahui* ("Anthology of the Teachings of Yunqi Zhuhong").

yunshui. (J. unsui; K. unsu 雲水). In Chinese, lit. "clouds and water"; a term abbreviated from the phrase "moving clouds and flowing water" (C. xingyun liushui; J. kōun ryūsui; K. haengun yusu), which is used to refer to an itinerant Buddhist practitioner who, like clouds or water, is always on the move and never settles down. The term is especially associated with the CHAN (K. SŎN; J. ZEN) school, where it refers to a Chan monk in training. The term implies that a novice monk is expected to travel to various monasteries and learn from different teachers as part of his training, rather than remaining attached to one specific monastery or teaching. In contemporary Japanese Zen usage, unsui refers to neophyte priests who undergo training as novices and live in a sōdō (SAṂGHA hall, see SENGTANG) at a Zen training center. A "cloud robe" (J. unnō), by extension, refers to a monk's robe that is worn and ragged from following an itinerant lifestyle. During the Edo period (1600–1868), the term unsui became popularized to mean liberated, blissful travel, as exemplified in the novel, *Tōkaidōchū hizakurige* ("Traveling the Eastern Highway on a Chestnut Pony") by Jippensha Ikku (1765–1831). Unsui is also contrasted with the term "dragons and elephants" (C. longxiang; J. ryūzō; K. yongsang; see S. HASTINĀGA), which is commonly found in Chan texts to refer to an advanced adept of Chan.

yuntang. (雲堂). In Chinese, "cloud hall"; a monastic residential hall. See SENGTANG.

Yuquansi. (玉泉寺). In Chinese, "Jade Spring Monastery"; important meditative center located on Mt. Yuquan in Jingzhou prefecture (present-day Hubei province). During the Daye reign period (605–617) of the Sui dynasty, a name plaque for the monastery was prepared by the King of Jin, and the eminent monk TIANTAI ZHIYI lectured there on his FAHUA XUANYI and MOHE ZHIGUAN. Yuquansi soon became a prominent center for meditators in China. The monastery became even more famous when the CHAN master SHENXIU of the Northern school (BEI ZONG) took up residence at the site sometime in the last quarter of the seventh century. The famed Chan master NANYUE HUAIRANG is also said to have ordained at Yuquansi.

Yu sim allak to. (C. Youxin anledao; J. Yūshin anrakudō 遊心安樂道). In Korean, "Wandering the Path to Mental Peace and Bliss"; traditionally attributed to the Korean monk WŎNHYO, its authorship remains a matter of debate. No early references to this text are found in Korean canonical catalogues, and the earliest extant version was found in the library of the Raigōin in Kyōto, Japan. The prevailing scholarly view is that the text was composed in tenth-century Japan, perhaps by an adherent of the TENDAISHŪ, with the first half of the work taken virtually verbatim from Wŏnhyo's *Muryangsugyŏng chongyo* ("Doctrinal Essentials of the SUKHĀVATĪVYŪHASŪTRA"). The *Yu sim allak to* was influential in Japan, especially during the Kamakura period, when it was quoted in such texts as the *Kōmyō shingon dosha kanjinki* by MYŌE KŌBEN, *An'yōshū* by Minamoto Takakuni (1004–1077), *Ketsujō ōjōshū* by Chinkai (1087–1165), and the SENCHAKU HONGAN NENBUTSUSHŪ by HŌNEN. The *Yu sim allak to* consists of seven sections: (1) the central tenet (i.e., the benefits of rebirth), (2) the whereabouts of the land of peace and happiness (ANLEGUO, viz., SUKHĀVATĪ), (3) clarification of doubts and concerns, (4) the various causes and conditions of rebirth in the PURE LAND, (5) the nine grades (JIUPIN) of rebirth, (6) the ease and difficulty of rebirth in the

different buddha-fields (BUDDHAKṢETRA), (7) and the rebirth of women, those with dull faculties, and sinners. The last section also contains a MANTRA from the *Amoghapāśakalparājāsūtra* and an empowerment (ADHIṢṬHĀNA) ritual.

Yu-Sŏk chirŭi non. (儒釋質疑論). In Korean, "Treatise on Queries and Doubts concerning Yu (C. Ru, viz., Confucius) and Sŏk (C. Shi, ŚĀKYAMUNI)"; a Buddhist "defense of the faith" against Neo-Confucian criticisms, written during the early Chosŏn period. Although the authorship of this text remains a mystery, the style and content of the treatise resemble the HYŎNJŎNG NON by KIHWA (1376–1433), and it is clear that its Buddhist author was well versed in both Confucian and Daoist thought. The *Yu-Sŏk chirŭi non* is written in catechetic style and consists of nineteen questions and answers, which largely address misleading views that Confucian scholars hold regarding Buddhism. Following a syncretic approach that seeks to reconcile the teaching of Confucianism, Buddhism, and Daoism, this work generally argues that these three teachings each have their own distinctive roles to play in people's lives and need not be in conflict. Buddhism, Confucianism, and Daoism are explained as corresponding, respectively, to (1) nature (K. sŏng, C. XING), mind (K. sim, C. XIN), and pneuma (K. ki, C. qi); (2) truth (K. chin, C. zhen), its traces (K. chŏk, C. ji), and the connection between them; and so on. The treatise claims that these three teachings are ultimately in accord with one another because of their identical basis in the mind. The text also treats such traditional aspects of Chinese thought as yin-yang cosmology and the five phases (K. ohaeng, C. wuxing) (viz., the five traditional Chinese elements), as well as astrological and cosmological issues.

yūzūnenbutsu. (融通念佛). In Japanese, lit. "consummate-interfusion recitation of the Buddha's name"; a method of chanting Amida (S. AMITĀBHA) Buddha's name (J. nenbutsu; C. NIANFO), devised by the founder of the YŪZŪNENBUTSU school, RYŌNIN (1072–1132). The principle of yūzūnenbutsu is derived from Kegonshū (C. HUAYAN ZONG) and TENDAISHŪ (C. TIANTAI ZONG) philosophy, especially the Kegon teachings of "comsummate interfusion" (J. yūzū, C. YUANRONG) and the unobstructed interpenetration of all phenomena (J. jiji muge; see C. SHISHI WU'AI FAJIE) and the Tendai teaching of the mutual inclusion of the ten dharma-realms (J. jikkai goku; C. shijie huju). The principle of yūzūnenbutsu builds upon this sense that each and every phenomenon is perfectly interfused with all other phenomena to propose that the merit coming from one person's chanting of Amitābha's name is transferred to all other persons and vice versa. When more people chant the Buddha's name, more merit is thus transferred to all people, and the merit derived from these cooperative efforts reaches not only the dharma-realm (DHARMADHĀTU) in which it is created but also all other dharma-realms as well. Therefore, all things in all realms of existence receive benefit from any one individual's practice of chanting the Buddha's name. The practice of yūzūnenbutsu thus has two major characteristics: (1) the individual's burden to practice is relieved because salvation is due not just to one's own merit but to everyone's merit; (2) the notion of "other power" (TARIKI) in this form of pure land means both the power of one's fellow beings and the power deriving from Amitābha Buddha's vow of compassion.

Yūzūnenbutsushū. (融通念佛宗). In Japanese, "School of Consummate-Interfusion Recitation of the Buddha's Name"; one of the first Japanese PURE LAND schools. The school was founded by the TENDAISHŪ monk RYŌNIN (1072–1132), who claimed to have a direct revelation from the buddha Amida (S. AMITĀBHA) regarding the principle of YŪZŪNENBUTSU, in which every individual benefits from both his own and other's chanting of the Buddha's name (J. nenbutsu; C. NIANFO) through a mutual transfer of merit. Ryōnin traveled around Japan to teach the practice and spread the school, keeping a register of new adherents as he traveled. Indeed, carrying this register of adherents became a privilege of the leader of the school. Ryōnin also made Dainenbutsuji (Great Recitation of the Buddha's Name Temple), in the Ōsaka area, the center for his campaign in 1127. ¶ The Yūzūnenbutsu school declined after six generations. When the sixth patriarch of the school Ryōchin (d. 1182) died without a successor, the register of adherents was entrusted to the Iwashimizu Hachiman shrine, in the hopes that the HACHIMAN KAMI cum BODHISATTVA resident there would select the next patriarch of the school. About 140 years later, the Yūzūnenbutsu school was revitalized through the efforts of Hōmyō (1279–1349), who claimed to have received a revelation from Hachiman. After becoming Ryōnin's seventh successor in 1321, Hōmyō restored Dainenbutsuji and several other branch temples that had long been neglected. He also received imperial patronage from the monarch Godaigo (r. 1318–1339), who added his name and the names of many government officials to the school's register of adherents. After Hōmyō's death, the school declined again as other pure land schools gained popularity, until 1689, when Daitsū (1649–1716) became the forty-sixth patriarch of the school. Daitsū rejuvenated the school, ardently propagating the school's teachings and the practice of chanting the Buddha's name. Daitsū systematized the school's teachings: he established an academic institute and wrote two treatises, the *Yūzū enmonshō* ("Essay on the Complete Teachings of Perfect Interpenetration [*Yūzū*]") and the *Yūzūnenbutsu shingeshō* ("Essay on Faith and Understanding in the *Yūzūnenbutsu*"). In the former text, Daitsū lists five classifications of the Buddhist teachings in ascending order (the teaching of humans and divinities, HĪNAYĀNA, gradual, sudden, and consummate teachings) and classified Yūzūnenbutsu teachings in the fifth category of the "consummate teachings" (see YUANJIAO); he also discusses the school's daily practice of chanting Amida Buddha's name ten times while facing west. The Yūzūnenbutsu school remains active today at its head temple of Dainenbutsuji, although it is relatively small in size compared to the major Japanese pure land schools of JŌDOSHŪ and JŌDO SHINSHŪ. The AVATAṂSAKASŪTRA and the SADDHARMAPUṆḌARĪKASŪTRA are the principal scriptures of the school, with the three major pure land sūtras (JINGTU SANBUJING) of secondary importance.

Z

Zanabazar (Mongolian). See RJE BTSUN DAM PA.

Zangs mdog dpal ri. (Sangdok Palri). In Tibetan, the "Glorious Copper-Colored Mountain"; the abode of PADMASAMBHAVA. It is located on the island of Cāmara, one of the two "subcontinents" flanking the island of JAMBUDVĪPA; Cāmara is sometimes identified as Sri Lanka. After leaving Tibet, Padmasambhava is said to have departed for the Copper-Colored Mountain. The island was inhabited by ogres (RAKṢASA), whom he first had to subdue. He then constructed an octagonal palace, called "Lotus Light" (Padma 'od), at the summit of the mountain, where he will abide until the end of SAṂSĀRA. In Tibetan Buddhism, Copper-Colored Mountain came to function as a PURE LAND, although it is located on earth, and is not flat as pure lands are supposed to be. There are numerous prayers for rebirth on the Copper-Colored Mountain and numerous accounts of devotees being transported there in dreams and visions. Among the most common depictions of Padmasambhava in Tibetan painting are those of him enthroned on the Copper-Colored Mountain.

zangzhu. (J. zōshu/zōsu; K. changju 藏主). In Chinese, "library prefect." One of the six prefects (C. TOUSHOU) at a CHAN monastery. The library prefect is in charge of the scriptures at the monastery. According to the CHANYUAN QINGGUI, the library prefect prepares the reading desks and tea for those who wish to study the scriptures at the library or scriptorium.

Zanning. (J. Sannei; K. Ch'annyŏng 贊寧) (919–1001). Chinese VINAYA master and historian. Zanning was a native of Bohai in present-day Hebei province. Sometime between 926 and 930, he was ordained at the monastery of Xiangfusi in Hangzhou, Zhejiang province, and received his monastic precepts on Mt. Tiantai. Zanning then studied the "Four-Part Vinaya" (SIFEN LÜ) of the DHARMAGUPTAKA school and became an expert in the South Mountain vinaya lineage (NANSHAN LÜ ZONG). He thus came to be known as Lühu or "Vinaya Tiger," and was given the title Great Master Mingyi (Bright Righteousness). In 978, he also received the title Great Master Tonghui (Penetrating Wisdom) and was invited to the monastery of Tianshousi. Upon the Emperor's decree, Zanning compiled the influential Buddhist biographical record, the SONG GAOSENG ZHUAN, which was completed and entered into the official canon (DAZANGJING) in 988. He also composed the DA SONG SENG SHI LÜE, one of the earliest attempts to provide a comprehensive account of the history of Buddhism throughout Asia. His other writings include the *Neidian ji*, *Jiuling shengxian lu*, and *Shichao yinyi zhigui*.

Zaō gongen. (藏王權現). In Japanese, "Provisional Manifestation of the Matrix King," also known as Zaō, Zaō bosatsu, and Kongō Zaō; proper name of a tutelary deity revered largely by followers of the Japanese SHUGENDŌ and SHINGONSHŪ traditions. Zaō gongen is said to have revealed himself to the legendary Japanese ascetic EN NO GYŌJA, the reputed founder of Shugendō, on Mt. Kinbu in Nara. Zaō gongen is considered to be a BODHISATTVA who quells demons, as well as a NIRMĀṆAKĀYA of the Buddha. Offerings and worship for Zaō gongen are conducted at the hall of Zaōdō on Mt. Kinbu. This wrathful deity is often depicted with three fearsome heads, with a three-pronged VAJRA in his right hand and his right leg suspended in the air.

Zaya Paṇḍita. [alt. Jaya Paṇḍita] (1599–1662). An important Mongolian monk of the DGE LUGS sect of Tibetan Buddhism. Born as the fifth son in a noble family of the Qoshot tribe, in 1615 he was selected by its leader to become a monk. He was sent to Tibet where he became a disciple of the first (also counted as the fourth) PAṆ CHEN LAMA, BLO BZANG CHOS KYI RGYAL MTSHAN, studying both the scholastic curriculum and the tantric curriculum. In 1639, after twenty-two years in Tibet, on the instructions of the Paṇ chen Lama and the fifth DALAI LAMA, he returned to his homeland, serving as a missionary among the Qoshot. During this period, he invented the todorxoi üzüg (clear script) for the transcription of the Oirad language. In 1650, he returned to Tibet to make offerings to the Dalai Lama and to visit the Paṇ chen Lama, and then continued his missionary work, going as far west as the Kalmyk region of the Volga. Zaya Paṇḍita died while en route back to Tibet in 1662. He was a distinguished translator, translating 177 works from Tibetan into the Oirad language. The title of Zaya Paṇḍita was given to masters of the five traditional sciences; there were at least two other important Mongolian monks who bore the title and had lines of incarnation. The monk described here can be distinguished by his Tibetan name, Nam kha'i rgya mtsho.

zazen. (J) (坐禪). See ZUOCHAN.

Zazen wasan. (坐禪和讚). In Japanese, "Praise of Seated Meditation"; a short song by the Japanese ZEN master HAKUIN EKAKU in the RINZAISHŪ, which is probably his most popular work. The *Zazen wasan* is still printed in manuals for scripture recitation and is chanted at many Rinzai temples and monasteries today. In his song, Hakuin extols as the supreme virtues original enlightenment (J. HONGAKU; C. BENJUE), seated meditation (J. zazen; C. ZUOCHAN), and seeing one's own nature (J. kenshō; C. JIANXING).

Zazen yōjinki. (坐禪用心記). In Japanese, "Notes on Employing the Mind during Seated Meditation," by the ZEN master KEIZAN JŌKIN in the SŌTŌSHŪ; published in 1680. Following the model of his teacher DŌGEN KIGEN and his meditation manual FUKAN ZAZENGI, Keizan composed this relatively short treatise of his own on seated Zen (J. zazen; C. ZUOCHAN) for the edification of clergy and laity alike. The *Zazen yōjinki* delineates the purpose, method, and technique of seated meditation, with an emphasis on what kinds of mental states should be maintained during practice. Sitting meditation is explained as being a technique designed to set aside all attachments and concerns so that one will be able to abide serenely in one's true nature, or original face. Keizan also speaks of the specific impediments to meditative practice, such as deluded visions and sloth and torpor, and suggests some practical techniques for mitigating such problems.

zedi. (Burmese). See JEDI.

Zen. (禪). In Japanese, "Meditation"; the Japanese strand of the broader East Asian CHAN school, which includes Chinese Chan, Korean SŎN, and Vietnamese THIỀN. Zen is the Japanese pronunciation of the Chinese term Chan, which in turn is a transcription of the Sanskrit term DHYĀNA, or meditative absorption. More specifically, Zen denotes the Japanese Buddhist traditions that trace their origins back to the Chinese Chan school, or CHAN ZONG. Currently three major traditions in Japan, RINZAISHŪ, SŌTŌSHŪ, and ŌBAKUSHŪ, refer to themselves as Zen schools, and are thus known collectively as the Zen tradition (J. ZENSHŪ; C. CHAN ZONG). The Rinzaishū was first transmitted to Japan in the late twelfth century by MYŌAN EISAI (1141–1215), who visited China twice and received training and certification in the Chinese LINJI ZONG. By the end of the Kamakura period, some twenty-one different Rinzai lineages had been transmitted to Japan. The Rinzai school came to be associated with the meditative practice of contemplating Zen "cases" (J. kōan; C. GONG'AN; see also J. kanna Zen; C. KANHUA CHAN). The foundation of the Sōtōshū is attributed to DŌGEN KIGEN (1200–1253), who is credited with transmitting the CAODONG ZONG of the Chinese CHAN teacher TIANTONG RUJING (1162–1227). Dōgen is said to have taught the technique of "just sitting" (SHIKAN TAZA), through which the mind would become stabilized and concentrated in a state of full clarity and alertness, free from any specific content. During the Tokugawa period, the Sōtō school developed into one of the largest Buddhist sects in Japan through the mandatory parish system (DANKA SEIDO), in which every household was required to register as a member of a local Buddhist temple. By the middle of the eighteenth century, there were more than 17,500 Sōtō temples across the country. The Ōbakushū was founded by the émigré Chinese CHAN master YINYUAN LONGXI (J. Ingen Ryūki; 1592–1673), who traveled to Japan in 1654/1655 to escape the succession wars and political turmoil that had accompanied the fall of the Ming dynasty. The Ōbaku school introduced exotic contemporary Chinese customs and monastic practices to the Japanese Zen Buddhism of the time. Although it remained much smaller than the Rinzai and Sōtō Zen traditions, the presence of the Ōbaku school compelled the monks of its two larger rivals to reevaluate their own practices and to initiate a series of important reform movements within their respective traditions (see IN'IN EKISHI). In the modern era, largely through the efforts of such towering intellectual figures as DAISETZ TEITARO SUZUKI (1870–1966), NISHIDA KITARŌ (1870–1945), and NISHITANI KEIJI (1900–1991), the term Zen has also come to connote a "pure experience" (junsui keiken) that transcends language and thought, which is sometimes argued to be the unique property of the Japanese people and their culture (cf. KYOTO SCHOOL). The cavalier way in which the term Zen is now deployed in generic Western writings (e.g., the myriad "Zen in the Art of" books) often has little to do with the traditional perspectives of the Zen tradition found in either Japan or the rest of East Asia. As in the case of Chan, in more common parlance, Zen can also denote the particular teaching style of a Zen master and is often expressed as "so-and-so's Zen." See also entries on the SŌTŌSHŪ, RINZAISHŪ, and ŌBAKUSHŪ and on specific Japanese Zen masters and monasteries.

zendō. (禪堂). In Japanese, "meditation hall." See SENGTANG.

Zenkōji. (善光寺). In Japanese, "Monastery of the Radiance of Goodness"; located in modern-day Nagano. According to the *Zenkōji engi*, the monastery was built at the beginning of the seventh century by a certain Honda Yoshimitsu to enshrine a famous Amida (AMITĀBHA) triad. In the ancient Indian kingdom of VAIŚĀLĪ, a merchant by the name of Somachattra is said to have warded off epidemic demons and cured his daughter by invoking the name of the buddha Amitābha ten times. Somachattra was so moved by the appearance of Amitābha and his two attendants AVALOKITEŚVARA and MAHĀSTHĀMAPRĀPTA in the sky that he asked the Buddha for an icon to be made in their likeness. The triad was then forged with special gold from the dragon king's palace and worshipped as a living manifestation of Amitābha and his attendants. Somachattra was later reborn as King Sŏng (r. 523–553) of the Korean kingdom of Paekche. The triad first traveled to Paekche to aid King Sŏng, after which it was taken to Japan. Honda Yoshimitsu is said to have discovered the triad in the Naniwa Canal and enshrined it in his house, which was later transformed into a magnificent buddha

hall by Empress Kōgyoku (r. 642–645). With support from the Hōjō bakufu, a Zenkōji cult proliferated especially during the Kamakura period and onwards, and numerous replicas of the "original" (Shinano) Zenkōji triad were made and enshrined in Shin ("New") Zenkōji temples. For centuries, the (Shinano) Zenkōji in Nagano remained under the control of another powerful TENDAISHŪ monastery known as MIIDERA. Zenkōji was devastated by fire in 1179, but legendary accounts testify to the miraculous escape of the "original" triad, which now remains as a secret buddha (HIBUTSU) image largely unavailable for public viewing. After the Japanese monk IPPEN's visit to Zenkōji, several Shin Zenkōji temples also came to be associated with his tradition, the JISHŪ.

Zenrin kushū. (禪林句集). In Japanese, "Phrase Collection of the ZEN Grove"; a lengthy collection of more than four thousand Zen phrases—specifically capping phrases (JAKUGO) or appended phrases (AGYO)—culled from Buddhist SŪTRAS, discourse records (YULU), kōan collections (see C. GONG'AN), and various Chinese belletristic classics. The collection was edited by a certain Ijūshi in 1688. Ijūshi's collection is based on a shorter phrase book entitled the *Kuzōshi*, compiled by the Zen master Tōyō Eichō (1428–1504) of the MYŌSHINJI lineage of the RINZAISHŪ. Beginning with single-character phrases, the Zen phrases in the *Zenrin kushū* are sequentially organized according to their number of Sinographs. The *Zenrin kushū* is one of the most commonly used collections in Japanese kōan training today.

Zenrin shōkisen. (禪林象器箋). In Japanese, "A Composition on the Images and Utensils of the Zen Grove"; compiled by the ZEN historian MUJAKU DŌCHŪ in the RINZAISHŪ; a comprehensive catalogue of regulations, events, utensils, and accoutrements used by the Zen (C. CHAN) tradition. The preface was prepared by Mujaku in 1741. More than just a simple catalogue, Mujaku's *Zenrin shōkisen* also meticulously notes the possible origin and history of each catalogued item and also expounds upon the significance of its implementation during his day, making it an invaluable tool for the study of Zen in practice. His research is based on an exhaustive list of sources (a total of 488 selections) beginning with sūtras and commentaries to Chinese and Japanese classics, lamplight histories (see CHUANDENG LU), and poetry. A handwritten copy of the text is currently housed at MYŌSHINJI in Kyōto.

Zenshū. (J) (禪宗). In Japanese, the school, lineage, or tradition of CHAN. See ZEN.

Zetawun Pagoda. In Burmese, "Prince Jeta's Grove" (P. JETAVANA); regarded as the oldest shrine in Sagaing. Zetawun Pagoda commemorates the Buddha's legendary first visit to Burma (Myanmar) in the company of ĀNANDA. According to tradition, the site was occupied by ninety-nine ogres (Burmese, bilu), the leader of whom was named Zeta. When they encountered the Buddha and Ānanda, the ogres welcomed them and, in return for their piety, the Buddha preached the dharma to them for seven days. All ninety-nine ogres became stream-enterers (P. sotāpanna; S. SROTAĀPANNA) while listening to these sermons. The Zetawun Pagoda purportedly contains the lower robe or waist cloth (P. antaravāsaka; S. ANTARVĀSAS) of the Buddha, which he is said to have presented to the ogres upon their entreaty to leave a token of his visit as an object of worship. The name Zetawun honors the ogre chief Zeta and recalls the fact that at the time of the Buddha's visit this spot was covered by forests (Burmese, wun). To commemorate the spiritual attainment of the ogres, the village that grew up around the site became known as Thotapan Ywa or Sotāpanna Village. An annual pagoda festival is held in the village on the new moon day of the Burmese month of Waso (July–August). Adjacent to the Zetawun can also be found an ordination hall said to have been established by the Mon saint, Shin Arahan.

Zhabs dkar tshogs drug rang grol. (Shapkar Tsokdruk Rangdröl) (1781–1851). One of the most revered Tibetan preachers and saints of the nineteenth century. He was born in the Reb kong region of A mdo in the northeast of the Tibetan cultural domain. During his youth, he received instruction in RDZOGS CHEN and various treasure (GTER MA) cycles of the RNYING MA sect. He undertook a one-year retreat at the age of sixteen and was ordained at the age of twenty at Rdo bis, a DGE LUGS monastery. He maintained his monastic vows throughout his life but wore his hair long and piled on the top of his head in the manner of a tantric YOGIN. His main teacher was Chos rgyal Ngag gi dbang po, but he studied with a variety of teachers, including those of the Dge lugs sect. He also studied traditional painting. An adept, pilgrim, and poet of the Rnying ma sect, he traveled throughout Tibet, undertaking retreats at such famous sites as Rma chen spom ra, TSA RI, and Mount KAILĀSA, including in a number of caves where MI LA RAS PA is said to have meditated. He became known as Zhabs dkar, or "white footprint," because he meditated at Mount Kailāsa, where the Buddha is said to have left his footprints (BUDDHAPĀDA). He also traveled to Kathmandu, where he offered gold for the spire of the BODHNĀTH STŪPA. He gained fame among all social classes through his wide-ranging activities as a Buddhist teacher and his enormous personal generosity and charisma. His autobiography, entitled *Snyigs dus 'gro ba yongs kyi skyabs mgon zhabs dkar rdo rje 'chang chen po'i rnam par thar pa rgyas par bshad pa* (translated as *The Life of Shabkar*) is regarded as one of the masterworks of that genre of Tibetan literature.

Zhabs drung Ngag dbang rnam rgyal. (Shapdrung Ngawang Namgyal) (1594–1651). A Tibetan Buddhist figure noted for unifying Bhutan as a Buddhist state. At a young age, Ngag dbang rnam rgyal was installed as the eighteenth successor to the throne of RWA LUNG monastery, seat of the 'BRUG PA BKA' BRGYUD sect of Tibetan Buddhism in central Tibet and its leaders, the 'BRUG CHEN INCARNATIONS. In 1616, at the age of

twenty-three, he was forced to flee to Bhutan in a political dispute over his recognition as the reincarnation of the fourth 'Brug chen master, PADMA DKAR PO. Ngag dbang rnam rgyal initially gained control over the western region, with his forces eventually defeating his rivals and uniting the various regions into a single country under his leadership. He later successfully repelled an invasion of Bhutan by Tibetan forces mustered by the fifth DALAI LAMA. His title Zhabs drung (literally "at the feet") refers to his great stature as a Buddhist master. He is famed for establishing a religious and political system of monastic and administrative centers called rdzong (fortress), which are still in use today in Bhutan. Ngag dbang rnam rgyal is also considered the first master of a prominent Bhutanese incarnation lineage, the Zhabs drung incarnations.

zhai. (J. sai; K. chae 齋). A polysemous Chinese term that means "fast," "purify," "make offerings to monks," "festival," or "vegetarian feast" (and often seen translated as "maigre feast"); it is also used to translate the Sanskrit term UPOṢADHA. The traditional PRĀTIMOKṢA prohibition against monks and nuns eating after noon was referred to in Chinese as zhai, hence its translation as "fast." In China, zhai came to refer generally to meals offered at Buddhist rituals and events and more specifically to vegetarian feasts held at monasteries throughout the country. Monasteries often maintained special funds to be used for such purposes. These vegetarian feasts and festivals served as one of the primary means through which the laity made offerings to the monastic community. One of the most famous of such festivals in East Asia was the "Ghost Festival" (YULANBEN).

Zhancha shan'e yebao jing. (J. Senzatsu zen'aku gōhō-kyō; K. Chŏmch'al sŏnak ŏppo kyŏng 占察善惡業報經). In Chinese, "Scripture of Divining the Requital of Good and Evil Actions"; an indigenous Chinese Buddhist scripture (see APOCRYPHA) compiled sometime during the late sixth century. The scripture seems to have been used by a community in Guangdong that was deemed heretical and whose practice of divination and repentance was banned in 593. The first roll of this scripture is largely concerned with the practice of divination, which is made possible through repentance. The scripture emphasizes the need for faith in this dharma-ending age (MOFA); the method of cultivating this faith is offered by the bodhisattva KṢITIGARBHA. This method largely involves the use of various spinning tops (lit. "wheels") on which the possible fate and fortune of the client is written. A total of 189 possible fates are offered. The repentance rite in the *Zhancha shan'e yebao jing* seems to have been influenced by the *Upāsakaśīlasūtra* translated by DHARMAKṢEMA. The second roll of the scripture has been a subject of controversy, for it provides an early version of the monistic "one mind" (YIXIN) and TATHĀGATAGARBHA doctrine that came to dominate in the East Asian schools of Buddhism. Comparisons are often made between this second roll and the influential DASHENG QIXIN LUN.

Zhang Sengyao. (C) (張僧繇) (d.u.; fl c. 502–549). The first Chinese artist to paint a rendering of the sixteen ARHAT protectors of Buddhism. See ṢOḌAŚASTHAVIRA.

Zhang Shangying. (J. Chō Shōei; K. Chang Sangyŏng 張商英) (1043–1122). Influential Chinese Buddhist layman and statesman; also known as Tinajue and Wujin jushi (Layman Infinite). Born to a prominent literati family in Xinjin (present-day Sichuan province), Zhang Shangying began his illustrious career in 1065 after receiving his jinshi degree. He first made a name for himself through military expeditions against neighboring barbarian tribes in Yuzhou, after which he was given a high metropolitan post by the powerful grand councilor Wang Anshi (1021–1086). Zhang thus became a supporter of Wang's administrative and fiscal reform attempts known as the "new policies" (xinfa). Even after Wang's fall from power, Zhang maintained his support for reform, which eventually allowed him to become grand councilor himself in 1111. Due to political battles at court and his complaints regarding Emperor Huizong's (r. 1100–1125) support of the Daoists' anti-Buddhist polemics, Zhang's tenure at court was cut short, and he spent the rest of his life in retirement. During this period of retirement, Zhang Shangying devoted much of his time to Buddhism. Throughout his life, Zhang befriended and studied under the most respected CHAN masters of his day, such as Dantang Wenzhun (1061–1115), Doushuai Congyue (1044–1091), Huitang Zuxin (1025–1100), ZHENJING KEWEN, YUANWU KEQIN, DAHUI ZONGGAO, and JUEFAN HUIHONG, and exchanged correspondence with many of them, some of which are still extant. Zhang was particularly fond of the AVATAṂSAKASŪTRA and commentaries on the text composed by the famous Tang dynasty layman LI TONGXUAN; emulating Li, Zhang made a pilgrimage to WUTAISHAN. He also wrote a treatise entitled *Hufa lun* ("Arguments in Defense of the Dharma)" as a rebuttal to the growing anti-Buddhist polemics among the Daoists at court.

Zhanran. (C) (湛然). See JINGXI ZHANRAN.

Zhanran Yuandeng. (J. Tannen Enchō; K. Tamyŏn Wŏn-jing 湛然圓澄) (1561–1626). Chinese CHAN master in the CAODONG ZONG; also known as Sanmu daoren. Zhanran was a native of Huiji prefecture in Zhejiang province. In his early twenties, Zhanran became the student of the monk Miaofeng (d.u.) on Mt. Tianhuang and later received monastic precepts from the Chan master YUNQI ZHUHONG, one of the most eminent Chan teachers of the Ming dynasty. In 1591, Zhanran became the disciple of Cizhou Fangnian (d. 1594) and inherited his Caodong lineage. Zhanran first made a name for himself while residing at the monastery of Shouxingsi and subsequently served as abbot of the monasteries WANSHOUSI on Mt. Jing, and Xianshengsi in his hometown of Huiji, as well as several other monasteries in different regions of Zhejiang province. Zhanran composed the ZONGMEN HUOMEN, an influential treatise on

Chan meditation, and his other teachings are recorded in the *Zhanran Yuandeng chansi yulu*.

zhao'er changji. (C) (照而常寂). See JI ER CHANGZHAO.

Zhao lun. (J. Jōron; K. Cho non 肇論). In Chinese, "(Seng) zhao's Treatise"; an influential work by the eminent Chinese monk SENGZHAO (374–414), one of the major disciples of the important Kuchean translator KUMĀRAJĪVA (344–413). The *Zhao lun* was compiled sometime between 384 and 414 and brings together Sengzhao's four major works. The first, *Wubuqian lun* ("On the Immutability of Things"), explores the irrelevancy of time in explaining dharmas that are not subject to production and cessation. The second, *Buzhenkong lun* ("Emptiness of the Unreal"), explains how dharmas can simultaneously appear as both real and unreal. The BORE WUZHI LUN ("The Nescience of Prajñā") explains that because wisdom (PRAJÑĀ) is quiescent, empty, and lacking a perduring essence, any conscious awareness of it, or emanating from it, is impossible. Finally, "Niepan wuming lun" ("The Anonymity of Nirvāṇa") demonstrates that NIRVĀṆA is fundamentally ineffable and therefore nameless. A chapter entitled "Zong benyi" ("Fundamental Meaning of the Major Tenets") appears at the beginning of the *Zhao lun* and offers a succinct explanation of some important doctrinal matters, such as original nothingness (benwu), the true mark of reality (shixiang), dharma nature (faxing), and the emptiness of nature (xingkong). Letters exchanged between Sengzhao and the layman Liu Yimin (d. 410) of LUSHAN are appended at the end of the *Zhao lun*. Numerous commentaries on this text exist across the East Asian traditions.

Zhaozhou Congshen. (J. Jōshū Jūshin; K. Choju Chongsim 趙州從諗) (778–897). One of the most renowned Chinese CHAN teachers of the Tang dynasty; his toponym Zhaozhou derives from the Zhaozhou region in Hebei province, where he spent much of his later teaching career. Zhaozhou was ordained in his youth at Hutongyuan in his hometown of Caozhou (in present-day Shandong province). At the age of eighteen, he met NANQUAN PUYUAN (748–835), a successor of MAZU DAOYI (709–788), and studied under him for several decades until that teacher's death. Then in his fifties, Zhaozhou began to travel throughout China, visiting prominent Chan masters such as HUANGBO XIYUN (d. 850) and Daowu Yuanzhi (760–835). Having served as abbot of various monasteries on Mt. Huangbo, Baoshou, and Jia, Zhaozhou settled at the age of eighty in Guanyinyuan (AVALOKITEŚVARA Cloister) in Zhaozhou, and taught a small group of monks there for the next forty years. Zhaozhou did not use the iconoclastic pedagogical techniques, such as shouting and beating (BANGHE), made famous by other teachers of his era, but used his words to challenge his students and lead them to self-realization. The Song-dynasty Chan master YUANWU KEQIN (1063–1135) described this characteristic of Zhaozhou's teachings when he said, "Zhaozhou's Chan lies on the lips." Zhaozhou is frequently cited in the collections of Chan GONG'AN (public cases), including five of the forty-eight gong'ans collected in the WUMEN GUAN ("Gateless Checkpoint") and twelve of the one hundred in the BIYAN LU ("Blue Cliff Record"). The most influential gong'an associated with Zhaozhou is the first case collected in the *Wumen guan*, the so-called WU GONG'AN: "'Does a dog have the buddha-nature (FOXING) or not?' 'No.'" Zhaozhou's "WU" (no; lit. "it does not have it"), became one of the most oft-cited statements in all of Chan, SŎN, and ZEN literature. Due in large part to the efforts of Chan master DAHUI ZONGGAO and his followers, Zhaozhou's wu came to be used as one of the meditative topics (HUATOU) in the Chan meditation practice of "questioning meditation" (KANHUA CHAN). Although Zhaozhou had thirteen dharma heirs, his lineage soon died out. He posthumously received the title "Zhenji dashi" (Great Master Apex of Truth). The record of his teachings is contained in the three rolls of the *Zhenji dashi yulu* ("Discourse Record of Zhenji Dashi") and in his *Zhaozhou lu*.

Zhe chen. (Shechen). One of the four main RNYING MA monasteries in eastern Tibet, the others being KAḤ THOG, RDZOGS CHEN, and DPAL YUL; founded in 1735 by the second ZHE CHEN RAB 'BYAMS incarnation, 'Gyur med kun bzang rnam rgyal (Gyurme Kunsang Namgyel, 1710–1769). Zhe chen then became the seat for his subsequent incarnations, who all served as abbot, and a principal institution of the Rnying ma sect of Tibetan Buddhism. The monastery, comprised of several main temples and surrounding structures, was at times also governed by a line of regent lamas, the Zhe chen rgyal tshab (Shechen Gyaltsap) incarnations. The fourth Zhe chen rgyal tshab, Padma rnam rgyal (Pema Namgyel, 1871–1926), formally recognized the young twentieth-century luminary DIL MGO MKHYEN BRTSE as one of five reembodiments of 'JAM DBYANG MKHYEN BRTSE DBANG PO, a leading figure of the nineteenth-century RIS MED, or nonsectarian movement. The institution's full name is Zhe chen bden gnyis dar rgyas gling (Shechen Dennyi Dargyeling).

Zhe chen rab 'byams. (Shechen Rapjam). An important line of Tibetan incarnate lamas. The first Zhe chen rab 'byams, Bstan pa'i rgyal mtshan (Tenpe Gyaltsen, 1650–1709), was a disciple of the fifth DALAI LAMA, NGAG DBANG BLO BZANG RGYA MTSHO, and Padma rig 'dzin (Pema Rikdzin, 1625–1697)—the latter being the first RDZOGS CHEN INCARNATION and founder of RDZOGS CHEN monastery. The second Zhe chen rab 'byams, 'Gyur med kun bzang rnam rgyal (Gyurme Kunsang Namgyel, 1710–1769), founded Zhe chen monastery in 1735. Subsequent incarnations served as the abbots of Zhe chen monastery.

zheng bao. (J. shōhō; K. chŏngbo 正報). In Chinese "retribution proper," the actions, or KARMAN, directly affect the individual, conditioning one's physical body and psychological makeup. See ER BAO.

Zhengdao ge. (J. Shōdōka; K. Chŭngdo ka 證道歌). In Chinese, "Song of the Attainment of the Way"; attributed to YONGJIA XUANJUE (675–713); also known as the *Chanmen biyao jue* ("Secret Essentials of the Chan Tradition"). Along with the XINXIN MING, the *Zhengdao ge* is cherished by the CHAN tradition as one of the classic verse expressions on the process of meditation and the experience of enlightenment. Its contents purport to convey Yongjia's awakening after only a single day and night of tutelage under the sixth patriarch (LIUZU) HUINENG, whence Yongjia's cognomen Ishujue ("Single-Night Enlightened," or "Overnight Guest"). The poem consists of fewer than two thousand Sinographs and follows a traditional regulated-verse style. The verse describes enlightenment as the realization that the true nature of all things is in fact the buddha-nature (FOXING), which is emptiness itself, transcending all the dichotomies of existence or nonexistence or truth and falsity. This enlightenment is said to occur suddenly, "in a snap of the fingers" (danzhi), the verse says, and it is this sudden enlightenment (DUNWU) that has been transmitted through the twenty-eight Indian and six Chinese patriarchs (ZUSHI) of the Chan tradition. Aspects of the style and vocabulary used in the poem, which seem to antedate the eighth century, have led to questions about the authenticity of its attribution to Yongjia. Several copies of this text were found at DUNHUANG, and numerous commentaries of this text are extant, dating from the Song dynasty. The Song-dynasty teacher DAHUI ZONGGAO claimed that the verse was held in such high esteem that it had even been back-translated into Sanskrit.

Zhengfayanzang. (J. Shōbōgenzō; K. Chŏngpŏbanjang 正法眼藏). In Chinese, "Treasury of the Eye of the True Dharma," in three rolls, edited by the CHAN master DAHUI ZONGGAO and his lay disciples in 1147. The Zhengfayanzang is largely a collection of 661 cases or GONG'AN with Dahui's prose commentary (pingchang), annotations (C. zhuoyu/zhuyu; see J. JAKUGO), and instructions for the assembly. The zhengfayanzang of the title is a term used within Chan to indicate the school's special repository of the "eye" or "mind" of the BUDDHADHARMA, which is independent from the scriptural tradition. (See JIAOWAI BIECHUAN). The exchanges between masters and disciples that Daohui covers in his collection are described as being the transmission of this eye. His *Zhengfayanzang* thus records the exchanges of a number of renowned Tang and Northern Song Chan masters and their disciples, including ZHAOZHOU CONGSHEN, DESHAN XUANJIAN, and XUEFENG YICUN, as well as the sermons of masters associated especially with the LINJI ZONG, including LINJI YIXUAN, YANGQI FANGHUI, and HUANGLONG HUINAN. Dahui strings together typically between three and six exchanges or sermons and, at the end of each section, adds his own brief prose commentary, often about twenty Sinographs in length, most starting with "Miaoxi says." (Miaoxi is one of Daihui's cognomens.) The *Zhengfayanzang* seems to have exerted some influence on the compilation of the ZONGMEN LIANDENG HUIYAO, by Dahui's third-generation successor Huiweng Wuming (d.u.). The SHŌBŌGENZŌ, the magnum opus of the Japanese SŌTŌSHŪ monk DŌGEN KIGEN, bears the same title but in its Japanese pronunciation.

Zhengjue. (C) (正覺). See HONGZHI ZHENGJUE.

Zhengnian. (C) (正念). See DAXIU ZHENGNIAN.

zhengwu. (J. shōgo; K. chŭngo 證悟). In Chinese, "realization-awakening"; the most advanced of the two types of enlightenment (WU; BODHI) discussed in some CHAN schools, equivalent to the achievement of buddhahood. This type of awakening is achieved at the consummation of the ten stages (BHŪMI) of the bodhisattva path, rendering one a buddha in fact as well as in principle. The initial "seeing the nature" (JIANXING) of buddhahood catalyzes the "understanding-awakening" (JIEWU), in which the Chan adept comes to know that he is not a deluded sentient being but a buddha. This initial sudden awakening is not in itself sufficient, however, to bring an end to the habituations (VĀSANĀ) that have been engrained in the mind for an essentially infinite amount of time. It is only after a period of gradual cultivation (jianxiu) that these habitual tendencies will be removed and one's actions will finally correspond with one's understanding. That point where knowledge and action are fully integrated marks the final "realization-awakening" (ZHENGWU) and thus constitutes the complete, perfect enlightenment of buddhahood (ANUTTARASAMYAKSAṂBODHI). This two-tiered approach to awakening is the hallmark of the sudden awakening/gradual cultivation (DUNWU JIANXIU) path (MĀRGA) schema of certain Chan masters, such as GUIFENG ZONGMI (780–841) in the Chinese Hoze school of Chan, and POJO CHINUL (1158–1210) of the Korean Sŏn tradition.

Zhenjing Kewen. (J. Shinjō Kokubun; K. Chinjŏng Kŭngmun 眞淨克文) (1025–1102). Chinese CHAN master in the HUANGLONG PAI collateral line branch of the LINJI ZONG; also known as Yun'an, Baofeng, and Letan. Zhenjing was a native of Shanfu in present-day Henan province. He became a student of a certain master Guang of the North Pagoda in Fuzhou (present-day Hubei province) and was given the name Kewen. After receiving the monastic precepts at age twenty-four, Zhenjing began studying the sūtras and commentaries, but left for the South to seek out teachers of Chan. In 1065, Zhenjing spent a summer retreat on Mt. Dawei and had his first awakening experience upon hearing the words of the Chan master YUNMEN WENYAN from another monk. Zhenjing eventually became a disciple of the eminent Chan master HUANGLONG HUINAN (1002–1069) in Jicui and inherited his Linji lineage. At the request of the local king, Zhenjing moved to Jinleng, where he became the founding abbot of a monastery named Baoningsi. Zhenjing later retired to Gao'an, where he built a small hermitage named Toulao'an. Six years later, he moved to the monastery of Guizongsi on LUSHAN and again to Letan at the request of the famed statesman ZHANG SHANGYING. Along

with his colleagues Huanglong Zuxin (1025–1100) and Donglin Changcong (1025–1091), Zhenjing helped to build their teacher Huanglong Huinan's lineage into one of the most prosperous in China. He retired to the hermitage of Yun'an, where he passed away in 1102. Zhenjing left numerous disciples and students, many of whom were statesmen and officials from Jiangxi province. His teachings can be found in the *Yun'an Zhenjing chanshi yulu*.

Zhenke. (C) (眞可). See DAGUAN ZHENKE.

zhenru. (J. shinnyo; K. chinyŏ 眞如). In Chinese, "true thusness" or "true suchness"; the Chinese translation of the Sanskrit terms BHŪTATATHATĀ or TATHATĀ, which comes to play its own important role in indigenous Chinese Buddhist thought. According to the Chinese scholastic tradition, deriving from translations of the LAṄKĀVATĀRASŪTRA and YOGĀCĀRA sources, ZHENRU is, along with right knowledge (chengzhi), one of the two "factors associated with enlightenment" (wufa), true thusness being what is seen by correct knowledge when perception is freed from conceptual superimpositions. True thusness (zhenru) is described in the DASHENG QIXIN LUN ("Awakening of Faith According to the Mahāyāna") as one of two distinct, but complementary, aspects of the one mind (YIXIN), along with production and cessation (shengmie). True thusness and production and cessation correspond, respectively, to ultimate truth (PARAMĀRTHASATYA) and conventional truth (SAṂVṚTISATYA), or the unconditioned (ASAṂSKṚTA) and conditioned (SAṂKṚTA) realms. Since the mind that is subject to production and cessation (which the *Dasheng qixin lun* identifies with ĀLAYAVIJÑĀNA) remains always grounded on the mind of true thusness (which the treatise identifies with TATHĀGATAGARBHA), the mind may therefore be simultaneously described as both deluded and enlightened. The bifurcation between this enlightened essence of the mind as "true thusness" and its various temporal manifestations as "production and cessation" also aligns with the "essence" (TI) and "function" (YONG) distinction that Buddhism imported from indigenous Chinese philosophy.

zhenyan. (J. shingon; K. chinŏn 眞言). In Chinese, lit. "true word." See MANTRA; SHINGONSHŪ.

Zhi. (J. Shi; K. Chi 支). Ethnikon used in China for monks from Scythia (C. Yuezhi) or its successor state, the KUSHAN kingdom, in the northwest of India.

zhi byed. (shije). In Tibetan, lit. "pacification"; a Tibetan Buddhist tradition of meditation practice traced back to the eleventh-century Indian adept PHA DAM PA SANGS RGYAS, who for many years taught at the small temple of GLANG SKOR, near Ding ri in western Tibet. The name derives from the goal of the practice, which is the "pacification" of all suffering, transforming negative states into positive states through the practice of the six perfections (PĀRAMITĀ), especially the perfection of wisdom (PRAJÑĀPĀRAMITĀ). The practice is also said to extend one's life. Together with the related tradition of GCOD, or "severance," promulgated by Pha dam pa sangs rgyas's female disciple MA GCIG LAB SGRON, pacification is frequently counted as one of eight major streams of Buddhist practice found in Tibet, the so-called eight great conveyances that are lineages of achievement (SGRUB BRGYUD SHING RTA CHEN PO BRGYAD). Unlike the tradition of severance, however, the practice of pacification as a unique system had largely died out by the nineteenth century, when great Tibetan scholars of the nonsectarian (RIS MED) movement attempted to preserve its transmission.

zhidian. (J. chiden; K. chijŏn 知殿). In Chinese, lit., "to know the halls," a "hall prefect"; one of the six prefects (C. TOUSHOU) at a CHAN or ZEN monastery. The hall prefect is in charge of cleaning and preparing the shrine halls and the ritual objects placed therein.

Zhi Dun. [alt. Zhi Daolin] (J. Shi Ton/Shi Dōrin; K. Chi Tun/Chi Torim 支遁/支道林) (314–366). An early exegete of the perfection of wisdom (PRAJÑĀPĀRAMITĀ) literature in the southern part of China and leader of an influential group of early Buddhist philosophers associated with the "Dark Learning" (XUANXUE) school. Zhi is especially important for his crucial reinterpretation of the Chinese philosophical term LI, which previously had meant the "pattern" or natural order of things. Zhi instead reinterprets li in light of perfection of wisdom thought as an absolute "principle," which later came to be contrasted with the manifestations of that principle in the world as various "phenomena" (SHI). This distinction between principle and phenomena later occupied a crucial position in the thought of many of the indigenous schools of Chinese Buddhism, including the TIANTAI ZONG and the HUAYAN ZONG. Zhi Dun is also known for the earliest communication to a certain monk from the Korean Koguryŏ Kingdom, at least one decade before the official introduction of Buddhism to the peninsula, suggesting earlier Buddhist contacts between China and Korea than the extant evidence indicates.

zhike. (J. shika; K. chigaek 知客). In Chinese, "guest prefect"; one of the six prefects (C. TOUSHOU) at a CHAN monastery. The guest prefect is in charge of receiving and accommodating important visitors and guests. In modern Japanese ZEN, the guest prefect plays an important role in the training of young monks on pilgrimage (J. ANGYA; see C. XINGJIAO) as they engage each other in the elaborate ritual of receiving permission to enter the monastery.

zhi khro. (shi dro). In Tibetan, "peaceful and wrathful"; a term used to refer to assemblies (especially in a MAṆḌALA) of peaceful and wrathful (also known as khrag 'thung or "blood drinking") deities. For example, in the so-called *Tibetan Book of the Dead*, known in Tibetan as the BAR DO THOS GROL CHEN MO or the *Karma zhi khro* ("The Peaceful and Wrathful Deities of

KARMA GLING PA"), a maṇḍala of forty-two peaceful deities and fifty-eight wrathful deities appears during the chos nyid bar do, the second of the three bardos (ANTARĀBHAVA).

Zhikong Chanxian. (J. Shikū Zenken; K. Chigong Sŏnhyŏn; S. *Śūnyadiśya-Dhyānabhadra 指空禪賢) (1289–1363). In Chinese, "Pointing to Emptiness, Meditative Worthy," an Indian monk who taught first in China, but later came to live and teach in Korea at the end of the Koryŏ dynasty, where his influence was especially important; his Chinese name is sometimes reconstructed into Sanskrit as *DHYĀNABHADRA, and this is how he is often known in the literature. According to his memorial stele written by the Korean literatus Yi Saek (1328–1396), Zhikong was born as the third son of the ruler of a small state in the MAGADHA region of northeastern India around 1235. He entered the monastic life at the age of eight and is said to have studied at the famous NĀLANDĀ monastic university under the guidance of Vinayabhadra (C. Lüxian). He claimed to have traveled to Sri Lanka at the age of nineteen to study under Samantaprabhāsa (C. Puming), the 107th patriarch in a putative "Chan" lineage starting from MAHĀKĀŚYAPA, which probably means some sort of meditative lineage quite distinct from the East Asian CHAN lineages. After receiving transmission from Samantaprabhāsa, Zhikong became the 108th patriarch in that lineage. Around 1324, Zhikong traveled via Tibet to the Yuan dynasty and then went on to Koryŏ in 1326 at the invitation of King Ch'ungsuk (1294–1339; r. 1313–1330, 1332–1339), whom he had met in Beijing at the Mongol court. During his stay in Koryŏ, Zhikong went on pilgrimage to many important Buddhist sites, including the famous Diamond Mountains (KŬMGANGSAN). He also founded Hoeamsa (Fir Tree Cliff Monastery) in 1328 in what is now Kyŏnggi province, which is said to have been modeled after Nālandā monastery. He returned to the Yuan in 1328, where he was visited by many Korean students, including the late Koryŏ monks NAONG HYEGŬN (1320–1376) and MUHAK CHACH'O (1327–1405), on whom he had great influence. He died in 1363, and because of the reverence in which he was held by King Kongmin (r. 1351–1374), some of his relics were sent to Koryŏ. The relics were first housed in the royal palace and later enshrined in a reliquary at Hoeamsa. Zhikong was supposed to have been well versed in literature of PRAJÑĀPĀRAMITĀ, VINAYA, and TANTRA. In Korea, there survives a collection of his teachings, the *Chigong hwasang Sŏnyo nok* ("Master Zhigong's Essentials of Sŏn Record"), and his putative sūtra, the *Munsusari posal ch'oesangsŭng musaenggye kyŏng* ("Sūtra on the Ultimate Nonproduction (ANUTPĀDA) Precepts of the Bodhisattva MAÑJUŚRĪ"), which is supposed to have been translated from a Sanskrit original by his disciple Naong.

Zhili. (C) (知禮). See SIMING ZHILI.

Zhi Qian. (J. Shi Ken; K. Chi Kyŏm 支謙) (fl. c. 220–252). Prolific earlier translator of Buddhist texts into Chinese. A descendant of an Indo-Scythian émigré from the KUSHAN kingdom in the KASHMIR-GANDHĀRA region of northwest India, Zhi Qian is said to have been fluent in six languages. Although never ordained as a monk, Zhi Qian studied under the guidance of Zhi Liang (d.u.), a disciple of the renowned Indo-Scythian translator LOKAKṢEMA (fl. c. 178–198 CE). Zhi Qian fled northern China in the political chaos that accompanied the collapse of the Han dynasty (206 BCE–220 CE), eventually migrating to the Wu Kingdom in the south. There, he settled first in Wuchang and later in the Wu capital of Jianye, which was where the majority of his translations appear to have been made. Zhi Qian was known to have been artistically talented, and many of his translations were noted for their fluent style that did not strive to adhere to the exact meaning of each word and phrase, but instead sought to convey the insights of the text in an accessible fashion for a Chinese audience. The fifty-three translations that are attributed to Zhi Qian range widely between ĀGAMA and didactic materials and early MAHĀYĀNA scriptural literature, but also include many spurious later attributions (see APOCRYPHA). Among the translations that may with confidence be ascribed to Zhi Qian are early renderings of the VIMALAKĪRTINIRDEŚA, the PUSA BENYE JING, the SUKHĀVATĪVYŪHASŪTRA, the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ, and a primitive recension of the AVATAṂSAKASŪTRA. Zhi Qian is also presumed to be one of the first Buddhist commentators in the East Asian tradition: DAO'AN (314–385) states in his scriptural catalogue ZONGLI ZHONGJING MULU (now embedded in the CHU SANZANG JIJI) that Zhi Qian wrote a commentary to the ŚĀLISTAMBASŪTRA (C. Liaoben shengsi jing) while preparing its translation. Late in his life, Zhi Qian retired to Mt. Qionglong, where he is said to have passed away at the age of sixty.

zhishi. (J. chiji; K. chisa 知事). In Chinese, lit., "to know or manage affairs"; a "steward" at a CHAN monastery. Ideally, there are six stewards who oversee the administration and finances of the monastic community. Because their offices were often located on the east side of the monastery, they were also often referred to as the east section or rank. The influential CHANYUAN QINGGUI mentions only four stewards, the prior (C. JIANYUAN), rector (C. WEINUO), cook (C. DIANZUO), and overseer (C. ZHISUI). Later, the prior came to be referred to as the DUSI, and a comptroller (C. JIANSI) and assistant comptroller (C. FUSI) were added to the list of four.

zhisui. (J. shissui; K. chikse 直歲). In Chinese, "overseer"; one of the six stewards (C. ZHISHI) at a CHAN monastery. The zhisui supervises the manual labor conducted in the monastery, including everything from large construction projects, repairs, and the cultivation of land to patrolling the monastery grounds.

Zhixu. (J. Chigyoku; K. Chiuk 智旭) (C). See OUYI ZHIXU.

Zhiyan. (J. Chigon; K. Chiŏm 智儼) (602–668). Putative second patriarch of the Chinese HUAYAN tradition. Zhiyan was

a native of Tianshui in present-day Gansu province. While still a boy, Zhiyan is said to have become a student of the monk DUSHUN at the monastery of Zhixiangsi on ZHONGNANSHAN. He was ordained at age fourteen and received the full monastic precepts at age twenty, at which time he began studying the "Four-Part Vinaya" (SIFEN LÜ) of the DHARMAGUPTAKA school, as well as the *TATTVASIDDHI, DAŚABHŪMIKASŪTRA, BODHISATTVABHŪMI, and MAHĀPARINIRVĀṆASŪTRA. Zhiyan also studied the MAHĀYĀNASAṂGRAHA under Fachang (567–645). While studying under Jinglin (565–640), Zhiyan came across a copy of the AVATAṂSAKASŪTRA and, at age twenty-seven, composed his influential commentary on the *Avataṃsakasūtra*, the HUAYAN JING SOUXUAN JI. He also composed the KONGMU ZHANG (viz., *Huayan jingnei zhangmendeng za kongmu zhang*), *Shi xuan men*, *Huayan wushi yao wenda*, *Jingang jing lüeshu*, and others. Zhiyan began to make a name for himself by preaching the *Avataṃsakasūtra* to the rural populace and eventually counted among his many supporters the Emperor Gaozong (r. 649–683) himself. Zhiyan is closely associated with the doctrine of "nature origination" (XINGQI), which explains how enlightenment can be "originated" only from within the very "nature" of this world; enlightenment is therefore not something that needs to be created, for it derives from the inherent nature of the mind itself. ZHIYAN's teachings on the *Avataṃsakasūtra* were extremely influential in East Asian Buddhism and were developed further by his disciples ǓISANG and FAZANG. The Korean monk WŎNHYO was also heavily influenced by Zhiyan's writings. Because Zhiyan resided at his teacher's monastery Zhixiangsi, he later came to be called Great Master Zhixiang.

Zhiyi. (C) (智顗) (538–597). See TIANTAI ZHIYI.

zhiyu. (J. chiyoku; K. chiyok 知浴). In Chinese, the "bath prefect"; one of the six prefects (C. TOUSHOU) at a CHAN monastery. The bath prefect is in charge of cleaning the bathhouse, heating the water for use, and preparing necessities such as towels, incense, and tea. Usually, the bath prefect prepares the bath according to a strict monthly schedule.

zhizhi renxin. (J. jikishi ninshin; K. chikchi insim 直指人心). In Chinese, "directly point to the human mind"; a famous aphorism summarizing the soteriological approach of the CHAN school. The phrase appears for the first time in HUANGBO XIYUN's CHUANXIN FAYAO, where it is followed by the line JIANXING CHENGFO ("see one's own nature and become a buddha"). Subsequently, these two phrases appear together with two other phrases, BULIWENZI ("not establishing words or letters") and JIAOWAI BIECHUAN ("a special transmission outside the teachings"), in the ZUTING SHIYUAN compiled in 1108. These four phrases subsequently became a normative teaching for Chan practice and also the foundation on which the Chan, SŎN, and ZEN traditions created their own self-identity as a separate school of East Asian Buddhism.

Zhongfeng Mingben. (J. Chūhō Myōhon; K. Chungbong Myŏngbon 中峰明本) (1263–1323). Chinese CHAN master in the LINJI ZONG and one of the most influential monks of the Yuan dynasty; also known by the toponym Huanzhu (Illusory Abode). Zhongfeng was a native of Qiantang in Hangzhou prefecture (present-day Zhejiang province). While still a youth, Zhongfeng left home to study under the Chan master GAOFENG YUANMIAO of Mt. Tianmu, from whom he eventually received his monastic precepts at age twenty-four. After he left Gaofeng, Zhongfeng maintained no fixed residence and would on some occasions dwell on a boat. As his reputation grew, he came to be known as the Old Buddha of the South (Jiangnan Gufo). Mingben was an especially eloquent advocate of "questioning meditation" (KANHUA CHAN); his descriptions of the meaning and significance of Chan cases (GONG'AN) and meditative topics (HUATOU) and the processes and experience of kanhua practice are widely cited in the literature. In 1318, he was given a golden robe and the title Chan master Foci Yuanzhao Guanghui (Buddha's Compassion, Perfect Illumination, Broad Wisdom) from Emperor Renzong (r. 1311–1320). Zhongfeng also served as teacher of the next emperor Yingzong (r. 1320–1323). Emperor Wenzong (r. 1329–1332) also bestowed upon him the posthumous title Chan master Zhijue (Wise Enlightenment). Five years later, Emperor Shundi (r. 1333–1367) entered Zhongfeng's discourse records (YULU), the *Zhongfeng guanglu*, into the Chinese Buddhist canon (DAZANGJING), a signal honor for an indigenous author (few of whom are represented in the official canon); Shundi also bestowed on him the title State Preceptor Puying (Universal Resonance). Zhongfeng also composed his own set of monastic rules (QINGGUI) titled the *Huanzhu'an qinggui*.

Zhongguan lun shu. (J. Chūgan ronsho; K. Chunggwan non so 中觀論疏). In Chinese, "Commentary on the MŪLAMADHYAMAKAKĀRIKĀ"; composed by the Chinese SAN LUN ZONG monk JIZANG in 608. Jizang begins with his observations on Sengrui's (378–444?) preface to their teacher KUMĀRAJĪVA's translation of the *Mūlamadhyamakakārikā*. He then analyzes the twenty-seven chapters of the *Mūlamadhyamakakārikā* in a manner consistent with other scholars of the San lun tradition. Jizang contends that the middle way is a path traversed by the buddhas and BODHISATTVAS and explains its contents in terms of conventional truth (SAṂVṚTISATYA), absolute truth (PARAMĀRTHASATYA), and neither conventional nor absolute truth. (See also SANDI.) Jizang supports his arguments by citing numerous sūtras, commentaries, and theories of other teachers. For his analysis of emptiness (ŚŪNYATĀ), Jizang frequently makes recourse to the MAHĀPARINIRVĀṆASŪTRA.

zhongjiao. (C) (終教). See HUAYAN WUJIAO.

Zhongnanshan. (J. Shūnanzan; K. Chongnamsan 終南山). In Chinese, "Southernmost Mountain"; also called Nanshan, Mt. Taibai, Mt. Difei, and Mt. Zhounan. Zhongnanshan is

located west of the former Chinese capital of Chang'an (present-day Xi'an) and occupies a section of the Qinling Mountain range that stretches through southern Shaanxi province. Because of its proximity to the capital, Zhongnanshan became an important practice site in both the Buddhist and Daoist traditions. Two Buddhist monasteries were built on the mountain, and they attracted many eminent Buddhist monks throughout the dynasties. DAOXUAN, the founder of the Nanshan branch of the Chinese VINAYA school (LÜ ZONG) studied there; because of his long association with the mountain, his tradition of monastic discipline came also to be known as the NANSHAN LÜ ZONG. FAZANG is also said to have begun his study of the AVATAṂSAKASŪTRA on Zhongnanshan and to have performed a Buddho-Daoist prayer ritual on the mountain at the behest of Emperor Ruizong in order to relieve a drought. The syncretic character of the ritual he performed symbolizes the way in which Zhongnanshan straddles the two religious traditions. Sources differ as to whether the monastery where he performed the ritual was Longchisi (Monastery of the Dragon Pool) or Wuzhensi (Awakening to Truth Monastery).

Zhongxiangcheng. (J. Shūkōjō; K. Chunghyangsŏng 衆香城). In Chinese, "City of Multitudinous Fragrances"; according to the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ, the city where the BODHISATTVA DHARMODGATA lived and taught the perfection of wisdom (PRAJÑĀPĀRAMITĀ); an alternate name for the Korean "Diamond Mountains." See also GANDHAVATĪ, KŬMGANGSAN.

Zhu. (J. Jiku; K. Ch'uk 竺). Ethnikon typically used in China for monks who hailed from India (C. TIANZHU).

Zhuanhong jue. (C) (傳弘決). See MOHE ZHIGUAN FUXING ZHUANHONG JUE.

zhuchi. (J. jūji; K. chuji 住持). In Chinese, "abbot" of a Buddhist monastery. The term literally means "dwelling and holding," from the sense that the abbot occupies his own monastery and maintains the Buddha's dispensation in the current generation, serving as a "holding vessel" so that the Buddha's lineage can never be extinguished. The zhuchi dwells in the "abbot's quarters" (FANGZHANG), a term that in some contexts comes by metonymy to refer to the abbot himself, as is the case in certain Korean monasteries.

Zhu Daosheng. (C) (竺道生). See DAOSHENG.

Zhu Fonian. (J. Jiku Butsunen; K. Ch'uk Pullyŏm 竺佛念) (d.u.). A prolific early Chinese translator, who was active between the latter fourth and early fifth centuries. A native of Liangzhou, he collaborated with BUDDHAYAŚAS in the translation of the DĪRGHĀGAMA, with Dharmanandin in the translation of the EKOTTARĀGAMA, and the "Four-Part Vinaya" (SIFEN LÜ), the DHARMAGUPTAKA recension of the VINAYA, which eventually becomes the definitive version of the vinaya in the Sinitic tradition. He was also involved in the translation of such texts as the AṢṬASĀHASRIKĀPRAJÑĀPĀRAMITĀ, the UDĀNAVARGA, a SARVĀSTIVĀDA anthology of aphorisms, and the JÑĀNAPRASTHĀNA, the central treatise of the Sarvāstivāda ABHIDHARMA. Some indigenous Chinese scriptures (see APOCRYPHA), such as the PUSA YINGLUO BENYE JING, are also attributed to him.

Zhuhong. (C) (袾宏). See YUNQI ZHUHONG.

Zhujing yao ji. (J. Shokyō yōshū; K. Chegyŏng yo chip 諸經要集). In Chinese, "Collection of the Essentials of the Various Scriptures," edited by the Chinese monk Daoshi (d. 683); also known as the *Shan'e yebao lun* ("Treatise on Good and Evil Karmic Retribution"). As the title implies, the *Zhujing yao ji* is a collection of what Daoshi considered to be essential passages from more than two hundred primary sources, including various sūtras, VINAYAs, and commentaries. Many of the passages that were chosen by Daoshi for inclusion in his collection are concerned with the issue of KARMAN and retribution, hence the text's alternative title. The entire collection is comprised of a total of thirty sections: (1) the three jewels (RATNATRAYA), (2) worshiping STŪPAs, (3) controlling thoughts, (4) entering the way, (5) praises and chants, (6) lighting incense, (7) receiving requests, (8) receiving vegetarian feasts (ZHAI), (9) breaking fast, (10) wealth, (11) poverty, (12) leading others, (13) repaying debt to others, (14) releasing living beings, (15) the flourishing of merit, (16) choosing friends, (17) staying alert, (18) six classifications of beings (GATI), (19) cause of karman, (20) desire and defilements, (21) four types of birth, (22) retributions, (23) ten evils, (24) deception, (25) laziness, (26) wine and meat, (27) divination, (28) hell, (29) mortuary customs, and (30) miscellaneous matters.

zhung lnga. (shung nga). [alt. gzhung chen bka' pod lnga/ gzhung chen pod lnga]. In Tibetan, "the five books," five Indian treatises that provided the foundation for the monastic curriculum of the DGE LUGS sect. The five works are the ABHISAMAYĀLAṂKĀRA of MAITREYA, the MADHYAMAKĀVATĀRA of CANDRAKĪRTI, the PRAMĀṆAVĀRTTIKA of DHARMAKĪRTI, the ABHIDHARMAKOŚABHĀṢYA of VASUBANDHU, and the VINAYASŪTRA of GUṆAPRABHA.

zhuoyu. (著語). In Chinese, "annotation," or "capping phrase." See JAKUGO.

zhurengong. (J. shujinkō; K. chuin'gong 主人公). In Chinese, literally "master" or "owner"; a term used within the CHAN tradition to refer to "buddha-nature" (C. FOXING) or "true mind" (C. zhenxin), sometimes seen also as the variant "old master" (zhurenweng). The ZIMEN JINGXUN ("Admonitions for the Dark-[Robed]"), an influential Buddhist primer compiled in 1313 by the CHAN monk Yongzhong (d.u.), specifically refers to the variant zhurenweng as a designation for "true mind." The

WUMEN GUAN ("Gateless Checkpoint"), the eponymous GONG'AN collection of WUMEN HUIKAI (1183–1260), includes a gong'an on zhurengong attributed to Ruiyan Shican (850–910), a second-generation successor of DESHAN XUANJIAN (782–865): Ruiyan would call to himself every day, "Master (zhurengong)!" And he would respond, "Yes." Then he would say, "Be clear!" "Yes." "Any time and any day, don't be fooled by anything." "I won't be." Yaun Kagu's (fl. c. 1376) CHAGYŎNG MUN ("Self-admonitions"), one of the three texts included in the Korean monastic primer CH'OBALSIM CHAGYŎNG MUN, opens with an admonition to postulants and novices: "Master (chuin'gong)! Listen to my words! How can you continue to transmigrate through the realms of suffering when so many people have realized the way through the gateway of emptiness?" The Korean Sŏn community uses the concept of chuin'gong as a generic "meditative topic" (hwadu; C. HUATOU) in kanhwa Sŏn (C. KANHUA CHAN), or "questioning meditation."

Zhwa dmar incarnations. (Shamar). An influential incarnation (SPRUL SKU) lineage in the KARMA BKA' BRGYUD sect of Tibetan Buddhism, regarded as a human incarnation of AMITĀBHA. The first incarnation, Grags pa seng ge (Drakpa Senge, 1283–1349), was a disciple of the third KARMA PA, who offered him a red crown (zhwa dmar), from which the name of the line of incarnations derives. Subsequent Zhwa dmar embodiments had close relationships with the Karma pa line, in many cases alternately serving as GURU and pupil to the BKA' BRGYUD hierarch. Grags pa seng ge founded a seat at GNAS NANG monastery in central Tibet, later moved to YANGS PA CAN monastery under the direction of the fourth incarnation, Chos grags ye shes (Chödrak Yeshe, 1453–1524). Several Zhwa dmar incarnations spent considerable time in Nepal, including the sixth, Gar dbang Chos kyi dbang phug (Garwang Chökyi Wangchuk, 1584–1630), who composed a detailed description of his travels. The lineage was interrupted for nearly a century when the tenth incarnation, Chos grub rgya mtsho (Chödrup Gyatso, 1741–1791), was accused of forging a treasonous alliance with the Gorkha army during a Tibetan conflict with Nepal, during which BKRA SHIS LHUN PO monastery was sacked. The tenth Zhwa dmar died in prison, by either suicide or murder. The Tibetan government seized Yangs pa can monastery and converted it into a DGE LUGS monastery. It also banned recognition of new Zhwa dmar embodiments, a proscription that lasted more than a century. In the interim, several incarnations were found but never officially installed. The incarnation lineage includes:

1. Grags pa seng ge (Drakpa Senge, 1283–1349)
2. Mkha' spyod dbang po (Kachö Wangpo, 1350–1405)
3. Chos dpal ye shes (Chöpal Yeshe, 1406–1452)
4. Chos grags ye shes (Chödrak Yeshe, 1453–1524)
5. Dkon mchog yan lag (Könchok Yanlak, 1525–1583)
6. Gar dbang Chos kyi dbang phyug (Garwang Chökyi Wangchuk, 1584–1630)
7. Ye shes snying po (Yeshe Nyingpo, 1631–1694)
8. Dpal chen chos kyi don grub (Palchen Chökyi Döndrup, 1695–1732)
9. Dkon mchog dge ba'i 'byung gnas (Könchok Gewe Jungne, 1733–1740)
10. Chos grub rgya mtsho (Chödrup Gyatso, 1741–1792) [interruption of lineage]
11. 'Jam dbyangs Rin po che (Jamyang Rinpoche, 1892–1946)
12. 'Phrin las kun khyab (Trinle Kunkyap, 1948–1950)
13. Mi pham smra ba'i go cha (Mipam Mawe Gocha, b. 1952)

Zhwa lu. (Shalu). A modest but important monastery near the Tibetan city of Gzhis ka tse (Shigatse), famous as the seat of fourteenth-century polymath BU STON RIN CHEN GRUB, and renowned for its unusual architectural features. The earliest foundations were laid circa 997 by Lo ston Rdo rje dbang phyug (Lotön Dorje Wangchuk, b. tenth century), an active teacher during the outset of the later dissemination (PHYI DAR) of Buddhism in Tibet. His disciple, Lce btsun Shes rab 'byung gnas (Chetsün Sherap Jungne, d.u.), established a larger structure in 1027, having promised his master to construct a temple "as large as a small hat," from which its name is derived. The project was completed just prior to a visit of the illustrious Bengali scholar ATIŚA DĪPAṂKARAŚRĪJÑĀNA. During the thirteenth century, Zhwa lu formed close ties with the ruling SA SKYA hierarchs and their Mongol patrons. In 1306, the Yuan emperor Temür (1265–1307) appointed Grags pa rgyal mtshan (Drakpa Gyaltsen, d.u.) as prelate, under whom the institution flourished. Bu ston's rise to the abbacy in 1320 is traditionally viewed as the beginning of a new lineage, the so-called Zhwa lu pa ("Those of Zhwa lu") or Bu lugs tshul ("Tradition of Bu [ston]"). It was at Zhwa lu that Bu ston famously redacted the several hundred volumes that would comprise his influential edition of the Tibetan Buddhist canon. The monastery is equally famous for its unique blend of Tibetan and Chinese architecture (most notably, its pagoda-style roof of glazed turquoise tiles) and murals executed under the direction of Newar artist-disciples of the master Newari artisan Arniko.

Zibo. (C) (紫柏) (1543–1603). See DAGUAN ZHENKE.

Zimen jingxun. (J. Shimon kyōkun/Shimon keikun; K. Ch'imun kyŏnghun 緇門警訓). In Chinese, "Admonitions for Those in the Dark-(Robed) School"; an important Buddhist primer, in nine rolls, compiled in 1313 by the CHAN monk YONGZHONG (d.u.) in the LINJI ZONG lineage of ZHONGFENG MINGBEN. Yongzhong's text is an expansion of an earlier one-roll primer entitled *Zilin baoxun* ("Precious Admonitions to the Forest of the Dark-[Robed]"), by the Song-dynasty monk Zexian (d.u.). In 1474, the monk Rujin (d.u.) of the monastery of Zhenrusi added some additional work of his own to Yongzhong's text and published the compilation as *Zimen*

jingxun, in a total of ten rolls. The text contains 170 anecdotes, instructions, admonitions, and suggestions to neophytes, derived from eminent monks who lived between the Northern Song and the Ming dynasties. The author admonishes Chan students to observe the Buddhist precepts and to exert themselves in the study of Buddhism. Citing such Confucian classics as the *Lunyu* ("Analects of Confucius") and the *Shijing* ("Book of Poetry"), Yongzhong admonishes students to be diligent in their learning, even encouraging them to study Confucianism and Daoism in order better to promote Buddhism, just as ancient eminent masters had done. He provides several masters' detailed instructions on Chan meditation, including proper physical posture, and offers instructions on the proper way of reading Buddhist scriptures. Finally, Yongzhong includes the instructions of many renowned Chan masters, as conveyed in their sermons (SHANGTANG) and letters (SHUZHUANG). Rujin's edition of Yongzhong's work continues to be widely used today to instruct novices and neophytes. In Korea, Yongzhong's nine-roll version has been republished several times since T'AEGO POU (1301–1381) imported it to the peninsula during the Koryŏ period.

Zimmè Paññāsa. In Burmese, lit. "Chiangmai Fifty"; the Burmese recension of the *Paññāsajātaka*, or "Fifty [Apocryphal] Birth Stories." See PAÑÑĀSAJĀTAKA.

Zlum brtsegs lha khang. (Dumtsek Lhakang). A large, three-floored STŪPA constructed in 1421 by the renowned Tibetan adept THANG STONG RGYAL PO (Tangtong Gyalpo), located in Bhutan's Spa gro (Paro) Valley. According to traditional biographies, the master erected this structure at a geomantically powerful location in order to restrain a malignant demoness dwelling in the region. It was restored and enlarged in 1841 by the twenty-fifth head abbot (rje mkhan po) of Bhutan, Shes rab rgyal mtshan (Sherap Gyaltsen, served 1836–1839).

zong. (J. shū; K. chong 宗). A polysemous term in Chinese, which can refer to the "core teaching," "cardinal doctrine," or central "axiom" of a text or scholastic philosophy, or to a "school," "tradition," or even "lineage." Because of the denotation of zong as a cardinal doctrine, the term is used to translate the Sanskrit SIDDHĀNTA, an "axiom" or principal "tenet" of the various schools of Indian philosophy (both Buddhist and non-Buddhist). Although commonly translated as "school" ("sect" is incorrect in a Chinese Buddhist context), this rendering is only appropriate for those scholastic and practice traditions that trace themselves back through an unbroken lineage of ancestors to a specific founding "patriarch" (ZUSHI), such as the TIANTAI ZONG, HUAYAN ZONG, and CHAN ZONG. Commentarial traditions focused upon the exegesis of a specific text, such as the DI LUN (DAŚABHŪMIKASŪTRA), SHE LUN (MAHĀYĀNASAṂGRAHA), or CHENGSHI LUN (*TATTVASIDDHI), do not qualify as true schools of Chinese Buddhism, since they neither claim to derive from a single founder nor posit an exclusive lineage of successors; they might more correctly be termed "scholastic traditions."

Zongjing lu. (J. Sugyōroku; K. Chonggyŏng nok 宗鏡録). In Chinese, "Records of the Mirror of the Source"; composed c. 961 by the Song-dynasty CHAN master YONGMING YANSHOU (904–975), in one hundred rolls; also called "Records of the Mirror of the Mind" (*Xinjing lu*). The "source" (zong), Yanshou says in the preface to the *Zongjing lu*, refers to the "one mind" (YIXIN), which functions like a mirror that is able to reflect all dharmas. This comprehensive collection offers an exhaustive elaboration of the Chan teaching of "one mind" by systematizing the doctrinal and meditative positions of the various Chan traditions of past and present. The *Zongjing lu* consists of three main sections: exemplifications of the source (biaozong zhang), questions and answers (wenda chang), and citations (yinzheng chang). The first section, which comprises much of the first roll, offers a general overview of the treatise, focusing on Chan's "source" in the one mind. The massive second section, corresponding to the second half of the first roll through the ninety-third roll, offers various explanations on the one mind through a question raised at the beginning of each section, followed by Yanshou's detailed response. His explanations are typically accompanied by extensive citations from various sūtras and commentaries, such as the YUANJUE JING and the DAZHIDU LUN. Throughout this exhaustive survey and explanation of doctrinal matters, Yanshou underscores the importance of the one mind or one dharma as the underlying source of all external phenomena. The third and final section, which comprises the last seven rolls of the collection, validates the previous explanations through quotations of hundreds of scriptures and sayings of eminent Chan masters; its aim is to help those of inferior spiritual capacity give rise to faith. Many of these quotations are from materials that are no longer extant, thus providing an important overview of Chan during Yanshou's time. Yanshou's goal throughout this work is to present his distinctive vision of Chan as a pansectarian tradition that subsumes not only the different Chan lineages, but also such doctrinal traditions as TIANTAI, HUAYAN, and FAXIANG. Much of the source material that Yanshou compiled in the *Zongjing lu* may derive from GUIFENG ZONGMI's similarly massive *Chanyuan ji* ("Chan Collection"), only the prolegomenon to which survives (see CHANYUAN ZHUQUANJI DUXU). The collection was influential not only in China, but also in Koryŏ-period Korean SŎN and the five mountain (GOZAN) schools of Ashikaga-period Japanese ZEN.

Zongli zhongjing mulu. (J. Sōri shūkyō mokuroku; K. Chongni chunggyŏng mongnok 綜理衆經目錄). A scriptural catalogue (JINGLU) compiled by the Eastern Jin monk DAO'AN (312–385); often referred to by its abbreviated title, *An lu*, or "An's Catalogue." The complete catalogue is no longer extant, but is partially preserved within the CHU SANZANG JIJI. The catalogue covers texts translated between the Han dynasty to the year 374 and provides the titles, translators's names, and the dates of the translations, wherever possible. As one of the first such scriptural catalogues compiled

in East Asia, Dao'an's compilation served as the model for all future such endeavors.

Zongmen huomen. (J. Shūmon wakumon; K. Chongmun hongmun 宗門或問). In Chinese, "Some Inquiries into the [Chan] Tradition," composed by the CHAN master ZHANRAN YUANDENG in the CAODONG ZONG. In 1605, Zhanran replied to inquiries he had received from Chan neophytes about the school's distinctive teachings and practices and edited together fifty-two of these exchanges as the *Zongmen huomen*. (The zongmen of the title is a common designation for the CHAN ZONG, especially in Song-dynasty and later materials.) As Zhanran explains in his preface, he wrote this text because it is difficult for neophytes to understand Chan since there are so many different Chan teachings and practices. For example, to the question of what is most essential in Chan meditation and how one should begin in Chan practice, Zhanran answers that one must aspire to investigate the matter of birth-and-death. As to how to investigate the matter of birth-and-death, he answers that one has to arouse three states of mind: (1) the mind of great faith; (2) the mind of ferocious effort (cf. YONGMAENG CHŎNGJIN) and nonretrogression; and (3) the mind of great doubt (see YIQING). (Cf. SANYAO). In the course of his exposition, Zhanran also covers other Buddhist practices, including recitation of the Buddha's name (NIANFO), but he is adamant that Chan is the best and most direct way to enlightenment. In addition to the series of exchanges, Zhanran also appends the following related texts to the *Zongmen huomen*: the *Canchan shinan* ("Difficulties in Investigating Chan"), *Huomen* ("Some Inquiries"), *Buyi* ("Appended Sayings"), *Daming Dingzi men* ("Clear Replies to Dingzi's Inquiries"), and the *Daguan heshang zhaoyang zhuan* ("Tale of the Monk Daguan's Invitation to Disaster"), a fervent defense of the renowned Chan master DAGUAN ZHENKE (a.k.a. ZIBO), who died amid political intrigue at court.

Zongmen liandeng huiyao. (J. Shūmon rentōeyō; K. Chongmun yŏndŭng hoeyo 宗門聯燈會要). In Chinese, "Essential Collection of the Lamplight Connections within the [Chan] Tradition"; composed by Huiweng Wuming (d.u.), a third-generation disciple of the CHAN master DAHUI ZONGGAO, in 1183. This work is a collection of anecdotes and teachings culled from the biographies and discourse records (YULU) of over six hundred patriarchs and teachers (ZUSHI) of the Chan tradition. Huiweng begins the collection with the seven buddhas of the past (SAPTABUDDHA), the twenty-eight Indian patriarchs, and the six patriarchs of China (see CHUANDENG LU). His collections also include the various lineages and collateral lines that split off from the sixth patriarch (LIUZU) HUINENG's disciples QINGYUAN XINGSI (up to the seventeenth generation) and NANYUE HUAIRANG (up to the fifteenth generation). In addition to its role as a genealogical history, the *Zongmen liandeng huiyao* was favored by many followers of Chan as a reliable and convenient collection of Chan cases (GONG'AN).

Zongmen shigui lun. (J. Shūmon jikkiron; K. Chongmun sipkyu non 宗門十規論). In Chinese, "Treatise on the Ten Rules of the [Chan] Tradition," composed by CHAN master FAYAN WENYI (885–958); also known as the *Fayan chanshi zongmen shigui lun*, *Jinghui Fayan chanshi zongmen shigui lun*, and simply *Shigui lun*. The *Zongmen shigui lun* warns against ten maladies to which those in the Chan tradition are succeptible, viz., (1) assuming the role of teacher without first purifying one's own mind, (2) sectarian disputes, (3) positing the main points of Chan without knowing the specific contexts, (4) answering without consideration of time and situation, (5) failure to distinguish defiled from pure, (6) baseless interpretations of the sayings of the masters of old, (7) memorizing slogans and not being able to use them at the right moment, (8) miscitations by not mastering the canon, (9) improperly composing songs and verses before one's understanding has matured, and (10) defending one's own shortcomings and indulging in disputes. The *Zongmen shigui lun* is also the first text to mention the names of the five houses (see WU JIA QI ZONG) of the mature Chan tradition.

Zongmi. (C) (宗密). See GUIFENG ZONGMI.

Zongze. (C) (宗賾). See CHANGLU ZONGZE.

Zuihō. (J) (瑞方) (1683–1769). See MENZAN ZUIHŌ.

zuishangsheng Chan. (J. saijōjōzen; K. ch'oesangsŭng Sŏn 最上乘禪). In Chinese, lit. "supreme vehicle Chan," referring to one of the styles of practice and pedagogy associated with the CHAN school; often considered to be equivalent to "unconventional Chan" (GEWAI CHAN). Supreme vehicle Chan is one of the five categories of Chan listed by GUIFENG ZONGMI (780–841) in his CHANYUAN ZHUJUAN JI DUXU ("Prolegomena to the Source of Chan Collection"). According to Zongmi's treatment, "supreme vehicle Chan" refers to meditation practices that rely on sudden approaches to awakening (DUNWU) and generate an initial insight into the true nature of mind, i.e., the original purity of mind that is shared by both sentient beings and buddhas. The text equates this form of Chan with the "pure Chan of the TATHĀGATAS" (rulai qingjing Chan), also known by its abbreviated name, tathāgata Chan (rulai Chan); it also is said to be equivalent to "single-practice SAMĀDHI" (YIXING SANMEI) and the "samādhi of suchness" (zhenru sanmei), since "supreme vehicle Chan" is the root of all kinds of samādhi. The text also defines supreme vehicle Chan as the "Chan transmitted from BODHIDHARMA"; this latter form of Chan is subsequently named "patriarchal Chan" (zushi Chan) in the Song-dynasty Chan collections, such as the JINGDE ZHUANDENG LU ("Record of the Transmission of the Lamplight Published during the Jingde Era") and Puji's (1179–1253) *Wudeng huiyuan* ("Collected Essentials of the Five Lamplight Histories"), which in turn redefines "tathāgata Chan" as subordinate to "patriarchal Chan."

zuochan. (J. zazen; K. chwasŏn 坐禪). In Chinese, "seated meditation." Zuochan is a combination of the Chinese term "to sit" (zuo) and the character CHAN, a transcription of the Sanskrit term DHYĀNA (meditation); often referred to in English-language sources by the Japanese pronunciation zazen. As its etymology implies, zuochan refers to sitting with legs folded on top of each other and eyes slightly closed in meditation. This meditative practice may be generically considered to be directed at samādhi, one of the three trainings (C. sanxue; S. śikṣātraya), along with morality (ŚĪLA) and wisdom (PRAJÑĀ), or alternatively at dhyāna, one of the six PĀRAMITĀs emblematic of BODHISATTVA practice, along with charity (DĀNA), precepts (śīla), forbearance (KṢĀNTI), effort (VĪRYA), and wisdom (prajñā). Sitting has long held pride of place within the Buddhist tradition as the archetypal position (ĪRYĀPATHA) most suited to sustained meditation training. The prototype for zuochan is the Buddha's own seated meditation under the BODHI TREE, as well as the legendary Indian monk BODHIDHARMA's "wall gazing" (BIGUAN) for nine years in a cave. Because of these associations with both the Buddha and Bodhidharma, the founder of the Chan school, zuochan was widely considered to be the primary practice within the CHAN, SŎN, and ZEN traditions. In China, zuochan came to be viewed as such a stereotypical aspect of the Chan school, broadly conceived, that Chan teachers began to critique its necessity and importance; these critiques suggested instead that Chan practice was not to be confined just to zuochan, but should also be conducted throughout the three other standard deportments of walking, standing, and lying down. For example, the LIUZU TANJING ("Platform Sūtra"), attributed to the sixth patriarch HUINENG, includes such a rectification of the meaning of zuochan when it says that "'seated' means, externally, to refrain from generating thoughts related to wholesome or unwholesome objects; 'meditation' means, internally, to see that the self-nature is unmoving." In this redefinition, zuochan means not just "seated meditation" but instead encompasses a way of understanding that is to be carried through all aspects of one's experience.

Zur chung pa. (Zur chung Shes rab grags pa) (1014–1074). A RNYING MA master, the disciple of ZUR PO CHE (Shākya 'byung gnas, 1002–1062) and father of Zur Shākya seng ge (also known as Sgro sbug pa, 1074–1135). Because he was a poor novice, Zur po che encouraged him to marry the daughter of a wealthy patron, which he reluctantly did. He is said to have spent thirteen years meditating in a cave. His most famous work is his final testament, the *Zhal gdams brgyad cu pa* ("Eighty Oral Instructions").

Zur po che. ([alt. Zur chen] Shākya 'byung gnas) (1002–1062). A RNYING MA master of the Zur clan. His disciple ZUR CHUNG PA, and Zur Shākya seng ge (also known as Sgro sbug pa, 1074–1135) are known with him as the three Zur (Zur rnam pa gsum), with Zur po che as the founding figure. He was a disciple of Nyang Ye shes 'byung gnas and was renowned especially for his practice and teaching of the "magical net" (MĀYĀJĀLA) class of TANTRAs, the *Dgongs pa 'dus pa'i mdo*, and the SĀDHANA of VAJRAKĪLAYA. As such, he holds an important place in the transmission of RDZOGS CHEN and SEMS SDE teachings. He was ordained by the famous VINAYA master Bla chen Dgongs pa rab gsal and also studied extensively with GNUBS CHEN SANGS RGYAS YE SHES. During the time of the later dissemination of Buddhism to Tibet, he is credited with organizing the Rnying ma tantras in such a way that a particular tantra, its commentaries, sādhanas, and ritual manuals were grouped together. He identified the *Dgongs pa 'dus pa'i mdo* as the root tantra of ANUYOGA, the GUHYAGARBHA as the root tantra of MAHĀYOGA, and the KUN BYED RGYAL PO as the root tantra of ATIYOGA. He is also credited with the fundamental division of the Rnying ma teachings in BKA' MA (words) and GTER MA (treasures). He founded the monastery of 'Ug pa lung (Owl Land) located to the east of Gzhis ka rtse (Shigatse).

zushi. (J. soshi; K. chosa 祖師). In Chinese, "patriarch" (lit. "ancestral teacher"), referring to eminent teachers in lineages that are claimed to trace back to ŚĀKYAMUNI Buddha or even earlier buddhas. Indian Sanskrit texts dating from the 2nd century CE onward refer to a tradition of five "masters of the dharma" (dharmācārya) who succeeded the Buddha as head of the SAṂGHA: MAHĀKĀŚYAPA, ĀNANDA, MADHYĀNTIKA, ŚĀṆAKAVĀSIN, and UPAGUPTA. Later sources expand this list into a roster of nine eminent masters who "handed down the lamplight of wisdom successively through the generations." Often, these genealogies were extended as far back as the seven buddhas of antiquity (SAPTATATHĀGATA). It is widely presumed that this notion of dharma-transmission lineages developed from the earlier VINAYA concept of the "preceptor" (UPĀDHYĀYA), a senior monk who confers the lower ordination (pravrajyā, see PRAVRAJITA) to new novices (ŚRĀMAṆERA) and higher ordination (UPASAṂPADĀ) to monks (BHIKṢU). This personal connection between preceptor and disciple created incipient ordination families connected to specific preceptors, connections that later could be extended to dharma transmission as well. ¶ In East Asia, these lists of Indian dharma masters continued to be expanded and elaborated upon so that they also included the preeminent indigenous figures within each lineage, thus connecting the Chinese patriarchs of each lineage with their Indian predecessors. Most of the indigenous traditions of East Asian Buddhism, including the CHAN ZONG, TIANTAI ZONG, JINGTU ZONG, and HUAYAN ZONG, draw their legitimacy at least partially from their claims that their teachings and practices derive from an unbroken lineage of authoritative teachers that can be traced back geographically to India and temporally to the person of the Buddha himself. The specific names and numbers of patriarchs recognized within each lineage typically change over time and vary widely between the different traditions. Of these lists, the list of patriarchs recognized in the Chan school has received the lion's share of scholarly attention in the West. This Chan list varies widely, but a well-established roster

includes twenty-eight Indian and six Chinese patriarchs. These six Chinese patriarchs (liu zu)—BODHIDHARMA, HUIKE, SENGCAN, DAOXIN, HONGREN, and HUINENG—are credited by the classical tradition with the development and growth of Chan in China, but early records of the Chan school, such as the LENGQIE SHIZU JI and LIDAI FABAO JI, reveal the polemical battles fought between disparate contemporary Chan communities to place their own teachers on this roster of patriarchal orthodoxy. It is important to note that all of these various lists of patriarchs, in all the different traditions, are created retrospectively as a way of legitimizing specific contemporary lineages or teachers and verifying the authenticity of their teachings; thus their accounts of the chronology and history of their lineages must be used critically. The compound zushi can mean either "patriarch" (lit., ancestral teacher) or in other contexts "patriarchs and teachers," as in the stock phrase "all the buddhas of the three time-periods and patriarchs and teachers throughout successive generations" (sanshi zhufo lidai zushi), which explicitly traces a school's ancestral lineage from the past to the present and into the future. Some modern Buddhists, especially in the West, deplore the sexism inherent in the term "patriarch," preferring instead to render it with the gender-neutral term "ancestor." See also CHUANDENG LU; FASI; PARAMPARĀ; YINKE.

Zutang ji. (J. Sodōshū; K. Chodang chip 祖堂集). In Chinese, "Anthology of the Patriarchs' Hall." See CHODANG CHIP.

Zuting qianchui lu. (J. Sotei kantsuiroku; K. Chojŏng kyŏmch'u nok 祖庭鉗鎚錄). In Chinese, "Record of Forceps and Hammers of the Patriarchs' Hall," edited by the CHAN master FEIYIN TONGRONG (1593–1661) of the LINJI ZONG during the late Ming dynasty. This collection includes over fifty anecdotes considered to be essential for the training of students. These anecdotes focus on the enlightenment stories of several renowned Tang- and Song-dynasty LINJI ZONG masters, such as LINJI YIXUAN, Shoushan Shengnian (926–993), Fenyang Shanzhao (947–1024), Shishuang Chuyuan (986–1039), YUANWU KEQIN, and DAHUI ZONGGAO, but also include a few stories concerning renowned masters in the YUNMEN ZONG and CAODONG ZONG. Most of these stories are excerpted from Chan texts published during the Song dynasty, especially Puji's (1179–1253) *Wudeng huiyuan* ("Collected Essentials of the Five Lamplight Histories"). Each story is accompanied by Feiyin's own short prose commentary (pingchang). Four additional exchanges between a certain master Wang Jing and the monk Fohui Faquan (d.u.) concerning the history of the Chan tradition are included as an appendix.

Zuting shiyuan. (J. Sotei jion; K. Chojŏng sawŏn 祖庭事苑). In Chinese, "Garden of Matters from the Patriarchs' Hall," edited in eight rolls by Mu'an Shanxiang (d.u.) in 1108; the oldest encyclopedia of the Chinese CHAN tradition. This collection includes over 2,400 items related to Chan pedagogy, culled from Buddhist and secular stories, proverbs, numerological lists, personal names, local dialects, and so forth. Mu'an is said to have embarked on this project in response to the growing number of monks who were unable to understand the rich content and context of the many GONG'AN exchanges found in Chan literature. Mu'an's material is drawn from over twenty important Chan sources, such as the discourse records (YULU) of YUNMEN WENYAN, XUEDOU CHONGXIAN, and FAYAN WENYI, and YONGJIA XUANJUE's popular ZHENGDAO GE. The encyclopedia functions as a glossary for these works, offering explanations for their difficult technical terms and obscure names (which are not necessarily Chan or Buddhist in origin), and drawing his explanations from Buddhist, Confucian, and Daoist materials, as well as such secular sources. For example, the first roll of the encyclopedia provides a glossary of the *Yunmen lu*, which discusses the author Yunmen Wenyan, offers definitions of terms and explanations of names appearing in the text, drawing on sources ranging from the *Shiji* ("Book of History") to the AGAMA SŪTRAS, and fills out the myriad numerical lists that appear in the text, such as the three vehicles (C. sansheng; S. TRIYĀNA), the three baskets of the canon (C. sanzang; S. TRIPIṬAKA), the eight teachings of Tiantai (see WUSHI BAJIAO), etc. Mu'an's exhaustive collection meticulously traces the source of each item and provides a detailed commentary on each. The *Zuting shiyuan* was republished in 1154, and numerous editions were published during the Tokugawa period in Japan.

List of Lists

This roster provides some of the most important numerical lists used in the Buddhist traditions. Generally, we include the equivalencies only in Sanskrit, Tibetan, and Chinese, since in most cases these will be adequate to trace the terms back to the relevant entries in the dictionary. In instances where there are several variations of a list, we seek to provide only one common form. In addition, the various languages often provide different interpretations of a particular term, making it difficult to provide a single English translation. For ease in tracing terms back to their main dictionary entries, the numeric elements in the foreign-language names of each list have not been provided; the exceptions are those lists in which numerals are included in the main dictionary entries (for example, daśabhūmi).

ONES

one vehicle. (S. ekayāna; T. theg pa gcig pa; C. yisheng 一乘)

TWOS

two accesses/entrances. (C. er ru 二入)

1. access of principle (C. liru 理入)
2. access of practice (C. xingru 行入)

two accumulations/equipments. (S. saṃbhāra; T. tshogs; C. ziliang 資糧)

1. accumulation/equipment of merit (S. puṇyasaṃbhāra; T. bsod nams kyi tshogs; C. fuziliang 福資糧)
2. accumulation/equipment of wisdom (S. jñānasaṃbhāra; T. ye shes kyi tshogs; C. zhiziliang 智資糧)

two aspects of esoteric Buddhism. (C. er mi 二密)

1. esoteric as to principle (li mi 理密)
2. esoteric as to practices (shi mi 事密)

two attainments. (S. siddhi; T. dngos grub; C. chengjiu/xidi 成就/悉地)

1. mundane attainments (S. sādhāraṇasiddhi; T. thun mong gi dngos grub; C. gongtong chengjiu/xidi 共同成就/悉地)
2. supreme attainment (S. uttamasiddhi; T. mchog gi dngos grub; C. zuishang chengjiu/xidi 最上成就/悉地)

two benefits. (S. artha; T. don; C. li 利)

1. benefitting oneself (S. svārtha/ātmahita; T. rang don; C. zili 自利)
2. benefitting others (S. parārtha/parahita; T. gzhan don; C. lita 利他)

two bodies (of a buddha). (S. kāya; T. sku; C. shen 身)

1. truth body (S. dharmakāya; T. chos sku; C. fashen 法身)
2. physical body (S. rūpakāya; T. gzugs sku; C. shengshen 生身)

twofold generation of the aspiration to enlightenment. (S. bodhicittotpāda; T. byang chub kyi sems bskyed; C. fa putixin 發菩提心)

1. attitude of aspiration (S. praṇidhicittotpāda; T. smon pa'i sems bskyed; C. yuan putixin 願菩提心)
2. attitude of undertaking (S. prasthānacittotpāda; T. 'jug pa'i sems bskyed; C. xing putixin 行菩提心)

two karmic retributions. (C. er bao 二報)

1. retribution proper [viz. one's own actions] (zheng bao 正報)
2. adjunct retribution [viz. environmental factors] (yi bao 依報)

two means of knowledge. (S. pramāṇa; T. tshad ma; C. liang 量)

1. direct perception (S. pratyakṣa; T. mngon sum; C. xianliang 現量)
2. inference (S. anumāna; T. rjes dpag; C. biliang 比量)

two obstructions. (S. āvaraṇa; T. sgribs pa; C. zhang 障)

1. afflictive obstructions (S. kleśāvaraṇa; T. nyon mongs pa'i sgrib ba; C. fannao zhang 煩惱障)
2. cognitive or noetic obstructions [to omniscience] (S. jñeyāvaraṇa; T. shes bya'i sgrib ba; C. suozhi zhang 所知障)

two stages. (S. krama; T. rim pa; C. cidi 次第)

1. stage of generation (S. utpattikrama; T. bskyed rim; C. shengqi cidi 生起次第)
2. stage of completion (S. niṣpannakrama; T. rdzogs rim; C. yuanman cidi 圓滿次第)

two supreme ones. (T. mchog gnyis)

1. Nāgārjuna
2. Asaṅga

OR

1. Guṇaprabha
2. Śākyaprabha

two truths. (S. satyadvaya; T. bden pa gnyis; C. er di 二諦)

1. conventional truth (S. saṃvṛtisatya; T. kun rdzob bden pa; C. sudi/shisu di 俗諦/世俗諦)
2. absolute truth/ultimate truth (S. paramārthasatya; T. don dam bden pa; C. zhendi/shengyi di/diyiyi di 真諦/勝義諦/第一義諦)

two types of nonself. (S. nairātmya; T. bdag med; C. wuwo 無我)

1. nonself of the person (S. pudgalanairātmya; T. gang zag gi bdag med; C. ren wuwo 人無我)
2. nonself of phenomena (S. dharmanairātmya; T. chos kyi bdag med; C. fa wuwo 法無我)

two vehicles. (S. yānadvaya; T. theg pa gnyis; C. er sheng 二乘)

1. vehicle of disciples (S. śrāvakayāna; T. nyan thos kyi theg pa; C. shengwen sheng 聲聞乘)
2. vehicle of solitary buddhas (S. pratyekabuddhayāna; T. rang rgyal gyi theg pa; C. yuanjue sheng 緣覺乘)

OR

1. great vehicle (S. mahāyāna; T. theg pa chen po; C. dasheng 大乘)
2. lesser vehicle (S. hīnayāna; T. theg pa dman pa; C. xiaosheng 小乘)

THREES

three actions. (S. karman; T. las; C. ye 業)

1. wholesome/virtuous (S. kuśala; T. dge ba; C. shan 善)
2. unwholesome/unvirtuous (S. akuśala; T. mi dge ba; C. bushan 不善)
3. neutral/indeterminate (S. avyākṛta; T. lung ma bstan; C. wuji 無記)

three afflictions. (S. kleśa; T. nyon mongs; C. fannao 煩惱)

1. desire/greed (S. rāga; T. 'dod chags; C. tan 貪)
2. hatred/aversion (S. dveṣa; T. zhe sdang; C. chen 瞋)
3. delusion (S. moha; T. gti mug; C. chi 癡)

three baleful destinies. (S. apāya/durgati; T. ngan song; C. equ 惡趣)

1. animals (S. tiryak; T. dud 'gro; C. chusheng 畜生)
2. ghosts (S. preta; T. yi dwags; C. egui 餓鬼)
3. hell denizens (S. nāraka; T. dmyal ba; C. diyu 地獄)

three baskets of the canon. (S. tripiṭaka; T. sde snod gsum; C. sanzang 三藏)

1. basket of discourses (S. sūtrapiṭaka; T. mdo sde'i sde snod; C. jingzang 經藏)
2. basket of discipline (S. vinayapiṭaka; T. 'dul ba'i sde snod; C. lüzang 律藏)
3. basket of abhidharma/scholastic exegesis (S. abhidharmapiṭaka/*śāstrapiṭaka; T. chos mngon pa'i sde snod; C. lunzang 論藏)

three becomings. (S. bhava; T. srid pa; C. you 有)

1. becoming in the sensual realm (S. kāmabhava; T. 'dod pa'i srid pa; C. yuyou 欲有)
2. becoming in the realm of subtle materiality (S. rūpabhava; T. gzugs kyi srid pa; C. seyou 色有)
3. becoming in the immaterial realm (S. ārūpyabhava; T. gzugs med kyi srid pa; C. wuseyou 無色有)

three bodies [of a buddha]. (S. trikāya; T. sku gsum; C. san shen 三身)

1. truth body (S. dharmakāya; T. chos sku; C. fashen 法身)
2. enjoyment body (S. saṃbhogakāya; T. longs spyod rdzogs pa'i sku; C. baoshen 報身)
3. emanation body (S. nirmāṇakāya; T. sprul pa'i sku; C. huashen 化身)

three classes of atiyoga. (T. rdzogs chen sde gsum)

1. mental class (T. sems sde)
2. instruction class (T. man ngag sde)
3. expanse class (T. klong sde)

three contaminants. (āsrava; T. zag pa; C. lou 漏)

1. contaminant of sensuality (S. kāmāsrava; T. 'dod pa'i zag pa; C. yu lou 欲漏)
2. contaminant of becoming (S. bhavāsrava; T. srid pa'i zag pa; C. you lou 有漏)
3. contaminant of ignorance (S. avidyāsrava; T. ma rig pa'i zag pa; C. wuming lou 無明漏)

three enlightenments. (S. bodhi; T. byang chub; C. puti 菩提)

1. enlightenment of the disciples (S. śrāvakabodhi; T. nyan thos kyi byang chub; C. shengwen puti 聲聞菩提)
2. enlightenment of the pratyekabuddhas (S. pratyekabodhi; T. rang rgyal gyi byang chub/rang sangs rgyas kyi byang chub; C. yuanjue puti 緣覺菩提)
3. complete perfect enlightenment [of the buddhas] (S. anuttarasamyaksaṃbodhi; T. bla na med pa yang dag par rdzogs pa'i byang chub; C. anouduoluo sanmiao sanputi 阿耨多羅三藐三菩提)

three families, lords of. (S. trikulanātha; T. rigs gsum mgon po; C. sanbu huzhu 三部護主)

1. Avalokiteśvara (T. Spyan ras gzigs; C. Guanshiyin 觀世音)
2. Mañjuśrī (T. 'Jam dpal; C. Wenshu 文殊)
3. Vajrapāṇi (T. Phyag na rdo rje; C. Jingangshou 金剛手)

threefold contemplation. (C. sanguan 三觀)

1. contemplation of emptiness (C. kongguan 空觀)
2. contemplation of conventional existence (C. jiaguan 假觀)
3. contemplation of their mean (C. zhongguan 中觀)

three gates. [viz. types of karmic activity] (S. dvāra; T. sgo; C. men 門)

1. body (S. kāya; T. lus; C. shen 身)
2. speech (S. vāc; T. ngag; C. kou 口)
3. mind (S. manas; T. yid; C. yi 意)

three gates to deliverance. (S. vimokṣamukha; T. rnam thar sgo; C. jietuo men 解脫門)

1. emptiness (S. śūnyatā; T. stong pa nyid; C. kong 空)
2. signlessness (S. ānimitta; T. mtshan ma med pa; C. wuxiang 無相)
3. wishlessness (S. apraṇihita; T. smon pa med pa; C. wuyuan/wuzuo 無願/無作)

three inner tantras. (T. nang rgyud sde gsum)

1. mahāyoga (T. rnal 'byor chen po)
2. anuyoga (T. rjes su rnal 'byor)
3. atiyoga (T. shin tu rnal 'byor)

three jewels. (S. ratnatraya; T. dkon mchog gsum; C. sanbao 三寶)

1. the buddha (T. sang rgyas; C. fo/fotuo 佛/佛陀)
2. the teachings (S. dharma; T. chos; C. fa/damo 法/達磨)
3. the community (S. saṃgha; T. dge 'dun; C. seng/sengqie 僧/僧伽)

three knowledges. (S. trividyā; T. rig pa gsum; C. sanming 三明)

1. recollection of past lives (S. pūrvanivāsānusmṛti; T. sngon gyi gnas rjes su dran pa; C. suzhu suinian/suming ming 宿住隨念/宿命明)
2. "the divine eye"/clairvoyance (S. divyacakṣus; T. lha'i mig; C. tianyan ming 天眼明)
3. the extinction of the contaminants (S. āsravakṣaya; T. zag pa zad pa shes pa; C. loujin ming 漏盡明)

three means of knowledge. (S. pramāṇa; T. tshad ma; C. liang 量)

1. direct perception (S. pratyakṣa; T. mngon sum; C. xianliang 現量)
2. inference (S. anumāna; T. rjes dpag; C. biliang 比量)
3. scripture (S. āgama; T. lung; C. shengyan liang/shengjiao liang 聖言量/聖教量)

three natures. (S. trisvabhāva; T. mtshan nyid gsum/ngo bo nyid gsum/rang bzhin gsum; C. sanxing 三性)

1. imaginary/imputed (S. parikalpita; T. kun btags; C. pianji suozhi xing 遍計所執性)
2. dependent (S. paratantra; T. gzhan dbang; C. yitaqi xing 依他起性)
3. perfected/consummate (S. pariniṣpanna; T. yongs su grub pa; C. yuanchengshi xing 圓成實性)

three poisons. (S. triviṣa; T. dug gsum; C. sandu 三毒)

1. desire/greed (S. rāga; T. 'dod chags; C. tan 貪)
2. hatred/aversion (S. dveṣa; T. zhe sdang; C. chen 瞋)
3. delusion (S. moha; T. gti mug; C. chi 癡)

three realms. [of existence] (S. traidhātuka; T. khams gsum; C. san jie 三界)

1. sensuous realm/desire realm (S. kāmadhātu; T. 'dod khams; C. yu jie 欲界)
2. realm of subtle materiality/form realm (S. rūpadhātu; T. gzugs khams; C. se jie 色界)
3. immaterial realm/formless realm (S. ārūpyadhātu; T. gzugs med khams; C. wuse jie 無色界)

three refuges. (S. triśaraṇa; T. skyabs gsum; C. san gui/san guiyi 三歸/三歸依)

1. the buddha (T. sang rgyas; C. fo/fotuo 佛/佛陀)
2. the teachings (S. dharma; T. chos; C. fa/damo 法/達磨)
3. the community (S. saṃgha; T. dge 'dun; C. seng/sengqie 僧/僧伽)

three roots. (S. mūla; T. rtsa ba)

1. teacher (S. guru; T. bla ma)
2. tutelary deity (T. yi dam)
3. ḍākinī (S. ḍākinī; T. mkha' 'gro ma)

three sages of Huayan. (C. Huayan sansheng 華嚴三聖)

1. Vairocana Buddha (C. Piluzhena zunfo 毗盧遮那尊佛)
2. Samantabhadra bodhisattva (C. Puxian pusa 普賢菩薩)
3. Mañjuśrī bodhisattva (C. Wenshu pusa 文殊菩薩)

three sufferings. (S. duḥkha; T. sdug bsngal; C. ku 苦)

1. suffering of [physical and mental] pain (S. duḥkha-duḥkhatā; T. sdug bsngal gyi sdug bsngal; C. kuku 苦苦)
2. suffering inherent in change (S. viparināmaduḥkatā; T. 'gyur ba'i sdug bsngal; C. huaiku 壞苦)
3. suffering inherent in conditionality (S. saṃskāraduḥkhatā; T. 'du byed kyi sdug bsngal; C. xingku 行苦)

three times. (S. trikāla; T. dus gsum; C. sanshi 三世)

1. past (S. atīta; T. 'das pa; C. guoqushi 過去世)
2. present (S. vartamāna; T. da lta ba; C. xianzaishi 現在世)
3. future (S. anāgata; T. ma 'ongs pa; C. weilaishi 未來世)

three trainings. (S. triśikṣā; T. bslab pa gsum; C. sanxue 三學)

1. morality/higher morality (S. śīla/adhiśīlaśikṣā; T. tshul khrims/lhag pa'i tshul khrims kyi bslab pa; C. jie/zengshangjie xue 戒/增上戒學)
2. concentration/higher concentration (S. samādhi/adhisamādhiśikṣā; T. ting nge 'dzin/lhag pa'i ting nge 'dzin gyi bslab pa; C. ding/zengshangxin xue 定/增上心學)
3. wisdom/higher wisdom (S. prajñā/adhiprajñāśikṣā; T. shes rab/lhag pa'i shes rab kyi bslab pa; C. hui/zengshanghui xue 慧/增上慧學)

three truths/judgments. [of the Tiantai school] (C. sandi 三諦)

1. truth of emptiness (C. kongdi 空諦)
2. truth of being provisionally real (C. jiadi 假諦)
3. truth of the mean (C. zhongdi 中諦)

three turnings of the wheel of the law. (S. dharmacakrapravartana; T. chos 'khor rim pa; C. zhuan falun 轉法輪)

1. the dharma-wheel of the four noble truths (S. catuḥsatyadharmacakra; T. bden pa bzhi'i chos 'khor; C. sidi falun 四諦法輪)
2. the dharma-wheel of the absence of defining characteristics (S. alakṣaṇadharmacakra; T. mtshan nyid med pa'i chos 'khor; C. wuxiang falun 無相法輪)
3. the dharma-wheel of thorough delineations (S. *suvibhaktadharmacakra/pravicayadharmacakra; T. legs par rnam par phye ba'i chos 'khor; C. [shan] fenbie falun/shan bian falun [善]分別法輪/善辯法輪)

three vehicles. (S. triyāna; T. theg pa gsum; C. san sheng 三乘)

1. śrāvakayāna (T. nyan thos kyi theg pa; C. shengwen sheng 聲聞乘)
2. pratyekabuddhayāna (T. rang sangs rgyas kyi theg pa; C. yuanjue sheng/pizhi fo sheng 緣覺乘/辟支佛乘)
3. bodhisattvayāna (T. byang chub sems dpa'i theg pa; C. pusa sheng 菩薩乘)

three restraints. (S. saṃvara; T. sdom pa; C. lüyi/sanbaluo 律儀/三跋羅)

1. the disciplinary rules of a monk or nun (S. prātimokṣasaṃvara; T. so so thar pa'i sdom pa; C. boluotimuchahu/biejietuo lüyi 波羅提木叉護/別解脫律儀)
2. the restraint that is engendered by meditative absorption (S. dhyānajasaṃvara; T. bsam gtan skyes pa'i sdom pa; C. chanlüyi 禪律儀)
3. the restraint that derives from being free from the contaminants (S. anāsravasaṃvara; T. zag pa med pa'i sdom pa; C. wuloulüyi 無漏律儀).

OR

three vows. (S. trisaṃvara; T. sdom gsum; C. san lüyi 三律儀)

1. the disciplinary rules of a monk or nun (S. prātimokṣasaṃvara; T. so so thar pa'i sdom pa; C. boluotimuchahu/biejietuo lüyi 波羅提木叉護/別解脫律儀)
2. bodhisattva vows (S. bodhisattvasaṃvara; T. byang sems kyi sdom pa; C. pusa lüyi 菩薩律儀)
3. secret mantra vows (S. guhyamantrasaṃvara; T. gsang sngags kyi sdom pa; C. mizhou lüyi 密咒律儀)

three wisdoms. (S. prajñā; T. shes rab; C. hui 慧)

1. wisdom derived from learning (S. śrutamayīprajñā; T. thos pa las byung ba'i shes rab; C. wenhui 聞慧)
2. wisdom derived from reflection (S. cintāmayīprajñā; T. bsam pa las byung ba'i shes rab; C. sihui 思慧)
3. wisdom derived from cultivation (S. bhāvanāmayīprajñā; T. bsgoms pa las byung ba'i shes rab; C. xiuhui 修慧)

FOURS

four absorptions. (S. dhyāna; T. bsam gtan; C. chan/ding 禪/定)

1. first absorption (S. prathamadhyāna; T. bsam gtan dang po; C. chuchan 初禪)
2. second absorption (S. dvitīyadhyāna; T. bsam gtan gnyis pa; C. erchan 二禪)
3. third absorption (S. tṛtīyadhyāna; T. bsam gtan gsum pa; C. sanchan 三禪)
4. fourth absorption (S. caturthadhyāna; T. bsam gtan bzhi pa; C. sichan 四禪)

four activities. (S. karman; T. las; C. shiye 事業)

1. pacification (S. śāntika; T. zhi ba'i las; C. xizai 息災)
2. enrichment (S. pauṣṭika; T. rgyas pa'i las; C. zengyi 增益)
3. control (S. vaśīkaraṇa; T. bdang gi las; C. huai'ai 懷愛)
4. wrath (S. abhicāra; T. drag po mngon spyod; C. xiangfu 降伏)

four aids to penetration. (S. nirvedhabhāgīya; T. nges par 'byed pa'i cha mthun; C. shunjuezefen 順決擇分)

1. heat (S. ūṣman; T. drod; C. nuan 煖)
2. summit (S. mūrdhan; T. rtse mo; C. ding 頂)
3. receptivity/acquiescence (S. kṣānti; T. bzod pa; C. ren 忍)
4. supreme worldly dharmas (S. laukikāgradharma; T. 'jig rten pa'i chos kyi mchog; C. shi diyi fa 世第一法)

four analytical knowledges. (S. pratisaṃvid; T. so so yang dag par rig pa; C. wu'ai jie/wu'ai bian 無礙解/無礙辯)

1. of factors (S. dharma; T. chos; C. fa 法)
2. of meaning (S. artha; T. don; C. yi 義)

3. of etymology or language (S. nirukti; T. nges pa'i tshig; C. ci/ci 詞/辭)
4. of eloquence (S. pratibhāna; T. spobs pa; C. leshuo 樂說)

four baleful destinies. (S. apāya/durgati; T. ngan song; C. equ 惡趣)

1. demigods (S. asura; T. lha ma yin; C. axiuluo qu 阿修羅趣)
2. animals (S. tiryak; T. dud 'gro; C. chusheng qu 畜生趣)
3. ghosts (S. preta; T. yi dwags; C. egui qu 餓鬼趣)
4. hell denizens (S. nāraka; T. dmyal ba; C. diyu qu 地獄趣)

four bases of psychic power. (S. ṛddhipāda; T. rdzu 'phrul gyi rkang pa; C. shenzu/ruyizu 神足/如意足)

1. aspiration (S. chanda; T. 'dun pa; C. yu 欲)
2. vigor/effort (S. vīrya; T. brtson 'grus; C. qin 勤)
3. thought/concentration (S. citta; T. bsam pa; C. xin 心)
4. analysis (S. mīmāṃsā; T. dpyod pa; C. siwei/guan 思惟/觀)

four bodies [of a buddha]. (S. kāya; T. sku; C. shen 身)

1. dharma body (S. dharmakāya; T. chos sku; C. fashen 法身)
2. enjoyment body (S. saṃbhogakāya; T. longs spyod rdzogs pa'i sku; C. baoshen 報身)
3. emanation body (S. nirmāṇakāya; T. sprul pa'i sku; C. huashen 化身)
4. essence body (S. svābhāvikakāya; T. ngo bo nyid kyi sku; C. zixing shen 自性身)

four bonds/fetters. (S. grantha/saṃyojana; T. 'ching ba; C. jie/fu 結/縛)

1. covetousness (S. abhidhyā; T. brnab sems; C. yu'ai 欲愛)
2. ill-will (S. vyāpāda; T. gnod sems; C. chenhui 瞋恚)
3. attachment to rules and rituals (S. śīlavrataparāmarśa; T. tshul khrims dang brtul zhugs mchog tu 'dzin pa; C. jiejinqu 戒禁取)
4. attachment to views/dogmatic fanaticism (S. dṛṣṭiparāmarśa/idaṃsatyābhiniveśa; T. lta ba mchog tu 'dzin pa; C. wojianqu 我見取)

four boundless states/immeasurables. (S. apramāṇa; T. tshad med; C. wuliang xin 無量心)

1. loving-kindness (S. maitrī; T. byams pa; C. ci 慈)
2. compassion (S. karuṇā; T. snying rje; C. bei 悲)
3. empathetic joy (S. muditā; T. dga' ba; C. xi 喜)
4. equanimity (S. upekṣā; T. btang snyoms; C. she 捨)

four characteristics of all conditioned objects. (S. saṃskṛta-lakṣaṇa/caturlakṣaṇa; T. 'dus byas kyi mtshan nyid/mtshan nyid bzhi; C. youwei xiang/sixiang 有爲相/四相)

1. origination/birth (S. jāti; T. skye ba; C. sheng 生)
2. maturation/continuance (S. sthiti; T. gnas pa; C. zhu 住)
3. senescence/decay/aging (S. jarā; T. rga ba; C. yi 異)
4. desinence/extinction (S. anitya [alt. anityatā]; T. mi rtag pa; C. mie 滅)

four conditions. (S. pratyaya; T. rkyen; C. yuan 緣)

1. causal condition (S. hetupratyaya; T. rgyu rkyen; C. yin yuan 因緣)
2. immediate antecedent condition (S. samanantarapratyaya; T. de ma thag pa'i rkyen; C. dengwujian yuan 等無間緣)
3. objective-support condition (S. ālambanapratyaya; T. dmigs rkyen; C. suoyuan yuan 所緣緣)
4. predominant condition (S. adhipatipratyaya; T. bdag rkyen; C. zengshang yuan 增上緣)

four contaminants. (S. āsrava; T. zag pa; C. lou 漏)

1. contaminant of sensuality (kāmāsrava; T. 'dod pa'i zag pa; C. yu lou 欲漏)
2. contaminant of becoming (bhavāsrava; T. srid pa'i zag pa; C. you lou 有漏)
3. contaminant of ignorance (avidyāsrava; T. ma rig pa'i zag pa; C. wuming lou 無明漏)
4. contaminant of views (dṛṣṭyāsrava; T. lta ba'i zag pa; C. jian lou 見漏)

four continents. (S. dvīpa; T. gling; C. [da][bu]zhou [大][部]洲)

1. videha [east] (T. lus 'phags; C. dong shengshen zhou 東勝身洲)
2. Jambudvīpa [south] (T. 'dzam bu gling; C. nan Shanbu zhou 南贍部洲)
3. godānīya [west] (T. ba glang spyod; C. xi niuhuo zhou 西牛貨洲)
4. uttarakuru [north] (T. sgra mi snyan; C. bei julu zhou 北俱盧洲)

four "defeat" offenses. (S. pārājika; T. phas pham pa; C. poluoyi 波羅夷)

1. sexual intercourse (S. abrahmacarya; T. mi tshangs pa spyod pa; C. yin 淫)
2. theft (S. adattādāna; T. ma byin par len pa; C. dao 盜)
3. killing [of a human being] (S. vadha; T. gsod pa; C. sha 殺)
4. lying about one's higher spiritual achievements (S. uttaramanuṣyadharmapralāpa; T. mi'i chos bla mar smra ba; C. wang 妄)

four deportments/postures. (S. īryāpatha; T. spyod lam; C. weiyi 威儀)

1. walking (S. caṅkrama; alt. gamana; T. 'chag pa; C. xing 行)
2. standing (S. sthāna; sthita; T. 'greng ba; C. zhu 住)
3. sitting (S. niṣaṇṇa; T. 'dug pa; C. zuo 坐)
4. lying down (S. śayana; T. nyal ba; C. wo 臥)

four divine abidings. (S. brahmavihāra; T. tshang pa'i gnas; C. fanzhu 梵住)

1. loving-kindness (S. maitrī; T. byams pa; C. ci 慈)
2. compassion (S. karuṇā; T. snying rje; C. bei 悲)
3. empathetic joy (S. muditā; T. dga' ba; C. xi 喜)
4. equanimity (S. upekṣā; T. btang snyoms; C. she 捨)

four empowerments. (S. abhiṣeka; T. dbang; C. guanding 灌頂)

1. vase empowerment (S. kalaśābhiṣeka; T. bum dbang; C. baoping guanding 寶瓶灌頂)
2. secret empowerment (S. guhyābhiṣeka; T. gsang dbang; C. mimi guanding 秘密灌頂)
3. wisdom–knowledge empowerment (S. prajñājñānābhiṣeka; T. shes rab ye shes kyi dbang; C. zhihui guanding 智慧灌頂)
4. word empowerment (S. śabdābhiṣeka; T. tshig dbang/ dbang bzhi pa; C. mingci guanding 名詞灌頂)

four fearlessnesses/self-confidences. (S. vaiśāradya; T. mi 'jigs pa; C. wusuowei 無所畏)

The Tathāgata's self-confidence derives from:

1. his knowledge of all phenomena (S. sarvadharmābhisaṃbodhivaiśāradya; T. chos thams cad mkhyen pa la mi 'jigs pa; C. zhufa xiandengjue wuwei 諸法現等覺無畏)
2. his knowledge that all the contaminants are destroyed (S. sarvāsravakṣayajñānavaiśāradya; T. zag pa zad pa thams cad mkhyen pa la mi 'jigs pa; C. yiqie loujinzhi wuwei 一切漏盡智無畏)
3. his correct identification of all the obstacles to liberation (S. antarāyikadharmānanyathātvaniścitavyākaraṇavaiśāradya; T. bar du gcod pa'i chos rnams bzhan du mi 'gyur bar nges pa'i lung bstan pa la mi 'jigs pa; C. zhangfa buxu jueding shouji wuwei 障法不虛決定授記無畏)
4. his realization of all the marvelous qualities that are to be achieved through completing the path to liberation (S. sarvasampadadhigamāyanairyāṇikapratipattathātvavaiśāradya; T. phun sum tshogs pa thams cad thob par 'gyur bar nges par 'byung ba'i lam de bzhin du gyur ba la mi 'jigs pa; C. weizheng yiqie juzu chudao ruxing wuwei 為證一切具足出道如性無畏)

four floods. (S. ogha; T. chu bo; C. puliu 瀑流)

1. craving for sensuality (S. kāmarāga; T. 'dod pa la 'dod chags; C. yu'ai 欲愛)
2. craving for continued existence (S. bhavarāga; T. srid pa'i 'dod chags; C. you'ai 有愛)
3. ignorance (S. avidyā; T. ma rig pa; C. wuming 無明)
4. views (S. dṛṣṭi; T. lta ba; C. jian 見)

four foundations of mindfulness. (S. smṛtyupasthāna; T. dran pa'i nyer bzhag; C. nianchu 念處)

1. mindfulness of the body (S. kāyasmṛtyupasthāna; T. lus dran pa nye bar bzhag pa; C. shen nianchu 身念處)
2. mindfulness of sensations (S. vedanāsmṛtyupasthāna; T. tshor ba dran pa nye bar bzhag pa; C. shou nianchu 受念處)
3. mindfulness of mental states (S. cittasmṛtyupasthāna; T. sems dran pa nye bar bzhag pa ; C. xin nianchu 心念處)
4. mindfulness of phenomena (S. dharmasmṛtyupasthāna; T. chos dran pa nye bar bzhag pa; C. fa nianchu 法念處)

four fruitions. [of sanctity] (S. phala; T. 'bras bu; C. guo [zheng/wei] 果[證/位])

1. stream-enterer (S. srotaāpanna; T. rgyun du zhugs pa; C. yuliu guo/xutuohuan guo 預流果/須陀洹果)
2. once-returner (S. sakṛdāgāmin; T. lan cig phyir 'ong ba; C. yilai guo/situohan guo 一來果/斯陀含果)
3. non-returner (S. anāgāmin; T. phyir mi 'ong ba; C. buhuan guo/anahan guo 不還果/阿那含果)
4. worthy one (S. arhat; T. dgra bcom pa; C. wuxue guo/ aluohan guo 無學果/阿羅漢果)

four graspings. (S. upādāna; T. nyer len; C. qu 取)

1. of sensuality (S. kāmopādāna; T. 'dod pa nye bar len pa; C. yuqu 欲取)
2. of wrong views (S. dṛṣṭyupādāna; T. lta ba nye bar len pa; C. jianqu 見取)
3. of rules and rituals (S. śīlavratopādāna; T. tshul khrims dang brtul zhugs mchog 'dzin nye bar len pa; C. jie[jin] qu 戒[禁]取)
4. of the concept "self" (S. ātmavādopādāna; T. bdag lta nye bar len pa; C. woyu qu 我語取)

four great elements. (S. mahābhūta; T. 'byung ba chen po; C. da 大)

1. earth/solidity (S. pṛthivī; T. sa; C. di 地)
2. water/cohesion (S. āpas; T. chu; C. shui 水)
3. fire/warmth (S. tejas; T. me; C. huo 火)
4. air/mobility (S. vāyu; T. rlung; C. feng 風)

four guardian kings. (S. mahārājan/lokapāla; T. rgyal chen; C. [hushi] tianwang/huguo tianwang [護世]天王/護國天王)

1. Dhṛtarāṣṭra; in the east (T. Yul 'khor srung; C. Chiguo 持國)
2. Virūḍhaka; in the south (T. 'Phags skyes po; C. Zengzhang 增長)
3. Virūpākṣa; in the west (T. Spyan mi bzang; C. Guangmu 廣目)
4. Vaiśravaṇa; in the north (T. Rnam thos sras; C. Duowen 多聞)

four immaterial absorptions. (S. ārūpyāvacaradhyāna; T. gzugs med pa'i snyoms 'jug; C. wuse ding 無色定) See FOUR IMMATERIAL REALMS (s.v.).

four immaterial realms. (S. ārūpyadhātu; T. gzugs med khams pa'i gnas; C. wuse jie 無色界)

1. infinite space (S. ākāśānantyāyatana; T. nam mkha' mtha' yas skye mched; C. kong wubian chu 空無邊處)

2. infinite consciousness (S. vijñānānantyāyatana; T. rnam shes mtha' yas skye mched; C. shi wubian chu 識無邊處)
3. nothingness (S. ākiṁcanyāyatana; T. ci yang med pa'i skye mched; C. wu suoyou chu 無所有處)
4. neither perception nor nonperception (S. naivasaṃjñānāsaṃjñāyatana; T. 'du shes med 'du shes med min skye mched; C. feixiang feifeixiang chu 非想非非想處)

four intentions. (S. abhiprāya; T. dgongs pa; C. yiqu/miyi 意趣/密意)

1. intention directed towards sameness (S. samatābhiprāya; T. mnyam pa nyid la dgongs pa; C. pingdeng yiqu 平等意趣)
2. intention directed towards other meanings (S. arthāntarābhiprāya; T. don gzhan la dgongs pa; C. bieyi yiqu 別義意趣)
3. intention directed towards other times (S. kālāntarābhiprāya; T. dus gzhan la dgongs pa; C. bieshi yiqu 別時意趣)
4. intention directed towards other individuals (S. pudgalāntarābhiprāya; T. gang zag gzhan la dgongs pa; C. buteqieluo yiyao yiqu 補特伽羅意樂意趣)

four intermediate states. (S. antarābhava; T. bar do)

1. intermediate state of the birth (S. jātyantarābhava; T. skye gnas kyi bar do)
2. intermediate state of the moment of death (S. mumūrṣāntarābhava; T. 'chi kha'i bar do)
3. intermediate state of dharmatā (S. dharmatāntarābhava; T. chos nyid bar do)
4. intermediate state of rebirth (S. bhavāntarābhava; T. srid pa bar do)

four Māras. (S. māra; T. bdud; C. mo 魔)

1. Māra of the aggregates (S. skandhamāra; T. phung po'i bdud; C. yinmo 陰魔)
2. Māra of the afflictions (S. kleśamāra; T. nyon mongs pa'i bdud; C. fannao mo 煩惱魔)
3. Māra of death (S. mṛtyumāra; T. 'chi bdag gi bdud; C. simo 死魔)
4. Māra the deity (S. Devaputramāra; T. Lha'i bu bdud; C. Tianzimo 天子魔)

four means of conversion. (S. saṃgrahavastu; T. bsdu dngos; C. sheshi; shefa 攝事/攝法)

1. generosity (S. dāna; T. sbyin pa; C. bushi 布施)
2. kind words (S. priyavādita; T. snyan par smra ba; C. aiyu 愛語)
3. helpfulness; viz. teaching others to fulfill their aims (S. arthacaryā; T. don spyod pa; C. lixing 利行)
4. consistency between words and deeds (S. samānārthatā; T. don mthun pa; C. tongshi 同事)

four modes of birth. (S. yoni; T. skye gnas rigs; C. sheng 生)

1. oviparous birth (S. aṇḍaja; T. sgo nga las skye ba; C. luansheng 卵生)
2. viviparous birth (S. jarāyuja; T. mngal nas skye ba; C. taisheng 胎生)
3. moisture-born (S. saṃsvedaja; T. drod sher las skye ba; C. shisheng 濕生)
4. metamorphic or transformative birth; viz. spontaneous generation [as of divinities] (S. upapāduka; T. brdzus te skye ba; C. huasheng 化生)

four noble ones. (S. ārya; T. 'phags pa; C. sheng 聖)

1. śrāvaka (T. nyan thos; C. shengwen 聲聞)
2. pratyekabuddha (T. rang rgyal; C. yuanjue 緣覺)
3. bodhisattva (T. byang chub sems dpa'; C. pusa 菩薩)
4. buddha (T. sang rgyas; C. fo 佛)

four noble persons. (S. āryapudgala; T. 'phags pa'i gang zag; C. xiansheng 賢聖)

1. stream-enterer (S. srotaāpanna; T. rgyun du zhugs pa; C. yuliu guo/xutuohuan guo 預流果/須陀洹果)
2. once-returner (S. sakṛdāgāmin; T. lan cig phyir 'ong ba; C. yilai guo/situohan guo 一來果/斯陀含果)
3. non-returner (S. anāgāmin; T. phyir mi 'ong ba; C. buhuan guo/anahan guo 不還果/阿那含果)
4. worthy one (S. arhat; T. dgra bcom pa; C. wuxue guo/aluohan guo 無學果/阿羅漢果)

four noble truths. (S. āryasatya; T. 'phags pa'i bden pa; C. shengdi 聖諦)

1. truth of suffering (S. duḥkhasatya; T. sdug bsngal gyi bden pa; C. kudi 苦諦)
2. truth of origination (S. samudayasatya; T. kun 'byung gi bden pa; C. jidi 集諦)
3. truth of cessation (S. nirodhasatya; T. 'gog pa'i bden pa; C. miedi 滅諦)
4. truth of the path (S. mārgasatya; T. lam gyi bden pa; C. daodi 道諦)

four persons. (S. pudgala; T. gang zag; C. buteqieluo 補特伽羅)

1. ordinary persons (S. pṛthagjana; T. so so skye bo; C. fanfu 凡夫)
2. disciples (S. śrāvaka; T. nyan thos; C. shengwen 聲聞)
3. solitary buddhas (S. pratyekabuddha; T. rang rgyal; C. yuanjue 緣覺)
4. bodhisattvas (T. byang chub sems dpa'; C. pusa 菩薩)

four perverted views. (S. viparyāsa; T. phyin ci log; C. diandao 顛倒)

1. to view as permanent what is actually impermanent (S. nityaviparyāsa; T. mi rtag pa la rtag par 'dzin pa; C. chang diandao 常顛倒)

2. to view as pleasurable what is actually suffering (S. sukhaviparyāsa; T. sdug bsngal ba la bde bar 'dzin pa; C. le diandao 樂顛倒)
3. to view as pure what is actually tainted (S. śuciviparyāsa; T. mi gtsang ba la gtsang bar 'dzin pa; C. jing diandao 淨顛倒)
4. to view as self what is actually non-self (S. ātmaviparyāsa; T. bdag med pa la bdag tu 'dzin pa; C. wo diandao 我顛倒)

four philosophical systems. (S. siddhāntabheda; T. grub mtha' smra ba)

1. Vaibhāṣika [Sarvāstivāda] (T. Bye brag tu smra ba; C. Piposha bu 毘婆沙部)
2. Sautrāntika (T. Mdo sde pa; C. Jingliang bu 經量部)
3. Vijñānavāda/Cittamātra (T. Rnam shes su smra ba/Sems tsam pa; C. Weishi 唯識)
4. Madhyamaka (Dbu ma pa; C. Zhongguan 中觀)

four realms of reality [dharmadhātu]. (C. si fajie 四法界)

1. dharmadhātu of phenomena (C. shi fajie 事法界)
2. dharmadhātu of principle (C. li fajie 理法界)
3. dharmadhātu of the unimpeded interpenetration between principle and phenomena (C. lishi wu'ai fajie 理事無礙法界)
4. dharmadhātu of unimpeded interpenetration of phenomenon and phenomena (C. shishi wu'ai fajie 事事無礙法界)

four reliances. (S. pratisaraṇa; T. rton pa; C. yi 依)

1. reliance on the meaning rather than the words (S. arthapratisaraṇena bhavitavyaṃ na vyañjanapratisaraṇena; T. don la rton par bya yi tshig 'bru la rton par mi bya; C. yiyi buyi yu 依義不依語)
2. reliance on the teaching rather than on the person [who delivers the teaching] (S. dharmapratisaraṇena bhavitavyaṃ na pudgalapratisaraṇena; T. chos la rton par bya yi gang zag la rton par mi bya; C. yifa buyi ren 依法不依人)
3. reliance on wisdom rather than [ordinary] consciousnesses (S. jñānapratisaraṇena bhavitavyaṃ na vijñānapratisaraṇena; T. ye shes la rton par bya yi rnam shes la rton par mi bya; C. yizhi buyi shi 依智不依識)
4. reliance on the definitive meaning rather than the provisional meaning (S. nītārthasūtrapratisaraṇena bhavitavyaṃ na neyārthasūtrapratisaraṇena; T. nges don la rton par bya yi drang don la rton par mi bya; C. yiliaoyi buyi buliaoyi 依了義不依不了義)

four right efforts. (S. samyakpradhāna/samyakprahāṇa; T. spong pa; C. zhengqin 正勤)

1. to bring about the (future) non-production of evil and unwholesome dharmas that have not yet been produced (S. anutpannānāṃ pāpakānām akuśalānāṃ dharmāṇām anutpādāya cchandaṃ janayati/anutpannānāṃ akuśalānāṃ saṃrakṣaṇaṃ; T. mi dge ba ma skyes pa mi bkyed pa; C. weisheng e ling busheng 未生惡令不生)
2. the abandonment of those evil and unwholesome dharmas that have been produced (S. utpannānāṃ pāpakānām akuśalānāṃ dharmāṇāṃ prahāṇāya cchandaṃ janayati/utpannānāṃ akuśalānāṃ prahāṇaṃ; T. mi dge ba skyes pa spong ba; C. yisheng e ling yongduan 已生惡令永斷)
3. the production of wholesome dharmas that have not yet been produced (S. anutpannānāṃ kuśalānāṃ dharmāṇām utpādāya cchandaṃ janayati; T. dge ba ma skyes pa bskyed pa; C. weisheng shan ling sheng 未生善令生)
4. the increase of those wholesome dharmas that have been produced (S. utpannānāṃ kuśalānāṃ dharmāṇāṃ sthitaye bhūyobhāvāya asaṃpramoṣāya paripūraṇāya cchandaṃ janayati/anutpannānāṃ punarutpāda; T. dge ba skyes pa spel ba; C. yisheng shan ling zengzhang 已生善令增長)

four seals. (S. mudrā; T. phyag rgya; C. yin 印)

1. pledge seal (S. samayamudrā; T. dam tshig phyag rgya; C. sanmoye yin 三摩耶印)
2. dharma seal (S. dharmamudrā; T. chos kyi phyag rgya; C. fa yin 法印)
3. action seal (S. karmamudrā; T. las kyi phyag rgya; C. jiemo yin 羯磨印)
4. great seal (S. mahāmudrā; T. phyag rgya chen po; C. da yin 大印)

four seals indicative of the Buddhist view. (S. caturmudrā/dṛṣṭinimittamudrā; T. phyag rgya bzhi/bka' rtags kyi phyag rgya; C. siyin/fayin 四印/法印)

1. all that is compounded is impermanent (S. sarvasaṃskārā anityatāḥ; T. 'dus byas thams cad mi rtag pa; C. zhuxing wuchang 諸行無常)
2. all that is contaminated is suffering (S. sarvasaṃskārā duḥkhāḥ; T. zag cas thams cad sdug bsngal ba; C. yiqie jie ku 一切皆苦)
3. all phenomena are without self (S. sarvadharmā anātmānaḥ; T. chos thams cad bdag med pa; C. zhufa wuwo 諸法無我)
4. nirvāṇa is peace (S. nirvāṇaśānta; T. mya ngan las 'das pa zhi ba; C. niepan jijing 涅槃寂靜)

four tantra classes. (S. tantra; T. rgyud sde)

1. action tantra (S. kriyātantra; T. bya ba'i rgyud)
2. performance tantra (S. caryātantra; T. spyod pa'i rgyud)
3. yoga tantra (S. yogatantra; T. rnal 'byor gyi rgyud)
4. unexcelled yoga tantra (S. anuttarayogatantra; T. rnal 'byor bla na med pa'i rgyud)

FIVES

five acts that bring immediate retribution. (S. ānantarya-karman; T. mtshams med pa; C. wujian ye [nizui/zhongzui] 無間業 [逆罪/重罪])

1. matricide (S. mātṛghāta; T. ma gsod pa; C. hai mu/sha mu 害母/殺母)
2. patricide (S. pitṛghāta; T. pha gsod pa; C. hai fu/sha fu 害父/殺父)
3. killing an arhat (S. arhadghāta; T. dgra bcom pa gsod pa; C. hai aluohan/sha aluohan 害阿羅漢/殺阿羅漢)
4. maliciously spilling a buddha's blood (S. tathāgatasyāntike duṣṭacittarudhirotpādanam; T. de bzhin gshegs pa'i sku la ngan sems kyis khrag 'byin pa; C. [exin] chu foshen xie [惡心]出佛身血)
5. creating a schism in the order (S. saṃghabheda; T. dge 'dun gyi dbyen byas pa; C. poseng 破僧)

five aggregates. (S. skandha; T. phung po; C. yun/yin 蘊/陰)

1. aggregate of materiality (S. rūpaskandha; T. gzugs kyi phung po; C. se yun/se yin 色蘊/色陰)
2. aggregate of sensation (S. vedanāskandha; T. tshor ba'i phung po; C. shou yun/shou yin 受蘊/受陰)
3. aggregate of perception (S. saṃjñāskandha; T. 'du shes kyi phung po; C. xiang yun/xiang yin 想蘊/想陰)
4. aggregate of conditioning factors (S. saṃskāraskandha; T. 'du byed kyi phung po; C. xing yun/xing yin 行蘊/行陰)
5. aggregate of consciousness (S. vijñānaskandha; T. rnam shes kyi phung po; shi yun/shi yin 識蘊/識陰)

five aids to liberation. (S. mokṣabhāgīya; T. thar pa cha mthun; C. shunjietuofen 順解脫分)

1. faith (S. śraddhā; T. dad pa; C. xin 信)
2. effort (S. vīrya; T. brtson 'grus; C. jingjin/qin 精進/勤)
3. mindfulness (S. smṛti; T. dran pa; C. nian 念)
4. concentration (S. samādhi; T. ting nge 'dzin; C. ding 定)
5. wisdom (S. prajñā; T. shes rab; C. hui 慧)

five buddha families. (S. pañcakula; T. rigs lnga; C. wu bu/jia 五部/家)

1. tathāgata family (S. tathāgatakula; T. de bzhin gshegs pa'i rigs; C. rulai bu 如來部)
2. vajra family (S. vajrakula; T. rdo rje'i rigs; C. jingang bu 金剛部)
3. jewel family (S. ratnakula; T. rin chen rigs; C. bao bu 寶部)
4. lotus family (S. padmakula; T. padma rigs; C. lianhua bu 蓮華部)
5. action family (S. karmakula; T. las kyi rigs; C. ye bu 業部)

five buddhas. (S. pañcatathāgata; T. de bzhin gshegs pa lnga; C. wuzhi rulai/wu fo 五智如來/五佛)

1. Vairocana (T. Rnam par snang mdzad; C. Dari rulai/Piluzhena 大日如來/毗盧遮)
2. Akṣobhya (T. Mi bskyod pa; C. Achu fo 阿閦佛)
3. Ratnasambhava (T. Rin chen 'byung gnas; C. Baosheng rulai 寶生如來)
4. Amitābha (T. 'Od dpag med; C. Amituo fo/Wuliangshou fo 阿彌陀佛/無量壽佛)
5. Amoghasiddhi (T. Don yod grub pa; C. Bukong Chengjiu rulai fo 不空成就如來佛)

five destinies [of rebirth]. (S. gati; T. 'gro ba; C. qu/dao 趣/道)

1. divinities (S. deva; T. lha; C. tian 天)
2. humans (S. manuṣya; T. mi; C. ren 人)
3. animals (S. tiryak; T. dud 'gro; C. chusheng 畜生)
4. ghosts (S. preta; T. yi dwags; C. egui 餓鬼)
5. hell denizens (S. nāraka; T. dmyal ba; C. diyu 地獄)

five effects. (S. pañcaphala; T. 'bras bu lnga; C. wu guo 五果)

1. correlative effect (S. niṣyandaphala; T. rgyu mthun gyi 'bras bu; C. dengliu guo 等流果)
2. retributive effect (S. vipākaphala; T. rnam smin gyi 'bras bu; C. yishu guo 異熟果)
3. separation effect (S. visaṃyogaphala; T. bral ba'i 'bras bu; C. liji guo 離繫果)
4. effect caused by human action (S. puruṣakāraphala; T. skyes bus byed pa'i 'bras bu; C. shiyong guo 士用果)
5. predominant effect (S. adhipatiphala; T. bdag po'i 'bras bu; C. zengshang guo 增上果)

five elements. (S. mahābhūta/dhātu; T. 'byung po chen po; C. da[zhong] 大[種])

1. earth/solidity (S. pṛthivī; T. sa; C. di 地)
2. water/cohesion (S. āpas; T. chu; C. shui 水)
3. fire/warmth (S. tejas; T. me; C. huo 火)
4. air/mobility (S. vāyu; T. rlung; C. feng 風)
5. space (S. ākāśa; T. nam mkha'; C. kong 空)

five eyes. (S. cakṣus; T. spyan; C. yan 眼)

1. fleshly eye (S. māṃsacakṣus; T. sha'i spyan; C. rouyan 肉眼)
2. divine eye/clairvoyance (S. divyacakṣus; T. lha'i spyan; C. tianyan 天眼)
3. wisdom eye (S. prajñācakṣus; T. shes rab kyi spyan; C. huiyan 慧眼)
4. dharma eye (S. dharmacakṣus; T. chos kyi spyan; C. fayan 法眼)
5. buddha eye (S. buddhacakṣus; T. sangs rgyas kyi spyan; C. foyan 佛眼)

five factors of meditative absorption. (S. dhyānāṅga; T. bsam gtan gyi yan lag; C. chanzhi/dingzhi 禪支/定支)

1. applied thought/initial application of attention (S. vitarka; T. rtog pa; C. xun 尋)
2. sustained thought/sustained attention (S. vicāra; T. dpyod pa; C. si 伺)
3. physical rapture (S. prīti; T. dga' ba; C. xi 喜)
4. mental ease (S. sukha; T. bde ba; C. le 樂)
5. one-pointedness (S. cittaikāgratā; T. sems rtse gcig pa; C. xin yijing xing 心一境性)

five faculties/dominants. (S. indriya; T. dbang po; C. gen 根)

1. faith (S. śraddhā; T. dad pa; C. xin 信)
2. effort (S. vīrya; T. brtson 'grus; C. jingjin/qin 精進/勤)
3. mindfulness (S. smṛti; T. dran pa; C. nian 念)
4. concentration (S. samādhi; T. ting nge 'dzin; C. ding 定)
5. wisdom (S. prajñā; T. shes rab; C. hui 慧)

five hindrances [to dhyāna]. (S. nīvaraṇa; T. sgrib pa; C. gai 蓋)

1. sensual desire (S. kāmacchanda; T. 'dod pa la 'dun pa ; C. tanyu 貪欲)
2. malice (S. vyāpāda; T. gnod sems; C. chenhui 瞋恚)
3. sloth and torpor (S. styānamiddha; T. rmugs pa dang gnyid; C. shuimian/huanchen 睡眠/昏沈)
4. restlessness and worry (S. auddhatyakaukṛtya; T. rgod pa dang 'gyod pa; C. diaoju/sanluan/ezuo/hui 掉舉/散亂/惡作/悔)
5. skeptical doubt (S. vicikitsā; T. the tshom; C. yi 疑)

Five Huayan classifications of the teachings. (C. Huayan wujiao 華嚴五教)
Earlier division, according to Dushun and Fazang:

1. hīnayāna teachings/śrāvakayāna teachings (C. xiaosheng jiao/shengwensheng jiao 小乘教/聖聞乘教)
2. elementary teachings [of Mahāyāna] (C. shijiao 始教)
3. advanced/final teachings [of Mahāyāna] (C. zhongjiao 終教)
4. sudden teachings (C. dunjiao 頓教)
5. perfect teachings/consummate teachings C. yuanjiao 圓教)

Later division, according to Guifeng Zongmi:

1. teachings for divinities and humans (C. rentian jiao 人天教)
2. hīnayāna teachings (C. xiaosheng jiao 小乘教)
3. dharma-characteristics teachings of Mahāyāna (C. dasheng faxiang jiao 大乘法相教)
4. characteristics-negating teachings of Mahāyāna (C. dasheng poxiang jiao 大乘破相教)
5. The nature-revealing teaching of the one vehicle (C. yisheng xianxing jiao 一乘顯性教)

five lineages. (S. gotra; T. rigs pa; C. zhongxing 種姓/性)

1. tathāgata lineage (S. tathāgatayānābhisamayagotra; T. de bzhin gshegs pa'i theg pa mngon par rtogs pa'i rigs; C. rulai sheng zhongxing 如來乘種性)
2. pratyekabuddha lineage (S. pratyekabuddhayānābhisamayagotra; T. rang rgyal gyi theg pa mngon par rtogs pa'i rigs; C. dujue sheng zhongxing 獨覺乘種性)
3. śrāvakayāna lineage (S. śrāvakayānābhisamayagotra; T. nyan thos kyi theg pa mngon par rtogs pa'i rigs; C. shengwen sheng zhongxing 聲聞乘種性)
4. uncertain lineage (S. aniyatagotra; T. ma nges pa'i rigs; C. buding zhongxing 不定種性)
5. no lineage [viz. icchantika] (S. agotraka; T. rigs med pa; C. wu zhongxing 無種性)

five nectars. (S. amṛta; T. bdud rtsi; C. ganlu 甘露)

1. semen (S. bodhicitta; T. byang sems; C. nanjing 男精)
2. blood (S. rakta; T. rak ta; C. nüxie 女血)
3. urine (S. mūtra; T. dri chu; C. niao 尿)
4. excrement (S. purīṣa; T. dri chen; C. shi 屎)
5. flesh (S. māṃsa; T. sha; C. gusui 骨髓)

five paths. (S. pañcamārga; T. lam lnga; C. wuwei 五位)

1. path of equipment/accumulation (S. saṃbhāramārga; T. tshogs lam; C. ziliang wei 資糧位)
2. path of preparation (S. prayogamārga; T. sbyor lam; C. jiaxing wei 加行位)
3. path of vision (S. darśanamārga; T. mthong lam; C. jiandao wei 見道位)
4. path of cultivation (S. bhāvanāmārga; T. bsgom lam; C. xiudao wei 修道位)
5. adept path (where there is nothing more to learn) (S. aśaikṣamārga; T. mi slob lam; C. wuxue wei 無學位)

five periods and eight teachings. [according to the Tiantai school] (C. wushi bajiao 五時八教)
The five major chronological periods of the Buddha's teaching (C. wushi 五時)*:*

1. Huayan period (C. Huayan shiqi 華嚴時期)
2. āgamas/Deer Park period (C. ahan shiqi 阿含時期/Luyuan shiqi 鹿苑時期)
3. expansive (vaipulya) Mahāyāna period (C. Fangdeng shiqi 方等時期)
4. perfection of wisdom (prajñāpāramitā) period (C. bore shiqi 般若時期)
5. Lotus (*Saddharmapuṇḍarīkasūtra*) and Nirvāṇa (*Mahāparinirvāṇasūtra*) scriptures period (C. Fahua Niepan shiqi 法華涅槃時期)

Fourfold division of the teaching according to means of conversion (C. huayi sijiao 化儀四教):

1. sudden [Huayan jing] (C. dunjiao 頓教)
2. gradual [āgamas, vaipulya, prajñāpāramitā] (C. jianjiao 漸教)

3. indeterminate (C. puding jiao 不定教)
4. secret/esoteric (C. mimi jiao 祕密教)

Fourfold division of the teaching according to content [*and based on the capacity of the audience*] (C. huafa sijiao 化法四教):

1. tripiṭaka, viz., hīnayāna (C. sanzang jiao 三藏教)
2. common/shared [by both hīnayāna and Mahāyāna] (C. tongjiao 通教)
3. distinct/separate [Mahāyāna] (C. biejiao 別教)
4. perfect/consummate [Lotus and Nirvāṇa sutras] (C. yuanjiao 圓教)

five powers. (S. bala; T. stobs; C. li 力)

1. power of faith (S. śraddhābala; T. dad pa'i stobs; C. xin li 信力)
2. power of effort (S. vīryabala; T. brtson 'grus kyi stobs; C. jingjin li/qin li 精進力/勤力)
3. power of mindfulness (S. smṛtibala; T. dran pa'i stobs; C. nian li 念力)
4. power of concentration (S. samādhibala; T. ting nge 'dzin gyi stobs; C. ding li 定力)
5. power of wisdom (S. prajñābala; T. shes rab kyi stobs; C. hui li 慧力)

five precepts. [of the laity] (S. pañcaśīla; T. tshul khrims lnga; C. wujie 五戒)

1. to abstain from killing living creatures (S. prāṇātipāta-virati; T. srog gcod pa spong ba; C. bu shasheng/li shasheng 不殺生/離殺生)
2. to abstain from taking what is not given (S. adattādāna-virati; T. ma byin par len pa spong ba; C. bu toudao/li buyu qu 不偷盜/離不與取)
3. to abstain from engaging in sexual misconduct (S. kāmamithyācāra-virati; T. 'dod pas log par g.yem pa spong ba; C. bu xieyin/li yu xiexing 不邪婬/離欲邪行)
4. to abstain from lying (often explained as lying about the possession of high states of attainment or superhuman powers) (S. mṛṣāvāda-virati; T. rdzun du smra ba spong ba; C. bu wangyu/li xukuang yu 不妄語/離虛誑語)
5. to abstain from intoxicants (S. madyapāna-virati; T. myos par 'gyur ba'i btung ba spong pa; C. bu yinjiu/li yinjiu 不飲酒/離飲酒)

five pure abodes. (S. śuddhāvāsa; T. gtsang gnas; C. jing jutian 淨居天)

1. free from afflictions (S. avṛha; T. mi che ba; C. wufan tian 無煩天)
2. not burning/without torment (S. atapa; T. mi gdung ba; C. wure tian 無熱天)
3. perfect form (S. sudṛśa; T. gya nom snang ba; C. shanxian tian 善現天)
4. perfect vision (S. sudarśana; T. shin tu mthong ba; C. shanjian tian 善見天)
5. highest (S. akaniṣṭha; T. 'og min; C. se jiujing tian 色究竟天)

five royal treasure revealers. (T. gter ston rgyal po lnga)

1. Nyang ral Nyi ma 'od zer
2. Guru Chos kyi dbang phyug
3. Rdo rje gling pa
4. Pad ma gling pa
5. 'Jam dbyang mkhyen brtse dbang po

five sciences. (S. pañcavidyā; T. rig pa lnga; C. wuming 五明)

1. manual arts (S. śilpakarma[vidyā]; T. bzo gnas kyi rig pa; C. gongqiao ming 工巧明)
2. grammar (S. śabdavidyā; T. sgra'i rig pa; C. shengming 聲明)
3. medicine (S. cikitsāvidyā; T. gso ba'i rig pa; C. yifangming 醫方名)
4. logic (S. hetuvidyā; T. gtan tshigs kyi rig pa; C. yinming 因明)
5. inner knowledge (S. adhyātmavidyā; T. nang gi rig pa; C. neiming 內明)

five supranormal powers. (S. abhijñā; T. mngon shes; C. shentong 神通)

1. psychic powers (S. ṛddhividhābhijñā; T. rdzu 'phrul gyi bya ba shes pa; C. shenjing zhizheng tong 神境智證通)
2. "the divine eye"/clairvoyance (S. divyacakṣus; T. lha'i mig; C. tianyan 天眼)
3. "the divine ear"/clairaudience (S. divyaśrotra; T. lha'i rna ba; C. tian'er 天耳)
4. knowledge of others' minds (S. paracittajñāna; T. pha rol gyi sems shes pa; C. taxin tong 他心通)
5. knowledge of past lives (S. pūrvanivāsānusmṛti; T. sngon gyi gnas rje su dran pa; C. suzhu suinian/suming tong 宿住隨念/宿命通)

five turbidities/degenerations. (S. kaṣāya; T. snyigs ma; C. zhuo 濁)

1. turbidity of the lifespan (S. ayuḥkaṣāya; T. tshe'i snyigs ma; C. min zhuo 命濁)
2. turbidity of views (S. dṛṣṭikaṣāya; T. lta ba'i snyigs ma; C. jian zhuo 見濁)
3. turbidity of afflictions (S. kleśakaṣāya; T. nyon mongs kyi snyigs ma; C. fannao zhuo 煩惱濁)
4. turbidity of sentient beings (S. sattvakaṣāya; T. sems can gyi snyigs ma; C. zhongsheng zhuo 衆生濁)
5. turbidity of the age (S. kalpakaṣāya; T. dus kyi snyigs ma; C. jie zhuo 劫濁)

five wheels/cakras. (S. cakra; T. 'khor lo; C. lun 輪)

1. great bliss wheel [at the forehead] (S. mahāsukhacakra; T. spyi bde chen gyi 'khor lo; C. dalelun/dinglun 大樂輪/頂輪)

2. enjoyment wheel [at the throat] (S. sambhogacakra; T. mgrin pa longs spyod kyi 'khor lo; C. baolun/shouyonglun/houlun 報輪/受用輪/喉輪)
3. dharma wheel [at the heart] (S. dharmacakra; T. snying ka chos kyi 'khor lo; C. falun/xinlun 法輪/心輪)
4. emanation wheel [at the navel] (S. nirmāṇacakra; T. lte ba sprul pa'i 'khor lo; C. huanhualun/qilun 幻化輪/臍輪)
5. bliss protecting wheel [at the perineum] (S. sukhapālacakra; T. bde skyong gi 'khor lo; C. hulelun 護樂輪)

five wisdoms/knowledges. (S. pañcajñāna; T. ye shes lnga; C. wuzhi 五智)

1. wisdom of the dharmadhātu (S. dharmadhātujñāna; T. chos dbyings kyi ye shes; C. fajie tixing zhi 法界體性智)
2. mirror-like wisdom/great perfect mirror wisdom (ādarśajñāna/mahādarśajñāna; T. me long gi ye shes; C. da yuanjing zhi 大圓境智)
3. wisdom of equality/knowledge of impartiality (S. samatājñāna; T. mnyam nyid kyi ye shes; C. pingdeng xing zhi 平等性智)
4. wisdom of specific knowledge (S. pratyavekṣaṇājñāna; T. so sor rtog pa'i ye shes; C. miao guancha zhi 妙觀察智)
5. wisdom of having accomplished what was to be done (S. kṛtyānuṣṭhānajñāna; T. bya ba grub pa'i ye shes; C. cheng suozuo zhi 成所作智)

SIXES

six aspects [of all phenomena in Huayan]. (C. liuxiang 六相)

1. generic/universal aspect (C. zongxiang 總相)
2. constituent/particular aspect (C. biexiang 別相)
3. identity/similarity aspect (C. tongxiang 同相)
4. differentiated aspect (C. yixiang 異相)
5. integrated/collective aspect (C. chengxiang 成相)
6. disintegration/instantiated aspect (C. huaixiang 壞相)

six causes. (S. ṣaḍhetu; T. rgyu drug; C. liu yin 六因)

1. efficient cause (S. kāraṇahetu; T. byed pa'i rgyu; C. nengzuo yin 能作因)
2. coexistent cause (S. sahabhūhetu; T. lhan cig 'byung ba'i rgyu; C. juyou yin 俱有因)
3. conjoined cause (S. saṃprayuktahetu; T. mtshungs ldan gyi rgyu; C. xiangying yin 相應因)
4. homogeneous cause (S. sabhāgahetu; T. skal mnyam gyi rgyu; C. tonglei yin 同類因)
5. all-pervasive cause (S. sarvatragahetu; T. kun gro'i rgyu; C. bianxing yin 遍行因)
6. retributive cause (S. vipākahetu; T. rnam smin gyi rgyu; C. yishu yin 異熟因)

six consciousnesses. (S. vijñāna; T. rnam par shes pa; C. shi 識)

1. visual consciousness (S. cakṣurvijñāna; T. mig gi rnam shes; C. yanshi 眼識)
2. auditory consciousness (S. śrotravijñāna; T. rna ba'i rnam shes; C. ershi 耳識)
3. olfactory consciousness (S. ghrāṇavijñāna; T. sna'i rnam shes; C. bishi 鼻識)
4. gustatory consciousness (S. jihvāvijñāna; T. lce'i rnam shes; C. sheshi 舌識)
5. tactile consciousness (S. kāyavijñāna; T. lus kyi rnam shes; C. shenshi 身識)
6. mental consciousness (S. manovijñāna; T. yid kyi rnam shes; C. yishi 意識)

six destinies. [of rebirth] (S. gati; T. 'gro ba; C. dao/qu 道/趣)

1. divinities (S. deva; T. lha; C. tian 天)
2. demigods (S. asura; T. lha ma yin; C. axiuluo 阿修羅)
3. humans (S. manuṣya; T. mi; C. ren 人)
4. animals (S. tiryak; T. dud 'gro; C. chusheng 畜生)
5. ghosts (S. preta; T. yi dwags; C. egui 餓鬼)
6. hell denizens (S. nāraka; T. dmyal ba; C. diyu 地獄)

six doctrines of Nāropa. (S. Nādapādadharma; T. Nā ro chos drug)

1. inner heat (S. caṇḍaliyoga; T. gtum mo)
2. illusory body (S. māyākāyayoga; T. sgyu lus)
3. dreams (S. svapanayoga; T. rmi lam)
4. clear light (S. prabhāsvarayoga; T. 'od gsal)
5. intermediate state (S. antarābhavayoga; T. bar do)
6. transference (S. saṃkrāntiyoga; T. 'pho ba)

six elements. (S. dhātu; T. khams; C. da/jie 大/界)

1. earth/solidity (S. pṛthivī; T. sa; C. di 地)
2. water/cohesion (S. āpas; T. chu; C. shui 水)
3. fire/warmth (S. tejas; T. me; C. huo 火)
4. wind/mobility (S. vāyu; T. rlung; C. feng 風)
5. space (S. ākāśa; T. nam mkha'; C. kong 空)
6. consciousness (S. vijñāna; T. rnam shes; C. shi 識)

six heavens of the sensuous realm. (S. kāmadhātu-deva; T. 'dod pa'i khams kyi lha; C. Yujie tian 欲界天)

1. four great kings (S. cāturmahārājika; T. rgyal chen rigs bzhi; C. siwang tian 四王天)
2. divinities of the thirty-three (S. trāyastriṃśa; T. sum cu rtsa gsum; C. daoli tian/sanshisan tian 忉利天/三十三天)
3. free from conflict (S. yāma; T. 'thab bral; C. yemo tian 夜摩天)
4. contented (S. tuṣita; T. dga' ldan; C. doushuai[tuo] tian 兜率[陀]天)
5. enjoyment of creation (S. nirmāṇarati; T. 'phrul dga'; C. huale tian 化樂天)

6. divinities who have power over the creations of others/divinities who partake of the pleasures created in other heavens (S. paranirmitavaśavartin; T. gzhan 'phrul dbang byed; C. tahua zizai tian 他化自在天)

six intermediate states. (S. antarābhava; T. bar do)

1. intermediate state of the present lifetime (S. jatyantarābhava; T. skye gnas rang bzhin gyi bar do)
2. intermediate state of absorption (S. samādhyantarābhava; T. bsam gtan gyi bar do)
3. intermediate state of dreams (S. svapanāntarābhava; T. rmi lam gyi bar do)
4. intermediate state of the moment of death (S. mumūrṣāntarābhava; T. 'chi kha'i bar do)
5. intermediate state of dharmatā (S. dharmatāntarābhava; T. chos nyid bar do)
6. intermediate state of existence (S. bhavāntarābhava; T. srid pa bar do)

six-limbed yoga [of the *Kālacakratantra*]. (S. ṣaḍaṅgayoga; T. sbyor drug)

1. retraction (T. sor sdud)
2. concentration (T. bsam gtan)
3. breath control (T. srog 'dzin)
4. retention of the complete deity (T. sku ril bur 'dzin pa)
5. recollection (T. rjes su dran pa)
6. contemplation (T. ting nge 'dzin)

six non-Buddhist teachers. (S. tīrthika-śāstṛ; T. mu stegs can gyi ston pa; C. waidaoshi 外道師)

1. Pūraṇa-Kāśyapa (T. 'Od srung rdzogs byed; C. Fulanna jiashe 富蘭那迦葉)
2. Maskarin Gośālīputra (T. Kun tu rgyu gnag lhas kyi bu; C. Moqieli jusheli/Moqieli jushelizi 末伽梨拘舍梨/末伽梨拘賒梨子)
3. Ajita Keśakambala (T. Mi pham sgra'i la ba can; C. Aqiduo chishe qinpoluo 阿耆多翅舍欽婆羅)
4. Kakuda Kātyāyana (T. Ka tya'i bu nog can; C. Jialuo jiutuo jiazhanyan 迦羅鳩馱迦旃延)
5. Nirgrantha-Jñātīputra (T. Gcer bu pa gnyen gyi bu; C. Nijiantuo Ruotizi 尼乾陀若提子/尼揵陀若提子)
6. Sañjaya Vairāṭīputra (T. Smra 'dod kyi bu mo'i bu yang dag rgyal ba can; C. Shanduye pilyu zhizi 珊闍耶毗羅胝子)

six ornaments of the world. (T. 'dzam gling rgyan drug)

1. Nāgārjuna (T. Klu sgrub)
2. Āryadeva (T. 'Phags pa lha)
3. Asaṅga (T. Thogs med)
4. Vasubandhu (T. Dbyig gnyen)
5. Dignāga (T. Phyogs glang)
6. Dharmakīrti (T. Chos kyi grags pa)

six perfections. (S. pāramitā; T. pha rol tu phyin pa; C. du/boluomi 度/波羅蜜)

1. giving/generosity (S. dāna, T. sbyin pa; C. bushi/tan 布施/檀)
2. morality (S. śīla; T. tshul khrims; C. chijie/shiluo 持戒/尸羅)
3. patience/forbearance (S. kṣānti; T. bzod pa; C. renru/chanti 忍辱/羼提)
4. effort/vigor (S. vīrya; T. brtson 'grus; C. jingjin/piliye 精進/毗梨耶)
5. meditative absorption (S. dhyāna; T. bsam gtan; C. jinglü/chan 靜慮/禪)
6. wisdom (S. prajñā; T. shes rab; C. zhihui/bore 智慧/般若)

six recollections. (S. anusmṛti; T. rjes su dran pa; C. nian 念)

1. recollection of the buddha (S. buddhānusmṛti; T. sangs rgyas rjes su dran pa; C. nianfo 念佛)
2. recollection of the dharma (S. dharmānusmṛti; T. chos rjes su dran pa; C. nianfa 念法)
3. recollection of the saṃgha (S. saṃghānusmṛti; T. dge 'dun rjes su dran pa; C. nianseng 念僧)
4. recollection of morality (S. śīlānusmṛti; T. tshul khrims rjes su dran pa; C. nianjie 念戒)
5. recollection of charity (S. tyāgānusmṛti; T. gtong ba rjes su dran pa; C. nianshi 念施)
6. recollection of the divinities (S. devatānusmṛti; T. lha rjes su dran pa; C. niantian 念天)

six sense faculties/sense bases. (S. indrya; T. dbang po; C. gen 根)

1. visual faculty (S. cakṣurindriya; T. mig gi dbang po; C. yangen 眼根)
2. auditory faculty (S. śrotrendriya; T. rna ba'i dbang po; C. ergen 耳根)
3. olfactory faculty (S. ghrāṇendriya; T. sna'i dbang po; C. bigen 鼻根)
4. gustatory faculty (S. jihvendriya; T. lce'i dbang po; C. shegen 舌根)
5. tactile faculty (S. kāyendriya; T. lus kyi dbang po; C. shengen 身根)
6. mental faculty (S. manendriya; T. yid kyi dbang po; C. yigen 意根)

six superknowledges/supramundane powers. (S. abhijñā; T. mngon par shes pa; C. shentong 神通)

1. psychic powers (S. ṛddhividhi; T. rdzu 'phrul gyi bya ba shes pa'i mngon shes; C. shenjing/shenzu [zhizheng] tong 神境/神足[智證]通)
2. "the divine eye"/clairvoyance (S. divyacakṣus; T. lha'i mig gi mngon shes; C. tianyan [zhizheng] tong 天眼[智證]通)

3. "the divine ear"/clairaudience (S. divyaśrotra; T. lha'i rna ba'i mngon shes; C. tian'er [zhizheng] tong 天耳[智證]通)
4. knowledge of other's minds (S. paracittājñāna; T. pha rol gyi sems shes pa'i mngon shes; C. taxin [zhizheng] tong 他心[智證]通)
5. knowledge of past lives (S. pūrvanivāsānusmṛti; T. sngon gyi gnas rje su dran pa'i mngon shes; C. suzhu suinian zhizheng tong/suming [zhizheng] tong 宿住隨念[智證]通/宿命[智證]通)
6. knowledge of the extinction of the contaminants (S. āsravakṣayajñāna; T. zag pa zad pa'i mngon shes; C. loujin [zhizheng] tong 漏盡[智證]通)

six tantras. (T. rgyud sde drug; C. dateluo 怛特羅)

1. kriyātantra (T. bya rgyud)
2. caryātantra (T. spyod rgyud)
3. yogatantra (T. rnal 'byor rgyud)
4. mahāyogatantra (T. rnal 'byor chen po'i rgyud)
5. anuyogatantra (T. rje su rnal 'byor rgyud)
6. atiyogatantra (T. shin tu rnal 'byor rgyud)

SEVENS

seven-branch service. (S. saptāṅgavidhi; T. yan lag bdun pa; C. qizhi zuofa 七支作法)

1. obeisance (S. vandanā; T. phyag 'tshal ba; C. lijing zhufo 禮敬諸佛)
2. offerings (S. pūjana; T. mchod pa phul ba; C. guangxiu gongyang 廣修供養)
3. confession of transgressions (S. pāpadeśanā; T. sdig pa bshags pa; C. chanhui yezhang 懺悔業障)
4. admiration/joy (S. anumodana; T. rjes su yi rang ba; C. suixi gongde 隨喜功德)
5. request [to turn the wheel of dharma] (S. saṃcodana; T. bskul ba; C. qing zhuan falun 請轉法輪)
6. request [to remain in the world] (S. prārthanā; T. gsol ba; C. qingfo zhushi 請佛住世)
7. dedication of merit (S. pariṇāmanā; T. bsngo ba; C. pujie huixiang 普皆廻向)

seven buddhas [of the past]. (S. saptatathāgata; T. sangs rgyas rabs bdun; C. qifo 七佛)

1. Vipaśyin (T. Rnam gzigs; C. Piposhi[fo] 毘婆尸[佛])
2. Śikhin (T. Gtsug gtor can; C. Shiqi[fo] 尸棄[佛])
3. Viśvabhū (T. Kun skyobs; C. Pishepo[fo] 毘舍婆[佛])
4. Krakucchanda (T. Log pa dang sel; C. Juliusun[fo] 拘留孫[佛])
5. Kanakamuni (T. Gser thub; C. Junahanmouni[fo] 拘那含牟尼[佛])
6. Kāśyapa (T. 'Od srung; C. Jiashe[fo] 迦葉[佛]
7. Śākyamuni (T. Shākya thub pa; C. Shijiamouni 釋迦牟尼)

seven factors of enlightenment/limbs of awakening. (S. bodhyaṅga; T. byang chub yan lag; C. juezhi/putifen 覺支/菩提分)

1. mindfulness (S. smṛti; T. dran pa; C. nian 念)
2. investigation of states (S. dharmapravicaya; T. chos rab tu rnam par 'byed pa; C. zefa 擇法)
3. perseverance/energy (S. vīrya; T. brtson 'grus; C. jingjin 精進)
4. rapture/bliss (S. prīti; T. dga' ba; C. xi 喜)
5. tranquility (S. praśrabdhi; T. shin yu sbyangs pa; C. qingan 輕安)
6. concentration (T. samādhi; T. ting nge 'dzin; C. ding 定)
7. equanimity (S. upekṣā; T. btang snyoms; C. she 捨)

seven jewels [of a cakravartin]. (S. ratna; T. rin chen; C. [lunwang]bao [輪王]寶)

1. wheel [chariot] (S. cakraratna; T. 'khor lo rin po che; C. lunbao 輪寶)
2. precious jewel (S. maṇiratna; T. nor bu rin po che; C. [moni]zhubao [末尼]珠寶)
3. queen (S. strīratna; T. btsun mo rin po che; C. nübao 女寶)
4. minister (S. pariṇāyakaratna; T. blon po rin po che; C. jushi bao/zhuzang bao 居士寶/主藏寶)
5. elephant (S. hastiratna; T. glang po rin po che; C. xiangbao 象寶)
6. general (S. senāpatiratna; T. dmag dpon rin po che; C. zhubingchen bao/jiangjun bao 主兵臣寶/將軍寶)
7. horse (S. aśvaratna; T. rta mchog rin po che; C. mabao 馬寶)

seven men who were tested. (T. sad mi mi bdun)

The first monks ordained in Tibet:

1. Sba khri gzigs, ordained as Śrīghoṣa (Dpal dbyangs)
2. Sba gsal snang, ordained as Jñānendra (Ye shes dbang po)
3. Sba khri bzher/bzhir
4. Ba gor Vairocana, or Vairocanarakṣita
5. Rma rin chen mchog
6. Rgyal ba mchog dbyangs
7. 'Khon Klu'i dbang po srung ba, or Nāgendrarakṣita

seven-point posture of Vairocana. (T. Rnam snang gi chos bdun)

1. legs in the vajra posture (T. rkang ba skyil krung)
2. hands in the positions of equipoise (T. lag pa mnyam bzhag)
3. spine straight (T. sgal tshigs drang por bsrang ba)
4. neck slightly bent (T. mgrin cung zad gug pa)
5. shoulders spread like the wings of a vulture (T. dpung ba rgod gshog ltar brkyangs pa)
6. gaze resting at the tip of the nose (T. mig sna rtser phabs pa)
7. tongue touching the palate (T. lce ya rkan la sbyar ba)

seven riches/prizes. (S. saptadhana; T. 'phags pa'i nor bdun; C. qi cai 七財)

1. faith/confidence (S. śraddhā; T. dad pa; C. xin 信)
2. vigor/effort (S. vīrya; T. brtson 'grus; C. jingjin 精進)
3. morality (S. śīla; T. tshul khrims; C. jie 戒)
4. shame and fear of blame/decency and modesty (S. hrī-apatrāpya; T. ngo tsha shes pa khrel yod pa; C. cankui 慚愧)
5. learning (S. śruta; T. thos pa; C. wen 聞)
6. relinquishment/renunciation (S. prahāṇa/tyāga; T. spang ba/gtong ba; C. duan/shi 斷/施)
7. wisdom (S. prajñā; T. shes rab; C. hui 慧)

EIGHTS

eight classes of non-human beings. (S. aṣṭasenā; T. lha srin sde brgyad/mi ma yin; C. tianlong babu 天龍八部)

1. divinities (S. deva; T. lha; C. tian 天)
2. serpents (S. nāga; T. klu; C. long 龍)
3. demons (S. yakṣa; T. gnod sbyin; C. yecha 夜叉)
4. demigods (S. asura; T. lha ma yin; C. axiuluo 阿修羅)
5. divine musicians (S. gandharva; T. dri za; C. gantapo 乾闥婆)
6. mythical birds (S. garuḍa; T. khyung, mkha' lding; C. jialouluo 迦樓羅)
7. half-horse, half-human beings (S. kiṃnara; T. mi 'am ci; C. jinnaluo 緊那羅)
8. great snakes (S. mahorāga; T. lto 'phye chen po; C. mohouluojia 摩睺羅迦)

eight close sons. See EIGHT GREAT BODHISATTVAS.

eight common accomplishments. (S. sādhāraṇasiddhi; T. thun mong gi dngos grub; C. gongtong chenjiu 共同成就)

1. medicinal pills (S. gulikā; T. ril bu; C. miaodan 妙丹)
2. eye medicine (S. añjana; T. mig sman; C. yanyao 眼藥)
3. swift-footedness (S. jaṅghākara; T. rkang mgyogs; C. tuzu 塗足)
4. going beneath the earth (S. pātāla; T. sa 'og; C. tuxing 土行)
5. enchanted sword (S. khaḍga; T. ral gri; C. baojian 寶劍)
6. traveling through the sky (S. khecara; T. rnam mkha' phur ba; C. kongxing 空行)
7. invisibility (S. antardhāna; T. mi snang ba; C. yinxing 隱形)
8. immortality (S. amṛta; T. 'chi med; C. busi 不死)

eight consciousnesses. (S. vijñāna; T. rnam shes; C. shi 識)

1. visual consciousness (S. cakṣurvijñāna; T. mig gi rnam shes; C. yanshi 眼識)
2. auditory consciousness (S. śrotravijñāna; T. rna ba'i rnam shes; C. ershi 耳識)
3. olfactory consciousness (S. ghrāṇavijñāna; T. sna'i rnam shes; C. bishi 鼻識)
4. gustatory consciousness (S. jihvāvijñāna; T. lce'i rnam shes; C. sheshi 舌識)
5. tactile consciousness (S. kāyavijñāna; T. lus kyi rnam shes; C. shenshi 身識)
6. mental consciousness (S. manovijñāna; T. yid kyi rnam shes; C. yishi 意識)
7. afflicted mental consciousness (S. kliṣṭamanas; T. nyon yid; C. mona shi 末那識)
8. storehouse consciousness (S. ālayavijñāna; T. kun gzhi'i rnam shes; C. alaiye shi 阿賴耶識)

eight episodes in the life of a buddha. (S. aṣṭabuddhakārya, T. sangs rgyas kyi mdzad pa brgyad; C. baxiang 八相)

1. descending from tuṣita heaven (T. dga' ldan gyi gnas nas 'pho ba; C. doushuai jiangshi 兜率降世)
2. entry into the womb (T. lhums su zhugs pa; C. rutai 入胎)
3. birth (T. sku bltams pa; C. chutai 出胎)
4. renouncing the world (T. rab tu byung ba; C. chujia 出家)
5. subjugating Māra (T. bdud btul ba; C. xiangmo 降魔)
6. attaining enlightenment (T. mngon par rdzogs par sangs rgyas pa; C. chengdao 成道)
7. turning the wheel of the dharma (dharmacakrapravartana) (T. chos kyi 'khor lo bskor ba; C. zhuan falun 轉法輪)
8. passing into parinirvāṇa (T. mya ngan las 'das pa; C. ru niepan 入涅槃)

eightfold noble path. (S. āryāṣṭāṅgamārga; T. lam yan lag brgyad; C. bazhengdao/bashengdao 八正道/八聖道)

1. right views (S. samyagdṛṣṭi; T. yang dag pa'i lta ba; C. zhengjian 正見)
2. right intention (S. samyaksaṃkalpa; T. yang dag pa'i rtog pa; C. zhengzhi/zhengsiwei 正志/正思維)
3. right speech (S. samyagvāk; T. yang dag pa'i ngag; C. zhengyu 正語)
4. right action (S. samyakkarmānta; T. yang dag pa'i las kyi mtha'; C. zhengye 正業)
5. right livelihood (S. samyagājīva; T. yang dag pa'i 'tsho ba; C. zhengming 正命)
6. right effort (S. samyagvyāyāma; T. yang dag pa'i rtsol ba; C. zhengqin/zheng jingjin 正勤/正精進)
7. right mindfulness (S. samyaksmṛti; T. yang dag pa'i dran pa; C. zhengnian 正念)
8. right concentration (S. samyaksamādhi; T. yang dag pa'i ting nge 'dzin; C. zhengding 正定)

eight great bodhisattvas. (S. mahā-upaputra; T. nye sras; C. bada suifo dizi/bada fozi 八大隨佛弟子/八大佛子)

1. Mañjuśrī (T. 'Jam dpal; C. Wenshu pusa 文殊菩薩)
2. Vajrapāṇi (T. Phyag na rdo rje; C. Jingan shou pusa 金剛手菩薩)

3. Avalokiteśvara (T. Spyan ras gzigs dbang phyug; C. Guanyin pusa 觀音菩薩)
4. Kṣitigarbha (T. Sa'i snying po; C. Dizang pusa 地藏菩薩)
5. Sarvanīvaraṇaviṣkambhin (T. Sgrib pa thams cad rnam par sel ba; C. Chu gaizhang pusa 除蓋障菩薩)
6. Ākāśagarbha (T. Nam mkha'i snying po; C. Xukongzang pusa 虛空藏菩薩)
7. Maitreya (T. Byams pa; C. Mile pusa 彌勒菩薩)
8. Samantabhadra (T. Kun tu bzang po; C. Puxian pusa 普賢菩薩)

eight great chariots of the practice lineage. (T. sgrub brgyud shing rta chen po brgyad)

1. ancient translation tradition (T. sna' 'gyur rnying ma)
2. tradition of precepts and instructions (T. bka' gdams)
3. tradition of the path and result (T. lam 'bras)
4. tradition of the transmitted precepts of Marpa (T. Mar pa bka' brgyud)
5. tradition of the transmitted precepts of the Shang Valley (T. Shangs pa bka' brgyud)
6. traditions of pacification and severence (T. zhi byed gcod)
7. tradition of vajrayoga (T. rdo rje'i rnal 'byor)
8. propitiation and attainment of the three adamantine states (T. rdo rje gsum gyi bsnyen sgrub)

eight great charnel grounds. (S. mahāśmaśāna, śmaśāna; T. dur khrod chen po; C. da shilin/ da hanlin 大尸林/大寒林)

1. most fierce (S. caṇḍogrā; T. gtum drag; C. baonue hanlin 暴虐寒林)
2. dense thicket (S. gahvara; T. tshang tshing 'khrigs pa; C. micong hanlin 密叢寒林)
3. blazing vajra (S. vajrajvala; T. rdo rje bar pa; C. jingangyan hanlin 金剛焰寒林)
4. endowed with skeletons (S. karaṅkin; T. keng rus can; C. gusuo hanlin 骨鎖寒林)
5. cool grove (S. śītavana; T. bsil bu tshal; C. hanlin 寒林)
6. black darkness (S. ghorāndhakāra; T. mun pa nag po; C. youan hanlin 幽暗寒林)
7. resonant with "kilikili" (S. kilikilārava; T. ki li ki lir sgra sgrog pa; C. jiujiu hanlin 啾啾寒林)
8. cries of "ha ha" (S. aṭṭahāsa; T. ha ha rgod pa; C. kuangxiao hanlin 狂笑寒林)

eight great fears. (S. mahābhaya; T. 'jigs pa chen po; C. nan 難)

1. lions (S. siṃha; T. seng ge; C. shi nan 獅難)
2. elephants (S. hastināga; T. glang po che; C. xiang nan 象難)
3. fire (S. agni; T. me; C. huo nan 火難)
4. snakes (S. sarpa; T. sbrul ; C. duchong nan 毒蟲難)
5. thieves (S. taskara; T. rkun po; C. zei nan 賊難)
6. violent waters (S. jalārṇava; T. chu bo; C. shui nan 水難)
7. imprisonment (S. nigaḍa; T. lcags sgrog; C. lao[yu] nan 牢[獄]難)
8. demons (S. piśāca; T. sha za; C. feiren nan/mo nan 非人難/魔難)

eight liberations. (S. vimokṣa; T. rnam thar ; C. jietuo/beishe 解脫/背捨)

1. embodied, one sees forms [of the realm of subtle materiality] (S. rūpī rūpāṇi paśyati; T. gzugs can gzugs rnams la lta ba'i rnam thar; C. neiyou sexiang guan zhuse 內有色想觀諸色)
2. without perceiving inward form [viz., one's own physical body], one sees outward forms [of the realm of subtle materiality] (S. adhyātmarūpasamjñī bahirdhā rūpāṇi paśyati; T. nang gzugs med par 'du shes las phyi rol gyi gzugs rnams la lta ba'i rnam thar; C. nei wusexiang guan waise 內無色想觀外色)
3. one develops determination by contemplating the beautiful/one becomes resolved on what is lovely (S. śubham ity evādhimukto bhavati; T. sdug pa'i rnam thar; C. jing jietuo shenzuozheng juzu zhu 淨解脫身作證具足住)
4. the sphere of infinite space (S. ākāśānantyāyatana; T. nam mkha' mtha' yas skye mched kyi rnam thar; C. ru wubiankong kong wubianchu juzu zhu/kong wubianchu juzu zhu 入無邊空空無邊處具足住/空無邊處具足住)
5. the sphere of infinite consciousness (S. vijñānāntyāyatana; T. rnam shes mtha' yas skye mched kyi rnam thar; C. ru wubian shi shiwubian chu juzu zhu/shi wubianchu juzu zhu 入無邊識識無邊處具足住/識無邊處具足住)
6. the sphere of nothingness (S. ākiñcanyāyatana; T. ci yang med pa'i skye mched kyi rnam thar; C. ru wusuoyou wu suoyouchu juzu zhu/wusuoyouchu juzu zhu 入無所有無所有處具足住/無所有處具足住)
7. the sphere of neither perception nor nonperception (S. naivasaṃjñānāsaṃjñāyatana; T. 'du shes med 'du shes med min skye mched kyi rnam thar; C. ru feixiang feifeixiangchu juzu zhu/feixiang feifeixiangchu juzu zhu 入非想非非想處具足住/非想非非想處具足住)
8. the cessation of perception and sensation (S. samjñāvedayitanirodha; T. 'du shes dang tshor ba 'gog pa'i rnam thar; C. ru shouxiangmie shenzuozheng juzu zhu/miexiangshouding juzu zhu 入受想滅身作證具足住/滅想受定具足住)

eight manifestations of the Guru [Rin po che]. (T. guru mtshan brgyad)

1. Padmākara
2. Padmasambhava
3. Blo ldan mchog sred
4. Shākya Seng ge
5. Seng ge sgra grogs
6. Padma rgyal po
7. Rdo rje gro lod
8. Nyi ma 'od zer

eight noble persons. (S. aṣṭāryapudgala; T. 'phags pa'i gang zag brgyad; C. baxiansheng 八賢聖)

1. candidate for the fruit of stream-enterer (S. srotaāpanna-phalapratipannaka; T. rgyun du zhugs pa'i 'bras bu la zhugs pa; C. yuliu xiang 預流向)
2. recipient of the fruit of stream-enterer (S. srotaāpanna-phalastha; T. rgyun du zhugs pa'i 'bras bu la gnas pa; C. zheng yuliu guo 證預流果)
3. candidate for the fruit of once-returner (S. sakṛdāgāmi-phalapratipannaka; T. phyir 'ong gi 'bras bu la zhugs pa; C. yilai xiang 一來向)
4. recipient of the fruit of once-returner (S. sakṛdāgāmi-phalastha; T. phyir 'ong gi 'bras bu la gnas pa; C. zheng yilai guo 證一來果)
5. candidate for the fruit of non-returner (S. anāgāmiphala-pratipannaka; T. phyir mi 'ong gi 'bras bu la zhugs pa; C. buhuan xiang 不還向)
6. recipient of the fruit of non-returner (S. anāgāmi-phalastha; T. phyir mi 'ong gi 'bras bu la gnas pa; C. zheng buhuan guo 證不還果)
7. candidate for worthy one (S. arhatphalapratipannaka; T. dgra bcom pa'i 'bras bu la zhugs pa; C. aluohan xiang 阿羅漢向)
8. worthy one (S. arhat; T. dgra bcom pa; C. zheng aluohan guo 證阿羅漢果)

eight opportune births. (S. kṣaṇa; T. dal ba; C. yuanli banan/yuanli ba wuxia 遠離八難/遠離八無暇)

Freedom from rebirth:

1. as a denizen of the hells (S. nāraka; T. dmyal ba; C. zai diyu nan 在地獄難)
2. as a ghost (S. preta; T. yi dwags; C. zai egui nan 在餓鬼難)
3. as an animal (S. tiryak; T. dud 'gro; C. zai chusheng nan 在畜生難)
4. as a long-lived divinity (S. dīrghāyurdeva; T. lha tshe ring bo; C. zai changshou tian nan 在長壽天難)
5. in a border region (S. pratyantajanapada; mtha' 'khob kyi mi; C. zai biandi zhi yudanyue nan 在邊地之鬱單越難)
6. with impaired sense faculties (S. indriyavaikalya; T. dbang po ma tshang ba; C. manglong yinya nan 盲聾瘖瘂難)
7. holding erroneous views (S. mithyādarśana; T. log par lta ba; C. shizhi congbian nan 世智聰辯難)
8. in a land where a tathāgata has not appeared (S. tathāgatānutpāda; T. de bzhin gshegs pa ma byung ba; C. shengzai foqian fohou nan 生在佛前佛後難)

eight precepts. [of the laity on upoṣadha days] (S. aṣṭāṅgasamanvāgatam upavāsam/poṣadhaśīla; T. bsnyen gnas yan lag brgyad; C. baguan zhai jie/ba zhaijie/ba guan zhai/ba jiezhai 八關齋戒/八齋戒/八關齋/八戒齋)

1. not to kill living beings (S. prāṇātipāta-virati; T. srog gcod pa spong ba; C. li shasheng 離殺生)
2. not to steal (S. adattādāna-virati; T. ma byin par len pa spong ba; C. li buyu qu 離不與取)
3. not to engage to sexual activity (S. abrahmacarya-virati; T. mi tshangs par spyod pa spong pa; C. li feifanxing 離非梵行)
4. not to lie [about spiritual attainments] (S. mṛṣāvāda-virati; T. rdzun du smra ba spong ba; C. li xukuangyu 離虛誑語)
5. not to use intoxicants (S. madyapāna-virati; T. myos par 'gyur ba'i btung ba spong pa; C. li yin zhujiu 離飲諸酒)
6. not to eat at improper times [viz. after twelve noon] (S. vikālabhojana-virati; T. dus ma yin pa'i kha zas spong pa; C. li feishi shi 離非時食)
7. not to use perfumes, garlands, or cosmetics and not to sing, dance, play music, or attend entertainments (S. gandhamālyavilepanavarṇakadhāraṇa-virati [nṛtyagīta-virati]; T. spos dang kha dog dang byug pa dang phreng ba thogs pa spong pa [glu gar spong pa]; C. li tushi xingman[li gewu guanting] 離塗飾香鬘[離歌舞觀聽])
8. not to sleep on high and luxurious beds (S. uccaśayana-mahāśayana-virati; T. khri stan mthon po dang khri stan chen po spong pa; C. li yanzuo gaoguang yanli chuangzuo 離眼坐高廣嚴麗牀座)

eight similes of illusion. (S. aṣṭamāyopamā; T. sgyu ma'i dpe brgyad; C. ruhuan yu 如幻喻)

Dharmas lack inherent nature (svabhāva), because they are like a:

1. dream (S. svapna; T. rmi lam; C. meng 夢)
2. illusion (S. māyā; T. sgyu ma; C. huanjing 幻景)
3. optical illusion (S. pratibhāsa; T. mig yor; C. guangying 光影)
4. mirage (S. marīci; T. smig rgyu; C. yangyan 陽燄)
5. reflection of the moon in water (S. udakacandra; T. chu zla; C. shui zhong yue 水中月)
6. echo (S. pratiśabda; T. brag cha; C. yuxiang 谷響)
7. city of the gandharvas (S. gandharvanagara; T. dri za'i grong khyer; C. xunxiang cheng/gantapo cheng 尋香城/乾闥婆城)
8. phantom (S. nirmita; T. sprul pa; C. huashen 化身)

eight stūpas. (S. stūpa; T. mchod rten; C. dalingta 大靈塔)

1. heap of lotuses stūpa (T. pad spungs mchod rten), commemorating the Buddha's birth at Lumbinī
2. enlightenment stūpa (T. byang chub mchod rten) at Bodhgayā
3. many auspicious doors stūpa (bkra shis sgo mang mchod rten), commemorating the first turning of the wheel of the dharma at Ṛṣipatana/Sārnāth

4. display of miracles stūpa (T. cho 'phrul mchod rten), commemorating the Buddha's display of the paired miracles at Śrāvastī
5. divine descent stūpa (T. lha babs mchod rten), commemorating the Buddha's descent from the trāyastriṃśa heaven at Saṃkāśya.
6. settling of disputes stūpa (T. dbyen bsdums mchod rten), commemorating the Buddha's healing of the schism caused by Devadatta
7. victory stūpa (T. rnam rgyal mchod rten), commemorating the Buddha's extension of his life by three months at the Cāpālacaitya
8. nirvāṇa stūpa (T. myang 'das mchod rten), commemorating the Buddha's passage into parinirvāṇa at Kuśinagarī.

eight sufferings. (S. aṣṭaduḥkha; T. sdug bsngal rgyad; C. baku 八苦)

1. birth (S. jāti; T. skye ba; C. shengku 生苦)
2. aging (S. jarā; T. rga ba; C. laoku 老苦)
3. sickness (S. vyādhi; T. na ba; C. bingku 病苦)
4. death (S. maraṇa; T. 'chi ba; C. siku 死苦)
5. separation from what is dear (S. priyaviprayoga; T. sdug pa dang bral ba; C. ai bieli ku 愛別離苦)
6. encountering what is not dear (S. apriyasaṃprayoga; T. mi sdug pa dang phrad pa; C. yuanzeng hui ku 怨憎會苦)
7. not finding what one seeks (S. yad apīcchayā paryeṣamāṇo na labhate; T. 'dod pa btshal gyang ma rnyed pa; C. qiu bude ku 求不得苦)
8. the five aggregates that are objects of clinging (S. pañcopādānaskandha; T. nye bar len pa'i phung po; C. wu quyun ku 五取蘊苦)

eight vidyādharas. (T. rig 'dzin brgyad)

1. Vimalamitra
2. Hūṃkara
3. Mañjuśrīmitra
4. Nāgārjuna
5. Padmasambhava
6. Dhanasaṃskṛta
7. Rambuguhya-Devacandra
8. Śāntigarbha

eight worldly concerns. (S. lokadharma; T. 'jig rten chos; C. [shi]feng [世]風)

1. gain (S. lābha; T. rnyed pa; C. li 利)
2. loss (S. alābha; T. ma rnyed pa; C. shuai 衰)
3. pleasure (S. sukha; T. bde ba; C. le 樂)
4. pain (S. duḥkha; T. sdug bsnyal; C. ku 苦)
5. fame (S. yaśas; T. snyan grags; C. yu 譽)
6. disgrace (S. ayaśas; T. ma grags pa; C. hui 毀)
7. praise (S. praśaṃsā; T. bstod pa; C. cheng 稱)
8. blame (S. nindā; T. smad pa; C. ji 譏)

NINES

nine attainments of successive stations of equipoise. (S. anupūrvavihārasamāpatti; T. mthar gyis gnas pa'i snyoms par 'jug pa; C. ru jiujing chan/cidi ding 入究竟禪/次第定)

(1–4) the four absorptions of the realm of subtle materiality (S. dhyāna/rūpāvacaradhyāna; T. bsam gtan bzhi; C. sichan/ding 四禪/定)
(5–8) the four absorptions of the immaterial realm (S. ārūpyāvacaradhyāna; T. gzhugs med bzhi; C. si wuse ding 四無色定)
(9) attainment of the cessation of perception and sensation/equipoise of cessation (S. saṃjñāvedayitanirodha/alt. nirodhasamāpatti; T. 'gog pa'i snyoms par 'jug pa; C. xiangshou mie[jin] ding/ shouxiang mie[jin] ding 想受滅[盡]定/受想滅[盡]定)

nine categories of scripture. (BHS. navāṅga[pravacana]; T. gsung rab yan lag dgu; C. jiu bu jing 九部經)

1. discourses (S. sūtra; T. mdo; C. qijing/changhang 契經/長行)
2. aphorisms in mixed prose and verse (S. geya; T. dbyangs bsnyad; C. yingsong 應頌)
3. prophetic teachings (S. vyākaraṇa; T. lung bstan; C. jibie/shouji 記別/授記)
4. verses (S. gāthā; T. tshig bcad; C. fengsong/guqi 諷頌/孤起)
5. utterances/meaningful expressions (S. udāna; T. ched du brjod pa; C. zishuo 自說)
6. framing stories (S. nidāna/itivṛttaka; T. gleng gzhi; C. yinyuan 因緣)
7. expanded teachings (S. vaipulya; T. shin tu rgyas pa; C. fangguang 方廣)
8. tales of previous lives (S. jātaka; T. skyes rabs; C. bensheng 本生)
9. marvelous events (S. adbhutadharma; T. rmad du byung ba; C. xifa 希法)

nine foulness contemplations/nine contemplations on the impure. (S. aśubhabhāvanā/aśubhasaṃjñā; T. mi sdug pa'i 'du shes; C. bujing guan/bujing xiang 不淨觀/不淨想)

Contemplation of:

1. a swollen corpse [bloating and tumefaction] (S. vyādhmātakasaṃjñā; T. rnam par bam pa'i 'du shes; C. zhangxiang 脹想)
2. a worm-eaten, rotting corpse (S. vipadumakasaṃjñā; T. rnam par 'bus gzhig pa'i 'dus shes; C. huaixiang 壞想)
3. a festering corpse [discharging pus] (S. vipūyakasaṃjñā; T. rnam par rnags pa'i 'dus shes ; C. nonglan xiang 膿爛想)
4. a bloody corpse (S. vilohitakasaṃjñā; T. rnam par dmar ba'i 'du shes; C. xietu xiang 血塗想)

5. a blueish corpse [mottled discoloration] (S. vinīlaka-saṃjñā; T. rnam par bsngos pa'i 'du shes; C. qingyu xiang 青瘀想)
6. a corpse being devoured by worms and maggots (S. vikhāditakasaṃjñā; T. rnam par zos ba'i 'du shes; C. danxiang 噉想)
7. a scattered corpse [dissolution of flesh and exposure of bones and sinews] (S. vikṣiptakasaṃjñā; T. rnam par mthor ba'i 'du shes; C. sanxiang 散想)
8. a burned corpse [cremated remains] (S. vidagdhakasaṃjñā; T. rnam par tshig pa'i 'du shes; C. shaoxiang 燒想)
9. a skeleton (S. asthisaṃjñā; T. rus gong gi 'du shes; C. guxiang 骨想)

nine similes [for the presence of the tathāgatagarbha]. (S. navodāharaṇāni; T. dpe dgu; C. jiu yu 九喻)

The tathāgatagarbha is present:

1. like a statue of the buddha in a soiled lotus (S. buddhaḥ kupadme; T. sangs rgyas pad ngan; C. weihua zhong zhufo 萎華中諸佛)
2. like honey in beehives (S. madhu makṣikāsu; T. sbrang rtsi sbrang ma la; C. zhongfeng zhong meimi 衆蜂中美蜜)
3. like kernels in husks (S. tuṣeṣu sārāṇi; T. sbun pa snying po; C. pi deng zhong shi 皮等中實)
4. like gold in filth (S. aśucau suvarṇam; T. mi gtsang nang na gser; C. fenhui zhong zhenjin 糞穢中真金)
5. like treasure under the ground (S. nidhiḥ kṣitau; T. sa la gter; C. di zhong zhenbao zang 地中珍寶藏)
6. like the stages beginning with the sprout in a tiny seed (S. alpaphale 'ṅkurādi; T. myug sogs 'bras chung; C. zhu guozi zhong ya 諸果子中芽)
7. like a conqueror's body in sodden clothes (S. praklinna-vastreṣu jinātmabhāvaḥ; T. gos hrul nang na rgyal ba'i sku; C. xiugu bihuai yi changuo zhenjin xiang 朽故弊壞衣纏裹真金像)
8. like royalty in the womb of a common woman (S. jaghanyanārījaṭhare nṛpatvaṃ; T. bud med ngan ma'i lto na mi bdag; C. pinjian choulou nü huai zhuanlun shengwang 貧賤醜陋女懷轉輪聖王)
9. like a precious image buried in the mud (S. mṛtsu ca ratnabimbam; T. sa la rin chen gzugs; C. jiaohei nimo zhong youshang miaobao xiang 焦黑泥模中有上妙寶像)

nine vehicles. (S. yāna; T. theg pa dgu)

1. śrāvakayāna (T. nyan thos kyi theg pa)
2. pratyekabuddhayāna (T. rang rgyal gyi theg pa)
3. bodhisattvayāna (T. byang sems kyi theg pa)
4. kriyātantra (T. bya rgyud kyi theg pa)
5. caryātantra (T. spyod pa'i rgyud kyi theg pa)
6. yogatantra (T. rnal 'byor gyi rgyud kyi theg pa)
7. mahāyogatantra (T. rnal 'byor chen po'i rgyud kyi theg pa)
8. anuyogatantra (T. rjes su rnal 'byor gyi rgyud kyi theg pa)
9. atiyogatantra (T. shin tu rnal 'byor gyi rgyud kyi theg pa)

TENS

ten dharma activities. (S. dharmacarya; T. chos spyod; C. faxing 法行)

1. writing (S. lekhana; T. yi ge 'bri pa; C. shuxie 書寫)
2. worship (S. pūjā; T. mchod pa; C. gongyang 供養)
3. charity (S. dāna; T. sbyin pa; C. shita 施他)
4. listening/learning (S. śravaṇa; T. nyan ba; C. tingwen 聽聞)
5. reading (S. vācana; T. klog pa; C. pidu 披讀)
6. comprehending (S. udgrahaṇa; T. 'dzin pa; C. shouchi 受持)
7. instructing (S. prakāśana; T. rab tu ston pa; C. kaiyan 開演)
8. reciting (S. svādhyāya; T. kha 'don byed pa; C. fengsong 諷誦)
9. contemplation (S. cintana; T. sems pa; C. siwei 思惟)
10. meditation (S. bhāvanā; T. sgom pa; C. xiuxi 修習)

ten directions. (S. daśadiś; T. phyogs bcu; C. shifang 十方)

1. east (S. pūrvā; T. shar; C. dong 東)
2. southeast (S. pūrvadakṣiṇā; T. shar lho; C. dongnan 東南)
3. south (S. dakṣiṇā; T. lho; C. nan 南)
4. southwest (S. dakṣiṇapaścimā; T. lho nub; C. xinan 西南)
5. west (S. paścimaḥ; T. nub; C. xi 西)
6. northwest (S. paścimōttarā; T. nub byang; C. xibei 西北)
7. north (S. uttaraḥ; T. byang; C. bei 北)
8. northeast (S. uttarapūrvā; T. byang shar; C. dongbei 東北)
9. zenith (S. ūrdhvam; T. bla ma; C. shang 上)
10. nadir (S. adhaḥ; T. 'og; C. xia 下)

ten endowments. (T. 'byor ba bcu)

One has taken rebirth:

1. as a human (T. mi)
2. in a central land (T. yul dbus)
3. with complete sense faculties (T. dbang po tshang ba)
4. not engaging in mistaken actions (T. las kyi mtha' ma log pa)
5. having faith (T. gnas la dad pa)

and when:

1. a buddha has appeared in the world (T. sangs rgyas 'jig rten du byon pa)
2. he has taught the dharma (T. des dam pa'i chos ston pa)
3. his teaching remains (T. bstan pa gnas pa)

4. it has followers (T. de'i rjes su 'jug pa)
5. they kindly act on behalf of others (T. gzhan phyir snying brtse ba)

ten fetters. (S. saṃyojana; T. kun tu sbyor ba; C. jie 結)

1. view of a perduring self (S. satkāyadṛṣṭi; T. 'jig lta; C. shenjian 身見)
2. attachment to rules and rituals (S. śīlavrataparāmarśa; T. tshul khrims brtul zhugs mchog 'dzin; C. jiejin qu 戒禁取)
3. skeptical doubt (S. vicikitsā; T. the tshom; C. yi 疑)
4. craving for sensual gratification (S. kāmacchanda; T. 'dod pa'i 'dun pa; C. tanyu 貪欲)
5. malice (S. vyāpāda; T. zhe sdang; C. chenhui 瞋恚)
6. craving for the realm of subtle materiality (S. rūparāga; T. gzugs kyi sred pa; C. seai 色愛)
7. craving for the immaterial realm (S. ārūpyarāga; T. gzugs med pa na spyod pa'i sred pa; C. wuseai 無色愛)
8. conceit (S. māna; T. nga rgyal; C. man 慢)
9. delusion (S. moha; gti mug; C. wuming 無明)
10. restlessness (S. auddhatya; T. rgod pa; C. diaoju 掉舉)

ten fundamental afflictions. (S. mūlakleśa; T. rtsa nyon; C. shi/huo/genben fannao 使/惑/根本煩惱)

1. sensuality/greed (S. rāga; T. 'dod chags; C. tan 貪)
2. anger (S. pratigha; T. khong khro; C. chen 瞋)
3. conceit (S. māna; T. nga rgyal; C. man 慢)
4. ignorance (S. avidyā; T. ma rig pa; C. wuming 無明)
5. skeptical doubt (S. vicikitsā; T. the tshom; C. yi 疑)
6. view of a perduring self (S. satkāyadṛṣṭi; T. 'jig lta; C. shenjian 身見)
7. extreme views (S. antagrāhadṛṣṭi; T. mthar lta; C. bianjian 邊見)
8. attachment to one's own point of view (S. dṛṣṭiparāmarśa; T. lta ba mchog 'dzin; C. jianqu jian 見取見)
9. wrong views (S. mithyādṛṣṭi; T. log lta; C. xiejian 邪見)

ten masteries. (S. vaśitā; T. dbang; C. zizai 自在)

1. lifespan (S. āyuḥ; T. tshe; C. ming zizai 命自在)
2. actions (S. karman; T. las; C. ye zizai 業自在)
3. necessities of life (S. pariṣkāra; T. yo byad; C. cai zizai 財自在)
4. determination (S. adhimukti; T. mos pa; C. shengjie zizai 勝解自在)
5. aspiration (S. praṇidhāna; T. smon lam; C. yuan zizai 願自在)
6. psychic powers (S. ṛddhi; T. rdzu 'phrul; C. shentong zizai 神通自在)
7. birth (S. upapatti; T. skye ba; C. sheng zizai 生自在)
8. phenomena/teachings (S. dharma; T. chos; C. fa zizai 法自在)
9. mind (S. citta; T. sems; C. xin zizai 心自在)
10. wisdom (S. jñāna; T. ye shes; C. zhi zizai 智自在)

ten meanings [of unimpeded interpenetration in the Huayan school]. (C. Huayan shiyi 華嚴十義)

1. teachings and their meanings/significance (C. jiaoyi 教義)
2. principle and phenomena (C. lishi 理事)
3. understanding and implementation (C. jiexing 解行)
4. causes and fruitions (C. yinguo 因果)
5. the "persons" who expound the dharma and the "dharma" they expound (C. renfa 人法)
6. the "distinction" and "unity" between discrete things (C. fenqi jingwei 分齊境位)
7. the "teacher," his "disciple," the "dharma" that is imparted, and the "wisdom" that the disciple develops (C. shidi fazhi 師弟法智)
8. the "dominant" and "subordinate," "primary" and "secondary" relations that pertain between things (C. zhuban yizheng 主伴依正)
9. the enlightened sages who "respond" to the spiritual maturity of their audiences and the audiences whose spiritual maturity "solicited" the appearance of the enlightened sages in the world (C. suishenggen yushixian 遂生根欲示現)
10. "autonomy" with regard to spiritual "obstacles" and their "antidotes," the "essence" of phenomena and their "functions" (C. nishun tiyong zizai 逆順體用自在).

ten perfections. (S. pāramitā; T. pha rol tu phyin pa; C. du/boluomi 度/波羅蜜)

1. perfection of generosity/giving (S. dānapāramitā; T. sbyin pa'i pha rol tu phyin pa; C. [bu]shi [布]施)
2. perfection of morality (S. śīlapāramitā; T. tshul khrims kyi pha rol tu phyin pa; C. [chi]jie [持]戒)
3. perfection of patience/forbearance (S. kṣāntipāramitā; T. bzod pa'i pha rol tu phyin pa; C. ren[ru] 忍[辱])
4. perfection of effort/vigor (S. vīryapāramitā; T. brtson 'grus kyi pha rol tu phyin pa; C. jinjing 精進)
5. perfection of meditative absorption (S. dhyānapāramitā; T. bsam gtan gyi pha rol tu phyin pa; C. chan[ding] 禪[定])
6. perfection of wisdom (S. prajñāpāramitā; T. shes rab kyi pha rol tu phyin pa; C. bore 般若)
7. perfection of skillful means (S. upāyapāramitā; T. thabs kyi pha rol tu phyin pa; C. fangbian 方便)
8. perfection of aspiration (S. praṇidhānapāramitā; T. smon lam gyi pha rol tu phyin pa; C. yuan 願)
9. perfection of powers (S. balapāramitā; T. stobs kyi pha rol tu phyin pa; C. li 力)
10. perfection of knowledge (S. jñānapāramitā; T. ye shes kyi pha rol tu phyin pa; C. zhi 智)

ten powers of a bodhisattva. (S. bala; T. byang chub sems dpa'i stobs; C. pusa li 菩薩力)

1. power of reflection (S. āśayabala; T. bsam pa'i stobs; C. shenxin li/zhixin li 深心力/直心力)

2. power of superior aspiration (S. adhyāśayabala; T. lhag bsam pa'i stobs; C. zengshang shenxin li 增上深心力)
3. power of application (S. prayogabala; T. sbyor ba'i stobs; C. fangbian li 方便力)
4. power of wisdom (S. prajñābala/jñānabala; T. shes rab/ye shes stobs; C. zhi[hui] li 智[慧]力)
5. power of their vow (S. praṇidhānabala; T. smon lam gyi stobs; C. yuanli 願力)
6. power of vehicle (S. yānabala; T. theg pa'i stobs; C. shengli 乘力)
7. power of conduct (S. caryābala; T. spyod pa'i stobs; C. xingli 行力)
8. power of transformation (S. vikurvaṇabala; T. rnam par 'phrul pa'i stobs; C. shenbian li/youxi shentong li 神變力/遊戲神通力)
9. power of enlightenment (S. bodhibala; T. byang chub kyi stobs; C. puti li 菩提力)
10. power of turning the wheel of the dharma (S. dharmacakrapravartanabala; T. chos kyi 'khor lo bskor ba'i stobs; C. zhuan falun li 轉法輪力)

ten powers of a tathāgata. (S. tathāgatabala; T. de bzhin gshegs pa'i stobs; C. rulai li 如來力)

1. power of knowing the positive and negative contingencies of things (S. sthānāsthānajñānabala; T. gnas dang gnas ma yin pa mkhyen pa'i stobs; C. chu feichu zhili 處非處智力)
2. power of knowing the maturation of deeds (S. karmavipākajñānabala; T. las kyi rnam smin mkhyen pa'i stobs; C. ye yishou zhili 業異熟智力)
3. power of knowing diverse aspirations (S. nānādhimuktijñānabala; T. mos pa sna tshogs mkhyen pa'i stobs; C. zhongzhong shengjie zhili 種種勝解智力)
4. power of knowing diverse dispositions (S. nānādhātujñānabala; T. khams sna tshogs mkhyen pa'i stobs; C. zhongzhong jie zhili 種種界智力)
5. power of knowing those who are of superior acumen and those who are not (S. indriyaparāparajñānabala; T. dbang po mchog dang mchog ma yin pa mkhyen pa'i stobs; C. gen shangxia zhili 根上下智力)
6. power of knowing the paths going everywhere (S. sarvatragāmanīpratipajjñāna; T. thams cad du 'gro ba'i lam mkhyen pa'i stobs; C. bianquxing zhili 遍趣行智力)
7. power of knowing absorption, liberation, concentration, trance, affliction, purification, and acquisition (S. sarvadhyānavimokṣasamādhisamāpattisaṃkleśavyavadānavyutthānajñānabala; T. bsam gtan dang rnam thar dang ting nge 'dzin dang snyoms par 'jug pa dang kun nas nyon mongs pa dang rnam par byang ba dang ldan pa thams cad mkhyen pa'i stobs; C. jinglü jietuo dengchi dengzhi zhili 靜慮解脫等持等至智力)
8. power of recollecting past lives (S. pūrvanivāsānusmṛtijñānabala; T. sngon gyi gnas rjes su dran pa mkhyen pa'i stobs; C. suzhu suinian zhili/suming zhili 宿住隨念智力/宿命智力)
9. power of knowing death and rebirth (S. cyutyupattijñānabala; T. 'chi 'pho bo dang skye ba mkhyen pa'i stobs; C. sisheng zhili 死生智力)
10. power of knowing the cessation of the contaminants (S. āsravakṣayajñānabala; T. zag pa zad pa mkhyen pa'i stobs; C. loujin zhili 漏盡智力)

ten precepts. [of novices] (*daśaśīla/śrāmaṇerasaṃvara; T. dge tshul gyi sdom pa; C. [shami] shijie [沙彌]十戒)

1. not to kill living beings (S. prāṇātipāta-virati; T. srog gcod pa spong ba; C. bu shasheng jie 不殺生戒)
2. not to steal (S. adattādāna-virati; T. ma byin par len pa spong ba; C. bu toudao jie 不偷盜戒)
3. not to engage in sexual activity (S. kāmamithyācāravirati/abrahmacarya-virati; T. 'dod pas log par g.yem pa spong ba/mi tshangs par spyod pa spong pa; C. bu xieyin jie/li fei fanxing jie 不邪婬戒/離非梵行戒)
4. not to lie [about spiritual attainments] (S. mṛṣāvādavirati; T. rdzun du smra ba spong ba; C. bu wangyu jie 不妄語戒)
5. not to use intoxicants (S. madyapāna-virati; T. myos par 'gyur ba'i btung ba spong pa; C. bu yinjiu jie 不飲酒戒)
6. not to eat at improper times [after twelve noon] (S. vikālabhojana-virati; T. dus ma yin pa'i kha zas spong pa; C. bu feishi shi jie 不非時食戒)
7. not to use perfumes, garlands, or cosmetics (S. gandhamālyavilepanavarṇakadhāraṇa-virati; T. spos dang kha dog dang byug pa dang phreng ba thogs pa spong pa; C. bu tushi xiangman jie 不塗飾香鬘戒)
8. not to sing, dance, play music, or attend entertainments (S. nṛtyagīta-virati; T. glu gar spong pa; C. bu gewu guanting jie 不歌舞觀聽戒)
9. not to sleep on high and luxurious beds (S. uccaśayanamahāśayana-virati; T. khri stan mthon po dang khri stan chen po spong pa; C. bu zuo gaoguang dachuang jie 不坐高廣大牀戒)
10. not to handle gold and silver/money (S. jātarūparajatapratigrahaṇa-virati; T. gser dang dngul la reg pa spong pa; C. bu xu jinyinbao jie 不蓄金銀寶戒)

ten realms of reality [dharmadhātu]. (C. shi fajie 十法界)

1. divinities (S. deva; T. lha; C. tian 天)
2. demigods (S. asura; T. lha ma yin; C. axiuluo 阿修羅)
3. humans (S. manuṣya; T. mi; C. ren 人)
4. animals (S. tiryak; T. dud 'gro; C. chusheng 畜生)
5. ghosts (S. preta; T. yi dwags; C. egui 餓鬼)

6. hell denizens (S. nāraka; T. dmyal ba; diyu 地獄)
7. disciples (S. śrāvaka; T. nyan thos; C. shengwen 聲聞)
8. solitary buddhas (S. pratyekabuddha; T. rang rgyal; C. yuanjue 緣覺)
9. bodhisattvas (T. byang chub sems dpa'; C. pusa 菩薩)
10. buddhas (T. sang rgyas; C. fo 佛)

ten recollections. (S. anusmṛti; T. rjes su dran pa; C. nian/suinian 念/隨念)

1. the Buddha (T. sangs rgyas rjes su dran pa; C. nianfo/fo suinian 念佛/佛隨念)
2. the dharma (T. chos rjes su dran pa; C. nianfa/fa suinian 念法/法隨念)
3. the saṃgha (T. dge 'dun rjes su dran pa; C. nianseng/seng suinian 念僧/僧隨念)
4. morality (S. śīla; T. tshul khrims rjes su dran pa; C. nianjie/jie suinian 念戒/戒隨念)
5. renunciation/generosity (S. tyāga; T. gtong ba rjes su dran pa; C. nianshi/shi suinian 念施/施隨念)
6. the divinities (S. devatā; T. lha rjes su dran pa; C. niantian/tian suinian 念天/天隨念)
7. breathing (S. ānāpāna; T. dbugs phyi nang du rgyu ba rjes su dran pa; C. nian anban/ruchuxi suinian 念安般/入出息隨念)
8. disgust (S. udvega; T. skyo ba rjes su dran pa; C. yan sui nian 厭隨念)
9. death (S. maraṇa; T. 'chi ba rjes su dran pa; C. niansi/si suinian 念死/死隨念)
10. what concerns the body (S. kāyagatā; T. lus kyi rnam pa rjes su dran pa; C. nianshen/shen suinian 念身/身隨念)

ten stages [of the bodhisattva path]. (S. daśabhūmi; T. sa bcu; C. shidi 十地)

1. joyful (S. pramuditā; T. rab tu dga' ba; C. jixidi/huanxi di 極喜地/歡喜地)
2. immaculate/stainless (S. vimalā; T. dri ma med pa; C. ligou di/wugou di 離垢地/無垢地)
3. luminous (S. prabhākarī; T. 'od byed pa; C. faguang di 發光地)
4. radiant (S. arciṣmatī; T. 'od 'phro ba; C. yanhui di 焰慧地)
5. invincible (S. sudurjayā; T. sbyang dka' ba; C. [ji]nansheng di [極]難勝地)
6. immediacy/coming face-to-face (S. abhimukhī; T. mngon du byed pa; C. xianqian di 現前地)
7. far-reaching/transcendent (S. dūraṅgamā; T. ring du song ba; C. yuanxing di 遠行地)
8. immovable/steadfast (S. acalā; T. mi g.yo ba; C. budong di 不動地)
9. eminence/auspicious intellect (S. sādhumatī; T. legs pa'i blo gros; C. shanhui di 善慧地)
10. cloud of dharma (S. dharmameghā; T. chos kyi sprin pa; C. fayun di 法雲地)

ten unwholesome courses of action. (S. akuśala-karmapatha; T. mi dge ba; C. e yedao 惡業道)

1. killing (prāṇātipāta; T. srog bcod pa; C. sha[sheng] 殺[生])
2. stealing (S. adattādāna; T. ma byin par len pa; C. [tou]dao [偷]盜)
3. sexual misconduct (kāmamithyācāra; T. 'dod pas log par g.yem pa; C. xieyin 邪淫)
4. lying (S. mṛṣāvāda; T. rdzun du smra ba; C. wangyu 妄語)
5. malicious speech (paiśunyavāda; T. phra ma; C. liangshe 兩舌)
6. verbal abuse (pārūṣyavāda; T. tshig rtsub; C. ekou 惡口)
7. frivolous prattle/idle gossip (saṃbhinnapralāpa; T. ngag 'khyal ba; C. qiyu 綺語)
8. covetousness (S. abhidhyā; T. brnab sems; C. tan[yu]/qiantan 貪[欲]/慳貪)
9. malice/ill-will (S. vyāpāda; T. gnod sems; C. chen[hui] 瞋恚)
10. wrong views (S. mithyādṛṣṭi; T. log lta; C. xiejian/yuchi 邪見/愚痴)

ten visualization devices. (S. *kṛtsnāyatana; P. kasiṇa; T. zad par gyi skye mched; C. bianchu 遍處)

1. earth (S. pṛthivī; T. sa; C. di 地)
2. water (S. āpas; T. chu; C. shui 水)
3. fire (S. tejas; T. me; C. huo 火)
4. wind (S. vāyu; T. rlung; C. feng 風)
5. empty-space (S. ākāśa; T. nam mkha'; C. kong 空)
6. blue (S. nīla; T. sngon po; C. qing 青)
7. yellow (S. pīta; T. ser po; C. huang 黃)
8. red (S. lohita; T. dmar po; C. chi 赤)
9. white (S. avadāta; T. dkar po; C. bai 白)
10. light (S. āloka/tejas; T. 'od/me; C. guangming/huo 光明/火)/[alt.] consciousness (S. vijñāna; T. rnam shes; C. shi 識)

ten wholesome courses of action. (S. kuśala-karmapatha; T. dge ba bcu; C. shanyedao 善業道) Abstention from the TEN UNWHOLESOME COURSES OF ACTION (s.v.).

ELEVENS

eleven cognitions. (S. jñāna; T. shes pa; C. zhi 智)

1. of suffering (S. duḥkhajñāna; T. sdug bsngal shes pa; C. kuzhi 苦智)
2. of origination (S. samudayajñāna; T. kun 'byung ba shes pa; C. jizhi 集智)
3. of cessation (S. nirodhajñāna; T. 'gog pa shes pa; C. miezhi 滅智)
4. of the path (S. mārgajñāna; T. lam shes pa; C. daozhi 道智)
5. of extinction (S. kṣayajñāna; T. zad pa shes pa; C. jinzhi 盡智)

6. of nonproduction (S. anutpādajñāna; T. mi skye ba shes pa; C. wusheng zhi 無生智)
7. of factors (S. dharmajñāna; T. chos shes pa; C. fazhi 法智)
8. of subsequent cognition (S. anvayajñāna; T. rjes su rtogs par shes pa; C. leizhi 類智)
9. of worldly conventions (S. saṃvṛtijñāna; T. kun rdzob shes pa; C. shisu zhi 世俗智)
10. of others' minds (S. paracittajñāna; T. gzhan gyi sems shes pa; C. taxin zhi 他心智)
11. of things-as-they-are (S. yathābhūtajñāna; T. yang dag pa ji lta ba bzhin du yongs su shes pa; C. rushi zhi 如實智)

TWELVES

twelve ascetic practices. (S. dhūtaguṇa; P. dhutaṅga; T. sbyangs pa'i yon tan; C. shi'er toutuo xing 十二頭陀行)

1. wears rag clothing from dust-heaps (S. pāṃśukūlika; T. phyag dar khrod pa; C. zhuo fensao yi/zhuo bina yi 著糞掃衣/著弊納衣)
2. possesses only three robes (S. traicīvarika; T. chos gos gsum pa; C. dan sanyi 但三衣)
3. does not eat after midday (S. khalupaścādbhaktika; T. zas phyis mi len pa; C. zhonghou bude yinjiang 中後不得飲漿)
4. eats only alms (S. paiṇḍapātika; T. bsod snyoms pa; C. cidi qishi 次第乞食)
5. eats one meal in a single sitting (S. aikāsanika; T. stan gcig pa; C. shou yishi fa 受一食法)
6. restricts the amount of food consumed (S. nāmantika; T. 'phyings pa pa; C. jieliang shi 節量食)
7. dwells in isolation in the forest (S. āraṇyaka; T. dgon pa ba; C. alanruo chu zhu 阿蘭若處住)
8. dwells at the foot of a tree (S. vṛkṣamūlika; T. shing drung pa; C. shuxia zhi 樹下止)
9. dwells in open, unsheltered places (S. ābhyavakāśika; T. bla gab med pa; C. ludi zuo 露地坐)
10. dwells in charnel grounds (S. śmāśānika; T. dur khrod pa; C. zhongjian zhu 塚間住)
11. never lies down to sleep (S. naiṣyadika; T. cog bu pa; C. changzuo buwo 長坐不臥)
12. does not omit any house on the almsround (S. yathāsaṃstarika; T. gzhi ji bzhin pa; C. changxing qishi 常行乞食)

twelve categories of scripture. (S. dvādaśāṅga[pravacana]; T. gsung rab yan lag bcu gnyis; C. shi'erbu jing/shi'erfen jiao 十二部經/十二分教)

1. discourses (S. sūtra; T. mdo; C. qijing/changhang 契經/長行)
2. aphorisms in mixed prose and verse (S. geya; T. dbyangs bsnyad; C. yingsong 應頌)
3. prophecies (S. vyākaraṇa; T. lung bstan; C. jibie/shouji 記別/授記)
4. verses (S. gāthā; T. tshig bcad; C. fengsong/guqi 諷頌/孤起)
5. utterances/meaningful expressions (S. udāna; T. ched du brjod pa; C. zishuo 自說)
6. framing stories (S. nidāna; T. gleng gzhi; C. yinyuan 因緣)
7. expanded teachings (S. vaipulya; T. shin tu rgyas pa; C. fangguang 方廣)
8. tales of previous lives (S. jātaka; T. skyes rabs; C. bensheng 本生)
9. marvelous events (S. adbhutadharma; T. rmad du byung; C. xifa 希法)
10. narratives (S. avadāna; T. rtogs pa brjod pa; C. piyu 譬喻)
11. fables (S. itivṛttaka; T. de lta bu byung ba; C. benshi 本事)
12. instructions (S. upadeśa; T. gtan phab; C. lunyi 論議)

twelve deeds of a buddha. (S. dvādaśabuddhakārya; T. sangs rgyas kyi mdzad pa bcu gnyis; C. shi'er xiang chengdao 十二相成道)

1. descent from tuṣita heaven (T. dga' ldan gyi gnas nas 'pho ba; C. doushuai jiangshi 兜率降世)
2. entry into the womb (T. lhums su zhugs pa; C. rutai 入胎)
3. taking birth (T. sku bltams pa; C. chutai 出胎)
4. proficiency in the arts (T. bzo yi gnas la mkhas pa; C. shanxian jiyi 善嫻技藝)
5. enjoyment of consorts (T. btsun mo'i 'khor dgyes rol ba; C. shouyong feijuan 受用妃眷)
6. renouncing the world (T. rab tu byung ba; C. chujia 出家)
7. practicing asceticism (T. dka' ba spyad pa; C. xiu kuxing 修苦行)
8. going to the bodhimaṇḍa (T. byang chub snying por gshegs pa; C. qu jingang zuo 趨金剛座)
9. subjugating Māra (T. bdud btul ba; C. xiangmo 降魔)
10. attaining enlightenment (T. mngon par rdzogs par sangs rgyas pa; C. chengdao 成道)
11. turning the wheel of the dharma (S. dharmacakra-pravartana; T. chos kyi 'khor lo bskor ba; C. zhuan falun 轉法輪)
12. passing into parinirvāṇa (T. mya ngan las 'das pa; C. ru niepan 入涅槃)

twelvefold chain of dependent origination. (S. pratītyasamut-pāda; T. rten cing 'brel bar 'byung ba; C. yuanqi 緣起)

1. ignorance (S. avidyā; T. ma rig pa; C. wuming 無明)
2. predispositions/habituations (S. saṃskāra; T. 'du byed; C. xing 行)
3. consciousness (S. vijñāna; T. rnam shes; C. shi 識)

4. name and form/mentality and materiality (S. nāmarūpa; T. ming gzugs; C. mingse 名色)
5. six sense-bases (S. ṣaḍāyatana; T. skye mched drug; C. liuru 六入)
6. sensory contact (S. sparśa; T. reg pa; C. chu 觸)
7. sensations (S. vedanā; T. tshor ba; C. shou 受)
8. craving/thirst (S. tṛṣṇā; T. sred pa; C. ai 愛)
9. clinging (S upādāna; T. len pa; C. qu 取)
10. existence/process of becoming (S. bhava; T. srid pa; C. you 有)
11. [re]birth (S. jāti; T. skye ba; C. sheng 生)
12. old age and death (S. jarāmaraṇa; T. rga shi; C. laosi 老死)

twelve sense-fields/bases of cognition. (S. āyatana; T. skye mched; C. ru/chu/ruchu 入/處/入處)

1. the sense-field of the visual sense-base (S. cakṣurāyatana; T. mig gi skye mched; C. yan 眼)
2. the sense-field of visual objects (S. rūpāyatana; T. gzugs kyi skye mched; C. se 色)
3. the sense-field of the auditory sense-base (S. śrotrāyatana; T. rna ba'i skye mched; C. er 耳)
4. the sense-field of auditory objects (S. śabdāyatana; T. sgra'i skye mched; C. sheng 聲)
5. the sense-field of the olfactory sense-base (S. ghrāṇāyatana; T. sna'i skye mched; C. bi 鼻)
6. the sense-field of olfactory objects (S. gandhāyatana; T. dri'i skye mched; C. xiang 香)
7. the sense-field of the gustatory sense-base (S. jihvāyatana; T. lce'i skye mched; C. she 舌)
8. the sense-field of gustatory objects (S. rasāyatana; T. ro'i skye mched; C. wei 味)
9. the sense-field of the tactile sense-base (S. kāyāyatana; T. lus kyi skye mched; C. shen 身)
10. the sense-field of tactile objects (S. spraṣṭavyāyatana; T. reg bya'i skye mched; C. chu 觸)
11. the sense-field of the mental sense-base (S. manāyatana; T. yid kyi skye mched; C. yi 意)
12. the sense-field of mental objects (S. dharmāyatana; T. chos kyi skye mched; C. fa 法)

FOURTEENS

fourteen indeterminates/unanswerable questions. (S. avyākṛta; T. lung du ma bstan pa'i chos; C. wuji 無記)

1. Is the world eternal? (S. śāśvato lokaḥ; T. 'jig rten rtag pa; C. shi chang 世常)
2. Is the world not eternal? (S. aśāśvato lokaḥ; T. 'jig rten mi rtag pa; C. shi wuchang 世無常)
3. Is the world both eternal and not eternal? (S. śāśvataś cāśāsvataś ca; T. 'jig rten rtag kyang rtag la mi rtag kyang mi rtag pa; C. shi yi chang yi wuchang 世亦常亦無常)
4. Is the world neither eternal nor not eternal? (S. naiva śāśvato nāśāśvataś ca; T. 'jig rten rtag pa yang ma yin mi tag pa yang ma yin; C. shi feichang feiwuchang 世非常非無常)
5. Is the world endless (viz. infinite)? (S. antavānlokaḥ; T. 'jig rten mtha' yod pa; C. shi youbian 世有邊)
6. Is the world not endless (viz. finite)? (S. anantavānlokaḥ; T. 'jig rten mtha' yod pa ma yin; C. shi wubian 世無邊)
7. Is the world both endless and not endless? (S. antavāṃś cānantavānlokaś ca; T. 'jig rten mtha' yod kyang yod la mtha' med kyang med; C. shi yi youbian yi wubian 世亦有邊亦無邊)
8. Is the world neither endless nor not endless? (S. naivāntavān nānantavāṃś ca; T. 'jig rten mtha' yod pa yang ma yin med pa yang ma yin; C. shi feiyoubian feiwubian 世非有邊非無邊)
9. Does the tathāgata exist after death? (S. bhavati tathāgataḥ paraṃ maranāt; T. de bzhin gshegs pa zhi nas yod; C. rulai sihou weiyou 如來死後爲有)
10. Does the tathāgata not exist after death? (S. na bhavati tathāgataḥ paraṃ maraṇāt; T. de bzhin gshegs pa zhi nas med; C. rulai sihou feiyou 如來死後非有)
11. Does the tathāgata both exist and not-exist after death? (S. bhavati ca na bhavati ca tathāgataḥ paraṃ maraṇāt; T. de bzhin gshegs pa zhi nas yod kyang yod la med kyang med; C. rulai sihou yi you yi feiyou 如來死後亦有亦非有)
12. Does the tathāgata neither exist nor not-exist after death? (S. naiva bhavati na na bhavati tathāgataḥ paraṃ maraṇāt; T. de bzhin gshegs pa zhi nas yod pa yang ma yin med pa yang ma yin; C. rulai sihou feiyou fei feiyou 如來死後非有非非有)
13. Are the life-force and the body identical? (S. sa jīvas tac charīram; T. srog de lus yin; C. mingzhe jishen 命者卽身)
14. Are the life-force and the body different? (S. anyo jīvo 'nyac charīram; T. srog kyang gzhan la lus kyang gzhan; C. mingzhe yishen 命者異身)

fourteen root violations of the tantric commitments.

1. contradicting one's guru
2. contradicting or denigrating the teachings of the Buddha or one's guru
3. quarreling with others on the same path
4. violating the bodhisattva vows (in action, word, or thought)
5. violating the sacred drops in the heart cakra through illicit sexual activity
6. denigrating the teachings and paths of other systems
7. revealing secrets to non-initiates or those not ready to receive them
8. viewing the five aggregates that compose the psychophysical continuum as impure
9. doubting one's entrance into the path

10. having the ability to perceive the mental continuum of others and recognizing that someone will commit great harm to others, but not taking action
11. holding either of the extreme views of eternalism or annihilationism
12. refusing to teach someone who asks for teachings and is qualified to receive those teachings
13. superficial or dualistic clinging to appearances of pure/impure; good/bad, etc.
14. verbally or mentally denigrating women

SIXTEENS

sixteen arhats. (S. ṣoḍaśasthavira; T. gnas brtan bcu drug; C. shiliu luohan 十六羅漢)

According to the East Asian tradition:

1. Piṇḍola Bhāradvāja (T. Bha ra dhwa dza bsod snyoms len; C. Bintoulu Baluoduo 賓頭盧跋羅墮)
2. Kanakavatsa (T. Gser gyi be'u; C. Jianuojiafacuo 迦諾迦伐蹉)
3. Kanaka Bhāradvāja (T. Bha ra dhwa dza gser can; C. Jianuojiabaliduoshe 迦諾迦跋釐墮闍)
4. Subinda [alt. Suvinda]/Abheda (T. Mi phyed pa; C. Supintuo 蘇頻陀)
5. Bakkula [alt. Nakula/Vakula] (T. Ba ku la; C. Bojuluo 薄拘羅)
6. Bhadra (T. Bzang po; C. Batuoluo 跋陀羅)
7. Kālika [alt. Karīka] (T. Dus ldan; C. Jialijia 迦里迦)
8. Vajraputra (T. Rdo rje mo'i bu; C. Fasheluofuduoluo 伐闍羅弗多羅)
9. Jīvaka (T. 'Tsho byed; C. Qipo/Shubojia 耆婆/戍博迦)
10. Panthaka [alt. Mahāpanthaka] (T. Lam chen bstan; C. Bantuojia 半託迦)
11. Rāhula (T. Sgra gcan 'dzin; C. Luohouluo 羅睺羅)
12. Nāgasena (T. Klu sde; C. Naqiexina 那伽犀那)
13. Aṅgaja (T. Yan lag 'byung; C. Yinjietuo 因揭陀)
14. Vanavāsin (T. Nags na gnas; C. Fanaposi 伐那婆斯)
15. Ajita (T. Ma pham pa; C. Ayiduo 阿逸多)
16. Cūḍapanthaka [alt. Cūḷapantha] (T. Lam phran bstan; C. Zhutubantuojia 注荼半托迦)

sixteen aspects of the four noble truths. (S. ākāra; T. bden bzhi'i rnam pa; C. xingxiang 行相)

1. impermanence (S. anitya; T. mi rtag pa; C. wuchang 無常)
2. suffering (S. duḥkha; T. sdug bsngal ba; C. ku 苦)
3. emptiness (S. śūnyatā; T. stong pa nyid; C. kong 空)
4. selflessness (S. anātmaka; T. bdag med pa; C. wuwo/feiwo 無我/非我)
5. origination (S. samudaya; T. kun 'byung ba; C. ji 集)
6. production/process (S. prabhava; T. rab tu skye ba; C. sheng 生)
7. cause (S. hetu; T. rgyu; C. yin 因)
8. conditions (S. pratyaya; T. rkyen; C. yuan 緣)
9. cessation (S. nirodha; T. 'gog pa; C. mie 滅)
10. serenity (S. śānta; T. zhi ba; C. jing 靜)
11. sublimity (S. praṇīta; T. gya nom pa; C. miao 妙)
12. deliverance (niḥsaraṇa; T. nges par 'byung ba; C. li 離)
13. path (S. mārga; T. lam; C. dao 道)
14. correctness (S. nyāya; T. rigs pa; C. ru 如)
15. achievement (S. pratipatti; T. sgrub pa; C. xing 行)
16. release (S. nairyāṇika; T. nges par 'byin pa; C. chu 出)

sixteen elders. (S. ṣoḍaśasthavira; T. gnas brtan bcu drug; C. shiliu zunzhe 十六尊者). See SIXTEEN ARHATS.

sixteen emptinesses. (S. śūnyatā; T. stong pa nyid; C. kong 空)

1. emptiness of the internal (S. adhyātmaśūnyatā; T. nang stong pa nyid; C. nei kong 內空)
2. emptiness of the external (S. bahirdhāśūnyatā; T. phyi stong pa nyid; C. wai kong 外空)
3. emptiness of both the internal and external (S. adhyātmabahirdhāśūnyatā; T. phyi nang stong pa nyid; C. neiwai kong 內外空)
4. emptiness of emptiness (S. śūnyatāśūnyatā; T. stong pa nyid stong pa nyid; C. kongkong 空空)
5. emptiness of the great (S. mahāśūnyatā; T. chen po stong pa nyid; C. dakong 大空)
6. emptiness of the ultimate (S. paramārthaśūnyatā; T. don dam pa stong pa nyid; C. shengyi kong 勝義空)
7. emptiness of the compounded (S. saṃskṛtaśūnyatā; T. 'dus byas stong pa nyid; C. youwei kong 有爲空)
8. emptiness of the uncompounded (S. asaṃskṛtaśūnyatā; T. 'dus ma byas stong pa nyid; C. wuwei kong 無爲空)
9. emptiness of the infinite (S. atyantaśūnyatā; T. mtha' las 'das pa stong pa nyid; C. bijing kong 畢竟空)
10. emptiness of the beginningless and endless (S. anavarāgraśūnyatā; T. thog ma dang mtha' ma med pa stong pa nyid; C. wuji kong 無際空)
11. emptiness of what cannot be repudiated (S. anavakāraśūnyatā; T. dor ba med pa stong pa nyid; C. wusan kong 無散空)
12. emptiness of essential nature (S. prakṛtiśūnyatā; T. rang bzhin stong pa nyid; C. benxing kong 本性空)
13. emptiness of all dharmas (S. sarvadharmaśūnyatā; T. chos thams cad stong pa nyid; C. yiqiefa kong 一切法空)
14. emptiness of intrinsic marks (S. lakṣaṇaśūnyatā; T. mtshan nyid stong pa nyid; C. zixiang kong 自相空)
15. emptiness of the unobservable (S. anupalambhaśūnyatā; T. mi dmigs pa stong pa nyid; C. bu kede kong 不可得空)
16. emptiness of the nature of nonexistence (S. abhāvasvabhāvaśūnyatā; T. dngos po med pa'i ngo bo nyid stong pa nyid; C. wuzixing zixing kong 無自性自性空)

sixteen moments of the path of vision. (S. darśanamārgakṣaṇa; T. mthong lam shes bzod skad cig ma; C. [jiandao wei] shiliu xin [見道位]十六心)

1. acquiescence to the cognition of dharma with regard to suffering in the sensuous realm (S. duḥkhe dharmajñānakṣāntiḥ; T. sdug bsngal chos bzod; C. kufa ren 苦法忍)
2. cognition of dharma with regard to suffering in the sensuous realm (S. duḥkhe dharmajñānam; T. sdug bsngal chos shes; C. kufa zhi 苦法智)
3. acquiescence to the subsequent cognition with regard to suffering in the subtle-materiality and immaterial realms (S. duḥkhe 'nvayajñānakṣāntiḥ; T. sdug bsngal rjes bzod; C. kulei ren 苦類忍)
4. subsequent cognition with regard to suffering in the subtle-materiality and immaterial realms (S. duḥkhe 'nvayajñānam; T. sdug bsngal rjes shes; C. kuleizhi 苦類智)
5. acquiescence to the cognition of dharma with regard to origination in the sensuous realm (S. samudaye dharmajñānakṣāntiḥ; T. kun 'byung chos bzod; C. jifa ren 集法忍)
6. cognition of dharma with regard to origination in the sensuous realm (S. samudaye dharmajñānam; T. kun 'byung chos shes; C. jifa zhi 集法智)
7. acquiescence to the subsequent cognition of origination in the subtle-materiality and immaterial realms (S. samudaye 'nvayajñānakṣāntiḥ; T. kun 'byung rjes bzod; C. jilei ren 集類忍)
8. subsequent cognition of origination in the subtle-materiality and immaterial realms (S. samudaye 'nvayajñānam; T. kun 'byung rjes shes; C. jilei zhi 集類智)
9. acquiescence to the cognition of dharma with regard to cessation in the sensuous realm (S. nirodhe dharmajñānakṣāntiḥ; T. 'gog pa chos bzod; C. miefa ren 滅法忍)
10. cognition of dharma with regard to cessation in the sensuous realm (S. nirodhe dharmajñānam; T. 'gog pa chos shes; C. miefa zhi 滅法智)
11. acquiescence to subsequent cognition with regard to cessation in the subtle-materiality and immaterial realms (S. nirodhe 'nvayajñānakṣāntiḥ; T. 'gog pa rjes bzod; C. mielei ren 滅類忍)
12. subsequent cognition with regard to cessation in the subtle-materiality and immaterial realms (nirodhe 'nvayajñānam; T. 'gog pa rjes shes; C. mielei zhi 滅類智)
13. acquiescence to the cognition of dharma with regard to the path in the sensuous realm (S. mārge dharmajñānakṣāntiḥ; T. lam chos bzod; C. daofa ren 道法忍)
14. cognition of dharma with regard to the path in the sensuous realm (S. mārge dharmajñānam; T. lam chos shes; C. daofa zhi 道法智)
15. acquiescence of subsequent cognition with regard to the path in the subtle-materiality and immaterial realms (S. mārge 'nvayajñānakṣāntiḥ; T. lam rjes bzod; C. daolei ren 道類忍)
16. subsequent cognition with regard to the path in the subtle-materiality and immaterial realms (S. mārge 'nvayajñānam; T. lam rjes shes; C. daolei zhi 道類智)

SEVENTEENS

seventeen heavens of the realm of subtle materiality. (S. rūpadhātunivāsa; T. gzugs khams gnas ris; C. sejie shiqi tian 色界十七天)

FIRST DHYĀNA:

1. Brahmā's retainers (S. brahmakāyika; T. tshangs ris; C. fanzhong tian 梵衆天)
2. Brahmā's ministers (S. brahmapurohita; T. tshangs pa mdun na 'don; C. fanfu tian 梵輔天)
3. Great Brahmā (S. mahābrahmā; T. tshangs pa chen po; C. dafan tian 大梵天)

SECOND DHYĀNA:

1. lesser radiance (S. parīttābha; T. 'od chung; C. shaoguang tian 少光天)
2. immeasurable radiance (S. apramāṇābha; T. tshad med 'od; C. wuliangguang tian 無量光天)
3. ultimate radiance (S. ābhāsvara; T. 'od gsal; C. guangyin tian/jiguangjing tian 光音天/極光淨天)

THIRD DHYĀNA:

1. lesser purity (S. parīttaśubha; T. dge chung; C. shaojing tian 少淨天)
2. immeasurable purity (S. apramāṇaśubha; T. tshad med dge; C. wuliangjing tian 無量淨天)
3. pervasive purity (S. śubhakṛtsna; T. dge rgyas; C. bianjing tian 遍淨天)
4. cloudless (S. anabhraka; T. sprin med; C. wuyun tian 無雲天)
5. meritorious birth (S. puṇyaprasava; T. bsod nams 'phel; C. fusheng tian 福生天)
6. extensive fruition (S. bṛhatphala; T. 'bras bu che; C. guangguo tian 廣果天)

FOURTH DHYĀNA (THE FIVE PURE ABODES, ŚUDDHĀVĀSA):

1. free from afflictions (S. avṛha; T. mi che ba; C. wufan tian 無煩天)
2. not burning/without torment (S. atapa; T. mi gdung pa; C. wure tian 無熱天)
3. perfect form (S. sudṛśa; T. gya nom snang ba; C. shanxian tian 善現天)
4. perfect vision (S. sudarśana; T. shin tu mthong ba; C. shanjian tian 善見天)
5. highest (S. akaniṣṭha; T. 'og min; C. sejiujing tian 色究竟天)

EIGHTEENS

eighteen elements/bases of cognition. (S. dhātu; T. khams bco brgyad; C. jie 界)

1. visual sense-base (S. cakṣurdhātu; T. mig gi khams; C. yan 眼)
2. visual sense-object (S. rūpadhātu; T. gzugs kyi khams; C. se 色)

3. visual consciousness (S. cakṣurvijñānadhātu; T. mig gi rnam par shes pa'i khams; C. yanshi 眼識)
4. auditory sense-base (S. śrotradhātu; T. rna ba'i khams; C. er 耳)
5. auditory sense-object (S. śabdadhātu; T. sgra'i khams; C. sheng 聲)
6. auditory consciousness (S. śrotravijñānadhātu; T. rna ba'i rnam par shes pa'i khams; C. ershi 耳識)
7. olfactory sense-base (S. ghrāṇadhātu; T. sna'i khams; C. bi 鼻)
8. olfactory sense-object (S. gandhadhātu; T. dri'i khams; C. xiang 香)
9. olfactory consciousness (S. ghrāṇavijñānadhātu; sna'i rnam par shes pa'i khams; C. bishi 鼻識)
10. gustatory sense-base (S. jihvādhātu; T. lce'i khams; C. she 舌)
11. gustatory sense-object (S. rasadhātu; T. ro'i khams; C. wei 味)
12. gustatory consciousness (S. jihvāvijñānadhātu; T. lce'i rnam par shes pa'i khams; C. sheshi 舌識)
13. tactile sense-base (S. kāyadhātu; T. lus kyi khams; C. shen 身)
14. tactile sense-object (S. spraṣṭavyadhātu; T. reg bya'i khams; C. chu 觸)
15. tactile consciousness (S. kāyavijñānadhātu; T. lus kyi rnam par shes pa'i khams; C. shenshi 身識)
16. mental sense-base (S. manodhātu; T. yid kyi khams; C. yi 意)
17. mental sense-object (S. dharmadhātu; T. chos kyi khams; C. fa 法)
18. mental consciousness (S. manovijñānadhātu; T. yid kyi rnam par shes pa'i khams; C. yishi 意識)

eighteen emptinesses. (S. śūnyatā; T. stong pa nyid bco brgyad; C. kong 空)

1. emptiness of the internal (S. adhyātmaśūnyatā; T. nang stong pa nyid; C. nei kong 內空)
2. emptiness of the external (S. bahirdhāśūnyatā; T. phyi stong pa nyid; C. wai kong 外空)
3. emptiness of both the internal and external emptiness (S. adhyātmabahirdhāśūnyatā; T. phyi nang stong pa nyid; C. neiwai kong 內外空)
4. emptiness of emptiness (S. śūnyatāśūnyatā; T. stong pa nyid stong pa nyid; C. kongkong 空空)
5. emptiness of the great (S. mahāśūnyatā; T. chen po stong pa nyid; C. dakong 大空)
6. emptiness of the ultimate (S. paramārthaśūnyatā; T. don dam pa stong pa nyid; C. shengyi kong 勝義空)
7. emptiness of the compounded (S. saṃskṛtaśūnyatā; T. 'dus byas stong pa nyid; C. youwei kong 有爲空)
8. emptiness of the uncompounded (S. asaṃskṛtaśūnyatā; T. 'dus ma byas stong pa nyid; C. wuwei kong 無爲空)
9. emptiness of the infinite (S. atyantaśūnyatā; T. mtha' las 'das pa stong pa nyid; C. bijing kong 畢竟空)
10. emptiness of the beginningless and endless (S. anavarāgraśūnyatā; T. thog ma dang mtha' ma med pa stong pa nyid; C. wuji kong 無際空)
11. emptiness of what cannot be repudiated (S. anavakāraśūnyatā; T. dor ba med pa stong pa nyid; C. wusan kong 無散空)
12. emptiness of essential nature (S. prakṛtiśūnyatā; T. rang bzhin stong pa nyid; C. benxing kong 本性空)
13. emptiness of all dharmas (S. sarvadharmaśūnyatā; T. chos thams cad stong pa nyid; C. yiqiefa kong 一切法空)
14. emptiness of intrinsic marks (S. lakṣaṇaśūnyatā; T. mtshan nyid stong pa nyid; C. zixiang kong 自相空)
15. emptiness of the unobservable (S. anupalambhaśūnyatā; T. mi dmigs pa stong pa nyid; C. bu kede kong 不可得空)
16. emptiness of the nature of nonexistence (S. abhāvasvabhāvaśūnyatā; T. dngos po med pa'i ngo bo nyid stong pa nyid; C. wuxing zixing kong 無性自性空)
17. emptiness of existence (S. bhāvaśūnyatā; T. dngos bo'i stong pa nyid; C. youxing kong 有性空)
18. emptiness of nonexistence (S. abhāvaśūnyatā; T. dngos po med pa'i stong pa nyid; C. wuxing kong 無性空)

eighteen mainstream Buddhist schools. (S. aṣṭadaśanikāya; T. sde pa bco brgyad; C. shiba bupai 十八部派)

1. Sarvāstivāda (T. Thams cad yod par smra ba; C. Shuo yiqie you bu 說一切有部)
    1. Mūlasarvāstivāda (T. Gzhi thams cad yod par smra ba'i sde; C. Genben shuo yiqie you bu 根本說一切有部)
    2. Kāśyapīya (T. 'Od srung pa'i sde; C. Yinguang bu 飲光部)
    3. Mahīśāsaka (T. Sa ston sde; C. Huadi bu 化地部)
    4. Dharmaguptaka (T. Chos srung sde; C. Fazang bu 法藏部)
    5. Bahuśrutīya (T. Mang du thos pa'i sde; C. Duowen bu 多聞部)
    6. Tāmraśāṭīya (T. Gos dmar sde; C. Tongxie bu 銅鍱部)
    7. Vibhajyavādin (T. Rnam par phye ste smra ba'i sde; C. Fenbieshuo bu 分別說部)
2. Saṃmitīya (T. Kun gyis bkur ba; C. Zhengliang bu 正量部)
    1. Kaurukullaka (T. Sar sgrog rigs kyi sde; C. Julujuluo bu/Xuandi bu 拘屢拘羅部/宣地部)
    2. Avantaka (T. Bsrung ba pa'i sde; C. Bukeqi bu 不可棄部)
    3. Vātsīputrīya (T. Gnas ma bu pa'i sde; C. Duzi bu 犢子部)
3. Mahāsāṃghika (T. Dge 'dun phal chen; C. Dazhong bu 大衆部)
    1. Pūrvaśaila (T. Shar gyi ri bo'i sde; C. Dongshanzhu bu 東山住部)
    2. Aparaśaila (T. Nub kyi ri bo'i sde; C. Xishanzhu bu 西山住部)
    3. Haimavata (T. Gang ri bo'i sde; C. Xueshan bu 雪山部)

4. Lokottaravāda (T. 'Jig rten 'das smra'i sde; C. Shuo chushi bu 說出世部)
5. Prajñaptivāda (T. Btags par smra ba'i sde; C. Shuojia bu 說假部)

4. *Sthaviranikāya (T. Gnas brtan sde; C. Shangzuo bu 上座部)
   1. Mahāvihāravāsa (T. Gtsug lag khang chen gnas sde; C. Dasizhu bu 大寺住部)
   2. Jetavanīya (T. Rgyal byed tshal gnas pa'i sde; C. Zhiduolin zhu bu 祇多林住部)
   3. Abhayagirivāsa (T. 'Jigs med ri gnas sde; C. Wuweishan zhu bu 無畏山住部)

eighteen sciences. (S. vidyāsthāna; T. rig gnas)

1. music (S. gandharva; T. rol mo)
2. erotic arts (S. vaiśika; T. 'khrig thabs)
3. livelihood (S. vārttā; T. 'tsho chas)
4. accounting (S. saṃkhya; T. grangs can)
5. grammar (S. śabda; T. sgra)
6. medicine (S. cikitsitā; T. gso dpyad)
7. law (S. nīti; T. chos lugs)
8. the arts (S. śilpa; T. bzo)
9. archery (S. dhanurveda; T. 'phong dpyad)
10. reasoning (S. hetu; T. gtan tshigs)
11. yoga (T. rnal 'byor)
12. learning (S. śruti; T. thos pa)
13. memorization (S. smṛti; T. dran pa)
14. astronomy (S. jyotiṣa; T. skar ma'i dpyad)
15. astrology (S. gaṇita; T. rtsis)
16. magic (S. māyā; T. mig 'phrul)
17. legend (S. purāṇa; T. sngon gyi rabs)
18. history (S. itihāsaka; T. sngon byung)

eighteen unshared factors [distinct attributes] of the buddhas. (S. āveṇikabuddhadharma; T. sangs rgyas kyi chos ma 'dres pa bco brgyad/ma 'dres pa'i chos; C. bugong[fo]fa 不共[佛]法)

1. their actions are without error (S. nāsti [tathāgatasya] skhalitam; T. 'khrul pa med pa; C. shen wushi 身無失)
2. their speech is not noisy (S. nāsti ravitam; T. ca co med pa; C. kou wushi 口無失)
3. they are never forgetful (S. nāsti muṣitasmṛtitā; T. bsnyel ba med pa; C. nian wushi 念無失)
4. their mind is never not in equipoise (S. nāsty asamāhitacittam; T. sems mnyam par ma gzhag pa med pa; C. wu yixiang 無異想)
5. their perception is free from discursiveness (S. nāsti nānātvasaṃjñā; T. tha dad pa'i 'du shes med pa; C. wu buding 無不定)
6. their equanimity is not due to a lack of discernment (S. nāsty apratisaṃkhyāyopekṣā; T. so sor ma rtogs pa'i btang snyoms med pa; C. wu buzhi she 無不知捨)
7. they do not regress in their zeal (S. nāsti cchandasya hāniḥ; T. 'dun pa nyams pa med pa; C. yu wumie 欲無滅)
8. they do not regress in their effort (S. nāsti vīryasya hāniḥ; T. brtson 'grus nyams pa med pa; C. jingjin wumie 精進無滅)
9. they do not regress in their recollection (S. nāsti smṛtihāniḥ; T. dran pa nyams pa med pa; C. nian wumie 念無滅)
10. they do not regress in their concentration (s. nāsti samādhihāniḥ; T. ting nge 'dzin nyams pa med pa; C. ding wumie 定無滅)
11. they do not regress in their wisdom (S. nāsti prajñāhāniḥ; T. shes rab nyams pa med pa; C. hui wumie 慧無滅)
12. they do not regress in their liberation (S. nāsti vimuktihāniḥ; T. rnam par grol ba nyams pa med pa; C. jietuo zhijian wumie 解脫知見無滅)
13. all their physical actions are preceded by gnosis and remain in conformity with gnosis (S. sarvakāyakarmajñānapūrvagamaṃ jñānānuparivarti; T. lus kyi las thams cad ye shes kyi sngon du 'gro shing ye shes kyi rjes su 'brang ba; C. yiqie shenye sui zhihui xing 一切身業隨智慧行)
14. all their verbal actions are preceded by gnosis and remain in conformity with gnosis (S. sarvavākkarmajñānapūrvagamaṃ jñānānuparivarti; T. ngag gi las thams cad ye shes kyi sngon du 'gro shing ye shes kyi rjes su 'brang ba; C. yiqie kouye sui zhihui xing 一切口業隨智慧行)
15. all their mental actions are preceeded by gnosis and remain in conformity with gnosis (S. sarvamanaḥkarmajñānapūrvagamaṃ jñānānuparivarti; T. yid kyi las thams cad ye shes kyi sngon du 'gro shing ye shes kyi rjes su 'brang ba; C. yiqie yiye sui zhihui xing 一切意業隨智慧行)
16. they enter into the perception of gnosis that is unobstructed and unimpeded with respect to the past (S. atīte 'dhvany asaṅgam apratihataṃ jñānadarśanaṃ pravartate; T. 'das pa'i dus la ma chags ma thogs pa'i ye shes gzigs par 'jug pa; C. zhihui zhi guoqushi wu'ai 智慧知過去世無礙)
17. they enter into the perception of gnosis that is unobstructed and unimpeded with respect to the future (S. anāgate 'dhvany asaṅgam apratihataṃ jñānadarśanaṃ pravartate; T. ma 'ongs pa'i dus la ma chags ma thogs pa'i ye shes gzigs par 'jug pa; C. zhihui zhi weilaishi wu'ai 智慧知未來世無礙)
18. they enter into the perception of gnosis that is unobstructed and unimpeded with respect to the present (S. pratyutpanne 'dhvany asaṅgam apratihataṃ jñānadarśanaṃ pravartate; T. da ltar gyi dus la ma chags ma thogs pa'i ye shes gzigs par 'jug pa; C. zhihui zhi xianzaishi wu'ai 智慧知現在世無礙)

TWENTIES

twenty-eight classes of divinities. (S. deva; T. lha; C. tian 天)

SENSUOUS REALM (KAMADHĀTU):

1. four great kings (S. cāturmahārājakāyika; T. rgyas chen rigs bzhi; C. siwang tian 四王天)
2. divinities of the thirty-three (S. trāyastriṃśa; T. sum cu rtsa gsum; C. daoli tian/sanshisan tian 忉利天/三十三天)
3. free from conflict (S. yāma; T. 'thab bral; C. yemo tian 夜摩天)
4. contented (S. tuṣita; T. dga' ldan; C. doushuai[tuo] tian 兜率[陀]天)
5. enjoyment of creation (S. nirmāṇarati; T. 'phrul dga'; C. huale tian 化樂天)
6. divinities who have power over the creations of others/ divinities who partake of the pleasures created in other heavens (S. paranirmitavaśavartin; T. gzhan 'phrul dbang byed; C. tahua zizai tian 他化自在天)

REALM OF SUBTLE MATERIALITY (RŪPADHĀTU):

FIRST DHYĀNA:

1. Brahmā's retainers (S. brahmakāyika; T. tshangs ris; C. fanzhong tian 梵衆天)
2. Brahmā's ministers (S. brahmapurohita; T. tshangs pa mdun na 'don; C. fanfu tian 梵輔天)
3. Great Brahmā (S. mahābrahmā; T. tshangs pa chen po; C. dafan tian 大梵天)

SECOND DHYĀNA

1. lesser radiance (S. parīttābha; T. 'od chung; C. shaoguang tian 少光天)
2. immeasurable radiance (S. apramāṇābha; T. tshad med 'od; C. wuliang guang tian 無量光天)
3. ultimate radiance (S. ābhāsvara; T. 'od gsal; C. guangyin tian/jiguangjing tian 光音天/極光淨天)

THIRD DHYĀNA

1. lesser purity (S. parīttaśubha; T. dge chung; C. shaojing tian 少淨天)
2. immeasurable purity (S. apramāṇaśubha; T. tshad med dge; C. wuliangjing tian 無量淨天)
3. pervasive purity (S. śubhakṛtsna; T. dge rgyas; C. bianjing tian 遍淨天)
4. cloudless (S. anabhraka; T. sprin med; C. wuyun tian 無雲天)
5. meritorious birth (S. puṇyaprasava; T. bsod nams 'phel; C. fusheng tian 福生天)
6. extensive fruition (S. bṛhatphala; T. 'bras bu che; C. guangguo tian 廣果天
7. nonperception (S. asaṃjñisattva; T. 'du shes med pa'i lha; C. wuxiang tian 無想天) [Note: This heaven is sometimes added to the list of seventeen heavens of the realm of subtle materiality and is included on this list for comprehensiveness.]

FOURTH DHYĀNA (THE FIVE PURE ABODES, ŚUDDHĀVĀSA)

1. free from afflictions (S. avṛha; T. mi che ba; C. wufan tian 無煩天)
2. without torment (S. atapa; T. mi gdung pa; C. wure tian 無熱天)
3. perfect form (S. sudṛśa; T. gya nom snang ba; C. shanxian tian 善現天)
4. perfect vision (S. sudarśana; T. shin tu mthong ba; C. shanjian tian 善見天)
5. highest (S. akaniṣṭha; T. 'og min; C. sejiujing tian 色究竟天)

IMMATERIAL REALM (ĀRŪPYADHĀTU)

1. infinite space (S. ākāśānantyāyatana; T. nam mkha' mtha' yas skye mched; C. kong wubian chu tian 空無邊處天)
2. infinite consciousness (S. vijñānānantyāyatana; T. rnam shes mtha' yas skye mched; C. shi wubian chu tian 識無邊處天)
3. nothingness (S. ākiṅcanyāyatana; T. ci yang med pa'i skye mched; C. wusuoyou chu tian 無所有處天)
4. neither perception nor nonperception (S. naivasamjñānāsamjñāyatana; T. 'du shes med 'du shes med min skye mched; C. feixiang feifeixiang tian 非想非非想天)

twenty varieties of the saṃgha. (S. viṃśatiprabhedasaṃgha; T. dge 'dun nyi shu; C. ershi sengqie/shengwen cidi, 二十僧伽/聲聞次第)

1. srotaāpanna (T. rgyun du zhugs pa; C. yuliu [guo]/ xutuohuan 預流[果]/須陀洹)
2. one who takes up to seven existences (S. saptakṛdbhavaparama; T. re ltar thogs na srid pa lan bdun pa; C. jiqi fanyou 極七返有)
3. one who goes from family to family (S. kulaṃkula; T. rigs nas rigs su skye ba; C. wang tianshang/jiajia 往天上/家家)
4. once-returner (S. sakṛdāgāmin; T. lan gcig phyir 'ong ba; C. yilai/situohan 一來/斯陀含)
5. one who has a single obstacle (S. ekavīcika; T. bar chad gcig pa; C. yijian, 一間)
6. non-returner (S. anāgāmin; T. phyir mi 'ong ba; C. bu huan/bu lai/anahan 不還/不來/阿那含)
7. one who achieves nirvāṇa in the intermediate state (S. antarāparinirvāyin; T. bar ma dor yongs su mya ngan las 'das ba; C. zhong ban/zhong banniepan 中般/中般涅槃)
8. one who achieves nirvāṇa at birth (S. upapadyaparinirvāyin; T. skyes nas yongs su mya ngan las 'das ba; C. sheng ban/sheng banniepan 生般/生般涅槃)
9. one who achieves nirvāṇa through effort (S. sābhisaṃskāraparinirvāyin; T. mngon par 'du byed dang bcas pas yongs su mya ngan las 'das ba; C. youxing ban/youxing banniepan 有行般/有行般涅槃)

10. one who achieves nirvāṇa without effort (S. anabhisaṃskāraparinirvāyin; T. mngon par 'du byed pa med par yongs su mya ngan las 'das ba; C. wuxing ban/wuxing banniepan 無行般/無行般涅槃)
11. one who goes higher/upstreamer (S. ūrdhvasrotas; T. gong du 'pho ba; C. shangliu ban/shangliu banniepan 上流般/上流般涅槃)
12. bodily witness (S. kāyasākṣin; T. lus kyi mngon sum du byed pa; C. shenzheng 身證)
13. follower through faith (S. śraddhānusārin; T. dad pa'i rjes su 'brang ba; C. suixin xing 隨信行)
14. follower through doctrine (S. dharmānusārin; T. chos kyi rjes su 'brang ba; C. suifa xing 隨法行)
15. one who aspires through faith (S. śraddhādhimukta; T. dad pas lhag par mos pa; C. xinjie 信解)
16. one who attains through seeing (S. dṛṣṭiprāpta; T. mthong bas thob pa; C. jianzhi/jiande 見至/見得)
17. one who is liberated dependent upon a specific occasion (S. samayavimukta; T. dus dang sbyor bar rnam par grol ba; C. shi jietuo 時解脫)
18. one who is liberated regardless of occasion (S. asamayavimukta; T. dus dang mi sbyor bar rnam par grol ba; C. bushi jietuo 不時解脫)
19. one who is liberated through wisdom (S. prajñāvimukta; T. shes rab kyis rnam par grol ba; C. hui jietuo 慧解脫)
20. one who is liberated both ways (S. ubhayatobhāgavimukta; T. gnyis ga'i cha las rnam par grol ba; C. ju jietuo 俱解脫)

THIRTIES

thirty-two marks of a great man. (S. mahāpuruṣalakṣaṇa; T. skyes bu chen po'i mtshan sum bcu rtsa gnyis/mtshan bzang so gnyis; C. daren xiang 大人相)

1. his feet stand firmly on the ground (S. supratiṣṭhitapāda; T. zhabs shin tu gnas pa; C. zu shan anzhu xiang 足善安住相)
2. he has thousand-spoked wheels on the palms of his hands and the soles of his feet (S. cakrāṅkitahastapādatala; T. phyag dang zhabs kyi mthil 'khor lo'i mtshan dang ldan pa; C. shouzu lunxiang 手足輪相)
3. the heels of his feet are broad (S. āyatapādapārṣṇi; T. zhabs kyi mthil rting pa yangs pa; C. zugen fuchang xiang 足跟趺長相)
4. he has long fingers (S. dīrghāṅguli; T. sor mo ring ba; C. xianzhang zhi xiang 纖長指相)
5. his hands and feet are smooth (S. mṛdutaruṇahastapāda; T. phyag dang zhabs kyi mthil 'jam shing gzhon sha chags pa; C. shouzu xiruan xiang 手足細軟相)
6. his hands and feet are webbed (S. jālahastapāda; T. phyag dang zhabs dra bas 'brel ba; C. shouzu wangman xiang 手足網縵相)
7. his legs are long [alt. his ankles are not prominent] (S. utsaṅgapāda; T. zhabs kyi long bu mi mngon pa; C. zufu gaoman xiang 足趺高滿相)
8. he has thighs like an antelope (S. aiṇeyajaṅgha; T. byin pa ri dwags e na ya'i 'dra; C. yiniye chuai xiang 毉泥耶踹相)
9. his arms extend below the knees (S. sthitānavanatapralambabāhu; T. bzhengs bzhin du ma btud par phyag pus mor slebs pa; C. lishou moxi xiang 立手摩膝相)
10. his penis is retracted (S. kośopagata-vastiguhya; T. 'doms kyi sba ba sbubs su nub pa; C. shifeng zangmi xiang 勢峰藏密相)
11. his brow is broad and even (S. samalalāta; T. dpral ba'i dbyes mnyams pa; C. e guangping qi 額廣平齊)
12. his skin is smooth and golden (S. sūkṣmasuvarṇacchavi; T. pags pa srab cing mdog gser 'dra ba; C. pifu xihua xiang 皮膚細滑相)
13. he has one hair in each pore of his body (S. ekaikaroma; T. spu re re nas skyes shing g.yas su 'khyil ba; C. shenzhu maokong yiyi maosheng xiang 身諸毛孔一一毛生相)
14. the hairs of his body stand erect (S. ūrdhvāgraroma; T. sku'i spu gyen du phyogs pa; C. shenmao shangmi xiang 身毛上靡相)
15. his thighs are well rounded (S. suvartitoru; T. brla legs par zlum pa; C. tui meiyuan xiang 腿美圓相)
16. the seven parts of his body are well-proportioned (S. saptotsada; T. bdun mtho ba; C. qichu jieman xiang 七處皆滿相)
17. the upper part of his body is like a lion's (S. siṃhapūrvārdhakāya; T. ro stod seng ge'i 'dra ba; C. shen shang ban ru shiziwang xiang 身上半如師子王相)
18. he has broad shoulders (S. citāntarāṃsa; T. thal gong rgyas pa; C. bojian chongshi xiang 髆間充實相)
19. his body and limbs are perfectly proportionate and thus shaped like a fig tree (S. nyagrodhaparimaṇḍala; T. shing nya gro dha ltar chu zheng gab pa; C. shenxiang yuanman runuojutuo 身相圓滿如諾瞿陀)
20. he has full, round shoulders (S. susaṃvṛttaskandha; T. dpung mgo shin tu zlum pa; C. jianshan yuanman xiang 肩善圓滿相)
21. he has an excellent sense of taste (S. rasarasāgra; T. ro bro ba'i mchog dang ldan pa; C. yu zhuwei zhong de zui shangwei 於諸味中得最上味)
22. he has a jaw like a lion's (S. siṃhahanu; T. 'gram pa seng ge'i 'dra ba; C. han ru shizi xiang 頷如師子相)
23. he has forty teeth (S. catvāriṃśaddanta; T. tshems bzhi bcu mnga' ba; C. jusishichi 具四十齒)
24. his teeth are even (S. samadanta; T. thems mnyam pa; C. chi qiping 齒齊平)
25. his teeth are evenly spaced (S. aviraladanta; T. tshems thags bzang ba; C. chi wuxi 齒無隙)
26. his teeth are white (S. suśukladanta; T. tshems shin tu dkar ba; C. chi xianbai 齒鮮白)

27. his tongue is long and broad (S. prabhūtatanujihva; T. ljags shin tu ring zhing srab pa; C. she guangbo 舌廣薄)
28. his voice is like Brahmā's (S. brahmasvara; T. tshangs pa'i dbyangs; C. da fanyin 大梵音)
29. his eyes are deep blue with eyelashes like a bull (S. abhinīlanetragopakṣma; T. spyan mthon mthing la ba'i rdzi ma lta bu; C. mu ganqing jie ru niuwang 目紺青睫如牛王)
30. he has a white tuft of hair between his eyebrows (S. ūrṇākeśa; T. mdzod spu; C. meijian baihao xiang 眉間白毫相)
31. the hair on his head turns to the right (S. pradakṣiṇāvarttakeśa; T. dbu skra g.yas su 'khyil ba; C. toufa youxuan 頭髮右旋)
32. he has a protrusion on the crown of the head (S. uṣṇīṣaśīrṣa; T. dbu gtsug tor dang ldan pa; C. dingshang xian wusenisha 頂上現烏瑟膩沙)

thirty-seven wings of enlightenment/factors pertaining to awakening. (S. bodhipākṣikadharma; T. byang chub kyi phyogs kyi chos; C. daopin/puti fen 道品/菩提分)

1. four applications of mindfulness (S. smṛtyupasthāna; T. dran pa nye bar bzhag pa bzhi; C. si nianchu 四念處)
2. four right efforts (S. samyakpradhāna/samyakprahāṇa; T. yang dag par spong ba bzhi; C. si zhengqin 四正勤)
3. four bases of psychic power (S. ṛddhipāda; T. rdzu 'phrul gyi rkang pa bzhi; C. si shenzu/si ruyi zu 四神足/四如意足)
4. five [spiritual] faculties/dominants (S. indriya; T. dbang po lnga; C. wugen 五根)
5. five powers (S. bala; T. stobs lnga; C. wuli 五力)
6. seven factors of enlightenment (S. bodhyaṅga; T. byang chub yan lag bdun; C. qi puti fen/qi juezhi 七菩提分/七覺支)
7. eightfold [noble] path (S. āryāṣṭāṅgamārga; T. 'phags lam yan lag brgyad; C. ba zhengdao 八正道)

FIFTIES

fifty-one/fifty-two mental concomitants. (S. caitta; P. cetasika; T. sem byung lnga bcu rtsa gcig; C. xin suoyou fa 心所有法). See EIGHTY-TWO DHAMMAS OF THE STHAVIRANIKĀYA/THERAVĀDA SCHOOL; ONE-HUNDRED DHARMAS OF THE YOGĀCĀRA SCHOOL.

SEVENTIES

seventy-five dharmas of the Sarvāstivāda school. (S. pañcasaptatidharma; T. chos don lnga; C. qishiwu fa 七十五法)

1. eleven material factors (S. rūpa; T. gzugs; C. sefa 色法)
    1. visual faculty (S. cakṣurindriya; T. mig gi dbang po; C. yangen 眼根)
    2. auditory faculty (S. śrotrendriya; T. rna ba'i dbang po; C. ergen 耳根)
    3. olfactory faculty (S. ghrāṇendriya; T. sna'i dbang po; C. bigen 鼻根)
    4. gustatory faculty (S. jihvendriya; T. lce'i dbang po; C. shegen 舌根)
    5. tactile faculty (S. kāyendriya; T. lus kyi dbang po; C. shengen 身根)
    6. visual objects (S. rūpa; T. gzugs; C. se 色)
    7. sound (S. śabda; T. sgra; C. sheng 聲)
    8. scent (S. gandha; T. dri; C. xiang 香)
    9. flavor (S. rasa; T. ro; C. mei 味)
    10. contact (S. spraṣṭavya; T. reg bya; C. chu 觸)
    11. unmanifest materiality (S. avijñaptirūpa; T. rnam par rig byed ma yin pa'i gzugs; C. wubiao se 無表色)
2. mind (S. citta; T. sems; C. xinwang 心王)
3. forty-six mental concomitants (S. caitta; T. sems byung; C. xin suoyou fa 心所有法)
    1. ten omnipresent mental factors (S. mahābhūmika; T. sems kyi sa mang; C. dadi fa 大地法)
        1. sensation (S. vedanā; T. tshor ba; C. shou 受)
        2. perception (S. saṃjñā; T. 'du shes; C. xiang 想)
        3. volition/intention (S. cetanā; T. sems pa; C. si 思)
        4. sensory contact (S. sparśa; T. reg pa; C. chu 觸)
        5. zeal/desire-to-act (S. chanda; T. 'dun pa; C. yu 欲)
        6. discernment (S. mati; T. shes rab; C. hui 慧)
        7. mindfulness/memory (S. smṛti; T. dran pa; C. nian 念)
        8. attention (S. manaskāra; T. yid la byed pa; C. zuoyi 作意)
        9. determination (S. adhimokṣa; T. mos pa; C. shengjie 勝解)
        10. concentration (S. samādhi; T. ting nge 'dzin; C. ding 定)
    2. ten omnipresent wholesome factors (S. kuśalamahābhūmika; T. dge ba'i sa mang; C. da shan di fa 大善地法)
        1. faith (S. śraddhā; T. dad pa; C. xin 信)
        2. heedfulness/vigilance (S. apramāda; T. bag yod pa; C. bu fangyi 不放逸)
        3. tranquillity/serenity (S. praśrabdhi; T. shin tu sbyangs pa; C. [qing] an [輕]安)
        4. equanimity (S. upekṣā; T. btang snyoms; C. xingshe 行捨)
        5. shame/decency/propriety (S. hrī; T. ngo tsha shes pa; C. can 慚)
        6. fear of blame/modesty (S. apatrāpya; T. khrel yod pa; C. kui 愧)
        7. absence of craving (S. alobha; T. ma chags pa; C. wu tan 無貪)
        8. absence of ill-will (S. adveṣa; T. zhe sdang med pa; C. wu chen 無瞋)
        9. absence of harmful intentions (S. avihiṃsā; T. rnam par mi 'tshe ba; C. bu hai 不害)
        10. effort/vigor (S. vīrya; T. brtson 'grus; C. qin/jingjin 勤/精進)

3. six omnipresent afflicted factors (S. kleśamahābhūmika; T. nyon mongs chen po'i sa mang; C. da fannao di fa 大煩惱地法)
   1. delusion (S. moha; T. ma rig pa; C. chi 癡)
   2. heedlessness (S. pramāda; T. bag med pa; C. fangyi 放逸)
   3. lassitude (S. kausīdya; T. le lo; C. xiedai 懈怠)
   4. lack of faith (S. āśraddhya; T. ma dad pa; C. bu xin 不信)
   5. sloth (S. styāna; T. rmugs pa; C. [hun]shen [惛]沈)
   6. restlessness (S. auddhatya; T. rgod pa; C. diaoju 掉擧)
4. two major omnipresent unwholesome factors (S. akuśalamahābhūmika; T. mi dge ba'i sa mang; C. da bushan di fa 大不善地法)
   1. lack of shame/decency/propriety (S. āhrīkya; T. ngo tsha med pa; C. wucan 無慚)
   2. lack of fear of blame/lack of modesty (S. anapatrāpya; T. khrel med pa; C. wukui 無愧)
5. ten minor afflicted factors of wide extent (S. parīttakleśabhūmika; T. nyon mongs chung ngu'i sa mang; C. xiao fannao di fa 小煩惱地法)
   1. anger (S. krodha; T. khro ba; C. fen 忿)
   2. disparagement/hypocrisy/concealing (S. mrakṣa; T. 'chab pa; C. fu 覆)
   3. selfishness/stinginess (S. mātsarya; T. ser sna; C. qian 慳)
   4. envy (S. īrṣyā; T. phrag dog; C. ji 嫉)
   5. vexation (S. pradāśa; T. 'tshig pa; C. nao 惱)
   6. hostility (S. vihiṃsā; T. rnam par 'tshe ba; C. hai 害)
   7. enmity/resentment (S. upanāha; T. 'khon 'dzin; C. hen 恨)
   8. deception (S. śāṭhya; T. g.yo; C. chan 諂)
   9. deceit (S. māyā; T. sgyu; C. kuang 誑)
   10. arrogance (S. mada; T. rgyags pa; C. jiao 憍)
6. eight indeterminate mental factors (S. aniyata; T. gzhan 'gyur; C. buding 不定)
   1. applied thought (S. vitarka; T. rtog pa; C. xun 尋)
   2. sustained thought (S. vicāra; T. dpyod pa; C. si 伺)
   3. worry (S. kaukṛtya; T. 'gyod pa; C. ezuo 惡作)
   4. torpor (S. middha; T. gnyid; C. shuimian 睡眠)
   5. sensuality (S. rāga; T. 'dod chags; C. tan 貪)
   6. hatred (S. pratigha; T. khong khro; C. chen 瞋)
   7. pride (S. māna; T. nga rgyal; C. man 慢)
   8. skeptical doubt (S. vicikitsā; T. the tshom; C. yi 疑)
4. fourteen conditioned forces dissociated from thought (S. cittaviprayuktasaṃskāra; T. ldan min 'du byed; C. xin bu xiangying xing fa 心不相應行法)
   1. possession (S. prāpti; T. 'thob pa; C. de 得)
   2. nonpossession (S. aprāpti; T.'thob pa med pa; C. feide 非得)
   3. homogeneity (S. sabhāgatā/nikāyasabhāga; T. rigs 'thun pa; C. zhong tongfen 衆同分)
   4. state of nonperception (S. āsaṃjñika; T. 'du shes med pa; C. wuxiang guo/wuxiang bao/wuxiang shi 無想果/無想報/無想事)
   5. equipoise of nonperception (S. asaṃjñāsamāpatti; T. 'du shes med pa'i snyoms 'jug; C. wuxiang ding 無想定)
   6. equipoise of cessation (S. nirodhasamāpatti; T. 'gog pa'i snyoms 'jug; C. mie jin ding 滅盡定)
   7. vitality (S. jīvitendriya; T. srog gi dbang po; C. ming gen 命根)
   8. origination/birth (S. jāti; T. skye ba; C. sheng 生)
   9. continuance/maturation (S. sthiti; T. gnas pa; C. zhu 住)
   10. senescence/decay (S. jarā; T. rga ba; C. yi/lao 異/老)
   11. desinence/extinction (S. anityatā; T. mi rtag pa; C. mie/wuchang 滅/無常)
   12. name set (S. nāmakāya; T. ming gi tshogs; C. ming shen 名身)
   13. phrase set (S. padakāya; T. tshig gi tshogs; C. ju shen 句身)
   14. syllable set (S. vyañjanakāya; T. yi ge'i tshogs; C. wen shen 文身)
5. three uncompounded factors (S. asaṃskṛta; T. 'dus ma byas kyi chos; C. wuwei [fa] 無爲[法])
   1. space (S. ākāśa; T. nam mkha'; C. xukong 虛空)
   2. analytical cessation (S. pratisaṃkhyānirodha; T. so sor brtags 'gog pa; C. zemie 擇滅)
   3. nonanalytical suppression (S. apratisaṃkhyānirodha; T. so sor brtags min gyi 'gog pa; C. feizemie 非擇滅)

EIGHTIES

eighty secondary marks [of a mahāpuruṣa]. (S. anuvyañjana; T. dpe byad bzang po; C. bashi zhong hao 八十種好)

1. copper-colored nails (S. ātāmranakhaḥ; T. sen mo zangs kyi mdog lta bu; C. zhizhao hongtong xiang/zhizhao chitong se 指爪紅銅相/指爪赤銅色)
2. glossy nails (S. snigdhanakhaḥ; T. sen mo mdog snum pa; C. zhise huaze 指色滑澤)
3. raised nails (S. tuṅganakhaḥ; T. sen mo mtho ba; C. zhizhao gao 指爪高)
4. rounded fingers and toes (S. vṛttāṅguliḥ; T. sor mo rnams zlum pa; C. zhuzhi yuanxiang/zhichang xianyuan 諸指圓相/指長纖圓)
5. tapered fingers and toes (S. anupūrvāṅguliḥ; T. sor mo byin gyis phra ba; C. zhuzhi xirou (xiang)/zhuzhi jianxi 諸指細柔(相)/諸指漸細)
6. full fingers and toes (S. citāṅguliḥ; T. sor mo rnams rgyas pa; C. zhuzhi fengman xiang 諸指豐滿相)
7. veins are not visible (S. nigūḍhaśiraḥ; T. rtsa mi mngon pa; C. maijin bulou 脈筋不露)
8. veins are free from knots (S. nirgranthiśiraḥ; T. rtsa mdud med pa; C. erwu maijie/jinmai wujie 而無脈結/筋脉無結)

9. anklebones do not protrude (S. gūḍhagulphaḥ; T. long bu mi mngon pa; C. zu buxian gu/huai buxian 足不顯骨/踝不現)
10. feet [and hands] do not differ in size (S. aviṣamapādaḥ; T. zhabs mi mnyam pa med pa; C. zu wubuping/shouzu ruyi 足無不平/手足如意)
11. walks with the stride of a lion (S. siṃhavikrāntagāmī; T. seng ge'i stabs su gshegs pa; C. xing ru shizi/weiyi ru shizi 形如獅子/威儀如獅子)
12. walks with the stride of an elephant (S. nāgavikrāntagāmī; T. glang po che'i stabs su gshegs pa; C. xingan ru xiang/jinzhi ru xiangwang 形安如象/進止如象王)
13. walks with the stride of a goose (S. haṃsavikrāntagāmī; T. ngang pa'i stabs su gshegs pa; C. xing ru e/xingfa ru ewang 形如鵝/行法如鵝王)
14. walks with the stride of a bull (S. vṛṣabhavikrāntagāmī; T. khyu mchog gi stabs su gshegs pa; C. xing ru shengqun/jinzhi ru niuwang 形如勝群/進止如牛王)
15. walks turning toward the right side (S. pradakṣiṇāvartagāmī; T. g.yas phyogs su ldog cing gshegs pa; C. xiangyou/huishen gushi bijie youxuan 向右/回身顧視必皆右旋)
16. walks elegantly (S. cārugāmī; T. mdzes par gshegs pa; C. weimiao xiang/xingxiang mei/xingbu yansu 微妙相/行相美/行步嚴肅)
17. walks without swaying (S. avakragāmī; T. mi g.yo bar gshegs pa; C. bu waixie/xingbu duanzheng 不歪邪/行步端正)
18. well-rounded body (S. vṛttagātraḥ; T. sku 'khril bag chags pa; C. shen zhongxi/shen zichi weiyi 身重習/身自持逶迤)
19. cleansed body (S. mṛṣṭagātraḥ; T. sku byi dor byas pa; C. shen guangze ru diaozhuo/guangze ming ligou 身光澤如彫琢/光澤明離垢)
20. well-proportioned body (S. anupūrvagātraḥ; T. sku rim par 'tsham pa; C. shen jubei/shenti xiangcheng 身具備/身體相稱)
21. clean body (S. śucigātraḥ; T. sku gtsang ba; C. shen jiejing/shenti qingjie 身潔淨/身體清潔)
22. supple body (S. mṛdugātraḥ; T. sku 'jam pa; C. shen rouruan 身柔軟)
23. pure body (S. viśuddhagātraḥ; T. sku rnam par dag pa; C. qingjing shen/shen qingjing 清淨身/身清淨)
24. has perfect genitals (S. paripūrṇavyañjanaḥ; T. mtshan yong su rdzogs pa; C. juzu xiang/shen manzu 具足相/身滿足)
25. broad and magnificent frame (S. pṛthucārumaṇḍalagātraḥ; T. sku kho lag yangs shing bzang ba; C. shenzhi qimiao/shen runze/miao guangxia xiangcheng 身肢奇妙/身潤澤/妙廣狹相稱)
26. walks with an even pace (S. samakramaḥ; T. gom pa snyoms pa; C. xingbu zhengzhi 行步正直)
27. youthful body (S. sukumāragātraḥ; T. sku shin tu gzhon mdog can; C. shense nenruan/rongyan qimiao changruo shaonian 身色嫩軟/容顏奇妙常若少年)
28. unimpaired body (S. adīnagātraḥ; T. sku zhum pa med pa; C. shen wu tuiqu/shenti buqu 身無退屈/身體不曲)
29. broad body (S. unnatagātraḥ; T. sku rgyas pa; C. shen fengman/ruyi fengman 身豐滿/如意豐滿)
30. firm body (S. susaṃhitagātraḥ; T. sku shin tu grims pa; C. shenzhi anshang buqing/zhuchu wu nengdong zhe/shenzhi jianshi 身肢安上不傾/住處無能動者/身肢堅實)
31. limbs and features are well-proportioned (S. suvibhaktāṅgapratyaṅgaḥ; T. yan lag dang nying lag shin tu rnam par 'byed pa; C. zhijie junping/gujie ru gousuo 支節均平/骨節如鉤鎖)
32. sight is free from disease and clear (S. vitimiraviśuddhālokaḥ; T. gzigs pa rab rib med cing rnam par dag pa; C. mu qingjing wu buming 目清淨無不明)
33. round belly (S. vṛttakukṣiḥ; T. dku zlum pa; C. fu yuan 復圓)
34. clean belly (S. mṛṣṭakukṣiḥ; T. dku skabs phyin pa; C. shen wu buxiu 身無不修)
35. belly is free from defects (S. abhugnakukṣiḥ; T. dku ma rnyongs pa; C. fu wu aotu 服無凹凸)
36. flat belly (S. kṣāmodaraḥ; T. phyal phyang nge ba; C. fu yuanxiang 復圓相)
37. deep navel (S. gaṃbhīranābhiḥ; T. lte ba zab pa; C. qi shen/qi shen yuanhao 臍深/臍深圓好)
38. navel turns to the right (S. pradakṣiṇāvartanābhiḥ; T. lte ba g.yas phyogs su 'khyil ba; C. qi youxuan 臍右旋)
39. beautiful from all sides (S. samantaprāsādikaḥ; T. kun nas mdzes pa; C. guan wuyan zu 觀無厭足)
40. conduct is pure (S. śucisamācāraḥ; T. kun tu spyod pa gtsang ba; C. xingshi jiejing 行事潔淨)
41. body has no black moles (S. vyapagatatilakakālagātraḥ; T. sku la sme ba dang gnag bag med pa; C. shen wu zhidian 身無痣黠)
42. hands are soft like cotton (S. tūlasadṛśasukumārapāṇiḥ; T. phyag shing bal ltar shin tu 'jam pa; C. shouruan ru mian 手軟如綿)
43. lustrous lines on his hands (S. snigdhapāṇilekhaḥ; T. phyag gi ri mo mdangs yod pa; C. shouwen juguang[se] 手文具光[色])
44. deep lines on his hands (S. gambhīrapāṇilekhaḥ; T. phyag gi ri mo zab pa; C. shouwen sheshen 手文甚深)
45. long lines on his hands (S. āyatapāṇilekhaḥ; phyag gi ri mo ring ba; C. shouwen chang 手文長)
46. face is not too long (S. nātyāyatavadanaḥ; T. shal ha cang yang mi ring ba; C. mian bu changda 面不長大)
47. lips the color of a bimba fruit (S. bimboṣṭhi; T. mchu bim ba ltar dmar ba; C. chun hong ru xiangxiangsi guo 唇紅如相想思果)
48. supple tongue (S. mṛdujihvaḥ; T. ljags mnyen pa; C. she ruanmei/she meiruan 舌軟美/舌美軟)
49. slender tongue (S. tanujihvaḥ; T. ljags srab pa; C. she ruan/she boguang 舌軟/舌薄廣)

50. red tongue (S. raktajihvaḥ; T. ljags dmar ba; C. she xianhong/she sechi 舌鮮紅/舌色赤)
51. voice resonates like an elephant and like thunder (S. gajagarjitajīmūtaghoṣaḥ; T. glang po che'i nga ro dang 'brug gi sgra dang ldan pa; C. ju xiangyu leiyin/xiangsheng longyin 具象語雷音/象聲龍音)
52. sweet, pleasing, and gentle voice (S. madhuracārumañjusvaraḥ; T. gsung snyan cing mnyen la 'jam pa; C. yinyun meihao/yinyun hechang 音韻美好/音韻和暢)
53. round canine teeth (S. vṛttadaṃṣṭraḥ; T. mche ba zlum pa; C. ya yuan 牙圓)
54. sharp canine teeth (S. tīkṣṇadaṃṣṭraḥ; T. mche ba rno ba; C. ya kuaili 牙快利)
55. white canine teeth (S. śukladaṃṣṭraḥ; T. mche ba dkar ba; C. ya bai 牙白)
56. even canine teeth (S. samadaṃṣṭraḥ; T. mche ba mnyam pa; C. ya fang/ya pingzheng 牙方/牙平正)
57. tapered canine teeth (S. anupūrvadaṃṣṭraḥ; T. mche ba byin gyis phra ba; C. ya jianxi 牙漸細)
58. high nose (S. tuṅganāsaḥ; T. shangs mtho ba; C. bi gao/bikong buxian 鼻高/鼻孔不現)
59. clean nose (S. śucināsaḥ; T. shangs gtsang pa; C. bi qingjing 鼻清淨)
60. clear eyes (S. viśuddhanetraḥ; T. spyan rnam par dag pa; C. mu qingjing 目清淨)
61. wide eyes (S. viśālanetraḥ; T. spyan yangs pa; C. mu guang 目廣)
62. thick eyelashes (S. citrapakṣmāḥ; T. rdzi ma stug pa; C. yanmao meihao 眼毛美好)
63. the iris and sclera of his eyes contrast like the petals and stamen of a blue lotus (S. sitāsitakamaladalaśakalanayanaḥ; T. spyan dkar nag 'byes shing pad ma'i 'dab ma'i mdangs pa lta bu; C. mu heibai fenqingmei ru lianhua xingxiang/mu heibai mei ru lianhua xingxiang 目黑白分清美如蓮華形相/目黑白美如蓮華形相)
64. long eyebrows [like a young crescent moon] (S. āyatabhrūḥ; T. smin tshugs ring ba; C. meimao xiuchang/mei ru chuyue 眉毛修長/眉如初月)
65. soft eyebrows (S. ślakṣṇabhrūḥ; T. smin ma 'jam pa; C. shuangmei nenruan 雙眉嫩軟)
66. eyebrows with even hairs (S. samaromabhrūḥ; T. smin ma spu mnyam pa; C. meimao pingqi 眉毛平齊)
67. lustrous eyebrows (S. snigdhabhrūḥ; T. smin ma snum pa; C. meimao run 眉毛潤)
68. full and long ears (pīnāyatakarṇaḥ; T. snyan shal stug cing ring ba; C. er hou xiuchang 耳厚修長)
69. even ears (S. samakarṇaḥ; T. snyan mnyam pa; C. er qiping 耳齊平)
70. unimpaired sense of hearing (S. anupahatakarṇendriyaḥ; T. snyan gyi dbang po ma nyams pa; C. ergen pingjun 耳根平均)
71. well-developed forehead (S. supariṇatalalāṭaḥ; T. dpral ba legs par dbyes pa; C. e guang yuanman 額廣圓滿)
72. broad forehead (S. pṛthulalāṭaḥ; T. dpral ba dbyes che ba; C. e kuan pingzheng 額寬平正)
73. large head (S. suparipūrṇa-uttamāṅgaḥ; T. dbu shin tu rgyas pa; C. tou ru motuona guo 頭如摩陀那果)
74. hair on the head is black as a bee (S. bhramarasadṛśakeśaḥ; T. dbu skra bung ba ltar gnag pa; C. fa se ganqing ru fengwang 髮色紺青如蜂王)
75. thick hair on the head (S. citakeśaḥ; T. dbu skra stug pa; C. fa mei 髮美)
76. soft hair on the head (S. ślakṣṇakeśaḥ; T. dbu skra 'jam pa; C. fa nenruan 髮嫩軟)
77. hair on the head is not disheveled (S. asaṃlulitakeśaḥ; T. dbu skra ma 'dzings pa; C. fa buluan 髮不亂)
78. hair on the head is not rough (S. aparuṣakeśaḥ; T. dbu skra mi gshor ba; C. shoufa zhengqi 首髮整齊)
79. fragrant hair on the head (S. surabhikeśaḥ; T. dbu skra dri zhim pa; C. shoufa xiangfu 首髮香馥)
80. hands and feet are adorned with such auspicious symbols as the śrīvatsa [endless knot]; svastika [swastika]; and nandyāvarta [elaborated swastika form] (S. śrīvatsasvastikanandyāvartalalitapāṇipādaḥ; T. phyags dang zhabs dpal gyi be'u dang bkra shis g.yung drung 'khyil bas brgyan pa; C. shouzu youru xiangdu jiangu/shouzu jixiang dexiang miaohao juzu 手足猶如祥犢堅固/手足吉祥德相妙好具足)

eighty-two dhammas of the *Sthaviranikāya/Theravāda school.

1. twenty-eight material factors (P. rūpa)
    1. four primary elements (P. mahābhūta)
        1. earth/solidity (P. paṭhavī[dhātu])
        2. water/cohesion (P. āpo[dhātu])
        3. fire/heat (P. tejo[dhātu])
        4. air/mobility (P. vāyo[dhātu])
    2. twenty-four types of derived materiality (P. upādārūpa)
        1. eye/visual faculty (P. cakkhu)
        2. ear/auditory faculty (P. sota)
        3. nose/olfactory faculty (P. ghāna)
        4. tongue/gustatory faculty (P. jivhā)
        5. body/tactile faculty (P. kāya)
        6. visual objects (P. rūpa)
        7. sound (P. sadda)
        8. scent (P. gandha)
        9. flavor (P. rasa)
        10. femininity (P. itthindrya)
        11. masculinity (P. purisindriya)
        12. [physical] vitality/life-force (P. jīvita, [rūpa]jīvitindriya)
        13. heart [as the physical basis of mentality] (P. hadaya [vatthu])
        14. bodily intimation (P. kāyaviññatti)
        15. verbal intimation (P. vacīviññatti)
        16. limitation/space element (P. pariccheda, ākāsadhātu)

17. lightness/buoyancy (P. lahutā)
18. malleability (P. mudutā)
19. wieldiness (P. kammaññatā)
20. birth/development (P. upacaya)
21. continuity (P. santati)
22. senescence/decay (P. jaratā)
23. desinence/extinction/impermanence (P. aniccatā)
24. nutriment (P. āhāra)

2. mind (citta)
   1. mind/consciousness/mentality (P. citta, viññāṇa, manas)
3. fifty-two mental concomitants (P. cetasika)
   1. thirteen morally indeterminate (P. avyākata)
      1. seven general/universal (P. sabbacittasādhāraṇa)
         1. contact (P. phassa)
         2. sensation (P. vedanā)
         3. perception (P. saññā)
         4. intention (P. cetanā)
         5. one-pointedness (P. ekaggatā)
         6. [mental] vitality/life-force (P. jīvita, [nama] jīvitindriya)
         7. attention (P. manasikāra)
      2. six secondary (P. pakiṇṇaka)
         1. applied thought (P. vittaka)
         2. sustained thought (P. vicāra)
         3. determination/resolution (P. adhimokkha)
         4. energy (P. viriya)
         5. rapture (P. pīti)
         6. zeal (P. chanda)
   2. twenty-five wholesome (P. kusala)
      1. nineteen sobhanasādhāraṇa (universal splendid mental factors)
         1. faith/confidence (P. saddhā)
         2. mindfulness (P. sati)
         3. shame/propriety/decency (P. hiri)
         4. fear of blame/modesty (P. ottappa)
         5. nongreed (P. alobha)
         6. nonhatred (P. adosa)
         7. equanimity (P. tatramajjhattatā)
         8. tranquillity of mental body (P. kāyapassaddhi)
         9. tranquillity of consciousness (P. cittapassaddhi)
         10. lightness of mental body (P. kāyalahutā)
         11. lightness of consciousness (P. cittalahutā)
         12. malleability of mental body (P. kāyamudutā)
         13. malleability of consciousness (P. cittamudutā)
         14. wieldiness of mental body (P. kāyakammaññatā)
         15. wieldiness of consciousness (P. cittakammaññatā)
         16. proficiency of mental body (P. kāyapāguññatā)
         17. proficiency of consciousness (P. cittapāguññatā)
         18. rectitude of mental body (P. kāyujjukatā)
         19. rectitude of consciousness (P. cittujjukatā)
      2. three abstinences (virati)
         1. abstinence from physical misconduct (P. kāyaduccaritavirati); alt. right action (P. sammākammanta)

3. fear of blame/modesty (S. apatrāpya; T. khrel yod pa; C. kui 愧)
4. lack of craving (S. alobha; T. ma chags pa; C. wu tan 無貪)
5. lack of ill-will (S. adveṣa; T. zhe sdang med pa; C. wu chen 無瞋)
6. lack of delusion (S. amoha; T. gti mug med pa; C. wu chi 無癡)
7. vigor (S. vīrya; T. brtson 'grus; C. qin/jingjin 勤/精進)
8. tranquillity/serenity (S. praśrabdhi; T. shin tu sbyangs pa; C. [qing] an [輕]安)
9. vigilance (S. apramāda; T. bag yod pa; C. bu fangyi 不放逸)
10. equanimity (S. upekṣā; T. btang snyoms; C. xingshe 行捨)
11. absence of harmful intentions (S. avihiṃsā; T. rnam par mi 'tshe ba; C. bu hai 不害)

4. six root afflictions (S. mūlaklesa; T. rtsa nyon; C. genben fannao 根本煩惱)
   1. sensuality/lust (S. rāga; T. 'dod chags; C. tan 貪)
   2. anger (S. pratigha; T. khong khro; C. chen 瞋)
   3. ignorance (S. avidyā; T. ma rig pa; C. chi/wuming 癡/無明)
   4. pride (S. māna; T. nga rgyal; C. man 慢)
   5. skeptical doubt (S. vicikitsā; T. the tshom; C. yi 疑)
   6. wrong views (S. dṛṣṭi; T. lta ba nyon mongs can; C. jian 見)
5. twenty secondary afflictions (S. upaklesa; T. nye nyon; C. sui fannao 隨煩惱)
   1. anger (S. krodha; T. khro ba; C. fen 忿)
   2. resentment (S. upanāha; T. 'khon 'dzin; C. hen 恨)
   3. vexation/maliciousness (S. pradāśa; T. 'tshig pa; C. nao 惱)
   4. disparagement/hypocrisy (S. mrakṣa; T. 'chab pa; C. fu 覆)
   5. deception (S. māyā; T. sgyu; C. kuang 誑)
   6. deceit (S. śāṭhya; T. g.yo; C. chan 諂)
   7. arrogance (S. mada; T. rgyags pa; C. jiao 憍)
   8. hostility (S. vihiṃsā; T. rnam par 'tshe ba; C. hai 害)
   9. envy (S. īrṣyā; T. phrag dog; C. ji 嫉)
   10. selfishness/stinginess (S. mātsarya; T. ser sna; C. qian 慳)
   11. lack of shame/decency/propriety (S. āhrīkya; T. ngo tsha med pa; C. wucan 無慚)
   12. lack of fear of blame/lack of modesty (S. anapatrāpya; T. khrel med pa; C. wukui 無愧)
   13. lack of faith (S. āśraddhya; T. ma dad pa; C. bu xin 不信)
   14. lassitude (S. kausīdya; T. le lo; C. xiedai 懈怠)
   15. heedlessness (S. pramāda; T. bag med pa; C. fangyi 放逸)
   16. sloth (S. styāna; T. rmugs pa; C. hunchen 惛沈)
   17. restlessness (S. auddhatya; T. rgod pa; C. diaoju 掉擧)
   18. forgetfulness (S. muṣitasmṛtitā; T. brjed nges pa; C. shinian 失念)
   19. lack of circumspection (S. asaṃprajanya; T. shes bzhin ma yin pa; C. bu zhengzhi 不正知)
   20. distraction (S. vikṣepa; T. rnam par g.yeng ba; C. sanluan 散亂)
6. four indeterminate factors (S. aniyata; T. gzhan 'gyur; C. buding [fa] 不定[法])
   1. torpor/drowsiness (S. middha; T. gnyid; C. shuimian 睡眠)
   2. worry/remorse (S. kaukṛtya; T. 'gyod pa; C. ezuo 惡作)
   3. applied thought (S. vitarka; T. rtog pa; C. xun 尋)
   4. sustained thought (S. vicāra; T. dpyod pa; C. si 伺)

3. eleven material factors (S. rūpa; T. gzugs; C. shiyi sefa 色法)
   1. visual faculty (S. cakṣurindriya; T. mig gi dbang po; C. yangen 眼根)
   2. auditory faculty (S. śrotrendriya; T. rna ba'i dbang po; C. ergen 耳根)
   3. olfactory faculty (S. ghrāṇendriya; T. sna'i dbang po; C. bigen 鼻根)
   4. gustatory faculty (S. jihvendriya; T. lce'i dbang po; C. shegen 舌根)
   5. tactile faculty (S. kāyendriya; T. lus kyi dbang po; C. shengen 身根)
   6. visual objects (S. rūpa; T. gzugs; C. se 色)
   7. sound (S. śabda; T. sgra; C. sheng 聲)
   8. scent (S. gandha; T. dri; C. xiang 香)
   9. flavor (S. rasa; T. ro; C. mei 味)
   10. contact (S. spraṣṭavya; T. reg bya; C. chu 觸)
   11. materiality associated with the sphere of mental factors [e.g.; materiality generated in meditative states] (S. dharmāyatanarūpa; T. chos kyi skye mched pa'i gzugs; C. fachu suoshe se 法處所攝色)
4. twenty-four conditioned forces dissociated from thought (S. cittaviprayuktasaṃskāra; T. ldan min 'du byed; C. xin bu xiangying xing fa 心不相應行法)
   1. possession (S. prāpti; T. 'thob pa; C. de 得)
   2. vitality (S. jīvitendriya; T. srog gi dbang po; C. ming gen 命根)
   3. homogeneity (S. nikāyasabhāga; T. rigs 'thun pa; C. zhong tongfen 衆同分)
   4. nature of ordinary people (S. pṛthagjanatva; T. so so skye bo nyid; C. yisheng xing 異生性)
   5. equipoise of nonperception (S. asaṃjñāsamāpatti; T. 'du shes med pa'i snyoms 'jug; C. wuxiang ding 無想定)

6. equipoise of cessation (S. nirodhasamāpatti; T. 'gog pa'i snyoms 'jug; C. mie jin ding 滅盡定)
7. state of nonperception (S. āsaṃjñika; T. 'du shes med pa; C. wuxiang guo/wuxiang bao/wuxiang shi 無想果/無想報/無想事)
8. name set (S. nāmakāya; T. ming gi tshogs; C. ming shen 名身)
9. phrase set (S. padakāya; T. tshig gi tshogs; C. ju shen 句身)
10. syllable set (S. vyañjanakāya; T. yi ge'i tshogs; C. wen shen 文身)
11. origination/birth (S. jāti; T. skye ba; C. sheng 生)
12. continuance/maturation (S. sthiti; T. gnas pa; C. zhu 住)
13. senescence/decay (S. jarā; T. rga ba; C. yi/lao 異/老)
14. desinence/extinction (S. anityatā; T. mi rtag pa; C. mie/wuchang 滅/無常)
15. continuity (S. pravṛtti; T. 'jug pa; C. liuzhuan 流轉)
16. distinction (S. pratiniyama; T. so sor nges pa; C. dingyi 定異)
17. association (S. yoga; T. 'byor 'grel; C. xiangying 相應)
18. instantaneity (S. jāva; T. 'gyogs pa; C. shisu 勢速)
19. order (S. anukrama; T. go rim; C. cidi 次第)
20. direction/area (S. deśa; T. yul; C. fang 方)
21. time (S. kāla; T. dus; C. shi 時)
22. number (S. saṃkhyā; T. grangs; C. shu 數)
23. complete assemblage [of the causes and conditions that lead to the production of dharmas] (S. sāmagrī; T. tshogs pa; C. hehe xing 和合性)
24. incomplete assemblage (S. asāmagrī; T. ma tshogs pa; C. bu hehe xing 不和合性)

5. six uncompounded factors (S. asaṃskṛtadharma; T. 'dus ma byas kyi chos; C. wuwei fa 無爲法)
    1. space (S. ākāśa; T. nam mkha'; C. xukong 虛空)
    2. analytical cessation (S. pratisaṃkhyānirodha; T. so sor brtags 'gog pa; C. zemie 擇滅)
    3. nonanalytical suppression (S. apratisaṃkhyānirodha; T. so sor brtags min gyi 'gog pa; C. feizemie 非擇滅)
    4. motionlessness (S. āniñjya; T. mi g.yo ba; C. budong 不動)
    5. cessation of perception and sensation (S. saṃjñāvedayitanirodha; T. 'du shes dang tshor ba 'gog pa; C. xiangshou mie 想受滅)
    6. suchness (S. tathatā; Tib. de bzhin nyid; C. zhenru 眞如)
